LABBAI (LUBBAI) (Tamil, ilappai, said to be a corruption of 'arabi), a class of Indian Musalmans, also known as Djanakas (Skt. varuna, “Greek, western”), supposed to be descended from Arab immigrants who intermarried with native women, but now having nothing to distinguish them from the aboriginal people, except their mode of dress and manner of shaving the head and trimming the beard. In 1911 they numbered 401,703, found chiefly on the E. coast of Southern India. Most of them are Sunnis, of the Shafi madhab, and their head-quarters are at Nagore, the burial place of their patron saint, Shâh al-Hamid 'Abd al-Kâdir (ob. 1600), commonly known as Kâdir Wali or Mirân Shâh (see Gazetteer of the Tanjore District, p. 243). They read the Kûrân in Tamil translation, written in Arabic characters. They are industrious and enterprising, especially as fishermen and traders.

LABBAIKA. [See TALIBYA.]

LABID b. RABI' ĀBŪ 'AKTI, an Arab poet of the pagan period, who lived in the days of Islam (muḥaddram), belonged to the family of BanûDJâ'far, a branch of the Kindāb, who belonged to the Banû Āmir and therefore was Arab. According to Ibn Sa'd, vi. 21, he died in 40 (660/661) in the night on which Mu'awiyah arrived in al-Nukhaila to conclude peace with Ḥasan b. 'Alī. Others, like Ibn Ḥadjar, iii. 657, whom Noldke (Fünf Mo'allaqāt, ii. 51) thinks ought to be followed, give 41 A.H., others again 42. He is said to have reached an unusually great age (al-Sidjistânî, K. al-Mu'annamartin, ed. Goldziher, ch. 61). In fact he makes several allusions to this in his poems. The date of his birth can only be approximately fixed. Even before 600 A.D. he seems to have attained a prominent position in his tribe by his command of language. As quite a young man he is said to have accompanied a deputation from his tribe to the court of king Abī Kâliba Nu'mân of al-Hira (c. 580-602), and when the latter was invited against the Banû Āmir by his friend Abī Rabi' b. Ziyâd al-'Abiti (of the tribe to which Labid's mother belonged), Labid succeeded with a satirical ṭaḡţa (Divan, No. 33) in so ridiculing him to the king that he restored his favour to the Banû Āmir. A verse from Nu'mân's answer to his courtier who sought to defend himself from the lampoon on him became proverbial (cf. al-Mufaḍḍal, al-Fâhîr, i. 43 sq.; al-'Askârî, Amālī, on the margin of Maidānî, ii. 427, 7-18; al-Maidānî, ii. 33; K. al-Aghānî, xv. i 94 sqq., 91 sqq., xvi. 222 sqq., 21 sqq.; Abū al-Kâdir, Khânān al-Adâb, ii. 79 sqq., iv. 171 sqq.). In his later poems Labid also often prides himself on having helped his tribe by his eloquence. He remained loyal to his tribe even when a famous poet and scorned the profession of a wandering singer, practised by his contemporary al-Askârî. But the coming of the Prophet Muhammad threw him out of the usual groove. We do not know the exact date of his conversion to Islam. As early as Djamâd al-akhirūl of the year 8 the chiefs of the tribe of Āmir b. Ṣaṭīra, Āmir b. Tufail and Arbag b. Kâis, a stepbrother of Labid, seem to have negotiated in Medina about the adhesion of their tribe to the new constitution without reaching any result (see Caetani, Annali, ii. 90 sqq.). Both men are said to have soon after come to an untimely end, Āmir from plague and Arbag from a lightning stroke; the latter story seems to find confirmation in Labid's lament for him (Divan, No. 5). The accusation on the other hand that Arbag attempted to kill the Prophet is quite incredible; for in that case Labid could hardly have composed several elegies on him and they would certainly not have been included in his Divān. In the year 9 the tribe again sent a deputation to Medina which included the poet and an agreement was reached. Labid is said on this occasion to have become a Muslim. He later migrated to Kāf, where he died. Of his family only a daughter is mentioned who is said to have inherited his talent (see al-Maidānî, ii. 49, 15 sqq.; al-Ghazullî, Mafâlî al-Budûrî, i. 52, 7 sqq.).

Labid's poems were very highly esteemed by the Arabs. Al-Nabigha is said to have declared him the greatest poet among the Arabs or at least of his tribe group, the Hawārin, on account of his Mu'allaqāt. He himself is said to have claimed third place after Imru'l-Kais and Tārafa. Al-Djamâbi (Tubâsî al-Shilârî), ed. Heil, p. 29 sqq.) places him in the third class of pagan poets along with Al-Nabigha and Al-Djumâbi. Abû Dhuqâb and Al-Shammâdh. Labid showed himself equally master of the kihjâ, the masārîya and the baṣîrâ. One of his kasha's was adopted into the collection of mu'allaqāt and is thought by Noldke (Fünf Mo'allaqât, ii. 51) to be one of the best specimens of Beduin poetry. Labid uses the traditional pictures from the animal world — wild asses and antelopes fleeing before the hunter and fighting with his dogs — as charmingly as the usual compliances about drinking bouts. He seems on the other hand to have only cultivated the morix, because it had been traditional. He deals far less with the subject of woman's love than with the description of the Aṣfâl which he likes to compare with
LABID — LÄDHİK

artistic calligraphy. He is also fond of recalling memories of places of his native district, the palm-groves and irrigation works of which continually move him to charming descriptions; indeed in one such connection he gives the whole itinerary (Divân, No. 19, v. 4 sq.) of a journey from central Arabia to the coast of the Persian Gulf (see von Kremer, op. cit., p. 12). As his almost contemporary Abû Dhâlib is fond of doing, in the "Meâlabâqa, v. 55 sqq. he turns however once more to his beloved and thus combines the nasiḥ with the main part of the kaşida to an organic whole; but for him this is simply a mode of transition to a new descriptive passage. His poetry is however distinguished from that of other poets of the pagan period by a certain religious feeling which seems to have been not exactly rare among his contemporaries, even before Muhammad's mission. While Zuhâr, for example, still expresses his practical wisdom derived from the experience of a long life, in plain though impressive language, Labîd on such occasions always strikes a religious note. He certainly did not profess Christianity nor can we see in him a representative of the so called Hanîf of the Stîr, as von Kremer wished to do. In him rather we find the belief in Allâh as the guardian of morality finding particular expression, a belief widely disseminated in Arabia by the preaching of the Christian church. Such passages naturally invited the Muslim traditionalists to increase them. Indeed a later author went so far as to ascribe to him a verse by Abu 'l-'Aṭâ'îya (fig. 18). But many passages of his Divân seem to owe their inspiration to the Kurân. The statement that he wrote no more poetry after his conversion to Islam is obviously an invention (see Ibn Sîdî, vi. 21, 4, repeated later; e.g. by al-Ghârînî, Mutâfi'î, i 52 infra); it is contradicted by the simple fact that poems 21 and 53 of the Divân were only composed shortly before his death (K. al-'Aţâ'îya, xvi. 101) The description of Paradise (Divân, No. 5, 4) is certainly inspired by the Kurân like the idea that precedes it, that a record is kept of the doings of men. Under the influence of Islam in No. 39 and 41, verse 11 of which, as Ibn Kûtâiba (K. al-'Aţâ'îya, p. 155, 3) already points out, certain parts must, after his conversion, if it is not to be considered an interpolation, he replaces the nasiḥ by pious admonitions. Thus he creates a new artistic form that of poetical paraphrases on the transitoriness of human life; besides the Kurân he may of course have been influenced by Christian preaching. He only follows older models in the connection when he combines admonition with the averting of blame from a woman in No. 14, as in Farâ's Muðallâla, verses 56 sqq. 63-65 (cf. Casel. Das Schicksal, p. 9), where this is however only an episode in the kaşida.

Labîd's Fûzan was edited, according to the Fûzan, p. 158, by several of the greatest Arabic philologists, al-Sukkât, Abû 'Amr al-Shâhînî, Abû-Imâm, al-'Abî and Ibn al-Sukkât. Of these editions only half of that of al-Tâ'i with a commentary has survived in the manuscript edited by al-Khâlî (see below) of the year 589. All other MSS are much later, e.g. those in London, Strassburg and that in Cairo not yet edited which also contains the Fûzan of Abû Dhâlib, ed. by J. Hell.

LÄDHİK (Lâdhîk, Greck. Aâsîhûkê), the name of several towns in Asia Minor.

1. The ancient Aâsîhûkê (Lâdhîk) is probably derived from the smelting furnaces which it had around it as the centre of the quicksilver mining area. It was in Karaman north of Konya on the great military road which ran through Asia Minor. Hâdi'dî Khâlîf already knows it by its modern name of Yor-gân Lâdhîk or Lâdhîkîya in Karaman.

LĀDHIKī — AL-LĀDHIKīYA

2. Lādhīkī (Hadjī Khālīfā: Lādhīkīya), the ancient Lādhīkīya or Lādhīkī (or Lādhīkī) in the south of Djemīyān. Al-Battānī calls it, following Greek sources, Lādhīkīya Frūdīs (=Φρούδης while Ptolemy places it in Caria). According to Ibn Baṭīṭa it was a large town with 7 Friday mosques, beautiful gardens, flowing rivers and springs and fine markets. The Greek women there made remarkably beautiful and durable woollen goods, embroidered with gold. Ibn Baṭīṭa also praises the hospitality of the inhabitants but censures the freedom of their morals. Slave girls were sold and prostitution practised even in the public baths. On the history of the town (now Eski Hıçar) see Δέκα.

3. Lādhīkī, the ancient Λοδηκία Περιφήκη of Amāsiya.

Bibliography: Ibn Bīlī, ed. Houtsma, passim; Le Strange, The Lands of the Eastern Caliphate, p. 146. (E. HONIGMANN)

AL-LĀDHIKīYA, a sea-port in Northern Syria, the ancient Λοδηκία Περιφήκη of Amāsiya. It was founded by Seleucus I, who called it after his mother Laodike, and towards the end of the Seleucid empire it was a member of the alliance of the four most important Syrian cities, the πέτες ἄλλες, Antiocheia, Apameia, Seleuceia and Laodicea. In the reign of Justinian I it was made the capital of the newly founded province of Ḥablūt. When the Arabs under the governor of Ḥims, ‘Uthāb b. al-Ṣamīt al-Anṣārī, advanced on the town, the inhabitants made a determined resistance. ‘Uthāb encamped near Lādhīkīya and had deep trenches dug in which even horsemen could advance unobserved. After a pretended retreat he returned in the night and was then able to surprise the inhabitants who had unsuspectingly opened the great gate of the city, and to enter the town. The citadel was then stormed and ‘Uthāb proclaimed upon the walls Allāh akbar. A section of the Christian inhabitants fled to al-Busaid (Horişān, Bā’ta al-Balad, ed. Gonzalez, p. 133, should thus be corrected for Yūsufiyād; Ed. Schwarz in Wellhausen, Ζ. D. M. G. i., lx. 246). Their request to be allowed to return to the town was granted them on payment of a fixed sum as kharāj. They retained possession of their church, while ‘Uthāb had a new mosque built which was later enlarged (al-Baladhirī, ed. cit., p. 132 sqq.). About 97 (according to al-Baladhirī: 100 A.H.), the Greeks attacked the coast of al-Lādhīkīya with a fleet, burned the town and carried off its inhabitants as prisoners (al-Baladhirī, ed. cit.; Brooks, T.H.S., 1878, xvii., p. 195). Umar had al-Lādhīkīya rebuilt, fortified and ransomed the inhabitants from their captors. Yazid completed the restoration of the city after ‘Umar’s death and he also put a garrison in it. According to another story however, Yazid’s services to the town were only the renovation of the defences and the strengthening of the garrison (al-Baladhirī, ed. cit.; Masʿūdī, Murādj al-Dhahab, Paris, viii., p. 281).

2. Al-Nicephoros Phokas the Patrician, town and the whole of Northern Syria from the Byzantines (Yaḥyā b. Saʿīd al-Anṭākī, ed. Kratzkovsky and Vasiliev in Patrolog. Oriental., 1924, xviii., p. 816). In 980, according to Yaḥyā b. Saʿīd, who, Rosen thinks, took his statement from a local chronicle of al-Lādhīkīya, the emperor Basil II appointed a certain Karmarūk, who had distinguished himself in an expedition against Tarabulus which belonged to the Fātimids, to be governor of the town. When it was besieged by the Arabs Nazāz and Ibn Sīkīrī, he was captured during a sortie, and beheaded in Cairo (Rosen, Zephist. Imp. Akad. Neud., xiv., p. 16 sqq., 153 sqq.). Michael Burtzes (al-Burtīzī) in 992 put down a rising of the Muslims in the town and had them deported to Bilād al-Kūn (Yaḥyā, ed. Rosen, op. cit., p. 30, 237). In 1086 al-Lādhīkīya belonged to the Banū Munṣūdī, Saṭīr (Derenbourg, Conqu., p. 27 sqq.) who had, however, to cede it to the Salāḥī Mulk Shāh. In August 1098, the Count of Normandy took the town; it then passed in rapid succession to the Byzantines, to Bohemund of Taranto, to the Byzantines again and finally after 18 months’ siege, to Tancred of Antioch (Nohrich, Gesch. der Kreï., Jerusalem, p. 45, note 8). In 1104 we again find the Greeks besieging it by land and sea, and Bohemund promised the Emperor Alexis Comnenus in the treaty of Devol (1105) the cession of this πρωτεύον of other places (Anna Comnena, Alexias, Bonn, ii., p. 241, 4). Tancred however soon afterwards with the help of a Pisan fleet took the town which in the meanwhile had again passed to the Muslims. The governor of Ḥablūt took and sacked it in 1156; in 1157 and 1170 it was visited by two severe earthquakes, in which only the principal Greek church remained intact. On July 13, 1160, Saʿīd al-Biḍ al-Baṭūlī took the town (‘Imād al-Dīn, Fath, p. 141; Alī Shīrāzī, Kitāb al-Rauṣūṭ, ed. Cairo 1257/1258, ii., p. 128 = Hist. Orient. des Crois., iv., p. 361). In autumn 1197 Bohemund III succeeded once more in conquering al-Lādhīkīya or a part of the town at least. In 1223 the Ḥalābīs destroyed the town or its citadel out of fear of the Christians approaching on the Fifth Crusade. But even after this (since 1197), half the city remained in possession of the Franks. Baibars in 1275 demanded that they should hand over this part of it. In 1281 al-Lādhīkīya belonged to the emir Sonqor of Dimashq, to whom the Sultan of the xuṭūt century was placed in the new province of Tarabulus (‘Umarī, Tūṣfī, p. 182, in R. Hartmann, Z. D. M. G., 1916, p. 35; Khālīl al-Zāhirī, Zubdā, ed. Ravisse, p. 48; Dīwān al-İnābī,}
Laghuit, a town and a oasis in Southern Algeria, 250 miles south of Algiers in 30° 55' East Lat., 33° 48' N. Lat., at 2,400 feet above sea-level. In 1911 it had 5,958 inhabitants of whom 555 were Europeans. Laghuit which forms part of the "Territoire" of Ghardaia is the capital of a mixed commune and a native commune of 6,650 square miles with 19,810 inhabitants.

The town and the oasis lie on the right bank of the Wèd Méi, which comes from the Diebel Amîr and finally under the name of Wèd Djedi enters the Shîj Melghir in the south of the province of Constantine. The houses lie in terraces on the slopes of two rocky hills, spur of the Diebel Tisgrine, the European quarter on the north-west slope and the native quarter on the north-east slope. It is defended by a wall and two forts on the summit. The oasis extends in a semicircle north-west and south-east of the town. The north-west part is the most extensive and contains palmgroves and fields of cereals. A canal led by a dam from the Wèd Méi called the Wèd Lekhier provides for the irrigation of the gardens. The palm-trees to the number of 30,000 produce dates of mediocre quality, but they supply the food of the inhabitants. The situation of Laghuit between the southern Oran and southern Constantine at the point where roads diverge to the west, to the Ulûd Sidi Shâhîk, to the south of the Mabr and to Wargà, to the east to the Ziban and Biskra, makes this place a considerable centre of commerce.

History. In the tenth century A.D. there was already on the banks of the Wèd Méi a little town, the inhabitants of which, after having recognised the authority of the Fatimides, took part in the rebellion of Ali Yazid. The country round was inhabited by wandering Berbers of the family Maghrâwa. The Hîlîfî invasion brought other tribes of the same stock into this region, notably the Kiel, driven out of the Zab, who founded a village called Ben Bala. Another Kûr (Bu Mentala, Nadjâl, Sidi Mimmun, Badja, Khashat Ben Fortî) were built by other refuges, some of Arab origin (Dawawida, Ulûd Bu Zayan), others came from the Mabr. These groups together took the name of al-Aghuat.

We know very little of the history of this town down to the xvith century. At the end of the
xvith century it paid tribute to the Sultan of Morocco; in 1666 the Ksour of Badila and of Kasbat Fotah were abandoned. In 1698 a Marabout originally from Tlemcen, Si al-Hadjdj Aissa, settled at Ben Btta, imposed his authority on the people of the three other Ksour and on the neighbouring tribe of the Larba. Under his leadership the people of Laghut defeated the people of Kasrt al-Ajafta but were forced to pay tribute to the Sultan of Morocco, Mlly Isma'il, who camped under the walls of the town in 1708. After the death of Si al-Hadjdj Aissa (1738 A. D.) the history of Laghut is reduced to that of the struggle between the two wiks who disputed control of it, the Ulad Serghine, of the south-west quarter and the Hallaf who inhabited the north-east quarter. In the middle of these feuds which bathed the oasis in blood, the Turks made their supremacy recognised. In 1727 the Bey of Titteri had imposed an annual tribute on the Kfitrians. The Mzabis driven from the oasis where they had acquired a part of the gardens, formed with the nomads of the south a confederation, over which the people of Laghut triumphed with the help of the Larba. Towards the end of the xvith century the Turks reappeared and enforced once more their suzerainty over Laghut which had gradually casting off. The Bey of Mdea fell in the first expedition (1784), but the Bey of Oran, Muhammad al Kabir, seized the town and destroyed the quarter of the Ulad Serghine (1786). His successor Othman then took the field against the Hallaf whom he scattered (1787).

The two enemy factions were not long however in reorganising themselves and civil strife began again until the chief of the Hallaf, Ahmad b. Sâlim, succeeded in making himself master of Laghut and the neighbouring Ksuis (1828). But peace did not last long. The Ulad Serghine supported by 'Abd al-Kadir regained the upper hand in 1837. Their chief al-Hadjdj al-'Arbi was appointed Khalifa by the Amir. He could not hold out and was forced to take refuge in Marh. His successor 'Abd al-Bâki was no more fortunate, although he had 700 regular troops and a cannon. In obedience to the Amir's orders he tried to imprison the notables but this provoked risings and he had to leave Laghut (1839). Al-Hadjdj al-'Arbi, again appointed Khalifa, was defeated by Ahmad b. Sâlim in alliance with the Marabout of Ain Mahdi, Tidjâmi, and then taken prisoner. Thus becoming again lord of Laghut, Ahmad b. Sâlim placed himself under French protection who appointed him their Khalifa in 1844. A French column under the command of Colonel Marey-Monge on this occasion camped at the very gates of Laghut. The French came back again in 1847 but did not definitely install themselves till 1852, when the Sharif Muhammad b. 'Abdallah, already lord of Wargla, had gained entrance to the town with the help of a section of the Hallaf. To retake it from him a column was sent under General Pélissier. Laghut was taken by storm after a desperate fight in which General Boussacene and Commandant Morand were killed (December 1852). A permanent garrison was then stationed in Laghut and it became the base of French operations in the south.

LAHIDJ, a sultanate in South Arabia with its capital of the same name north-west of 'Aden, bounded by the Hâshâbi territory on the north, the Fatl territory on the east, the 'Akhrâbi land in the south and the Subâbi territory in the west. The capital, called Lahidj or el-Hôta lies at a height of 350 feet above sea-level between the two rams of the Wâdi Tuhar, which leaves the Mzab and the Wâdi Kabir, in a fertile oasis which, occupying a wide valley, owes its existence to its irrigation by canals fed from the mountain streams and wells of excellent water as much as 15 feet deep. The town is surrounded by palmgroves and fields on which cereals are grown, notably durra (coleus sorghum) and various vegetables; in addition to date-palms there are all kinds of fruit trees, including citrons and cocoa-palms, this being one of the most northerly points in Arabia where the latter are found. The town which was visited in 1593 by Ludovico di Barthema and in 1810 by V. G. von Schetz and which Niebuhr still found small, while it was not until 1878 (1504) houses and 800 straw or reed huts with almost 5,000 inhabitants, owes its prosperity to the Russo-Turkish war in the course of which in 1878 England temporarily proclaimed a state of siege in 'Aden and evicted the Arabs and Somalis from 'Aden. The latter went to Lahidj where they built themselves thousands of huts close to the town, which now form extensive suburbs and considerably increased the number of inhabitants. The sea of houses is dominated by the palace of the Sultan, built by Indian architects and four to five stories high with extensive subsidiary buildings; it is entirely built of clay and painted white. The palace is surrounded by a clay wall, to the east of which lies the town with its numerous rectangular flat-roofed houses, all built of sun-dried bricks made of a mixture of dung, clay, straw and dried grass and one or two stories high. The monotony of the picture is broken only by the very simple, insignificant mosques which are outlined in white round the roof. To the east of the palace in the shade of beautiful leafy trees and palms is a pleasant looking one-storied bungalow built by the Sultan for foreign guests. Round the town are scattered little groups of low straw huts, made of durra stems and surrounded by a hedge which are inhabited by Somalis and their families. In addition to these there are also Sawahills settled in Lahidj. The great mass of the inhabitants however are Yemen Arabs, who live in the numerous houses and mud-huts, which form the town with its narrow, winding, dusty streets. A part of the town is reserved for the Jews, who look wretched and are merchants and artisans. There are also a few Muslim Jews who are traders. All types of the population are met with in the bazaar street which is barely six feet wide. Not far from this is the armourers' market where smiths, Arabs and Jews have erected their simple workshops in open booths. The principal weapons made here are the fine grembanas while the long cavalry lances, which are used by the Yemen Kabulis are made in Dâlîna, Ansâb or Hawir and brought for sale to the Lahidj market. In
Wellsted’s time there were also 30 silk-weavers here, who got their yarn from India. The oasis is very well watered and the numerous little canals are fed by the perennial stream which passes not far from the town. Lahidj which plays an important part in the caravan traffic is connected by a road with ‘Aden and in 1907 was to have been linked up by a railway with ‘Aden and ‘Arib, part of which was actually surveyed but the plan was abandoned. England took up the scheme again in 1915 during the war and laid a strategic railway of 1 mile gauge for 25 miles to Lahidj; in 1921 it was extended a few miles beyond the oasis of Lahidj and now reaches Habil al-Humaisa, 8 miles N.W. of al-Hujat. The continuation of the railway to ‘Asir would open up Southern Yemen and increase the importance of Lahidj.

History. The name Lahidj (Lahij) which means a damp low lying area intersected by water channels, a place-name that admirably suits Lahidj, is connected by the genealogists with the Himyar Lahidj b. W Bair b. al-Ghawth b. ‘Abd b. Zuhar b. Abyan b. al-Humaisa and is applied by the geographers to a district in Yemen which forms part of the territory of Abyssinian north-east of ‘Aden. Al-Hamdani mentions it among the towns of the Yemen Tahama and says that in the time of Abyah b. ‘Amir b. al-Hithri dhi Abyah b. Malik b. Zaid b. al-Ghawth b. Sa’d b. ‘Afif b. ‘Abd b. Malik b. Zaid b. Salat b. Zuma al-Himyar al-Aqghar were alive. Vakiti says the same for the district of Lahidj which included the towns and villages. A number of poets, particularly South Arabsians, are familiar with the town, e.g., Kas b. Makshuk ‘Amir b. Madikarri, Khudai b. ‘Amir, Saliyd al-Himyar, ‘Amir b. al-Salimi and especially the famous ‘Umar b. ‘Abd al-Salih, who had property there.

After Yemen had been won for Islam, Lahidj shared the fortunes of this extensive province of the Arab empire Lahidj thus passed with Yemen under the Sa’di and then to the Abdūsins during their absorption by the Lakhīs in the time of Mu’izz al-Din Salāḥ. Lahidj was a favourite of the Lakhīs, who passed on to the Turks and to the English who finally ruled it. Lahidj was the capital of the short-lived kingdom of Lakhīs which arose after the break-down of the Lakhīs. It was the capital of the Lakhīs in the 10th century and was the seat of government. It was destroyed by the English in 1918 and has been rebuilt.

The town of Lahidj was the capital of the Lakhīs, who ruled the district for a short time. The town was destroyed by the Turks in 1897 and has been rebuilt.

the Sultan, or his sons were to enter or leave Aden free of duty. In spite of this treaty the Sultan, who was still sore over the loss of Aden, continued to intrigue against the English and supported the attack of the Arabs on Aden in 1840 and even had the English representative in Aden, Hasan Kahtib, murdered and regularly adopted a hostile attitude towards the English. His constant failures however forced him to change his policy and on February 11, 1843 he concluded a new agreement with England which was renewed in a more stringent form on February 20, 1844, before his monthly allowance was again paid to him. Muhsin b. Fadil, who had again allowed himself to be involved in a war with England in 1846 in which he was defeated, died on November 30, 1847. His son and successor Ahmad maintained friendly relations with England as it was in his best interest to do so. He died in 1849 and was succeeded by his brother Ali who resumed a policy of hostility to England and roused the hostility of the tribes against Aden. On March 7, 1849 a treaty was however concluded with the East India Company which was ratified on October 30, by Lord Dalhousie, but an attitude of constant friendship to England was not thereby secured. The Sultan even cut off supplies and it finally came to open fighting in which the Sultan was defeated on March 18, 1858 at Sheikh Othman so that he had again to reconcile himself to a peaceful policy. When in 1873 the Turks in their reconquest of the Yemen advanced on the hinterland of Aden, the English occupied Lahij and the Turks had to retire as a result of English diplomatic negotiations with the Sublime Porte. Whether these negotiations were instigated or approved by the Sultan had who had lost his independence — only nominal it is true — by the Turkish occupation of his territory, is not known. In any case in 1887, as E. Glaser records, Sultan Fadil b. Ali was receiving a monthly allowance of £1,250 dollars from Aden.

Ali b. Fadil (1866-?)

† July 1915

Abd al-Karim (since July 1915)

In the World War Turkey assumed the offensive from the Yemen in June 1915 against the English sphere of interest and Turkish troops in conjunction with those of the Imam Yahya b. Hamid al-Din, their ally, under the command of Muhammad Nasr reached Lahij in their advance on Aden where there was a battle with the English and their allies. In the course of the fighting the English troops evacuated Lahij and Sultan Ali b. Ahmad was shot. A counter-attack on July 21, 1915 restored Lahij to the English but by August 21 they were again driven out of Lahij which was occupied by the Turks who held it till the beginning of 1918. It was not till the collapse of Turkey on the Palestine front and the cutting of communications with the Yemen that the position became untenable for the Turkish troops and forced them to retire. Since July 1915, Abd al-Karim b. Fadil b. Ali has been ruler of the Sultanate of Lahij.

Lahidjan, the capital of the county of Saftli-Rud, and of the western region of the mountain Dulfak (cf. the ancient name of a people *Avesta*), which is the modern city of the same name, on the river COM-KHALA (Purdasar) which is 8 miles higher up flows through Langarud, the present capital of the district of Rani-i Kuh.

Lahidjan is the most important town in the Kuh region. It has a population of about 10,000 and is one of the largest towns in the region. Its location on the river COM-KHALA has made it an important trading center.

The district of Lahidjan is divided into seven cantons:

attested in the Caspian dialects (it is regular in Tætì; in Mæzandarān we have the parallel forms ṣamãdãj/a, Melgunof, p. 221). The fact that we have districts of Lāhidjān and Lāridjan in the adjoining provinces of Gilân and Mæzandarān is remarkable, but still more significant is the fact that Lāhidj of Shīrvān represents an idlet of Iranian Tæt surrounded by Turks (the Tæt are now found scattered throughout Daghistan, the country round Teherān, Ardabālādjan, etc.). Their present name has a rather general and vague character, cf. Tæt. The colony of Lāhidj may have retained the original dialect formerly spoken in the metropolis. The name of the silk ṣamãdãj suggests the former existence of a place called Lād, which produced silk (cf. Vâkût, s. v. Lāhidj). [Vâkût says that Lāhidj produces the silk called "Lāhidj" which is not of high quality]. With the suffix -ī, the word Lāh-li would mean the people of Lāid. It remains to be seen if the region of Lāhidjān is not the ancestral home of numerous Lāhidj colonies. At the present day it is spoken in Lāhidjān — although with certain local peculiarities — the Gilaki dialect but this parent dialect has here exercised a levelling influence, of which the foreign Turkish was incapable in the case of the local Turkic of Shīrvān. As Lāhidjān of Kûrdistan we may recall the hypothesis of Andreas that the name "Dimîv" by which the Zâzî call themselves (north of Dîyâr-bakr) is a metathesis of Dîlâm (Dailam). The emigrations from Gilân, still very obscure, certainly penetrated far to the west. — [To the names mentioned one might add perhaps that of Kâfâ-ī Lâhâjî in Kûhzistân (?); cf. Târîkh-i Guzîda, G. M. S., xiv., p. 240].

LĀHŌR, capital of the province of the Pandîb, British India, situated on the river Râwî, at 31° 35' north latitude, 73° 20' east longitude. Population in 1911, 223,687, of whom 129,531 were Muhammadâns. The foundation of Lāhōr is ascribed to a Turkish prince Vâlî, grandson of the political Lava or Loh, son of Râma, after whom it was named Lohāwâr. It is not mentioned in the chronicles of the invasion of Alexander the Great, nor is the town described either by Strabo or Pliny; but it may be the Labokla of Ptolemy, which Sir Alexander Cunningham (in his Ancient Geography of India) explains as Lâvâlaka, "the abode of Lava". In the Mahâbhârata, the Pandîb is called Tâkadesa, or the country of the Tâkas. According to Huien Tsâng, Tâkâ was the capital of the Pandîb in 633 A.D. He makes no mention of Lāhōr by any name capable of identification as such, though he traversed the entire province and stayed in it for quite two years. Possibly the Lohkot of the Purânas is Lāhōr. The Dēvān Bîgû (a compilation from the Purânas) gives an account of a battle between Bānnâl, Râdja of Lâvâpûr, and one Bîhêm Sen Kanêksûn, the mythical ancestor of the solar Râdja princes of Central India, is said to have migrated south from Lohkot, an event assigned by Colonel Tod to c. 145 A.D. One of the city gateways is known as the Bāhî Gate; the Solankhis and Bâtis of Râdjûtpûr point to Lāhōr as the seat of an earlier settlement. The first distinct mention of Lāhōr occurs in the history of the campaigns of Subûktâgin, and of Mahmûd of Ghârîn, when the Brahman kings of the Kâbûl valley, being driven from Pâshâwâr and Ohind, established their new capital first at Bêra on the Dêhâlám, and then at Lāhōr. Both Dji Pâl, and his son Anang Pâl, the successive antagonists of the Ghârizi invaders, are called Râdjas of Lâhōr by Fârîsha, according to whom the Hindu dynasty was subdued in A.D. 1031, when Lâhōr became the residence of a Muslim governor under the king of Ghârizi. A final insurrection of the Hindu was quelled by Mawûdûd in 1042, and the city was left in charge of Malik Ayâr, whom Muhammadan tradition regards as the founder. During the reign of Mâshûlî III (1099—1114), Lâhōr became the capital of the Ghârizi dynasty, but was captured in A.D. 1186 by Shâh Shâh-al-Dîn, known as Muhammad Ghûr, the Muhammadan conqueror of India. The town was sacked by the Mongols of Cîngiz Kâhân, and of Timûr, and in the reign of Mubârâk Shâh it was "a desolate waste in which no living thing except the owl of ill-omen had its abode" (Elliot-Dowson, iv. 56, 57). Lāhōr remained insignificant throughout the period of the Pathân dynasties. In 1356, Baholulodî seized Lâhōr as a first step to power. It was plundered by Bâbâr's troops in 1524.

Even at this time the Pandîb was an almost uninhabited waste, except for a few walled cities in which the Hindu could exist in some security from the frontier raids. As Lâhōr and Kâbûl every year used to make raids on the Pandîb, and for this reason the province the decadendent was depopulated for a long time, and very little agriculture was carried on. Rai Râm Deo Bâht, of Pâtîlâ, rented the whole Pandîb from the governor of Lâhōr for 900,000 takâs (£ 2,000) (Bâbâr's Memoirs).

Under the Great Mughals, Âgra, Dîhit, and Lâhōr were the three chief cities and mint-towns of the Mughul Empire. Akbar held his court here from 1584 to 1598, and repaired and enlarged the fort. In the time of Âjâhârângh, who made it a secondary capital, Lâhōr reached its zenith of wealth and splendour; the tombs of his emperor and Kâbûl every year used to make raids on the Pandîb, and for this reason the province the decadendent was depopulated for a long time, and very little agriculture was carried on. Rai Râm Deo Bâht, of Pâtîlâ, rented the whole Pandîb from the governor of Lâhōr for 900,000 takâs (£ 2,000) (Bâbâr's Memoirs).

The flat landscape included in the misfortunes which attended the decline of the Mughul Empire. Situated on the high-road from Afghanistan, it has been exposed to the visitation of every Western invader, and suffered from the successive conquests of Nadîr Shâh, Ahmad Shâh Durrânî, and other less famous depredators. Lâhōr was a bone of contention between the Sikhs and the Muslims, and the great city of the Mughul princes and their viceroys was reduced to little more than a heap of ruins. But the rising of Sikh power under Ranjit Singh (1798 A.D.) made Lâhōr once more the centre of a flourishing realm. It relapsed into anarchy after Ranjit Singh's death. Then followed the First and Second Sikh Wars, and annexation to British India in 1849. Since that time the capital of the Pandîb has grown steadily, and a new town covers a large tract which was recently a wilderness.

The native city is a walled town with thirteen gates. It has been a municipality since 1867. The old crafts are moribund, but have been replaced by trades of a modern character. There are power mills — cotton, flour, iron — and a large agricultural market. The European quarter, or Civil Station, lies to the south and east of the city, and is a large administrative, educational, and business centre. The older part is known as Anârkâlî, and here are the buildings of the Government Secretariat,
Lahor is a great railway centre, and the headquarters of a big system, the North Western Railway, with extensive workshops and a large railway colony.

**Laila (A), night, Laiat al-bar'a, Laiat al-Kadr, see Kamāsīn.**

**Laila 'Akhyaliya, an Arab poetess, daughter of Abdul-lah b. al-Kahfāli (a) b. Ka'b b. Mu'aywa of the tribe of 'Uqai b. Ka'b. She got her name from the fact that her father — according to other traditions one of her ancestors Ka'b or Mu'aywa — was known as al-Akhayl (= "the falcon"); perhaps it was a common name in her family and the phrase hāyūn laul-ahshā in her verses glorifying her family may refer to this (Al-Ghámī, x. 80; Hamdān, p. 711). Laila is usually mentioned in connection with her fellow-tribesman Tawba b. Humayyir al-Khafadji; fragments of her laments for him are preserved in the Kitāb al-A'zāhī. She also wrote an elegy on the death of the Caliph 'Uthmān. It is also recorded of her that she exchanged lampoons with Ṣabīqa al-Dā'ī. Her conversations with Mu'aywa, 'Abd al-Malik and Ḥaḍīl lātīb b. Yaṣuf are several times recorded. She begged the latter, in her old age to take her to her uncle Kutaba b. Muslih in Khorasan and she is said to have died on the way. She must therefore have lived in the second half of the first century A.H.

**Bibliography:** Al-Ghámī, x. 67—84; Ibn 'Abd al-Malik and Ḥaḍīl lātīb b. Yaṣuf. She was related to him and always retained a grateful memory of him as is shown by her elegy full of deep feeling on his death. In her case the lack of information about her is characteristic of the old Turkish conception of women about whom very little is spoken in public. She was Carly married but divorced very soon afterwards. She had the reputation of a Leb-ban. She cared very little about the opinion of the world. She lived for her pleasures and her writing. A few anecdotes relate to her infringements of the social code of Turkish ladies. She joined the

Mewlewī and was buried in the Mewlewī convent in Galata. She died in 1264 (1848).

Lalit Khamlm left a regular Dīwān entirely lyrical which was several times printed (Bīlāl 1260, Constantinople 1267, 1299 etc.). Although she is still completely in the purely Oriental conventional period of Turkish poetry, her place at the end of the old school is not to be denied. Her verses are simple and clear and free from the affected bombast of the time and with their classically correct language much easier to understand than the majority of contemporary poets, whereas admirers of the old school like M. Nadjī can find very few "good" verses in her. Her hymns (alamāri) and elegies were particularly admired. She was celebrated for her ready wit.

LAK, 1. the most southern group of Kūrd tribes in Persia. According to Zain al-Abīdin their name (Lak, often Lāk) is explained by the Persian word lāk (100,000) which is said to have been the original number of families of Lak. The group is of importance as the Zand dynasty arose from it. The Lak now living in Northern Luristan are sometimes confused with the Lur (Zain al-Abīdin), whom they resemble from the somatic and ethnical point of view. The facts of history now show that the Lak have immigrated to their present settlements from lands further north. The Lākī language, according to O. Mann, has the characteristics of Kurdish and not of the Lūt dialects [cf. LŪK]. Čirikov, Futovets Journal, St. Petersburg 1875, p. 227, says: "the Lur and the Lak speak different dialects and hate one another".

The Lak appear in the Sharaf-nāmeh, i. 323 alongside of the Zand, among the secondary Kurd tribes, subjects of Persia. According to Rabin, the Lak were settled in Luristan by order of Shāh Abbās who wished in this way to create some support for the new wāli of Luristan, Husain Khān, whom he had chosen from among the relatives of the old Shāfswardi Atābāgh (Tābih-i-ʻAlam-u-ărī, p. 369). Of these tribes, the Sīsīla had formerly lived at Māhidāsh (S.W. of Kirmānshāh); the Dīlīn take their name from Aft Dūlāf [cf. the article al-Kāsim b. 583] whose fields in the third (ninth) century lyeng in the north of Lurīstan [cf. SULLY], the Bādījūn of Zohīb (q.v.) as well as of Lurīstan say they come from Mawjīl and are evidently one tribe. The Lurīstan branch seems to have exchanged its Kurmandī dialect for
Lakki during its sojourn among the Laks in the time of Shah Abbas. Even after Shah Abbas there were several Lak tribes outside of Luristan. Zain al-Abidin (beg. of the 6th century) mentions among the Laks: the Zand, the Mafi, the Badjiyan and the Zandi-yi Kala (?). To the last tribe (according to Houtum-Schindler: Begele) belonged Karim Khan Zand (born in Perija, the modern Pari about 20 miles from Dowlatabad on the Suljanabad road). When at Shiraz, Karim Khan sent for the Lak tribe of Bairanwad. In 1212 (1797) the Bairanwad and the Badjiyan actively supported Muhammad Khan Zand in his attempt to take the power from the Kajjar (H. J. Brydges, A History of Persia, London 1833, p. 46, 58; R. G. Watson, A History of Persia, London 1866, p. 116). Under the Karim Khan several Lak tribes were broken up. The Zand have almost completely disappeared; in 1360 remnants of them were to be found among the Badjiyan of Khankin (Khurshid-Efendi, Siyaha-namii Huiia, Russ. transl., p. 112, 221); there are still a few Zand families in the Dorah-Farman district to the S.E. of Kirmanshah (R. M. M., xxvii., p. 39); a section of the Amala of Push-t-i Kahr claims to be descended from the Karim Khan tribe. At the present day there are Mafi at Waramin, Tirhan, and Kazvin.

According to a good list compiled by Rousseau at Kirmanshah in 1807 (cf. Fundgruben d. Orients, Vienna 1813, ii. 529) the following Lak tribes are listed as Lak: the following tribes: Kalhur, Mafi, Namaki, Djalilwam, Payarwalm, Kalyia, Siftwam, Bahramwam, Karkki, Tawalli, Zifyarwand, Kakti, Namawlan, Ahmawlan, Bohii, Zilina, Harsini, Shaihwa. 

According to O. Mann and Rabino, the Lak tribes of Luristan are as follows: Silsila (9,000 families), Diltifan (7,470), Tirhan-Amaria (1,352 families), the Bairanwad (6,000 families) and Diltifan (1,000 families) forming part of the Balagi-Girawi group, a total of about 15,000 tents. The Bairanwad and Diltifan live to the east of Khurramabad around the sources of the river which flows through this town; the Silsila and the Diltifan live on the right bank of the Shahr and Khawa respectively while the Tirhan (perhaps = Tarkhan, i.e. "exempt from taxes") live between the left bank of the Saimara and the lower course of its left bank tributary from Khurramabad. The territory occupied by the Lak and including N. and N.W. Luristan is sometimes called Lakistan.

The cohesion of the Lak tribes is evident from the fact that even before 1914 the Silsila, Diltifan and Tirhan were united under the authority of Naazar 'Ali Khani of the Amiria clan. In addition to the bonds of tribe and language, there is that of religion for all the Diltifan and many of the "Amali of the Tirhan belong to the extremist Shia sect of the Akhi Hak (cf. Suılan Iskii).

On the other hand the term Lak in Armenian and Leki (plural Lek-ebi) in Georgian means the Legzi/Legzii of Daghistan (where the e may certainly name the value of aji: Legzi). This last name seems to have been applied to the highlanders of Kuh, living in and around the sources of the Samur, and later to have been extended to all the people of Daghistan, although no people of the Caucasus actually call themselves Legzi/Legzi. Marquart, Beiträge z. Geschichte und Sage v. Iran, Z. D. M. G., 1895, xxh., has attempted to explain the Arabic al-Lozk by the addition of the Persian suffix -i to the name Lek (or Lak), cf. Sago, "inhabitant of Sistān".

LAKHM (HAN). With the exception of the Lakhmid clan in the 'Irak, so frequently celebrated in the old Arab poetry, the pre-Islamic history of this family is not well known and is full of legend. Their traditional genealogical tree is given in the article DJUHĀM. According to it Lakhm was of Yemen origin and was the brother of Djūhām and Šamila. These genealogical tables may be taken for what they are worth for Daghistan. As to Lakhm, Yemens and Ma'addis claim descent from the powerful Ibrāhīm b. Hira. As to the reputed relationship of Lakhm with Djūhām and Šamila, it must correspond to facts sufficiently established in the century when Išām first appeared. It shows that the three groups were then connected by community of aims and interests. This forms a solid guarantee of a genealogical connection even if open to criticism in other respects.

Of the three sister-tribes, Lakhm was undoubtedly the most illustrious and the oldest also. Legend connects it with the descendants of Abūnām. A Lakhmid is said to have taken Joseph out of the well into which his brothers had thrown him. But by the year of the Hijra, the Lakhm had been ravaged while the Šamila [q.v.] and notably the Djūhām who under the Omayyads played a leading part, had increased in importance. Two centuries before the Hijra, the surplus Lakhmid population had spread over the lands in the north of the Peninsula in Syria and Palestine and in 'Irak where they established the Lakhmid phylarchate of Hira [q.v. and the article DJADIMA], continually at war with the Qassāns of Syria. In Syria we find the Lakhm settled in the same cantons as the Djūhām. Like the latter, they had adopted Christianity which had also become the official religion of the Lakhmids of Hira. When Išām appeared, the Lakhm had practically absorbed their relatives, the Lakhm, of Syria, a peaceful absorption by mutual agreement. In the first century A.D. the two tribes were usually named together as forming one group, and even when reference is made to a "chief of Lakhm" we can hardly be wrong in thinking he also ruled the Djūhām. The nisak Lakhm becomes rare in comparison with Djūhām. In the wars of Išām, during the conquest of Syria, at Yarmūk, at Siffin, and later in the course of the campaigns under Yazid I, against the sacred cities of the Hijāz, the two tribes fought under the same chiefs and under the same banner. "Lakhm" became
practically reduced to little more than a title of honour. Its archaic flavour, the glorious memories which it recalled of the phylarchs of "Irak", very impressive in the "Burke" or "Almanac de Gotha" of the Arabs. But as to the Lakhmids, they no longer have a separate existence from the Djughdam. When in the lands to the west of the Euphrates, we find them mentioned alone, the name must be taken to mean the Djughdam. It is the latter that the chroniclers usually have in mind.

(L. Lammens)

LAHKNAU, former capital of the province of Oudh (Awadh), now secondary capital of the United Provinces of Agra and Oudh in British India; situated on the river Gomti, at 26° 52′ N. L., 80° 56′ E. L. Population at the 1911 census, 197,812, of whom 4,461 were Muhammadans. Nothing is known of its history prior to the foundation of its town; even the derivation of the name is uncertain, though the first syllable is a contraction of Ṭakmān or Lakhman. The oldest part is the Lāmān Tīlā, which was colonised by Šahīkh at the close of the thirteenth century. A member of this fraternity, Šāh Mīnā, who died in 1478, gained much saintly repute and his tomb is an object of pilgrimage. Lakhnau's prominence began in the time of the Sūrī kings of Bihīlī. It was occupied by Ilmāyīn in 1526, and taken by Bābur in 1528; under Aqbar it was the chief town of the Ṯārī. The decay of the Moghul Empire enabled Saqādat Khān (1724) to found the dynasty of the Nawāb-wāzers of Oudh, who ruled as independent governors, and latterly as kings of Oudh, till 1856. Saqādat Khān, a Siyājī from Persia, of the Šāh's sect, a waizir of the Empire, destroyed the power of the Šahīkh of Lakhnau, but retained his capital at Faizāhād. He adopted the Ṭāh as the dynastic hādīr. The grandeur of the city dates from the time of Ṭāh al-Dawla (1775—1797), the fourth of his line, whose reckless munificence has passed into a proverb, and whose reign was the golden age of Lakhnau, which he made the capital of Oudh. East of the beautiful Victoria Park (1857) is a fine group of buildings, the Kām Darwāzā, the Great Imāmābārā, and a mosque, also by Ṭāh al-Dawla. The second and third are in the Māchi Bāwan, or old fort; here also is the Lakhmān Tīlā, surmounted by the mosque of Awrangzēb. The Great Imāmābārā is the chief architectural glory of the city. To the same period belong the Martiniere, built by General Claud Martin, first as a residence for himself, afterwards converted into a school Saqādat Ṭāh Khān (1797—1814) constructed the Dilkhuspah palace and the Sikandra Bāgh. He and his successors continued to adorn the suburbs with public ornamented parks and country seats. The meretricious style of the period marks the decay of Indian Muhammadan architecture.

Ghāzī al-Dīn Haidar assumed the title of king of Oudh. He built the Chattar Manzil palaces, and the mausoleum called the Shāh Nadjaf.

Muhammad 'Ali Shāh (1837—1842) reformed the administration, and by his economic measures stayed the downfall of his house for two more reigns. His name is associated with the buildings at Hussainābād. During the reign of his son Amdjad 'Ali Shāh, all the old abuses returned, and the government of the country became utterly paralysed. Wajīd 'Ali Shāh (1842—1856) was the last king of Oudh. He built the Kāsār Bāgh palace, a florid structure of stuccoed and gilt brick.

Mal-administration by one of the most extravagant courts known to history led to the annexation of Oudh in 1856 during the viceroyalty of Lord Dalhousie. Some of the famous buildings in the Mutiny took place at Lakhnau, the name of which will be ever remembered in connection with the gallant defence of the Residency.

Modern developments have been stimulated and controlled by the wise generosity of the Local Government, and Lakhnau with its suburbs is regarded by many as the finest city in Northern India. As a centre of Urdu culture, it is the rival of Dīhil itself and is a seat of learning with unusual facilities for female education. The Canning College (1864) in the Bāshās Bāgh, King George's Medical College (1910), and the Isabella Thoburn College for women, are now included in the University.

Secondary establishments include the Colvin School, and the Reid Christian College. The Provincial Museum is also in Lakhnau. The Cantonment is the largest military station in the United Provinces. The city is a great railway centre, and the head-quarters of the Oudh and Rohilkhand Railway are here. There used to be an extensive native manufacture of gold and silver brocade, muslin, embroidery, brass and copper ware, but here as elsewhere indigenous arts have fallen on evil days.

LAHKNAUT. [See Gaur.]

LAKIT. [See Luka.]

LĀL-EZĀNĪ. [See Mehmēd Lāl-e-Zānī.]

LĀM (BANT LĀM), an Arab tribe living in the mountainous region of the Tigris ("Ali Ġheri, "Ali Ġharī, "Amira). According to the statistics of Khurāshī Efendi (middle of the sixteenth century) there were over 4,400 families of Bani Lām west of the Tigris (between "Amira and Shatt al-Hai) and 5,070 east of the Tigris, along the Persian frontier from Mandali to the region of marshes (Khāh) into which the Karkhāh disappears. 17,450 families of the Bani Lām went over to Persian territory between 1788 and 1846 (the southern parts of the Punji Kūh, the domains of the wāls of Khwāz), some columns were also established east of the Karkhāh and at Fallāthīya. The Bani Lām claim to have originated from...
the neighbourhood of Mecca (Lyclama a Nijeholt, *Voyage*, iii. 225) and their eponym was their chief Fardād Lām. The Bani Lām, for the most part Shīʿīs, were on friendly terms with the wālis of Hūwaizā (the Muḥāṣṣaʿa, Arab sayyids, q.v.) who played an active part in Persian politics in the time of the Safawīs. In 1678, 1715, 1742, 1748 the Bani Lām in connivance with the chief of Hūwaizā rebelled against the pāshās of Baghdād. Less happy were the relations of the Bani Lām with the Lūr wālis of Pusht-i Kūh who deprived them of the villages of Bāyāt, Deh-i Lūrān and Baksāy, but as a rule the Bani Lām got on well with their Lūr neighbours.

`Ali Riḍā Pāshā (in 1836) and Nadīb Pāshā (after 1843) inflicted heavy defeats on the Bani Lām. The central Persian government also (expeditions of Muʿtamid al-Dawla in 1841) drove the Bani Lām from the left bank of the Karḵa but, protected by the mountains of Pusht-i Kūh to the north and on the east and by the dependency, the Bani Lām kept till 1914 a position of autonomy between Turkey and Persia. The presence of the Bani Lām and the Sagwān Lūrs in Deh-i Lūrān, Pūsht-i Pul and Dūstād had stopped commercial traffic by this direct route. The unity of the tribe was lost in the sixteenth century; the section on the right bank and that on the left of the Tigris had each its own shākīh. In 1821 the energetic Madhḵūr (Matḵūr), son of Djanḏil, succeeded the deceased Shāhik Aḵtar but Layard noticed that he had already little authority over his rivals. Lady Blunt says of Shāhik Mīrbān and her son Boneye, Shāhik Ghūḏān, son of Boneye, at the beginning of the war of 1914 attacked the English force at Ahwāz but was soon disposed of.

(V. MINORSKY)

**LĀM**, 23rd letter of the Arabic alphabet, with the numerical value 30. For palaeographical details see the art. ARABIA, plate I.

**LAMAS-SŪ** (Turk. "river of Lamas"; Ar. Lams), a river in Cilicia, coming from the Taurus, a day’s journey from Ṭarsūs between Ayāsh and Mersina; in ancient times it marked the boundary between the two Cilicias (of the mountains and the plains). On the banks of this river exchanges of prisoners with the Greeks and the payment of ransoms were several times made. Some of these took place in the reigns of Hūrān al-Rashīd and the emperor Nicolephoros I in 180 (805); the second under the same caliph and emperor in 192 (908); the third in the reigns of the caliph al-Walīḥ and the emperor Michael III the "Drukad" in Muḥarram 231 (Sept. 845); the fourth in 241 (856) and the fifth in 246 (860)

under the same emperor and the caliph al-Muṭawakkil; the sixth in 283 (996) under the caliph al-Muḥtafd and the emperor Leo VI; the seventh called "redemption from treachery" under the same emperor and the caliph al-Muktāfi in 292 (905); the eighth three years later in 295 (907); the ninth took place in 305 (917) under the caliph al-Muṭādīr and the emperor Constantine Phorphyrogenetos; the tenth took place in 313 (923) under the same rulers; the eleventh in 326 (938) under the same emperor and the caliph al-Ḫājī; the twelfth took place in 335 (946) in the caliphate of al-Muḏf through the intermedial of Saif al-Dawla the Ḥamīdīd, lord of Aleppo. This river had at this place either a ford or a bridge which the ransom prisoners crossed. There was also a town of the same name (أدغ، Lamus) on this river not far from the sea.

(CT. HEARTY)

**LAMGHANĀT, a district in eastern Afghanistan. It is often referred to by Babur, see W. Erskine’s translation of his "Memoirs", p. 141 and P. de Courteille, i. 287. The name is fancifully connected with Lamech, the father of Noah. (H. BEVERIDGE)

**LĀMĪ, nom de plume (taghālit) of SHĀHĪK MAḤMŪD b. ḤOṬHM b. ṬĀLĪ AL-NAYṢĀKĪ, a celebrated Sufi writer and poet of the early part of the reign of Sulaimān I, the era, not only of the greatest political development of the Turkish empire, but also in which literature was most cultivated. He was born in Brussa, the son of the *defterdar* of Sulaimān Bāyāzid’s treasury. His grandfather had been taken by Timurlenk after his invasion to Transoxania (Samarkand) where he learned the art of *nāʿābālīk* (embroidery and painting) there highly cultivated and on his return to Asia Minor introduced the first embroidered saddle. On the completion of his theological studies with Mollā Akhawain and Mollā Muḥammad b. al-Hādījī, Hasan-zāde, Lāmī, who had an inclination to *Sūfism*, became *muwīd* with the Nayṣākī Shāhīk Aṭīf b.-Ṭāhir Sāyīd Ṭāhe Ṭāhkitā, who spent his whole life in the calm retirement of a Sufi, free from external cares and favoured by the patronage of Sulaimān Selim and Sulaimān who frequently showed signs of their favour to him and his numerous family; he lived in Brussa writing industriously till his death in 938 or 940 (1532 or 1533). He was buried in the mosque built by his grandfather on the citadel of Brussa.

The versatility and quality of his literary output in prose and poetry is really astonishing. But his work was not so much original as translations and
adaptations, as was characteristic of the period which regarded Slavish attachment to Persian models as the highest ideal. He usually took as his model "Lāmā" then the most celebrated poet of Persia with whom he had a further link in their both being Naṣḥījānīs and therefore was called "Lāmā-i Rūm." His proximity is greater than that of any Turkish writer. We have a cycle of nine romantic poems from his pen. His importance to "Turkish literature is considerable but is greatly exaggerated by von Hammer who devotes the longest monograph in his Gesch. d. osm. Dichtkunst (119-209) to him. Lāmā’s style is still eumorphically laced and simple. There is not yet any trace in him of the overwhelming turidity of the later artificial classicism, yet it must be confessed that most that is beautiful in him is due to his Persian originals. Zīyā Pāsha in his Kārāštāt has for this reason paid no attention to him.

The list of his works as given in the Sharaf al-Insān numbers 24, but in reality there were more. His prose writings are: the translations of Djami’s Sufi works: Naṣḥāt al-Casr (biographies of Sufis with the sub-titles Fatih al-Majdhūbat il-Turāb ʿAbd al-Majīd al-Dībādžī-i Mēkāh, and Sharāhāt al-Nuṣrahāt (*The witnesses of prophecies*), printed at Constantinople in 1293); the Sharaf al-Insān: "The worth of man," considered by Lāmā to be his masterpiece which is a Turkish version of Part 22 of the 51 Arabic tractates (Kasāʿīl) of the Ikhwān al-Safā, the struggle between man and animal (ed. and transl. by Dietrich, Berlin 1858, Leipzig 1879 and 1881: Thier and Mensch vor dem Konige der Genien). His works of a religious character are Mūmānī ʿaswāt al-Insān, translation and commentary on the 100 verses of Ḥirūsīn Nuṣrāw ar-Rāyī. He also wrote a collection of letters, Munazara, a commentary on the Diwān-i Gulistan of Šūrūl, and Tharīya. "Book of examples," a collection of tales and allegories, Int. Constantinople, n.d.; a Madgha al-Lajwāf, or Latāf al-nūmā (a collection of often very daring anecdotes, quite in the style of Boccaccio’s Decameron, which received its final form from his son, ‘Abd Allāh Lāmī, also known as a poet). Finally as a kind of transition to pure poetry he wrote two munāzara (disputations in prose and verse later so popular), namely: Munāzara ʿAbd Allāh Ṭāh̄ā ("Disputation between summer and winter"), Constantinople 1290, with the title Munāzara-i Sultan Ṭāhā ʿālā Shahrīyā Ṭāh̄ā and Munāzara ʿAbd Allāh ʿalā Shahrīyā ("Disputation between Soul and Spirit").

His very much more important poetical works include a large Dīwān of about 10,000 verses which contain much that is beautiful and original; besides Lāmā’s, also contains the Shahāts in 1288; transl. by Pfrimmer. 'Vorbericht der Engel's Barza (separately printed at Constantinople Stadt Ferâ'at Vienna 1839).

His great Mālqāwā poems were of permanent influence; some deal in a popular faṭuwa with stories from Persian legends, namely: Salāmīn a.-l. al-Salām (d. dedicated to Sulṭān Selim), from Djami’s original; Wāz al-Rūmīn (d. dedicated to Sultan Sulṭān); from the original of Fakhrī Qanānī (d. 440 = 1530) and a version of the original of Naṣḥījānī al-Arūzī al-samarqandī; Wāz al-lāf al-Salām (from the Persian original of Tūṣūrī (d. 441 = 1650) translated at the express desire of Sultan Sulṭān (transl. by von Hammer, Vienna 1833); Forhād-nāma (transl. by von Hammer, Stuttgart 1812); Heft Paikar, "The seven beauties" (based on Hāfīz’s Heft Munāzara, which again goes back to Niẓāmī’s Heft Paikar). Besides the two allegorical dramas Gūrū al-Qizān ("Ball and Bat") and Ṣāmīn al-Parvānā, "Candle and Butterfly", the latter probably from the Persian of Ahī Shirāzī, he also wrote two Māhkāsāt’s of a religious nature, the Naṣīhāt-i Ṣahāwa (illustrated MS. in the Aṣḥāb Library, No. 249) and Manzuh (or Manzūhī Uwātī al-Karnī). Finally there are his political allegories Ḥusān al-Dīn (ed. translation and annotated with Lāmā’s Turkish version by R. Dvorš, Ḥusān u dīn, persische Alle- logrie von Fattālī aus Niẓām). For the Persian literature of Lāmā, see Lāmā-i Rūm., ed. Flugel, Leipzig 1835-1848.

(TH. MENZEL)

LAMTA, a large Berber tribe of the Banū family. Its exact origin does not seem to have been known to the Arab and Berber genealogists, who simply make them brethren of the Ṣanḥiṭā, Haskura and Gazūla; others give them a Himyarite origin like the Ḥawwārā and the Lawītā.

The Lamta were one of the nomad tribes who wore a veil (mālqāwā). One section lived on the south of the Māzū, between the Massufa on the west and the Targa (Tuareg) on the east; they even seem to have extended as far as the Niger In the south of Morocco, in al-Sūs, where there were Lamta who led a nomadic life, in company with the Gazūla, the Lamta occupied the territory nearest to the Atlas. On the coming of the nomad Arabs of the Banū family, the two sections of the Lamta were absorbed by the Ḣawwārā; the remaining sections then joined the Shabānāt, another Banū tribe, to oppose the Gazūla who joined the Ḣawwārā in the territory of the Lamta of al-Sūs at the mouth of the Wādī Nūl (now Wādī Nūn) lay the commercial town of Nūl or Nūl of the Lamta, the first inhabited place one reaches on coming from the Sahara. Several Morocconic dynasties have struck coins there.
The jurisprudent Waggāq b. Zallī of Sidjūlmīsā, a pupil of Abū Imrān al-Fass, was a member of the tribe of Lamța; one of his pupils was ʿAbd Allāh b. Yāsīn al-Gazālī, founder of the Almoravid empire.

The country of the Lamţa was noted for the lamţa bucklers made at Nīl with the skin of the lamţ antelope.

Bibliography: al-Idrīsī, al-Bakrī, Ibn Khāl- dūn, Kitāb al-Ībār, indices, s.v. Lamţa and Nīl; Leo Africanus, Description de l'Afrique, ed. Schleifer, iii. 272, 437.

Lamţuna, a large Berber tribe belonging to the ethnic group of the Šāhūdā who lived in tents, and led a nomadic life in the desert to the south of Morocco with other tribes whose members veiled their faces with the Ḳīkān (q.v.)...

At first idolators, the Lamţuna embraced Islam and converted also the Negro peoples who lived around them. After having had a series of independent kings, they fell into anarchy until Yahyā b. Ibrāhīm al-Gudallī took control of them; having gone on a pilgrimage to Mecca in 440 (1048-1049) he brought back from Nāfīs the jurist ʿAbd Allāh b. Yāsīn al-Gazālī, who after having instructed the Lamţuna in the principles of religion and Muslim law, made himself their chief, conquered their neighbours, the Gudallī and Massūfī, and led them to the conquest of Morocco. He was the founder of the Almohad empire, also known as the empire of the Mulāththimūn or Lamţuna (cf. Almoravid). At the fall of the Almoravid empire the Lamţuna disappear from the history of Morocco. Their name is still borne by some tribes of Mauritania.

Bibliography: The first paragraphs of the chapter devoted by the Arab historians to the history of the Almoravid dynasty especially: Ibn Abī Zar, Raudū al-Kītāb; Ibn Khālādūn, Kitāb al-Ībār, ed. de Siane, i. 235 and 237; al- Bakrī, Kitāb al-Muḥiddīb, ed. de Siane, 1911, p. 164.-165.

(L. S. Collin)

LANKORAN (LENKORAN), the capital of the district of the same name in the province of Baku. Lankoran is the Russian pronunciation of the name which was at one time written Langur-Kusun (anchorage), or perhaps Langur-Kanun (place which pulls out the anchors) which is pronounced Lankarān in Persian and Lankon in Tālīšī. The ships of the Bākū-Enzeli (q.v.) line call at Lankoran, which has an open roadstead but at 8 miles N.E. of the town is the island of Sarā, which has an excellent roadstead which shelters the ships in bad weather.

In the district of Lankoran, de Morgan found monuments of very great antiquity (dolmens, tombs, cases of exposure of bodies in the Mazdaēan (†) fashion), but it is not known at what period the town of Lankoran was founded. Certain statements (cf. Tārīḫ-i Alām-ārād under the year 940 [1533] in Dobr. Arz. zusange, IV, 283; and Sha'īb `Alī Hāna [about 1725 A.D.], Tārīḫ-e Lārābād, ed. Balfour, p. 157) suggest that the capital of Tālīšī was originally at Asṭārā; towards the end of the xviiith century Lankoran became the capital of this khanate. The whole district was annexed by the Russians under Peter the Great (treaties of 1723 with Tāmāsāb II and 1729 with the Afgān A chcraf) but returned to Persia by the treaty of 1732. Retaken by Count Zubow in 1796, Lankoran was retaken in 1812 by the Persians who fortified it. On the 9th Muḥarram (Zaḥrūr) 1228 (Jan. 1, 1813), Lankoran was taken by storm by General Kotliarewski after a brave resistance of the Persians. This event hastened the conclusion of the treaty of Gūlīstān (1813) by which Persiaced to Russia part of Tālīšī to the north of the river Aṣṭārā. From 1846 Lankoran was the capital of the district. The fortress was dismantled in 1865. Since 1921 Lankoran has formed part of the republic of Aḏharbājān, a member of the Soviet Union.

The population of the town, which was 3,920 in 1867, had reached 11,100 in 1897. The district of Lankoran has an area of 5,000 sq. miles and in 1840 had 30,000 inhabitants and in 1861 99,082. Later the district was reduced to 2,000 sq. miles; in spite of this, its population in 1897 was 125,895 of whom 46.5% were Aẓāri Turks, 46.2% Russians, 6.9% (in the north) and Armenians (2.0%).

The district is composed of 3 zones: to the north, an eastern continuation of the steppes of Mūghān; to the east, a marshy littoral intersected by lagoons and covered with a rich subtropical vegetation; to the west are wooded mountains running from 5,000 to 7,500 feet above sea-level which rise from the Russian frontier forming the border with the Persian province of Aḏarbastābī. The district is rich in forests and has good fishing.

(L. S. Collin)

LÄR. 1. Capital of the district of Lārīstān, to the southeast of Fārs. Very little is known of Lārīstān and its early history. The country appears to correspond to the land of the dragon Hafṣūn-bōkht which was killed by Ardāshir Pāpakān. According to Persian legend, Ardāshir's adversary lived in the village of Ālār in the rustāk of Kudjarān which was one of the maritime rustāks (rūstāk al-isl) of the province Ardāshir-Khūra (Tabari, i. 820; Noldke in his translation of the Kūrmānak (p. 50) gives the variants Gallūr (?) and Kūchārār; the Shāh-nāme, ed. Mohl, v. 308: Kudjarān. Lastly the Armenian geography of the seventh century mentions a Kοδζάξχαται in Persia (Khūrdratāna) (cf. Marquart, Erdkarte, p. 44). The preencing of an a to the name Lār is also found in the name of the island of Lār (cf. below). Marquart identifies Kūchāhrān with the castle of Dūḡnān near Šīrāz; on the other hand the Fārs-nāme-yi-Yażūrī mentions a village of Kudjar-Khūrār in the canton of Gallāz-dar (the ancient Fāl [Fal] Bāl of Ibn Baṭ̄ūṭā; Kūhndžal = Kūndž + Bāl) immediately adjoining Lārīstān. According to a verse attributed to Firдавsī (cf. Vullers, Lexicon, s.v. Lād) but not found in the known editions of the Shāh-nāme, the town was
originally called Lār (and fell to Gurgin Milād, one of the heroes of the cycle of the Kayānīd Kai Khusrav). This would be a very curious case of the changing of d to r found especially in Armenian and in the Caspian Tati dialect (Darmesteter, *Ét.-iranien*, i. 73). The Fārs-nāma-yi-NAZRĪ mentions another legend according to which the people of Lār in Fārs had come from Lār in Dāmāwand (cf. below) the cold of which they could not endure.

The Arab geographers do not mention Lār, for apparently the old routes linking up the chief towns of Fārs, with Shāf and Kāīš, or Hurmūz (by Fāsā and Furg) avoided the town of Lār (cf. N. I. N., *Fārs*, p. 185, 187). According to Jamdalī, this was a wilayet near the sea and Ilūn Bātūta alone talks of Lār as a "large town, with springs, considerable rivers and gardens".

Lār had a local dynasty. Its princes, relying on the evidence already mentioned regarding the presentation by Kai Khusrav of the town of Lār to Gurgin, son of Milād, traced their descent from this hero. They were even crowned with the crown of their ancestor and this treasure was among the booty taken by the Šafāwīs in 1610.

The first prince of Lār to be converted to Islām (about 100) was Djalāl al-Dīn Ḥejāq. The dates given for the foundation of the town are 1415 and 1419 (Murad Šāb.-Khwād.). Fourteen of his successors are known but their order is not so certain; when in 1403 (1334), Ilūn Bātūta passed through Lār, the Sultan of Lār, or Turkom man origin, was called Djalāl al-Dīn, while according to the genealogy of the Milādnās, the Kābulīnlar (r) was ruling there between 1231 and 1253. The dependence of Lār on the Muzaffarids is shown by a gold coin of Shāh-Nuḏār (760-786) struck in Lār (S. Lane-Poole, *The Coins of the Mongols in the British Museum*, 1881, p. 240). In 1070 the troops of Muhammad Sultan, grand-son of Timūr, ravaged the eastern part of Fārs on the lines of Darab; Djalāmār-Lūr (Ez. Fasād, Fārs, i. 809).

There are Timūrid and Ghurān coins struck at Lār (O. Codrington, *A Manual of Medieval Nomismatics*, London 1904, p. 183). In the reign of the Milādnā Djalāh-dān (859-883), the Russian merchant Alānāsi Nikūn, passed through Lār in 1409 on his way to Hurmūz and India and in 1472 on his way from Hurmūz to Shīhz. The Milādnā Nikhrūsān "the just" (930-948) was a poet, musician and author; he died by the hand of a slave. His successor Ibāhim Khān submitted to the Šafāwīs and received the title of Amir Pāvān. His son Nār [Nawr] al-Dīn lived in the time of Sultan Muhammad Šafāwī. Under Abdāl-Ibrāhīm Mirāzī "Ali" al-Mulk, son of Nār al-Dīn, was authorized to take the name of Ibrāhīm Khān II. The young Khān showed signs of independence and oppressed merchants and travellers. This could not be tolerated at a time when Lār lay on the great road between the capital and the sea. As a preparation for the occupation of Gumbūn (= Bandar-Abbas) in 1614 (f) and of the island of Hurmūz in 1615, he began the fortification of Lār. Alalwādī Khān, in 1609 and 1610 (1609) marched against Ibrāhīm Khān and seized his possessions. Ibrāhīm Khān II had to surrender to the mercy of Alalwādī who treated him honourably and took him to Shīhz, where he died during an epidemic. The government of Fārs was then entrusted to Khādīkhān of Lār, a sincere Shīta (tarīk-i shāhī sewānt [q. v.]; paīmandā), Tarīkh-i Alavī-ārān (Iran), p. 423-426. Buildings of the Milādnā are still to be seen at Lār — a mosque and a bazaar of hewn stone covered with stucco. The bazaar was restored in 1615 by Nānbar Kālīr Beg Djalāmār Lūr, ważir of Lār.

The memoirs of Shāhī Ali Ḥazīn contain interesting notes on the domestic life of Lār at the beginning of the sixteenth century (rule of the Afgān Khudābād-Khān, passage through Lār of the route of Shāh Aḥsan, etc.). According to Ḥazīn (p. 120) the people of a part of the Lār lands (gān-zāl) of Lāristān were Shītas. They had prospered under the Afghāns but Nādir, wishing to reduce them, sent against them the sardar of Fārs, Muhammad Khān Balāc. The latter met with difficulties at Lār and having come to terms with its inhabitants returned to Fārs. In 1146, Muhammad Khān rebelled against Nādir and tried to raise the Shītas of Lār. The latter maintained a waiting attitude but by order of Nādir they were massacred and scattered. Lār was later annexed by a certain Nāsir Khān, formerly a brigand in the bulāk-ī safra (a region between Lāristān and Kirmān) who received from the Shīh the title of Khān. His family (the beger-leg) remained in power from the beginning of the sixteenth century when the governor-general of Fārs sent troops to Lār and appointed a simple kalāntar there (Fārs-nāma-yi-NAZRĪ).

At the beginning of the sixteenth century the Bālbī Mihīb Khān invaded Lāristān. The conquest of Fārs was very frequently visited by European travellers in the eighteenth century when they lay on the direct road between Shirāz-Djalāmār-Lūr Bandar-ī Abbās: Figueiron (1617), Sir T. Herbert (1627), J. A. Mandelslo (1635), J. B. Tavernier and Thevenot (1665), Struys (1672), Chardin (1673), Dr. J. Fryer (1676), Le Brun (1703). At this time there was a factory of the Dutch East India Co. at Lār (Thevenot, *voyage*, Amsterdam 1727, iii. 460-476). After the fall of the Šafāwīs, Bandar-ī Abbās became the port for the province of Kirmān only, while Būshīr became the principal port of the Persian Gulf. Lār conducted a local trade with the ports of Bandar-ī Abbās, Līngā (q. v.) and Tāhir (the other Šafāwī, q. v.); of especially Stinck, *ancient trading centres of the Persian Gulf*, C. F., 1895, p. 166-173. In the sixteenth century, Lār has been described by Daprè and Stack.

Of the 76 bulūks of Fārs, that of Lār called lāristān is the most extensive (57 47 farshks, i.e. about 45,000 square miles). It is bounded on the N.W. by Barāntū, on the S.E. the bridge of Lūtarūn separates it from the nāghiya of Bandar-ī Abbās. This latter had a separate dynasty (the Kullānī princes of Hurmūz). To the south Lāristān is washed by the Persian Gulf (the ports of Kung, Lūga, Mokhīā, Čārak, Nakhū). In 1917 A. T. Wilson found Lār quite prosperous (Notes on a journey from Bandar-Abbās to Shiraz, Geogr. Journ. Series 1909, 151-170). On the west it is bordered by the canon of Malik, Ālā marwashī, and Khūnd, on the north-west by the buluk of Dāyūn; on the north by the buluk of Darāb; on the northeast by the Bulāk-i Safla.
The country is full of mountain ranges running parallel to the shore of the Persian Gulf and has a torrid climate. Water is scarce and brackish. The river of Lārīstān, variously known as Rūdkhāna-yi Shūr-i Galladār, Shūr-i Hing, Rūdkhāna-yi Lamān etc., runs from west to east and flows into the sea a far away east of Kung.

The subdivisions (nāhiya) of the butūk of Lārīstān are as follows (their orientation from Lār is given and the distance from it is in farahak):

</table>

The term bīghā in the local dialect means a valley shut in by two ranges of mountains. Fūmīstān is derived from the word fūm, corn.

The population of Lārīstān is thinly scattered. The most important towns are Lār (Dāpré: 15,000 inhabitants; Stack: 1,400 houses: 5,000 inhabitants) and Linga [q.v.]. The majority of the population is Persian. In canton No. 6 there are some Bahārū Turks and Nos. 2 and 3 are inhabited by Arabs.

Lārīstān has Persian dialects of its own (O. Mann, Die Tajik-Mandariten der Provinz Fars, Berlin 1909, xxxiv. 126—131) and there is even a local literature in them. The Fārs-nāma mentions Akhūnd Mullā Muḥammad Bākīr ("Suḥ-bāt") who was well acquainted with Arabic, Persian and "Darī". Romakwī has collected some of the poems in the local dialect of the poet Mahdīār as well as Persian quartains by several popular poets, natives of Lārīstān (Romakwī, Pers. narod. zecirowostihyia, in Ẓafti, 1916, xxii. 313, 340).

2. An island in the Persian Gulf now called Aībū Shu‘ābī. Near Chus had touched at it on his perilous but does not give the name, which according to Tolemy was Ξέγης (in Semitic isle of seaweed). The Greeks praised the pearl fisheries of Lār. Ibn Khūrdadbhīs calls the island Mūnadjjdīm-bāshī. Other variants in the Arab geography according to Le Strange are Allān and Lān. The Fārs-nāma, ed. Le Strange, p. 241 makes it a dependency of the island of Ardaschir-Khwāra. Yağıt (iv. 341) places it between the island of Kāis and the port of Sirāf. The Portuguese called it Ilha de Lazão from the village of Lār (should this be Lāshī?—at the end of it). It is 13½ miles in area. To the east of it lies the little isle of Shīwār (Cīvār). Some ten miles north of Lār on the coast of Fārs lies the little harbour of Nāhūlū. We do not know if there is any connection between the names of the town and of the island Lār. An island "Lārak" ("little Lār") lies south of the island of Hurmānā.

3. A high valley lying in Māzdār-dār, on the sources of the Harat-xpei. The altitude of Lār is from 8,500 to 6,500 feet. It lies west of Damānwād. The valley is deserted in winter. In summer the nomads pitch their tents there. The people of Tīhrān also go there for summer quarters. Stahl however (Petterm. Mittel., Ergänzungsheft No. 118, 1869, p. 619) found traces of ancient dwellings on the right bank of the river Lār. The locality is sometimes called Lārdīnān, which must be a plural of Lārdīnā, "inhabitant of Lār" (in the suffix -īn cf. Marquart, Beiträge, Z.D.M.G., 1895, p. 666). The same derivation explains the Arabic transcription al-Lāriz (Baladhuri, p. 8), one of the cantons of Tābaristān (not however found in the list in Ibn Rusta, p. 146). Al-Lāriz formed part of the possessions of al-Maṣmūghān taken in 131 (748) by Abū Muslim (Marquart, Einl. u. d. t., p. 127, 137). The term Lārdīnā seems to have been applied especially to the place below the high valley of Lār near the modern bridge of Pāltūr; cf. Dīh-Falūl in Ibn Isfandiyār, transl. Browne, G.M.S., p. 67. Lārdīnā is said to have been the longest inhabited part of Tābaristān. Its village Warak was said to have been the birthplace of Farīdīn. In the villages lying on the slopes of Damānwād, Stahl saw a festival celebrated in memory of the death of Zokh (Aug. 11; cf. Morier. Second Journey, p. 357). At Lārdīnā there was a special marzubān under the ispahanāb of Tābaristān (Ibn Isfandiyār, ibid., p. 15, 183, 283). On the district of Lāhdūn (Lārdīnā) cf. Lārdīnā. — Spiegel (Varenna, Z.D.M.G., 1876, xxvii. p. 716—726) was inclined to suppose a connection between Warak (Ibn Isfandiyār, p. 15: Waraka, native place of Farīdīn = Thāraţāna) and the Aveitic country Varena. The site of Waraka is unknown but in Lārdīnā there exists a village Wana; on the disappearance of v in Persian dialects, cf. Grundrisse d. iran. Phil., ii, p. 59, 351.

(V. Minorsky)
LARANDA (also called Karämn from the name of the dynasty which reigned there in the sixth century), a town in Asia Minor, capital of the kazar of the same name and of the sandjak of Konan, to the S.E. and 35 miles from this town. It is 4,000 feet above sea-level, has 2,000 houses, 7,500 inhabitants, 105 mosques, 21 Friday mosques, 4 dervish monasteries, 515 shops, 30 warehouses, 9 cafes, 4 caravanserais, 14 baking ovens, 7 baths, 5 mills, 1 military depot, 110 fountains, 1 barracks, 1 Greek school, 10 Muslim schools, 2 madrassas. There are a ruined fortress, mosques and other monuments in ruins from the time of the Karämn-äglü (mosque of Amir Mäsi with pillars from ancient buildings). The town was annexed to the Ottoman empire in 1464. To the north is the Kara-Dagh covered with mediaeval monasteries now in ruins (bih bir kilise = 1001 churches).

LARI MEHMED. [See MEHMED LARI]

LARIN (v. lari), a silver coin current in the Persian Gulf and Indian Ocean in the xvith and xvirith centuries. It takes its name from Lär [q. v.], the capital of Läristän [q. v.], at which it was first struck; cf. Pedro Texeira (Travels, Hakl. Soc., 1902, p. 341): "There is also the city of Lär, where are called laris, a money of the finest silver, very well shaped and current throughout the East" and Sir Thomas Herbert, speaking of Lär in 1627 (Some Years' Travels, London 1665, p. 130): "Near this byzar the larees are coined, a famous sort of money". The larin weighed about 74 grains (4.9 grammes) and had a high reputation for the purity of its silver. It was worth ten pence in English money (Herleti) or one-fifth of a French crown (Tavernier) or 60 Portuguese reis.

The larin is in shape quite unlike any other coin. It is a thin silver rod about 4 inches long, doubled back and then stamped on either side with inscriptions from dyes like any other coin. It is admirably described by William Parrett in his account of the moneys of al-Serja in 1580 (Hakluyt, P. descript. Voyages, Glasgow 1904, vii. 12): "The silver larin is a strange piece of money, not being round like all other current money of Chrisitianitie, but is a small rod of silver of the greatness of the pen of a goose feather where with we use to write and in length about one eighth part thereof, which is so wrested that the two ends meet at the just half part and in the head thereof there is no Turkish writing and the be the best current money in all the Indies and six of the larees make a ducat".

The kings of Lär ceased to issue these coins after its conquest by Shah 'Abbâs, the Great of Persia (Chardin, V. i. p. 236; Amsterdam 1735, iii. 128), but its popularity led to this type of coin being adopted by other states of the Indian Ocean. The kings of Hormuz of the latter part of the xvith century issued larees as did the Shâhs of Persia at Shiraz and the Ottoman Sûfisân at Basra. In India they were struck in the xvith century by the 'Abîl Shâhî dynasty of Bidjûr and other rulers and the frequent finds of them in Western India show how extensive was their circulation there. In the Malabar Islands in the early xvith century the king struck his own larees as we know from the Voyage of F. Pyrard de Laval (Hakl. Soc., 1857, vol. i., p. 232 sqq.). In Ceylon they were also struck, not only by the natives but also by the Portuguese merchants at Colombo; in this island they were twisted roughly into the shape of a fish-hook, whence the term "fish-hook" money. These pieces are either uninscribed or bear rude imitations of the Arabic script. In Ceylon the "fish-hook" money survived into the xvith century. A degenerate descendant of the larin still exists (Philipy, Heart of Arabia, ii. 319) on the Arabian side of the Persian Gulf, in Hasa where it is known as a fustula, i.e. the "long" (coin). It is only an inch long and of very base silver, if not copper, without any trace of inscription. It is described by Palgrave (Journey, etc., London 1865, ii. 179) who adds that there is a proverb like a Hasa fustula", applied to any one who like the local currency is of no use away from home.

(J. ALLAN)

AL-LÄT, an old Arabian goddess. The name (from al-lahat; cf. al-lät) means "the goddess" but was the proper name of a definite deity, according to the Arabs themselves: e.g. Ibn Wâsî, ed. Jahn, p. 44, 23 the sun. She is found as early as the Nabataean and Palmyran inscriptions and was later worshipped by various beduin tribes (e.g. the Hawæzin; Ibn Hisâm, p. 849, 13). An oath by al-lät is frequently found in the poets, e.g. Abû Sâdîn in Ibn Hisâm, p. 567, 7, Mutallamis, ed. Vollers, p. 2, 2, Aabs b. Hadjar, ed. Geyer, p. 11, 2, and even in al-Akhâl, Kûbâ al-Akhalâ, vii. 173. She had her principal sanctuary in the valley of Wa'djîd near Tâ'if, where the Mu'attib (Attâb) b. Mâthîk b. Khâ' held her priestess and a white stone hung with all kinds of decorations was her symbol. She is frequently mentioned along with al-Üzzi (Ibn Hisâm, p. 145, 7; 206, 2, 871, 5), where Wudd also is mentioned; Aabs b. Hadjar, p. 11, 2 and among the Kuraish, she, along with this goddess and Manâî, was held in such high esteem, that Muhammad once went so far as to recognise these three goddesses as intercessors with Allah but soon afterwards withdrew this (Sûra, lii. 15 sqq.). According to Tabâshi, i. 1395, 3 Abû Sufâyân carried al-Lât and al-Üzzi with him into the battle of 'Uhd. After the capture of Mecca, al-Lât was destroyed with her sanctuary in Tâ'if by al-Mughîrâh, who were related to her priest. But she was not forgotten, for, according to Doughty, there are still in Tâ'if blocks of stone which the people call al-Üzzi, Hulal and al-Lât, at which they secretly seek help in cases of illness.

**FRUHL**

**AL-LATIF (A.), “the Kind”, one of the names of Allah [q. v.].**

**LATIFI,** properly AND AL-LATIF CELEBR OF KSATUMI, secretary to the office for administering pious foundations (imedaret blatiit). He was secretary in Belgrade, came in 950 (1543) to Constantinople to the waqf office of Eyub, then went to Rhodes and Egypt. He died in 990 (1582) on the voyage from Egypt to Yanba on the Red Sea.

Latifi was a good poet and an even better stylist. He is famous for his collection of biographies of poets, Tezdheke-i Shuradar, which he finished in 953 (1546) and like Sehi, whose example he was the first to follow, dedicated it to Sultan Sulaiman the Great. His love for his native city tempted him to attribute to it a whole series of poets not born there so that his work was jokingly called Ksatumuni-nama. In spite of several inaccuracies, the book, which was printed in 1314 in Constantinople, is indispensable for our knowledge of the older poets of whom he deals with 502 from the time of Murad Khusn to his own day. His able critical remarks show that he had excellent insight into the nature of the poet’s art, but the standard that he imposes on the poets for adoption into his work is not too strict. He never published any continuation to his work although he lived for over 40 years after writing it; other works of his are: Munziqara, which was edited in 1287 by Tewfik Bey; a regular Duana; a collection wrongly attributed to Kemal. Pasha-zade of 100 hadiths with paraphrases in Turkish verse; a Rizale-i Eswafi Istanbul; also: Nafir al-Latif, Kabir al-Ashar, Ans al-Fiszla, Fuquli arba. A translation of his Tezdheke was made by Thomas Chabert, Zurich 1800: Latiff oder Biographische Nachrichten von vorzüglichsten dtirischern Dichtern nebst einer Blumenlese aus ihrer Zeit.

(TH. MENZEL)

**LAWATA, a Berber ethnic group, belonging to the family of Butr, whose eponymous ancestor was Lawa the younger, son of Lawa the older, son of Zeph. Ibn Khdan disputes the view of certain Berber genealogists recorded by Ibn Halim who consider the Lawata as Sadaaniata and the Mazata as of Coptic origin. Others say the Lawata with the Hawwara and the Lamara were of Himyarite origin. In any case they were the oldest home of the Lawata seems most likely to have been the eastern part of North Africa. They were found in Egypt to the north between Alexandria and Cairo; to the south in the oases and in al-Sa‘id. Some Lawata led a nomadic life in the region of Borka. In the Maghrib they lived in the aljabal Lawata (south of Gabes and Sfax) and it is probably this section that is mentioned by Corippus under the name Iluguten = Berber: Ilawaten; others lived in the country round Bougie and in the region south of Tiaret (Tahert) where they had adopted the Iblis heresy. In Morocco there were Lawata in the Tadla (the Zanara section), in the south of Fas and in the land between Tangier and Arzila.

**LAWH (A), board, table; the first meaning is found in the Kur’ân, Sura, liv. 13, where Noah’s ark is called ilaq atilawh. The second meaning is that of lawh as writing material, e.g. the tables of the lawh (Sura, v. 142, 149, 153, where the plural alawid is used; see Livian, ii. 421). Al-lawâd se la’lawh (Bukhari, Tafsir al-Kur’ân, Sura, iv., bâb 18) corresponds to our “paper and ink”. The expression mân bâna il’lawâh “what lies between the two boards” is found in Hadith, to describe the whole Kur’ân (Bukhari, Tafsir, Sura lxx., bâb 4; Livian, bâb 84); cf. mâ bâna il’lawâh (Bukhari, Tafsir al-Kur’ân, bâb 16). In modern linguistic usage alawid also means a school-child’s slate.

Al-lawh thus means the tablet kept in heaven which in Sura, xxxv. 22 is called lawh mubah (cf. ii. 1066a, 1076a). According to this passage, it is usually described as the “safely preserved” tablet. But it is not certain whether the words in this passage are really syntactically connected. If we read mubah, the word does not go with lawâh but with the preceding kur’ân and the translation is: “Verily it is a Kur’ân, famous, preserved on a tablet” (see the commentaries); “preserved” i.e. against alteration.

In the commentaries on Sura, xxvii. 1, the tablet is again mentioned: “We sent it down (the Kur’ân) in the night of the decree”; this refers either to the first revelation made to Muhammad or to the descent of the Kur’ân from that tablet which is above the seventh heaven.

The tablet as the original copy of the Kur’ân is thus identical with umm al-kurâb.

The decisions of the divine will are also written on the lawh with the pen kalâm [q. v.]. We have therefore to distinguish two quite different conceptions:

a. The tablet as the original copy of the Kur’ân. This idea is found in the pseudopigraphical literature. In the Book of Jubilees, iii. 10, it is said that the laws relating to the purification of women after childbirth (Lev. xxiii. 11) are written on tablets in heaven. Jub. xii. 28 says the same of the law regarding the “feast of booths” (Lev. xxiii. 40—43) and Jub., xxxii. 15 of the law of tithes (Lev. xxiii).

b. The tablet as the record of the decisions of the divine will is also found in the Book of Tablets. In Jub. v. 13 it is said that the divine judgement on all that exists on earth is written on the tablets in heaven. Enoch prophesies the future from the contents of these tablets (Book of Enoch, xxii. 2; cf. lxxxi.; citii. 2; evi. 19). The “scripture of truth” is mentioned as early as Daniel, x. 21, the contents of which
Daniel announces in prophetic form. These ideas are connected with the Babylonian conception of "tablets of fate".

From these passages it is evident that in the pseudo-epigraphic literature also the tablets in heaven are also regarded as the originals of revelation, sometimes as tablets of fate. This is sufficient to explain the double meaning of Levi in Muslim literature.

For other passages, cf. the Index to Charles, The Apocrypha and Pseudepigrapha of the Old Testament, s. v. "Tablets"; it cannot always be said definitely to which of these two conceptions a statement belongs.

In mystical and philosophical literature Levi is given a place in the cosmic system and sometimes explained as aššu šašil and sometimes as maššu bulli or umm al-kuli.

(A. J. WENKIN)

LAZ, a people of South Caucasian stock (Iberic, "Georgian") now dwelling in the southeastern corner of the shores of the Black Sea.

The ancient history of the Laz is complicated by the uncertainty which reigns in the ethnical nomenclature of the Caucasus generally; the same names in the course of centuries are applied to different units or groups. The fact that the name Phasis was applied to the Rion, to the Cörokh (the ancient Akampis) and even to the Axazes also creates difficulties.

The earliest Greek writers do not mention the Laz. The name βαζίσα, βαζία is only found after the Christian era (Pliny, Nat. Hist., iv. 4; Periplus, of Arrian, vi. 2; Ptolemey, v. 9, 5). The oldest known settlement of the Lazoi is the town of Lazos or "old Lazik" which Arrian puts 680 stadia (about 80 miles) south of the Sacred Port (Nоворозсиск) and 1,020 stadia (100 miles) north of Pityus, i.e. somewhere in the neighbourhood of Persope. Klie-glend sees in the Lazos a section of the Kerkesti, who in the first centuries of the Christian era had to migrate southwards under pressure from the Yazgi (i.e. the Cerkes [i.e. the] who call themselves Adlige (Adzlige); the same author regards the Kerkesti as a "Georgian" tribe. The fact is that at the time of Arrian (second cent. B.C.), the Lazoi were already living to the south of Sukhum. The order of the peoples living along the coast to the east of Trebizond was as follows: Colchi (and Samni); Machelones; Henichori; Zydritae; Lazai (βαζία), subjects of king Mahussus, who owned the sovereignty of Rome; Apilae; Abaci (cf. Arziba); Sangae near Sebastopolis (= Sukhum).

During the centuries following, the Laz gained so much in importance that the whole of the ancient Colchis had been renamed Lazica (Anonymous Periplus, Fragm. Hist. Græc. i. 180). According to Constantine Porphyrogenitus, In habit. Imperii., Ch. 53. in the time of Diocletian (285--305), the king of the Bosporus, Saromatus, invaded the land of the Lazoi and reached Halys (N. Marr explains this last name by the Laz word meaning river) Among the peoples subject to the Laz, Procopius (G.R., G.t. iv. 2 and 3) mentions the Abah-gi and the people of Sumia and Skynania (= Lečkhum; it is probable that the name Lзиza referred to the most powerful element and covered a confederation of several tribes. The Laz were converted to Christianity about the beginning of the 5th century. "In the desert of Jerusalem" Justinian (527--665) restored a Laz temple (Procopius, De Aedificiis, v. 9) which must have been in existence for some time before this. The Laz also sent bishops to their neighbours (Proc., Bell. Got., iv. 2). In Colombia the Laz were under the suzerainty of the Roman emperors who gave investiture to their kings and the latter had to guard the western passess of the Caucasus against invasions by the nomads from the north. On the other hand the monopolistic tendencies of the commerce of Rome provoked discontent among the people of Colchis. In 456 King Gobazes sought the help of the Sānsānīn YezdegîrII against the Romans. Between 539 and 562 Lazien was the scene of the celebrated struggle between Byzantium (Justinian) and Persia (Khusraw II).

According to Procopius, who accompanied Belisarius on his expeditions, the Laz occupied both banks of the Phasis but their towns (Archaeopolis, Sebastopolis, Pitius, Skanda, Sarapans, Rhodopolis, Mochoresis) all lay to the north of the river while on the left bank which was desert land the lands of the Laz only stretched for a day's march to the south. Nearer to Trebizond were the "Roman Pontics" which only means that the inhabitants were direct subjects of the Roman emperor and not of the Laz kings; from the ethnical point of view the "Roman Pontics" could not have been different from the Laz. This strip of shore continued longest to shelter the remnants of the Laz.

In 1204 with the aid of troops lent by queen Thamar of Georgia, Alexis Comnenus founded the empire of Trebizond, the history of which is very closely connected with that of the southern Caucasus. Nicephorus Gregora (v. 7) says that the founder of the dynasty had seized "the lands of Colchis and of the Lazes". In 1252 John Comnenus received the title of "Emperor of the East, of Iveria and of the lands beyond the sea". In 1341 the princes Anan Archilutha ascended the throne with the help of the Laz. The lands directly under the authority of the emperors of Trebizond seem to have extended as far as Makriâla while Gongala was under a local dynasty (cf. the Chronicle of Panaretos, under the year 1376).

In 865 (1461) Sultan Muhammad II conquered Trebizond and as a result the Laz came into contact with Islam, which became their religion (شافي). The stages of their conversion are still unknown. The fact is that in the central regions of Georgia (Ахалтейское) Islam seems to have gained ground gradually from the 13th century (N. Marr in the Bull. of the Acad. of St. Petersburg, 1917, p. 415--446, 478--506).

In 926 (1519) Trebizond with Batum was made a separate eyalet. According to Ewliya Celebi who went through this region in 1600 (1649) the five sandjaks of the eyalet were: Djanikha (Джаиинк = Samiani), Trebizond, Guniya (Gonia), Lower and Upper Batum. The modern Lazisân was governed from Gonia, for among the kâfis of this fortress we find Atina, Sumia, Witia and Bele (= Belevetis) and Arkhavi: Ewliya and the version of the Ḍhāhān-nāma in Fellman's, Original-fragmente, Abh. d. Bayer. Acad., 1846). Hīdūdul Khâlīfa and Ewliya Celebi were deceived by the similarity in sound of Caucasian
names (as also was Vivien de St. Martin) proposed a theory of the identity of the name Lezgi and Laz. Ewliyâ calls Trebizond "former Lezgi vilayet". Hâddjud Khallifa after enumerating the peoples of the district (Lezgi): Mingrelians (Megrîl), Georgians, Abkhaz (Abaza), Cerkess and Laz, adds that the latter are those who live nearest to Trebizond. To the S. E. of Trebizond in the Cepni mountains he mentions the Turks who "worship as their God (mu'âdd) the Şah of Persia (i.e. are extreme Shi'is) and are associated (mewčtarîl) with the Laz". Hâddjud Khallifa and Ewliyâ do not agree on the number of the siefs of Trebizond; Ewliyâ only says that the value of the eyâlet has depreciated through the unreason of many of its 41 nahiye (Djîkân-numâ, p. 429; Ewliyâ, ii. 81, 83—85).

The first serious blow to the feudal independence of the dere-bey of Lazistan was only struck at the beginning of the sixteenth century by the Ottoman Pasha of Trebizond, but Koch who visited the country after his expedition still found most of the hereditary dere-bey's power, although shorn of some of their liberties. He counted fifteen of them: Atlina (two), Bulep, Artashin, Witse, Kapiste, Arkhawe, Kisse, Khopa, Makria, (Makrâli), Gonia, Barum, Maradit (Marâdîl?), Perlawan and Cat. The land of the last (the western) lay however on the Corolk behind the mountains separating this valley from the river of Lazistan in the strict sense. On the other hand among the dere-bey of Lazistan was the lord of Hamshin, i.e. of the upper valleys of Kalopotamos and of Furtuna inhabited by Muslim Armenians. According to the Armenian historian Lewond, transi. Chahnazarian, Paris 1826, p. 162, the latter with their chief Hamam of the Amatuni family had settled in the district in the time of Constantine VI (780—797) (the old Tambur was given the name Hamshin < Hamamhem, "built by II."). It is evidently this region that Clavijo (1403—1406), ed. Srezewski, St Petersburg 1851, p. 383, calls "tierra de Arraquiel". He adds that the people, dissatisfied with their king Arraquiel (Arâkîl), submitted to the Muslim ruler of Isipir. The Laz Muslims are not only those of Khopa have not forgotten Armenian. A Hamshin lexicon was published by Kipashidze.

With the institution of the wilayets the sandjak Lazistan became part of the vilayet of Trebizond. Its capital was at first Batum but, after the Russian occupation of Batum in 1878, the administration of the sandjak was transferred to Rize (Rhizaon), detached for this purpose from the old central sandjak of Trebizond. Lazistan lying to the west of the Ottoman-Russian frontier occupied a strip of coast 100 miles long and 15 to 20 miles broad. The käds of the sandjak were: Khopa, Atina and Rize, subdivided again into 6 nahiye (Samy-Bey, Kamis al-Ilâm, v. 3966). Cauinet, La Turquie d'Asie, i. 118—121, mentions Of as a fourth käd and gives 6 (7) nahiyes (Hamshin, Zaradere, Kapawli, Wale, Kârâ-yi-sab'a, Witse, Arkhawi). In 1880 there were in the sandjak 364 inhabited places with 138,467 inhabitants, of above 689 were orthodox Greeks and the rest Muslims (Laz, Turkicised Laz, Turks and "Hamshin"). The number of true Laz cannot be more than half the total population.

The term Laz is used in the west of Turkey to designate generally the people of the south-east country round the south-east of the Black Sea, but in reality the people calling themselves by this name and speaking the Laz language now live in the two käds of Khopa (between Koprush and Gurup) and Atina (between Gurup and Kemero). Laz is spoken in 64 of the 69 villages of the käd of Atina. To these should be added the very few Laz who used to live in Russian territory to the south of Batum. These Laz were incorporated in Turkey by virtue of the Turco-Serbian treaty of March 16, 1921, which moved the Turkish frontier to Sarp (to the south of the mouth of the Corolk). Rize and Batum are now outside the Laz country proper.

The Laz are good sailors and also practise agriculture (rice, maize, tobacco and fruit-trees). Before 1914 many of them earned a living in Russia as bakers and often came home with Russian wives, who became converts to Islam. The Laz are known for their conversational in religious matters. Turkish proverbs and the marionette theatre (baragöz) are often very scathing about the Laz (Lazarîh termomu musulman yemes onu, "the Muslim does not eat Laz jelly"; termomi from the Greek bymaç).

The Laz language is closely connected with Mingrelian (which is a sister language of Georgian) and with N. Y. Marr finds it sufficiently peculiar to consider it a Mingrelian language rather than a dialect. In the Lazo-Mingrelian group he believes he can find resemblances to the more Indo-European elements in old Armenian (Grabar). There are two Laz languages, eastern, and western with smaller subdivisions (the language of the Chkhala). Laz is very full of Turkish words. It has no written literature but there are local poets (Râşid Ǝlmî, Pehlivân-oghlu, etc.). The Laz are forgetting their own language, which is being replaced by the Turkish patois of Trebizond (cf. Písarew in Zap., 1901, xiii., p. 173—201) in which the harmony of the vowels is much neglected (cf. a specimen in N. Marr, Teksti i rozhkaniya, St. Petersburg, viii., p. 55). The Georgians call the Laz Čan but the Laz do not know this name. Čan is evidently the original of the Greek name Sannoi/Tzannoi and it survives in the official name of the sandjak of Samsun (Djianâ). From the historical point of view the separation of the Laz and Čan seems to have taken place in spite of the close relationship between the two of them. In the time of Arrian, the Sannoi were the immediate neighbours of Trebizond. In an obscure passage in this author (cf. the perplexed commentary of C. Müller in Geogr. Graece Minores, ad Arranî Periplo, 8) he places on the river of the frontier between the Colchis (Lazii) and the Orminvi (?). Koch mentions the interesting fact that the people of Of speak a "language of their own" and according to Marr, the people of Khoshnîn (near Atina) speak an incomprehensible language. Procopius places the "Sannoi who are now called the Tzannoi" on the area adjoining the mountains separating Corokh from the sea (the Parayades range, the name of which survives in the modern Parakhar/Balkhar). The researches of N. Y. Marr have shown that the Čan (Tzannoi) had at first occupied a larger area including the basin of the Corokh and its tributaries on the right bank from which they were temporarily displaced by the Armenians and finally by the Georgians (Kharrtli). The chronicles of Trebizond continue to distinguish the Laz from the Tziaîdès (Τζιαίδες). The latter in alliance with
the Muslims attacked the possessions of Trebizond in 1348 and in 1377 were punished by the Emperor. At this period the Thānāids must have been in the southwest of Trebizond (besides, the sandjak of Ğanik is to the west of this port). Thus the Georgian application of the name Ǧan to the Laz may be explained by the confusion of the two tribes, one of whom (the true Ğan living to the south and west of the Laz) was ultimately thrust to the west of Trebizond.

(V. Minorsky)

**LAZARUS** is the name in the Gospels of 1) the poor man who finds compensation in Abraham’s bosom for the misery of this world (Luke. xvi. 19—31); 2) the dead man whom Jesus raises to life (John xi.). The Qurān mentions neither one nor the other, but among the miracles with which it credits Jesus is included the raising from the dead (Sura, ii. 43). Muslim legend with its fondness for the miracle of resurrection is fond of telling of the dead whom Jesus revives, but rarely mentions Lazarus. Tabari (Annies) talks of these miracles in general. According to him, Ǧâm b. Nūh is revived by Jesus (i. 187). Al-Kisūf only mentions Ǧâm son of Nūh’s of those restored to life by Jesus. Thābilī relates closely following St. John’s Gospel: “Al-‘Azīr died, his sister sent to inform Jesus, Jesus came 3 (in the Gospel 4) days after his death, went with his sister to the tomb in the rock and caused al-‘Azīr to arise; children were born to him”. In Ibn al-Ḥāṭir the resurrected man is called “‘Azīr”, the el of Elāzīr was taken for the article, as in al-Yāsā’ (Elissa) and Alexander (al-Iskandar) or in Azar in the Qurān, whose name Fränkel derives from Elizer. In Ibn al-Ḥāṭir we find Muslim legend endeavours to increase the miracle, Jesus raises not only ‘Azīr (Lazarus) but also his wife (children are born to him), and Sām (son of Nūh), the prophet “‘Azīr and Yahyā b. Zakariya (John the Baptist).

**LEBARAN.** [See 'a-Atl-Fitr.]

**LEO AFRICANUS, AL-ḤASAN b. MUHAMMAD AL-WAZZĀN AL-ZAYYĪT, called Yūḥānān al-Ḳāṣid al-Gharbī, in Latin Johannes Leo Africanus, born at Granada in 901 (1465) was brought up in Fās. Entrusted with three diplomatic missions to the South of Morocco by the Banū Watfīn, he went to Mecca in 921 (1516) and then to Stambul. Captured on his way home by Sicilian corsairs he was taken to Naples in 926 (1520), then to Rome where the Pope baptised him “Johannes Leo”. At Rome he compiled the following works, only the first of which has come down to us in the original Arabic text: 1. Arabic-Hebrew-Latin Vocabulary composed in 930 (1524) for the physician Jacob ben Simon (MS. Escorial 598; cf. H. Derenbourg, *Cat. ms. arabes de l’Escorial*, Paris 1884, i. 410); 2. *Description de l’Afrique*, which he translated into Italian on March 10, 1526 (divulgated since 1531; publ. by Ramusio, *Navigations, viaggio*, Venice 1550, i. 1—103; French transl. by Temporal, ed. Schefer, 1896; Latin by Florianus; English by Forry, ed. Browne, 1896; Dutch by Leers; German by Lortbach); 3. *Libellus de viris illustribus apud Arabes*, finished in 1527, Latin transl., ed. by Hottinger, then by Fabricius. These works gave the west the earliest materials for a history of Islam; cf. in the economic and social monograph on the city of Fās, *Descriptions*, Bk. iv., Ch. 23—34, a remarkable resume from the Mālikī point of view of the historical development of theology. Before 957 (1550) Leo returned to Tunis where he died, a good Muslim.

(L. Massignon)

**LEPANTO**, is the Italian form of the name of the Greek town Naupactos in which the Turks call line Bakht. This is how the Turkish form is transcribed, e.g. by Leunclavius (*Annales Turcici*, p 32) while von Hammer (*G.O.R.*, iii. 318) transcribes it as Aina Bakth, which he translates
“Spiegelglück”; in view of the Greek form however it is very probable that the Turks originally pronounced it Ine Bakhti. The town is situated in the ancient Locris, north of the stream which leads from the Ionia Sea towards the Gulf of Corinth, known since the middle ages as the Gulf of Lepanto.

After from the xiii century part of the despoty of Epirus, Lepanto fell into the hands of the Venetians who made it one of the strongest places in Greece, Muhammad II during his war with Venice therefore undertook an expedition to take the town by land. In 1477 Khâdim Sultan Pasha was given the task but did not succeed (Taṣawwîr-i Âlî Othmân, ed. Cairo, p. 115). It was Bayazid II who ultimately took the town in 1499 with the help of the Turkish fleet after the latter had defeated the Venetians near the island of Sapienza (Buriç Reis Adaşı) in July. The town was already being besieged by Mustâfa Pasha, beglerbeg of Rûm III; Bayazid joined the army later. The commander of the garrison had declared be would never surrender until Turkish vessels should enter the strait. This happened after the battle of Sapienza, for the Venetians made a feeble resistance. The Venetian commander capitulated on Aug. 26, 1499 (cf. Taṣawwîr-i Âlî Othmân, p. 127 and ʿAsli Pasha Zâde, p. 267–258, which gives the date as 3 of Muḥarram = Aug. 26, 1499). Immediately afterwards Bayazid built two forts to defend the entrance to the Gulf.

Lepanto is particularly celebrated for the famous naval battle fought on Oct. 7, 1571, between the Turkish fleet and the Christian fleet consisting of 108 Venetian galleys, 77 Spanish, 6 Maltese, 3 Savoy and 12 Papal in addition to 8 enormous Venetian galleasses (the figures given by the Turkish historians vary considerably) united under the command of Don John of Austria. This great combined expedition of the Christian fleets had been provoked by the capture of Cyprus by the Turks under Lala Mustafa Pasha in 1570 and 1571. The Turkish fleet came for the most part from Cyprus with the sır-Thaner Pertew Pasha and the Kapudan Pasha Sâli and was joined by Uludâg Ali Pasha (Ochiali) beglerbeg of Algiers with 20 ships. After raids on the coast of Crete and the Ionian Islands it had cast anchor off Lepanto; it was here the Turks learned of the approach of the Christian fleet. The Turkish fleet consisted of 300 ships (so von Hammer; Ḥâdîddi Khalifa speaks of 180); it was not at the top of its strength on account of the numerous deserts. Against the advice of Pertew Pasha and Uludâg Ali, the Kapudan Pasha decided to leave the bay of Lepanto and to attack. The Christian ships entered the Gulf on Oct. 7: the battle which followed lasted a few hours and ended in the complete destruction of the Turkish fleet; the Kapudan Pasha perished in the battle. Pertew Pasha escaped with difficulty and Uludâg Ali who commanded the left wing succeeded in saving 40 vessels. This, their first great defeat at sea, is called by the Turks taṣawâr, donama seferi, the “expedition of the destroyed fleet.” The immediate results of this event were not considerable, for the Allies could not take advantage of their success and the Turks very soon succeeded in making good their losses in material; Muhammad Şokolî [q.v.] was credited with saying that the empire was rich and powerful enough to make the anchors of the fleet of silver, and the ropes of silk and the sails of atlas (Pâchewî, i. 499). The moral results however were very great and justify the great importance attached in history to the battle of Lepanto.

In June 1687 the Venetian and Austrian forces seized Lepanto, but they had to surrender the town to the Turks by the treaty of Carlowitz (1699); as Venice still held the whole of the Morea, Lepanto remained the only Turkish stronghold in this region. The Turkish history of the town ended with the insurrection of the Grecians, as a result of which Naupactus was incorporated in the kingdom of Greece.

The defence of Lepanto consisted of 3 successive lines of fortifications on a cone-shaped hill; it was the residence of a sângîkh-bey of the sütâr of the Kapudan Pasha (Ḥâdîddi Khalifa, Taṣawwîr-i Kâbulî, p. 67). Its great strategic and maritime importance is explained by Ḥâdîddi Khalifa in Rumûlî und Bosnê, transl. by von Hammer, p. 125.

Lerida, the ancient Êrîdû, the Arabic Lârîdî, a town in nîthern Spâin, halfway between Saragossa and Barcelona, now the capital of the province of the same name, with a population of about 29,000. It lies at a height of about 600 feet on the right bank of the Segre (the Wâtî Şîkîr of the Arabs; Yâkût, Muğfâm âl-Bûtûnî, s.v., wrongly makes this another name of Lerîdî), and forms an important strategical point at the entrance to the plains of Aragon.

Lerida, which is undoubtedly of Iberian origin, was taken by Julius Caesar in 49 B.C. in the first Civil War between him and Pompey. In 546 a council met there and it was occupied by the Muslims in the first half of the eighth century. It seems to have henceforth shared the fate of Saragossa and to have been an important point for the defence of the Upper Frontera (al-ḫaźl al-dâ). It was later part of the independent kingdom of the Banû Hûd of Saragossa. At the division which took place on the death of Sulûman b. Hûd al-Mustâmî b. i'lâh (1046), it fell to his son Yâsûf but was again taken by the ruler of Saragossa Aḥmad al-Muqṭadîr. Bibliography: al-Ibrîn, Šifît al-Andalusî, ed. Dozy and de Goeje, text, p. 190, transl., p. 231; Abu 'l-Fâţî, Tâkûvas al-Bûtûnî, p. 180–181; Yâkût, Muğfâm al-Bûtûnî, vii. p. 313; Fâgman, Extracts inçîsîs reliâsi al-Mustâmî, cf. Index; Ibn 'Iţârî, al-Bayân al-muğfâmî, vol. iii., ed. E. Levi-Provençal, Paris 1927, cf. Index.

(É. Levi-Provençal)

LEWEND, the name of the members of an ir régulâr militiâ, which formed part of armed forces of the Ottoman empire during the early centuries of its existence; they were chiefly
employed as soldiers on the fleet in the period when the Turkish navy consisted mainly of the consort vessels, which the Suljûqs employed for their naval expeditions. The word *lewend* seems to have been borrowed like many other naval terms from the Italian. The Italian word would have been *levante* (Sâmi, *Kamû-i Türkî* or *levanti* (Dâvud Pasha) and was originally used by the Venetians for the sailors whom they recruited from the inhabitants of their possessions in the Levant, to defend the coasts or serve on the fleet. It was the same category of men, i.e. Christian Greeks, Albanians or Dalmatians, living on the Mediterranean coasts that the Turks used at first. After a time Turkish elements from Asia Minor joined them.

The *lewends* were a soldiery almost without discipline whom it was impossible to make use of when the navy came to be regularly organised. Even in the time of Muhammad II the use of *lewends* had been begun for the naval service and under Bayazid I, the first regular body of marines was formed, consisting of 400 *lewends*. About the same time the *lewends* were employed on the galleys as *kurdjâl* in place of the less loyal Christians (Hâmidji Khalîfî, *Tarîfât al-Khân*, p. 108). Thus the true *lewends* were gradually removed from the navy. We find however that the word *lewend* is still used at a later period to indicate the soldiers of the navy, especially the riflemen (*füsîkîjî* of Dâvud Pasha); in Constantinople there were two barracks of *lewends* belonging to the organisation of the arsenal. In a figurative sense, the great naval captains of the 16th century are also called *lewend* (e.g. by Şafvat Bey in his article *T. O.,* xi, p. 24).

The *lewends* after having been removed from the fleet still continued to exist as marauders, especially in Asia Minor where they were a scourge of the land. The word *lewend* thus acquired the meanings of vagabond and rascal; this last meaning has even passed into Persian. On the other hand, the *lewends* in the province for long continued to recruit their bodyguard among the *lewends* (cf. the picture of a *lewend* in the plate on p. 416 of the third volume of *D'Ohsson*).

From the end of the 16th century, the government of Constantinople itself forced it to take steps to abolish the bodies of *lewends* still in existence. Ordinances of 1695, 1718 and 1750 gave them permission to join the new corps of the *diş* and *şâtwa* (Kâzûl, *Tarîqât*, Constantinople 1827, v. 13, 123) and at the same period of military expeditions in 1737, 1742, 1752, 1759 and 1763 exterminated the last bands of this turbulent soldiery, who still existed in different parts of Asia Minor (Kâzûl, *Tarîqât*, p. 25, 30, 78, 209; Wâzi, *Tarîqât*, p. 117, 234).

**Liân** (a), an oath, which gives a husband the possibility of accusing his wife of adultery without legal proof, but not becoming liable to the punishment prescribed for this, and of denying the paternity of a child borne by the wife. *In the language of the Sharî'ah*, evidence given by the husband, strengthened by oaths, by which the husband invokes the curse (*Ia'na*: from this the whole process is a *pœtori* named) and the wife the wrath of Allah upon themselves, if they should lie; it frees the husband from *hadd* (the legal punishment) for *khadij* (accusation without proof of infidelity by persons of irreproachable character) and the wife of *hadd* for incontinence (*A. Sprenger, Dictionary of the Technical Terms used in the Sciences of the Muslimans, Bibl. Indica, Old Series, ii., 1309). On the technical use of the related verbal forms, cf. the Arabic lexicons and Dozy, *Suppl. aux Dict. Arabes*, v. v.; al-Kastallâni, commentary on al-Bukhârî, *Taḥāf, 25*, at the beginning; al-Zurqâni, commentary on the *Muwatta*, Bâb *mâ dâ'î fi 'I-Liân*, at the beginning.

1. The following Kur'ânic passage is the basis for the regulations regarding the *liân*: xxiv. 6 sq.: "As to those who accuse their wives (of adultery) without having other witnesses than themselves, the man concerned shall swear four times by Allah that he is speaking the truth and the fifth time that the curse of Allah may fall upon him if he is lying, but the woman may aver the punishment from herself if she swears four times by Allah that he is lying and the fifth time that the wrath of Allah may fall upon her if he is speaking the truth. If Allah were not gracious and merciful towards you and wise and turning lovingly towards you."

These verses belong to a part of the Kur'ân, apparently composed at one time, containing various regulations about adultery and consisting of xxiv. 1—10, 21—26; verses 11—20, which certainly belong to the year 6 were inserted later; our verses must therefore be older (cf. Nöldeke-Schawлы, *Geschichte des Qorans*, i. 210 sq.; H. Grimme, *Muhammad*, ii. 27, puts the *Sûra* between the battles of Badr [2 A. H.] and Uhud [3 A. H.]).

They form a regulation in favour of the husband, an exception to the punishment strictly laid down in Kur'ân, xxiv. 4 (cf. also verses 23—25 for *khadij* and are therefore, like this penalty, primarily Muslim and have no affinity in Arab paganism in which an institution like the *liân* had no place at all (contrary to D. Santillana, *Istituzioni di dito musulmano*, i. 221 below). The word *liân*, which comes from the Kur'ân, is unknown to the pre-Musliman poetry.

The disputes concerning *liân* are almost entirely (the oldest probably exclusively) exegetical and occasion is given to the occurrence of the revelation of the *Kur'ânic* verses in question; they are to some extent contradictory (attempts to harmonise them are found in al-Zurqâni, commentary on the *Muwatta*, Bâb *mâ dâ'î fi 'I-Liân*).

For the use of the term *liân* in the first sense, see the use of the word *liân* in the language in the second sense (as a verb) in their s.:

1. The husband (unnamed) laments his sad case to Prophet in covert language whereupon the verses are revealed (oldest form); 2. Lu'aimir b. Harîth asks in the same way, first through the intermediary of a friend and then directly of the Prophet (a development of the first type); 3. Lu'îb b. Umayya accuses his wife of adultery and is to be punished with *hadd*
for this, when Allah saves him sometimes by the revelation of the verses (this type probably a development of the first, in which Sa'd b. Ubadah also is often involved, who had previously with scornful criticism called attention to the possibility of the dilemma which has now actually happened, has of the three the most schematic and not original appearance); 4) some one marries a young woman and finds her not a virgin while she disputes his assertion; the Prophet therefore orders talaq (not exegetic). There are of course other transitional and mixed forms. In so far as the hadiths yield nothing new about talaq, this brief outline is sufficient; they are only of importance when they afford evidence for the oldest juristic adaptation of this Qur'anic institution.

2. The first subject of the earliest legal speculation was the question, not touched upon in the Qur'an, whether talaq makes separation between the husband and wife necessary. In many hadiths this question is so expressly (sometimes polemically) affirmed that there must have been a school which approved the continunity of the marriage after the talaq. The statement that al-Musab b. al-Zubair is said to have held this view (Muslim; Nasai'i) is however based only on an inadmissible interpretation of another haddith, in which he appears as a contemporary; on the other hand that Uthman al-Batti held it may be considered sufficiently proved (al-Zurkhani on the Mishatta). Among the oldest representatives of the other view which later became predominant, that a continuance of the marriage was impossible after talaq, may be included with some probability 'Abd Allah b. Umair and with certainty al-Zuhri in whose time it was already sunna, and Ibrahim al-Nakha'i (Kitab al-Ajadi); the tracing of this opinion back to 'Abd Allah b. 'Abbas, which we find in the hadiths, must however be regarded as unhistorical.

Next arises the question how this annulment of the marriage as a result of talaq is to be carried through, whether by a triple talakah, which the husband has to pronounce against his wife or by the decision of the judge before whom the talaq is taken or by the talaq itself. The first view is undoubtedly based on a large number of traditions, while no trace of its use in law has survived; these traditions are rather interpreted in favour of the second view (cf. the Haddith of al-Zuhri in al-Tabari, Tafsir and al-Buhari, Talakah, bab 30 and Hadith, bab 43; the tradition in Ahmad b. Hanbal, v. 330 sq. forms in its abbreviated form only an apparent exception; a polemic against the first view in al-Tabari, N. 2067). The second opinion survives in the later legal Talakah; apart from the ample testimony to the haddiths, the oldest representatives known with probability or certainty are 'Abd Allah b. Umair, al-Zuhri, in whose time it appears as sunna, and Ibrahim al-Nakha'i (Kitab al-Ajadi); its ascription to 'Abd Allah b. 'Abbas is again not historical. For the third there is no evidence in tradition; it is only found after the rise of the madhhab. We seem therefore to have a tendency to development in a particular direction.

Other prescriptions about talaq in tradition, going beyond what is laid down in the Qur'an, are of less importance. Thus, when the question is raised at all, it is unanimously laid down that the husband can never marry the wife again at a later date, that a talaq may take place during pregnancy (legal talakah is later attached to their interpretation of this haddith), that the child has only relationship with its mother as regards kinship or inheritance i.e. is considered illegitimate. Other hadiths say that the talaq must be taken in a mosque and attribute the formula to be spoken there by the Prophet. We are also brought into contact with questions of detail, which play a part in the later Talakah by a tradition according to which the Prophet did not allow talaq unless the husband and wife were on equal terms as regards Islam and freedom; a series of older authorities who held the contrary view is quoted in the Mudawwana.

Details of the further teaching of Ibrahim al-Nakha'i on talaq are given in the Kitab al-Ajadi. Two more general pronouncements in Malik and al-Shafi'i bring us to the period of the rise of the madhhab. Malik states definitely that it was the sunna of al-Madina, about which there is no doubt and no Talakah, that the husband and wife after the talaq has taken place could never marry one another again and al-Shafi'i says that with talaq divorce of the pair and denial of the paternity of the child was sunna of the Prophet.

3. The teachings of the separate madhhab develop the views of their earliest representatives, not entirely on the same lines (c.f. from the Mushatta); it is to be assumed with probability that Malik followed the second view regarding the element in talaq which annulled the marriage (cf. above), while his school later held the third opinion entirely. The most important regulation of the Fiqh regarding talaq that go beyond what has been so far discussed are as follows: if the husband accuses the wife of adultery or denies the paternity of his child without being able to prove it in the legally prescribed fashion and she denies his charge, recourse is had to the process of talaq. If the husband refuses to pronounce the formulae prescribed for him, he is punished with the haddi for Talakah, according to Abu Hanifa, however, imprisoned until he pronounces the formulae, whereby he is set free or is declared to have lied, whereupon he is liable to haddi. If the wife refuses to pronounce the corresponding formulae, she is punished with the haddi for adultery, according to Abu Hanifa and the better tradition of Ahmad b. Hanbal, however, imprisoned until she pronounces the formulae, whereupon she is set free or confesses her transgression and is then liable to haddi. On the question whether talaq is possible if one partner is both not Muslims or not free or not 'ard, there is wealth of Talakah, which cannot be detailed here; the same applies to the possibility of talaq during the pregnancy of the woman, with the object of denying the paternity of the child On this point the strength of the principle that the marriage decides the descent of the child is remarkable, as is the distinction between two objects of talaq (accusation of the wife of adultery and denial of paternity) which is only a result of later developments. In the whole of the earlier period these two objects coincide from the juristic point of view. The divorcing element in talaq is, according to the Malikis (on their presumed divergence from Mlik himself on this question; cf. above) and a tradition of Ahmad b. Hanbal, the talaq of the wife, according to al-Shafi'i that of the husband, according to Abu Hanifa and the
better tradition of Ahmad b. Hanbal however the verdict of the judges pronounced after the Fā'īn of both. Opinions also differ regarding the legal consequences of a later withdrawal of the Fā'īn by the husband; according to Abū ʿIynāfa and one tradition of Ahmad b. Hanbal, a new marriage of the two people is possible in this case, according to Māturīdī and the better tradition of Ahmad b. Hanbal it is not; among older authorities only Ṣaḥīḥ b. Dzhūbair is in favour of the first view, while ʿUmar, ʿAbd Allāh b. Maʿṣūd, ʿAbdallāh b. ʿUmar, ʿAṭīr and al-Zubairi are quoted as in favour of the second (not all have historical confirmation) which was also held by al-Awzāʾī and Ṣufyān b. Ṣaḥwī. Finally it is a disputed question whether the Fā'īn can only be performed orally or (in the case of a dumb person) by gestures; al-Bukhārī devotes chapter 25 of his Kitāb al-Talāq to the discussion of this question and the reasons for his attitude to it.

It is easy to understand that resort was once to the Fā'īn in extreme cases. Thus we find a scholar of Cordova in the fourth century A.H. pronouncing the Fā'īn against his wife simply in order to revive this sunna of the Prophet, which had fallen into oblivion (I. Goldziher, Muhammedanische Studien, ii. 21). But it has not yet fallen completely into desuetude, as Muslim law has no other means of disputing the paternity of a child (cf. Juynībol, Handlediing, p. 217, note 2; Santillana, Istituzioni, p. 222).

LIYYĀN, or Arab tribe, a branch of the Ḩudhail [q. v.]. Genealogy: Liyyān b. Ḧudhail b. Mūdirī b. al-Yās b. Mūjrūl. Settled like the other branches of the Ḩudhail in the country N. E. of Mecca, the Liyyān do not seem to have had in the period just before and after islam a history independent of their brethren: it is only rarely that they are mentioned apart from them, e.g. in Ḩumaydī, p. 34, a propos of their battles with the warior-poet Ṭala'bṭa Ṣalāḥ; Muḥṣīl, Māqūṣ, ed Wüstenfeld, ii. 272: iv. 104 (cf. Ḩumaydī of al-Buhurī, p. 80—81; Ḣudhail Ḧajjāh, ed. II. H. Brn, No. 86 = S. F. A. W. 203, 4. 1927, p. 31), u 614 of a battle with the Khuzā'īa. The poets of this tribe are as a rule reckoned among those of the b. Ḩudhail — e.g. Mālik b. Ḩuṣayn al-Khunā'ī, al-Muṣṭanakhkhul al-Khunā'ī, etc. At the time of the preaching of Islam we find them like the rest of the Ḩudhail under the political influence of the Kuraish. This explains their hostile attitude to Muhammad, which resulted in the murder of their chief Ṣufyān b. Ḩuṣayn b. Nuhān by ʿAbdallāh b. ʿUmar at the instigation of Muhammad. This murder was cruelly avenged by the Liyyān who slew several Muslims in their turn (ṣam al-Rabīʿi, 4 a. h., cf. Ḥumaydī). There is no further mention of hostile relations between the Muslims and the Liyyān; it is probable that the latter were included in the submission which the Ḩudhail made to Islam.

After the triumph of Muhammad and in the periods following, there is an almost complete lack of information about the Liyyān and there are very few persons of note belonging to this tribe: the grammarian al-Liyānī, whose full name was ʿAlī b. Ḧāmid (Ḵāzīm) or b. al-Mubārak, d. in 222 or 223 (cf. al-Zubairī, Tabbārī at-Nakha, ed. Krenkow, Res/ e, viii. 145, No. 125, with bibliography; Flagel, Die gramm. Schulen, p. 51) perhaps belonged to it, but other sources (Yakūṭ, Ṭabaḥi, ed. Margoliouth, v. 229; Tādī al-ʿArās, x. 324, 10) trace his našba al-Liyyānī to the unusual length of his beard (liyyān).

There was some reason to suspect that the Liyyān at a remoter period of Arab history had played a more important part than that almost unnoticed, which they did later: this seems evident from a passage in Ibn al-Kalbi (K. al-Aṣmā'ī, p. 57 = Yakūṭ, Muḥṣīl, iii. 181, 19) who assigns to the Liyyān certain priestly functions (ṣadūm) in the cult of the Ḥudhail idol Ṣawā' (cf. Wellhausen, Rāch Arab. Heidentums, p. 18—19); but as the dates of their inscriptions and graffitis in the north of the Ḥijāz has not only confirmed this suspicion but revealed the existence of a Liyyān state several centuries before the coming of Islam. These inscriptions, first known from the imperfect copies of Doughty and Habel, were later collected in large numbers (over 900) by Euting and deciphered by D. H. Muller after preliminary work by J. Halévy. They are now available in still larger numbers and better known as a result of the discoveries and publications of Fathes Jaussen and Savignac. They are almost all in the vicinity of the village of el-ʿUllā (especially in the area full of archaeological remains) called el-Khawīk and in the rocky cliffs to the east of this not far to the south of the great Nabataean centre of al-Hiḍār [q. v.], Mada'in Ṣālīb; some have even been found here although in much smaller numbers. Their epigraphy closely resembles that of the Minaean inscriptions (which are also found in very large numbers east of el-ʿUllā) of which the Liyyān inscriptions represent a dependent or parallel form, but in any case of a decidedly later date (against D. H. Muller who wrongly thought them older). Their language on the other hand is quite like that of the Thamudean and Safaitic inscriptions, in Northern Arabic and only differs from classical Arabic by several peculiarities (especially the use of ha in place of al for the article, and of a participle of the form nisba in contrast to the form mūsā'il of the classical Arabic).

From these inscriptions we learn that el-ʿUllā — the old name of which is given in the form D D N identical with the Dehdān of the Bible — was the capital of a 'kingdom of (or of the) Liyyān', of which some of the kings were Talmai I and II (cf. the name of Talmai, king of Gešhūr, father-in-law of Ab-ḥolam, ii. Sam. iii. 3 and xii. 17). Takhmān, Lawdhān, Hanūmah M-SH-M, Kairīb. This kingdom seems to have been for a long period of remarkable size and importance; before it was formed or became quite independent el-ʿUllā Dehdān was a colony of the Minaeans and formed one of the stages on the great trade route which brought the merchandise of the Yemen and India to the ports of the Mediterranean. After the fall of the Minaean kingdom (according to M. Hartmann between 230 and 200 B.C.) the Nabataeans
replaced the Mineans in the control of trade and settled in al-Hidjr; but at the same time the Liyhānīs, who had absorbed Minean civilization formed an independent kingdom and arrested the southward advance of the Nabataeans; the frontier of the two states must have been between al-Hidjr and el-Ola. It is probable that these Liyhānīs were simply a section of the Thamūd [v. v.] whom we find mentioned in the annals of Sargon of Assyria, while there is no ancient reference to the Liyhānīs until Pliny who mentions them (Hist. Nat., vi. 33, 3) under the name of Lēchiēnī. Their power must have increased after the fall of the kingdom of Petra (106 A.D.) and it seems that from this time onwards, they also held al-Hidjr, abandoned by the Nabataeans.

When and how the Liyhān fell in their turn to the position in which we find them in the sixth century forming part of the tribe of Hudhaihl, and settled in a territory considerably to the south of their original home, we cannot tell, on account of the complete absence of documents. Muslim tradition has lost all memory of them and confounds them apparently under the general designation of Thamūd with the Thamūd proper and the Nabataeans of al-Hidjr; a memory but a very vague one of the old kingdom of Liyhān may perhaps have survived in the isolated mention in a tradition that the Liyhānīs were "remnants of the Dārjūnī" who later became part of the Hudhaihl (Tabari, Annales, ed. de Goeje, i. 749, 11-12; cf. Dūrhum) following Ibn al-Kalbī; Taqī al-Ārūsī, x. 324, 1-3, following al-Hamdānī, probably in al-Ikīl and the passage is not found in the text of the Qissat al-Ārāh. The Thamūdianic graffiti (which used to be called proto-Arab) are a development (later or parallel) of the Liyhānī script, the last stage of which is seen in the Āfīlīcīc graffiti; but we are completely ignorant of the historical relations of the peoples who used these similar scripts.

The ruins of Dādān-el-Ola, although they have so far only been superficially explored give us some idea of the advanced stage of civilization to which the Liyhānīs had attained; besides tombs, some of which are decorated with sculptures in high relief, Fathers Jausser and Savignac have discovered a sanctuary with a central basin circular in form (for ablutions?) and ornamented with large statues several important fragments of which have been discovered. An inscription in this sanctuary mentions an afkāl of the god Wādī; this term, which certainly is the name of a sacrificial office, is not unknown to Muslim Arab tradition (Akbānī, xxxix. 686; Ibn Duraid, K. al-Iṣṭihāb, p. 197, 7). Among the deities worshipped by the Liyhānīs we find alongside of typically Arab ones like Allāh, al-Īšā, Wādī, Yaghūth and a god Dūh Ghābāt of whom we know nothing definite, gods of Aramaean origin, like Bālsāmīn, the god of the sky and, in a theophoric name, Sāmil; in these names as well as in the use of other Aramaic terms (among them nafish in the sense of "tongue") there is apparent the influence of the Nabataeans undoubtedly contributed with the Mineans to form the character of Liyhānī civilization. The presence of Judaean elements, which Muller and Glaser thought they could recognise is on the other hand more than doubtful.

LIMNI, Turkish form of the name of the island of Lemnos in the Aegean Sea between Mount Athos and the mainland of Asia Minor about 50 miles S.E. of the entrance to the Dardanelles. In ancient times a possession of Athens, in the middle ages it belonged to the Byzantine empire; in this period, in 901, the island was sacked by the Muslim inhabitants of Crete. Towards the end of the middle ages Lemnos had passed into the hands of the Italians who called the island Stalincene (formed with the addition of the Greek preposition οἷς and the article). When the Turks took Constantinople the island belonged to the Genoese lords of Lesbos (Midillu), the Gateius. Under Bayazid I, who had fortified the Dardanelles, Lemnos passed with the other islands under Turkish rule. But when Constantinople became the Turkish capital it was inevitable that Lemnos, the largest of the three islands commanding the entrance to the Dardanelles (the others are Lemnos and Tenedos, or Bozja Ada) entered the direct domination of the Turks. In 1456 took place Muhammad II's expedition against Ainos as a result of which the Conqueror became lord of the islands of Thasos, Samothrace and Imbros. Negotiations had been going on between the lord of Lesbos and the Sultan regarding the payment of tribute. But in the course of these negotiations the people of Lemnos, dissatisfied with the rule of Nicolas Gateius, brother of the lord of Midillu, voluntarily submitted to the Sultan who appointed Hamzah Beg governor of the island and entrusted him, according to an account of Gallipoli, with the task of installing him there. Gateius succeeded in leaving the island before the arrival of the Turks. The date of these happenings which are recorded only by the Byzantine historians Ducas (XIV, 190) and Chalcedonias (vii. 248) is not certain; but Ducas who was representative of the princes of Lesbos at the Sultan's court, may be considered a reliable authority. In 1457 a Papal fleet drove out the Turks — the Pope had intended to establish an order of Knights on Lemnos — but some time afterwards the same Isma'il Beg recovered Lemnos with the adjoining islands (Zinken, ii. 235 sqq.). In 1462 Muhammad became master of Lesbos also. In the following year the Turkish possession of Lemnos was disputed by the Venetians whose Admiral Canale in 1467 (A. S. 772 in Neshri and Sa'd al-Din, according to von Hammer) took Ainos and the islands in this part of the Aegean Sea (cf. also Menoudjīm Bâghi, iii. 354); these conquests resulted in Muhammad's great expedition against the island of Euboea or Negropont (in Turkish:
Eghribos) in 1468. Soon afterwards the Turks retook Lemnos and by the peace concluded with Venice in 1479 this island remained definitely a possession of the Turks. In this last year the island of Tenedos was fortified by the Sultan so that the system of defences of the Dardanelles was completed.

In July 1566 the Venetians won a victory over the Turkish fleet before the Dardanelles and as an immediate result took Tenedos, Samothrace and Lemnos. These conquests were such a threat to the capital that the grand vizier Muṣṭafā Koprulu took energetic measures and sent an army of 4,500 men under the Kapudan Paşa Topal Muḥammad; the latter besieged the citadel of Castro for 63 days, after which it was concluded on November 15, 1567. Tenedos was regained from the Turks by the same expedition (Naʿima, ii. 579, 585, 633). Finally in 1770 in the Russo-Turkish war Count Orloff laid siege to Castro and after 60 days had obtained its surrender, when the Kapudan Paşa Husan attacked the Russian fleet in the harbour of Mudros (Turkish: Munduros), forced the Russians to withdraw on October 24, 1770 (Wasi'i, ii. 118).

Turkey lost Lemnos after the Balkan War. By the peace of Athens (November 14, 1913) it had been stipulated that the Powers should delimit the island and Lemnos was allotted all the Aegean islands to Greece except Tenedos, Imbros and Castelorizo. Turkey, reinforced by a strong public opinion, would not accept this decision, but the outbreak of war in 1914 prevented the negotiations being brought to a satisfactory conclusion. In the course of the war the strategic importance of the island for Turkey became manifest; after the failure of the naval attempt to force the Dardanelles, the Entente powers in April 1915 established a naval base in the Gulf of Mudros which lies on the south side of the island to serve as a base of operations for the forces which were to be landed at Gallipoli, to force a road to Constantinople. This is how the British admiral’s flag-ship in the Gulf of Mudros came to be the scene of negotiations which preceded the Armistice of Mudros between Turkey and the Entente powers on October 30, 1922.

In the old administrative division of the Turkish empire the island formed part of the sanjcak of Gallipoli which was the sanjcak of the Kapudan Paşa; after the reforms of the sixteenth century Limni became a sanjcak in the Balār-i Safīd Wilāyet including the kildas of Limni, Boğaz Ağa (Tenedos) and Imros (Imброс). Castro, a little harbour on the west coast, was always the seat of the governor and had the garrison. Cuinet gives 27,079 as the total of the population, which has always been predominantly Greek. Cuinet gives the Muslims as 2,450. One of the specialities for which Lemnos has always been celebrated since ancient times is "terra sigillata" (Turkish "timi mokkum"), a kind of earth found near the village of Koskinon on the south coast (where it has been sought to locate the site of the ancient Hephaestia) which is credited with medicinal virtues. This bed of clay was unearthed once a year (August 16) to the accompaniment of certain ceremonies at which the Greek priest and the Turkish hajja both assisted (Naʿima, ii. 586).

LINGA, a little seaport on the Persian Gulf which lies between Lārīstān [q.v.] and the desert. The old port was at Kung, 8 miles east of Linga; the Portuguese had a factory there where they ruled long after the loss of Hormūz (to 1711). In the reign of the Zand dynasty, 1,000 Dāwāsīm Arabs (Bānī Dāwāsīm, Dāwāsīm, Kowāsīm) with their chief Shaikh Sallīm came from Ras al-Khaima (Umān) and took Linga from the khātīr of the district Dāhānīrī. In 1887 the Persian government took possession of Linga and deported the Teherān the last hereditary shaikh (Kādīb). The present population is very mixed (Arabs, Persians, Hindus, Africans). On the shore at Linga are wharves for building boats for local traffic and the port is fairly busy, but the mountains which rise from 3,500—4,000 feet behind Linga make communication with the hinterland difficult (Lār is 45 farsākhs from Linga).

LISĀN AL-DIN. [See Ιβν Χάθιβ.]

LISBON, Portuguese Lisbon, a city at the mouth of the Tagus, now the capital of Portugal, with 435,000 inhabitants; tradition ascribes its foundation to Ulysses and it originally bore the Phoenician name of Olīptūp. Under the Romans it received the name of Felicissimus, or Limni, and formed a municipium. It was under the rule of the Alans from 407, of the Visigoths from 585 to 715, when it passed into the power of the Muslims.

For the Arabic transcription of the name of Lisbon we find the two forms Līthūnna and Lūthānna with or without the article (cf. especially, David Lopes, Os Arabes nas obras de Alexandre Herculano, Lisbon 1911, p. 58—59 and the references there given). The most usual ethnic is Al-Usbānī. Lisbon was not a large town in the Muslim period but it was nevertheless frequently descripted by the Arab geographers. Al-Kistī speaks of its ramparts and its caravans and of the springs of warm water which rose in the centre of the town. It is built, he says, opposite the fort called al-Maḍān (Almada), so called from the gold dust washed up on the bank by the Tagus. It is also from Lisbon that this geographer followed by several authors makes the legendary expedition of the "Adventurers" set out (no doubt to the Canary Islands; cf. above ii., p. 886, s. v. AL-KHILĀDIY).

Lisbon very early (by 711) fell into the hands of the Muslims and under the Omayyad caliphs of Cordova formed a part of the district of Balṭa, along with Santarem and Cinta. The Arab chroniclers record several risings there which were quickly suppressed. It was however from the Normans (Mādīrūs) that Lisbon suffered most in this period. During their first invasion of al-Andalus in 1229 (844) it was there that they disembarked for the first time. According to Ibn 'Idārī, their fleet consisted of 54 galleys and 54 vessels of less
importance; the alarm was given to the caliphs of Cordova by the governor of Lisbon, Wahib Allāh b. Ḥarm. Again during the invasions of 966—971, in the reign of al-Īṣākam II, the Normans began by ravaging the plains of Lisbon after landing at Alcacer do Sal (Ḳaṣr Abī Dānīm). For further details, cf. the article Māsūsī and the literature there quoted.

After the fall of the Omayyad caliphate of Spain, Lisbon formed part of the independent kingdom founded by the Ṭafsids [q. v.] with Badajoz (Batallawa) as capital. Under the Almoravids, it seems to have been taken for a brief period by the Christians and retaken at the end of 1104 (1110) by the Emir Sir b. Abī Bakr, at the same time as Santarem, Badajoz, Porto and Evora. It was only some 40 years afterwards, in 1142 (1147) that it was finally conquered by Afonso I Henriques of Portugal with the help of a body of Crusaders who were on their way to Palestine under Arnold van Aerschot.

LĪTHĀM (A.) (sometimes also pronounced Ṭīṭām), the mouth-veil, is a piece of material with which the Beduins concealed the lower part of the face, the mouth and sometimes also part of the nose (see the commentary on Ḥarrī, ed. de Sacy, Paris 1821, p. 374, q). It served the practical purpose of protecting the organs of respiration from hot and cold as well as against the penetration of dust (cf. Ibn ʿUmmama, No. 5, 43; also No. 39, 24, and 73, p; and the commentaries on Mutanabbī, p. 464, 27 and Ḥarrī, p. 374, 2). It also made the face more or less unrecognisable and thus formed a protection against the averger of blood (Goldziher in Z. D. M. G., xli. 101). The ʿlīthām was therefore also sometimes worn as a deliberate disguise by people who did not usually wear it; thus in the 100 Nights (ed. Macoughan, i. 878) it is worn by a princess, who disguises herself as a man, and (ibid. ii. 58) by a woman for similar reasons. A denominative verb has been formed from ʿlīthām, the fifth form of which in particular means “to put on the ʿlīthām” (e.g. Aghānī, viii. 102, 20; xxi. 55, 19; Ḥākānī, ed. Kosgarten, p. 121, 13; Wright, Obras de al-Andalus, p. 111, 2; Ḥarrī, Masāḥīṣ, ii. 433, 2), while the eighth form in the meaning “to put on something as liṭham” is generally used only metaphorically (see below) Tālḥīmān usually means a woman’s veil (Cherbonneau in J. d. A., s. v. Ṭalḥīmāt, i. 64), but talḥīmāt al-kayyīf is also found as the distinctive dress of a particular office under the Fātimids; their chief kādī wore it along with the turban and talḥīmāt (de Sacy, Christi, ii. 92). In general however, the ʿlīthām does not seem to have been worn by town-dwellers.

The ʿlīthām has no considerable importance for Islam from the purely religious point of view; it is forbidden along with certain other garments for the mubīn (Bukhārī, i. 390, below). The custom of wearing a ʿlīthām was generally disseminated among the ʿAnṣābīd tribes [q. v.]. In N.W. Africa, who are therefore described as ʿlīthām-wearers, mulʿāthāmah or aṣwāl al-mulʿāthāmah; as the Almoravids originated in one of their clans, the Ṭamūmā, the ʿlīthām thus came to have a certain political significance. The custom of wearing a ʿlīthām (below the nīḥā, see Bakri, p. 170) was found in other parts of Africa also, e.g. in Kāmān (Maẓrīzī, i. 103, 31 ]._

LIWA’ (A. “flag”, from lwa to “enroll”) means in Turkish official terminology an administrative area, several of which form a vilayet “province” and one is in turn divided into kazas “districts”. It corresponds pretty much to the département in France. It is synonymous with nanglik (t. “flag”) and is used alongside of it. The sanjak is governed by a mutasarrifi, whence a third synonym mutasarriflik. The institution of the liva" goes back to the early days of the Ottoman empire but it was under Mahmud II in 1814 that the present administrative organisation came into being. Bibliography: Uciniti, Lettres sur la Turquie 3, Paris 1853, i. 44, 50. (CL. HAURT)

LIWAN (Λ, for ak-lawan; Dozy, Supplément, 563) in eastern houses is a hall, enclosed by walls on three sides and open through an arch on the fourth; it is raised two or three steps and forms the focus of the house, all the rooms of which open on to it or on to an arched corridor which is ornamented with plants and trees. This is a type borrowed from the Sasanian palaces, of which a specimen has survived to the S.E. of Baghídád, in the ruin called Tám-kirá, “vault of Chosroes”, or Támín-kirá, “hall of audience”. It corresponds to the fiilár of the modern Persians. It is open on the north side to get the cool air. Bibliography: A. von Kiémer, Topographie von Damascus, Denckers, Ab. Wien, 1854, vol. v., p. 19; Lane, Modern Egyptians, London 1837, i. 78, 20: ii. 45. (CL. HAURT)

LODI, the name of a clan of the Ghilzai tribe of Afghanistan. A family of this tribe was established in Multan before India was invaded by Mahmud of Gharní, for that district was ruled, in 1005, by Abu'l-Fath Dáwid, grandson of Shaikh Jamal Lodi who had established himself there, but the importance of the tribe dates from the reign of Firuz Tughluq when some of its members entered India for purposes of trade, but soon occupied themselves with politics. Dawlat Khan Lodi competed with Khizr Khan [q. v.] for the throne on the extinction of the Tughluq dynasty. Malik Paham Lodi took service under Malik Mardán Dawlat, governor of Multán, and his eldest son, Sulcán Shah, served Khizr Khan at Multán. After the battle on Nov. 12, 1405, in which Khizr Khan defeated and slew Mållí (Ikbál Khan), Sulcán Shah received the title of Islam Khan and the sif of Sirhind, where he settled with his four brothers and assembled a body of 12,000 horse, mostly of his own tribe. His next brother, Khal, had a son named Buhlul (usually called “Baholol” in India), whom Islam Khan adopted, to the exclusion of his own son, Kutb Khan, and married to his daughter. Kutb Khan fled to Dihlí and entered the service of Muhammad Sháh the Sayíd, to whom he described his relations as a danger to the state. Muhammad sent a force against them and they were defeated and fled to the hills, but almost immediately recovered, recovered their possessions, and defeated the minister, Hisam Khan, near Sidhawa. In 1442 Dihlix was threatened by Mahmud Khalaji II, of Malwa, and Muhammad Sháh appealed to Buhlul, who demanded, as the price of his assistance, the execution of his enemy, Hisam Khan and the appointment of Hamid Khan as minister. The feeble king complied, and Buhlul marched to Dihlí with his contingent and took command of the army. The battle with the army of Malwa was indecisive, but Mahmud was recalled by the news of a riot in his capital and Buhlul was hailed as the saviour of the kingdom, and received the title of Khan Khánan and the government of the Pándíb. He shortly afterwards picked a quarrel with Muhammad and besieged him in Dihlí, but retired to Sirhind without capturing the city. In 1443-1444, Muhammad died, and was succeeded by his son *Alam Sháh, a feeble monarch who, after a brief and troubled reign in Dihlí, retired to Buhlúd, which he made his place of residence. Buhlul then marched to Dihlí and *Alam Sháh abdicated in his favour. Buhlul ascended the throne on April 19, 1451, and reigned for thirty-eight years. He was succeeded, on July 17, 1459, by his son Síkandar, who reigned until November 21, 1517, when he died and was succeeded by his son lbrahím, who was defeated and slain by Dábur on the field of Pándíb on April 22, 1540. Bibliography: NieÁín al-Dín Almad, Tábshá-i akbarí; Khwáfi Khlán, Muntasíb al- Tawáriosh, ed. and translation by G.S. A. Rankine, all in Bib. Ind., series of the A.S.B.; Muhammad Kásim Fíradi, Gulshan-i Hárshí, Bombay 1832. (T. W. HAIG)

LOJA (λ, Lovegra), a little town in Andalusia, 35 miles S.W. of Granada, on the left bank of the Genil at the foot of an imposing limestone mountain, Periquetes. It has now rather less than 20,000 inhabitants but seems to have been more important in the Arab period. It was the birthplace of the famous Ibn al-Khaṣṣáb Lísaín al-Dín [q. v.] who wrote an enthusiastic description of it. One can still see there the ruins of the fán which commanded the town in the Arab period. It was repopulated in 280 (893) in the reign of the caliph "Abd Allah b. Muhammad. This *key of Granada* was besieged in 1498 by the Catholic Kings who took it after a month’s siege with the help of a body of English archers. Bibliography: Vákutí, Mádjam al-Buldan, vii. p. 543; F. Simonet, Descripc Ion del reino de Granada, Granada 1872, p. 95—96. (E. LÉ: PROVENCAL)

LOMBOK (usually called by the natives Tanah Sasak), the second in order of the Little Sunda Islands lying east of Java; the Strait of Lombok separates it from Bali, the Strait of Alas
from Sumbawa. A not very broad, rather flat, strip runs from east to west approximately through the centre of the island, which is in part extremely fertile and is shut in by hills on the north and south. In the north is the volcano of Kintjani revered as holy by a large section of the population. The island is one of the richest parts of the Archipelago; the main industries are agriculture and cattle-rearing, the first being on a particularly high level. A quantity of the rice which is in part grown on fields excellently irrigated is exported. Even if we exclude the foreign traders settled on the island (especially Buginese, Arabs and Chinese) the population is not homogeneous but consists of two groups which are sharply distinguished territorially also; the smaller western part is inhabited by Balinese, the centre and the east by the much more numerous Sasaκ. The inhabitants of the western part are descendants of the Balinese, who came as conquerors to Lombok in the xvith and xvith centuries and gradually extended their power over the whole island; they intermarried very little with the native population, so that they do not differ very much from the people of their original home; their language is Balinese, and they profess the religion of Java, whereas the Sasaκ, who are found in their mother island, with a few exceptions (they have for example adopted a dewastram into their pantheon and the sacrifices to this Muslim god must not include pork).

The Sasaκ are the true aborigines of the island; they are quiet and industrious; in their physical features they most closely resemble the Sumbawanese and their language (not yet fully studied) shows a similarity in certain points with the Sumbawanese. They have all adopted Islam except for the little group of the Bodha, who have remained pagans; they live quite apart from the rest of the island, especially in the northern districts of the island, and Bajan and on the south coast and engage in agriculture of a primitive type. They claim to be the descendants of Balinese who immigrated hither in ancient times before the great invasion; there is however no ground for this assertion; physically and linguistically they are in no respect different from the Sasak around them and the name Bodha is also found in other parts of the East Indian Archipelago as an expression used by Muhammadans to indicate groups of people who have remained pagan.

Of the earlier history of the island we only know that in the xivth century, it was a possession of the Javanese empire of Majapahit, but we have no very reliable information as to how and when it became converted to Islam. Islam probably came to Lombok from Eastern Java at the time of the decline of the Empire of Majapahit. Evidence of a considerable Javanese influence can still be traced, and according to a chronicle in the Javanese language found in Lombok, it was Pangeran Prapen, the son of Raden Paku (Suman Giri) who converted Lombok by force to Islam.

The Sasak are of course no more orthodox Muslims than any other people in the East Indian Archipelago, but Islam has so far influenced them that we may see in it the reason why, in spite of the low level of the religion, there has been assimilation between Balinese and Sasak. They are divided into two groups or sects: Waktu lima and Waktu tiga (Islam). The former, who live mainly in the plain of Central Lombok are the Orthodox among the Lombok Muslims; their name shows that in (theory at least) they observe the obligations prescribed by Islam of performing 5 (=lima) salah a day. In keeping with this, the name of the Waktu tiga (who live mainly in the mountains) would mean that they are of the opinion that three (tiga, tiga = 3) prayers a day are sufficient. This is however an improbable explanation. Many are of the opinion that the name is to be explained by the fact that the Waktu tiga only know of three times of prayer, namely fajr (or aurat of Brunei), asad and maghrib; they only observe or in other, the Muslim principal festivals and their marriage ceremony also shows that they wish to be regarded as Muslims. At the same time pagan sacrifices and pilgrimages (which however can also be found among the Waktu lima) play a prominent part in their life. In their villages, there is always in addition to the Muhammadan fiisti i s fimangku, i.e. one who acts as an intermediary at the worship of all kinds of spiritual powers from the world of animism. It is particularly among the Waktu tiga that we find the custom that the village headman keeps two coarse pieces of cloth woven out of different coloured threads (the one "male" and the other "female") to which offerings are made in cases of illness etc.; every household makes a copy on the pattern of these pieces of cloth, which are also treated with reverence.

Practically nothing is known of the early period after the conversion of Lombok to Islam; the island was divided into little principalties often at war with one another; the eastern part was under the influence of Macassar and Sumbawa, the western under the influence of Bali. In 1674 the Dutch East India Company concluded its first treaty with the princes of Lombok. Soon afterwards in 1692 took place the first serious Balinese invasion and about 1740 the king of Karangasem succeeded in bringing the whole island under his sway. Four small Balinese kingdoms thus arose on Lombok which were frequently at war with one another until in 1838 the king of Mataram overthrew his opponents and ruled over the whole of Lombok. Down to 1849 he regarded himself as a vassal of the King of Karangasem on Bali; he then placed himself under the suzerainty of the government of the Dutch East Indies. The Sasak repeatedly rebelled against their Balinese rulers until finally in 1894 the Dutch intervened with the result that they conquered Mataram; since 1895 Lombok has been directly under Dutch rule and administered jointly with Bali.

Bibliography: A complete bibliography for Lombok to the end of 1919 is given in C. Lekkerkerker, Bali en Lombok, Rijswijk 1920.

LÜBNÂN (LEBANON). The Arabs have a somewhat confused, almost mysterious idea of Lebanon. Here they place the sojourn of the Akar [q.v.]. They do not distinguish it from the Anti-Lebanon for which they have no special name. "Djabal Sanir" means to the Arabs the section of Anti-Lebanon to the north of the valley of the Barad [q.v.] The massif of Hermon has been known since the time of Hassan b Thabit as Djabal al-Thady; it is the Djabal al-Shâri of modern writers. Nor are the Arab geographers agreed about the northern boundary of Lebanon. Some include al-Jamkám (Amanus) in it. This confusion has been facilitated by the vague popular appellation Djabal, which has been applied from the Middle Ages to the present day to the range parallel to the Mediterranean running through Syria from the mouth of the Orontes to Galilee; from this comes the name Akit al-Djakal, Djabaliya, "mountaineers", applied by the Muslim chroniclers to the Nuṣairis, Mutawalls, Druzes etc. A hadith tells us that stone from Lebanon was used in building the Ka'ba. This tradition perhaps explains why the Arab geographers see in Lebanon the continuation of the long arête which separates the Hujjaz from Najjd and Syria and Anatolia to the Black Sea. The southern frontier of Lebanon is usually made to coincide with the lower valley of the Lajjîn, the modern Kâsimiya. Current usage, conforming to local tradition, makes the Lebanon lie between this river and the Nahr al-Kabîn (the ancient Eleuthera) on the north. This is the region which our historical survey will cover. The backyard and the shattered population of the Anti-Lebanon has always gravitated in the orbit of the towns of Eastern Syria, while Lebanon with its towns opening to the sea and its flanks watered by the abundant rains yielded by the moisture from the sea, which it gives to the rest of Syria by its rivers, is in economic and political dependence on the centres of the ancient Phoenician country.

Lebanon is rarely mentioned by the pre-Muslim madan poets; for example by Nâbirgha Dhubyanî, whose patrons were phylarchs of Ghassân. The name becomes more familiar to their Muslim successors, e.g. Abû Dhabal al-Djumâh, Nâbirgha al-Sâlihînî and Abû al-Râmîn b. Hassân, from their attendance at the Omajied court. Its territory, covered with forests, mezâne, wet forests, and mountains, difficult of access, cut up by deep valleys and torrentous rivers, from the Arab conquest has offered a place of refuge to several small nationalities, increased from time to time by the influx of all the oppressed and persecuted.

The semi-independence which it has never ceased to enjoy has favoured its evolution on individualist lines and the local development of its communities, formed at the expense of orthodox Islam i.e. the Mutawâwallis, the Druzes and the Nuṣairis [q.v.], not to speak of the Christian sects, Malâkitâs, Jacobites and Maronites; these last are nowhere mentioned by name by the Arab writers, when dealing with Lebanon. The degree of autonomy won by these groups, religious in their origin but finally strictly national, enables us to follow the fluctuations of Arab penetration and Muslim power in Syria.

Each sect, often each district, lived under the rule of petty native dynasties, supposed to be founded by suzerains in Damascus, Bagdad or Cairo. They received grants of investiture and were in return liable to certain obligations and military service, when the actual authority was able to force them to it. With a remarkable agility, the feudal chiefs of the Lebanon practised the art of manoeuvring through all the turmoil that saw successively installed in the east the rule of the caliphat, Sallân, Saljûck, Ayyûbid, Franks, Mamlûk, and Turkish pâshas. Not realising its strategic importance, the Omajieds and 'Abbyssids did not think of occupying Lebanon, still thinly populated except in the districts on the coast; they were less far-seeing than the Crusaders, who built massive fortresses on the frontier of the "Mountain"; Husn al-Akrâd [q.v.] and Shākif Arūn. This negligence enabled the Djurâdṳna [q.v.] to enter Lebanon. The establishment of the Maronites in the upper regions of northern Lebanon must have coincided with the coming of these Anatolian invaders and have facilitated the organisation of this Christian group, which was destined to play a preponderating part in the Mountain. At the end of the ninth century,
Arabs of Tanūkh, coming from the region of Aleppo, had established themselves in southern Lebanon, a principality, that of the "emirs of al-Gharbi" in the middle of peoples, partly Arabised and influenced by Shi'a teaching. The development of this emirate was arrested in the eleventh century by the creation of the Frankish dukedoms of Saydā (Saida) and Barut (Bairūt). The lordships of Gibelet (Djebail), Batrun (Bayroun) and the county of Tripoli depended for support on the Christians of northern Lebanon.

After the expulsion of the Franks, the Mamluks of Egypt entrusted the defence of Bairūt to the Tanūkhids. In the xiii and xiv centuries, the rising against the Mamluks followed by the extermination of the Mutawwīls and Druse rebels of Central Lebanon made it easier for the Maronites to occupy the lands south of the Nahr Ibrāhīm (Adonis). In the beginning of the xvth century the Tanūkhids joined the Ottomans who were conquering Syria. Weakened by internal dissensions they had soon to yield to the Banū Ma'n of whom Fakhhr al-Dīn [q.v.] was the most noteworthy representative. In 1696 on the death of the last of the Mamluks, the Ottoman governor passed to their relatives, the Banū Shihāb who came originally from the Wādī 'l-Tāin, on the western slopes of Hermon.

The fall of Fakhhr al-Dīn had opened Lebanon to Turkish intrigues. They were not long in undermining the authority of the Shi'ahids, constantly struggling with the insubordination and encroachments of the Druse feudal chiefs. In the interests of agriculture the Ma'nids had encouraged the immigration of Christians from the north into southern Lebanon. This policy was intensified by the Shi'ahids who were on good terms with the Maronites. The next famous among these amirs was Bahshir [q.v.] a Christian by birth (b. 1769). Resuming the scheme of the Ma'nids Fakhhr al-Dīn, he worked for half a century in forming a great state of Lebanon. Deposed in 1840 he died in exile. Direct Turkish rule in Lebanon (1840—1860) perpetuated anarchy and insecurity there and fighting between the Maronites and Druses. This ended in the massacre of Christians by the Druses and the landing of French forces to restore order. An international commission was appointed to elaborate a "Règlement Organique", the charter of a new autonomy for Lebanon, under the control of Europe. At the head of it was a Catholic governor-general, appointed for five years with the approval of the Powers in whom was centralised all the executive power. As a counterpoise to this authority, an administrative council was elected in such a way as to secure representation to the various communities. From this "Règlement Organique" arose modern Lebanon which owes to it fifty years of prosperity and peace such as it had never before known.

The Great War upset everything. Turkish forces occupied the Mount Lebanon and a Turkish governor was appointed; famine and disease soon decimated the population. On April 25, 1920, the conference at San Remo entrusted to France the mandate for Syria and Lebanon. On Sept. 1 of the same year, at Bairūt, General Gouraud, High Commissioner of the French Republic, solemnly proclaimed the creation of "the Grand Liban" with Bairūt as its capital. In addition to the "Autonomous Lebanon" created in 1860, this new state included the districts of Tripoli, Sādā and Tyre. It stretches from the Nahr al-Kabir in the north to the borders of Palestine and is bounded on the east by the chain of the Anti-Lebanon. Grand Liban is governed separately from the "Confédération Syrienne", with which it reserves the right to conclude agreements. It is administered by a French official until a native governor is appointed. A representative council of 30 members elected by vote discusses matters of general interest and the budget.

According to the last census (1921—1922) the population is 620,000. The Christians number 350,000 of different sects of whom 200,000 are Maronites; 275,000 Muslims (125,000 Sannīs, 105,000 Mutawwīls or Shi'is, 43,000 Druses etc.); 3,500 Jews; 20,000 foreigners.

Ludd, a town in Palestine, S.E. of Yaffa, is mentioned in the Old Testament (only in the later books: Chr. ii. 33; Neh. vii. 37, xi. 35; I Chr. viii. 12) under the name of Lod, in the Greek period as Lydda; the Greek name of Diopolis given in the Roman period did not drive out the old name, the preservation of which was helped by Acts, ix. 32 for example. It was an important place in the early centuries of the Christian era; the capital of a papacy; it had a rabbinical school and was the see of a bishop at quite an early date. It was particularly famous for the alleged tomb of St. George above which a church was built. It was conquered with several other towns in Palestine by 'Amr b. al-As and at a later date was the temporary capital of Salāḥān whom his brother, the Caliph Walīd (705—715), had appointed governor of Filastīn, until he rebuilt Ramla, after which Lydda began to decline. In the tenth century, 'Ukkādāsī mentions the splendid church of St. George and the Muslim legend connected with that of the dragon-
LUDD — LUHAIYA

sleven, according to which Christ will one day slay Antichrist at the door of this church. After the church had been destroyed by the Fatimid Caliph Hakim (996–1020) and rebuilt once more, it was destroyed in 1099 by the Muslims on the approach of the Crusaders, so that the victors only found the splendid tomb when they arrived. Under Christian rule Lydda again became the see of a bishop and a new church was built immediately adjoining the ruins of the old one but was destroyed by Saladin. The town never recovered from its complete destruction by the Mongols in 1271. A mosque was erected on the site of the earlier church while the ruins of the church of the Crusaders were handed over to the Greeks who restored them in modern times.

LUDHIANA, is the name of a district and town in the Pindârî Division of the Pândîrî province of British India. The tract is an alluvial plain bounded on the north by the river Sutlej and traversed by the old bed of that stream; the area is 1,455 square miles. There is some irrigation from the Sirhind Canal. The early history is obscure; Sunet is a site where ancient coins are found peculiar to the place. The tract is prominent in the annals of the Sikhs. In the year 1809 Ludhiana town became the British frontier cantonment, and the district assumed almost its present limits at the conclusion of the first Sikh War in 1846. The population of the district in 1921 was 1,25,622, of whom 80,000 or were 1,25,622 Sikhs, fine men and excellent farmers. Gudjas, Arains and Muhammadan Radjputs come next in numbers.

The town of Ludhiana stands on the Grand Trunk Road close to the Burhanallah: it is an important junction on the North Western Railway. The founders were Lodi Pathans from whom it took its name. After the first Afghan War the exiled family of Shah Shudâî domiciled here. The population in 1921 was 51,880. Ludhiana is a busy market town famous for the manufacture of shawls and turbans, of furniture and wooodwork, and for wool and silk dyeing. Military contractors supply uniforms and accessories to the Indian Army. The principal women's hospital of the province is here, founded by the American Presbyterian Mission, which has its chief station in Ludhiana

(1. R. W. BIRTLEY)

LUHAIYA, a harbour at the southern end of the Gulf of Lhûzân on the Arabian coast of the Red Sea. The little, now unimportant, town lies on what was once an island but has become joined to the mainland in comparatively recent geological times and is separated from it at high tide, while the harbour is dry at low tide. The town in Niebuhr's time had no wall around it, but there were ten or twelve towers on the land side at intervals of 250 paces with galleries at a height above the ground reached by a ladder. The towers were armed with a few cannons. When Ehrenberg visited Luhaiya in 1825 the town was enclosed by walls. At the present day there rises behind the town a fort built by the Turks with one or two modern guns. The houses of the town are for the most part wretched little straw huts, such as are usual in Tihãma; only a few are built of stone. The harbour of Luhaiya is hardly worth the name, as the anchorage is bad and the entrance is made difficult by sunken reefs. Even quite small ships have to anchor far from the town, and low water even small boats cannot reach the shore if loaded. The drinking-water is brackish and dear. The coast around Luhaiya is dry and sterile. The main industry of the population, who are mainly Arabs, but include a few Baniyas and still is fishing and trading. Luhaiya owes its importance mainly to the trade in coffee, which is brought down from the highlands, stored, shelled and sold. Near the town there are also a few coffee plantations, the produce of which is highly esteemed and used to be reserved for the Sultan of Turkey. There was and still is a busy trade with ‘Aden, Hodeida and ‘Aden, mainly conducted by Arab sailing-ships. The principal articles of export is coffee and corn is imported. Luhaiya is connected with Djodda and Hodeida by a caravan road 621 miles long. There is also a telegraph line to Hodeida. The Eastern Asia Service of the Lloyd Triestino has a three monthly service to Luhaiya.

Nothing definite is known about the origin of Luhaiya. A. Sprenger identified the town with the Mağâlûn kâmû of Ptolemy but this equation seems at best only possible. The identification of Luhaiya with the old town of Samborchathe or the harbour of Laupas or Naçfûlâ kâmû which E. Gosei supports, is very improbable. Niebuhr supposed that the inhabitants of Luhaiya owed their name when the demands of the export trade in coffee from the interior required it. Here also, as at Mokhâ, the hermitage of a Muslim saint is said to have been the nucleus around which the admirers of the saint gradually collected and built the town. A chapel was built over his tomb, the vicinity of which was considered auspicious for living and dead. At the beginning of the xviith century the Portuguese who call the town Luya for the first time became acquainted with Luhaiya. In 1513 Alfonso d’Alboquerque entered the harbour on an expedition into the Red Sea. Luhaiya then formed part of the territory of the Imam of Sanû’a to whom it paid tribute. In the second half of the xviith century Luhaiya suffered from the raids of the Hâshih and Bâshik tribes, who on one occasion burnt it down. In spite of this the trade of the town must even then have been not inconsiderable, for about 1760 in Mawsim (April to July) it paid 3,000 dollars from the harbour revenues to the Imam of Sanû’a. At the beginning of the xixth century the governor of the Imam of Sanû’a made himself independent in Luhaiya; but when the Wahhabis invaded the Yemen and defeated the Qâdî of Luhaiya, the latter went over to the victors and took from the Imams of Sanû’a the whole of Tihãma from Luhaiya to Bîb al-Mandab along with ‘Ad al-Fakh and a considerable part of the coffee-growing country. Luhaiya now seemed to
have a brilliant future before it; for it was to be the main harbour of export not only for the whole of this vast area but of the Wahhabi country also and negotiations were opened with the East India Company, who were invited to establish a factory in Laḥiya. Laḥiya's prosperity was again interrupted by the invasion of Muhammad ʿAli who occupied Laḥiya in 1833. In 1869 he found it in possession of the Turks under whom the port and its hinterland formed a bayd in the sanduq of Ḥodeida. Laḥiya was also used by them as a base of operations against the neighboring completely pacified highlands of ʿAṣir, which obtained independence with the collapse of Turkey in the world war. Saḥiy ʿAli b. Muhammad al-Iṣrī, lord of ʿAṣir who is considerably under Italian influence, has held Laḥiya and Ḥodeida since 1918.

(ADOLF GROHMANN)

**LUKATA** (Ar.), an article found (more precisely: "picked up"). The leading principle in the Muslim law regarding articles lost and found may be said to be the protection of the owner from the finder, sometimes mingled with social considerations. The picking up of articles found is generally permitted, although it is sometimes also said to be against religious scruples, the article which he has found (or taken) for a whole year unless it is of quite insignificant value or perishable. The particulars of this advertising are minutely regulated by special rules. After the termination of the period, the finder, according to Malik and al-Shafiʿi has the right to take possession of the article and do what he pleases with it, but according to Abū Ḥanifa, only if he is "poor"; but the use of the articles as religious alms (ṣadaqa) even before the expiry of a year is permitted in a preferential clause in Abū Ḥanifa and Malik. If the owner appears before the expiry of the period he receives the object back, as he does after the expiry; but if the finder has disposed of it in keeping with the law, he is liable to the owner for its value; Dīwān al-Zahrār alone recognised no further claim by the loser in this case. The establishment of ownership is facilitated, compared with the ordinary process in Mālik and Aḥmad b. Ḥanbal (in al-Bukhārī also; cf. his supersession to Lūkata, bāb 1). As regards the finding of domestic animals in the desert, there are special regulations which are less onerous for the finder in the case of injured animals and more onerous when they are not injured. Al-Shafiʿi and Aḥmad b. Ḥanbal have similarly some special regulations for articles found in the Ḥaram, the sacred territory in Mecca, which at the bottom go back to the old idea of a special right of ownership by Allāh in the Ḥaram and articles found in it.

These prescriptions of the Fiṣḥ are based on certain ḥaddātīs which have been handed down with several variants (cf. al-Bukhārī, Lūkata; Muslim, Constantiniopole 1329 sq., v. 133) which need not be quoted in detail here as they agree with the principles in all conditions. But it may be mentioned that in a very old stratum, later worked over, there is mention of a two or three year period. In the conception of the primitive jurists the article found is sometimes described as deposited (waḍda); further, out of special religious scruples, one is careful not to pick up found dates and eat them, as they might belong to the zakāt; finally there is a ḥaddātī which forbids the Meccan pilgrims (ḥajj) to pick up articles found at all. From the supersession by Bukhārī to Lūkata, bāb 1, it is evident that found articles might be handed over or used to be handed over by a government office, their retention in the finder's care is justified by quoting a special tradition.

None of these traditions can be considered historical; at most the prohibition by the Prophet in his address after the occupation of Mecca from keeping articles found in the Ḥaram without advertising the index (cf. above) may be genuine on account of its antiquated terminology; Lūkata is not mentioned in the Kurʾān.

(J. SCHACHT)

**LUKMAN,** a legendary figure of the period of Arab paganism, who was adopted into the Kurʾān and later legend and poetry. The story of Lūkman shows three main stages of development: I. The pre-Kurʾānic Lūkman al-Muʿāmmar, the long-lived hero of the Dāhliyya; II. The Kurʾānic Lūkman, the wise maker of proverbs; III. The post-Kurʾānic Lūkman, the writer of fables.

I. **LUKMAN in the old Arab tradition.**

Even the earlier legends already show Lūkman in several aspects: 1. as Muʿāmmar; 2. as a hero; 3. as a sage. — He is offered a long life. He chooses the duration of the lives of seven vultures; he brings up a vulture; when it dies, he keeps a second one and so on for six vultures, which he survives, but he dies at the same time as the seventh, Lubad. The vulture was by far the most popular emblem of longevity among the Arabs (Pa. ciii. 4; Goldziher, Abh. zur arabisch. Phil., ii., p. li. sqq.); R. Basset (Leypọn Bùibō, p.
Lūkān

xxvii.—xxix.) finds a remarkable parallel in the interpretation given by Șidūnūs Apollinaris, for example, of Romulus’s watching for birds: Romulus sees twelve vultures, which means the twelve periods through which Rome will endure. The Kitāb al-
Mu'ammarīn of Abū Ḥātim al-Saljīstānī gives Lūkān second place for longevity: Ḥādir was the longest lived man, and Lūkān the second, who lived seven times the length of a vulture’s years, i.e. 7 × 80 = 560 years; but the figure is increased in different stories to 1,000, 3,000 or even 3,500 years. The last of the vultures rested by Lūkān was called Lubad and endured; when Lubad finally let his wings droop, Lūkān stirred him up to fly again, but in vain; Lubad dies and with him Lūkān. Lūkān, as Iamnīr noted, was already celebrated by Nābīgha. — Various adventures are ascribed to Lūkān such as the heroes of the Dāhiliyya always had to go through; he was the first to punish the adulterer bystoning and the thief by cutting off his hand. — Lūkān be-
longed to the tribe of ʿĀd. Here we have the old Arab saga coalescing with the Kur’ānic legend: ʿĀd, sinful like Sodom, is devastated by drought. An embassy is sent to Mecca to pray for rain and Lūkān goes with it. In the enjoyment of the holy city, given them by ʿĀd, he forgot the purpose of their journey. Reminded of their duty, one of them obtains by prayer a black cloud. This cloud brings to the tribe of ʿĀd the destruction which was to be their punishment for rejecting the Prophet Ḥūd.

Lūkān was already known in the pagan period as a sage. His wisdom is celebrated by pre-Muslim poets (Hörvitz, Koranische Untersuchungen, p. 133). It is natural to suggest that the old stories refer to more than one person. Lūkān’s wis-
dom forms the transition from the Dāhiliyya to the Kur’ān.

II. Lūkān, the maker of proverbs.

In Sūra xxxi of the Kur’ān, Muhammad intro-
duces Lūkān as a sage and makes him utter pious admonitions. These latter do not bear the stamp of Lūkān nor of Muhammad but belong to the common stock of proverbial sayings. A characteretic example is the following: “If all the trees in the earth were pens, and if God were to swell the sea into seven seas of ink, the words of God would not be exhausted” (Sūra xxxi. 26).

This great hyperbole is found in hundreds of variants (N. Reinhold Kohler, Grundzüge der Himmel von der Welt, in Orient und Ockland, n. 246—559; Ethnologische Mitteilungen aus Urgan, i. 341—
323, 441—453). It is recorded that this saying arose out of a dispute with the abūr of the Jews. The abūr insisted that all knowledge was contained in the law, and the saying is directed against them. Does this really mean that Muhammad borrowed this hyperbole from the Jews, to whom it really belonged originally? In the admonition of Lūkān: “Moderate thy pace, lower thy voice, for all voices, that of the ass is most hateful” (Sūra xxvi. 18) Kendall Harris has found the model in Akhīrān: “Lower thy head, speak quietly, and look down! For if a house could be built by a loud voice, the ass would build two houses in a day”.

Once Muhammad had consecrated Lūkān as the wise utterer of proverbs, everything that was thought puns or sen-sole could be attributed to him. Wāḥib b. Ma‘āsumī is credited with saying that he had read 10,000 chapters of Lūkān’s wisdom. The Arabic collections of proverbs (notably Mādīnī) attribute much to Lūkān (see R. Basset, op. cit., xlv.—liv.). Taḥlabī devotes a chapter of his Madījātī to the wisdom of Lūkān. Many sayings seem to link up with the Sūra of Lūkān. Sūra xxxi. 14 advises reverence for parents but warus against being led astray by parents to worship false gods. Taḥlabī’s authority makes Lūkān say: “Be amenable to your friends but never so far as to act against God’s laws”. There are many other sayings which Taḥlabī recalls. Akhīrān: Lūkān teaches that the rod benefits the child like water the seed. In Akhīrān we have: “Spare not thy son for strokes of the rod are to a boy like dung to the garden”. Lūkān says: “When thou seest people who re-
member God, join them; hast thou knowledge it will be useful to you with them and they will increase it; if thou hast none, they will teach thee; when thou seest people who do not remember God, do not join them; for if thou hast knowledge, it will not avail thee, and if thou art ignorant, they will increase thy ignornace”. Akhīrān says: “Join the wise man, then thou wilt become as wise as he, but join not the brawler and babbler, lest thou be caught up in his net”. Lūkān gives excellent advice for one going on a journey and also adds that he should be armed, similarly Akhīrān. In Mādīnī’s Arabic proverbs Lūkān is credited with the following admonition: “My son, consult the physician before thou fallst ill!” This corresponds to the first saying in Ben Sūra’s alphabet: “Honour the physician before thou re-
quirest him”. On the other hand Lūkān’s warning against hypocrisy is found in similar form in the Disciplina clericalis.

Muslim legend is fond of making the sages and wise men of the past into prophets. But since Muhammad quotes Lūkān as a sage, the story was told that God offered Lūkān the choice between becoming a prophet or a sage. Lūkān chose wisdom and became vizier to King David, who called him fortunate: “Hail to thee, thine wisdom, ours the pain!” Lūkān lived down to the time of the prophet Yūnus (Jonah). He is also called judge of the Jews. Muslim legend sometimes also, although very rarely, makes Lūkān a prophet and even gives him the “Madījāt” (megilla), the roll of wisdom (Ṭabarī, Annals, i. 1208).

III. Lūkān, the writer of fables.

Lūkān was honoured by Muhammad and after him as a maker of proverbs. A few centuries later he became a writer of fables also, perhaps because anṭālīya meant both proverbs and fables. Lūkān thus became the Aesop of the Arabs. Much was transferred to Lūkān that was told in Europe of Aesop. The tendencies to this can be traced quite early. While the very earliest legend saw in Lūkān the hero and Muslim legend makes him a sage, judge, vizier, or even a prophet, the later Oriental legend delights in describing him as a carpenter, a shepherd, a deformed slave, an Egyptian, Nubian or Ethiopian slave, a feature which is obviously modelled on the story of Aesop. Lūkān’s master orders him to set the best before his guests. Lūkān gives them the tongue and heart of a sheep. On another occasion his master tells him to set his worst before them. Once again Lūkān sets a heart and tongue before them, for there is nothing better than a good tongue and a good
heart and nothing worse than an evil tongue and an evil heart (in Plutarch and in the *Vita Aesopi* of Maximus Planudes the tongue only is mentioned and not the heart). — Lukmān's fellow-slaves on one occasion eat their master's figs and accuse Lukmān. At Lukmān's suggestion the master makes them drink warm water. Lukmān vomits water only, the other slaves figs and water. — Lukmān's master in his cups had wagered he would drink up the sea. Sobered he asks Lukmān's advice. The latter demands of those who had taken up the wager that they should first dam back all the rivers flowing into the sea, as his master had promised to drink up the sea only but not its tributaries. The latter is a widely disseminated motive in fairy tales of the type of the Emperor and the Bishop (Walter Anderson, *Kaiser und Abt*, F.F. Communications, No. 42, p. 134—140, especially p. 139 where reference is made to Lukmān; Chauvin, *Bibliographie*, viii. 60—62). These anecdotes are also found in the *Vita Aesopi* of Planudes (xivth century), but they are known as early as Plutarch, *Consvivium septem Sapientum*.

The older Arabic literature does not know fables of Lukmān. They first appear in the late middle ages. The Paris manuscript published by Jos. Derenbourg belongs to the year 1299 and contains 41 fables. These fables have often been published and thoroughly discussed, especially by Derenbourg, R. Basset and Chauvin. Out of the 41 fables, No. 22 alone has no parallels: the thornbush bgs the gardener to tend it so that kings may delight in its flowers and fruits; the gardener waters it twice a day and the thornbush overruns the whole garden. R. Basset recalls the fable of Jotham of the thornbush which destroys everything (*Judges*, ix.). All the others with the exception of the thirteenth (the midget and the bull) are found in the Syritic fables of Sophos (= Aesopus) published by Landsberg. All are found in Aesop except No. 9 (the gardener and the wasp), No. 22 (man and the thornbush) and No. 40 (the man and the snakes).

It has been further observed that in these fables the very animals indigenous among the Arabs, the ostrich, the hyena, the jackal and the camel play no part. As these fables first appear in the late middle ages there can now be no doubt that we have to deal with a selection of Aesop's fables translated into Arabic.

IV. Related legendary figures.

Lukmān is a many-sided figure: he is *Muhammad*, hero, sage, maker of proverbs, and writer of fables. It is no wonder then that he has often been compared with the other legendary heroes, Prometheus, Akhiqar and Solomon. Abu 'l-Faraj makes Lukmān the teacher of the epedoeles. Three of these equations deserve closer examination: 1) with Balaam, 2) with Akhiqar and 3) with Aesop. The identification with Balaam is old. Arabic legend gives the following genealogy: Lukmān b. Ba'ār b. Nāhār b. Tārīkh. It is evident that the Kurān exegists sought for something corresponding to Lukmān in the Bible. They found this in Balaam as the *voces balae* and *abam* both mean the same: *to devour*. This then became a Muslim tradition, which entered the Hebrew *Midrash* in which Lukmān is one of the seven wise teachers of the king's son (ed. Casdel, p. 220 sq.) and also the *Disciplina clericatis* of Petrus Alphoncns, where the correct text is *Balaam qui lingua arabica vocatus Lucamam* (ed. Hilka-Soderhjelm, p. 3). The Kurān exegists had no doubt about this identity. The question arises however: did Muhammad himself see Balaam in Lukmān — and next: is Lukmān really Balaam? Derenbourg, Basset and Eduard Meyer (*Die Islamischen und die rheinischen Geschichte*, p. 379) answer in the affirmative. But it is quite incredible. The pre-Kurānic tradition about Lukmān, the Kurān Sūra, which shows deep reverence for Lukmān, have no single feature of the hated Balaam of the Bible and the Haggada. This identification was only made later by Kurānic exegists, who wished to connect Lukmān with the Bible at any cost, and made him the son of Bērō, i.e. Balaam, just as they sometimes made him the nephew or cousin of Job.

Lukmān's similarity to Akhiqar was also noticed long ago, but it is only quite recently that the identification has found a vigorous champion in Rendel Harris, who devotes the chap. vii. of his *Story of Akhiqar* to it. He bases his identification on the agreement of Sūra xxxi. 18 with Akhiqar's warning about the voice of the ass, and on Arab hypotheses which compare Lukmān with other figures in legend and history, notably to the relationship of Lukmān, Akhiqar and Aesop. The story of Aesop shows originally a close relationship to that of Akhiqar. The later legend of Lukmān has borrowed much of the story of Aesop and thus becomes like the Akhiqar story but in reality Lukmān is not directly connected with Akhiqar but with Aesop.

The development of the Lukmān legend seems varied but clear. Lukmān properly belongs to the legends or possibly the history of Arab paganism. For even this period already knows the sage Lukmān. With Muhammad he becomes the teacher of pious doctrines. Incited by the Kurān the interpreters of the *Kurān* found Lukmān's sayings, in many places and found Lukmān himself in the Balaam of the Bible. He was credited with fables in addition to the proverbs and was thus made the Aesop of the Arabs.

THE ORIGIN OF THE NAME LULI

The origin of the name *luli* has not yet been investigated. The term seems to be applied to the inhabitants of the town of Sind which the Arab authors call Atur or al-Kur (cf. Arabs > al-Rai; Alum > al-Lun). This town had been conquered by Muhammad b. al-Kasim before 95 (714) (al-Tabari). The town is called Alur. This town, the old capital of the Hindu rajas of Sind, is now in ruins (on the Indus, cf. the *Stop* of Kohri in the district of Sukkur: cf. *Imperial Gazetteer of India*, Oxford 1907, vii. 441 and xxi. 308: Atur and Rohri). The change of *Atur* to *Lur* is readily explained by the phonetic law of dissimulation of the two *v*’s especially after the change from Atur (Indian) to al-Rai (Arabic). The descendants of the Indian musicians of Kabarim (cf. above) seem to have been joined after the most important town that the Arab invaders had known, and perhaps before them, the Sasanians. This explanation would locate precisely the original home of the *luli*; but, without in any way prejudicing the ethnical relationship of this tribe.

The Lūr/Luli gipsies (cf. the reference above to their dark skin) must be clearly distinguished from the Lūr (q.v.) highlanders who live in the southwest of Persia, have a fair skin and speak an Iranian dialect with no trace of Indian elements. The situation is however slightly complicated by Lūr/Turk斯坦 points. In the first place the use of the terms Lūr, Luri, Lur, etc. is not always quite clear. In the confirmation of Arabic tribes of Fars there is a Luri clan; Sykes, *Ten thousand Miles*, p. 320: Rittich, *Peydaka v Bulūkstān*, Lew. Geogr. Obšči, 1902, xxxiii., p. 69 speaks of a Luri section (Persian pronunciation of Luri”) among the Lūr of Kūrub. Edmonds notes the existence of a Luri (q.v.) clan in Kuristān in the Dashtān division of the Bārānwand group. In Kūrub there is a clan Luri-Kullār (cf. SENNA). Still more confusing is the fact that some Lurs follow the profession of acrobats, bear-leaders, rope-dancers (cf. Cirkow, p. 277). As early as the 19th century, Shāhīb al-Lūr al-Marmī mentions the talent of the Lurs in these directions and in our own day we find wandering troops of Lurs as far north as Tabriz where there is a permanent colony of Kārāt gipsies, professional actors and singers. It is possible that the special qualifications of the Luri and gipsy players differ somewhat; the Sāmūnāt of Kuristān (cf. SARFUL and SENNA) who excel in singing and dancing are not acrobats. But we must first of all wait till a special investigation settles to what precise section the wandering Luri artists belong.

There is nothing impossible in a gipsy infiltration into Lūristan. Whatever was the ethnical entity covered by the name Zut in the first century of the Zuṭ with the Luri see above: Hamza, Ibn ‘Allab, al-'Umarī, al-Razzak (sic) and Nawara (cf. Hawāmat al-Zuṭ between Aradżīn and Kūni-Hormūz in the modern town of Hindyu in the “Indians” may have a similar origin). According to Rakīchī, p. 382, when in the second quarter of the 1st century a. h. the Zuṭ had apostatised from Islam. they were joined by the local Kurds, which provoked the punitive expedition of Abd Alīh b. ‘Amīr to Ishaq (Mālamir, the future capital of the Būurq). The alliance of the Zuṭ and Kurds (435 Luri; q. v.) at so early a date is curious. Under al-Rān, Bāzīlī, 435 mentions two places in Sind and a small district (mālsīyā) under Alwāz in Khurīsān. Schwarz, *Persien im Mittelalter*, v. 665, identifies this Rūr with the district of al-Lur (cf. LUISTĀN). In the light of what has been said above one might suppose the existence of the Luri in a very ancient Indian colony. But as our sources contain no positive confirmation of this hypothesis (according to Ibn Hakawī, p. 176, the “Kurds” were predominant in al-Lur) the questions of the origin of the name al-Rūr in Khurīsān of the identity of this al-Rūr with al-Lur and of the remoter origin of the name Luri must for the present be left open. In any case even if the name Luri came from the town of
al-Lür, the origin of the name would not necessarily settle the question of the ethnical origin of this people.

As to the general question of the gypsies in Persia, their names in the provinces other than Kirmān and Balūčistān are as follows:

in Khōtātān: Kīrshmāl (in which a fantastic popular etymology sees ghair-i shāmār, interpreted as “innumerable”; in Transcausian Turkish dialects kirshmal means “vaarien”; cf. the comedies of Fath ‘Ali Achkundow, q.v.);

in Astarabād and Māzandarān: Dżūtgi and Gādōrī;

in Ḍadharītūn: Karāqī (and cagītān Turk means “faithful servant, person near the khan”); Abu l-Ghārī, p. 145 and Baghadow, ii. 45;

in Fārs (and elsewhere): Kāollī (= Kāhūlī).

The names mentioned may correspond to slight local distinctions not yet fully known. Gobineau collected the following names of particular tribes leading a nomadic life in the north of Persia: Sanānī (?), Kāsā-tarshā, “cap-makers”; Budavighī, Adeneṣtrī [Adhar-narsī]; Zargar-i Kirmān, “goldsmiths of Kirmān”, Shahīyīrī (winter at Hamadān, summer near Dānmandārān), Kargī, Tūrā-tarāb (daravār + tabī “sheep-doctor”); Gūzbān, Bāzh-kāpūn (in Turkish, Bāzh “head” + kāpūn “the who sees”); Gādōrī (bold hunters in Māzandarān; cf. de Morgan), Kēhīt, Bādjūmbān. According to Newbold the Persian gypsies fall into two classes: Kāollī (or Ghurbati) and Gādōrī.

As names applied to Persian gypsies in general Gobineau gives Bejšawa/Waghawa (cf. the name of the Armenian and Transcausian gypsies, the Boshqo) and Odīlī (?). The following names have a general and neutral character: Ghurbati, “living in a foreign land”; according to Ivanow, the Persians who confuse 闸 and 闸, see in kurbati an offensive allusion to the promiscuity (kurbat, “relationship, consanguinity”) of which isolated communities in all ages have been accused; the name is sometimes transcribed kurbati and kurbatī, Fīyūd (from the Arabic, fayyūd, “couriers”); Ustākār, Aghā, Ghurbāl-bānd (“sieve-makers”).

The number of gypsies in Persia may be estimated at 20,000 families, or 100,000 souls, of whom 5,000 families are in Ḍadharītūn and 300–500 families in Kirmān (Sykes). The gypsies have an organisation of their own at the head of which is the chief of the Shah’s nomads under whom are the provincial deputies (kułantār).

In western Persia the gypsies are very little different from the Persian peasantry (Sykes, Ivanow). In Khōrāsān they play a considerable part in the life of the rural community as artisans, making and repairing sieves, chains, combs etc. In Astarabād the Gādārī are coppersmiths, carders of wool and cotton (de Morgan). Throughout Persia one sees the black tents of the nameless ilāt who must be gypsies. It remains to be seen if the Kurd tribes bearing names like Khārssat (“turners”); Lūr-ī Kīlāshār (“shutters”) are not of gypsy origin (cf. the article Persia). In the towns, such as Sabzawār, Nāhāpūr and Tābriz, the gypsies have quarters of their own. There are troops of gypsy dancers and musicians in Persia but they do not seem to be very popular. Ouseley gives a description of the dances and of the marionette theatres of the Karāqī (Tābriz). The dancers and singers of the Sūmān tribe in Kurdistan have often been described by travellers; cf. notably: Lycklama and Nijenholt, Voyage, iv., p. 30–76; Cirkow, Patrolo Journal, p. 282, 299, 350; Kwardi-Efendi, Niyeh-ī-nimāt Ehdūd, Russian translation, p. 119; cf. T. Thomson, The Surnames: are they Gypsies, fn. 40. Gipsy Lore Soc., ii, 1909, p. 275–276.

The language of the gypsies of Persia (Sykes, de Morgan, Ivanow) has taken its morphology from modern Persian; its vocabulary also is full of Persian words (cf. the lists in de Morgan); Indian elements seem to be rarer than in the Romanii of Europe; the language of Kirmān and Khōrāsān (Sykes, Ivanow) contains a large number of unrecognisable elements. Longworth Dames out of 96 words in Sykes’s vocabulary found 12 Indian, 4 Arabic, 8 Persian and 52 of unknown origin. He would regard this dialect rather as an artificial secret jargon. Denys Brey (quoted by Ivanow) in any case confirms the fact that the Lōrī of Balūčistān is learned by the children as a separate language (“is at any rate acquired naturally by Lōrī children, as a language for the home circle”).

The Sūmānī, or Kurdish mainly. According to Cirkow they are called Dūmmī, which must correspond to Dūmān (plural = Dūm), the name of a large caste in Indian (which comprises the well-known name for gypsies: Rom). The vocabulary of the Dūmān (Baghdād, Aleppo) as collected by Newbold. J. R. A. S., 1856, p. 503 from an informant from Allum-kōprū, is full of Kurdish words: kānmūr, “stone”, kūhī, “salt”, ēvāz, “boy”. A Kurd tribe in the east of Bohtān bears the suggestive name of Sindī/Snλiyān (the * Sindians *). According to the Shāh-āf-nāma the chief of the Kūrdīkān clan (of the Zākī) had married a gipsy woman. In discussing the relationships of gypsies and Kurds, it should be remembered that in 220 (875) a section of the Zung settled in Shānīkīn, i.e. at the gate of Kurdish territory; cf. Ouseley, Mācre, p. 30; Tabārī, iii. 1168.

According to Sampson, two categories of gipsy speech may be distinguished according to the fate of the primitive Indian aspired mādāc: the one changes them into aspirated temere, i.e. Pīkrīt, bhhānt > phir (Armenia, Europe), the other deprives them of aspiration, bhhānt > ban (Persia, Syria, Egypt). The interest of the Persian dialects in the fact that Persia was the first country in which the gipsies sojourned after leaving India (probably in the 8th–9th period). In the gipsy dialects of Persia, as yet very insufficiently studied, we may expect to find traces of a rather archaic phonetic system. Ouseley for example found among the Karāqī of Tābīz the word bōhā “sister” which must be older than phēr or ban (cf. also bohā in Gobineau).

Le Strange, London 1926, p. 57; Ouseley, Travels in various Countries of the East, London 1819–1823, i. 309; iii. 400, 405 (the Karāqī of Tābīz); Ker Porter, Travels in Georgia etc., London 1822, ii. 528–532: the Karāqī near Marāğāh; Die Zigeuner in Persien und Indien, Das Ausland, Munich 1833, p. 163–164; Bataillard, Nouvelles recherches sur l’affiliation et la dispersion des Bohémiens ... avec un appendice sur l’immigration en Perse entre les années 420 et 440.
al-Din Arslân Shâh his successor and Lu'lu' his regent. When Imâd al-Din seized the fortress of al-Imādiya in Ramadan of the same year (Dec. 1218), Lu'lu' sent an army against him. Lu'lu's troops besieged al-Imādiya but had to return with nothing effected, whereupon the other fortresses in al-Hakkâriya and al-Zawâzin surrendered to Imâd al-Din when the latter made an alliance with the lord of Irbil, Muṣafar al-Din Kubbûrî. Lu'lu' sought the assistance of the Ayyūbid al-Malik al-Ashraf, who ruled the greater part of Mesopotamia, and recognised his suzerainty, whereupon al-Ashraf sent an army to Naṣîbin to help Lu'lu' if necessary. Ibn Mūḥarram, (Alif, 1219) Lu'lu' was defeated by Lu'lu's forces near al-Âṣyr and had to flee to Irbil. Peace was however soon afterwards concluded through the intervention of al-Ashraf and the Caliph al-Nâṣîr, but when the sickly Nūr al-Dîn died in the same or the following year and his brother Nâṣî al-Dîn Mahmûd, who was some three years old, succeeded him, Imâd al-Dîn and Muṣafar al-Dîn began to raid and plunder the district of al-Mawṣîl whereupon Lu'lu', who had first sent his eldest son with an army to al-Ashraf to help him against the Franks, appealed for help to Abîeg, al-Ashraf's general in Naṣîhin. Abîeg set out at once and joined Lu'lu'. On Ḥāraja 20, 616 (Oct. 1, 1219) Lu'lu' was defeated near al-Mawṣîl but while he was again collecting his followers around him Muṣafar al-Dîn retired. After the conclusion of peace, 'Imâd al-Dîn occupied the fortress of Kawâşgîn, and Lu'lu' had again to appeal to Aṣhraf. Muṣafar al-Dîn however induced a number of emirs, among them Ibn al-Masîţûb to secede from al-Ashraf and take up a position at Dânumûr to prevent the latter's passing. The emirs however soon changed their views with the sole exception of Ibn al-Masîţûb who went to Irbil. He was twice defeated, first by the governor of Naṣîbin and then by the troops of Farrûq Shâh, lord of Sindjâr, who took him prisoner.

When he had been released, he collected a plundervor horde around him and ravaged the country far and wide. He was defeated by an army of Lu'lu's and took refuge in the fortress of Tell Afîr. The latter was besieged and Lu'lu' himself came up from al-Mawṣîl. On Rabi' 17, 617 (June 21, 1220) he had to capitulate and Ibn al-Masîţûb was taken prisoner and brought to al-Mawṣîl. After al-Ashraf had made peace with Muṣafar al-Dîn he handed over to Lu'lu' the fortresses of Jîltûda, Naṣîbin and the governorship of Mesopotamia, to which other fortresses were later added. After the death of Naṣîr al-Dîn (619—1222—1223) or according to others not till 631 = 1233—1234) Lu'lu' was recognised as Aṭībeg of al-Mawṣîl and assumed the name of al-Malik al-Rahîm. In 635 (1237—1238) he became involved in war with the Ayyûbid al-Nâṣîr Nadîm al-Dîn. The latter took the Khârâzmiyân into his service and granted them Harrân and Fëdass whereupon they seized al-o the town of Naṣîbin. About three years later they were defeated by the ruler of Halab and Hamân and Lu'lu' regained Naṣîbin with Dârâ. Lu'lu' had also to fight the lord of Halab, the Ayyûbid al-Nâṣîr Yusûf. In 648 (1250—1251) he was defeated and Naṣîbin, Dârâ and Karkhîsîl into the hands of the Aleppo forces. Lu'lu' died in 657 (1259) aged 80. After recognising the suzerainty of Hâlidâ [v.]

Bibliography: Ibn al-Athîr, ed. Tornberg,
LU'LU', I. A Mamük of Salif al-Dawla, the ruler of Aleppo, vizier of his son Sa'd al-Dawla and his grandson Sa'id al-Dawla. On the latter's assassination, he became guardian of his sons and from 394-400 (1003-1009) independent governor of Aleppo under Fātūmī suzerainty; cf. the article HAMATAN where the bibliography also is given.

2. A eunuch and the trusted adviser of the Saldjuk Sultan Ridwān of Aleppo; on the latter's death in 507 (1113) he became Ataleg of his son Alp Arslān al-Akhbar (lit. 'the dumb'), so called on account of an impediment in his speech. Alp Arslān who left the government in the hands of Lu'lu' rendered himself hated by his court on account of his crimes and tyrannical conduct and fell a victim to a conspiracy in which Lu'lu' seems to have had a share. To retain a firm hold on the reins of government, he appointed Alp Arslān's six year old brother Sultan Shah his successor who reigned in name till 517 (1123). Anarchical conditions prevailed in Syria throughout the whole period (cf. the art. Ḥalāl). To retain his power Lu'lu' had to steer a course between the Crusaders, the Seldjuk Sultan Alp Arslān and the Saldjuk Sultan Muhammad. He promised to hand over Aleppo to the latter but at the same time secretly sought the help of the Ataλeg Toghtikin [q.v.] of Damascus against him and of Ḩālig of Māridīn and on the other hand to prevent them becoming too strong betrayed their movements to the Crusaders who were able to inflict damage on them. He succeeded in retaining Aleppo with the help of Toghtikin's cavalry. To raise the necessary funds to pay these and his own troops he extorted the last farthing out of his viziers and the wealthier inhabitants of Aleppo. He himself never left the citadel for fear of conspiracies. When he was at last forced in 510 (1117) to make a journey, either to take his treasures to a friend's care or to get money stored with him, his Turkish bodyguard fell upon and killed him. The latter seized his treasure and tried to take Aleppo by surprise but were defeated by the garrison and had to give up the booty. Lu'lu' is a typical example of the advance of the Seldjuk at the beginning of the Crusades which was only put an end to by the energy and ability of Nūr al-Dīn.

(M. SORBERNIK)

LU'LUA (L'ùlù), a fortress near Taršīn in Cilicia, which was besieged by the Caliph al-Mā'mūn in 217 (832). It was the strongest of the Greek citadels and the one that wrought most havoc among the Muslims; it had a large garrison and was well supplied with arms. The caliph, not having succeeded in taking it, blockaded it for a hundred days with two forts, the troops of which routed the Emperor Theo-

philus; as a result of this defeat, the people of Lu'lu'a appealed to 'Uqalī b. 'Abnās who was their prisoner to negotiate for them and capitulated on obtaining safeguards (amān) granted by al-Mā'mūn.

(ČL. HUart)

LUR (in Persian Lūr with a short), an Iranian people living in the mountains in S.W. Persia. As in the case of the Kurds, the principal link among the four branches of the Lurs (Māmāsan, Kūhgilū, Bakhtiyārī and Lurs proper) is that of language. The special characteristic of the Lur dialects suggests that the country was iranised from Persia and not from Media. On the ancient peoples, who have disappeared, became iranised or absorbed in different parts of Luriān, cf. the latter article.

The name. Local tradition (Ta'rikh-i Guscā) connects the name of the Lurs with the place Lūr in the defile of Mān-rūd. This tradition is perhaps based on a memory of the town al-Lūr mentioned by the early Arab geographers (Iṣākhār, p. 105 etc.), the name of which survives in Saḥā-īy Lūr (to the north of Dhipūl). There are several other place-names resembling lur, namely Lū, a district of Ḥūndalī Sāhīr (Schwarz, Persien, p. 668; cf. the Kūhgilū tribe: Lūsār), which may be Lū with juu 'money in Persian'; a Lurs tribe (Yāhūd Lūrān) ascribed to the前述 tribe, according to Iṣākhār, capital of the sultān of Sardān (between Kūh-Gilū and the Bakhtiyārīs) and lastly there is a place called Lūr (Lūr) near Saimara.

Masūdī, in his list of 'Kurd' tribes, speaks of the Luriya tribe (which may mean the Lurs connected with the district of al-Lur). In the 13th century Yākūt uses the names Lūr, Lūr to mean the 'Kurd tribe living in the mountains between Kūhgilū and 1-fahān'; he calls the country inhabited by it bālīd al-lūr, or Lūistān.

These facts show the stages of evolution of the geographical term (perhaps pre-Iranian) into an ethnical name. If however we seek an Iranian etymology for the name Lūr, its connection with the first element in Lur-brap (already proposed by von Bode) at once suggests itself. According to Just, Iranisches Namenvok. Lūr is explained by raθlah a 'red'. The place-name Lūr in Yākūt may supply an intermediate form. The Ta'rikh-i Guscā gives a popular etymology Lūr < ḥar a "wooled hill" in Lūr.

Ethnology. If the linguistic data connect the Lurs with Fārs, local tradition only regards as true Lurs the tribes who came from the defile of Mān-rūd. According to the Ta'rikh-i Guscā, p. 539-547, there is in the valley of Mān-rūd a village called Kūrd near which there is a defile. The place called Lūr is situated in this kūl (the word means in Lūr a "little ravine", cf. O. Mān). The name Mān-rūd much resembles that of Mā-diyān-rūd (the word mādi-yān is found as mān-mūn in Lūr; Ḫakwān, vi, 138) but certain historical considerations make us look for it near Mangarra-Mūngarra (cf. Ta'rikh-i Guscā, p. 548 on the place lying between Mān-rūd, Sānāl and Mangarra). The clans (marāk) of the natives of Kūrī Mān-rūd
were later called after the places where they had settled, like the Dangi (Dangi, Dangard) and the Utari (Aztari). The governing family of the Atabegs of Little Lur belonged to the Dangaw (the name of their clan, the Sahl, Sahl should be corrected from Salwari, 'Ahmar, p. 369; Salwari, 'Ali Hazin, Tadhkira, p. 135 and Salwari in Houtum-Schindeler). The Turki-i Guradi concludes by enumerating the 8 clans (qalab) of the two principal sukk and the 18 other tribes (ajwadina) of the Lur.

A few names (Mangar, Anaraki, Djaidaki) correspond to modern names. Finally 4 clans are mentioned: Sathi (Sami), Arsat (Ashtan, Asan), Arch and Bashi, who, although speaking Luri, are not Lurs; the people of the other villages of Manrud were peasants (razafit).

About 500 (1106), a hundred (or 400) Fadlulli Kurd families arrived from Syria. They came by the north (Shottar-Kuh) and settled at first on the lands of the Khunjariq wazirs (cf. the article TURK). At the end of the 14th century, 24 new families (xi'thi) were produced. One of these tribes (Shiab) belongs to the Mansuri tribes. The Turks (Hawwani, Shati), the Goywand (Alfki, cf. the name of this place below Shishhtar), and 18 other tribes (mutafa'ir) are mentioned. Among whom we find the Bakhtiyari (Shakhiri), the Idrasani (Narahsh), the Shishpar, the Laki, the Shishti, the Mamadsan, etc. According to the Sharaf al-huda (l. 26), all these tribes also came from Syria. These waves of immigration must have had a considerable effect on the ethnic composition of the Great Lur. It is probable that the immigrants were Kurds and that traces of them still survived among the Kurds whom Ibn Bata'li (ii. 21—30) found at the beginning of the 15th century near Bahshshah and Kisi Hormuz when on his way to the capital of the Grand Lur. There has long been a village of Kurdistân on the Davush and it had even given its name to this river. Shishah al-Din al-Umar (v. i, viii. p. 330—332) mentions the existence of Lurs in Syria and Egypt and tells how Saladin (563—589), alarmed by their dangerous ability to climb the steepest ramps, had them massacred en masse. This anecdote throws a light on the causes which produced the arrival of the return to Luristan about 600 a.h. of numerous Iranian tribes.

The southern part of Little Lur was exposed to militation by Kurds, especially through the valley of Kashi (cf. 1 ak). Last to the north of Susa is a tree dari-e Bashi, bearing the name of a clan of the Kurd tribe of Dawkân, celebrated in the history of the Hasanawis (cf. Ibn al-Asri, iv. 146, 219) and exposed to Turkish and Mongol invasions (cf. the desperate fighting of the Atabegs of the Luri-i Khic against the Bayat and Aliawa [= Baharl] Turi).

In the Sii'awai period, Turkish tribes were introduced into Luristan from the direction of the Kuh-Gill (where traces of them still exist) and Georgian and Armenian colonics to the north of the Kakhchayli country. On the movements of the population under Nader, the Zands and Kadars see below. The ethnic situation gradually stabilised at the beginning of the 16th century.

The names of the Lur tribes and groups are now quite well known and we have lists going from 1586 to 1922 a comparison enables us to note the changes that have taken place meanwhile. Regroupings seem to be taking place more rapidly among the Lurs than among the Kurds but the general framework of the tribal groups remains essentially the same.

In 1881 (Curzon, III. 274) there were 421,000 Lurs of whom 170,000 were Bakhtiyari, 41,000 Kuh-Gill, and 210,000 Seni. According to Rabin this last tribe settled in the Mandamand mountains (or 50,000 individuals) in Pish-Kuh, and 10,000 tents (or 50,000 individuals) in Pusht-i Kuh (this last figure seems too low).

The Mamassani (Mamassani) group includes 4 main tribes: the Bakash, Djawilti (Djawi), Dushmanziari and Rustami (cf. the article SHIL). The Kuh-Gill group (Kuh-Gill) includes 3 large tribes (Akgadi, Bawi and Dikati). The first of these tribes (cf. the name of the old Turkish tribe of Aghajari) is of a composite character, for of its 7 clans four (Ashar, Bekhalt, Caghatali and Kura-Bagh) are Turkish (evidently the remains of the Shah-Senian) to whom the government of Kuh-Gill has been given under the title of khans (Tikhaliki) bears the name of a district in Kurdistân of Senna (q.v.). On the second tribe, Bawi, O. Mann notes that it bears the name of an Arab tribe of the neighbourhood of Asha; but there is also a mountain called Bawi to the south of Khursamabad. The third tribe, Dikati, is purely Luri and is composed of two main sections: Carvanik and Lurawi with very many subdivisions. This threefold composition of the Kuh-Gill group is typical of many of the Lur tribes.

As to the Bakhtiyari, Sawyer as long ago as 1894 said that their territory was thoroughly surveyed on a scale of 8 miles to the inch, nearly every tribe visited in their own encampment, everything appertaining to the Bakhtiyaris may now be said to be known. But Curzon's tables (1890) are still the last word available to the student. Of the two Bakhtiyari groups: Cahar-lang and Hafs-lang, the latter is the more important at the present day. The Cahar-lang, who used to in the south are now mainly on the outskirts in the district north of the northern barrier (between Burudjird and Gulpaygan). The main groups of Lur are: Tarhan, Dihar, Bashi (cf. 1 ak) and Bakhtiyari. The tribes of the last group are the Lurs par excellence and have important subdivisions: Dirigand, Sagwand, etc. It is possible that the Dirigand are the real nucleus of the Lur race. Their chiefs are called mir.

In contrast to what we find among the Kurds, where the individual members of the tribe are usually much attached to their hereditary chief, the Lurs proper (Bakhtiyari) are distinguished by a more democratic feeling. The power of the hereditary families of Khans is based on their 'guard' (i'asat) but this power is considerably reduced by the authority of the chiefs of the clans (tewekel). The Khans are forced to court the favours of these wild, petty chiefs (Edmonds: 'uncouth headmen'); the latter are amenable to the solicitations of their neighbours and in this way the tribes are broken up and new groupings take place. Little is known of the ethnology of the Lurs. The notes of Duhouisset (who commanded a Lur regiment in 1859), Études sur la pop. de la Pers., p. 25, of Khanhoff, Mm. sur l'ethnogra-
phic de la Perse, Paris 1866, p. 15, 110 and 138, and of Danilow only touch the surface of the subject. Dahouset particularly notes the peculiar (compressed) form of the skull of the Lurs. Edmonds emphasises the difference between the Lurs and the Laks; the latter are taller, have purer features and aquiline noses. Their women are much more beautiful than those of the Lurs. The hair of the Lurs is often chestnut-coloured; very heavily bearded men are found among the Lurs. (The Persians call Luristan: ma'adan-i rizh, “mine of beards”). The women do not seem to have such liberty among the Lurs as among the Kurds. According to Edmonds there are no cases among the Kurds of women acting as chiefs of tribes. But v. Hammer (ii. 239) mentions under the year 1725 the warlike exploits of the two daughters of the Wali 'Ali Mandān Khān.

The domestic life and manners of the Bakhthiārs have found enthusiastic panegyrist in Layard, Mrs. Bishop and Cooper, Grove, New York 1925. On the other hand the Lurs have been very severely judged by most travellers, cf. Edmonds, Geyr. Journ., 1922 (ibid. the speech of General Douglas who was wounded by the Lurs in 1904).

Religion. The Christian and Jewish colonies (cf. the evidence of Benjamin of Tudela) settled in the village of Karkha since the Sassanians period (cf. Mānbūdān) may have left some traces in the country. A very curious tradition is the story of the conversion of the Bakhthiāris to Christianity in the time of Constantine the Great (?) (Hanway, lii. 168). A mention in the Ta'īb-i Bāqrašān, G. S. M., xvi/2, p. 216 shows that in 650 the mukkhir (Imādullāh) had gained a footing around Gird-Kūh. The Hurūf heresy had probably also a following in Luristan, for the mawla of its founder Faḍl Allah who attempted the life of Sultan Shāhrukh in 1427 was called Aḥmad Lur (Brown, Pers. Lit. under Tatār Dominān, p. 366). In the Safavid period the wars of the Little Lur claimed descent from 'Abbās, son of the Caliph 'Alī, whose tomb is shown near Sirwān (Masbaqāthān), cf. Rawlinson in Ritter, ix., p. 402. The esoteric doctrines of the extremist Shi'ah are wide spread in Luristan. The great majority of the Lak are Ahl-i Ḥak (Ašl-i-išār: q. v.). The Sagwand, Pāpi and Badrāi tribes are also followers of this secret religion. In the belief of the Ahl-i Ḥak, Luristan is the scene of the activities of the third avatar of the divine manifestation who is called Bābā Khosrān and numbers among his "angels" Bābā Tāhir [q. v.]. An important sanctuary of the sect, the tomb of Shāh-īzde Aḥmad (the alleged son of the imām Māshākiša), is in the district of Kūs near Br-āw (territory of Kaławand) and is kept by Saiyids of the Pāpi tribe; these Saiyids wear red turbans which recalls the predilection for red of the old Muḥammad = Khurramiya [q. v.] whose flags were of this colour.

The religion of the Lurs was so little orthodox even from the Shā'-a point of view that at the beginning of the xvi. century prince Muḥammad 'Alī Mirzā had to send for a mudājahid to convert the tribes to Islām (Rabino, p. 24). All the Lur and Lak tribes are officially Shi'is (contrast the attachment of the true Kurds to Sunnī orthodoxy).

Language. Down to the beginning of the xvi. century our knowledge of the Lur dialects was confined to 88 words collected by Rich, to 4 Bakhthiāri verses in Layard and to some thirty words collected by Houtum-Schindler. As late as the Grundris d. irdan. Phil., 1/2, 1898-1901, p. 249, we find the thesis stated that Luri is closely related to Kurdisch and may even be described as one of its dialects. The materials of Zakoǔski (collected 1832-1856) were finally published the day after the death of the author (d. 4/1914). The merit therefore of having first established the important fact that Kurb and Luri are quite separate ("sine riegehende Scheidung des Kurdischen vom Luri") is due to O. Mann. This scholar has shown that although there are Kur dialects in Luristan (cf. the article LAK), the true Lurs speak dialects which belong undoubtedly to the S. W. Iranian group (like Persian and the dialects of Fārs) and not to the N. W. group (like Kurdish and the "central" dialects). The Luri dialects which have none of the asperities of Kurdish (cf. KURD) fall into two categories. To the first belong the dialects of the Great Lur: Māmbāsān, Kültūh and Bakhthūyār (the latter has a few insignificant peculiarities of its own); to the second belong the dialects of the Little Lur, i.e. of the Feili Lurs.

Even the first group possesses very few special features compared with modernPersian. From the point of view of phonetics: Mām at the end of a word becomes -um, -um (mukkamātān; dawām; dūram); a changes into: bāṭī; inter-vocalic a gives dh (y): mukkāmātām; the combination māt give -māt and mā (d): māštāk-bārāh, rāf-tahr; initial bh becomes: bāštāk-shām, etc. Peculiar to Bakhthūyār are the change of inter-vocalic M to: gūsuwar-gūso; and the occasional change of sh to: shā = 1shām. It is remarkable that some of these phonetical peculiarities were long ago noted by Handahāh Mustawfī (Tārīkh-i Gīlān, p. 537-538). He says that Lurs (though full of Arabic words) does not have the peculiarly Arabic sounds, like kā, gā, xā, š and kā. Inflexion: Plural in -mānt; 1st pl. in -mānt; 2nd pl. in -mānt. This form of the present: M instead of Persian māz; first Persian plural ending in -mānt (zhārā: māntūm = miktām). Luri usually forms the pronominal of active verbs as in Persian with the help of personal endings (active construction) and not like Kurdish and the majority of Persian dialects (including those of Fārs) which
give the preterite a passive construction. Vocabu-

As to the Feili group, their dialect differs very little from ordinary Persian (Mann: "weeter niets als ein stark abgeschlifene Persisch").

There are in Luri a few islands of Kurds of some importance. Such are in the north the Lak tribes [?]. Among the Feili, the Makhli group (on the frontier of Kirman-shah, at Halulatun, and farther south) speaks a southern Kurdish dialect like that of the Kullur. The Kurd-khï̂a group (to the south of Pashk-i-Khi) speaks a "curmantji" Kurdish. Linguistic conditions in the Pashk-Khi still require further study.

Literature. The Luri tribes and especially the Bakhgitji have a rich popular literature, fairy tales, epic fragments—celebrating the exploits of their heroes (like Muhammad Taok Khan Ca-Lang and Haji Chandiki Haff-Lang), songs sung at marriage (ژوژو) and cradle-song (ژوژو). These pieces are often pretty and full of sentiment; of the collection by O. Mann and Zukowski (the latter published an article on Persian and Bakhgitji lullabies in the brain. Min. Var. de. Pers. ond. Jan. 1896); D. L. R. Loizer and E. G. Luminu, Persian Tales, London 1919, p. 107-351; Bakhitji Tales (translations only).

History. On the participation of the tribes of Khûzistân and Fâr in the fighting between Arabs and Persians in the early centuries of the Hijra cf. the article Kurdi. The Caliphs interfered directly in the affairs of the country, especially in Kûh-Kûk [q. v.]. The fortunes of the Lurs were more closely associated with the Iranian dynasties ruling in Khûzestân, at Shiraz, Isfahan, Hamadan and on the Zagros; the Safarcis, Bûyids, Kâlâwinds, Hasanwinds and their successors of the family of Abu T-l-Shak (cf. the article Kûrds).

We have coins of the Bûyids struck at Hidaj (Cordringon). In 322 the âlûjî army marched through Luristan (Sîs — Shâoop-khâwast — Karadî). The Hasanwinds Kûrds whose capital was at Sarmâdd (south of Bâsîn) extended their dominions into the valley of the Karkha, Shâoop-khâwast (= Khurramabad) formed part of their possessions about 400 (1009) (Tân-i Ahîar, ix. 89); Zafâyâ ed-lîmân, ed. Amedroz, ii. 291, et. 451). The Kâlâwînd Gâshâshup sustained a siege by the Sal-aids in Shâoop-khâwast (548 = 1052). The amirs of this last dynasty later settled in the eastern Luristan the family of Zangi b. Bursuk in Shâoop-khâwast before 499 (1050). Hisam ed-Dîn Abâghûl at Dî-i Maskh on the Karkha before 549 (1154) (Khiwar al-Sâdû, G. M. S., p. 285). A Turk Hîva ed-Dîn Shâhâ and Aqshâ is mentioned as lord of Luristan and of a part of Khûzestân between 547 and 570. A long inscription (Kâfe) on a stone near Khurramabad is still undeciphered (cf. a copy in this volume, ii. 298; Rawlinson thought he recognised in it the name of the 'Abâbin Shâfîdî ed-Dîn but according to Curzon it has an earlier date (570 = 1131)).

In any case all attempts from outside to subdue Luristan or to take posses of its territory affected the tribal system very little, the development of which came to a head at the evening of the A'thebs.

The principal source for the domestic history of the country is the Tarîkh-i Gûzûla (750 = 1330) based in turn on the Zubât al-Tarîkhâ of Ijzâmî al-Dîn al-KâshâÎ (of which the Perseische Manuskriptbibliothek only has the first volume, No. 528 of Persischen Catalogue). The Magdâm ed-Anîb (c. 743) is based on an independent oral tradition but is less accurate. The Dîmâr Bâzrâ although late (its author Zâd Ahmad died in 975) uses unpublished data. The Zâfar-nâma (1105 = 1750) is based on the Zubât al-Tarîkhâ or perhaps a good copy of the Tarîkh-i Gûzûla. According to these sources which supplement the statements of the Arab geographers, the situation in Luristan about 300 (912) was as follows:

The Shîl [f. v.] — who are not mentioned by the Arab before the Mongol epoch — occupied a part ("half") of Luristan. The will of Shû-ân and proper (Tarîkh-i Gûzûla, p. 557 and 539, 15) had a governor named Nadjm ed-Dîn Akbar (according to the Magdâm ed-Anîb the title Nadjm ed-Dîn was hereditary among the Shîl) while the Lur territory under the Shîl (probably Kûh-Gilâ) had a shahvâwî Saif ed-Dîn Mâkâm whose family had been prominent in the country since the Sâdîn period; he was the Rûshîbîna tribe which the Tarîkh-i Gûzûla mentions among the Lur tribes. The rest of Luristan was ruled by a family of Lur princes (independent of the Shîl) of whom Badr ruled in the Great Lur and his brother Mansîr in the Little Lur. Their dates are uncertain. Badr's successor was his grandson Na'm ed-Dîn Muhammad
b. Khlil b. Badr (according to the Madjma’ al-Antab, Nasir al-Din was a nephew of Awrang [Rang] b. Muhammad b. Hifil). Nasir al-Din was deposed by the Fadlawi Kurds who founded the dynasty of the Antab family in the Great Lur and relied for support on tribes who came from outside Luristan (cf. above under Ethnology). The same Fadlawi drove the Shul out of their settlements.

We know nothing of Mansur, brother of the above mentioned Badr. The tribes of Little Lur were directly under the caliphs and in the north were subjected to the invaders. The founder (about 580) of the native dynasty of the Antab family of Lur-i Kuchik [q. v.] had to dispose of a rival Sorkh b. Ayiar (probably a scion of the dynasty of Abu ‘l-Shawk which was called ‘Ayiar/Ainaz; cf. the article KURDS).

The history of the two dynasties of the Antab is filled with feuds, murders and executions but in domestic affairs the state of the country was fairly prosperous. The Antab built bridges and madrasas (Ibn Batuta) and secured a peaceful existence for the inhabitants (cf. Tarikh-i Guzida, p. 550). The revenues of each of the two Antab were estimated at a million dinars while each of them paid to the Mongol treasury tribute of 91,000 dinars only (Mu’ayyad al-Kubh, p. 70).

In the interval between the Mongols and the rise of Timur, the two Antab were vessels of the Muafarids. In 758 and 795 Timur ravaged Little Lur but treated the lord of Great Lur more kindly. In 795 Timur passed through Kuh-Gilu and Shulistan. The Timurids (cf. the article BAKARA) consolidated their power in Luristan and in 837 the last Antab of the Great Lur disappeared.

Shafawi period. The lords of the Little Lur maintained their position and by intrigue even succeeded in extending their power over the plain to the west of the mountains of Pughti Kuh. After the execution of Shahwardi Khan, Shah ‘Abbas installed in his place a vahi descended from a lateral line of the old family. The possessions of this Wali, Husain Khan, were, however, somewhat reduced.

After the disappearance of the dynasty of the Great Lur the power had passed to the chiefs of the tribes composing this federation. Under Shah Tashmak we find the title of Shuwardi of the local chieftain of the principal clan, the Astaraki. Tadj-mir, having neglected his duties, was executed and replaced by Mih Djahlungir Baktiyari (the Astaraki and Baktiyari had come to Luristan after 600; cf. Tarikh-i Guzida). Djahlungir under the guarantee of Shah Rustam of the Little Lur pledged himself to supply annually to the Shafawi treasury 10,000 mules. In 974 the governor of Hamadan was sent to remind him of his obligations (Sharaf-nama, i. 48). Henceforth the Baktiyari tribe becomes of the first rank and, as usual, gives its name to the whole confederation.

As to the Kuh-Gilu territory, it was governed by Khans of the Turkman tribe (Shahsevan) of Afshar settled among the Lurs. In 988 (1580) a devish impostor claiming to be Shah Ismai’l II had a considerable success among the Djarik, Djanwani and Bandani tribes who killed several Afshar governors. In 1005 as a result of the excesses committed by the Afshar as well as by the Lurs, the governor of Farah, Alikhward Khan, established the direct centre of his government in Kuh-Gilu (Tarikh-i ‘Alam-din, p. 195, 358).

We do not know under what circumstances at the end of the Shafawi dynasty (Parshana-yi Naziri) the group of Manjikani tribes, who had migrated into the Great Lur (after 600) occupied the ancient Shulistan (cf. n. 77).

After the Shafawi family, during the troubles provoked by the appearance of the Afghans before Isfahan, the wali of Luristan, ‘Ali Mardan Khan Feili (a descendant of the Husain Khan appointed by Shah ‘Abbas), played a considerable part. With 5,000 of his men he took part in 1137 (1722) in the defence of the capital. He was even appointed commander-in-chief of the Persian troops but the other Khans refused to take orders from him. When the Turks invaded Persia in 1725, Mardan Khan abandoned Khorasan (which was occupied by Ahmad Pasha) and retired to Khuristan from which he undertook a diversion against Bagdad. The Turks who had gone through the Baktiyari country and reached Firuzan had to retire. Cf. Ali Hazin, Tarikh-i Afsari, ed. Balfour, London 1831, p. 115, 134, 137, 143, who was an eye-witness of the events; Hannway, The Revolutions of Persia, ii. 135, 159, 168, 238; Malcolm, History of Persia, London 1829, ii. 60-64; von Posd. Travels, ii. 281-285; Hammer, G.O.R., iv. 227.

About the same time several Baktiyari khans (Kasim-Khan, Sadi-Khan) are mentioned as resisting the Afghan and Ottoman invaders but they did not agree well with ‘Ali Mardan Feili. In 1137 (1724) ‘Ali Muhammad Husain Khan Baktiyari recognised as his suzerain a certain pretender who claimed to be prince Sadi Mirza. The latter’s headquarters were in Kuh-Gilu; he was not taken before 1140 (1727) (Hannway, Karta, p. 168, 172). Mardan Khan, Tarikh-i Djahan Guzida-yi Naderi, Tabriz 1284, tran. into French by Jones, London 1770, p. xxvii). The Afghans do not seem to have penetrated into the Baktiyari country and their expedition in 1724 against Kuh-Gilu was a fiasco. (v. Hammer, ii. 210; Malcolm, op. cit., ii, p. 449).

By the treaty of 1140 (1727) the Afghan Afras provided Luristan to Turkey with other western provinces. The Turks kept it (nominally) till 1149 (1736) when Nader re-established the status quo (Hannway, ii. 254, 347; von Hanauer, G.O.R., iv. 355, 317).

Under Nader a certain Turkman chief named Baba Khan Capshu (Capskhu) was appointed beglerbeg of Luristan-i Feili. On the other hand ‘Ali Mardan II Feili was entrusted by Nader with diplomatic negotiations in Constantinople. Nader in 1732 passed through Kuh-Gilu with his troops where Muhammad Khans Babul (the claimant to Shiraz) was defeated. The local Afshar had to support Nader, who was one of their tribe. Several expeditions were sent against the Baktiyari among whom a new chief ‘Ali Murad Maniwand (Caharlang) had collected together the malcontents. In 1732 Baba Khan Capshu was sent against him for the first time. In 1149 (1735) Nader Shah took the field against him in person going via Djalpa and Barmal. The Baktiyari country was several times invaded but the main blow was directed against the little explored country south of Shuturistan—‘Ali Murad was captured and executed. The Baktiyari were decimated and deported to Djan and Langar (in Khorasan). A little later a Baktiyari detachment distinguished itself in the assault on Kandahar (Maliki Khan,
LUR — LUR-I BUZURG

cf. loc. cit. p 116, 134. contains interesting geographica details; transl. Jones, i. 185, ii. 18; 'Ali Haqin, p. 231, 253; Malcolm, ii. 21.

The deposed Bahk'tiyari returned from Khurasan immediately after the death of Nādir (Tābī`ī-bi-`Abd-Allāh Nādir) and in the dynesty of the latter was extinguished the Bahk'tiyari chieftain 'Ali Mardān Kān (who is not to be confounded with the two Wahls of Luristan-i Feli) attempted to play a big part. In 1163 (1750) along with Karim Kān Zand he set up at Isfahān a s combos of the later line of the Safawīs (Ali Dāwūd under the name of Ismā'īl III). The career of "guardian of the sovereign" acted by Nādir seemed to be certain for him also but Karim Kān gained the upper hand; the troops of 'Ali Mardān who included Lak of the tribes of Kalkh and Zangana were defeated in 1752; he escaped to Başgūdād but died there by the hand of an assassin; cf. Mirzā Šadīq, Tābī`ī-bi-`Abd-Allāh, quoted by Malcolm, ii. 61 and note r; Hammond, C.O.R. xvi. 475, 477; R. S. Poole, The Coins of the Shahs of Persia, London 1887, p. xxxv; Curzon, ii. 289.

Karim Kān (q.v.) who had disposed of his Bahk'tiyariv rival was himself a Lak of the tribe of Zand, settled in the immediate neighbourhood of Luristan-i Feli. On the movements of population in his time, cf. the articles Kurīs and Lār. In 1200 (1785) when 'Ali Kān Zand had to fall back on Shīrāz a number of Lāris and of Turks assembled at Isfahān under former partisans of 'Ali Mardān Kān but the town was soon occupied by Akh Muhammad Kādjar who had nothing better to do than attack the Bahk'tiyarīs (Cab-d-`Abd-Allāh Shīrāzī, Tābī`ī-bi-Zandiyā, ed. Beer, p. 29; Malcolm, cf. cit., ii. 179 sq.) which injured his popularity among the tribes.

The Lur Bahk'tiyari country was never completely assimilated during the century and a half which the Kādjarīs reigned. A resume of the history of the Bahk'tiyarīs in the sixth century has been given by Curzon in Ch. xxiv. of his Persia. At first the Kānūrzī family, descended from the brother of 'Ali Mardān Kān (cf. above), came to the front but the expedition of the governor of Isfahān Manuchīr Kān Muhammād al-Dawla (whose real name was Yemikolopow; he was an Armenian from Tūls) in 1814 put an end to the career of the Isfahān Muhammad Taşi Kān and the family did not recover. About 1850 the Bahk'tiyarīs (or Bāˈīrīs, a family which claimed to be descended from a shepherd named Tānī) rose to prominence in the Isfahān group and in spite of the assassination in 1882 of its chief Husain Kāh Kān (Hādji Ikhānī) by order of prince Zoll al-Sulṭān retained its wealth and importance. The Bahk'tiyarīs played a considerable part in the Persian revolution which ended in the deposition of Muhammad 'Ali Shah Kādjar in 1909. The Bahk'tiyarī country all this time enjoyed perfect autonomy under the rule of its lādān and lāri. The centralising efforts of the Kādjarīs had more effect in Luristan-i Feli (formerly Luri Kūčik) in as much as, as a result of the governorship in Khurāsān of the energetic prince Muḥammad 'Ali at the beginning of the sixth century, the family of the wāls of Luristan found its rights restored to the possession of Pūchs-i Kāh (q.v. and Ğirikow, p. 227). The Pūchs-Kāh formed the Persian province of Luristan, Muhammād 'Ali Mirzā with troops and artillery marched through this province. In 1836 Rawlinson followed him at the head of his Gūrānī regiment. After the famous expedition of Manṣūrīn Khān (1841), his nephew Sulaimān Khān Saḥām al-Dawla, governor of Khurāsān, maintained order in Luristan but for the second part of the sixteenth century Luristan was plunged more or less into a state of anarchy. It was not till 1900 that prince 'Ain al-Dawla was able to restore order in Luristan and at this time several explorers travelled freely in the disturbed province. But in November 1904 two British officiers (Col. Douglas and Capt. Lorimer) on their way to Khurramābād and wounded by Lurs. A considerable agitation was stirred up among the Lurs (and in western Persia generally) by the appearance among them of the rebel prince Saḥār al-Dawla (several times since 1905). In spite of the efforts of the Persian government Luristan remained closed till 1917, when with the help of foreign representatives several campaigns went from Dieul to Barādūrīah. About the same time the Persians claimed the rank of wāli of Pūchs-Kāh on Nāṣr 'Ali Khān Amrā (cf. the article Lur); cf. Edmonds in the Geogr. Journ. 1922.

It is only since the accession of Rūdī Khān (later Shāh Rūdī Pahlavī) that the situation in the region inhabited by tribes of Lur origin changed radically and the authority of the Central Government enforced respect for itself through the whole of the south-western provinces.

LUR-I BUZURG, a dynasty of Atāhēgs which flourished in Eastern and Southern Luristan between 550 (1155) and 827 (1425) the capital of which was Lūshān (Malamfī). The eponymous founder of the dynasty, also known as Faḍlāwī, was a Kurd chief of Syria named Faḍlūya. His descendants (the Diḥān-ārān mentions 9 predecessors of Abū Tābīr) migrated from Syria and passing through Miṣr and Adhārba`ījān (where they made an alliance with the Amīr Diḥābīdah [?] of Gilān) they arrived about 550 (1100) in the plains north of Usturūn-Kāh (Luristan).

Their (chief Abū Tābīr b. Abīl Naḥm) disinguished himself in the service of the Saljuq Sunqur (543—556) and 827 (1425) an expedition against the Shāhānkūhīs (q.v. As a reward Sunqur gave him Kūh-Gilāya and agreed to send him to conquer Luristan. He succeeded in this. Abū Tābīr assumed the title of Atābeh and later quarrelled with Sunqur and made himself independent (c. 550). (The Muḥamīd-ān-Ahsāb seems to confuse several individuals under the name Kādī Abīl Ali, to whom it attributes the following successes: the defeat of the Shīl [q.v.], the deposition of Nāṣr al-Dīn, last descendant of Badr, ruler of Luristan, and the defeat of the Khūzistān troops commanded by the Tāzh ᵉxēh.)

Under the son of Abū Tābīr, (2) Malik (sic) Hazārasp (600—626 or 650), Luristan prospered and new Arab and lamian tribes flocked into it. Hazārasp drove out of Luristan the last remnants of the Shīl and invaded Luristan proper. The Shīl migrated to Fās. Hazārasp disputed with the Saljuqs the possession of the fortress of Mandaḵ (Mungash, S. W. of Mālamfī). The possessions of Hazārasp were extended up to a distance of 4 farsāhs from Isfahān. The Caliph
Nāṣir (575–622) confirmed his title of Atābeḵ. On the other hand, Hazarāsp maintained friendly relations with the Khwārizmshāh Muhammad and gave his daughter in marriage to his son Ghiyāth al-Dīn (Dījkān-su'b, G.M.S., xvii/2, p. 113, 204). (The Dījan-ārā mentions two sons of Hazarāsp: 'Imād al-Dīn (d. 649) and Nuṣrat al-Dīn Kaṭīla (d. in 649); the former became Zarda-Khān, where several members of the family were afterwards interred.)

(3) Timāku (c. 655–656), son of Hazarāsp and his Salghurid wife, successfully withstood four attacks on him by the Salghurid Atābeḵ of Fārs, who was indignant among other things at the expulsion of the Shīl from Luristan. Timāku took from Ḥissān al-Dīn Khālīl (d. in 650) certain districts of Lur-i Kūčik. He defeated the generals sent against him from Khużistān by the caliph. During the Baghdād campaign of Ḥulagū Khān (653), Timāku accompanied him in Khitavāsun’s division in Būšān. He did not however conceal his feelings about the treatment inflicted on the caliph and Muslims. Ḥulagū took umbrage at this and Timāku fled to Luristan and shut himself up in Mānĝajašt. Ḥulagū pardoned him but later changed his mind and had him executed in Tabźn. Timāku was buried at Zarda-Khān.

(4) Shams al-Dīn Alp Arghūn succeeded to his executed brother and ruled for 15 years. He led a nomadic life. His winter residence was at Ḫādī and at Sus (probably Susān on the Kārān above Shīštar) and his summer one at Dīja-y-i sard (on the upper waters of the Zanda-rūd) and at Bārof (source of the Kārān).

His son (5) Yūṣūf Shāh had spent his youth with Abaḵa Khan (663–680) and even after appointed in his father’s stead remained at the Mongol court with 200 horsemen. He took part in the war against Burāk-Khān (q. v.) and distinguished himself in a skirmish with the Dahālam. To the possessions of Yūṣūf Shāh Abaḵa Khan added Khużistān, the region of Kāh-Gilīya and the towns of the modern Luristan (including Tustar above Isfāhān) and Djarbdhaḵān (Gulpāyagān). Yūṣūf Shāh went to Kāh-Gilīya and attacked the Shīl settled in the modern Manmasanti county east of Kāh-Gilīya. After the death of Abaḵa, Yūṣūf Shāh was forced against this will to go with 2,000 cavalry and 1,000 foot to the help of ʿAlīm Tukkāl. The latter was defeated (683) and the Lara retreated from Tabāz to Natanz across the desert where the majority died of thirst. After the accession of Arghūn, Yūṣūf Shāh went to pay him homage and interceded on behalf of the former vizier Khwāzī Shams al-Dīn, who had taken refuge in Luristan (cf. d’Ohsson, lv. 5).

His son (6) Afrāṣiyāb sent his brother Ahmad to the court of Arghūn while he himself remained in Luristan where he put to death the members of the former vizier family. Their relatives having taken refuge in Isfāhān, Afrāṣiyāb sent his kinsmen in pursuit of them. At this moment arrived the news of the death of Arghūn (690). The Lara killed the Mongol governor of Isfāhān, Afrāṣiyāb appointed members of his family to govern in Hamadān, Fārs and in the territories reaching to the Persian Gulf and even began to march on the capital. The Mongol general Amir Tarāk was defeated at Kūhrūd (Kohrūd, near Kāshān). Kaïkhātu Khan sent Mongol troops against Afrāṣiyāb and troops from Lur-i Kūčik. Afrāṣiyāb shut himself in Mānĝajašt but after some time went to Kaïkhātu who pardoned him. Returning to Luristan, Afrāṣiyāb massacred his own relatives and a number of the notables. Ghiyāth Khān (694–703) at first showed himself favourable to Afrāṣiyāb but in 696 on the complaint of Amīr Ḥurkūdā of Fārs, Afrāṣiyāb was tried and executed at Mahāwīnd (5) of Turān.

The rank of Arghūn was next conferred on his brother (7) Nūṣrat al-Dīn Aḥmaḏ (from 695 to 730 or 733) who had spent most of his life at the court of the Ilkhāns. According to the 校友 in Dījan-ārā he introduced Mongol institutions (zīyār-i magzūl) into Luristan. Ḥamдалlah Mustawfī praises his able and prudent administration which repaired the damage done by Afrāṣiyāb. He was a friend of men of religion and several books were dedicated to him, like the Turajīk Dāvudān fi Aḥṣāṭi Mālik-ī Basalī al-Dīn Shāh Shīktūf (663). The Ilkhān 校友 in Aḥmaḏ gives him the title of ʿār. According to Ibn Baṭṭūṭa he built 160 madrasas (‘hermitages’) of which 44 were at Ḫādī and he had roads cut through the mountains.

His son and successor (8) Rukan al-Dīn Yūṣūf Shah II (733–740) was also a just ruler. His lands (校友 in Aḥmaḏ) extended from Bāšā and Khużistān to Lālamūs (9) and Fīrūzān. He was buried in the madrasa of Ruknādād.

His successor was his son (according to Ibn Baṭṭūṭa his brother) (9) Muṣṭafā al-Dīn Afrāṣiyāb II (Aḥmaḏ). Ibn Baṭṭūṭa travelling via Mājdīl-Rūmūn-Tustar, visited the capital Ḫādī or Malāmūr. He found the prince given to wine. The Arab traveller describes the peculiar customs of the Lurs which he witnessed at the burial of the son of the ‘sultān’. The latter’s possessions included ‘Tustar (Shīštar) and extended to Garwīκ al-Rūkh (the modern Kāhvarūkh in Carmāshāl west of Fīrūzān). During the ten days the Arab traveller took to cover this distance he found shelter every night in a madrasa. At the same time (740) Ḥamдалlah Mustawfī mentions the foundation by the Emirs of the Great Lur Dījaḵāt (apparently the district N.E. of Luristan and west of Gulpāyagān).

Next follows an obscure period. According to the anonymous historian of Muzāṣ İskandar, the successor of Afrāṣiyāb was his son (10) Nāwī al-Ward (‘rose-bud’), who ruled from 736 (*7) to 756 and dissipated the treasures of his ancestors. According to the Dījan-ārā, Muhammad Māpurār of Fārs (713–760) learning of his dealings with Abū ʿĪsāḵ İndūţ had him blinded at Sūd in 750. His cousin (the Dījaḵān-ārā’s nephew) (11) Shams al-Dīn Pashaḵāb b. Yūṣūf Shah II (*7) succeeded him and ruled from 756 to 780. At this time Luristan became involved in the civil wars of the Muzāṣ İskandars. When Shāh Ṣāmūr, making Shīštar his headquarters began a series of raids on the lands of Pashaḵāb, Shīş Shūtl (elder brother and rival of Man-ūr, d. 780 or 784) came to the help of Pashaḵāb. We have coins of 762 and 764 struck at Ḫādī and in the name of Shīš Shūtl (S. Lane-Poole, Cat. of Oriental Coins in the Brit. Mus., vol. vi. [London 1881], p. 235, 237). After the death of Pashaḵāb a struggle began between his two sons (12) Malīk Pīr Aḥmaḏ and his younger brother (13) Malīk Ḥūṣāng in which the latter was killed. (According to the anonymous historian of İskandar, if he has been rightly understood by Ḥomwūr, Aḥmaḏ and Ḥūṣāng were bastard sons of Khwāzī Shams and Iṣḥāq Shīktūf respectively, who shared their father’s fief. During the reign of Aḥmaḏ they quarreled and the elder Malīk Pīr Aḥmaḏ fled to Tūsar where he was granted a fief by the Ilkhāns. When Iṣḥāq was exiled to Tabźn, Aḥmaḏ could not persuade his brother to return, and his relations then broke off.)
LUR-I KÜÇIK, a dynasty of Atabegs which ruled in Northern and Western Luristan between 580 (1184) and 1006 (1597) with Khurramšāh as their capital. The Atabegs were descended from the Lur tribe of Djangrā (Jangra). The dynasty is also known by the patronym of Khurramšāh from the name of the first Atabeg. (It remains to be seen if this name is connected with that of Muhammad Khurramšāh, vicer of the former rulers of Luristan before the rise of the Atabegs of Lur-I Buzurg). After 730 the power passed to another line which later claimed to be of ʿAlid descent; at this time also the title malik succeeded that of atabeg. The ancestors of the Khurramšāhs had entered the service of Hisām al-Dīn (of the Turk tribe of Shahī or Shudja) who ruled Luristan and Khusūsī about the end of the Sālūq period (c. 550—580).

(1) Shuṣ̄dā al-Dīn Khurramšāh b. Abī Bakr b. Muhammad b. Khurramšāh was at first Shīhāna of a part of Luristan on behalf of Hisām al-Dīn but after the death of the latter (in 570 or 580) became independent lord of the whole of Lur-I Küçik. He waged war on the Djangrāvi (the tribe in which he had originated, but which was then being ruled by his rival Surkhāb b. ʿAlīyar) and besieged their stronghold Dī-i-Siyāh (in the district of Mānīrūd and in the ʿwilayet of Samhārā). The inhabitants handed over Mānīrūd over to him but the caliph ordered Shuṣ̄dā al-Dīn to deliver up to himself the stronghold of Māngarrā (Māngarāh north of Khūlāh). In compensation Shuṣ̄dā received the district of Tarāzak in Khusūsī. Shuṣ̄dā al-Dīn drove back the Bayāt Turks who were ravaging Luristan. He led a nomadic life and spent the summer at Kīrīt (in Bālā-Gīrīt) and the winter at Dūlur (Dīhi Lurān in Pūsh-i Kōh?) and at Mālāḥ (?). He died a centurion in 621 and his tomb was venerated by the Lurs. His son Badr was killed by his nephew (2) Saʿīf al-Dīn Rūstam b. Nūr al-Dīn who became Atabeg and was a capable ruler. Rūstam ruled over Khurramshāh, his father first (3) Shāraf al-Dīn Abū Bakr and next (4) ʿĪz al-Dīn Gāvāhp. The latter married the widow of Abū Bakr, Malik Khātūn, who was the sister of Sulaimān Shīh Aiwa, later commander-in-chief of the caliph al-Mustaʿṣim (Abū should be altered to ʿAlī) the chief of a tribe or in the district of the last Sālūqūs; cf. Rāhāt al-Sādūr, G. M. S., p. 436; ʿĪz al-Dīn, G. M. S., p. 475; Fīrōz, Ṣafī, G. M. S., p. 477; Defrémery, Récits sur quatre princes d’Hami- dou, T. A., 1847, p. 177; When (5) Hisām al-Dīn Khālīl b. Badr b. Shuṣ̄dā died, a struggle ensued between him and Sulaimān-šāh (Shīhān al-Dīn). The Lurs took Bahār (near Hamādān) but finally Khālīl was defeated and killed near Shāpur-ḵwaist in 640 (1242).

His brother (6) Badr al-Dīn Masʿūd went to the court of Mangī and returned in the train of Hūfāgī. This devout man, an authority on ʿAskī law, ruled till 658. He showed great kindness to the family of Sulaimān-šāh, when the latter was executed at the taking of Baghādād. The sons of Masʿūd were executed by Abaḵā, who appointed Atabeg (7) Tādā al-Dīn b. Ḥīsām al-Dīn Khālīl (also executed by Abaḵā in 657).

He had two immediate successors, the two sons of Masʿūd of whom (8) Falak al-Dīn Ḥasan ruled a part of Luristan (dīfāʾ, wilāyat) and (8b) ʿĪz al-Dīn Ḥusain ruled the crown domains (indijā). The number of their troops was 17,000. They chastised the Bayāt and reunited under their control all the lands between Hamādān and Shīhūšt and between Jafābād and the Arab lands. Both died in 659.

Kalḵāšt appointed as their successor (9) Dja- ma al-Dīn Khādīr b. Tādā al-Dīn, who was killed in 693 near Khurramshāh by (10) Ḥīsām

(12) Izz al-Dīn Muḥammad b. Izz al-Dīn (Ṣābi) was a minor and his cousin Badr al-Dīn Masʿūd (son of 8) obtained from Uldjaitū the title Āṭābeg and ruled over a part of Luristan (dīfār) but later Izz al-Dīn fully established his authority. After his death (716 or 720) his widow (13) Dava-lṭ Khuṭṭān retained a semblance of authority while the real power was in the hands of the Mongols. Such was the state of affairs when Hamdallāb was writing his Taʾrikh-i Gisrida (c. 730). Later the maḏka (who according to the anonymous historian of Iskandar became the wife of Yūsuf b. Saḥaf (the Great Lur) found herself forced to surrender to the throne to Izz al-Dīn Husain who received investiture from Abī Saʿīd and ruled for 14 years. His son and successor (15) Shuǧāʾ al-Dīn Māḥmūd was killed by his subjects in 750.

(16) The Malik ‘Izz al-Dīn b. Shudjā al-Dīn was only 12 when his father died. The vicissitudes of his life are known from the record of them in the Zafar-nāma. In 785 (1383) the Muḥammad Shuǧāʾ with his army visited Khurramābād and married the daughter of Izz al-Dīn. Another of his daughters was married to Abī Ḥamād b. Uvār. The death of Izz al-Dīn was announced in 793. In 798 he was told of the depredations of the Lurs of ‘Izz al-Dīn. Setting out from Firūz-Kūh, Tumīr by forced marches reached Luristan. Burūḏjīrīd was laid waste, and the fortress of Khurramābād razed to the ground. The ringleaders were thrown down from the tops of cliffs. The fate of ‘Izz al-Dīn is unknown and we do not know if he was one of the Āṭābegs of Luristan in whom 789 Tumīr granted an audience at Shīrāz, to whom according to the anonymous historian of Iskandar, ‘Izz al-Dīn was captured in 790. He passed through Fārs (Armīyān, Wāmīyān, situated near Burūḏjīrīd) and deposed with his son to Turkestan. At the end of three years both father and son were released. In 793, ‘Izz al-Dīn played a part in the aggrandizement of the Muṣaffarīd Zain al-‘Abīdīn, son of his old suzerain Shāh-Shudjā. When in 795, Tumīr returned to Persia, he went from Burūḏjīrīd to Shīhstār. Luristan was overrun piece by piece and laid waste by the troops of Mirzā ‘Omar but ‘Izz al-Dīn escaped his pursuers. In 798 prince Muḥammad Sulṭān, governor of Fārs, extended his authority over all Luristan and Khurramābād. In 805 we find a mention of the restoration of the fortress of Armīyān (1) near Burūḏjīrīd ordered by Tumīr and under 806 the Zafar-nāma mentions the arrival in Bālakān from Nīhawand of a courier, bearing the head of ‘Izz al-Dīn, whose skin had been stuffed with straw and publicly exposed. His son (17) ʿAlī Māḥmūd, whose irregularity in the payment of tribute seems to have provoked the punishment of his father, regained his possessions, after the death of Timūr in 810 and was ruled till 815 (or 825). (18) Shāh Ḥusayn (“Abdās,” i.e. descendant of ‘Abbās b. Abī Abī Ṭalib, an-

other son of ‘Izz al-Dīn), took advantage of the decline of the Timūids to extend his territory. He plundered Hamdān, Gulpāyag, Isfahān and even undertook an expedition to Shahrāzūr where the Bahārūl Turks slew him in 871 (or 872). His son (19) ‘Abī Rūstam supported Ismāʿīl I; at this period the lords of the Little Lur had already adopted the theory that they were of ‘Alīid descent. The son of Rūstam (20) Oghur (or Oghuz) accompanied Shāh Taḥmāsp on his campaign of 940 against Ubaḏ Allāh Khān and during his absence his brother (21) Džaḥaṅgīr seized the power. He was executed in 949. The governor (lala) of his son (22) Rūstam Shāh handed over the latter to Taḥmāsp Shāh who imprisoned him in Alamūt while Muḥammadī, another son of Džaḥaṅgīr, was hidden by the Lurs at Čagula. An impostor in Luristan gave himself out to be Shāh Rūstam Taḥmāsp, then released the true Rūstam who recovered his fief but had to hand over a third of it (do dang) to his brother (22b) Muḥammadī. At the instigation of the wife of Shāh Rūstam, the governor of Hamdān sent Muḥammadī who was slain in Aḥānum. The sons of Muḥammadī plunged Luristan and the adjoining provinces into great disorder. Ten years later Muḥammadī escaped, and conquered Luristan while Shāh Rūstam took refuge at the court of the Shāh. Muḥammadī established good relations with Taḥmāsp and Ismāʿīl II but after their death submitted to Sultān Murād III (1582–1603), which earned him an extension of his territory by the cahots west of Pūsh-i Kūh: Mandlā, Džesān, Badrātī and Tursāk. But relations with the Ottoman Turks soon became strained and Muḥammadī became reconciled with the Safawīs.

(24) Shāhwardī b. Muḥammadī, who had escaped from Baghdād where he was living as a hostage, received investiture from Shāh Khudūsbanda after his father's death. At the time of the occupation of Nīhawand by the Turks Shāhwardī showed some signs of independence. In 1000 good relations with Shāh 'Abbās were re-established with whom Shāhwardī made the most of his alleged descent from 'Abbās b. Abī and his Shīʿī (tayybiyya, as 'Abbāsī). Shāh 'Abbās married his sister and gave him a Sufī princess in marriage. In 1002 Shāhwardī in a pitched battle killed the governor of Hamdān Oghurlu Sultān Bayāt who was trying to levy taxes in Burūḏjīrīd. Shāh 'Abbās, filled with wrath, left the Khorāsān front and hastened to Khurramābād. Shāhwardī crossed the Saimara (Karkhā) and escaped to Baghdād. Luristan was given to Sultān Ḥusayn b. Shāh Rūstam. In 1003 Shāhwardī was pardoned and restored but he was not long in relapsing. In 1006 Shāh 'Abbās took the field against him a second time. Shāhwardī was besieged and slain in the fortress of Čagula (in Pūsh-i Kūh). Ḥusayn Khān b.Muṣār beg Saẕwīnī (1) was given Luristan, except Saimara, Hindmas (1) and Pūshī-Kūh which were given to Taḥmāsp Kūl Iānu. This may be regarded as the end of the dynasty of the Āṭābegs of the Little Lur, although the dynasty of "wāls" of Luristan (later of Pūsh-i Kūh [q. v.]) continues to be ruled by the descendants of Shāhwardī.

(V. MIRSKY)

**LURISTAN**, "land of the Lurs," a region in the S.W. of Persia. In the Mongol period the terms "Great Lur" and "Little Lur" roughly covered all the lands inhabited by Lur tribes. Since the Safavid period, the lands of the Great Lur have been distinguished by the names of Kūh-Gilli and Bakhtiyari. At the beginning of the xviiith century the Mamassani confederation occupied the old Shīštān [q. v.] and thus created a third Lur territory between Kūh-Gilli and Shīštān.

It is however only since the xvith century that Lur-i Kūk [q. v.] has been known as Luristan (for greater precision it was called Luristan-i-Feilī). In the xivth century Luristan was divided into two parts: 1. *Pīš Kūh*, "country on the side of the mountains" (i.e. east of Kabīr-Kūh) and 2. *Pusht-i Kūh* (country beyond the mountains) i.e. west of Kabīr-Kūh. At the present day the term Luristan usually means Pīš-kūh while Pusht-i kūh means the Feilī country.

The Mamassani territory and the Kūh-Gilli form part of the province of Fārs. The capital of the Mamassani is at Bahliyān (cf. *ṣūr*). Kūh-Gilli (Kūh-ṣūr-i Bahli, Kūh-Gilli) stretches from *Bāgh* (west of Bahliyān) to Bahlihā; this last town is the main centre for the tribes of Kūh-Gilli. To the south the Kūh-Gilli tribes descend as far as the Persian Gulf. The mountains of Kūh-Gilli and the frontier between its tribes and the Bakhtiyari are not yet well known. The chief rivers of Kūh-Gilli are the Ab-i Shīštān which is formed by the junction of the Kairāštālā and the Zohrā and in its lower course runs via Zāhdūl and Hindiyān, and the Ab-i Kurdistān or Džurjāl, one branch of which later runs into the Karun [q. v.] and the other towards Jawrāk. On Kūh-Gilli see the valuable *Fārs-nawā-yi Gāhr* of Ḥasan Pārdī (Tūhān 1313), the itineraries of Scoqueler, Hausknacht (*Routen im Orient*, Map iv.), Wells and Herzfeld and the general account in *de Bode*, i. 251–289; ii. 327–398; *Ritter, Z. Asian*, ix. 132–144 is now very much out of date.

The Bakhtiyārī lands stretch from Čahāmāhīl (west of I-fahān) to Shīštār; to the south the Bakhtiyārī march with the Kūh-Gilli and to the north they go beyond the northern barrier of Luristan (Shūtur-kūh etc.). They are found around Farākān, Burūndū, Ḟajrudnāg, and in the Canons around Burārdnū (even before 1840 many villages had been purchased here by Muhammad Taḵī Khan Čāhr-Lang). Roughly speaking the Bakhtiyārī occupy the upper basin of the Zandārūd and of the Kūsān [q. v.] above Shīštār. The works of Layard, Sawyier, Mrs. Bishop, Cursōn etc. give a very accurate picture of this mountains country, in the centre of which rises the Kūh-Rang (12,500 feet high) which forms the watershed between the Persian Gulf and the central Persian plateau. (It may be asked if the name Kūh-i Rang is not the Mongol kūren, "encampment, larger", found in Luristan). The frontier between the Bakhtiyārī and the Lurs proper follows the western branch of the Abī Diz, an important tributary of the Kūrān. Luristan (Pīš-kūh) is bounded on the east and west by the convergent streams of the Abī Diz and the Kākhā, while in the north the range of the Čihār-bālghān, Gareh etc. separates Luristan from Nīshwand and Sīlāghor (district of Burārdnū). To the west of Kākhā Pusht-i Kūh begins. In the northwest the frontier of Luristan runs to the southwest of the districts of Ḥalīlān and Ḥarsīn which belongs to the province of Kermānāshāh.

The chief left bank tributary of the Kākhā is the Kāshgān (Rawlinson: Kāshghān) which is formed by two arms. The northern arms with its tributaries drains the beautiful plains of Hūr-rūd, Alīshāt and Khwāna. The southern arm, separated from the northern one by the Yāftā-Kūh range, takes the name of the town of Khurramābād [q. v.] near which it passes. After the confluence of the two arms, the Kāshgān, running S.W., receives on the left bank the combined waters of the Kāwgbān and Tāyīn, which flow from Kūh-i Haftād Pāhū (south of Khurramābād) and the northern slopes of the Kūh-i Gird. These two ranges are at right angles to the mountain which follows the right bank of the Abī Diz, which they separate from the valley of the Kākhā. On the right bank the Kāshgān receives the Mādīyān-rūd, "river of the mare". Above Kāshgān the Kākhā receives on its left bank several tributaries of less importance still little known (Rūlār etc.). Below Kāshgān and also on the left bank, the Kārkā receives the Fānā, Leilm (Lehum) and Ab-i Zāl. This last river with its tributaries Anārāk etc. rises in the southern slopes of the Kūh-i Gird. The topography of the right bank of the Abī Diz is not well known. The sources of the Balārdūd and its right bank tributary the Kūrāb lie a considerable distance to the north. The Balārdūd flows into the Abī Diz between Dīsfūl and Susa. The Kūrāb receives on its right bank the waters of the Kūh-i-āb which come down from the high valley of Māngarā, which with the peaks that surround it form a kind of natural bastion and separate the basin of the Balārdūd from that of the Abī Zāl. The Šahrā-yi Lur plain formerly well irrigated lies north of Dīsfūl and south of Kūrāb ("pitch-water") whose naphtha spring has been known since ancient times. It was probably here that Dārus settled a colony of Greeks (*Ritter*, ix. 201).

The interior of Luristan presents a series of mountain ranges, which stretch N.W. to S.E., the direction usual in Persia, and rise one behind the other between the plain of Susiana and the northern barrier (height about 9,000 feet).

**Ancient history.** The lands now occupied by the Lur tribes have been inhabited since the period before the arrival of Iranians in them. This region, being at a considerable distance from Assyria, was mainly under the influence of Elam; Susa where there have been found traces of occupation going back to the third millennium B.C., lies just at the entrance to the mountains of the Little Lur. The purest traces of the local culture and of this alone are found more to the south-east. Just as the Atabegs of the Great Lur had for their capital Iškābid (=Malamer) so in very early times. the lords of this district, the kings of Aṣāpīr (Hapīrito), whatever were their relations with the rulers of Susa had control at least of
the Kārān valley. The site of Mālamīr (cf. de Bode, Layard, Jéquier in de Morgan, Dilig. en Pers., 1902, iii. 133—143 and Hüsing, Der Zagros u. seine Völker, Leipzig 1909, p. 49—59) with its purely indigenous (Elamite, non-Semitic) inscriptions and bas-reliefs is an important point. The recent discovery by Herzfeld (Reisbericht, Z.D.M.G., 1926, p. 259) in the Māmasān region of a bas-relief and bricks bearing Elamite characters (1500—1000 B.C.) is valuable as indicating the extent of Elamite penetration into the Lar mountains. Kūh-Gūlīn lying between Susiana and Persis may correspond to the still unknown region of Anšān (Amān) out of which came the ancestors of Cyrus the Great. On the survival of this name near Shāhītar, cf. Grundr. d. Iran. Phil., ii. 418 (according to Rawlinson: Assān).

The antiquities of the valley of the Upper Kārān (the two Sūsān, Lurdāgān, the mounds of Salm, Tūr and Frād) are insufficiently known (Layard, Sawyer). According to Sawyer, the higher Bākhītyārī lands are “singularly devoid of any ancient landmarks”.

For the west part of Luristān in the strict sense of the word see the articles MĀSĀRĀN, and PAMPIH-π KÜH. No monuments of very great antiquity have been discovered except the caves (Median?) of Se-daṛān between Māngarā and Khorramābād, Čīrīkow, p. 129. The early inhabitants of Luristān were the Kāshgiu = Keshūti who imposed their rule on Babylon between 1760 and 1650 B.C. The Achaemenids paid the Keshūti the right of passage for the Babylon-Ecbatane route. These highlanders were temporarily subdued by Alexander the Great. Antiquity, pursued by Eumenes, traversed the heart of the Kassanian country, according to Rawlinson on the route Pul-i-tang—Keīlūn pass—Khorramābād (Ritter, Erdkunde, ix., p. 335). The Kassanans (who should perhaps be distinguished from the KēšŪt = Kešūt = Kēshūtī) who spoke a language different from that of their neighbours, but in it we already find proper nouns borrowed from Indo-European. Cf. E. Meyer, Gesch. d. Altert., 1/2, Berlin 1913, § 455; Hüsing, Der Zagros, p. 24 and Aurān in Les langues du monde, Paris 1925, p. 283. [The name Kāshgiu has perhaps survived in that of the river Kūshgān.] It is also probable that northern Luristān was more or less dependent on the land of Ellīpī, often mentioned by the Assyrians. This region, which was considerably influenced by Media is now located in the province of Kirmānšāh. Cf. Andreas, Alinī in Encyl-Wiss., 2, Strauβ, Z. A., xv., 379; Cambridge Ancient History, 1921, ii., cf. map.

We know very little about the Mawtūnī people who (Herodotus, v. 49) were bound on one side by the Armenians and on the other by the Susians (Reinach, Un peuple oublié: Les Maitunie, Revue des Études Grecques, 1894, vii., p. 313—315).

Here we can only call attention to these various ethnical elements buried in the later strata of Iranian invasions. In the name of Parādān, a canyon in the northeast of Bākhītyārī, we have a reminiscence of the Median tribe of Paratākistān (Herodotus, i. 110) and of the province of Paratākistān (Strabo, i., p. 80) which lay between Media and Persia (in Assyrian: Partakka, Partakka; cf. Streak, Z. A., xv., p. 363). The iranisation must have been accelerated by the formation of the great empires, Achaeemnid, Macedonian, Parthian and lastly Sassānī. There are many Sassānian towns in the valley of the Kārkūh. Many Sassānian buildings are attributed by the natives to the Atabegs of Luristān, who were certainly nothing more than the restorers. The complicated system of bridges is very remarkable (cf. the photographs in de Morgan, Études Geogr., ii. and Études Archéol., Paris 1893—1897, p. 360—374) and the roads which may still be traced on the upper courses of the rivers of Susiana. The remains of roads, paved or hewn out of the rock, may be seen at Tang-i Sāndā (between Bīhābān and Mālamīr) near the Sassānian bas-reliefs (de Bode, i. 353, 364), to the east and west of Mālamīr (de Bode, i. 350, ii. 820: gjeadd-ī atšābān, between Difūs and Kīrūh (Rawlinson, A march from Zohāb, p. 93), to the south of Kūhāwā (Gjeadd-ī Khorvar, Čīrīkow, p. 216—221). All these works are evidence of a systematic and continuous penetration. But since at the end of the fourth (tenth) century the inhabitants of the plain of Kūhrisman had not yet forgotten the Old Iranian language (Mukaddasī, p. 418) colonies of the ancient stocks may have survived in isolated corners of the mountains. The Lar highlands only assumed the present extent under the Atabegs.

The knowledge of the Arab geographers about the Lur country is very summary although they describe the routes between Kūrīstan and Fās (cf. Schwarz, Persien, i. 173—180; Aṣlādān-Širāz, p. 190: Aṣāladān-Sumānān), between Kūhrīstan and Ifāšān (the road started from Iījād; ibn Khurāddābīh, p. 57; Mukaddasī, p. 401) and lastly between Kūhrīstan and Dīfūs. As to these last routes, Iṣṭakhrī, p. 196, reckons from al-Lur to Shāpūr-Khwās 30 farsāks, from there to Lāštār (= Alīšār) 12 farsāks, from there to Nikwānd 10 farsāks (the road must be that which follows the upper waters of the Balad-rūd). A few details of this route are cleared up by Mukaddasī, p. 401, who gives the following eight stages: Karādji (cf. the article SULĀN-Kād)—Wafrawand—Irbān—Kurūchī (certainly = Hūrūd, Hūrūd, north of Khorramābād)—Sābur—Khudās (= Shāpūr-Khwās = Khorramābād)—Kākīṣh (=) al-Kūn—Razmānān—al-Lur. Mukaddasī, p. 418 also makes one suspect the existence of a road along the Al-i Dīz: from al-Lur to al-Dīz, two stages, from there to Kāgān one stage, from there to Ghilīpāgān 40 farsāks through uninhabited country (mofūnān).

Among the inhabited places in modern Luristān may be noted the following: the town of al-Lūr, a farsāk north of Difūs (Kantarat Andāmī) the site of which should be sought in the plain of Shāhī-yi Lur near Sālībābād; the town of Lāštār, now disappeared, was certainly in the plain of Alīšār and the town of Shāpūr-Khwās. The exact location of the latter is important for the comprehension of certain events in the fifth (eleventh) century (ibn al-Alīfī, ix. 89, 146, 211; x. 166; Turāk-i Guzida, p. 557). Rawlinson had identified Khorramābād with Shāpūr-Khwās (cf. Le Strange, The Land, etc. p. 202, 668). The combined evidence of Iṣṭakhrī, p. 196 and 201, of the Aṣāladān al-Kulūk, p. 79, 176 and particularly the itinerary of Mukaddasī, p. 401 fully justify Rawlinson’s identification (against Le Strange). The change of name, or moving of the site (cf. Schwarz) must have taken
LURISTAN

place in the ninth century. The Nāshat al-Kušūb (740 = 1340) which does not include Shapur-Kaust in its enumeration of the towns of the Little Lur in the Indian source, to mention Khurram-ābād (a town in ruins). It is on the other hand not at all probable that the wilāyat of Mān-rūd, the alleged ancestral home of the Lurs, is near Khurramābād. It should be sought to the north of the town of al-Lur near Mān-garra (= Māngarra). Samtah, mentioned in the Tu’rīqu-i Gāzīa, p. 549, was in Mān-rūd; its fortress Diz-i Siyāh must correspond to the fort of Diz which defends the entrance to Māngarra and was destroyed by the wāli of Pishth-i Kāh in 1895 (Mann, Die Mandarten der Luristan, p. 117). Finally the stronghold of Gīrīn (Tu’rīqu-i Gāzīa, p. 549, 552) is mentioned by Cirkow, p. 133, among the encampments of the tribe of Pāpī (to the south of Khurramābād).

Economic conditions. Apart from the Bakhtiyāri districts near Isfahān where there are flourishing villages, the Lur territories inhabited by nomads or semi-nomads only export the products of their cattle-rearing. But the future of the mountainous country which lies like an amphitheatre around the plain of Khwāz est is very promising. The Lur lands are rich in minerals and especially in petroleum. The famous wells of Masjūdī Sulaimān (Maldūn-Nafīn), belonging to the Anglo-Persian Oil Company are in the middle of Bakhtiyāri territory (between Shūghtar and Mālamīr). The same Company whose concession includes all the petroleum-bearing lands in the whole of southern Persia is putting into operation its claims in the Kūh-Gilīl region (to the north of the port of Gānāwa) etc. (cf. Schwer, Der turkisch-pers. Erdeinverkehr, Hamburg 1919).

On the other hand the territories now occupied by the Lurs was played a considerable part in ancient times, as they lay on the route between the great centres of the Persian empire. Their southern part (Kūh-Gilīl) may become of great importance for air and railway communication between Neshapota and India. The Bakhtiyāri country is now traversed by aconnecting Khwāz est with Isfahān and controlled by Lyon Brothers. Finally Luristan proper seems destined to be crossed by the main line connecting the Persian Gulf (Mohammara or Khormāw) with Teherān, and perhaps the Caspian Sea. Before the war of 1914 surveys had already been begun for making the Mohammara–Dizūl–Khurramābād railway by the Persian Railways’ Syndicate (cf. Litten, Persien, Berlin 1920, 65, 85). Since the change of dynasty in Persia, the Persian government proposes to carry through this task itself (cf. Millspaugh, Amrī, 1912 in Pers. Mitt., 1916, p. 272).

Lût, the Biblical Lot has in Muslim legend, even as early as in the Kur'an, an importance which he does not have in the Bible or the Hadâda. As his story is related, with the downfall of the sinful Sádûm (not however mentioned in the Kur'an) he appears to Muhammad as a prophet of punishment along with Hud, Seth, Nûh and Shu'âib as predecessors of Muhammad. When Muhammad is accused of being a liar he can converse himself with the reflection that before him the people of Nûh, 2Ahd, Thamûd, the people of Ibrahim and the people of Lût also called their prophets liars (Sûra, xxii. 43). Lût's people (called 2baum Lût, l. 13: 2vwân Lût) are usually located between Thamûd and Madyan. Lût in the Kur'an becomes a mu'âlî, messenger of Allah (xxvii. 160; xxxvi. 123), a rasûl amin, a reliable prophet (xxvi. 162), a participant in wisdom and knowledge (xxi. 74). When Ibrahim warns his people, Lût believes him (xxxi. 25). Lût is sent to sinners who forbid hospitality (xx. 70), waylay strangers and practice sodomy and cruelty such as no other people had before them. They threaten him that they will banish those who lead such a moral life saying: "If thou preachest right, bring God's punishment upon us" (xxix. 28). God therefore sends his angels of punishment; Ibrahim's intercession is vain (xi. 77-79). The angels come to Lût. His people demand the visitors for sinful purposes. In vain Lût offers his daughters instead. He feels himself helpless. The angels calm him, saying: "We shall save thee, only no one must turn round; thy wife will do it". The city was turned completely upside down (xi. 84; xv. 74); sidjîl stones, marked by God, rained upon it.

The Kur'an mentions no other name in the history of Lût. The destroyed city is called al-mu'tahîb (Sura, lv. 54) of which the plural is almü'tâbihât (ix. 7; lxix. 9) corresponding to the Hebrew mahpehâ, which is used in the Bible of Sodom.

The Kur'an commentators also know the Biblical story quite accurately (Tabari, ed. de Goeje, i. 346, 347). They are able to fill all the gaps and give all names. The sins of Sodom are fully described. Sadûm has a king of the line of Nimrod. The habitants worship idols. Lût admonishes them for 40 years (al-Kisâ'). Then God sends three angels, Gabriel, Michael and Israîlíl (al-Kisâ' and the soul-taker Asérîl) (Minonski): "In Lût's time there was a Man who destroy a people among whom there are 300 believers". No. — 300, 200, 100...? — No. — 14 believers. No. — This number is assued, Ibrahim comforts himself, in the belief that Lût's wife is one of the believers. The angels must not destroy Sâdûm until Lût testifies four times to its sinfulness. They at once meet Lût who testifies. After meeting others they encounter Lût's daughter. She invites them into her father's house. Lût orders his people to be silent, especially his wife who has disobeyed him for 40 years (al-Kisâ'). But Lût's wife deliberately makes it known that they have visitors or she ostentatiously procures salt (this is why she becomes a pillar of salt) or she actually says: "Young men have come to stay with us, with more beautiful cheeks and sweeter fragrance than I have ever seen".

The people demand the young men; Lût offers his daughters. "If we wanted thy daughters, we would know where to find them", they reply. Lût bars the doors. At the bidding of the angel he opens them. Gabriel blinds the intruders with a blow of his wing. They turn on Lût and his mother. "Save yourself!" they cry. "Lût's house is bewitched!" As the hour of destruction is at hand, Gabriel (according to others the Angel of Punishment Michael) turns the town upside down, and lifts it up so high that the angels in heaven hear the crowing of the cocks and the howling of the dogs of Sâdûm. Sidjîl stones fall; on each is marked whom it is to strike. As Lût's wife looks sympathetically on her people, she is struck by a sidjîl-stone. The number of killed varies between 4,000 (Thâlabî) and four millions (Tabari, ed. de Goeje, i. 342). All perished, except one who fled to Mecca, brought his sidjîl-stone to the haram where it hung for 40 days between heaven and earth, until it finally slew the man who brought it there (Thâlabî).

The Muslim legend gives names to everything and explains them all. Lût takes his name from látâ, "to attach oneself", because Ibrahim's heart was affectionately attached to Lût (Thâlabî). Lût's wife is called Hálsaka' or Wa'lî', his older daughter Kith (2), the younger Râriya (3) (Tabari), Zaghâr (Yâsût), or Rawaya (2) (al-Kisâ'). Not only is Sâdûm mentioned, but also other four towns, in whose names may be recognised the Biblical
Amrā, Adhām, Sāḥib’ān and Sā’ār. Of Sā’ār, Thālibā’ī says it was saved (Gen. xix. 20–22) "because it believed in Liṭi." The Muslim legend has a little in common with the old Haggada (Gen. Rabba, xlix, 1; Sinhedrin, 1909), e.g. the fact that Abraham thinks he is sure of a certain number of devout people. When Torke R. Elster (xxv) describes the daughters of Liṭi favourably, when Mīhrāgh Ḥagādah (ed. Schechter, p. 257) calls the angels sent to Sodom, Gabriel and Raphael, Muslim legend may have had some influence on the later Mīhrāgh.

LUTFI YAHYA. [See ARF MIKHSAK.]

LUTFI ‘ALI BEG Adhar, a Persian poet and biographer of the xivth century. He was born in Isfahān on the 20th Rab‘I 1123 (June 7, 1711) and spent his youth at Kūm and later at Shīrāz, where his father lived while governor of Luristan and the coast of Fars under Nadīr Shāh. After the death of his father, he made the pilgrimage to Mecca and travelled in Persia, finally settling in Isfahān in the service of Nadīr’s successors. He latterly adopted a life of seclusion and put himself under the spiritual direction of Muḥammad ʿAlī Mushtaghī. He died in 1381.

Lutfi ‘Ali Beg is best known for the collection of biographies of Persian poets which he compiled between 1760 and 1779 under the title of Māṭīkhīdā; in it he gives biographies of poets in Persian in alphabetical order according to towns and districts. The last part deals with contemporary authors and is followed by an autobiography, the Aṣa Ṣālihī which was lithographed at Qazvin in 1249 A.H. and at Bombay in 1277 A.H. There is a Turkish translation printed at Constantinople in 1250 A.H. Among his poems was a mathnawī, Tawāf al-Dawlah, from which the author quotes many verses at the end of his book. Lutfi ‘Ali Beg was held in considerable esteem by his literary contemporaries; he was particularly intimate with the poet Ḥūf of Isfahān.

LUTFI ‘ALI KHAN was the last member of the Zand dynasty in Persia. He was the son of Qājār Khan Zand (q.v.), who had reigned from 1756 to 1785, and had continued the struggle against the Kūmil Agha Muhammad, who had forced him to retire to Shīrāz, where he died on Jan. 23, 1789 from poisoning. During the short period of the reign of his father, Lutfi ‘Ali Khan had been entrusted with the conquest of Luristan and Kīrmān, which he had successfully carried through. But after the death of Dji‘far he was forced to flee from his own army to Kīrmān to seek refuge with the Arab lord Būshīr. With the latter’s help, he was able to make himself master of his capital Shīrāz where a certain Saiyid Murād had proclaimed himself king. It was chiefly through the efforts of his father’s minister Ḥājjī Shāh of the town that Lutfi ‘Ali succeeded in getting himself again recognised as sovereign. After his accession the character of the young man, whose nobility and generosity had hitherto been as much praised as his personality seems to have changed. His acts of tyranny and cruelty decided Ḥājjī Shāh to abandon the cause of the Zands and betray it to the enemy. This he did in 1791 when Lutfi ‘Ali Khan had set out against Agha Muhammad Khan. Ḥājjī Shāh seized Shīrāz and stirred up Lutfi ‘Ali’s own troops to mutiny against him. The latter fled to the coast and succeeded in collecting a small armed force with which he tried in vain to retake Shīrāz. Then followed several years of guerilla warfare waged with incredible vigour by Lutfi ‘Ali against the Kūmilān. He went up and down the whole of southern Persia, being for some time supported by the lord of Tabān and even by the British ambassador in Yazd. In 1794 being assisted by the chiefs of the district of Garmāsi, he even took Kīrmān. Here Agha Muhammad besieged him with a large force. After four months the town capitulated; Lutfi ‘Ali Khan succeeded in once more escaping and reaching Bām but here he was treacherously delivered over to his enemy who had him taken to Tībān where he was blinded and mutilated and finally put to death. Then came the terrible vengeance wreaked by the Kūmilān on the people of the town of Kīrmān [q.v.]

Lutfi ‘Ali Khan, the “last chivalrous figure amongst the kings of Persia” (Brown), probably had the sympathy of most of his contemporaries and it is recalled that even Agha Muhammad Khan openly recognised his bravery. But as his history was written under the new dynasty of the Kūmilān in Persia, the Persian sources could not show much sympathy for him. European sources give a more faithful picture of the course of events. The more modern Persian historians like Mirza Muhammad ‘Alī Khan (Dororo-i Makhzan-gar-i Tārīḥi Jām, Isfahān 1328, reproduced in Beek, Neuerutsche Kirchengeschichte, Heidelberg 1914, p. 259–260) do not hesitate to describe the action of Ḥājjī Shāh as treason. Lutfi ‘Ali Khan who soon afterwards became minister tried to justify his conduct to Sir John Malcolm.

LUTFI PASHA, properly Ḥājjī LUTFI PASHA, was an important Turkish statesman, scholar and historian, grand vizier in the time of Sultan Sulaiman i-al-Kāntār. He was of Albanian descent. The date and place of his birth are unknown. He was brought up in the imperial service, which he had
apparently entered through the *devshirim* for the Jauissaries. Much may be learned of his career from his own biographical references in the "History" and in the Hâşâni. Even in the world he devoted himself to theological studies, a fondness for which he retained throughout his whole life.

At the accession of Sultan Selim (1512—1520) he passed from the ranks of the pages as a peşni and filled in succession the following offices at the court: teyânâr (taster), kâşâş-bâshî, mir-i ʿAlâm (bearer of the imperial standard). He then became sanâdîk beş of Kastamonu, beglerbeg of Karaman, of Anatolia and in 941 (*tevâriş*). He spent a quarter of a century in the foreign service of the Sultan; according to his own account, he was through all the wars and battles in the reign of Sultan Selim who was very favourably disposed to him, usually in his train: in Rumelia and Anatolia, in Arabia, Syria and Egypt; similarly in the reign of Sultan Sulayman he took part in the campaigns against Belgrade, Rhodes, Hungary, Viena the Tâhâş, Baghdad, etc. In 945 (1538) he took part in the campaign to Kara Boghdad as second vizier. In 946 (1539) he succeeded as grand vizier Ayâş Paşa, who had died of the plague, also an Albanian, at a period when the Ottoman empire was straining its strength to the utmost. (The year 944, which was suggested by Kâtib Celebi’s *Târîh-i al-Târîhât*, Constantinople 1146, p. 176 adopted by all later historians and so handed down, is incorrect as is proved not only by Lütfî Paşa’s own statement but also by an analysis of events). He proved his ability in high army commands, in the fleet and in administrative offices.

He sought to carry through with a strong hand the reforms in internal administration which he had long recognised to be necessary, especially economies in the financial system, the abolition of oppressive institutions (*ağa*, privileges of couriers), the development and independence of the navy, the importance of which for Turkey his foresight recognised. Earlier than anyone else he saw the beginning of the collapse of the externally so brilliant political system. At the same time he conducted negotiations with Venice, Austria and France with great skill and firmness. It is very worthy that he was the first to recognise the surpassing genius of Müşir Sinâh, whom he appointed state architect. He was a highly gifted statesman, an energetic inflexible personality, incorruptible and above all intrigue with high ideals and strong religious and scientific leanings. In spite of his violent temper he was regarded as a “good natured Vizier”.

He was a brother-in-law of Sultan Sulayman, whose sister Şâh Sulayh he had married. Nevertheless he was summarily dismissed in 948 (1551) when in his rage he used threats to his wife when she reproached him with his inhuman treatment of a Muslim slave-girl. His eagerness for reform had naturally gained him few friends, at court. It is said that only his rank as a dansad saved him from execution. Whether the deeper reason for the matrimonial dissensions lay in his love for boys is not clear.

Lütfî Paşa was banished with a pension to Dimotika where he had a *siftik*. Here he gave himself entirely up to his studies, for which he was well qualified by his constant intercourse with theologians and scholars during his whole political career. After his return from Mecca to Dimotika — his successor Rustam Paşa was successful in preventing a complete reconciliation with the Sultan — he used his enforced leisure to compose numerous works in Arabic and Turkish. He died in all probability after 979 (1562) (so also Momentum-bashî), in any case after 961, in Dimotika. The date 959 (1544) usually given is impossible as he continued his history down to Ramazân 15, 961 (Aug. 14, 1554) and there is no reason to suppose that any other continued the history; on the contrary there are references in the text to events of the year 961. He only left one foundation, a *mâşâm* in Constantinople, after which the quarter and the Lütfî Paşa mosque take their names; its builder was a dessertdâr Ahmed Celebi.

Lütfî Paşa is the author of 21 works, a list of which he himself gives in his "History", p. 1—4 (cf. also the list in Flume, Geschichte des osman. Reiches, ii. 703; Flügel, *Abhandlungen der Wiener Gesellschaft der Wissenschaften*, vii. 247; Berlin, *Türkische Bibliothek*, vol. xii., p. xv.—xvii.). It includes 15 Arabic and 8 Turkish works, to which perhaps may be added the Kâmi-i mâniş ascribed to him which he perhaps does not mention as his own because it was the result of his official activities.

His theological works have not come down to us, so far as we know. According to sources — not however specially blessed in his favour — he had only a moderate knowledge of the different branches of theological study and medicine, which he loved to display with a dilettante’s exaggerated opinion of his powers. This is true, however as not only his perhaps quite mediocre theological works but also his really important historical writings, except for the Hâşâni have been almost unnoticed.

As a poet he is praised by Şehi, who completed his *Hedîc-i hediye* in 945 in the time of his grand vizierate. But the numerous verses scattered throughout his history are not by him. Verses certainly by him are very mediocre. Besides, he does not show much sympathy with poets as the contemptuous attitude to ʿAli Celebi, author of the *Humâyûn-nâmi*, shows, to whom he makes the reproach that he had spent 20 years trying to be the first to recognise the surpassing genius of Müşir Sinâh, whom he appointed state architect. He was a highly gifted statesman, an energetic inflexible personality, incorruptible and above all intrigue with high ideals and strong religious and scientific leanings. In spite of his violent temper he was regarded as a “good natured Vizier”.

He was a brother-in-law of Sultan Sulayman, whose sister Şâh Sulayh he had married. M Ä’ AL-A’AINAIN AL-SHINGIT, the name by which the famous agitator in Mauritania [q.v.] at the end of the sixteenth century and beginning of the seventeenth is best known (several explanations of his sobriquet are given; the literal meaning is “the water of the eyes” but the most satisfactory seems to be that which sees in it simply a euphemism, like that in the expression ʿmurrat al-dīm). 

Mūhammad Muṣṭaṣṣ Mā’ al-A’ainain was the twelfth son of a chief and marabout of great fame in his own country, Mūhammad Fāṭīm b. Mā’mūn, born at Walā’at in the latter part of the sixteenth century and chief of the Moorish tribe of Gālāgīma in the district of al-Ḥawd in the southeast of Shingit group. After breaking off from the Bakṣayya whose religious head was the chief al-Muḥtār al-Kuntī [q.v.], he founded a new brotherhood affiliated to that of al-Ḵādirīya [q.v.], to which he gave the name of Futluṭa derived from his own. On the death of Muhammad Fāṭīm in 1689, Mā’ al-A’ainain left the district of al-Ḥawd to complete his Islamic studies in Shingit (on this flourishing Moorish centre, see the long and interesting monograph by a native of the place resident in Cairo, Ahmad b. al-ʿAlīn b. al-Shingiti. *al-Waṣiṭ fi Tarāṣīm Līlāh Shingit.* Cairo 1329 [1911]). Mā’ al-A’ainain then settled for several years in al-Adrīr [q.v.] but afterwards went further north to the al-Sākhyat al-Ḥamrā‘ country, which was his usual residence from 1824. All this region, which now forms the northern part of Spanish Rio de Oro, was being desolated by murder and brigandage. He succeeded in establishing security there, restored the land to cultivation, planted numerous palmgroves and encouraged trade by caravan to Senegal and Shingit in one direction and to Morocco on the other. He chose Smāra as his permanent abode and later built a ṣaḥba for himself there in the Moroccan style on the Wādī Tarāṣī. Like the majority of religious leaders of the Saharan countries of North Africa, he practiced commerce, politics and the proselytising activities of a marabout and was not long in gathering round him a considerable number of followers who became widely known throughout Morocco by their nickname of “blue men.” In an account of their costume, consisting of a jallaba of khunut (a cotton stuff from Guinea), a turban and a burnous, all blue in colour. They were also called Ānīya, from the name of their master, and al-Šingiti (Shawāṭī), “the men of Shingit.”

Mā’ al-A’ainain very soon entered into regular relations with the Sulṭāns of Morocco. He had already made a sojourn in the country on his journey to the holy places of Islam, in the reign of Mawlāy ʿAbd al-Raʾyām b. Ḥishām [q.v.] (1238-1276 = 1822-1859). Later and especially in the reign of Mawlāy al-Ḥasan [q.v.] (1290-1311 = 1873-1894) he traveled regularly to Marrāḵūsh and to Fās and was welcomed by the Sulṭān, whom he supplied with slaves (in which he also dealt). When the young Mawlāy ʿAbd al-ʿAzīz [q.v.] ascended the throne in 1311 (1894), he sent him his homage and went to visit him in 1896 in Marrāḵūsh. The Sulṭān gave him a gift in his southern capital of a site for a zāvitā of his order and he hired him a steamer to take him with his suite from the Moroccan port of Mogador to that of Tarāṣī, the natural harbour of the Rio de Oro for his capital Smāra. This little port henceforth became of some importance: German ships, Greek and Spanish sailing-vessels disembarked there merchandise from Morocco and considerable cargoes of arms and ammunition, all consigned to the agitator to enable him to supply.
his followers and arm the Moorish tribes to enable them to fight French expansion beyond the frontiers of Senegal. For several years Māʿ al-ʿAinain was able to maintain in all the vast area under his influence an atmosphere hostile to French penetration into Mauritania. He was largely the instigator of the anti-French outbursts, which after the assassination on May 12, 1905, near Tidjikjda, of the explorer Xavier Coppolani decided France to occupy Tagant in 1906.

After these happenings, Māʿ al-ʿAinain, having assembled the chiefs of the great Moorish tribes who were in alliance with him, took them to Fas to demand the alliance and assistance of Morocco against France in Mauritania. He was favourably received by Mawlay ʿAbd al-ʿAziz and succeeded in getting a cousin of the Sultan, Mawlay Idris, sent to al-Adrār as representative of the magāzīn. At the same time Māʿ al-ʿAinain was authorised to install himself in the Moroccan ṭūbā of Tinżit, to summon to the holy war and to rally around him all the warriors of the Sahara from al-Sūs to the region of Sākiyat al-Ḥamrāʾ. The hopes that Mawlay ʿAbd al-ʿAziz had based on the plans of Māʿ al-ʿAinain were soon disappointed. After the occupation of Ujda and the destruction of Shāwiyah by the French he had to disown Māʿ al-ʿAinain. The latter had no longer a chance even in his own country, where a fatal blow was struck at his power as a result of the al-Adrār expedition in the course of which French troops led by Colonel Gouraud completely scattered his forces. Māʿ al-ʿAinain had however not lost all hope of regaining his former influence in his old territory. He aimed even higher, when in May 1910 he did not hesitate to proclaim himself Sultan and to attempt the conquest of Morocco, which he thought had been sold to the infidels by the ʿAlawī sovereigns.

Having united around him all the tribes of the Anti-Atlas and of al-Sūs as well as his own followers, he reached Marrākṣūs and from this town tried to take Fas by surprise, taking the road through the Central Atlas. But he was checked in his advance near Tādīs [q.v.] by a column under General Moinier which routed him completely on June 23, 1910. He just managed to escape and reach al-Sūs where he was abandoned by all his followers and had to sell his slaves and flocks in order to live. He retired to the ḏāra of Tinzn, where he died on 17th Shawwāl 1328 (Oct. 28, 1910).

Two years later, the son of Māʿ al-ʿAinain, Ahmad al-Ḥibat, in his turn attempted to proclaim himself Sultan. Proclaiming himself the Mahdi, he set out from Tinzn and entered Marrākṣūs on Aug. 18, 1912, where he had himself proclaimed, while his troops put the city to fire and sword. But on Aug. 29, al-Ḥibat was defeated at Benguerir by Colonel Mangin, who after a second encounter at Sidi Bu ʿTāhān entered Marrākṣūs on Sept. 7 following.

Māʿ al-ʿAinain, who had very many open or secret followers in Morocco has left in the country the reputation of a true ascetic and a great doctor in Islam. *The hair shaved, the face veiled, all dressed in white, he only appeared in public on Fridays to go to the mosque. Māʿ al-ʿAinain led an austere life, lived exclusively on milk, dates, and mutton. A well read man, he composed many pious works, books on theology, mystic Sūfism, astronomy, astrology, books full of contemplative reveries, on theological and dogmatic controversies, on metaphysical theories, and of magical formulae to acquire riches and power by occult means. Like his father and his brother, he loved to spread among his disciples a reputation as a worker of wonders and a thaumaturgist. These magical practices much increased his prestige in Seguëit (al-Sākiyah al-Ḥamrāʾ) and in Morocco (E. Richet, La Mauritaie, Paris 1920, p. 126–127).

A short monograph was devoted to Māʿ al-ʿAinain by his son Muhammad Taḥy al-ʿĀmil entitled: Mafʿūdāt al-muṣākāt bi-ṣalātun Māʿ al-ʿAinain, printed al-fawārid, Fas 1316. A notice of him is also given in the Wāṣirat of Ahmad al-Shingīti, p. 360–362.
MA’ADD, a collective name for certain Arab tribes, in the traditional usage for those of North Arabian origin (Mudar and Rab’i) in contrast to the Yemeni tribes. This contrast said to be inherent in the name Ma’add seems already to be found frequently in the early poets, always presuming the genuineness of the passages in question. Thus in a verse of Idris b. ‘Kais (Alwardī, No. 41, l. 5) the term Ma’add is used apparently in the sense of excluding the Ḥabd, Ṭayi and Kinda, and in Nashiha (Alwardī, No. 18, l. 1, 2), the Ghassān. Tradition also records fighting between Ma’add and Yemen in the pre-Muhammadan period (cf. ‘Yākūt, ii. 434; Ibn Badrān, p. 144). At a later period the genealogical term Ma’add is even more sharply contrasted with South Arabia, when the term Mu’rid and South Arabs had become the dividing political element in the fighting of the Ommiyad and ‘Abbasid period (passages quoted in Goldziher, see below Bifl).

The fact that the name Banū is not found combined with Ma’add as well as the form of the word itself suggests that Ma’add may originally have been of similar foundation and meaning to Ma’bar, a general name for “people”, body of people. Ibn Daurād (Iṣṭifāṣ, p. 20) long ago suggested the derivation from the root ṣad. “To count, number” not however without adding other very different attempts to interpret it. The usual genealogical scheme of Arab tradition has inserted it the name Ma’add as the name of an ancestor of an eponymous series, namely a son of the traditional founder ‘Anas. Ma’add is brought into connection with the history of Mecca by the legend that he married ‘Ummā, a daughter of the Ḥafīrūmīts. From this marriage were born ‘Nai’ū, father of the tribal eponym Mu’ād, Rab’ū and ‘Ayyād. According to Abu ʿAlī Fābū, Hist, Ante-Islāmica, ed. Fleischer, p. 72 Ma’add is even said to have been a contemporary of Nebuchadnezzar.

MA’ARRAT MASRIN or MISRIN, capital of a nāḥiyā of Ḥalab. The name is also written Ma’arrat Naṣrān which has been wrongly taken as an abbreviation of Ma’arrat Kinnarīn (Le Strange, Palestine under the Moslems, p. 497). In Syriac manuscripts of the eighth century, the town is called Ma’arrat Mesqīn (Wright, Catalogue of the Syriac MSS. in the Fort. Mus., p. 454); dated 745 with Agnāni. Lewis & Hazzard, in Gesta Pontificum Orientis, London 1910: a palimpsest under a collection of biographies of holy women, written by a monk of Mar Mattai Monastery of Bēth Mārī Kānān, a monastery of the town of Ma’arrat-Mesqīn in the Kūra of Antioch-a.

In the year 16, Abu ʿUbayd defeated a large Greek army which had assembled between Ḥalab and Ma’arrat Masrīn and then took this town, which capitulated under conditions similar to Ḥalab (al-Baladhurī, Futuḥ, ed. de Goeje, p. 149). In the reign of the Caliph Mutawakkil, ‘Amr b. Hāwbar, a native of Ma’arrat al-Buraydā (cf. Ṣafw, Musārīṭ, p. 400) near Ma’arrat al-Nū’mān, was governor of the town; Kamāl al-Din (Freytag, Selecta ex Historia Halābī, Paris 1859, text p. 24; transl. p. 18) quotes the beginning of a lampoon composed by him on the town, and how it was taken by ‘Ubayd b. Djiyād (d. 231). Nicephorus Phocas took the town in 537 (568) and deported its 1,200 inhabitants to Bilād al-Rūm (Kamāl al-Din in Freytag, Z. D. M. G., xi. 228). After the truce of Sāfār 359 (966–970) between the Greeks and Kāhrīya, the town passed to the territory of the latter (op. cit., p. 232). In 415 (1024) the Kilābi leader ʿAlī b. Mīrād on his march against Ḥalab sent his follower Abū Ṣafwūr Sulaymān b. Ṣaww against Ma’arrat Masrīn; the latter took the town and made it a governor prison (J. J. Müller, Historia Monodiaramum, Bonn 1829, p. 14; Rosen, Zapiski Akad. Nauk., xlv. 578). Shortly before the death of Ẓāhiḥ (545), the Byzantines took the town. The town passed between Nāṣir and South Arabs had become the dividing political element in the fighting of the Ommiyad and ‘Abbasid period (passages quoted in Goldziher, see below Bifl).

The fact that the name Banū is not found combined with Ma’add as well as the form of the word itself suggests that Ma’add may originally have been of similar foundation and meaning to Ma’bar, a general name for “people”, body of people. Ibn Daurād (Iṣṭifāṣ, p. 20) long ago suggested the derivation from the root ṣad. “To count, number” not however without adding other very different attempts to interpret it. The usual genealogical scheme of Arab tradition has inserted it the name Ma’add as the name of an ancestor of an eponymous series, namely a son of the traditional founder ‘Anas. Ma’add is brought into connection with the history of Mecca by the legend that he married ‘Ummā, a daughter of the Ḥafīrūmīts. From this marriage were born ‘Nai’ū, father of the tribal eponym Mu’ād, Rab’ū and ‘Ayyād. According to Abu ʿAlī Fābū, Hist, Ante-Islāmica, ed. Fleischer, p. 72 Ma’add is even said to have been a contemporary of Nebuchadnezzar.

Bibliography: Tabāri, i. 671 sqq.; Maḥdī (Pseudo-Balakī), ed. Huart, iv. 101 ff. On the origin and history of the feuds between the North and South Arabs cf. Golzheher, Muḥammadanische Studien, i 78 sqq.; on the genealogy, ibid., p. 179. (11 H. BRAT)

The town has not been much visited by modern travellers. Jullien describes Ma'arrat Maṣfīn as a large village, lying among sesame fields and olive trees in a rich plain. Garrett is enthusiastic about the fertility of the region and criticises the field systems: he considers the olive trees of the community generally as unhealthy, fig trees are numerous and roses growing by the roadside*. In modern times the name of the town is often written Ma'arrat al-Muṣfīn (with the article) e.g. by J. B. L. J. Rousseau (*Description du Fuḥailik de Halah*, in Fundgruben des Orientes, Vienna 1814, iv. p. 11), Ritter (*Erkundungen*, xvi., p. 1576), Garrett (*Publications of an American Archæal. Expedition to Syria*, New York 1914, part i., p. 119) etc.

Not to be confused with our town is Ma'arrat al-Khawān (also called Ma'arrat al-Akhwān) east of it, sometimes called simply Maṣfīn, e.g. by Seiff (Zeitschr. f. Erdk., 1873, viii., p. 24; Maarrat, al-Dīn, ed. 1909, p. 193), and it is accepted to give this name to Ma'arrat Maṣfīn*. The site of a castle still bears the name Kal'at al-Muṣfīn (see below). We have much earlier evidence from another older name, Ma'arrat al-Yūnis (al-Kalālīh, ed. de Goeje, p. 149; Abu ʿl-Fidāʾ, *Annales Musulmānici*, ed. Reiske, i., Copenhagen 1789, p. 226 etc.). The district of this town originally formed an iliūm (ilīmus) of the jdūd of Ḥim, (whence Hīm, al-Khurāshī, B. G. A., vii. 75; cf. also — but this is an anachronism, — al-Kalḵšāndī, ṣāhib al-ṣafī, iv. 142, transl. Gaudefoy-Demounyès, *La Syrie*, p. 109) the Hīm gate (see below), probably also a memory of this. It was only from the time of Ḥīnān al-Rūdī that the town belonged to the jdūd of Kinnariān, the capital of which at a later date was Ḥalāh (Le Strange, *Palestine under the Moslems*, p. 36, 39).

As early as 276 (891—92) we find Yaḵūṭī giving the Banū Tanbīḥ as the inhabitants of the town. The district around it was one of the parts of Syria most strongly settled by Maronites (al-Maṣfīn, Khalīf, *al-Tanbīḥ*, ed. de Goeje, p. 133). As there was no running water near the town, its inhabitants had to collect rain-water in cisterns. But the country around was rich in olive, fig, pistachio and almond trees; wine was also made here as in the ancient Ḥaram. According to Ibn Ḥuṣayn the orchards stretched for nearly two days' journey (in the town and formed one of the richest and most fertile areas in the world. South of Ma'arrat al-Maṣfīn, just beside the town wall was, according to local tradition, the tomb of ʿosmān son of Ṣūḥ; but Yaḵūṭī says his grave was really at Nahābū (cf. Goldziher, *Muhammadiene Traditionen über den Grabeigentum der Joum*, in *Z. D. I.*, i., 13—17). The Dājam Nāla Yaḵūṭī in Ma'arrat al-Maṣfīn still bears the name of ʿosmān and has an inscription dated 604 (1207—1208) (Von der Hellen, *Voyage en Syrie*, p. 202, note 4).

When Abu ʿl-ʿUṣair came to Ma'arrat Ḥim, in the year 16 (637), the people came out to welcome him and promised to pay his demands and built al-Kalālīh, ed. de Goeje, p. 131; Caetani, *Annales dell'Islam*, iii., p. 794 § 284). The Caliph ʿUmar II was buried in 101 in the monastery of Simeon (*Dair Sīmān*) at al-Nāṣr (al-Maṣfīn) not far from Ma'arrat al-Maṣfīn (Hömgärm, Z.S., i., 1922, p. 17; Dussaud, *Topographie historique de

---

**MA'ARRAT AL-NU'MĀN**

Ma'arrat al-Nu'mān, in northern Syria, often called simply al-Maʿarrā. It is celebrated as the birthplace of the poet Abu ʿl-ʿAlāʾ Ahmad al-Maʿarrā, [q.v.]. According to al-Samʿānī (Kitāb al-Anbāʾ), reproduced by D. S. Margoliouth, *G. M. S.*, xx., 1912, fol. 536, i., the name from the place-name was Maʿarrāni to distinguish it from that of Ma'arrat Naṣīr, Maṣfīn. The town probably lay on the site of the ancient Arra which is called Ḫāyya ʿAbī Ḫāyya in an inscription. Yaḵūṭī says that Ma'arrat al-Nu'mān was an old town in ruins. Naṣīr-i Khusraw in 438 (1047) found in the town wall a stone column with an inscription in some language not Arabic and Ibn al-Shihna also talks of old pillars being dug up in the town. Van Berchem notes the remains of a Greek inscription in the Madrasa (*Yayaz*, p. 203, note 1).

The town received its new epithet, to distinguish it from the numerous other Syrian towns of the same name, from the Companion of the Prophet, al-Nu'mān b. Basḥi, who was governor of this district under Maʿārṣiya and whose son died there. According to another tradition it is called after al-Nu'mān b. ʿAbd al-Sāliḥ of the tribe of Tanbīḥ. An earlier name of the town according to Ibn Battūta and Khalīf al-Zahiri (ed. Ravalesi, p. 49) was Dīkīt al-Kuṭbīr, according to al-Dimashqī Dīkīt al-Kurāshī; al-Ḥubrīn and Ibn al-Shihna (see below). But ʿAbd al-Sāliḥ, the owner of the land, to whom the town belonged, was not given as a birthplace of Tanbīḥ.
la Syrie, Paris 1927, p. 184), 'Abdallah b. Tahir, appointed by the Caliph al-Ma'mūn in 207 as successor of his father in the governorship of Syria, destroyed the fortifications of Ma'arrat al-Nu'mān, while fighting against Naṣr b. Shabīth and many small towns like Ḥisn al-Kafr and Ḥisn Hunāk (Kamāl al-Dīn in Freytag, Selecta ex historia Helvī, Paris 1819, p. 20). In 290 the Karmania were subjected by ʿAbd al-Karīm, ravaged the country round Ma'arrat al-Nu'mān, Ḥisn, Ḥumā, and Salamīyya, slew many inhabitants of these towns and carried off the women and children into captivity. The Banū Kilāb in 325 (936–937) entered Syria from al-Najdī and advanced on Ma'arrat al-Nu'mān. The commander there, Mu'ād b. Sa'd, went out to al-Burāghūlī (site unknown) to meet them but was captured there with the greater part of his army, and only later released by the Kilābī Abu ʿl-Abbās ʿAbdallāh b. Sa'd, governor of Ḥalab. The latter and the Kilābī Yānis in 332 were driven from Ḥalab by al-Ḥusayn b. ʿAbī Ḥamīda, Saif al-Dawla's uncle and pursued beyond Ma'arrat al-Nu'mān as far as Ḥisn al-Kufr, whereupon Governor the Franks, who were victorious against Saif al-Dawla as far as Ma'arrat al-Nu'mān, which he took. Mu'ād b. Sa'd whom Kībhī had already installed there as governor was slain in battle at Kinnārīn by Saif al-Dawla. In 357 (968) the emperor Nicephoros Phocas took the town and destroyed its chief mosque and most of the walls. When Karghūyya seized ʿAleppo, Zuhair the governor of Ma'arrat al-Nu'mān joined the Ḥamdūddī Sa'd al-Dawla (355) and set out with him from Manbāq against ʿAleppo; it was only when the Greek Turbasi brought help to Karghūyya that the pair retired to al-Khunṣūr and Ma'arrat al-Nu'mān. In the treaty between Nicephoros and Karghūyya (Safr 359) Ma'arrat al-Nu'mān was promised to the latter. Sa'd al-Dawla held out in it for three years. Bakdūr had depo-ed and imprisoned Karghūyya in ʿAleppo and made himself sole ruler (364 = 975). Sa'd al-Dawla set out from Ḥisn against him and with the Banū Kilāb whom he had won over to his side by promising them lands at Ḥisn be-seged Zuhair, who was an ally of Bakdūr, in Ma'arrat al-Nu'mān. He forced his way with his followers into the town through the Ḥunāk gate; when they were repulsed, they burned the Ḥisn gate. Zuhair thereupon surrendered and was executed in the citadel of Ḥamā; the citadel of Ma'arrat al-Nu'mān was plundered by the conqueror. When Rammūsā, a Mamluk of Saif al-Dawla ("al-Safr") rebelled in 396 in Ma'arrat al-Nu'mān against Sa'd al-Dawla, the latter with Luʿlu' went to besiege the town but retired to Ḥalab on the approach of Bandjutakin (Freytag, Locomotivrail, p. 45, l. 6); Luʿlu' who had seized the power in Ḥalab in 392, next year had Kafr Ṭūna in the district of Ma'arrat al-Nu'mān and the fortress in the ʿArāḍ (the two districts of al-Rūḏj, cf. Rosen, Zap. Imp. Akad. Nauk, xlv., p. 237, note 200) destroyed to prevent them falling into the hands of his enemies. When the Ḥamādīyya and al-Dawla al-ʿAbbāsī were in 434 (1045) again against the Mamlūk Muʿizz al-Dawla Thīmāl, he occupied Ma'arrat al-Nu'mān. In 452 on his campaign against his nephew Maḥmūd, Thīmāl spent eight days in the town; the inhabitants suffered severely as the Arabs on account of the severe winter were billeted in the houses and did much damage there. Maḥmūd after occupying Ḥalab in 457 allotted Ma'arrat al-Nu'mān to the Turk chief Ḥarīn; on Shāwāl 17, 458, the latter entered the town with Turks, Dailmīs, Kurds, and men of the tribe of al-ʿAwādī, about 1000 fighting men besides camp-followers. They pitched their camp before the gate at which public prayers were said. Although excellent discipline prevailed among them and no one injured the olive-trees and vineyards or even took water for it, the inhabitants breathed more freely when they left the town again to assist Maḥmūd on his campaign against the Kilābīs. In 462 Turks in large numbers came out of Byzantine territory against Ḥalab, went via Ṭūrūk to al-Dijar, Ma'arrat al-Nu'mān, Kafarṭab, Ḥamā, Ḥisn and Rakanīyya, and laid Syria waste in dreadful fashion. The Turk Tutuş in 472 undertook a campaign from Damascus against the north of Syria; he burned the region of Ḥaḍāl al-Summāk and Ḥaḍāl ʿAbdallāh ʿUmar. Extorted enormous sums from the people of Sarmin and Ma'arrat al-Nu'mān and plundered the country east of Ma'arrat al-Nu'mān; he laid siege to Djabal al-ʿAbbāsī, burned Ma'arrat Ratarīya (the ancient Maṣrāzīgūn) in the district of Kafarṭab. His son Rūmān in 488 gave the town of Ma'arrat al-Nu'mān with its lands to Suṭḥān b. Ṭūrūk. Soon after the taking of Anṭākiyya (491) the Franks advanced on our town, supported by the people of Tall Mannas, and all the Christians in Ma'arrat al-Nu'mān itself but they were defeated between these two towns. In the beginning of 492 they again besieged the town with a large army (then an urbis munitissima, Will of Tyre, vii. 9) and took it, killing almost the whole population, 20,000 men, women and children (Hist. or. des. Croisades, iii. 482 sq.). Ma'arrat al-Nu'mān was, like Jerusalem in the same year, completely sacked and the walls and mosque destroyed. During the siege the Franks had destroyed all the gardens round the town and the Kilābīs, who had come to the help of Rūmān consumed all the supplies of the district so that the country was completely starved. In 496 Rūmān reconquered the lost fortresses. At the end of 514, he concluded a treaty with the Franks by which the latter were allotted Ma'arrat al-Nu'mān, Kafarṭab, al-Ṭāra and and a part of Ḥaḍāl al-Summāk etc. In 531 (1137) the Atābeg Zangi regained Ma'arrat al-Nu'mān. When the inhabitants asked to have restored to them the estates of which the Franks had deprived them, he demanded the original charters of ownership from them but they had been destroyed. He therefore had search made in the books of the office of the financial department of Ḥalab (Dafātir Dirāsān Ḥalab) and found from the old payments of khurādīyāt what families had owned property and restored them (Ibn al-Athir, ed. Tornberg, xi. 34 = Hist. or. des. Crois., i. 423; Abu ʿl-Fida', Annales Moslem, ed. Reiske, iii. 470; v. 274). Zangi razed the walls. While King Folco of Jerusalem was putting down a rising in Antākiyya, Turkoman tribes entered the district of Ma'arrat al-Nu'mān and Kafarṭab but were driven out again by the Franks who thereupon conquered Kībhī b. Muʿizz al-Dawla Thīmāl, Hist. Or. des. Crois., i. 667, where our town is meant by al-Maʿarr, not Maʿarrat Maṣrīn as Robricht, Gesch. d. Konigs. Jerusalem, p. 107 assumes). The Byzantine emperor John II Comnenos in 532 (1138) invaded the district of Maʿarrat al-

Ṣalāḥ al-Dīn in 584 (1188) went from Halab to Maʿarrat al-Numān from which he made pilgrimage to the Shāiḫ Abū Zakariyāʾ al-Makhrūbi who lived at the tomb of the Caliph ʿUmar. Towards the end of the reign of Ṣalāḥ al-Dīn (c. 1191) the town formed part of the Syrian possessions of Taḥk al-Dīn (Hist. Or. d. Crois., v. 14). Maʿarrat al-Numān is several times mentioned in the wars between Ṣalāḥ al-Dīn's sons. About 589 it belonged to al-Malik al-Muṣaffār b. Ṣalāḥ al-Dīn ʿUmar. Later we find its possession alternating between Ḥamā and Halab. An old Shāfīʾ madrasa was built, according to the inscription on its gateway, in the reign of the Ayyūbīd Sūluṭ of Ḥamā, al-Malik al-Manṣūr Muḥammad ʿI (plan in Creswell, R. I. F. A. O., xxi. 13); it is by the same architect as the lovely square minaret of the great mosque. Ibn al-Muʿṣaddam in 596 (1159) owned the towns of Fāmīyā, Kafrāṭāb and 25 estates in the district of Maʿarrat al-Numān. In 597 the town was sacked by Sūluṭ al-Malik al-Zāhīr Ghāzī al-Halab and seems to have belonged to him for a period. An inscription dated 604 (1207–1208) still bears his name. Al-Malik al-ʿĀṭil in 598 went from Damascus via Ḥamā to Tall Ṣafīrūn where al-Malik al-Manṣūr of Ḥamā joined him. His opponent al-Malik al-Zāhīr of Halab concluded a treaty with him by which he was to cede Kaʿb al-ʿAlāʾid to Afdāl and the part of Maʿarrat al-Numān which he held to al-Malik al-Manṣūr. About 619 and 620 the town belonged to the lord of Ḥamā, al-Malik al-Naṣīr; it then passed temporarily to al-Malik al-Manṣūr ʿĪsā of Damascus who placed a governor in it. (Kamāl al-Dīn, transl. Blochet, R. O. L., v. 65; Maḳrizī and Ibn ʿAwīlī, R. O. L., ix. 497 sqq.; Abu ʿl-Fidāʾī, Annāl. Mālīk, ed. Reiske, iv. 312). During this fighting the lands of Maʿarrat al-Numān and Ḥamā were ravaged by a horde of Arabs under Mānī (R. O. L., v. 68). On the advice of Saʿīd al-Dīn b. ʿAbd al-Qodūr, the Kopānī of Halab, Shāh al-Manṣūr (the same man) of Ḥamā in 611 (1213–1214) had the citadel of Maʿarrat al-Numān rebuilt, but by 615 al-Malik al-Naṣīr of Halab seized the town again and after a brief siege the citadel also. The news of its fall was brought to Halab by a carrier-pigeon (R. O. L., v. 100, 105; Abu ʿl-Fidāʾī, op. cit., v. 404, 452, 596). The Khwārizmīs, routed by ʿCingī Kān, entered Syria over the Furāṭ and advanced via al-Dābībūl, Tall Aʿzār and Sarmin to Maʿarrat al-Numān which then belonged to Halab. The geographer al-Dimāshḳī also reckons the town to Halab. After the victory of Balbars over the Tatars at Aʿīn Dīlūt where the Mongol general Khtobūga Ṣūluṭ had been left behind in Syria by Hilāḡū fell, Khosrawshāh the Tatar lord of Ḥamā left Syria. Ṣūluṭ Ḥusayn thereupon restored this town along with Bārin and Maʿarrat al-Numān, which had belonged for 23 years to Halab in 658 (1259) again to its original owner al-Malik al-Manṣūr of Ḥamā.

Henceforth with slight interruptions Maʿarrat al-Numān was in the possession of the lords of Ḥamā. In the years 710 (1310) the Sūluṭ granted Bārin and our town to Abu ʿl-Fidāʾī as a fief but he had to return them to Halab by 713 (1313) as the conditions of ownership had become ex-

 extraordinarily obscure on account of the frequent changes in the land-books and repeated grants by the Sūluṭ (Abu ʿl-Fidāʾī, Annāl. Mālīk, v. 274). A journey by the prince to Egypt in 716 resulted in the restoration of the town and citadel to him and a charter of presentation was prepared (op. cit., v. 302, 304). Abu ʿl-Fidāʾī quotes a portion of a poem which the Almohad secretary (faith of ʿīnād) Shāhīd al-Dīn Mahīmūn composed on the event (op. cit., v. 306). But by the end of the same year he had again to cede the town to Muḥammad b. ʿĪsā (op. cit., v. 310).

The district of Ḥamā was confiscated in 742 and placed under the Egyptian governor as a separate province (Qamīṣ); henceforth Maʿarrat al-Numān formed a wilayet of this province (al-Kākhashandi in Gaudefoy-Demombynes, La Sirène à l'époque des Mamelouks, p. 233). In the Mamlık period the town had seven gates (according to the al-Rawd al-Maṣʾūr fi aḥādīth al-Maṣʾūr, quoted in al-Kākhashandi, Cairo, iv. 142): the Halab gate, the great gate, that of Shīḥ, called after the adjoining tomb of Seth, the garden gate, the Ḥim Gate and the like gate (kaftāh probably a double gate of Ḥimnā). Maʿarrat al-Numān was a station of the Egyptian pigeon-post (al-ʾumarāʾ Tāʾifī, transl. R. Hartmann, Z. D. M. G., lxx. 501; al-Kākhashandi, iv. 393).

After the battle of Marj Dīlīk in 922 (1516) the town passed to the Ottomans. De la Vallé a century later found here (1616) a native chief under Turkish vassalry and the Agha who lived there in Poecoeke's time while paying tribute to the Porte retained complete independence. Troilo found in the town "zwey schone Wirthes-Hausen, das eine war ziemlich bauvollig, das andere aber noch wohl zugerecht, umb und umb mit breiten langen bleyern Taffeln bedeckt". Seetzen describes Maʿarrat al-Numān as the most northerly place in the Pašhalik of Damaskus (Sōrya). Walpole was a guest of the muttaṣarīf of the town. The district of the town later became a każī of the Ḥirā of Halab. When Saḥau passed through it in 1879, a kānīmaḵām was living there. Along the frontier with Ḥamā Maʿarrat al-Numān was the most northern town in the territory under French mandate. According to Saḥau it has about 40 well built houses and with its well cared for gardens and fields looks a peaceful and prosperous country town, while van Berchem calls it a "large village of rather dismal appearance"; it lies in a monotonous but well tilled plain at the foot of the eastern edge of the plateau of the Djebel Ḥiḥā. In the north-west it is commanded by the high hill on which stand the ruins of the mediaeval citadel (on the map by R. Gazezt and F. A. North, in Smirni, Archæol. Exp. to Syria, i. 50 and Princeton Exp., Div. ii., Sect. B. part 3, Kaʿb al-Numān is wrongly placed north-east of the town, cf. however also van Berchem, Voyage, p. 202 and Eli Smith in Riter, Erit. xvii. 1067 and Sachau, Reise, p. 94). Among the architectural features of Maʿarrat al-Numān the most notable, next to the great mosque, is the already mentioned Shīḥī Madrasa (built in 595). A notable building of the Ottoman period is a large square caravanserai on the south side of which is a fine gateway with an inscription of 974 (1566–1567). Sykes was shown by the Kākhashandi as one of the sights of the place (the alleged) tomb of the poet Abu ʿl-ʿĀlāʾ.
MACASSAR, an important seaport on the island of Celebes, on the Bay of Macassar; it is the capital of the administrative district of "Celebes en Onderhoorigheden" and also of the division of it of the same name administered by an assistant-resident. By the native population the town has made very great

MACASSAR

MAC'BAD, Abū ʿAbbard Maḥād f. Wāhī, was one of the great singers and composers of the early Umayyad period. He belonged to Malūn and was a client of ʿAbd al-Rahmān b. Kāṭān (cf. Aghbānī, i. 19) of the house of Wāḥid b. the Bāb Makkāhī. He was a half-caste, his father being a negro. In his youth he was an accountant, but having taken music lessons from Śīh Kháthīr, Naṣḥī al-Farīsī and Qādimaî (q. v.) he adopted music as a profession and soon made a name for himself. During the reign of ʿAbd al-Malik (65–86 = 685–705) he carried off the prize at a tournament of song organised by Ibn Saftān at Makka. He sang at the courts of al-Walīd I (80–96 = 705–713), Yazīd II (101–105 = 720–724), and al-Walīd II (105–126 = 734–744), the second of these treating him with unheard of favour. On the death of Ibn Suraídī [q. v.] about the year 107 (726), Maḥād became the leading singer, and when al-Walīd II was called to the throne, Maḥād, although an old man, was invited to his court at Damascus. Here he was honourably treated and received a gift of 12,000 pieces of gold. Shortly afterwards he was again commanded to appear at court, but he was very ill when he arrived. Paralysis intervened, and although he was lodged in the palace itself, it had every possible attention, he died (125 = 743). At his funeral, the caliph and his brother al-Chams, walked in front of the bier, whilst the renowned songstress Sallāmā al-Kass, one of Maḥād's pupils, chanting one of his elegies.

Maḥād must undoubtedly be counted among the "four great singers" (Aghbānī, i. 98, 151; ii. 127) whatever opinions may be held as to the others. A poet of Malūn said: "Tuwais, and after him Ibn Suraídī, zelled my renown; the eminence belongs to Maḥād." ʿIsāk al-Mawsīlī (cf. ii. 439) said: "Maḥād was a consummate singer, and his compositions reveal a talent superior to all his rivals." Poets like al-Buhūtī [q. v.] and ʿAbd Tāmmān [q. v.] have shown the work of Maḥād in Arabiā musical history. Among the compositions of Maḥād his most famous were the seven known as the "Cities" (Mādīn) or "Fortresses" (Ḫubāfī), whilst five others were celebrated as the Maḥādīt. His fame was made by his adoption of a grandiose (ḵāmil ṭamm) style of composition in the rhythms (ḫābīl) called Ḫubīl or Ḫabhīl. Among his pupils were Ibn ʿĪsāhāk, Malik al-Taṭī [q. v.], Yūnūs al-Kāthīr [q. v.], Siyyāt, Sallāmā al-Kass and Habbābā.

AL-MARĪRĪ, ZAIN AL-DĪN ARabi, writes about the year 985 (1577) for Sulṭān ʿAli ʿAbbāsī of Bidjāpur (d. 987 = 1579) a brief history of the spread of Islam in Malabar, the coming of the Portuguese and their campaigns against the Muslims from 908 to 985 (1498–1578). The work is preserved in Brit. Mus. MS., No. 94, India Office No. 714 and 1044. 5 and in Morley, Catalogue of Historical MSS., No. 13 and is entitled Tāfăfīt al-Mughālibīn; extracts were given by John Briggs in Persica, History of the rise of the Mughal power in India, London 1829, in. 52 and 1829; it was translated by M. I. Rowlandson, Tāfīsīt al-Mughālibīn, an historical work in the Arabic language, London, Or. Transl. Fund 1833 and ed. by D. Lopez, Historia dos Portugueses no Malabar, por Zunzimun, manuscrito arabo do século XVI publicado e traduzido, Lisbon 1898. (C. Brockelmann)
progress in the last few years, is still often called by its original name of Ujung-pandang (Djum-pandang). The Dutch gave it the name Macassar from the kingdom of the same name. The heart of the Macassar country is the former principality of Tello, which was put under the direct rule of the Dutch East India government in 1811 and is a remnant of the once very powerful kingdom of Macassar. The area inhabited by the Macassars in the wider sense stretches over the whole southern part of the south-western peninsula of Celebes, as well as over the island of Saleic and several groups of island in the neighbourhood. The remainder of southern Celebes is inhabited by Buginese who are closely related to the Macassars and whose language, manners and customs are very similar.

The Macassars do not differ much in physical appearance from the Javanese; they are of above medium height and in general well built. Their mode of life, dress and dwellings are simple. The main industry is agriculture which is very successful on the generally fertile soil; in the plains rice grows, often on wet fields, in the mountains maize particularly, but also vegetables and leguminous plants and cocoa-nuts. The cattle-rearing is also not unimportant. The native industries which are carried on in the houses of natives are not on a very high level; the work of the gold and silver smiths is relatively good. An unfavorable verdict has often been passed on the character of the Macassars but this seems to be exaggerated; they find it difficult to adapt themselves to the life under the colonial régime and of the rest they are not difficult to govern. Among their vices are their fondness for dice and cock-fighting. Originally three classes were distinguished in Macassar society, the princes and nobles, the people, and the slaves. Slavery has now been abolished even in the districts under independent rule.

The population generally professes Islam and its laws are on the whole conscientiously observed and the Muslim principal feasts faithfullv celebrated. But one cannot of course say that Islam regulates the whole of their social and religious life. The customs which survive from an earlier period are very difficult to form an exact judgment of the ideas of Islam. In every village there is still to be found a little building which is used for the worship of the spirits of the animistic period (the chief of whom is Karang Lowe, i.e. the "great prince") and where heathen priests offer sacrifices. There can therefore be no question of fanaticism and the very simple mosques are in general in disrepair. The highest Muhammadan office is filled by the kuli, usually a man of princely descent, who used formerly to be appointed and dismissed by the king. He had control of all matters relating to worship and he also gave legal decisions in questions of inheritance and played an official part in marriages and divorces. There were lower officials under him who acted as preachers and preceptors, performed the offices of a sexton and gave elementary religious instruction. Their knowledge of Islam is usually very slight. The revenues of their clergy consists of the sakka (zakat), the pita (fitra) and of presents on all sorts of occasions at which they take part, and of a certain percentage (jyeke) on the division of inheritances. The sakka is irregularly and unsatisfactorily paid, the pita much better.

No particulars are known of the earlier history of Macassar and of the regions inhabited by the Macassars in general. In the middle of the sixteenth century they were under the rule of the Hindu-Javanese kingdom of Madjapahit. According to the native chronicles of the royal houses of Gowa and Tello, which, at least so far as the earliest period is concerned, were more or less originally consisted of an alliance of nine small districts each under a noble; after the government had passed into the hands of one man and the kingdom had expanded, to include for example the lands of what was later Tello, Gowa is said, after the death of the sixth king (at the same time the first whom the chronicles represent to us as an ordinary mortal), to have been divided between his two sons; the one became ruler of Gowa and the other of Tello. It is certain that, so far as our knowledge goes, there were always close relations between these two kingdoms and that there was a certain degree of unity about them; they were known together to Europeans as the "kingdom of the Macassars". About the year 1512 Malays from Sumatra were given permission to settle in Macassar and it was perhaps they who first brought Muslim ideas to South Celebes. When the Portuguese appeared there in the middle of the century, they found only a few foreigners there, who were Muslims; it was not till the beginning of the sixteenth century that the Macassars in general adopted this new religion. During the reign of Tunjilalu (1565-90), Bubulluh, king of Ternate, came to Macassar, concluded a treaty and at the same time attempted to introduce the Muslim religion into South Celebes. In 1603 Sultan 'Aliuddin and one of his brothers became converts to Islam, which thereupon spread rapidly over Gowa and Tello, chiefly through the influence of Kareang Motawaya, administrator of Gowa and prince of Tello. We find traditions about the first preaching of Islam in South Celebes, similar to those of other parts of the archipelago. They are particularly associated with a certain Dato-ri-Bandang, a Minangkabau peasant from Kottaengah, who is said to have landed about 1606 in Tello and to have preached the Muslim faith, at the same time attempting to introduce the Muslim religion into South Celebes. In 1603 Sultan 'Aliuddin and one of his brothers are said to have been his contemporaries Dato-ri-Tiro and Dato-Patimang. Their tombs are still much visited.

In the first half of the sixteenth century the kingdom of Macassar extended very much, so that it brought under its suzerainty almost the whole of Celebes, Buton, Flores, Sumbawa, Lombok and the east coast of Borneo. The Dutch East India Company, which had a good deal of trouble with the Macassars, did not succeed till 1627 in concluding a treaty with them which permitted freedom of trade but allowed them no permanent settlement. But as Macassar caused the Company further difficulties in the Moluccas, a war resulted in which the town was burned. By the peace concluded in 1660, the king lost a portion of his territory; the Portuguese were forbidden to remain in the kingdom while the Company were allowed to settle and trade freely in Macassar. Peace was again broken in 1665; the Admiral of the Dutch East India Company, Speedman, sailed with a large fleet to Celebes, destroyed the Macassar fleet and forced the king to sign a treaty of peace ("Bongaars Verdrag", 1667; confirmed in 1669), whereby
MACASSAR — MADAGASCAR

the suzerainty of Macassar over Celebes was finally destroyed. Even after this, the relations of the Company and the kingdom were not good. Telle was incor-

The island was called al-Komr by the Arabs, Bakini (lit.: where there are (ni) Buki) by the Bantus of the neighbouring East African coast and by certain Malagasy tribes. The Portuguese called it "Island of St. Laurence" because they discovered it on that saint's day, August 10, 1506, and finally it became known as Madagascar from Marco Polo's name for it. The orthography جبل القمر جبل al-Qamar, in which the Nile was

MACASSAR. With its area of 228,340 sq. m., Madagascar is the third largest island in the world after New Guinea (244,770 sq. m.) and Borneo (284,630 sq. m.). Its area is a little greater than that of France (207,000 sq. m.). Belgium (11,373) and Holland (12,740) combined. It is

The island called of "Kom" or "of the moon" is mentioned by all the Muslim geographers who deal with eastern Africa. We shall see below how and to what degree the name of this mountain is connected with that of Komar = Madagascar.

In my memoire entitled Le Kwa-Kum en les anciennes navigations interocéaniennes dans les Mers du Sud (J. A., 1919, vol. 13 and 14), I have endeavoured to trace the origin of the name Komar; the documents there utilised enable it to be con

The Chinese sources take us also to East Africa in which the Cu fan is of Cao Ju-ku (1252) reproducing word for word two passages of the Li shi tai tais of Cu-yu (178) locating a land of K'un-lun on the "land of the Zangs of K'un-lun", which is close to a large island (M=Madagascar) which is the regular home of the f'ei or rack of the Arabs, whose feathers are so large that they can be used for holding a half-mud of water. The old name of Madagascar has survived in modern geography in the name of the Comoro Islands, the little archipelago lying to the N.W. of the island. In his Exploración portuguesa de Madagascar en 1813 (Bol. Soc. Geogr. of Lisbon, 7th series, 1857, p. 331-356). Father Luis Mariano refers to the Malagasy's as Bikè (more correctly: Bikô), which is also found in later travellers. It is the name given by the Eastern Bantu to the large African island: Bikô, or with the addition of the locative suffix -ni: Bakini. Bikô is to be con

Musa mentioned the name De 39-
dom subjects phonetically vahvah, which is a plural Bantu form wafiki malagacised wa < Bantu plural form, waw euphonic intervocalic Malagasy k waka. This radical is identical with the reduplicated form used by the Arab geographers, tvahvak or tvhvak q v and phonetically equivalent to the fiki of the early travellers and the Eastern Bantu wa fiki, the Malagasies and Buki, Madagascar. This explanation seems preferable to that which I had proposed in 1904 in F. A., vol. ii., p. 496 sqq. I think we must agree that the Malag. vahlaka comes from wa fiki and recognise a Bantu substratum in the Malag. word.

The present name of Madagascar is given by Marco Polo in the form Madagasacar (cf. The Book of See Marco Polo, ed. Sir Henry Yule and Cordier, p. 411 sqq.). Yule long ago pointed out that Marco Polo had not visited Madagascar and only knew it by hearsay, and that the information he gave about it really related to the adjoining east coast of Africa. The origin of this name is as follows: As I think has already pointed out in studying once more this chapter of Marco Polo, Madagascar is undoubtably a slightly erroneous formation of the form Zangbar and should be corrected to Madagasbar, land of the Malagasies, just as Zangbar means land of Zang or of the Zangs (see citations from the Se Majestueux. Soc de Ling. de Paris, vol. xiii., 1905-1906: Trois etymologies malagacises, p. 418-422), where *zangbar should be corrected to *zangbar.

This correction is justified by the following facts: In the Travels already quoted, Father Luis Mariano mentions a kingdom of the S. E. of Madagascar which he calls Matarasi, Matarasi, Matarasi (or Matarasi). Three years later in 1616, Father D’Almeida, travelling in the same country also mentions a kingdom of Matarasi. Cauche in his Relation published in 1657 by Morikot (Relations et curiosités de l’ile de Madagascar et du Brésil, p. 10, 49, 99, 124, 127, 134), mentions a province called Madagascare by some and by others Malagasie, the inhabitants of which he calls Malagassie and Malagassies. He also uses the term Madagascaro, but with the wider sense of the whole island and its inhabitants. Placourt (Histoire de la grande ile de Madagasar, 1661, p. 1) says: ‘The island of Saint Lauren is called Madagascar by the Malagasy by the geographers, by the inhabitants Madrass, by Ptolemy Menuthias, by Thunny, Corsini... but its real name is Malagasie.’ Later writers are all more or less inspired by the work of Placourt and need not be discussed here. All these different readings go back to two forms: Malagasy and Malagasi which correspond exactly to two main categories of dialects those with dental d and those with liquid l. It is the latter form that came to prevail over the whole island, sometimes with the sibilant: Malagáisi. and sometimes with the palatal: Malagáii. Both are paroxynous. The modern vernacular frequently uses the abbreviated form gáii and even l. These facts seem to justify the explanation suggested over by the same Madagascar which we owe to Marco Polo.

The doubt, Malagáisi-Madragáisi, Malagáisi-Madragáisi is obscure. According to the morphology of the language it may represent a form *mala or *mada gáii which recalls nothing, whether we take the form with soft letters mada-gáii or that with hard noted by the Portuguese: mada-gáii. Nor do we know whether we have to deal with a western Indonesian root or a Bantu stem. In any case it is probable that we have to deal here with a foreign tribal name, the eastern or western origin of which can no longer be explained from an ancient or modern language.

In the Arab geographers the first detailed account of the island of Komr Madagascar is found in the Kitab Nuzhat al-Maghribi fi Khitair al-Zanj (1154) of al-Idrisi who included the large African island in the country of the Zangs. ‘The people of the island of Zalag = Sumatra’, he says, ‘in the seventh section of the first clime come to the country of the Zangs in large and small ships and use it as a centre for trading in their merchandise as they understand one another’s language’ (MS. 2221 of the Bibl. Nat. Paris, p. 206, l. 15). This passage is very important as it shows that in the xiii century, Madagascar, wrongly located in the country of the Zangs, had been long before colonised by immigrants from Sumatra who had introduced their language into the island and Malagasy was derived from it. In the eighth section of the same clime the island of Komr Madagascar is situated seven days’ sail from the Maldives. Its king lives in the town of Malay. This is an island four months’ journey in length. It begins near the Maldives and ends in the north opposite the islands of China. The geographer of Roger of Sicily, in whose map shows, has combined into one huge island Madagascar, Ceylon and a part of Sumatra. In the ninth section, we are told that the people of Komr and the merchants of the land of the Maharrada (= Sumatra) come to the inhabitants of the east coast of Africa and are welcomed by them and trade with them (cf. my Relations de Voyages, Index, s.v. Komr and Komor).

Yakut in his Mal’djam (completed in 1224) says simply (vol. iv., p. 174): ‘al-Komr is an island in the centre of the range of the Zangs, which contains no larger island than this. It contains a large number of towns and kingdoms. Each king makes war on the others. Amber and the leaf al-komari (sic) are found on its shores. This is a perfume; it is also called betel flower. Wax is also obtained from it’. The Kitab al-Maghribi of the same author contains identical information taken from the Mal’idjam (ed. Wustenfeld, 358) but the latter text has more correctly the leaf al-komari’.

Alu l-Hasan b. Sa’d b. Al-Maghribi, best known as Ibn Sa’d, was born in 1208 or 1214 near Granada and died at Damascus in 1274 or in Tunis in 1286. The Bibliotheque Nationale in Paris has a copy catalogued as Ms. n°. 2234, a treatise on general geography which runs from f. 1 to 117 and is entitled: ‘The book collected and epitomised by Ali b. Sa’d b. Al-Maghribi the Spaniard of the Book of the Geography of Ptolemy in seven climes; and he has added to it longitudes and latitudes from the book of Ibn Fathun’. This copy of the original manuscript is dated 714 (1314-1315) and belonged to the celebrated geographer Abu l-Fida. The text contains in a few lines information of the highest importance to the following effect: ‘The Komr who have given their name to the mountain of this name situated in eastern Africa are brothers of the Chinese. They originally lived with the Chinese in the eastern regions of the earth, i.e.

The Encyclopaedia of Islam III.

5
in the interior of the Asiatic continent. Discord having broken out between them, the latter drove the Komr to these islands. After a certain period of time, dissensions broke out among the Komr who had migrated into these islands, the king and his family migrated once more and went to the large island of Komr = Madagascar and the king settled in a town of the island, called Kominya. These Komr immigrants to the large island increased in numbers and spread through the different centres of the island; but new dissensions broke out and provoked a new exodus, and many of them went to settle in the south at the beginning of inhabited land along the mountain which bears their name" (cf. Relation des Voyages, n. 316 sq.). If we translate these successive migrations into terms of modern geography, we get the following: The Komr, related to the Chinese, originally inhabited Central Asia, migrated from the interior of the continent where they were neighbours of the Chinese to the adjoining lands = Indo-China, Malay Peninsula and Indonesia. In the 13th century (cf. Ibn Majid in his Kitab al-Fawaid) they migrated from Indo-China to the coast of Malaya-Lancipot India. There followed several centuries in which the Komr were neighbors of the Chinese in the Malay Peninsula and Indonesia and from there to the land of the mountain of Komr, the famous mountain in which the Nile was thought to rise = East Africa.

The Komr from Central Asia to the sea-coasts of India-Lancipot India certainly took place long before our era. Several centuries must have passed between the departure of the emigrants from the plateau of Eastern Tibet, their expansion in the region of the coast, from Burma to Indo-China and their crossing to Indonesia. Ibn Sa'd lived in the 8th century. How then could he have known of events that took place several millennia before his time and are not recorded elsewhere? Neither the history nor legends of the Komr show anything of such happenings. The Indians, Sumatrans, and Indonesiologists whom I have consulted cannot think of any text or inscription directly or indirectly referring to them. I am surprised at such a question being raised by a comparatively late Arabic text and I know no satisfactory answer. I was prepared by my studies on Madagascar to accept Ibn Sa'd's statement that the large African island was colonised by Sumatrans whose ancestors had come from the Asiatic continent; this is exactly what Ibn Sa'd tells us. The agreement between the Arabic text and historical events is striking; but this undeniable agreement is unexpected for we do not know as well as we ought how and when such information could have been obtained in the 8th century. I put forward the hypothesis (Körte & von Garath, 1920) that Ibn Sa'd might have got the information at the court of Bulgar where he spent some time in the 9th century. But we know from his biographers that the Arab traveller lived in Bagdad, studying astronomy at the 36 latitudes of that city and making extracts from the scripts. He may have found in these works the statements he has fortunately preserved for us.

A contemporary of Ibn Sa'd, Lamin or Nadjin al-Din Abu 'l-Fath Yusuf b. Ya'qub b. Muhammad, better known as Ibn al-Mu'tadmir al-Shahabi of Damascus, prepared his Tarikh al-Mustawfiir (Cod. al-Mustawfiir) in 1250 (MS. 6021 of the Bibl. Nat. in Paris). In the 25 folios devoted to the history of 'Aden, 72 a. 3 deals with the voyages of the Komr from their original home to 'Aden and notably in 626 (1228) from Madagascar to the African coast and to 'Aden (cf. J. A., vol. 13, 1919, p. 469-485).

The following geographers: Shams al-Din Abu 'Abdallah Sufi al-Damashki (d. 1325), Abu 'l-Abbas Ahmad al-Nawai (d. 1325), Abu 'l-Fidr (1273-1313), Ibn Khalidin (d. 1375), Malrizi (1365-1442) tell us nothing particular about the island of Komr. The towns, which some of them locate in the great African island, are really in Ceylon or farther east or cannot be identified (cf. Relations des Voyages, index, s. v. Komor and Komur).

In the 8th century Ibn Majid (cf. Shihab Al-Din Ahmad b. Majid) in his Kitab al-Fawaid (cf. my Instructions nautiques et routières arabes et portugais, fol. 68b) mentions the island of Komr among the ten large islands of the world and mentions it after the Arabian peninsula: "The island which is the second in size", he says, "is the island of Komr. It is now an island (sic). The information I have collected orally does not agree about its length or breadth for it is quite apart from the world and the inhabited climates of the earth. This is why there is doubt on the subject. In the large books on geography it is said to be the largest of the inhabited islands. Between it and the land of Sofala and the islands dependent on it (= the Mozambique Channel) there are islands and reefs. In spite of this sailors are able to pass among the islands and reefs. The island of Komr takes its name from that of Kerman, son of 'Amar son of Shem son of Noah. To the south it has the sea which the Greeks called Oliviandos, this is the ocean surrounding the world (al-Masir in Arabic). It is the beginning of the southern darkness, which is to the south of this island of Komr". Ibn Majid frequently mentions the island of Komr in his other Nautical Instructions and it undoubtedly is Madagascar.

With Salaiman al-Mahrni (cf. below) our information becomes more definite. In his al-Umdat al-mahritija in Chap. iv, dealing with the islands and sailing routes along their coasts (cf. Instructions nautiques et routières arabes et portugais, vol. II, p. 229), he says: "Let us begin with the island of Komr because it is a large island which stretches along the coast of Zang and Sofala. Its northern extremity is called Ras al-Mih = Amhur Cape); it lies in 1 16' of Nas = (21° 37' South; the true latitude is 17° 57'). Its southern extremity which is called Isfah (= Cape Sainte Marie) is in 3 16' of Nas = (21° 37' south; the true latitude is nearly 25° 38' according to some, in 1 16' of Nas = (24° 51' south) according to others. This latter latitude is the more accurate. There is a difference of opinion about the direction of the sea-routes along it coast because this island is remote from the inhabited earth. There are two opinions regarding the direction of the route along its east coast: according to some one should sail S.W. 4 W. according to others S.W. There is a third opinion that one should go W.S.W. from one end to the other of the island. This last view is that of the older sailing
masters. In my opinion, adds Sulaimān al-Mahri, it is possible that the route should be W.S.W., then S.W. ¼ W., then S.W., and in another direction still for two reasons: the first that it is a large island, that its coast is long and the route is also long. The second reason is that the directions given have not been verified on account of the fewness of the voyages made to this island and the insufficient nautical knowledge of those who have been there. Sailing-masters (mukallim) of Zang have told me that the route on the east coast from Rās al-Milha to the place where Naš is 8 ibha (\(= 13^\circ 30\)‘) south is to the south and from this place to the south end of the island is S.-\(\frac{1}{2}\)S.W. I have recorded that the route on its west coast from Rās al-Milha to the place where Naš is 8 ibha (\(= 13^\circ 30\)‘ S.) is to the south; and from this place to the south end of the island S.-\(\frac{1}{2}\)S.-W. On the west coast from Rās al-Milha to the place where Naš is 6 ibha (\(= 16^\circ 44\)‘), the coast is perfectly safe; from 6 ibha to its south end there is a rīkk ("bank" or "shallow") about 2 zūm (= 6 hours) sail or more in length to the neighbourhood of the coast. Between the island of Kūm and the coast (east coast of Africa) there are four large inhabited islands, near one another, to which the people of Zang go. The first of these islands is Anjouan (\(=\) Great Comoro). It is in 11 ibha \(\frac{1}{2}\) of Naš (\(= 9^\circ\) S. approx.); Monri, the capital of Anjouan, is in exactly 11° 40‘ South. Between it and the African coast it is 16 zūm (\(= 48\) hours) sailing. The second, Mũalũ (our Mohali), is in 11 ibha of Naš (\(= 8^\circ 37\)‘ S. true Lat. about 12° 20‘); the third Dumānī (capital of Anjouan) which is in 11 ibha of Naš (\(= 8^\circ 37\)‘ S. true Lat. 12° 15‘) is to the east of Mũalũ; the fourth Mawūṭ (our Mayotte) is in 10 ibha \(\frac{1}{2}\) of Naš (\(= 9^\circ 25\)‘ S., true Lat. 12° 46‘ 55‘). To the east of these islands lies a great reef of rocks, about 4 zūm (= 12 hours) sail, usually called Aīn al-Baḥr ("eye" or "source of the sea"). The harbours of the west coast of Kūm are Langānī (15° 17‘ S.), Saḥā (true Lat. approx. 13° 54‘) and Munsafīt (\(=\) the bay of Mahdazamba, whose whole west point is in approx. 15° 12‘ Lat.). Those of the west coast are Bendar Šiṃapī (in the same latitude as Langānī on the west coast), and Bimārīth (\(=\) Vohemar in 15° 21‘ 15‘). All these ports are dangerous (for ships) except Langānī. Known that between Rās al-Milha and the coast of Zang, there are 50 zūm (= 150 hours) sail; and 20 zūm (= 60 hours) to the east of Rās al-Milha there is an inhabited island called Munawwarā (one of the southern Maldives). To the southeast of the island of Kūm lie numerous islands called Tīrakahā (the Mascarene Islands); they are 12 zūm (= 36 hours) sail from the island of Kūm. In his Kitāb al-Minādāj al-fajhrī (f. 73b of the same MS.), Sulaimān al-Mahri gives another description of the island of Kūm which does not differ from that given above. Four pages earlier (f. 71) he mentions several other harbours of the island of Kūm with their latitude calculated from the altitude of the Great Bank: Island of Munawwarā by 11 ibha; Bendar Is- mānīl or Bendar Is- mānīl on the east coast and Lūn- langānī or Langānī on the west by 10 ibha; Bimārīth on the west coast, Anāmīl on the west by 9 ibha; the island of Amber (Djīsārat al-ʿAmar) on the east coast and Bender al-Nḥōb on the west by 8 ibha; Noğhim (?) on the east coast and Malawīn (?) on the west by 7 ibha; Manākīr on the east coast (true Lat. 23° 08‘ 30‘) and Bender (al-)Shūṭān, “port of the banks,” by 6 ibha; Bender Hadūda on the east coast and Bender Kūrī on the west by 4 ibha; Wabaya (according to the Turkish text of Sidi ʿAlī; the name is illegible in MS. 2559) on the east coast and Bender Hit (or Hīt) on the west coast by 3 ibha; Bender Hadūda (ṣīn) on the east coast; no name known on the west coast and Bender Kūrī in this latitude by 2 ibha; Bender Kīs (or Kauz) on the east coast and the bay of Kūrī on the west coast by 1 ibha; the majority of the names of harbours, which are sometimes found on both coasts recall nothing known elsewhere.

Malagasy undoubtedly belongs to the western Indonesian group of the Malayo-Polynesian family. Down to the adoption of the Arabic alphabet, the language was only oral and, so far as we know, never written down in any alphabet. The lack of epigraphic material on the one hand, and of ancient monuments on the other deprives us of any chance of regaining the past history of this vast island. Before the xvi century, a few Arabic and Chinese texts would constitute our only documents, if the linguistic substrata did not yield us some valuable information. These substrata are of two kinds, Bantu and Sanskrit. These former are divided into three categories:

1. The borrowings of relatively recent date from Swahili, which in turn got them from Arabic, of the type: Malag. bahari, "sea" < Swahili bahari < Arabic bahār; Malag. kamba "coconut fibre rope" < Swahili kamba < Arabic khobār, khubj; Malag. sukani, "rudder" < Swahili nusuki < Arabic shukūn. These loanwords are practically only found in the maritime dialects of the N. W. and W. coasts.

2. The borrowings from Swahili of the type: Malag. blvu, "baabab" < Swahili bluveyu; Malag. baada, "master,"" sir" < Swahili baada; Malag. kibbika, "measure for rice" < Swahili kibbika, "measure of about a quart", etc. Like the preceding, these loanwords are found almost solely in the maritime dialects of the west coast; it may therefore be assumed that they also are of recent introduction.

3. The following words are, on the other hand, used either in the old and modern coast dialects or in the dialects of the centre and east, that is outside of the zone frequented by the sailors of the east coast of Africa, Zanzibar and the Comoros. They are found in manuscripts of the Bibliothèque Nationale and in old records of travel; they are not borrowings, but belong to an old substratum of the language:

- Malag. ambāha "dog" < Bantu mbaa;
- Malag. akča "guinea-fowl" < Bantu kanga;
- Malag. amphndua "ass" < Bantu pan;
- Malag. akūn, akīnw, akīn. ox < Bantu ngombe;
- Malag. angndua "tale, fable" < Bantu ngana;
- Malag. akunedī, aknndrī akndri "sheep" < Bantu kūndi;
- Malag. fnndn, fnndn, "green pigeon" < Bantu ninga;
- Malag. gdru "kind of lemur" < Bantu ngdore "little black monkey";
- Malag. kizī "kind of lemur" < Bantu kizā "woman, wife";
THE NAM-KRIT SUB-RATRUM CONTAINS MANY WORDS OF VARIOUS CLASSES;

1. NAMES OF GODS, SPIRITS AND OF CASTE;
   Old Malag. Tz.ozan, "god of evil", tan dea < Sanskrit devata, "deity" (for the inverse semantic progression of Sanskrit deva, "god") > Zend dieu, Pahl. die, "evil spirit".
   Old Malag. Ram, "in the expressions hanin-ramu, lit. "by Rahu the moon" = eclipse of the moon; also in the noun ramina, lit. "obscured by Rahu the sun" = eclipse of the sun.
   Malag. enda, andina, "noble", "of royal or noble caste" < Kawi sūra < Sanskr sthā, etc.

2. NAMES OF THE MONTHS:
   The names of the months in the Indian calendar are found in the dialects of all the tribes of Madagascar. They have not however been preserved in the original order and a month that is placed at the beginning of the year by one tribe is put at the middle or end by another. On the other hand, some and zimba are not found in the Malag. lists; they are replaced by two artificial (large and small) and two natural (large and small) and a month called raha (ße):
   - Skr. ṛahā > Malag. fahia, féza, féha, fiaa;
   - Skr. ṛahā > Malag. malia;
   - Skr. cau > Malag. ali, amia, aimia;
   - Skr. ṛahā > Malag. ahe, aha, aha;
   - Skr. ṛahā > Malag. sara, saha;
   - Skr. ṛahā > Malag. aha, aha;
   - Skr. ṛahā > Malag. aha, aha;
   - Skr. ṛahā > Malag. aha, aha;
   - Skr. sari > Malag. saha, saha;
   - Skr. sari > Malag. saha, saha;

   "the month or moon of shira";
   cf. also Skr. raha "season of the tame" > Malag. sara, sarana, sarana, sarana, sarana; sarana "season of hurricanes".

A. COMMON WORDS:
   - Skr. ṛahā "10 months" > Malag. 100 miles;
   - Old Malag. 1 = modern Malag. 4 = 100 miles;
surmounted by a vertical tashdīd, then by ُ.

Contrary to Malay each letter is vocalised, which renders the reading of Malagasy-Arabic texts easy in spite of the variations in orthography, which are too numerous to be given here.

The Arabic-Malagasy alphabet was once used over a very considerable area; at the present day, it is only used on the S.E. coast where very many natives were still using it at the end of the sixth century. The Malag. Muslims of the N.W. and W. prefer to use the Araβico-Comoro or Arabico-Swahili alphabet. The latter renders by ُ a ِr identical with the Malag. ِr but this form is only used in the island of Anjouan. The dialect of this island which has a ِr transcribes it by ُ, the ُ of Persian and Turkish. The Arabic letters ُ, ُ, ُ, ُ, ُ, ُ and ُ are only found in Malagasy, when Arabic words are quoted and they are pronounced respectively ُ, ُ, ُ, ُ, ُ, ُ, ُ, ُ and ُ.

Malagasy manuscripts in the Arabic character bear the generic name of shura-de “great writing”, i.e. “sacred writing”. They used to be difficult to obtain; the owners gave them an esoteric character which did not allow their contents to be communicated to a stranger. I was able to get some copied and to acquire a few others between 1890 and 1894. The Bibliotheque Nationale in Paris has ten, of which eight are undoubtedly old. MSS. 2, 3, 4 and 5 came from the old Abbey of St. Germanes des Prés; N°. 6 is also old, although it was only acquired in 1820. Thanks to an inter-linear transcription and Latin translation by a European, which can be dated on palaeographical grounds between 1595 and 1620, it may be presumed that N°. 7 reached Europe in the second half of the sixteenth century and must therefore have been written before that date. According to an MS. note by Langlès, “MS. 8 seems to have been brought to France in 1742”; the MS. 5132 wrongly classed with the Arabic manuscripts is also an old Malagasy manuscript. MS. N°. 1 given by the Duc de Coislin to the Abbey of St. Germanes des Prés has coloured drawings, coarsely executed of men, animals, trees, and cabalistic figures but not a single line of text. MS. N°. 13 is a copy of four short modern manuscripts. With the except of 1 and 13, all the manuscripts are on native paper, written with the kalâm with native ink. Flacourt gives a detailed description of them in his Histoire de la grande île Madagascar (p. 194 sqq. of the edition 1661). The subject matter of the manuscript is very varied. There does not seem to have been a shura-de prototype out of which all the others proceeded. In an apparent disorder, the result of the fancy of the author or the copyist, we find collected sūras of the Kurān, interlinear lists of the names of Allāh, and of names of angels, Arabic religious texts with interlinear Malagasy translations (cf. the facsimile publ. in N. E., vol. xxxviii., 1904, p. 457); Arabic-Malagasy glossaries, magic texts, and invocations in large numbers, magic squares and formulae, texts showing the magic influence, good or bad of the planets, signs of the zodiac, lunar mansions, months, and days of the week, of the male and female character of the twelve Muhāmmadan months (Muharram is male, Sa'āf is female, and so on, in MS. N°. 2 sqq., 269), of patterns for amulets (kīriz < Arabic ژز). The sūras of the Kurān are not reproduced in the order which was settled at the revision ordered by the Caliph ʿOthman. MS. 6 gives them in the following order: fāṭha, cxv., cxlix., clixii. and so on to cxvii. (f. 2a etc.). Then come verses 1-4 of Sūra cxiv., verse 256 of li., verse 16 and beginning of verse 17 of iii. The same MS. also contains Sūra xxxi. (f. 130b) and f. 130b-134b, verses 158-159, 137, 256-259, 284-286 of Sūra ii. and verses 25-26 of Sūra iii.

Here we may mention several texts of particular importance, one of which is certainly unexpected. MS. 3 contains a bilingual glossary of 36 common words, Malagasy and Dutch, the two languages being transcribed into Arabic characters. It was published in B. T. L. V., vol. lxi., 1908. I have suggested that it must have been compiled by the interpreter of Frederik de Houtman, “who had spent four years with the Dutch and spoke their language well”. He had supplied Houtman with “his collection of Malagasy words”.

MS. 5 contains from f. 85a to 88a an Arabic poem with Malagasy translation in honour of a certain Laiā (I have not yet been able to ascertain if this is the lover of Madjān, or of some Laila in Arabic literature). The piece begins “The poets said...” and ends “…the girl who possesses beauty and kindness”. The Arabic verses are of an unusual inaccuracy and show that whoever reproduced them had a very superficial knowledge of the language and poetry.

MS. 8 (f. 52b to 56b) preserves a khūṭba in Arabic entitled al-dīn allāh al-Muṣtaṣim bi'llāh (the text has bi-l-rād Allāh) Amr al-Mu'minin. Further on there is a reference to Sūltān ʿAbd al-Ḥānī, son of Sūltān ʿOthmān.

The mention of the last of the ʿAbbāsids caliphs seems to indicate that the Malagasy converts to Islam, among whom this khūṭba was in use, had been converted by Arabs who had left Baghdād or a country under al-Muṣtaṣim in this caliph's reign, i.e. between 640 and 656 (1242-1258). We cannot explain otherwise how this happen without the title “Commander of the Faithful” in a khūṭba used in Madagascar. As to the Sūltān ʿAbd al-Ḥānī (perhaps we should read ʿAbd al-Ḥānī) who is here”, the khāṭīf then indicating the Sūltān in question), I have not been able to identify him. As it is written, the name is neither Arabic nor Malagasy. MSS. 7 and 8 contain two identical versions of a religious text which I published in N. E. (xxxviii. 449 sqq.). In a passage devoted to the glorification of the month of Ramdān, the anonymous author succes-
sively invokes the prophets of the Old Testament, Jesus and Mary, the Prophet Muhammad, the first four caliphs, Ḥasan and Ḥusain, and finally Abū Ḥanīfa al-Nuʿmān, the great Sunni Imām, and Muhammad b. Idrīs al-Shafiʿī, the founder of the Sunni school which bears his name. The mention of these two learned men and the ḥadīth already mentioned are evidence of the orthodox character of certain Muslims of Madagascar and, perhaps one may say of the generality of Muslims on the southeast coast. But the same manuscript No. 8 contains a Persian text which prevents us putting forward this conjecture. This latter text which is still unique is found on f. 255–27b. The last lines invoke the "abūra mubākhārah, then, the first eight iāmin's of the Shīa sect of the "Twelvers" (cf. 11J[XN ʿAṣākirya) to whom the author has added "All Akbar ("All the elder") of Ḥusain and half-brother of Ḥusrām b. Ṣāhel. The mention of these iāmin's of whom the last named, "All b. Ṣāhel, reigned from 135 (800) to 202 (815) is valuable, for it implies that the writer of this text belonged neither to the shiʿiatic sect of the Zakariyya founded in 695, nor to the shiʿiatic Shīa sect of the Imāmas which dates from 765, nor to the orthodox Shīa sect of the "Twelvers" which is important, for the Persians whom historical tradition makes come from Shībān and colonise Kilwa on the east coast of Africa and the island of Anjouan in the Comoro Archipelago were Zaḍīyas (cf. G. Ferrand. Les Salésiens de Kilwa, in Mémoires Henri Foutte, in the present case. The Imāmīya, whose presence in Madagascar is evident from MS. No. S thus form a separate group different from that of the Persians who had immigrated to the adjoining coast of Africa.

The Arabic–Malay manuscripts which I possess, those of the University Library of the Faculty of Letters in Algiers and the others which I have been able to see are, as a rule, much inferior to those of the Bibliothèque Nationale, with the exception of the "Ṭaḥta and the Persian text, which so far as I know are found nowhere else. Quite a considerable number of manuscripts like MS 13 contain genealogies of kings of the Southeast, from which all the documents come, and local histories One of them gives details of La Casse's campaign in the summer of 1659–1663 (cf. N. F., 1907, xxvii).

The majority of the religious texts which are found in the Arabo-Malagasy MSS. of the Royal Nat. are translated into Malay. The Arabic part is very incorrect and the Malay translation shows that the exegesis of Malagasy understand very little of it. The illustrations and bilingual Goldiner, to whom nothing Islam was foreign, was interested in the texts which I publish. Comparing three translations of the Malay text with the Arabic text he concluded that "the meaning of the fundamental ideas was most gravely misunderstood" (Les Diverses langues de l’île Maurice et de Malabo et de l’Archipel d’Azur au XIVe Siècle, in its Origines, in R.H.E., 1905)

The borrowings of the Malagasy from the Arabs who converted them to Islam are many and are found through all the tribes of the island without exception. The most notable are the names of the days of the week, in particular, "sikhi, sikhi (<"six", "figure") is the art of divination, its object is to find out what is not known and the method of discovering a remedy against it. Used throughout the island with slight variations from one tribe to another, sikhi, to take the form generally used, is a direct derivative from the Twelvers', lit. the science of sand or Arab geomancy (cf. the Kitāb al-Farṣ fi ʿIltīm al-Kaṣīlī of Sīnérah Muhammad al-Zanjū, Bth. Cairo, n. d.). Shāhī al-Zanjū's table from which is derived all these in use in Madagascar comprises the following 16 figures.
Each figure of the table bears a name of its own and is composed of a certain number of dots, maximum eight (IV) and minimum four (XII). Four figures have five dots (V, VII, VI and XV); six have six dots (II, III, VI, X, XI, XIV) and four have seven dots (I, VII, VIII, IV). Each figure governs a certain number of things or beings; according to the question put to the diviner, the latter considers very carefully the figure relating to the question asked. The influence of each of the figures comes from the sign of the zodiac, planet, day, Arab month and from one of the four elements to which it corresponds. It is also lucky or unlucky, male or female, ħālip (applying to the person consulting the fates) or maylāb (applying to the question asked); it is more or less strong and powerful in such and such conditions, and it also shows in what state the thing asked shall be realised. The 16 figures of the table are divided into different groups each bearing a particular name:

the ḏawāqid, “those who enter” which number three (XI, I, XV). If they are present in a large number in the sīlikī effected by the diviner, it is a very auspicious sign and the questioner will certainly obtain what he seeks. If one of the ḏawāqid proves to be the first figure, the object sought enters, i.e. is obtained;

the Ḳhawārid, “those who go out” are three in number (III, I, XII). If they are several times represented in the sīlikī effected by the diviner, it is an unlucky omen and the object sought will be unattainable. If one of the Ḳhawārid proves to be the first figure, the object “goes out”, i.e. is lost to the seeker;

the munkālīb, “those who return” (IV, V, VI, IX, XIV, XVI) are sometimes lucky, sometimes unlucky, according to circumstances. If one of the munkālīb is the first figure, the operation will remain without a definite result;

the Ṭāwaṣṣiḥ, “those who are fixed, who do not vary” are the figures I, II, X, XI, XIII, XV. They are lucky and assure that the seeker will gain his end;

the munkēlīb, “the dismal” are figures III, VII, VIII, XII. If the first figure is one of the munkēlīb the questioner will not obtain what he asks, or will not escape the misfortune he fears.

The figures I, IV, VII, X are called awtād “the pious”. If the four figures found in it are similar, success is assured.

Figures II, V, VIII, XI are called mīkāli al-awtād, “what concerns the pious”. If the four figures found in it are similar the desire expressed, will be realised.

Figures III, VI, IX, XII are called ṣūlāt al-awtād, “the end of the pious”. If the four figures found in it are similar the object desired is coming and will arrive or the desire is completely realised at the moment of consulting the diviner.

The sixteen figures are also divided into two groups of eight; one is called ṣīlikī al-ḥalīb, “figure of him who asks”; these are the eight who represent him who is consulting the fates; the other ṣīlikī al-maylāb, “figure of the thing sought”, i.e. those who have to answer the request. If the first figure of the ṣīlikī is among the eight ħālib, and the seventh among the eight maylāb, it is a very good omen. If on the other hand, the first figure is maylāb and the seventh ħālib, it will be impossible to avert the evil fete. It must also be enquired if the fifteenth figure of the operation of the diviner is ħālib or maylāb, if ħālib, it is lucky and if maylāb, unlucky.

If the ṣīlikī is consulted on behalf of a sick man the presence of figures VIII, VI, V, XIV, IX, IV, XIII indicates his approaching end.

The four first figures of the table are also called ṣuyūt al-ḥayfā, “hours of the days”. Repeated several times they indicate that the thing sought will be realised in the course of a day. The four following (V—VIII) are called ṣuyūt al-qurnāt, “houses of the weeks” and indicate an interval of a week; the four others (IX—XII) ṣuyūt al-ghaybūr, “houses of the months” indicate an interval of a month and the last four (XIII—XVI) ṣuyūt al-sinīm, “houses of the years” indicate an interval of one or several years. If one of the houses of the days occupies a position other than the first four, the interval increases in proportion as it is remote from the first four places. On the other hand if one of the houses of the weeks, months or years is found before its place, the interval diminishes in proportion to its nearness to the first figure.

The figures I, III, V, and X mark the direction of the east; VIII, XII, XIV and XV, the direction of the west; II, IV, VI and VII, the direction of the north, and IX, XI, XII and XVI, the direction of the south.

Figure I of the preceding table is called al-ḥayfān or ṣīkēs. The first of these names has passed into Malagasy in the form ṣalakantsi. It represents the person who comes to consult the diviner; its zodiacal sign is Pisces; its planet Jupiter; its day Tuesday and its element the sea. The corresponding figure is the fifteenth. It is lucky, male and ħālib; i.e. it is one of the eight figures representing him who consults the fates. Its month is Dhu 'l-Ḥijjah. If in the preparation of the sīlikī it occupies the first place, the thing demanded will be realised after an interval of three days. The amount of happiness and success which it brings will be greater if it occupies the first place.

Figure II (ṣabībat al-tawāṣṣiḥ, Malag. 'alakans) is that of wealth, riches, possessions and estates, and merchandise of all kinds. Its sign of the Zodiac is Sagittarius; its planet, the Sun; its day, Sunday; its element, fire. The corresponding figure
is the tenth. It is lucky, feminine and mafîth, i.e. it is one of the eight figures which represent the thing sought. Its month is Ǧumādā al-Awwal. If it occupies the fourth place, the desire of the seeker will be accomplished after an interval of 55 days; if it is in the fifth place, it is still propitious; if in the fourth it indicates greatness.

Figure III (Qabdat al-khârîj, Malag. aAda) is that of the family, especially brothers and sisters. Its sign of the Zodiac is Râs Ljâwazhr («the head of the Dragon»); its planet Saturn; its day, Saturday. The corresponding figure is the tenth. It is unlucky, male and fâlib. If it is in the fourteenth place, the interval necessary for the accomplishment of the desire formulated is 150 days. It reaches the maximum size in the ninth place and strength in the third. Its metal is gold.

Figure IV (al-qaDma > Malag. dama, damu) is that of the country, gardens and barriers of the dead. Its sign of the Zodiac is Virgo; its planet Mercury; its day, Wednesday. The corresponding figure is the fourteenth, its element black earth. It is good or bad according to circumstances and mafîth. Its month is Ǧumādā al-Ākhir. If it is in the fourteenth place, the interval before the rediation of the desire expressed is 20, 55 or 130 days. It is large in the sixth place and strong in the fifth and tenth. Its metal is silver. Figure V (al-l hacker < Pers. khurâk or al-farâb) Malag. diskada) is that of children and bearers of news. Its sign of the Zodiac is Libra, its planet Venus, and its day, Friday. The corresponding figure is the twelfth. The south wind is its element. It is neither good nor bad: it is fâlib and female. Its month is Râjab. If it occupies the fourteenth place the desire expressed is satisfied the day following. It is large in the twelfth place and strong in the fourth, eighth and eleventh. Its metal is gold.

Figure VI (al-idhâf, Malag. aida, idha) is that of the sick, of cries of war, of slaves, of less of property, of remigration and of ships sailing ships of the Western Indian ocean. Its sign of the Zodiac is Aquarius; its planet Mercury; its day, Saturday. The corresponding figure is the seventh. Its element is the west wind. It is good or bad according to circumstances. tâlib or mafîth. Its month is Ǧub âl-Kaʿaḍa; it is female. If it is in the fourteenth place, the interval before accomplishment of the desire expressed will be fifteen days. It is large in the ninth place and strong in the eighth, eleventh and twelfth. Its metal is silver.

Figure VII (unâ > Malag. al-am) is that of husbands and wives, of women and of sexual relations. Its sign of the Zodiac is Capricorn; its planet Saturn; its day, Saturday and its element earth. The corresponding figure is the sixth. It is unlucky, tâlib or mafîth, and male or female according to circumstances. Its month is Shawwâl. If it is in the fourteenth place, it indicates an interval of 30 days before an answer to the question asked the diviner is obtained. It is large and strong in the second, ninth and eleventh. Its metal is silver.

Figure VIII (klam > Malag. aDwama, dhawma) is that of death and removal. Its sign of the Zodiac is the Ram; its planet Mars; its day, Tuesday. Its corresponding figure is the sixteenth, its element fire. It is unlucky, fâlib and male. Its month is Muḥarram. If it is in the fourteenth place, it indicates an interval of 21 days. It is large in the first and strong in the fourth. Its metal is iron.

Figure IX (bayz > Malag. alibwara, adhîhidâdi) is that of departure and of those who clothe the dead in white linen. Its sign of the Zodiac is Cancer; its planet, the moon, its day, Monday. Its corresponding figure is the thirteenth and its element is water. It is neither lucky nor unlucky but may be one or other according to circumstances. It is fâlib and female; its month is Ǧumâdā al-Ākhir. In the fourteenth place it indicates an interval of ten days for the accomplishment of the desire expressed. It is large in the ninth and strong in the eleventh. Its metal is copper.

Figure X (nasrat al-khârîj, Malag. asurwalah) is that of strength and of rulers. Its Zodiacal sign is Leo, its planet is the sun; its day, Sunday; its element fire. It is male, fâlib and very lucky. Its month is Ǧub âl-Kaʿaḍa. In the fourteenth place the interval before the accomplishment of the desire is 32 days. It is large in the tenth and strong in the thirteenth. Its metal is gold.

Figure XI (nasrat al-dhâhil, Malag. ashura) is that of life in towns, of return to the domestic hearth, of ambition, of friendship, and of children. Its sign of the Zodiac is Taurus, its planet Venus, its day Friday, its element, black earth. The corresponding figure is the fifth. It is male, lucky and fâlib. Its month is Ramadan. If it is in the fourteenth place, ten months will have to pass before the realization of the desire. It is strong in the fourteenth place and large in the eleventh. Its metal is copper.

Figure XII (sibhat al-khâbika > Malag. kaDlawa) is that of enemies, cunning and ambushes. Its sign of the Zodiac is Dīl al-Djaawazhr, the "Dragon's tail"; its planet Saturn, its day Saturday. The corresponding figure is the third, its elements are water and terra firma. It is unlucky, mafîth and feminine. If it is in the fourteenth place, the interval before the accomplishment of the desire is 66 days. It is large in the twelfth and strong in the thirteenth. Its metal is iron.

Figure XIII (furik > Malag. tarabik) is that of the road which leads to the house of death, to the cemetery. Its sign of the Zodiac is Cancer; its planet, the Moon; its day, Monday. The corresponding figure is the ninth, its element is water. It is lucky, mafîth and female. Its month is Ǧub âl-Kaʿaḍa. If it is in the fourteenth place, the interval before the accomplishment of the desire will be 50 days. It is large in the fourteenth and strong in the fifteenth. Its metal is copper.

Figure XIV (qīrma > Malag. adhasama, adhism) is that of learned men, of remedies, of knowledge, arts and medicine. Its sign of the Zodiac is Gemini; its planet, Mercury; its day, Wednesday. The corresponding figure is the fourteenth. Its element is the wind. It is lucky or unlucky, male or female, fâlib. Its month is Ǧumâdā al-Ākhir. In the fourteenth place which its own, it indicates an interval of 6 months before the accomplishment of the desire. It is large in the fourteenth and strong in the fifteenth. Its metal is iron.

Figure XV (sibhat al-adâhika, Malag. altria) is that of the judge. Its Zodiacal sign is Pisces; its planet is Jupiter; its day, Thursday and its element water. The corresponding figure is the
first. It is lucky, male or female and ǧālib. Its month is Shawwāl. In the fourteenth place the interval before accomplishment of the desire will be 55 days. It is large in the fourth and strong in the eleventh. Its metal is iron.

Figure XVI (naḥi al-khuḍād > Malag. kusu) is that of the end of all things and the last of the sīkīdī. Its sign of the Zodiac is Scorpio; its planet Mars, its day Tuesday and its element water. The corresponding figure is the eighth. It is lucky or unlucky, male or female and ǧālīṭ; its month is Djamādā al-Awwal. In the fourteenth place it indicates an interval of seven days before the realization of the desire. It is large on the fourteenth and strong in the sixteenth which is its own. Its metal is copper.

These are the sixteen figures of the sīkīdī and the signification given them in Madagascar.

As its Arabic name shows, this “science of the sand” was first practised by tracing lines or dots on the sand; in Arabic one says ǧarab al-rumī, “to strike the sand”; to describe the preparation of the ǧim al-rumī. On the east coast of Africa in Swahili the same operation is called ǧātūga baw, lit. “to strike the planchette” (which implies that the dots forming the sixteen figures are inscribed on a planchette) or rumī, a Bantuised form of the Arabic rumī “saud”. At the first the lines or dots were traced on the sand, then on a planchette of wood and lastly as in Madagascar on paper. According to another Malagasy method, the diviner also uses grains of sand, or seeds, especially those of the fanu tree (Piptadenia chrysostachys, Bth.).

When requested to consult the fates by the sīkīdī, the diviner first of all pronounces the invocation: “Awake, O God, to awaken the Sun! Awake, O Sun, to awaken the Cock! Awake, O Cock, to awaken Man (ulambelina)!” Awake, O Man, to awaken the sīkīdī; not that it may lie, not that it may lead us to error, not that it may make a laughing stock, not that it may say foolish things, not that it may deal with any matter of no importance, but that it may search out secrets, that it may see what is beyond the mountains and the other side of the forest that it may see what no human eye can see. Arise! For thy skill which comes from the Muslims with long hair (sic! silamū be vula), from the high mountains, from Rabaruba, from Templaketsiketsika, from Zaftisimaui (eponym of a tribe of the south-east converted to Islam), from Andriambavitualahi, from Rakelihuranana, from Ianakara (eponym of another south-eastern tribe, converts to Islam), from Andrinoni-Sulamatra, from Vazimba (a dwarf tribe, of African origin as the name shows; the old owners of the soil), from Anakandriananaha, from Rakelihavavula (lit. the little man with long hair)! Arise! For we do not have thee for nothing, for thou are dear and cause expense! We have taken thee in exchange for a fat zebu cow with a large hump. And for money on which there was no dust (i.e. coins which are still circulating). Awake! For thou hast the confidence of the ruler and thou expressest the judgment of the people. If thou art a sīkīdī that can speak, a sīkīdī that can see and that does not repeat (only) the gossip of people, the hen killed by its owner, the ox killed in the market, the dust which clings to the feet (i.e. a sīkīdī who does not repeat what everyone knows); awake, on the mat which is on this very spot!” (cf. Antananarivo Annual and Madagascar Magazine, 1886, p. 221). If the diviner operates with seeds, he takes up a few at random and counts them two by two until the end he has one or two which are placed at the top of the figure. The operation is repeated four times which gives the four rows of dots of the first figure.

When the diviner works on paper, he traces with the kalam a line in the form of the arc of a circle, the centre of which is indicated by a dot. The sum of the dots and initial and final curves (each of which counts as a dot) must not exceed 14, although the māsīkīdī is understood to make the dots without counting them. He then draws three other concentric curves in the same way. This done, the dots are counted two by two and line by line from left to right. A vertical line separates the groups of two dots from one another. After the last vertical line there remains either the final curved line which counts as a dot, either a point or a line, i.e. two dots. This or these are written opposite each line and given figures I, II, III, IV:

```
  I
  II
  III
  IV
```

The four first figures are called in Arabic, um-mahāt “the mothers”:

```
  a
  b
  c
  d
```

Figure V is obtained by transcribing vertically from right to left the line a a′, b b′, c c′ and d d′ give in the same way figures VI, VII and VIII. These four new figures derived from the four first are called al-banāfī “the daughters”:

```
  V
  VI
  VII
  VIII
```

Figure IX is formed by adding horizontally the dots of I and II (in the addition + + = =, + + = =, + + = = = =). All the other figures are similarly formed: III and IV give X; V and VI give XI; VII and VIII give XII; IX and X give XIII; XI and XII give XIV;
XIII and XIV give XV; and XV and I give XVI.

The eight last figures are called banât al-banât "the daughters of the daughters":

These sixteen figures contain the fate of the inquirer and the diviner has to give him the meaning of each of them by interpreting them from the table of Shāhīkh al-Zanātī, which was given above (p. 714). We may therefore imagine what a high place the ahdīkī occupies in Madagascar life, and the very numerous circumstances in which recourse is had to it. The diviner was and undoubtedly still is the true manager of it. In practice it is consulted for every act of private and public life whether of the individual, family, clan or tribe. I have not been able to learn how one becomes a miṣb[i]lī. It is the speciality of certain individuals without distinction of sex or birth.

A diviner or a sorcerer may be man or woman (I have never known a woman sorcerer but have heard that there are such) The sorcerer may be of royal birth, noble or freeman (I have never heard of a sorcerer or diviner who was a slave, although slaves have been executed on charges of sorcery) The diviner or the sorcerer is very often the son or daughter of a diviner or a divineress, which assures him an extensive clientèle, for he or she is supposed to inherit the paternal (or maternal) crest. The sorcerer or diviner may be either native or foreigner I was taken for a diviner during a stay of forty mouth at Mananjary (S E coast) by the Muslim miṣb[i]līs of the district, who treated me as a colleague after I had shown them my knowledge of Islam. It was in this way that I was enabled to be initiated gradually into the practice of ṣin ib and appeal was sometimes made to it.

The area of dissemination of the ʿilm al-ḥawāl in Africa is considerable. It is found in Dārfūr and the Tafsir of Hafsa in Pesamney reveal the existence of practices closely allied to it among a West African people who are however not Muslim (cf. Ferrand, Miroirs, M. 1955, p. 128) The great annual festival of the ʿilm al-ḥawāl is only a survival under another form of the old iṣṭīʿu[t]a (p. 1) On this identification of G. Ferrand, Miroirs, M. 1955, p. 128, see below

According to the Portuguese discoverers and especially of Hecquet, the Malagasy-Malay of the S E. of the xvth century arrived during Ramėmā, erected the oblong prayer- nātī the Kūrān, but drank fermented liquors and ate pork. There were ṣin ib in the S E. which assembled of the faithful took place; but there is no mention of the existence of mosques in the early travellers and Hecquet says definitely in his preface that "the nation of which he is going to speak...has no ṣin ib nor temples". As in ʿilm [p v] the success of Islam was only mediocre in Madagascar. Malagasy does not readily assimilate foreign beliefs and customs and the latter do not profoundly modify native beliefs and customs. His whole philosophy is contained in the proverb māni ni aina, "life is sweet"; he thinks it good to be always the strict observation of the Kūrān prescriptions would have upset too much his usual life and customs. Allah proscribes fermented liquors, standing stones, games of chance and consulting the fates as abominations invented by Satan. But these abominations are particularly dear to the Malagasies; they are particularly devoted to alcoholic liquors and to gambling, believe firmly in soothsaying and standing stones (tangambatu) held in honour throughout the whole island. No doubt they venerate Allah, the Kūrān, the Prophet and saints of Islam but it is a purely verbal reverence and they are not really islamised to the degree, that for example are the negroes of the adjoining east coast of Africa.

The conversion of the Malagasies to Christianity was also a failure. At the time of the conquest of the island in 1895 they were quite disposed to be converted en masse to Roman Catholicism, thinking it would please us; they had to be warned that the French government only attached importance to respect for the laws and respected the religious convictions of every one whatever they were. This fact of which I was a witness is more eloquent than any other and throws an illuminating light on the past.

The evidence quoted above and especially that of comparative philology enable us to draw up the following scheme of the settlement of Madagascar so far as our knowledge at present goes,

I. Many legends give the old Vazimba, now disappeared, as tanguan-tant or ancient masters of the soil i.e. the autochthons. The name which is found in East Africa is clearly Bantu and represents an older vazimba Malag. vazimba. They are said to have been of small stature. They were perhaps nigrillo.

II. There was an important immigration of African Bantus prior to our era of which we have an evidence in a certain substratum of African words which has survived in the modern language.

III. There was next an important immigration of Hindooedans from Sumatra (cf. G. Ferrand, L'Empire Sumatran de Cirebon) in the second-fourth centuries a.d. A word like the Malag. keti < old Malag. kiti = 100,000 < Malay ketu 100,000 < Sanskrit katu 10,000,000 is over many others testifying to this fact. These Indonesians modified the onomatological, cultural and linguistic type of the nigrillo Bantu who peopled Madagascar.

IV. Arrival of Arabs in the sixth-ninth centuries and conversion of the Malagasies to Islam. These Arabs probably came from the Persian Gulf and belonged to the Sunna.

V. Another immigration of Sumatrans at the end of the tenth century. I consider the Wākṭā to be western Islanders, as I shall explain in the article wākṭā. The book of the Wonders of the World (Adīgī al-Hind, ed. by van der Lath, and trans by M. Devé) mentions a piratical campaign by these Wākṭā in 334 (945) in the Western India Ocean. It is probable that we have here a reference to the migration led by Ramūni the
“Sumatran” or Raminia “the Sumatran” (fem.). His elder son Ra-Hadzi was the ancestor of the tribe of Zafni-d-Raminia, “the descendants of Raminii”, of the S.E. coast of Madagascar. The younger son, Ra-Kuka, went into the interior of the island, reached the plateau of Imerina where he married a Vazimba woman. Ra-Kuka was the ancestor of Hova who bear his name.

VI. Coming of Persians of the sect of the “Twelvers” later than the reign of ‘Alī al-Riḍā (185-190 = 800-815).

VII. Tenous of other Arabs in the reign of the ‘Albāṣid caliph al-Mustāṣim, in the middle of the thirteenth century of our era.

Al-Madā’in: a mediaeval Arab town or rather a group of towns in al-’Irāk (Ibbânlânia) about 20 miles S.E. of Baghdađ lying on either side of the Tigris in two almost equal portions. The name al-Madā’in (plur. of al-Madīna) “the towns” is explained from the fact that the two capitals situated opposite one another, Seleucia on the west and Ctesiphon on the east, was built between 312 and 301 B.C., and Ctesiphon on the east (the first reference to which is in 221 B.C.), the winter residence of the Parthian and Sasanian kings, with several other places close at hand were regarded as forming a whole. The Semitic Aramaeans who formed the bulk of the population under the Arsakids and Sasanians comprised the whole group under the name Maḥbūs or Mūnibhūs “the towns”, which latter word the Arabs adopted in the plural form al-Madā’in peculiar to their language. Following the Sasanians, the Arabs reckoned seven towns in al-Madā’in, the official names of which they partly arabisised.

On the west bank lay Bah-rasir, corrupted by the Arabs to Behrāsir (often wrongly read Baharāsir and Nahr Shir or Sir; cf. Streck, Babylonien, p. 262, note 3). The name does not mean “good (is) Ardeşîr” as it is often explained but “house (i.e. foundation) of Ardeşîr” (cf. thereon, Noldeke, W. Z. K. M., xvi., 1902, p. 7: Weh = Aram. Bē). In Syria the Talmudic literature Behrāsir is usually called Rēbāsir (= Kohele of the late classical writers) and Maḥbūs = (= the town”). It occupied the lower southern half of the former Greek town. A parasang (c. 3 miles) north of it was the village of Darzadhān (also Darzādān), arabisised to Darzādān. On the east bank stood Ctesiphon. The Arab historians and geographers usually reproduce this name, which is not Greek but very probably indigenous (Iranian?) by Twaināfūn; but we also find Tusfūn and Tusāfin corresponding exactly to the presumed Palhāvi form (Tosfūn, Tosbūn). On these place-names cf. the very full discussion by Streck in Pauly-Wissowa, l.c., Suppl. vol. iv. 1102 ff. Not uncommonly the town on the east bank, much more important for the Muslims, is called al-Madâ’in (e.g. in al-Ṭisakhī, B. G. A., i. 87.?). About an hour’s journey away, south of Ctesiphon stood Weh Antoşi-kī Khosraw (= Antioch, house of Khosrow). The Arabs, who founded it in 1921, by Ehsâwar I Anushawrin, which settled with the deported inhabitants of Antioch ad Onontem destroyed in 540 and is said to have been planned on the model of the Syrian capital,
Rūmīyā = Rome or (New) Rome or Byzantium. The Syriac sources distinguish this new foundation from the older towns by the name Ṣa'da'ī bīt-hāštā = "New town".

We know nothing further about the three other towns of al-Madā'in, which made up the number seven so popular in the east and was here no doubt deliberately chosen. The exact forms of their names are not even known.

As far as the Parthian period there was a stone bridge to convey the traffic between the two thickly populated banks of the Tigris, which the historian Ḫamaṣa al-Iṣfahānī (cf. his Taʾrikh, ed. Gottwaldt, p. 31, 16) describes as a marvel; but already in his day (beginning of the fourth = tenth century) there was no longer any trace of it. Under the Sāšānians a second bridge (of boats?) was erected. In the Muslim period however there was still only a bridge of boats.

In Yarsāfīn-Tesiphon two main quarters are distinguished, the northern "old town", Arab al-Madā'in al-ʿuttāba and the southern, ʿAblānāb (ʿAblānāb, ʿAbūlānāb, and other variants of the name).

The "old town" probably represents the oldest settlement on the east bank, the foundation of the Parthian period. In it was a royal palace which the Arabs called al-Kāṣr al-ʿabīyāf = "the white palace" (there were other palaces of the same name elsewhere; cf. the article Kāʾṣar, s. v.), probably the residence originally of the Sasanian kings built by one of the last Arsakids or first Sasanians. The southern quarter ʿAblānāb also included a royal residence, the Ṣawīn (= pillared hall, palace), usually described more definitely by the Arab authors of the middle ages as Ṣawīn al-ʿāṣir (= Pers.-Khosrow, Chosroes, the general title of the Sasanian kings among the Arabs; cf. Streck, Seleucia u. Kleisphōn, p. 37, note 1) Its builder is known with certainty to have been Sapor (Sāpor) I (243-272 A.D.). It may be noted that later Arab historians often confuse the "white palace" and the Ṣawīn.

It can hardly be supposed that the site of al-Madā'in, so favoured by nature, at the point where the Euphrates and Tigris most nearly approach each other, was without any considerable settlement until the time of Seleucus I. There is on the contrary every indication that the town of Ḥudayrī (written ideographically Ḥūdayrī, dating back to remote antiquity like its -sceen-on ʿIp) the OPT of the cities, cannot well be located anywhere else than on the site of the older towns of Seleucia and Ctesiphon or in the immediate neighbourhood. What the Arab writers say about the founder of al-Madā'in is worthless. They ascribe the foundation to mythical kings of the old Iranian epic like Ḍa信访 and Tāmārā and other celebrated rulers of the east like Nūrūd-dīn or ʿAbd al-Rahōmī, Alexander; for Nūrūd-dīn see Abl-Fadlī-Bāqhaib, Taʾrikh, p. 203, ed. p. 50, 2.)

For the pre-Muhammadan history of al-Madā'in which does not fall within the scope of this work cf. Streck, Seleucia u. Kleisphōn, and the references to articles in Pauli-Wischnius. The Arabic sources contain much valuable information for the Sasanian period; the most valuable is Tabari's history (cf. Noldeke, Gesch. der Pers. u. Aras. im A. v. Zeit der Sasan. , Leyden 1879). We may here mention that under the later Sāšānians, Ctesiphon, to some extent, lost its popularity as the winter capital, for they, especially Khosrow II Parvēz (599-628), preferred Dastgerd to it, three days journey to the north on the very old "royal road" (cf. Dastagīrī).

We have fairly full information about the conquest of al-Madā'in by the Arabs, especially the great chronicles of Tabari (1. 2426-2456) and Ibn al-ʿAṣir (ed. Tornberg, ii. 396-403; cf. also Caetani, Annali dell'Islam, iii. 732 sq; Wellhausen, Skizzen und Vorarbeiten, vi. 68 sqy, and Streck, Seleucia u. Kleisphōn, p. 38-41). After the glorious battle of al-Kaldisiya, which made the Arabs masters of ʿIrāk west of the Tigris (cf. above, ii, p. 612 b), the Caliph ʿ Omar ordered Saʿd b. Abī Waḳāṣ, who was then in command of the Muslim troops operating in the ʿIrāk, to march on the Persian capital. Saʿd advanced, fighting several battles on the Tigris and appeared before Behrāsīr in the first half of January 637 (= end of 16 A.H.). The strongly fortified town which was bravely defended was besieged and stormed in vain for two months. In the end the Persians whose supplies were exhausted fled by night unnoticed over the river so that when the Arabs stormed the town soon afterwards they found it quite deserted. A few days later the invaders were able by using a convenient ford to cross the Tigris, much swollen by the spring floods. This almost miraculous crossing effected without any loss is a much celebrated event in Muslim history; it is one of the famous "days" of the period of the conquest. The Persians had not expected that the Arabs would win their way across. The king had taken refuge with his family and court in Ḥulwān (q.v.); the army had retired to Ṣīr Nahravān (about 24 miles north of Ctesiphon). Only a few regiments remained at the palace in the capital. At the end of March 637 Saʿd made his triumphal entrance through the deserted streets. The progress of the Arab operations had not given the Persians sufficient time to carry off the vast treasures accumulated in Ctesiphon. These all fell into the hands of the victors. The Arabic sources give many interesting details of the very valuable objects which were captured not only in Ctesiphon but in the pursuit of the Persian army. The total value of the booty taken in Ctesiphon was estimated at 900 million dirhems (of a nominal value of nine pence but it varied a great deal).

The occupation of the Sāšānian capital, the greatest royal city in nearer Asia, may be said to be the most important event of the period of Islam's splendour, the period of the great campaigns of conquest. In the "old town" the victorious Saʿd built the chief mosque — the first Muslim place of worship to be built in the ʿIrāk.

Al-Madā'in was not destined to be the residence of the Arab governor of the ʿIrāk; on the contrary it sank under Muslim rule to be a mere provincial town. It was soon overshadowed by the newly founded Arab military colonies of Kūfa, to which the gates of Ctesiphon were transported — a symbolic custom found elsewhere in the Arab east — Basra and Wadī Aswāt. Basra and Kūfa now became the political and intellectual centres of Mesopotamia until the Caliph al-Mansūr built Baghdad and the political and cultured centre of gravity of the land gravitated thither. The foundation of Baghdad dealt al-Madā'in its death blow: it was now called upon to yield the building material necessary for the new capital of the caliphate,
just as Babylon had done for Seleucia centuries before.

In the history of the Umayyad and 'Abbasid periods al-Madâ'in was as a rule no longer of any prominence. It only played a part of some importance in the civil wars of the first two centuries of Islam, those provoked by the Khâridjîs as well as those provoked by the 'Alida. The Muslim inhabitants of al-Madâ'in were, it seems, always strong supporters of the Shi'a. They were also hostile to the Khâridjî movement. As early as 458 there was fighting around al-Madâ'in between 'Alî and the Khâridjîs. An attempt by the latter (in 664) to seize Ctesiphon from Bahrasîr was thwarted by the commander there who had Shi'a sympathies, by destroying the bridge of boats. The Khâridjîs however later succeeded in twice gaining temporary possession of al-Madâ'in, e.g. in 688 when the Khâridjî group of the Azârkiya [q. v.] wrought great slaughter among the Muslims who did not belong to their party. The second occupation of al-Madâ'in in 696 was achieved by the Khâridjî leader Shâbib b. Yazid. On these events cf. J. Wellhausen, Die religions-polit. Oppositions-partien im alten Islam (v. Abb. G. W. G., N. F., vol. v., N. 2 [1901], p. 21, 36, 43, 45; R. Brunnow, Der historische Charakter des alten Ommajîn, Leyden 1884, p. 22, 92. With the death of Shâbib b. Yazid, the power of the Khâridjîs was broken, but as late as 751 'Abbasid troops had to be sent to suppress a leader of these rebels; cf. A. Muller, Der Islam im Morgen- und Abendlande, t. 440.

As regards the 'Alid wars in the 1stâk the most important campaign was that of Hasân to al-Madâ'in in the year 691. Hasân lived there in the "white palace". Cf. on this expedition, the Arabic accounts of which differ not inconceivably: Weil, Geschichte der Chalifen, i. 244; Flügel, Gesch. der Araber, Leipzig 1867, p. 158—159; A. Müller, op. cit., i. 336 and especially J. Wellhausen, Das arabische Reich und sein Sturz, Berlin 1902, p. 146. In the latter Shi'a troubles of al-Madâ'in appears in 684—686 and 714 as supporting the 'Alids; cf. Wellhausen, Die religions-polit. Oppositionspart., p. 72, 73, 80, 98. The importance of al-Madâ'in as an objective in these civil wars is evident from the fact that in those days the military road from Baṣra to Kufr did not go through the desert along the Arabian bank of the Tigris but went across the canals to the Tigris at al-Madâ'in and from thence over further canals to the Euphrates; cf. Wellhausen, Die religions-polit. Opp., p. 85, note 3.

The Caliph al-Ma'mûn was repeatedly forced to lead an army against al-Madâ'in; in 817, when in the troubles arose over the succession on the death of Hârûn al-Rashîd the Banû Quraysh b. Musâdefended the town against Ma'mûn (cf. i., p. 6058) and in 815 when an 'Alid rebel Abu 'I-Sâyâyâ (al-Sarî b. Masûr, cf. iv., p. 170) who had seized the town was besieged in it. For the rest we do not hear much more of al-Madâ'in in the 'Abbasid period; its two main components, Tâsafûn and Bahrasîr, continued for several centuries more to enjoy the modest existence of small country towns. As regards Rûmîya which was included in the system of towns forming al-Madâ'in, the Caliph al-Masûr had temporarily held his court there in 754 and had caused Abî Muslim [q. v.] to be treacherously murdered there (Yâkût, ii. 867; 2; Strock, Babylonien, ii. 268). But about the middle of the tenth century this place according to al- Masûrî (Murâdî al-Nakbâb, ed. Paris, ii. 200) was already completely deserted: the wall round it built of thick bricks was the sole relic of it left. When Yâkût wrote in the early decades of the xiiiith century (cf. his Ma’qûm, i. 768; v. 447, 7) the whole of the east side of al-Madâ'in, i.e. Tâsafûn in particular was already completely deserted; on the west bank still stood Behrasîr, a small town, practically a village, inhabited by peasants who practised only agriculture. It was now known as al-Madâ'in.

When Jalâl with his Mongol hordes was advancing to conquer the Caliph's capital in 1257, he pitched his camp in the ruins of the Iwan and in the following year, after he had been joined by the troops of the Mongol princes, he marched on Baghdâd; cf. Rashid al-Dîn, Hist. des Mongols de la Persé, ed. Quatremère, Paris 1836, p. 266. The author of the Ma’rûdî al-Itlîdî (ed. Juyboli, iii. 62) who wrote an epitome of Yâkût and died in 1328 is also acquainted with Bahrasîr as a little town inhabited exclusively by Shi’is, as is also Bâkûwi who about 1403 prepared a synopsis of the geography of al-Kazwîn [q. v.]; cf. the French translation of the latter Talâtîb al-Alâbîr by de Guignes in N. e., ii., 1789, p. 424. When Behrasîr became deserted is unknown. Presumably the disastrous invasion of the Mongols under Timûr at the beginning of the xvîth century which was so fatal to so many once flourishing towns of the lands of the Euphrates and Tigris also caused the collapse of this last settlement in the territory of al-Madâ'in.

It was not till the xiiiith century that a modest village arose on the site of Ctesiphon, a little north of the ruins of the Iwan of the in sight of the highly venerated sanctuary of Sâlûm Pâh and called after him. This consisted on my visit in 1927 of a single street of mud-houses and hânîs where the numerous Shi’i pilgrims who pass through here and put up. The brilliance of the place was mainly supplied by the ruins of the Iwan especially of the north wing of its great hall which collapsed in 1888; cf. Herfeld, op. cit., ii. 63.

In the Great War the site of al-Madâ’in was the scene of desperate fighting, momentous in its results. This is usually called the Battle of Ctesiphon. When the Anglo-Indian army under General Townshend in the late autumn of 1915 began an advance from the fortress of Kût al-‘Amîn along the Tigris to the north to try to take Baghdâd, it was defeated on the 22nd and 23rd November 1915 in the district of the ruins of al-Madâ’in by the Turks. The fighting over the east bank; the British line of battle ran on the east of the ruins of the Iwan and the little village near it. This reverse forced Townshend to retire to Kût al-‘Amîn, which was soon afterwards surrounded by the Turks and capitulated after a five months' siege on April 29th 1916. For further particulars of this battle, the greatest on the Mesopotamian front in the world war, see the works on this subject; cf. especially General Townshend's My Campaign in Mesopotamia (London 1919), p. 193 sq., 171—154, with plan of the battle (map 7).

In connection with this brief sketch of the history of al-Madâ’in it may be mentioned that one of the most distinguished scholars in the
field of Arabic history was born here, namely 'Ali b. M. al-Maḍā'īn [cf. the next article], born 753, d. between 830 and 845. His work itself has not survived but may be partly reconstructed from the numerous extracts in Baladhuri, Tabari, Yahyā, the Kitāb al-Thadhhib, etc., so that we have an idea of its contents; cf. Brockelmann, G. A. E., i. 140—

As to the mint history of al-Maḍā'īn, neither the name al-Maḍā'īn, nor as we might perhaps expect, Taibāf or Behraiz is found on the coins of the Muslim period; on the other hand we have a considerable number of pieces with the inscription al-bāb "the gate" which undoubtedly belong to our city. The Arabs adopted the custom of the Sassanians who gave their coins struck in Ctesiphon the mint name Bābīz (= the gate), which is to be interpreted like "Sublime Porte" as the official epithet of their royal capital (cf. the official designation of Constantinople as Δυτικόν Σταύλον "Gate of Bliss"). We have not only a series of Arabic coins with the mint name al-bāb down to the end of the Umayyad period but also a few pieces of Sassanian type with the legend Bābāz, on the latter (specimens of the year 67—68 cf. Nauck, Kalālig. des orient. Münzen in den kgl. Mus. zu Kiel, i (1898) p. 102. Coins are also found occasionally with the mint al-Maḍā'īn d'Assis, the name of the northern quarter of Ctesiphon (with the Sassanian royal palace: cf. above). For the Arab coins of the ninth century cf. articles of various writers in Z. P. M. G., iix. 504—505, xxx. 148 sq.; xxxii. 691; xxxiv. 25, 58; xlil. 592; cf. also Streck, Scl. und Ktes., p. 37—88 and the references there given.

Here we can only refer briefly to the important part which al-Maḍā'īn played in the church history of the east independent of Rome, especially Nestorian Christianity. The see of Seleucia, said to have been first erected in the time of the apostles, was the premier diocese in the east. As supreme head of all the Nestorian bishops, in the Sassanian period as well as in that of the Caliphs as patriarch of the east the occupant of the see of Seleucia bore the title Kāthīk. A number of important churches were held at his official residence in the course of centuries. The episcopal cathedrals were in Behraiz (New Seleucia) which the Syriac sources usually called Kökhe (cf. above): hence the official title of the patriarchate, "Church of Kökhe". Besides, the official church of the bishop there were in al-Maḍā'īn in the quarters on either bank a whole series of other Christian churches, the names of which are occasionally found in Syriac and Arabic texts. From Seleucia

the Nestorian church developed considerable missionary activity, extending even to the Far East and reaching its zenith in the period from the sixth to the ninth century. Under the Abbāsids 25 metropolises — the first in rank after the Katholikos was the bishop of Kaskat [q.v.] — each of whom in turn had 6—12 suffragans under him, acknowledged the authority of the see of Seleucia. All the metropolises received their investiture in the cathedral of Kökhe. Soon after the foundation of Baghdād (762) the Katholikos also moved from Behraiz (Kökhe), now declining politically and commercially, to the new capital of the empire in order, as religious and political head of the Christian community, the more effectively to champion their interests there at the court of the Caliph, where he usually enjoyed considerable prestige. But each new patriarch continued to be ceremonially installed in the mother church at Kökhe (probably down to the end of Abbāsid rule). For further information on the organization of al-Maḍā'īn in oriental church history cf. Streek, Babylonien, ii. 274—275: do., Sel. und Ktesiph., p. 42—7. 64 (sources in Syriac literature); J. Labour, Le christianisme dans l'emprise perse, Paris 1904.

That al-Maḍā'īn was also for some time an important centre of the gnostic sect of the Manichaean may be mentioned here; but it is doubtful whether their founder, Mani (Manea), as is often supposed came from Ctesiphon itself; cf. thereon most recently Schaefer, in Isl. xiv. 23.

Finally it may be briefly recalled that al-Maḍā'īn possesses considerable interest for the history of Judaism, especially for the Talmudic period of it. As in the Hellenistic period, the Jews under Sassanian and Arab rule had also their main settlement on the west bank in Behraiz which in Jewish sources is usually called Mahzā, "the town". There, as in the Greek Seleucia (cf. Streek, Sel. und Ktes., p. 10, 21), they formed an exceedingly high percentage of the inhabitants, indeed at times they seem to have been in the majority. That they are described as very rich is not surprising in view of the great importance of al-Maḍā'īn as a trading centre down to the time of the rise of Baghdād. At the same time their character is unfavourably described by the Mahzanēs; it differed from that of the other Jews of Babylonia which is perhaps mainly to be explained by the fact that there were many proselytes among them. They also had a famous college, which was however only the intellectual centre of Babylonian Judaism under Rabah bar Joseph (b. 229 A.D.), a native of Mahzā, and at other times was inferior to the other Jewish centres of learning in Babylonia. Nehardea, Sura and Pumbeditha. For further Jewish accounts of al-Maḍā'īn, cf. A. Berliner, Vater, zur Geogr. nach Ethnogr. Babylonien im Talmud und Midrash, Berlin 1883, p. 19, 23—24, 39—43: 61—62; see also Streek, Sel. und Ktesiph., 47, 63 and 64 (bibliography). Apart from the wretchedly modern village of Salmān Pāk the whole of the area of the town of al-Maḍā'īn measuring about 60 square miles is quite uninhabited. It is only from the middle of the xvith century that we have more or less full accounts of it by European travellers: cf. Streek, Sel. und Ktesiph., p. 47—8. The first systematic topographical and archaeological examination of the extensive ruined site was made by E. Herzfeld, who visited it five times between 1903 and
1911. He dealt fully with the results of his examination in 1914 in the second volume (not published till 1920) of his and Sarre's *Archäologische Reise im Euphrat- und Tigristeben*; cf. ii., p. 46—76 and the pictures on Plates xxxix—xliv (Vol. iii.) and cxxii—cxxxvii (Vol. iv.). Herzfeld gives (ii. 51) the first plan of the whole area prepared by him in 1911; cf. this reduced to 1/4 of the original also in Streck, *Sel. u. Babyt.* p. 50 and in Pauly-Wissowa, *op. cit.* iv., Vol. iv., 1106.

Of the towns on the west bank, notably Seleucia, there has survived from the Hellenistic period only remnants of the old city wall (al-sīr), a double wall of gigantic dimensions, on the north and (less considerable) south side. The whole west side of the old city is now sunk in a permanent swamp (harā) formed since 1900 of the annual inundations. Within the south half of the ancient city walls, there now rise from the otherwise flat plain two mounts of rubble about 15 feet high (djara'a), which in the 'Irak is practically synonymous with tell), namely the Djara'at al-Bārida and the Djara'at al-Buṭt al-Kādī. The former which takes its name (powder-millhill) from a powder-mill which used to stand there to supply the Turkish troops, may, from the finds of pottery, conceal an important part of the Sasanian foundation of Behistun. The second hill with the legendary name Djara'at (or Djara') al-Buṭt 'al-Ḳadī's daughter' may very well mark the site of the several times mentioned citadel of Seleucia-Kōkhā. Beyond the above mentioned permanent swamp, further hills and walls may be seen: — Tell ʿUmair (or Djara'at ʿUmair), Khusūf or Abū Hulayṣifya, al-Ṣuṣifya, al-Khāyāmīyat and Tell al-Dhahab. They perhaps all fell within the area of Seleucia, and probably come from suburbs of it.

The ruins on the east bank, that of the village of Salamān Fāk. After isolated wall-like ruins of walls and canals, the first considerable unit we reach is a large quarter of the town running for a mile along the Tigresi, one of the Hellenistic Seleucia covering 1,400 yards in breadth enclosed by a notable mediaeval destroyed wall of clay: — hence the name al-Tawalābi, the little clay-wall. Within this area lie a few farmplaces with palm-groves, mulberry trees and fields. Al-Tawaliba with its immediate vicinity must mark the site of Madina al-ʿAtiqa, the northern quarter of Ctesiphon. A second area filled with ruins is found around the village of Salamān Fāk and around the Iwān.

The village street of Salamān Fāk leads in a straight line to the much venerated tomb of Salamān al-Fārisī (Salamān the Persian) or, as it is usually called locally, of Salamān Fāk, *S. the Pure*. He is said to have been born in the town, to have adopted Islam and as Apostle to the Persians' is one of the most popular Shi'a saints. According to Muslim tradition he died at an advanced age in 656 or 657 in al-Madain, where the Caliph ʿOmar appointed him governor; it should be noted however that the Arab stories of Salamān's share in the conquest of the 'Irāq and in the government of al-Madain are little credible. Cf. on Salamān vol. iv., p. 116 and Streck, *Sel. und Ktes.* p. 53—54. The mausoleum with the alleged grave of Salamān which is crowned by a dome (it used to be shown in the vicinity of Isfahān) stands on the south side of a court enclosed by a high white turreted wall and in its present form may date from the first half of the xviith century, when it was renovated by Sultan Murad IV (1623—1640). In 1907—1908 the building was restored. A description of the interior by Kāsim al-Duḍqūlī is given in Herzfeld, *op. cit.* ii., p. 262, note 1.

South-west of Salamān Fāk about 1,000 yards from it close to the bank of the Tigris is a second Muslim tomb with a dome, that of Huḍhafa b. al-Yāmān, one of the "councillors" of Muhammad. The latter, an ardent champion of the 'Abid cause, obtained, we are told, great merit by building the first mosque in al-Madain and died in 657 in Kūfā: on him see Baldhārī, p. 289; Tabari, i. 2452; Streck, *BABYLONIA*, ii. 262; Herzfeld, *op. cit.* ii. 59.

The tradition that these two companions of the Prophet are buried here is old and goes back to the third (ninth) century — the earliest reference is in Yaʿqūbi, *B. G. A.*, vii. 320. Of the thousands of Persian pilgrims who annually visit the great Shi'a shrines of the 'Irāq (Kerbilā), Nādirā, Kāṣīmān and Sāmārā) many chose to visit Salamān Fāk as one of the stages on the way out or home.

K. Niebuhr (cf. his *Reisebeschreibung nach Arabien*, Copenhagen 1778, ii. 306) heard of a tomb of a third companion of the Prophet in al-Madain, namely that of ʿAbd Allāh b. Salām, [p. 2.] a Jew of al-Madina. The latter was a strenuous opponent of ʿAlī — never to come to the 'Irāq so far as we know. The Salāhndī Buḥdādī of 1317 (1906), p. 256 (according to Herzfeld, *op. cit.* mentions in addition to Ḥudhafa a certain ʿAbd Allāh al-Anṣari, buried in al-Madain, but I think his statement like that of Niebuhr (or rather his informants) is not to be relied upon. There is possibly some confusion with ʿAbd Allāh b. Sabī, who is said to have been of Jewish origin and accompanied the Caliph ʿAlī to the 'Irāq, but was there banished by him, as his extravagant enthusiasm for him made him a nuisance, to al-Madain, where he may have died. Details of his end are not known. Herzfeld suggests that ʿAbd Allāh b. Ḥulaybī, who according to Yaʿqūbi (p. 410) was murdered by the Khārdoj in 36 (658) while acting as ʿAlī's representative in al-Madain. As the interior of Salamān's sanctuary is said to contain two graves, the second may be claimed as that of this uncertain ʿAbd Allāh and not as that of the last Caliph Musta'ṣim executed by Ḥulaybī, as Mignard, *Travels in Chaldea*, London 1829, p. 78 says: he is followed by W. Alusworth, *Narrative of the Euphrates Expedition*, London 1855, ii. 276. For the existence of a tomb of a Caliph at al-Madain there is no literary authority. As to the second area of ruins, which begins south of Salamān Fāk, it is generally agreed that the great hall of Tahk Ikhār ("arch of Kish") and of the celebrated Iwan which will be dealt with briefly below. In the immediate vicinity of the Tahk, four groups of ruins may be distinguished in which the most notable is an oblong mound 20 feet high in the south, called locally ʿHusāni-i ʿKaisa, "the harem of Kish", the hyena hill. It certainly conceals a single building. All these groups of ruins which fringe the Tahk on the four sides undoubtedly belong to the palace of the Iwan, which must have covered an area about 400 yards long and 500 broad. Some 500 yards S. E. of the ruins of al-Tahk, behind an irrigation canal the surface shows fewer but continuous remains
of buildings, which stretch to a corner of the wall, called Bistān-i Kisrā, "the garden of Kisrā"; which perhaps enclosed a park for animals. A thousand yards S.W. of Bistān-i Kisrā rises another mound, 20—25 feet high, almost square at the base, Tell al-Dhahab = "Gold-hill" or Khusraut Kisrā = "Treasury of Kisrā". It is apparently one large building, perhaps the treasure-house built by Khosrau II (cf. Tabari, i. 1042).

In conclusion it must be emphasised that, for the proper appreciation of the ancient mediaeval and modern topography of al-Madā'in, the important fact must not be overlooked that the configuration of the whole country round was radically altered when the Tigris, since the end of the middle ages, completely changed its course here and now leaves its old bed immediately south of Ctesiphon for a stretch of 3 miles and describes a curve five times this length. We must further consider the possibility that not only has a considerable part of Seleucia disappeared in the Tigris, but smaller pieces of Ctesiphon have been gradually swallowed up by the floods of the river.

The most impressive memorial to its great past is now the Tāj-i Kisrā, which stands in the centre of the sun of al-Madā'in. The surviving portion consists of a gigantic façade 102 yards long divided into unequal portions by an arch 80 feet in width thrown boldly across. This, the front wall, originally over 100 feet high, divided into three stories is effectively relieved by open and imitated doors, arcades, pilasters and half columns. Through the gigantic archway a door reaches a spacious hall 150 feet deep, on either side of which are five parallel side-chambers. A wide door in the back wall of the hall leads into a wide court apparently square in plan.

For the place of Iwan in the history of art and the date of its origin, the reader may be referred to Herzfeld, op. cit., p. 74 sq. According to him the building shows a mixture of Oriental and Hellenistic styles. Sapor (Sabur) 1 (241—272) is the only possible builder; Khosrau I (531—579) seems to have undertaken a considerable restoration of the whole. The most characteristic part of Iwan, which clearly shows it was mainly intended for a palace of audience, is the great hall, in the Māsānian period the scene of ceremonial public audiences and receptions by the sovereigns. Nothing has survived of the architectural details of the Iwan, and the stucco or mortar coating in which these found expression has fallen off. The Kaiser-Friedrich-Museum in Berlin possesses stucco rosettes, which Herzfeld (Z. f. d. M. G. Ixxv., 1927, p. 226) identified as ornaments from the Iwan. In the interior, the palace, as we know from the accounts of the Arabs, was adorned with pictures and images in gilt relief. When the Muslims, pending the building of a mosque of their own, used the great hall of the Iwan provisionally after the capture of Ctesiphon, the paintings remained there intact and were still to be seen two centuries later. For example in the ninth century we find the poet Abū 'Uṣāda al-Buḥurī (cf. i., p. 773), who wrote a very fond of describing palaces, describing the Iwan in a famous poem from his own observation; see this poem in the edition of his Diwān printed at Stambul in 1300 (1882) (Vol. i., 108 sq). Almost the whole text is also given in Yākūt, i., 427—429; pieces of it in al-Khitat Khāshānī (Salman, p. 90—91) and in Kayrūnī, ed. Wustenfeld, ii., 304.

The majesty remains of Ctesiphon, which from early times have always made a deep impression on the Oriental mind, very soon inspired the imagination of the poets. The Persian poet Afšāl al-Din b. 'Ali Khākānī (d. 595 = 1200 [q.v.]) wrote an elegy on al-Madā'in, one of his best works; cf. Streck, in Grundriss d. iran. Phil., ii. 264. This was printed in Stambul in 1330 (1912) and in Berlin 1543 (1924). This latter edition entitled Aweyn-i Modā'in, a poème de Khākānī, adapted et augmenté par quelques poètes contemporains (pahl. No. 5 of the Iranşahr press) has a critical historical introduction by Dr. Riđā Tewfik and a commentary by the modern Persian writer Ḥusain Dāndī; on it, cf. E. G. Browne, The Persian Poetry of Modern Persia (Cambridge, 1914), p. 307.

Muslims regard the abandoned and ruined remains of the Persian royal city as monuments of the victory of their religion (on the alleged omen of the collapse of 14 pinnacles of the Iwan in the night of Muḥammad's birth, see Streck, Sel. una Babylon., p. 6) and as impressive symbols of fallen greatness. Like the pyramids, we find them in Arabic poetry as the regular symbol of the transitoriness of worldly power: cf. for example the verses of al-Tifūšī in Maḥfzī, al-Kāfītī; the chapter on the pyramids, ed. by E. Graefe (Leipzig, 1911), p. 47 and 58 (and 94). The Būyid Sulṭān Ḥabīl al-Dawla (1025—1045) recorded his visit there by incising on the wall of the Iwan two verses proclaiming the transitoriness of worldly things (see Yākūt, i., 429, s.): cf. also Streck, op. cit., p. 61. The Arabs reckoned the Iwan, like the pyramids, among the wonders of the world (cf. e.g. Ibn al-Fakhr, B. C. A. A., v. 255); indeed it was held to be the work of man but of the demons, the Dīnān [q.v.]. Quite early many legends became associated with the Iwan, most of which centre round the figure of Khosrau Anūshgarwān, still proverbial in the east for his generosity: e.g. the story of the old woman's hut which the king, undertook to guard within the precincts of the palace (see Streck, Babylonien, ii., 256—258; Streck, Sel. and Kītāb, p. 50 and J. A., 1851, Vol. 15, p. 489) which Herzfeld (op. cit., p. 68) traces to the lack of symmetry in the façade; also the story of the "chain of justice" to which petitions were attached (initiated by Ikhrān in Tabriz: cf. j. v. Hammer, Geschichte der Iskāhān, Darmstadt 1843, ii. 339) which according to Bormont still seem to be known among the people around al-Madā'in; cf. the legend published by him in Le Liban, La Revue du Domain, May 1926, p. 10—11: La Légende du Mena d'eau taken down from the lips of a Bedouin there.

Down to the accession of the 'Abbāsid the Iwan seems to have been practically intact; then they began to use it as a quarry but this was abandoned as too costly, the yield being far below the cost of obtaining it. As to the Caliph who ordered it to be taken down, authorities differ. Al-Mānsūr is usually given (754—775) but very often Harūn al-Rašīd also (786—809). In any case the partial destruction of the Iwan under the early 'Abbāsid is an assured fact; cf. Streck, Babylonien, ii., 255—256, 259; do, Sel. and Kītāb, p. 61—62; Herzfeld, ii. 63. The Iwan with the exception of the great hall and two wings of the façade had been destroyed by this time; for the part that was spared, the name Tāk-i Kissrā—now popularly pronounced Tāk-i Késrā as a rule—
came into use, first, I believe, in Rashid al-Din (Hist. des Mongols de la Perse, ed. Quatremère, p. 266), Yakut (i. 425), as well as Bākūwī (c. 1400) after him, know only the arched hall flanked by two wings as remains of the Iwān. The building remained in this state practically unaltered till 1888 when on April 5th on the occasion of a high flood the northern front wing collapsed, probably undermined by the ruthless robbery of bricks. An attempt was made a few years ago to save the threatened south wing by securing its foundations. Pictures of the Tāq-i Kisrā before and after 1888 may be found in Fr. Langenegger, Die Baukunst des Irān (Dresden 1911, p. 16.

The Kašr-āb-Adyəd, the “White Palace”, has been cleared of the stones of the capture of Ctesiphon it was spared by the Arabs like the Iwān. The Muslim general Sa’ad took up his quarters in it. It met its fate in the reign of the Caliph al-Muktafi (902–908) who had it destroyed to provide building material to complete the al-Tādi palace on the east side of Bagdad; cf. Streek, Babylonien, ii. 122; ii. 259; Herzfeld, op. cit., ii. 63.

Systematic excavations have never been conducted on the site of al-Madā’in. The antiquities found here come from isolated chance finds; for a list of these see Pauly-Wissowa, Suppl. iv., p. 1166–1167. The Deutsche Orientgesellschaft has just (autumn of 1927) begun work at al-Madā’in; and it is to be hoped that this enterprise, which on a considerable scale, will yield valuable results for the archaeology, history and topography of Seleucia and Ctesiphon, especially on disputed points which can only be decided by the spade.

The Encyclopaedia of Islam, III.
"l-Akrād of the Fihrist, 103, 14. There still exist only parts 1 and 2 of the K. al-Żawīs (Fihrist, 104), in the Zāhiriyah of Damascus (e.g. 'Abd al-Zayyāt, Khārisīn al-Kutub fi Dimashq wa-Damāsку, p. 28, N°. 1, 3). Of his historical works his K. Ḥabūr al-Ḫalīfa 'al-Kabīr seems to have been the most comprehensive. It came down to the reign of al-Mu'tasim. Tabari's account of the end of the reign of the caliph Hīṣām in 125 and the beginning of the reign of al-Walīd seems to be based on it, although for 'Umayyad history he generally prefers Abū Mīkha'il. The K. al-Dawla al-'Abbāsiyya, according to Yākūt, Irshād, v. 315, 8, consisted of several books, some of which were still available to him in Sukkāri's manuscript. He is wrong however in thinking that this work was unknown to Ibn al-Nadīm, for it is evidently the K. al-Dawla of the Fihrist, 103, 19, but it was omitted in the copy used by him. Of his historical monographs, the one used most copiously by Tabari was his history of Khurāṣān, the title of which K. Futūh Khurāṣān already given in the Fihrist, 103, 19, made its subject plain; it is a most important source for the history of Central Asia in the period of the Muslim conquest. His history of Başra (Fihrist, p. 103, 9) seems also to have been Tabari's main source for his account of this town. As his authority Tabari gives 'Umar b. Shabba; in one passage he definitely mentions the latter's K. Ḥabūr Aḥl al-Baṣra (i. 168, 10); perhaps he knew Madżīn's work through the intermediary of 'Umar b. Shabba. Lastly Madżīn's work on the Khāridjīs was used not only by Tabari but also by Bābāhīr in the K. al-Ḫalīfa (Ahwardi's Anonymous), by Mubarrad in the Kāmil and Abu 'l-Farādj al-Ḫīṣānī in the K. al-Ḫīṣānī. His separate work on the battle of Nahrawān has been used by Tabari for the year 38. From his history of Madīna (Fihrist, p. 103, 23) al-Bābāhīr seems to have taken his statements in the K. al-Futūh, p. 11, 2; 13, 6; 47, 17 and he seems to have been acquainted with Madżīn's numerous other monographs on the history of the conquest. Among al-Maḳdisī's pupils, al-Zabārī b. Bakkār, is the best known conserver of his work, which was however rendered obsolete in the next generation by the systematic works of Bābāhīr and Tabari.

MADĀR. [See Ghāzi Miyan.]

MADDA (α.), a philosophical term = hayyūla, Gr. φῶς, like its correlative Īsara, Gr. ἵππος, a word of varied significance. In general it means that which can possibly exist (δυνατός) but which really is not (has no form) but may become something through the adoption of opposed determinatives (forms). As the realisation of the possible is conceived as advancing by stages, a lower stage of form may again be conceived as material for a higher form of development. The question is further complicated even in Aristotle by the distinction between a physical and a logical material (this consists in the conception of species, which is formed by the specific differentia) and by the division of the physical into a heavenly and an earthly material. In addition there were further different, especially neo-Platonic, influences among the Arab philosophers.

The fourfold division of matter is very common, e.g. in the Ikhwān al-Safā': 1. prime matter, either directly or indirectly an emanation from the divine being, i.e. an intelligible matter conceived, according to Pseudo-Empedocles, as the first emanation but usually explained as in neo-Platonism as the last in the series (spirit, soul, nature), often defined as the efflux of light from the light of God; 2. the matter of the universe as a whole, especially and permanently, of the heavenly spheres, which first of all adopts the indefinite form of corporeality (extent) or at once the three definite dimensions; 3. the matter of the four earthly elements, fire, air, water and earth; 4. energy, which is already formed in some way, but can be used for definite purposes, e.g. wood, stone etc.

In agreement with Aristotle the philosophers regard God as pure immaterial form. Only an extreme mystic like 'Abd al-Karīm al-Djīlī can call Him the Ḥayyūla of the world. As regards the lower spirits (spirits of the spheres, angels etc.) opinions differ, but most thinkers find it easy to assume an intelligible matter, and even to recognise in the first created, the highest world spirit, a material principle; next however they are fond of distinguishing this intelligible matter as receptive and the earthly sensible matter as passive. — Different opinions are expressed regarding the principium individuationis: in the comparatively speaking purer Aristotelians we find the tendency to seek it in matter and in those who are more inclined to Platonism in form. All insist, although with varying emphasis, upon the desire of matter for form more than the love of form for union with matter.

As to logical matter, it may be noted in conclusion that the three modalities of judgment (necessity, possibility and impossibility) are described as "matters" (Ibn Sinā). — Cf. also the article 'UNSUR.

(TJ. DE BOER)

MADHANA. [See Manāra.]

MADHAB. [See Fiqī.]

MADHHIDJ, an Arab tribe of Yemen origin, treated by the genealogists to Mālik b. Udād, who is said to be descended in the fourth generation from Khaṭān and to have received his name Madhhidj from a hill of this name on which he and his brother Taiy were born. His sons are said to have been: Sa'd al-'Abbāsha, Djaal, Yahbābir called Murād, and Zaiz called an Az. The Madhhidj whose tribal lands are said to have lain near Tardj "on the road to Yemen" (Yākūt, s.v.) and whose brother tribes were Khaṭhām and Murād, were, according to tradition, at war with the 'Amir b. Sa'āda about the time of the appearance of Muhammad; in the course of this war was fought the battle of Faif al-Rīf. In the Muslim period, families of the tribe of Madhhidj were predominant in Kūfa along with those of Kinda and Hamdān.

MADĪD, the second metre in Arabic prosody, very little used on account of a certain heaviness in its rhythm. In theory it consists of four feet in each hemistich and the prosodists quote in support of this several anonymous verses. In practice there are only three.
There are three ‘arād and six darb:

First row: fā’ilātun, fā’ilātun, fā’ilātun, fā’ilātun, fā’ilātun, fā’ilātun.

Second row: fā’ilātun, fā’ilātun, fā’ilātun, fā’ilātun, fā’ilātun, fā’ilātun.

Third row: fā’ilātun, fā’ilātun, fā’ilātun, fā’ilātun, fā’ilātun, fā’ilātun.

fā’ilātun may become fā’ilātun; it only changes into fā’ilātu (without n) if fā’ilām which follows it retains its long vowel. Fā’ilātun, except in the second ‘arād with its third darb, only changes into fā’ilām when fā’ilātun preserves its n.

(NAH. AL-NAGQUI)

AL-MADİNA, a town in Arabia, the residence of Muhammad after the Hijāra, and capital of the Arab empire under the first caliphs. The real Arabic name of the town was Yathrib, Jathirppa (this is the correct reading) in Ptolemy and Stephan Byzantisus, Jihrib in Minaean inscriptions (M. Hartmann, Die arabisccc Frage, p. 253 sq.). Al-Madina on the other hand is a descriptive word “the town” and is taken from the Aramaic, in which Madinina means strictly, “area of jurisdiction” and hence town (of some size). In the Meccan sections of the Kūfān it is found as an appellative with the plural al-Madīnān, while in the Madina Sūras al-Madina is used as a proper name for the residence of the Prophet (ix. 102, 121; xxxii. 60; ixiii. 8). The old name Yathrib on the other hand is found only once (xxxiii. 13). It is evident from these references that the usual explanation of the name as “the town” (of the Prophet) is a later one. It is rather to be supposed that it was a result of the existence of a strong Jewish element in Yathrib that the Aramaic loan-word became the regular name of the town. It is analogous to the originally South Arabian Hadjar [q. v.] “town”, which is applied to the capital in Bahrain. Of the Madinese poets, Kās b. al-Khāṭim uses the name Yathrib exclusively while Hāsa b. Thālūt and Ka‘b b. Mālik use both names, which is also the case with Muḥammad’s ordinance of the community (Ibn Ḥishām, p. 341 sqq.).

Madina is situated in the Hijāra on a plain sloping very gently towards the north, the boundaries of which are marked in the north-and-northwest by the hills of Ubd [q. v.] and ‘Air about four miles from the town, two outer spurs of the range which forms the boundary between the Arabian highlands and the low lying coastslands (Thāma). West and east the plain is bounded by the Ḥarras or Lābas, barren areas covered with black basalt but the eastern Ḥarras lie at a greater distance and leave between them and the town room for more fertile patches so that the eastern frontier of the plain is really formed by a row of low black hills. In the south the plain stretches away farther than the eye can reach. Its noteworthy feature is a richness in water unusual in Arabia. All the water-courses come from the south or from the Ḥarras and flow to the north, where they combine at Zaghāba and then take a westerly course to the coast in the wādī Idam. As a rule they only contain water after rain but they keep the level of the subterranean water fairly high so that there are a considerable number of wells and springs. After heavy rains the open square of al-Manākhā (see below) forms a lake and considerable inundations are not rare and may even be dangerous to the buildings in the eastern part of the town. One such flood was particularly threatening in the reign of the Caliph ‘Uthmān so that he had a dam built as a protection against it (Balādhurī, p. 11) and even worse were those of the years 660 and 734 A.H., when the wall created by the great volcanic outburst was broken through by the water (Samhūdī-Wāstensfeld, p. 23).

The water is in places salt and unpalatable, and different governors of the town have made aqueducts to bring to the town good water from wells of sweet water farther to the south. The water courses have different names: in the west al-‘Aṭīq with W. Būthān and Rantān, in the east W. Kānāt with Mabīrūr and Mūdīr. The soil is of salty sand, lime and loamy clay and is everywhere very fertile, particularly in the south. Date palms flourish exceedingly, also oranges, lemons, pomegranates, bananas, peaches, apricots, figs and grapes. The winters are cool and wet, the summers hot rarely sultry. Modern travellers say the air is pleasant but not very healthy and fevers are and always have been a plague, especially for newcomers as Muḥammad’s followers had frequently to learn (Balādhurī, p. 11; Farazdāk, ed. Boucher, p. 9, 13; Burchardt, Reisen in Arabien, p. 482 sqq. 605; Burton, A Pilgrimage, p. 176 sqq.; Wensinck, Mohammed en de Bedj-, p. 31; A. Lammens, Dāima, p. 54; Goldziher, Muḥammadische Studien, ii. 241). The Umayyads called the Town “the filthy” in contrast to the honorific al-‘ayyūba which the Prophet is said to have given it (Goldziher, ḥ. cit., ii. 37).

The way in which Madina is favoured by nature forms a striking contrast to Mecca which lies in a rocky valley where corn does not grow (Sūra xiv, 40). From the very beginning it was not a regular town but a collection of houses and cottages which were surrounded by gardens and cultivated fields, the inhabitants of which were devoted to agriculture and therefore contemptuously called “Naḥa-means” by the Bedouins. These scattered settlements only gradually became consolidated to a townlike agglomeration, which however lay farther north than the later town, as the name Yathrib according
to Samtūf (Wüstenfeld, Geschichte der Stadt Madīna, p. 37) was especially associated with a place west of the tomb of Ḥamza where the Banū Ḥārītah settled. The town which arose in this way was not surrounded by a wall so that its defences were the thick groves of palms and the orchards which surrounded the houses. As they were less thick on the north and west sides, these were most exposed to hostile attacks. The little forts (ṣūnum, plur. ʿādām or ʿudām, plur. ʿādām) which were built in considerable numbers formed a substitute for a wall and the inhabitants could retire into them in times of trouble.

There were in later times no reliable traditions regarding the origin and earliest history of Madīna and the historians endeavoured to fill the gap themselves and as elsewhere made the Dārūhum (q.v. and also Krauss, in Z. D. M. G., 1x, 352) and the quite unhistorical 'Amalakites play a part in (cf. also Hassan b. Thabit, ed. Hirschfeld, N9, 9, verse 6). It is only with the coming of Jews to Madīna that we are on surer ground, but the historians know so little of the exact period of these settlements that they connect them sometimes with Moses, sometimes with the deportation of the Jews under Nebuchadnezzar, and sometimes with the conquest of Palestine by the Greeks or by the Romans. According to various references in the Talmud there were Jews in Arabia in the early centuries of the Christian era and this certainly means North Arabia in the main (see Hirschfeld, Beiträge zur Erklärung des Koran, p. 49 sq.), and that they were numerous is evident from the existence of Jewish communities in Ẓāimā, Ḥijrār (Jaussens and Savignac, Mission, p. 150, 242), Khaibar, Wādī 'l-Kura, Fadak and Maḵnā, to which may be added that in Madīna. Everywhere in these cases they took over and developed the cultivation of the soil, and it was probably due to them, that these scattered settlements each developed into a kind of town; evidence of this is found in the Aramaic name Madīna for Fāqirūb. According to the definite statement of Hassan b. Thabit (N9, 9, verse 8) in Hirschfeld) they built a number of small forts in this town. But that they were not the first to do this may probably be concluded from the fact that the earliest inhabitants were not pure Beduins (according to Lammens, Ṭabīf, p. 72, these forts were built after the model of those of the Yemen). The Jewish tribe of Kainuḵā played a prominent part in the immigration, as at a later period one of the principal markets in the western part of the town was called after it. But gradually the tribes of Kuraizah and Naḏīr came to be the leading ones. In Madīna Jewry. The former dwelled with the Bahdal on the W. Mahzir, the Naḏīr on the W. Buṭḥān (Kīlāb al-Aṣghārī, xix, 95, where the Jewish tribes and the jāzaed Arab tribes are detailed). While in this passage, as usual, the Kurāizah and the Naḏīr are numbered among the pure Jews, according to a notable statement in the historian Yaḵtūbi (ed. Houtsma, ii, 49, 52) they were not pure Jews but jāzaed clans of the Arabic tribe of Dārūhum, which Noldeke has repeatedly emphasized as a genuine tradition. Now it is historically certain that at that time there were many Jewish proselytes (cf. Ibn ʿUtayba, Kīlāb al-Maḏārīf, p. 299) but in spite of this there are decisive reasons for believing that the Jewish element in Madīna did not arise in this way. It is of special significance that the Kurāizah and Naḏīr are frequently called the Kākhāni, the 'two tribes of priests', which shows that the Jews knew their genealogy and laid stress upon their descent (cf. e.g. Ibn Ḥāṣim, p. 660, 18: 'how reviled the pure of the two tribes of priests'). The same thing is seen from the fact that Naḏīr Ṣafyā was married by Muhammad as described as belonging to the family of Aaron (Ibn Saʿd, viii, 86, ). But the decisive fact is the way in which the Prophet speaks in the Madīna sūras to the Jews there. He apostrophises them as sons of Israel and reminds them that God has raised them above all men (ii, 44, 116); he brackets them with the ancient Israelites as if they had taken part in the Exodus from Egypt (ii, 46 sq.); Allah gave Moses the scriptures so that they might be rightly guided (ii, 50); they break the laws which bound them to observe at the treaty of alliance (ii, 77 sqq.) etc. Such passages suggest as clearly as possible that he regarded them as true descendants of the ancient Israelites. There must therefore have been in addition to the jāzaed Arabs a stock of true Jews, and indeed it is obvious that without such there could have been no proselytes. Wellhausen moreover has aptly pointed out that the Arabian Jews by their language, their knowledge of the scriptures, their manner of life, their fondness for malicious mockery, secret arts, poison, magic, and cursing, and their fear of death, make an unusual impression which cannot be explained simply by the jāzaeding of pure Arabs. But on the other hand it must not be forgotten that the Jews in Arabia were very much influenced by their surroundings and had assumed a character of their own. For example we find among them the division into tribes and families, characteristic of the Arabs, with the obligations associated with this. The names of these tribes cannot be traced to old Jewish names but are thoroughly Arabic in appearance, which is also true of their personal names among which true Jewish names like Samawal and Sīrā are rare. The arabisation of the Jews is particularly notable in the poems which are ascribed to Jewish poet of which might have been equally well written by Beduins (see Noldeke, Beiträge zur Kenntniss der Poesie der alten Araber, p. 59 sqq.).

While the Jews were supreme in other places like Khaibar, al-Fadak etc., the position was changed in Madīna as a result of a new immigration which the Arabs associate with the bursting of the dam at Maḏīrīq [q.v.] and the migrations of South Arabian tribes produced by it. In this way the two so-called Kaila tribes, Awa and Ḥaṣarrāj [q.v.], came to Madīna. No particulars of their coming are recorded, but from an interesting verse in Ibn Khurdabdīhī (B.G.A., vi, 128) and Yākūt, iv, 466, it is evident that they were for a long time subject and tributary to the Jews and that this part of Northern Arabia was at this time under Persian rule, in keeping with the usual Jewish policy of maintaining friendly relations with Persia. Later the Kaila Arabs however succeeded in casting off the Jewish yoke and bringing the Jews under their rule. According to tradition the occasion of this was that a powerful Jewish king named Ṣittyaw, who exercised the just primae nocis, was murdered by a Ḥaṣarrāj Mālīk b. ʿAbd Allāh to save his threatened sister — a widely disseminated motif (cf. K.
Schmidt, *Fus primae notitii*, 1882, and also *R. E. F.,* 1883, p. 156 sqq.) on which too much stress should not be laid. As to later events there are two different traditions: some make Malik after his deed seek the help of a Ghassânî ruler, Abu Djihaila (cf. the name Djiabela among the Ghassânîs), others of a South Arabian Tubba', As'ad Abïkârib (c. 430; M. Hartmann, *Die arabischen Fragm.* p. 482, 497). In this second story, Wellhausen finds some support in some old verses and assumes that Tubba's is here an erroneous popular name for a later Abyssinian viceroy. There is however nothing in these verses about an attack of the South Arabs on the Jews of Madina alone but on the inhabitants of the town together, so that Wellhausen further supposes this attack may have so weakened the Jews hitherto predominant that the Arab inhabitants succeeded in breaking their supremacy; but this is of course no more than an attractive hypothesis. In any case the name Abrahā in Kāis h. al-Khaṭjīm, N°. 14, verse 15, cannot be used as a basis for further hypotheses for it is certainly not the celebrated Ahrahā [q.v.] who is meant. Besides, these stories contain legendary allusions to Muḥammad's future appearance in Madīna, which betrays at least a later recasting by Muslims.

The new lords of Ṭaḥrīr took over the forts occupied by the Jews and built several more (Samhādī, p. 37). They also learned "Nahataan" arts from them and began to cultivate palms and pursue agriculture. The Khazradjīs, whose principal family was Nādhījār (or Ta'm al-Lātī), as the most powerful tribe assumed the leadership and occupied the centre of the town where the modern Madīna lies. West and south of them lived other Khazradjī tribes while the territory of Ḥārīrīr ran to the east. The Awsls, who also comprised several families, settled south and east of their brethren, the Naḥīṭ in the northeast separated by the Ḥārīrī from their kinsmen. The two principal Jewish tribes Naḍrīr and Kūraḍa preserved a certain amount of independence and retained their lands under the name of the Kainuḵā' which retained their lands in the southwest although their main industry was practising the goldsmith's art. Further details of the parts occupied by the tribes and families are given in Samhādī (Wüstenfeld, p. 29 sq., 37 sq.) but these can only now he partly identified. Besides there were in Madīna, in addition to the Jews and the immigrant Kāila tribes several Arab tribes, some of which were already there when the former came. They were closely connected with the Jews and were partly judaized. The settlement of affairs reached in this way gave the town a period of peace, which was however gradually broken as an increasing enmity arose between the two Kāila tribes, as was not infrequently the case with Arab brother-tribes. At first it was individual families that fought one another but the confusion gradually spread until the existence of the whole town was threatened. The quarrel began with the feud of Sumair, so-called after an Awt named Sumair. This was settled by an arbitrator but it was not long till renewed friction led to renewed hostilities, of which the so-called feud of Ḥātib was the most serious. We are introduced to this second period by the poems of Kāis b. al-Khaṭjīm of the Awt family of al-Nabīt. The fighting throughout ended unfavourably for the Awtis and the Nabīt were finally driven from their possessions. In their need the Awtis appealed for help to the two principal Jewish tribes. They at first refused it; but when the Khazradjīs had foolishly slain some Jewish hostages, they concluded an alliance with the Awtis and declared themselves ready to assist them. It was no longer a fight between a few families but a struggle between the two great rival tribes in their fall strength and other inhabitants of Ṭaḥrīr, even the Beduins of the country round also took sides. At Bu'aṭh [q.v.] after long preparations a decisive battle was finally fought. It at first looked as if the Awtis were again to be defeated. The tables were turned and the Khazradjīs suffered a severe reverse. It is interesting to note that 'Abdallāh b. Ḫusayn of the Khazradjīs on this occasion displayed the same irresolution that he did later in his opposition to Muḥammad; he took the field with the others but did not enter the battle. On the day of al-Sarrā he actually ran away. The battle of Bu'aṭh restored the equilibrium between the principal tribes, but the continual fighting had sapped the strength of the town and the bitter feeling which continually revealed itself made the lives of the inhabitants more and more unbearable. Then a momentous change took place when the people of Madīna, who required a leader with a strong hand, and Muḥammad, who had only to a slight extent succeeded in winning over the Mekkans to his religious views, came into contact with one another.

The Kāila tribes at the time of their immigration to Ṭaḥrīr had been heathens like the great majority of the Arabs. The principal deity they worshipped was Manāt [q.v.], after whom the Awtallāh were originally named hut they also reverenced among others al-Lāt (cf. the name Ta'm al-Lāt already mentioned). Through living alongside of Jews they became influenced by their religious and moral ideas, but unfortunately we know very little of their spiritual outlook before the coming of the Prophet. The poet Kās deals in the Beduin style mainly with the quarrels between the tribes and families and rarely refers to religious matters. He nowhere mentions the local deities but refers to Allāh (No. 6, verse 22) whom he calls the creator (5; 6; cf. Goldziher, *Z. D. M. G.*, 1vii. 398), which is in itself sufficient to prove Jewish or Christian influence. Of him he says in N°. 11, verse 8: "Allāh will only what he will"; verse 13, 12: "Praise be to Allāh, the lord, the lord of the building" refers to the Ka'ba in Mecca, the masjid covered with carpets (5, 14). The three days in Minā are mentioned in 4, 4, which shows that they then as later in the Muslim poets gave the young men an opportunity for love-affairs with women of other tribes. In rejecting a life after death, 6, 22, he is quite on a level with the pagan Mekkans. Alongside of such representatives of a mixed religion there were others whose conceptions had developed farther through contact with Jews or Christians, so that they were reckoned hānis [q.v.] as they definitely rejected the popular deities and had assumed a tendency to asceticism. Abu 'l-Haïtham and As'ad h. Zūrān for example professed monotheism before they became acquainted with Muḥammad (Ibn Sa'd, iii/ii. 22, 139). A Khazradjī, Abu Kāis Sīrma b. Abī Anas, wore sackcloth and laid stress on levitical purity; he actually thought of becoming a Christian hut gave up the idea and adopted Islam when an old man (Ibn Hīṣām, p. 347 sq.). A man of the Awt tribe,
Abū 'Amir 'Abd 'Amr b. Ṣaifīt was known as "the monk" from his ascetic mode of life; he later became an enemy of the Prophet, left Madīna and fought against him on the side of the Meccans; he is also said to have supported those who built a rival mosque at the time of the Tabūk campaign (Ibn Ḥišām, p. 411; Ibn Sa'd, ii/ii. 90, 7; Willki-Wellhausen, p. 310). In evidence of such influence of Christians in Madīna one might quote a verse of Ḥassān b. Thāḥit (ed. Hirschfeld, p. 133, 7), but this probably refers to a later period and opportunities of mixing with them were to be found in many places in Arabia. One result of living alongside of Jews in Madīna was that the art of writing was quite well known there (cf. Ibn Kūtaibah, Ktāb al-Maṭrīf, p. 132 sqq.; Ballādhūnī, p. 473 sqq.; Ibn Sa'd, ii/ii., passim).

The spiritual influence of the Jews on the Arab inhabitants of Madīna became an important factor in the relations between them and Muhammad, for it made them receptive to his religious ideas with which they became acquainted by visits to Mecca and in other ways. How finally a treaty was concluded between him and several representatives of the Madīnees, by which the latter pledged themselves to take him into their community and to defend him as if he were one of themselves and how he and those of his followers who were still faithful to him thereupon migrated to Madīna is related in the article MUHAMMAD. After a brief stay in the southern suburb of Kūhī he entered the town and took up his abode with a Ḫadhrajī, Abū Ayūb al-Ṯālīb b. Ṣa'id, with whom he lived till a dwelling was arranged for him. He is said to have left the choice of the site to the movements of his camel — if the story is true, a very clever move not only from the religious but also from the political point of view. In any case it is certain that hardly anything ever showed so clearly his gift, based on his unshakeable belief in his prophetic call, of leading men to follow his will, as the fact that he succeeded in a very short time in bringing some kind of order into Madīna, hopelessly split up by feuds, and making a kind of unity out of the heterogeneous elements in the town, the earlier Arab inhabitants of Yathrib, the later immigrants, now predominant Kaila tribes, the Muhādhīrīn from Mecca and the Jews or judaized Arabs. We get a glimpse of the first step towards this goal from the ordinance of the community preserved in Ibn Ḥišām, p. 341 sqq. ("Book of the fines"); cf. Ṣahāri, Glossary s. v. 'ākūf, which Wellhausen, Skizzen und Vorarbeiten, iv. 67 sqq., and following him Caetani, Annali dell' Istituto, i. 393 sqq. and Wensinck, Mohammed de Joden te Medina, p. 78 sqq. have discussed. It is most interesting for its omissions and it lacks to a marked degree clear and logical fundamental ideas, because Muhammad was content temporarily with what could be attained and avoided everything that might cause strife. In it he calls himself the messenger of Allāh, but there is no reference to his divine inspiration. His object is to form a unified umma out of the inhabitants of Madīna and this is defined from the religious side as the community of believers from Mecca and Yathrib. But the non-believers are not excluded, and the umma coincides rather with the town of Madīna which included also Jews and heathens, of whom it is not demanded that they should adopt Islām. The tribes retain their autonomy as regards blood-vengeance and ransom of prisoners, but against the rest of the world generally the affording of protection was obligatory on every member of the community without exception and no one could conclude peace separately with the enemies of the community (particularly the Kurāshī). All important matters, out of which misfortune might befall the community, were to be brought before Allāh and Muhammad. The valley of Yathrib was to be haram (or haram) for all who were bound by this ordinance. The whole document thus alternates continually between religious and purely political clauses in a very opportunist fashion. It never became of great importance and it soon fell into oblivion as it was rendered obsolete by the rapid progress of events, certainly not against the wish of Muhammad whose plans went far beyond what was laid down in it. The main cause of its loss of importance was the breach which soon occurred between Muhammad and the Jews, which the latter provoked by their scornful criticism of Muhammad's revelations, especially of the weak points revealed in his reproduction of stories from the Old Testament. This meant a serious threat to his authority and in addition the Jews endeavoured to destroy the agreement reached in Madīna by endeavouring to revive the old hostility between the two Kaila tribes (Ibn Ḥišām, p. 385 sqq.; cf. Sīra, iii. 114 sqq.). To meet these difficulties, which of course were very welcome to his enemies in the town, Muhammad worked hard to unite his followers for a common object, the war with the Meccans, by which he could at the same time avenge the resistance offered him there. It was at first difficult for him to arouse enthusiasm for this war among the Muhādhīrīn and even more the Ṭanīr but finally, when a fortunate accident occurred to help him, he succeeded in bringing about a war with the Meccans which led to the momentous victory at Badr. On the further fighting of this campaign, the battle of Uhoud and the name of the ditch, cf. the article MUHAMMAD. The latter campaign gets its name from the ditch (Khanḍāk q.v.) which Muhammad on the advice of a Persian (Salāmān) had dug around the unprotected parts of the town and which, in spite of its modest dimensions (it is said to have been a fathom broad), formed a serious obstacle to the enemy. Ibn Dujayr in the sixih century still saw traces of it, an arrowshot west of the town. On its further course cf. Wensinck, Mohammed en de Joden, p. 26, 31. The Meccans in this fighting gave him very material assistance by their lack of warlike ability and energy, and the war contributed to consolidate his position in Madīna, aided not a little by the lack of resolution among the Muhādhīrī who never managed to seize opportunities favourable to them. He was thus not only in a position to continue the war against his native city but also to repel the Jews in ruthless fashion for all the annoyance they had caused him. After the battle of Badr, the Kainūkī were driven out of the town and after the battle of Uhoud, which went against the Prophet, the same fate was meted out to a Kāhin tribe, the Nadir. But the worst lot was that of the Kuraiz, whom in spite of the intercession of the Awsis he had massacred. These events however do not show the Jewish tribes in a favourable light as they made no attempt to help one another but left each other
in the lurch in most cowardly fashion. The Kurāja alone at the massacre showed a courage which to some extent atones for their previous attitude. In this way Muhammad succeeded in disposing of the danger that threatened him from the Jews, for the Jews who were left in Madina were of no importance and caused him no serious difficulties. With the treaty of Ḥudaybiya in the year 6 A.H. [cf. MUHAMMAD] the war with the Kurāja was practically finished, for in it his genius for diplomacy succeeded in bringing them to recognise Madina as a power equal in importance to Mecca. The official conclusion of the struggle was the bloodless occupation of his native city in 8 A.H. However great a triumph this was for the Prophet, it produced a new feud which was to prove fateful for Islam after the death of Muhammad. Even before the decisive turn in the struggle with Mecca, in the campaign against the Banū Muṭṣalf, the ill feeling between the emigrants and a section of the people of Madina came to a head in threatening form. Ibn Ḥishām has recorded some of the hoastful speeches and threatened to expel the troublesome intruders (cf. Ṣūra, ixii. 8), which he naturally denied when the Prophet later took him to task. But when Muḥammad had entered Mecca, his faithful followers in Madina became anxious, as they feared he would now abandon their town and return to his native place. He calmed them however and declared that he would live and die with them (Ibn Ḥishām, p. 824). But when he began to treat the Meccans with great clemency and after the battle of Ḥunain was striving to win them over to his religion by rich gifts, the Anṣār with justice felt themselves slighted and once again feared that he would abandon them. But he delivered them a speech in which he reminded them how he had united them when they were living in hostility to one another and declared his gratitude for all that they had done for him, and when he concluded by asking them to he satisfied if others went home with captured herds but they with the messenger of Allah, they burst into tears and withdrew satisfied (Ibn Ḥishām, p. 885 sq.). While in such stories there may be an echo of the later antagonism between the Anṣār and the Kurāja, they undoubtedly give a not inaccurate idea of the feelings which found expression and this time. It is all the more remarkable that according to various indications there must have been an opposition to Muhammad at the time of the Tabiīt campaign in Madina. His orations against the Munāfikūn in the ninth Sūra sound unusually excited and recall those of the Meccan period with their threats of punishment. There is also the notable, but unfortunately not quite clear story of the Masjd al-Dirār (cf. also Lammens) which some men had built south of the town in the land of the 'Amr b. ʿAwf and which he sanctioned until he saw that its object was to provoke discussion among the believers for the benefit of his former enemies (Ṣūrā, ix. 108 sqq.), wherefore he had it demolished. According to another story, the already mentioned Ḥanif Aḥū 'Amir was the moving spirit in it, (Ibn Ḥishām, p. 906 sq.; Wajūdī-Welhausen, p. 410 sq.; Tabari, i. 1704 sq.; Ibn Saʿd, II/ii. 36, 8, 96, 13). In any case Muhammad succeeded in again restoring peace, probably assisted by the fact that the leader of the Munāfikūn died soon afterwards.

Faithful to his promise, the Prophet remained in Madina till his death on June 8, 632. According to a reliable tradition (Ṭabarī, i. 1817; Ibn Saʿd, ii/I. 57, 58, 59, 71, 6), his corpse lay unburied for a whole day, so that its putrefaction was far advanced when it was finally buried under ʿAṣīla's house, apparently a result of the great confusion into which the Prophet had plunged the town. The nity created by his strong hand at once fell to pieces; the Anṣār assembled and chose the Khazzājī Saʿd b. ʿUbdā as their chief, while others proposed that the government should be shared between the Anṣār and the Muhāǧirūn. ʿUmar's rapid and vigorous intervention however succeeded in thwarting these plans so threatening to Islam and carrying through the election of Aḥī Bakr as Caliph. He and his two successors resided in Madina which thus became the capital of the rapidly growing empire. Aḥī Bakr and ʿUmar, like the Prophet, were buried under the house of ʿAṣīla, while ʿUḥman's body was brought in the darkness on a door to the Jews to thwart any such obsequies and stone-throwing. In this period no one thought of strengthening the defences of the capital, not even during the ridda after the Prophet's death and still less later when the holy wars were waged exclusively in foreign lands. ʿUḥman had the forts taken down, but remains of them could be seen as late as the tenth century (Masʿūdī, K. al-Tanbih, B. G. A., viii. 206).

ʿAll's reign brought a complete change for Madina. When the great civil war broke out between him and his rivals and the decisive battles were fought in the provinces, the Caliph recognised that the vast empire could not be governed from the remote corner of the world in which Madina lay. While the earlier caliphs had remained in the capital and sent out armies of conquest from it, ʿAll placed himself at the head of his troops and set out from Madina in Oct. 656, never again to see it. He made Kufa his capital and after Muʿawiyah's victory Damascus took its place. Madina now sank, like its old rival Mecca, to the rank of a provincial town, unaffected by the current of the world's events. What plous old folks thought of this change is reflected in a characteristic tradition (Dinawari, p. 152 sq.) according to which several prominent Anṣār tried to induce ʿAll to abandon his plan of leaving Madina: "What thou dost lose in the form of prayers in the mosque of the Prophet and the course between his tomb and his pulpit is of more value than what thou expectest to find in the ʿIrāq; reflect how ʿUmar used to send his generals to war; there are still just as capable men amongst us as then!" But the Caliph replied: "The wealth of the state and the armies are in the ʿIrāq and attacks threaten from the Syrians, and I must be near them".

Madina with its venerable associations and the tomb of the Prophet could not of course become quite unimportant; on the contrary, its sanctity increased in the eyes of Muslims, as the more the faith of Muḥammad became imprinted in their conceptions; but the life of the town became more and more remote from the real world in which actual history was being unfolded. Aḥī retired all who wished to keep aloof from the turmoil of political happenings, like ʿAlī's son Ḥasan, after he had abandoned all his claims (Ṭabarī, ii. 9; Dinawari, p. 232). ʿUṣayn also went there from Kufa, but left it again to make his desperate attempt to gain his rights, and it is significant that none of the Madina Anṣār
went with him (Wellhausen, *Die Oppositionspar-
teiien*, p. 69). When he was slain, his wives and son were brought to Madina, where they lived in peace and took no further part in the fighting. 'Ali's son, Muhammad b. al-Hanafiya, lived in Madina (Dinwari, p. 308). It was not however only relatives and ardent followers of the Prophet, who preferred to live here in his city, but several of his former enemies, the Umayyads, also felt attracted thither by the quiet and easy life and would not go to Damascus (Lammens, *Études sur le califat de Moawia*, p. 35). In this way Madina gradually became the home of a new population, consisting of people who wished to enjoy undisturbed the great wealth which the wars of conquest had brought them. Life there became more and more luxurious until finally the holy city became so notorious (Khitâb al-Asghâni, xxi. 197, 19), that during a rising in the year 127 (745) the last Umayyad Caliph Marwan II could ask one of the participants in it how it was that the wines and singing-girls of Madina had not held him back from taking part in it (Tabari, ii. 1910). Such was the side of his career of the present inhabitants of Madina (Travels in Arabia, 3rd ed., p. 151: "carding, playing, tipping in arak, brutish hemp smoking, ribald living"). This was the golden period of Madina about the glories of which the poets sang. Flourishing, well-watered gardens and meadows surrounded the town, and there were a number of splendid palaces built by wealthy Qurâsh, especially in the Wâdi 'l-Ajkâf of which traces can still be found (cf. Batantûn, Rihâ, p. 261 sq.; Lammens, *Moawia*, p. 228).

Another section of the people of Madina was attracted thither by the quiet life, although for other reasons. Their object was not worldly enjoyments but they devoted themselves to the memories in the town of its sacred past, by collecting and studying the legal and ritual enactments dating from the Prophet, in so far as they were based on the *sunna* of Madina and the *ijma* there. The most distinguished representative of this group was Malik b. Anas (d. 179 = 795), the author of the *Mawaqif*, who as founder of the MalikÂ' school gathered many pupils around him (Colziâ, *Muhaddisemischen Studien*, ii. 213 sqq.). One of them, Ibn Zabâla, composed the first history of the town of Madina (199 = 814) but it has not survived.

Madina was now ruled by governors appointed by the Caliph, lists of whom are given by Tabari and Ibn al-Athîr. The town was however not entirely unaffected by the wars of the first centuries after Muhammad. In the reign of Yazid, feeling in Madina, even among the Umayyads, was more or less hostile to the Caliph and many took sides of his rival 'Abd Allâh b. Zair ibn Zayd in Mecca. The expedition of the governor 'Amr b. Sa'id, which Yazid ordered, was a failure. In 63 (682-3) the Madinense rebelled openly, appointing 'Abd Allâh b. Hanâla as their leader and building a wall with a ditch to defend the town on the north. The Caliph sent an army under the leadership of Muslim b. 'Ukba which took up its quarters on the Harra N.E. of the town and fought the battle of the Harra, which ended in the defeat of the Madinense — according to the usual story, a result of the treachery of the Banû Hâritha. That the inhabitants were abandoned to the ill-treatment of the Syrian troops is probably a malicious libel (Wellhausen, *Das arabisch Reich*, p. 98 sq.). Towards the end of Umâyad rule, in the year 130 (747/8), the Khârijis under Abû Hâmaîz resisted the Madinense at Kubbâd; but he was surprised by Marwân's troops and slain (Tabari, ii. 200 sqq.; B. G. A., vi. 327). When the 'Abbâsides became supreme, two Alid brothers, Muhammad and Ibrâhîm, sons of 'Abd Allâh, made an attempt to fight for their rights. Muhammad himself, the son of al-Mahdi, appeared in Madina in 145 (763/4) where he found not a few adherents, among them Malik b. Anas and Abû Hânifa. He endeavoured in various ways to imitate the example of the Prophet, used his sword, had the ditch dug by him round the town restored (see above) etc. The Caliph sent his relative 'Isâ b. Mûsâ with 4,000 men against him and when he bridged the ditch by throwing a couple of doors over it and entered the town, most of al-Mahdi's followers lost heart, as was usual with the supporters of the Alids, and when he renewed the hopeless struggle, he was mortally wounded. About 20 years later (169 = 786) another Alid arose, Husain b. 'Abî, against the Alids, and his followers were driven out and slain at Fakkîh near Mecca. In spite of the harm he did to the town of the Prophet, he was celebrated by the Alids as a martyr (Tabari, iii. 551 sqq.; Ibn al-Athîr, vi. 60 sqq.). In the caliphate of Wâliq, Madina suffered severely from the attacks of the Sulaim and the Banû Hilal. Boghâ the elder [q.v.] came to their assistance in 230 (844/5) and imprisoned the Beduins. When he left the town again, the latter succeeded in breaking out of prison; the Madinense however discovered their escape and put them to death (Ibn al-Athîr, vii. 124). Their love for Wâliq was shown by their lamenting him every night after his death (ibid., vii. 21).

In the centuries that followed, Madina is only rarely mentioned by the historians, and what they tell us about it is of little interest as a rule. When the Fatimids became lords of Egypt and were threatening the holy cities in the Hijâz, a wall was at last built round Madina. This was erected in 364 (974/975) by the Bayyâd 'Abud al-Dawla but enclosed only the central part of the town. It was restored in 540 (1145/46) by a vizier of the sons of Zangi. But as a considerable proportion of the inhabitants lived outside the wall without protection from the attacks of the Beduins, the Atâbêg of Syria, Nûr al-Din Mahmûd b. Zangi, in 557 (1162) built a second wall of greater extent with towers and gateways. The present wall, 35-40 feet high, was built by the Ottoman Sultan Sulîman but Salîm the Magnificent (1520—1566) of basalt and granite (Samhâji-Wustenfeld, p. 126). A trench was dug around it. The same Sulîman brought a covered aqueduct from the south into the town. Finally the wall was raised to a height of 80 feet by Sultan 'Abd al-Azîz, which height it has retained.

A feud between the governors of Mecca and Madina with a battle at Dhu 'l-Hulafa is recorded for the year 601 (1203). The Meccan leader who had set out to besiege Madina was put to flight but obtained support from other amirs, whereupon the Madinense abandoned further hostilities (Ibn al-Athîr, xii. 134).

In 654 (1256) Madina was threatened by a volcanic eruption, known as the fire of Hijâz. It began on the last day of Dhu' al-âdah I with a
sight earthquake which increased in vigour each succeeding day. Then a glowing stream of lava burst forth which, as the chroniclers tell us, devoured rocks and stones but fortunately flowed to the east of the town and then continued its way northward. The inhabitants sought protection in the Mosque of the Tomb, praying and confessing their sins. The belief in the latter's inviolability, which was thus strengthened, was soon to be shattered by the conflagration described below.

Under the rule of the Turks Madina continued to lead a quiet life, little heeded by the outside world, and it is rarely mentioned, a circumstance much facilitated by the fact that the holy city could not be entered by non-Muslims. Radical changes only came about in the sixteenth century. In 1804, the Wahhabis took the town, plundered its treasures and prevented pilgrimages to the Tomb of Muhammad. An attempt to destroy the dome over the tomb failed, but the great treasures in pearls, jewels etc., presented by pious visitors to the mosque were carried off. It was not till 1813 that Muhammad Ali's son Yusuf succeeded in retaking the town. In 1818 he took Dar'iya and razed it to the ground, whereupon he returned to Madina. The sacred cities once more belonged to the Turks and the Grand Sharif of Mecca even forbade pilgrims from Ibn Sa'ud's territory to enter Mecca. This restoration of Turkish rule brought at least one important innovation: the building of the Hijaz railway from Damascus to Madina in 1908. It was primarily intended for pilgrims but was also of military importance and therefore suffered severely in the world war. Through the intervention of the Grand Sharif Husain b. Ali b. 'Abd al-Mu'tin, the fighting and the intrigues in North Arabia became more and more involved. He first posed as a faithful servant of the Turkish Sultan but later he rebelled and on Nov. 6, 1916 had himself proclaimed king of the Hijaz and joined the English. After the peace which ended the world war the Turkish troops evacuated Madina in 1918. In the meanwhile a stronger opponent to Husain had arisen in 'Abd al-Arīz b. Sa'ūd, who had once more raised the Wahhabis to a position of supremacy. Husain's bold move in assuming the title of caliph found no support among the Arab chiefs, and the people of the Hijaz forced him to abdicate. Ibn Sa'ūd seized this opportunity, entered Mecca in October 1924 and forced Husain's son 'Ali to leave the town. The two holy cities are therefore now both in the hands of the Wahhabis, who are however now more tolerant and permit visits to the Mosque of the Tomb and other holy places and only forbid actual worship there.

In spite of the inaccessibility of Madina to all non-Muslims the reports of various modern travellers enable us to form a fairly clear picture of it, which can only be briefly outlined here. In keeping with the configuration of the ground the plain on which Madina lies is divided into an upper southern part, a middle part, al-Ṣāliya and al-Ṣālīq, names found even in the earliest writers. Al-Ṣāliya is reckoned to run to the above mentioned village of Kuṭāba, 3 miles away, al-Shafila to the hill of Ḫūd. The older wall encloses the town proper; the already mentioned later wall which is now partly in ruins encloses the western rather large suburb of al-Anbariya and "camp of the camels," barr al-munākhā, 400 yards broad lying between it and the town. Here is pointed out the traditional site of the muqalla, the Prophet's place of prayer, a tradition probably worthy of credence, as otherwise it would have been natural to locate it in the great mosque mentioned below. Along the south side of the wall runs the road of the funeral processions, Darb al-Djarnās, which leads to the old general burial-place, Bab al-Qarbād (so called after the plant nitārīn retsu) in the east of the town. Among the thousands who are buried here are the little son of the Prophet, Ibrāhīm, his wives (whether also his daughter Fātimah is disputed: see below), many of his companions, al-Abābās, Muhammad al-Ṣākir, Dja'far al-Ṣādīk, the already mentioned jurist, Mālik b. Anas, and many others.

At the north-west corner of the town stands the castle built on to the town wall. There are several gates in the walls, including the Bab al-Ṣāhilī in the east, the Bab al-Majdī in the east and the Bab al-Anbariya in the west. From a spring of fresh water in the village of Kuṭāba an aqueduct runs into the town, first laid by Marwān when governor of Madina. It frequently fell into disrepair and was restored for example by several Ottoman sułāns, on the last occasion by 'Abd al-Ḥamid after the Wahhabis had destroyed it. The damage not infrequently done by floods has already been mentioned. In 754 the Madinese were prevented for six months by an inundation from visiting the grave of Ḥamza. The streets of Madina are clean but narrow and only the main streets are paved. The houses are well built of stone and a number have two stories. Several of them are surrounded by gardens, but the houses with gardens are mainly found outside the north and south wall, especially towards the south where vegetable gardens and orchards alternate with palm groves and cornfields. The dates of which there are 70 varieties are, as in ancient times, one of the principal products. The pilgrim traffic is however the most important source of revenue for the inhabitants, who let their dwellings to the strangers and guide them to the sacred places and instruct them about ritual duties. The muṣawwarīn here play the same role as the mušawwarīn in Mecca. Burton (ii. 189) gives the number of inhabitants as 16,000–18,000, in addition to 400 men in the garrison. Wavell (p. 63) in 1908 put it at 30,000, excluding soldiers and pilgrims, while Batangib made 60,000 including many foreign visitors. The results of the world war have of course altered these conditions in many ways. The population used to increase gradually by visitors settling often permanently in the sacred city. Of descendants of the old Anṣār there are very few left in Madina; according to Burchard there were only ten families in his time. There are a number of Shī'a in the suburbs.

Madina possesses no sanctuary venerated from remote times like the Ka'ba; on the other hand it possesses compensation for this of inestimable value in the mosque which encloses Muhammad's grave and is the goal of countless pilgrims. Some teachers even put this sanctuary higher than the Meccan one, but this view is not general, and the visiting of this mosque is not obligatory like the pilgrimage to Mecca.
and also may be undertaken at any time. According to unanimous tradition the Prophet was buried under 'Aīsha's house, where also the two first caliphs found their last resting-place. Further, all the earlier stories agree that Muhammad soon after his arrival in Madina had a mosque built, which he enlarged after the taking of Khaibar, and they are also agreed that the dwellings of his wives were close by so that 'Aīsha's house with the grave could easily have been taken into the mosque. That there is nothing improbable in itself in a mosque having been built in the time of the Prophet is shown by the mention of a rival mosque, Sūra ix. 108 sqq.; cf. xxiv. 36. But Caetani, Anmāli, i. 432 sqq., has disputed with important arguments the correctness of the tradition and from various statements drawn the conclusion that originally on the site of the later mosque there was more probably only the dār of Muḥammad with a courtyard and various dwellings. If this is right, it is not known who built the mosque; but probably it was erected not long after Muhammad's death, for the rapidly increasing reverence for the Prophet must very soon have aroused the desire to bring his resting-place into touch with his religion. To this mosque, early built, can then be referred what tradition tells us of Muhammad's mosque: — a simple building of brick with pillars of palm stems and a roof of palm leaves. Accorded to the tradition, 'Umar had it enlarged and after him 'Uthmān who replaced it by a building of stone and mortar with a roof of teak. When Marwān was governor of Madina, he had a makṣura of coloured stones erected; but no important advance was made till the reign of Walīd, who commissioned the then governor, afterwards caliph, 'Umar b. 'Abd al-'Azīz, in 87 (706) to adorn the building in greater splendour. For this 'Umar used Greek and Coptic builders, and the Byzantine emperor is said to have contributed ḥaṣābā'ī of gold and a large quantity of mosaic stones towards it. On this occasion five minarets were placed at the corners of the sanctuary and the roofs covered with plates of lead. The mosque remained unaltered till the reign of al-Mahdī. After this Caliph had visited Madīna, it was rebuilt and extended in 162 (778—779) and its length was now 300 and its breadth 200 ells. In the following century another restoration was necessary and was carried through by al-Mutawakkil in the year 243 (856—862).

Of the mosque which thus came into existence there are very full descriptions by Ibn 'Abd Rabbighi (d. 328 = 940), Muqaddasi (375 = 985), Ibn Dūbair who travelled in the east in the years 578—581 (1182/83—1186/87), and also Yaḥyā. Of the many details given by these authors only a few can be quoted here. As is quite evident from several of these descriptions, the mosque had the form, always retained later, of an open court-yard covered with sand or gravel, jāhr, which was surrounded on all four sides by rows of pillars. In the eastern part of the southern pillared hall was the holy of holies, the tomb of the Prophet, with the tombs of Abū Bakr and of 'Umar. It is described by Yaḥyā (iv. 458) as a high building, separated at the top only by a space from the roof of the pillared hall. Regarding the relative positions of the three graves there were in his time different views. North of them, according to some traditions, was the tomb of Fāṭima while according to others this was in the general burying ground. The part of the pillared hall lying west of the graves bore the name al-Rawḍa, the garden, from an alleged utterance of the Prophet. The total number of pillars is said to have been 290; those in the southern part were stuccoed, with gilded capitals, the others were of marble. The walls were adorned with marble, gold, and mosaic. Along the southern border of the Rawḍa ran a barrier, with which several highly venerated relics were associated: — the remains of the trunk of a tree, on which Muḥammad used to lean, and especially his minbar or pulpit. According to tradition Muʿāwiya wished to remove this; but immediately a vigorous earthquake began and he abandoned the idea and instead raised it by an upper structure five steps higher. Al-Mahdī later wished to remove this addition, but he was dissuaded from doing this as the nails had been driven into the old minbar (Yaʿkūb, ed. Honstma, ii. 283; Ṭabarī, iii. 483; Muḥaddad, ed. de Goeje, p. 82). According to the descriptions it had 8 steps and there was a slab of ebony over the seat which visitors might touch. The remnants of the tree-trunk were kissed and stroked with the hands, an interesting imitation of ancient Arabian religious customs. Among the various treasures of the mosque was the Madīna standard manuscript of the canonical text of the Karān prepared by 'Uthmān. The mosque had 19 doors of which only 4 steps higher. Al-Mahdī later wished to remove this addition, but he was dissuaded from doing this as the nails had been driven into the old minbar (Yaʿkūb, ed. Honstma, ii. 283; Ṭabarī, iii. 483; Muḥaddad, ed. de Goeje, p. 82). According to the descriptions it had 8 steps and there was a slab of ebony over the seat which visitors might touch. The remnants of the tree-trunk were kissed and stroked with the hands, an interesting imitation of ancient Arabian religious customs. Among the various treasures of the mosque was the Madīna standard manuscript of the canonical text of the Karān prepared by 'Uthmān. The mosque had 19 doors of which only

While the Mosque of the Tomb escaped the volcanic eruption already mentioned (654 = 1256) it suffered in the same year from a fire due to the carelessness of a caretaker, which destroyed a part of it. An appeal to the caliph of Bagdad for assistance to rebuild it remained unanswered as the 'Abbāsīd dynasty was then tottering before the Abbasid in Damascus was to take place two years later. Only the roof was repaired in the year after the fire in makeshift fashion; the rubble was not cleared away from the tombs but remained there for over two centuries. Several of the Mamlūk Sultāns showed some interest in the sanctuary, among them Baibars I, who, according to Muḥdīr al-Dīn (Cairo 1283, p. 434), placed a railing round the tomb of the Prophet and had its roof girt, while others sent workmen and materials, and notably al-Manṣūr Kālītīn in 678 (1279) to mark the site of the tomb built a dome over it covered with plates of lead. Aṣḥaf Saif al-Dīn Kāṭīt Bey (873—890 = 1468—1495) was however the first to deal with the mosque in really energetic fashion and he had the minaret at the southeast corner, al-Rāṭiya, taken down and rebuilt. A great calamity then fell upon the mosque for, in a terrible thunderstorm in 886 (1481), it was struck by lightning and partly destroyed, and the library with its valuable manuscripts of the Karān perished. Saḥmūdī, who lost his own library on this occasion, gives an account of the conflagration. The indefatigable Sultān however sent a large number of workmen with tools and materials, and in 889 (1484) the building was restored and among other alterations the dome over the tomb was enlarged; he also presented the brass railing which surrounds the makṣura. On this occasion, the Sultān also presented to the town baths and a hypocaust for
them, an aqueduct and a water mill, as well as a large number of valuable books to replace those destroyed. Its misfortunes however were not at an end for in 898 (1492) it was again struck by lightning; the Ra’siya at the southeast corner was destroyed and had to be rebuilt. The mosque received its present form by an extension to the north, made by ‘Abd al-Majid in 1270 (1853—1854) which Burton saw before its completion. The many inscriptions which cover the walls, include various Sūras and formulae and the mystic prayer al-Burda.

In modern times we have descriptions by Burckhardt (unfortunately incomplete, as he was ill during his stay), by Burton (1853), a brief one by Wavell in 1908—1909 and a good one by al-Batanūnī (1910). In their main outlines they give much the same picture as the older ones. The mosque stands in the centre of the town proper, a little to the east. Al-Batanūnī gives the length from north to south as 385 feet, the breadth on the north side as 285 feet and on the south side as 220 feet. The court (al-ṣuḥa‘ or al-ḥaswa) is covered with sand or gravel and enclosed on all four sides by a wall of which the largest part on the south side encloses the actual masjid. The pillars in this part are covered with marble with gilt ornamentations. All the pillars in the mosque, 327 in number, support arches on which rest little domes like divided oranges. Of the pillars 22 are in the eastern part of the southern hall (the maqṣūra), the sanctuary proper with the tomb of the Prophet. “The Garden”, i.e. the area between the tomb and the minbar, is 70 feet long and 50 broad. The maqṣūra is enclosed on the south, where the mosque is extended by a row of pillars, by a brass grille with the relics already mentioned and the beautiful mihrāb of the Prophet with an indication of the direction of prayer. The present minbar is of marble with gilding, a gift of Marādī III in 1590 (1688). The maqṣūra, the holy of holies of the mosque, a quadrangle 50 feet long from north to south and 47 feet broad, is surrounded by a green polished brass railing through which a door, Bāb al-Raḥma or Bāb al-Wusūf, leads to al-Rawḍa. It encloses an area which is called al-hudrā, in allusion to ‘A’isha’s house. It cannot be accurately described as it is covered with green silk and is not seen by visitors. The covering, which recalls the covering of the Ka‘ba, is said to have been first presented by the mother of Hārin al-Rashīd. Nūr al-Dīn Zangī is said to have cleared a new area around the older hudrā to protect the tomb. In the hudrā are the tombs of the Prophet and of the first two caliphs, according to the usual belief in the following order: the most southern is the tomb of Muhammad with the head to the west, next him Abū Bakr with his head beside Muhammad’s feet and on the north ‘Umar with his head beside Abū Bakr’s shoulders. A fourth, empty grave is said to be intended for Jesus after his parousia. On the north side of the large maqṣūra, another smaller one adjoins it, which, according to an assumption still disputed by many, contains the tomb of Fath. Two doors on the east and west side connect it with the minbar. To the west hanging lamps are placed in this, the most sacred part of the mosque, and in addition in the Rawḍa there are candelabra of crystal. In the court of the mosque, approximately east, is a quadrangular area shut off by an iron grille, which is called Fāṭima’s garden. Of the 15 palms which grew there in the time of Ibn Džubair, Burton saw only 12; al-Batanūnī mentions several small palms planted round a high one. Behind the boundary is the so-called “Prophet’s well”. The mosque has four minarets at the four corners and according to Burton a fifth in the centre of the west side, but this is not mentioned by al-Batanūnī. Five doors give admittance to the sanctuary: on the west the Bāb al-Salām and Bāb al-Raḥma, on the north the Bāb al-Majidī, on the east the Bāb Džubīr’ al-Bakr) and Bāb al-Nakš. They are all closed at night. From the descriptions already quoted, the mosque was not impressive when seen from the outside, as the houses were built so thickly round it that an open view of it could not be obtained. Even the richly ornamented Bāb al-Salām only looked like the termination of a street running from the west. But this seems now to have been altered, as according to Musil, Zur Zeitgeschichte von Arabien, p. 34, all the houses in the immediate vicinity of the mosque were removed in 1916. The immediate vicinity of the city of the Prophet is of course very rich in places with which are associated anecdotes and traditions of him. The most important of these is the hill of Uḥūd [q.v.] with the graves of those who fell for the faith there. It is rivalled by the village of Kubā’ where Muhammad on his arrival in his new home stayed from Monday till Thursday (Ibn Ḥithān, p. 335). The village, which was at that time occupied by the ‘Amr b. ‘Awf, is according to the Arab geographers 2 miles, according to Burckhardt, 3—4 hours from Madīna; to be accurate it is about 3 miles. The surrounding gardens which are exceedingly rich in all kinds of fruit and vegetables extend for 4 or 5 miles (Burckhardt). Burton describes how the village appeared to him as he approached it: “a confused heap of huts and dwelling-houses, chapels and towers, with trees, between foul lanes, heaps of rubbish and yelping dogs”. Tradition marks the spot where the Prophet’s camel knelt (al-mabrak) and here also was the mosque mentioned in Sūra, ix. 109 built out of piety, as well as its counterpart, the Maqṣūdī al-Dīrār, destroyed by Muhammad’s orders (cf. Wālīd—Weihhausen, p. 417; Ibn Sa‘d, iii. 32, 6; and above). The mosque of Kubā’ with its simple minaret was in ruins in Burckhardt’s time, but has since been replaced by a stone structure.

History of the Medina Caliphate

The Medina Caliphate, the ancient capital of the Umayyad Caliphs of Cordova, the ruins of which are still in existence about 5 miles to the west of this latter town, at the place called Cordova la Vieja, on one of the last spurs of the Sierra Morena overlooking the valley of Guadalquivir [q.v.]. The western Arab historians give us a great deal of information on the foundation of this royal town, upon the period which marked its prosperity and upon the causes which led to its fall. It was the great Caliph 'Abd al-Rahman III al-Nasir [q.v.], who decided upon building it, and its construction was begun during the reign of this sovereign at the end of the year 925 (936). The chronicles say that one of his sons, leaving him a large sum of money, al-Nasir wished to utilize this sum for the payment of the ransom of the Spanish Muhammadians prisoners of war in the kingdoms of Leon and of Navarre. As the envoys who had been sent for this purpose failed to find any prisoners whom they could ransom, the Caliph's favourite al-Zahrâ' is said to have advised him to employ the legacy to build a town to which she would give her name. This anecdote is without doubt legendary, at least in several points. The work of building the town was carried on for many years (from 15 to 40 years according to the sources), and the site selected was the site of the palace of the Caliph. Six thousand hewn stones were used every day, not to mention other materials; the necessary marble was chiefly imported from Ifrikiya, and no less than 4,313 columns were required, if we may believe Ibn Ijarhâr. According to the same author it was the crown prince al-Hakam himself who directed operations. The name of the chief architect, Maslama b. 'Abd Allâh, has also been preserved.

The building of Madinat al-Zahrâ' engaged not less than 10,000 workmen. Account was taken in the planning of the town of the very steep slope of the site and al-Idrisi gives a clear account of how this slope was utilized. The town was built on three terraces; the upper part was set aside for the palace and its appendances; the middle one was devoted to gardens; the lower one contained private dwelling-houses and the Great Mosque. 'Abd al-Rahman removed with all his court to Madinat al-Zahrâ', as he felt the Caliph's palace of Cordova which faced the cathedral mosque and overlooked Guadalquivir too small, and this became his favourite residence. His successors al-Hakim II and Hisâsh II lived there for the most part during their reigns, and further embellished the town of al-Nasir. It appears, however, to have very soon fallen into decay, especially from the time when it had as rival the residence of the 'Amirid Hâdhib, al-Madina al-Zahrâ' [q.v.]. It was pillaged on several occasions by the Berber mercenaries who had rebelled against Cordova. The year 1010 (1090) marked its final fall. A century and a half afterwards in the time of Idrisí, the walls alone remained and vestiges only of the palace. A few inhabitants still lingered in it.

A beginning was made in exploring and systematically excavating the ruins of Madinat al-Zahrâ'
about the year 1910, under the direction of the Spanish archaeologist, R. Velázquez Bosco. The first work done was the excavation of the double road leading from the town through the middle terrace and from certain parts of the palace. A large number of carved stones have been brought to light.

**AL-MADJARRA, the Milky Way** (the place, path, road of moving).

The Name. It is probably taken in the first place from the Greek *κακήσσης*: *al-dā'ira al-labānīya* or *al-dār dh al-labān*, the circle or path which looks like milk. Other names are *fārīb al-halīb*, the road of milk; *fārīb al-tub*, the road of the place where there is milk, and hence metaphorically *umn al-samāw*, mother of heaven, who feeds the heavens as with milk; *fārīb al-tīb*, path of straw and *darb al-tabābāna*, path of the place where there is straw. Similarly the Milky Way is called in Persian *kakhēsšān*, straw-puller, or *kakhēssān* or *rāhī kakhēssan*, path of the strawpuller; in Turkish *saman ughrī* or *saman Kapara*, straw or fodder-thief. Whether names connected with straw go back to Greek or Oriental ideas is uncertain. Gundel (op. cit.) holds the latter view. In the East the Milky Way is the hay, straw and meal, which Peter or Saint Virgin lost and blessed by God flew to heaven. Another Turkish name is *hâijdjîter*, path of the pilgrims.

Other Arabic names are *hāb al-samāw*, gate of heaven, and *al-tharīf or al-tharīf*, gap, probably from the idea that the Milky Way corresponds to a gap or split through which one can see the shining heaven. Another name is *umm al-nuḍūm*, mother of the stars, because no part of the heavens is so rich in stars. The stars are also to have leprosy (*djarbat al-nuḍūm*). Among the Kazan Tatars the Milky Way is called *Path of the Wild Goats* and by Altai Tatars (*Path of Hear-Frost* (frosted way).

The name *nahr al-madjarra*, River of the Madjarra, is noteworthy. The Milky Way is regarded as a river; this is evident from the passages in *Abd al-Rahmān al-Sūfī* in his work on the constellations, in *al-Birūnī* in his *Kitāb al-Tajhib* towards the end and in the *Chronology* (text, p. 345), transl., p. 348), in al-Karwain in the *Cosmography* (text, i., p. 37; transl., p. 18) and in many others. In these passages the constellation of Sagittarius or the eight stars forming the 20th station of the moon which are called the Ostriches *al-nuḍūm* are described. Four of the stars which lie on the Milky Way are called *al-nuḍūm al-wārid*, the ostrich going to drink; the four others lie at the side of the river of the Milky Way and are called *al-nuḍūm al-sūdir*, the ostrich returning from drinking (cf. e.g. L. Ideler, *op. cit.*, p. 184 and Hyde, *Ulugh Beg's Tabular*, Oxford, p. 23).

Description of the Milky Way. A description of the Milky Way, the stars and constellations in it, is given by Ptolemy in the *Almagest* (Bk. viii., Ch. 2) and the Muslim translators have borrowed from this. The editors have treated it in different ways. Al-Tūsī for example in his edition of the *Almagest* gives the description as fully as in Ptolemy; but he does not use the translation by al-Hādīdād, as I was able to show. Ibn Sinā on the other hand, who gives a brief synopsis of the contents of the *Almagest* in the *Sifā* (Healing) gives no such description; he deals here in the same way as he does with the Tables which he omits.

The very full treatment of the Milky Way is followed in Ptolemy by a description of the method of making a globe of the heavens on which the Milky Way is represented. Ibn Sinā, for example, took over this section word for word in a form which we also find elsewhere. It is therefore exceedingly probable that the Milky Way was represented on one or other celestial globe, of which a whole series is recorded. It does not seem to be on the extant globes (cf. H. Schnell, *Die Kugel mit dem Schmet.*).

An independent description of the whole Milky Way as full as that in Ptolemy, I have not been able to find in Arabic works. A brief description is given by Abū Ḥanifa al-Dinawarī (in al-Marzūqī, *Kitāb al-Asma wa'l-Akhbār*, Haidarābād 1332, ii. 9-12). The description of al-Dinawarī leaves much to be desired and the text is not quite correct. The former is in keeping with *Abd al-Rahmān al-Sūfī* s verdict, according to which al-Dinawarī was very well acquainted with the verses on the Milky Way but his astronomical knowledge was insufficient (it may be noted that *Abd al-Rahmān mentions an Ibn Kunawa, while there is a Muhammad b. Kunawa in al-Marzūqī*).

The anonymous writer mentioned in the Bibliography gives a brief description of it.

*Abd al-Rahmān al-Sūfī* unfortunately only gives a description of one part of it. He mentions the part of the Milky Way between the great, bright Milky Way (*al-majjarra al-ṣawma*) and the falling Eagle (Lyra) (*Ṣifā al-majjarra*, here at *γ* Cygni the Milky Way divides). *Abd al-Rahmān* follows this stretch up to *ξ* Scorpii. In many cases the position of stars e.g. in the Ship is given from their position with respect to the Milky Way. Schjellerup has given details in the tables appended to the synthetic account, p. 5 sqq.

In the *Kitāb al-Tajhib* of al-Birūnī we read *al-Madjarra of the Arabs, Kakhâshān of the Persians and Râh Bishât of the Hindus is an aggregation of a very large number of small stars.*
They form an almost perfect large circle, which runs between Gemini and Sagittarius, sometimes narrow, sometimes wide, in some places it is dense, in others not. Aristotle thinks that the Milky Way consists of stars surrounded by vapour like the halo round the moon and the mist (in the sky) and the comets 1.

Theory of the Milky Way. On the nature of the Milky Way and the cause of its shining there are a number of views, which follow the same lines as those of the ancients (cf. O. Gilbert, Die meteorologischen Theorien des griechischen Altertums, Leipzig 1907, index, s. v. γαλαξία). I now give al-Karâfi's account of it.

Al-Karâfi (d. 1285–1286) who wrote a work on Optics ("Noteworthy consideration of what the eyes grasp in 50 questions or problems"), says in the 49th question: "Why do we see a black haze on the moon? Is this an illusion or reality?" and continues:

"Connected with this question is that of the Milky Way which looks like a road in the sky. We are told: 1. It is the gate of heaven. 2. It consists of small stars which are crowded so closely together that the eye cannot distinguish one from the other. 3. It is said to be a vapour which has risen from the earth and solidified under the cone of the fixed stars. One part forms a black burned body. This is the case in the centre of the Milky Way. A part lies in places which are far away from those in which there is burning; these are the two sides of the Milky Way. These places appear white. 4. Finally we are told that the Milky Way consists of something whose shape is inserted in the heavens and which is in some part of the earth, to which the way cannot he found and which cannot he reached 2.

Of these four views the second is nearest the truth.

The anonymous author of the Berlin manuscript also tells us very fully about the different views and the nature etc. of the Milky Way; here is the passage in question: "Learned men have many and varied views on the nature and substance of this belt. Some say that it is a part of the upper sphere and thicker and coarser than the rest of it. It is therefore visible, while the rest is not, as the latter is exceedingly fine. This corresponds to the opinion of the philosopher Diodorus (Ti-\(\text{yūdrīs}).")

"According to Aristotle this belt consists of vapours which have collected together and ascended into the sky through the intermediary of the stars. As vapours are continually rising, they retain their shape. There is a contradiction in this. If we assume that the belt is formed by rising vapours, they cannot possibly be always seen at one and the same place in the sky; nor can they he seen from all places on earth and they cannot maintain one and the same distance from the stars and the ascendants."

"If the belt is always seen in the same way and has permanently the same form, if it is seen in all places, it must be the same distance from the stars and the ascendants is always the same, this is a sure indication that the belt does not originate in vapours as these completely lack these qualities."

"Some learned men are agreed that the Milky Way, al-Madjarra, has its origin in the fact that small stars have become combined in this figure (\(\text{qādār}\)) and offer themselves jointly to the view. On account of their smallness they do not look like shining stars as they are joined together and give their light together (the light of the single stars forming one whole). This is the origin of the shining and the figure which we see. This view is one which is intelligible and men adopt it." 3

"We say that the Milky Way is a limbus of the sphere of the fixed stars. As it is a thick limbus, which is thicker than the other limbs, it completely absorbs the light of the sun, corresponding to what the other limbs take up, i.e. as the stars do. This corresponds to the view of him who says that the latter are thick limbs of their sphere. Each limb takes up light in proportion to its density. But this density is the cause of light being reflected to us 4."

"Many learned men attack the Aristotelian view — as was done even in ancient times — and regard the latter view (5.) as the most probable."

The anonymous writer therefore lays it down quite generally that the Milky Way cannot be in the ether; it has always one and the same form quite independently of the position from which it is seen and does not alter its position.

Ahū 'l-Faradj (Bar Hebraeus) in his work ("Elevation of the spirits; on the shape of heaven and of the earth"; transl. by F. Nau, Paris 1899, 92 sq.) has a section on the vapour-stars 2 (kawkāb ṣāḥbī) and the Milky Way. He says: "In the heavens there are some white patches, vapour-stars. Some think these are a part of the Milky Way as it like they resemble clouds. They also think that they consist of a very large number of very small stars lying very close to one another, like the mane below the lion which is in the shape of an ivy leaf. Those who believe this also say that the whole Milky Way consists of very small stars joined together. The Milky Way is obviously neither smoke nor vapour in the air, as the Peripatetics say, since the moon and the planets experience no change in their light as they pass through the Milky Way (it must therefore lie outside the sphere of Saturn) but on the contrary rather affect the Milky Way 3.

The following note may he added on patches of nebulae:

Among the nebulae known to the Muslims are the Magellanic clouds which were observed by merchants in Makdāšīh. They saw there a white patch of cloud which never came down and never changed its position (al-Kazwīnī, 'Adīṭīh al-Makhdūṣīr, vol. ii., p. 40).

At quite an early date Ibn al-Haitham thoroughly and fully proved that the Milky Way is not in the air, but in the heavens and at a distance which is very great in proportion to the diameter of the earth, from the absence of a parallax, e.g. from the fact that it has the same position with respect to the fixed stars at different points on the earth. The anonymous writer also points this out (E. Wiedemann, Über die Lage der Milchstrasse nach Ibn al-Haitham, in Sirius, xxxix.,

---

1) According to this, the anonymous writer would believe that the fixed stars, the Milky Way etc. receive light from the sun, a view that is contradicted by Ibn al-Haitham and others (cf. below).
2) In the tables and astronomical works only the vapour-stars (nebulae) mentioned by Ptolemy are given.
3) There is an error here: The Milky Way would have to be below the sphere of Saturn but above the atmosphere like the planets. — The alterations in the brightness of the Milky Way are phenomena caused by dazzling.

The Milky Way is mentioned in a whole series of verses, particularly by modern poets. I have published 22 of these in the S.B.P.M.S. Erlangen, with the help of A. Fischer (Leipzig, Kowalski (Cracau), Hell (Erlangen) and Krenkow (Beckenham).

(MADJD) AL-DAWLA, Abu 'Abd Allah Rustom b. Fakhir al-Dawla, a Buid. After the death of his father Fakhir al-Dawla [q.v.], Madjd al-Dawla, who, according to the usual statement, was then four years of age, according to another eleven (while Ibn al-Athir, al-Kamal, ix. 48 says he was born in 379 [989/990] which does not agree with either of these statements) was proclaimed as successor under the regency of his mother Saiyida. In 388 (998) Khus b. Washmgir [q. v.] seized the two provinces of Dirdqan and Tabarsi, to which was added by the treaty of peace Mzdanda-ran also, and later he brought Gilan also under his rule. In 397 (1006—1007) Madjd al-Dawla with the help of the vizier al-Khaqani Abu Ali b. Ali b. al-Kasim attempted to overbow his mother but he was taken prisoner by his brother Shams al-Dawla [q.v.] and the Kurdchief Badr b. Hasana Wah, whereupon Shams al-Dawla took control of the government. His rule did not last long, however; after a year Madjd al-Dawla was released and again recognised as ruler, while his brother retired to his governorship of Hamadhan. In 405 (1015) the latter succeeded in seizing the town of al-Ra;i; Saiyida and Madjd al-Dawla had to flight, but were soon able to return because Shams al-Dawla was prevented from following them by a mutiny in the army and had to leave the city. Saiyida held the reins of government till her death (410, 1020—1024), while Madjd al-Dawla, who although extremely interested in learning, otherwise cared only for his numerous harem, paid no heed to affairs of state. After Saiyida's death complete chaos reigned. In the beginning of the year 420 (1029) Sultan Mahmut b. Subuktegin [q.v.] undertook a campaign into the Triik. When Madjd al-Dawla wrote to him and complained of the rebellious spirit of his army, the Sultan sent a considerable body of troops against Raiy and ordered the commander to seize Madjd al-Dawla. When the troops appeared the latter went to them and was at once seized along with his son Abul Dalaf. The Sultan himself then set out against Raiy, seized the town and had Madjd al-Dawla sent in chains to Khorsan.

MADJD AL-DIN. [See HIRAT ALLAH B. MUHAMMAD.]

MADJD AL-MULK, Abu 'l-Fadl Asaad b. Muhammad al-Barkhistani, finance minister of the Saljuq Sultan Barkiyaruq. As early as 485 (1092—1093) we find Madjd al-Mulk mentioned among the officials of the sultan's court. After his death Barkiyaruq was unable to find a person who became more and more powerful, while Barkiyaruq's weakness and incapacity became more and more obvious. But as a Shii Madjd al-Mulk became suspected of being the real instigator of the murders committed by the Isma'ilis and after the amir Bursuk [q.v.] had fallen a victim to Isma'ilist fanaticism, the troops mutinied (Shawwl 492 = Aug./Sept. 1099) and demanded that Madjd al-Mulk should be handed over to them. He offered to sacrifice his life and proposed that the sultan should have him executed to satisfy the soldiers. But Barkiyaruq, wishing to save him, had him imprisoned. After the soldiers had sworn not to slay Madjd al-Mulk, but only to imprison him, he was handed over. In spite of their oath, the soldiers fell upon him and at once hewed him to pieces. — His nisba is derived from Barawistan, a village near Kuman; cf. Yakut, s. v.

(K. V. ZETTERSTEEN)

MADJHUB (a., "attracted") denotes in the terminology of the Sufis a person who is drawn by the Divine attraction (dajhba), so that without trouble or effort on his part he attains to union with God. In other words, the madjdhub experiences the ecstatic rapture of losing himself in God, and is thereby distinguished from the salik ("traveller"); who makes the journey to God, stage by stage, with conscious endeavour and purpose. The opinion favoured by antinomian derivishes, that the madjdhub is superior to the salik finds expression in the saying: "One dajhha (act of drawing) from God is equivalent to all the (devotional) work of mankind and dinn ("sanat al-tasabila"); but it is generally recognised that whether dajhha or salik [q.v.] preponderate, both are needed in order to reach perfection. Those in whom dajhha precedes salik and constitutes the predominant element in their spiritual life are called madjdhub-i salik, while conversely those with whom salik comes first are known as salik-i madjdhub. Although the terms madjdhub and salik are employed by Hallaj (Masignon, Passion, ii. 905) and occur
frequently afterwards, their application in a narrower sense to those who repudiate or acknowledge the moral and religious law is characteristic of the dervish fraternities, which, as is well-known, differ widely from each other in their theory and practice concerning this matter.

MADJID (A), [See Al-Alī]

MADJNUN. In Arabic, Persian and Turkish literature the epithet al-madjnun, i.e. "the man possessed by a djinn", "the madman", is pre-eminently associated with Ka‘īs b. al-Mu‘alla (according to others, the name of his father is Mu‘ṣīb), the madjīnun of the Banū ‘Amir b. Sa‘āda, the story of whose passion for Laila, daughter of Sa‘d, a woman of the same tribe, is celebrated throughout the Muḥammatan world. Ka‘īs is said to have died about 80 A.H. (Fawāzī, Butūk 1283, ii. 172), but it seems doubtful whether he can be regarded as a historical person, and this view is supported by the statements of early Muslim authorities (Aghānī, i. 167—169; cf. Ibn Khallīkān, ed. Wüstenfeld, N.o 105, p. 159, 8, and Ibn Khaldūn, Muḥaddidin, ed. Quatremere, ii. 196, 4 fr. foot = Aghānī, i. 169, 4 fr. foot, where maghīnun is described as one of three persons who never existed), while Ibn al-Kalbī declared that the story of Madjīnun and the poems attributed to him were fabricated by a man of the Banū ‘Umaiya (ibid., i. 167, 4 fr. foot). Stripped of the picturesque details with which later poets have embellished it, the story is a simple one: Ka‘īs meets Laila amongst a party of women, falls in love at first sight and slaughters his camel to make a feast for her. His love is returned, but her father advises him to give her to his son in marriage; and soon afterwards she becomes the wife of Ward b. Muhammad al-‘Uqailī. Ka‘īs, crazed with despair, passes the rest of his days in solitude, wandering half-naked in the hills and valleys of Nājd, making verses on the subject of his unhappy love, and only seeing Laila at rare intervals until his death. The development of this love-tale of the Arabian desert into one of the popular themes of Persian romantic and mystical poetry was begun by Niẓāmī of Ganjā, in whose Khamar the Laila al-Madjīnun occupies the third place. Of other poems bearing the same title, the best-known in Persian literature are those by Amīr Khusrāw of Dihlī, Dāmī and Ḥattūf; and in Tur- kish, by Ḥāmō (see the abstract in Gibb, History of Ottoman Poetry, ii. 175—190) and Fuūdī (ibid., ii. 85—88; 100—104).—Sūfī writers find in Madjīnūn a type of the soul which through tribulation, self-devotion and self-abandonment aspires to be united with God.

(R. A. Nicholson)

MADJIRA or Monoq, a term in prosody, meaning the vowel of the rawi or the consonant which is repeated at the end of each line of a kāṣida (cf. Kāṭiva). (Moh. Ben Cheneh)

AL-MADJIRĪTI, his full name was Abu 'l-Kāsim Maslama b. Ahmad al-Farābī al-Ḥasib (the Astronomer). Of the Cordovan al-Andalusī (the Spaniard). We know little of his life. He was born in Madrid but in what year is not known. Various dates are given for his death, which must lie between 395 (1004) and 398 (1007). In Madrid he studied the science of mensuration under an authority on the subject, 'Abd al-Ghāfir, who was also famous for his geometrical knowledge. Al-Madjariti later moved to Cordova where he lived in the reigns of Ḥakam II (350—366 = 961—976) and Ḥīṣam II (366—399 = 976—1009). He died before the outbreak of the fighting and confusion (fitna) which led to the fall of the Umayyads. From his place of birth and place of long residence he gets the two names al-Madjariti and al-Kurtubi. Like so many other scholars, Al-Madjariti is mentioned in laudatory terms by the biographers. He was the leader (imām) in mathematical knowledge, including mensuration. He surpassed his predecessors in knowledge of the doctrine of the spheres and the movements of the stars. He devoted particular attention to the observation of the heavenly bodies and made a special point of comprehending the Almagest. Whether al-Madjariti also dealt seriously with medicine we do not know but among his pupils were several who did. On the works on occult subjects ascribed to him, cf. below.

We are told of a journey to the east from which he brought back Greek and Arabic manuscripts which he adapted for the requirements of the west. Spanish astronomy was thus given a more independent position; for before the middle of the tenth century, as the survey given by Sanchez Perez shows, the Spanish representatives of astronomy and mathematics were of little importance either in numbers or ability. There were among them no scholars to compare with the Banū Mūsā, Thabit b. Qurra, Ibn al-Hādhām, al-Battāntī etc. But even after the time of al-Madjariti, Djābir b. Aḥfār and al-Zarkālī are really the only two of distinction. Perhaps we should also mention the much used Abu l-Ḥasan al-Marrākūshī, but his works are for the most part compilations.

In Cordova, where al-Madjariti lived for a considerable time, he founded — probably as a result of his journey — a school which numbered a number of distinguished scholars, such as Ibn al-Samh (Suter, N.o 194, also a physician), Ibn al-Saffār (Suter, N.o 195), the Kirmānī (Suter, N.o 205), Ibn Khaldūn (Suter, N.o 207, also a physician), al-Zahrāwī (mathematician and physician), (Suter, N.o 190). These men spread and developed the teachings of al-Madjariti and his methods; al-Zarkālī also based his work upon them. — It is however questionable whether al-Madjariti owes his fame more to the widely circulated occult writings which are probably pseudographic or to his astronomical teaching; for his literary activity in this latter field was not great.

Of his astronomical works, his version of the book of tables (tāb) of Muhammad b. Mūsā al-Khwārizmī, which is one of the earliest books of tables in Islam, is of special importance. He converted the tables which are based on the era of
Yazdādjiird into tables based on the Muḥammadan era. He also to some extent replaced the meridian of Arin by that of Cordova, and he also gave the approximate positions of the planets for the beginning of the Ḥijrā. On the other hand, he did not notice a series of errors in the older book and various other astronomical works of his: a work in which he gives a short method of equating the stars (Ṭabīl al-Kawākib) in the tables of al-Battānī; a work on the astrolobe which survives in Latin; a translation of the planisphere of Ptolemy; the latter was translated into Latin in 1143 by Hermann Secundus of Tolosa. His interest in astronomy led al-Mādjarī to deal with the principle of the transversal, in which he developed the views of Thābit ibn Qurra. His Fi Zamān ʿIlm al-ʿAḍād (On the Perfection of the Doctrine of Numbers) or al-Mulamātāt On Business-calculations) is mathematical. Whether the Kitāb al-ʿAḍād (On stones) and the work on the procreation of animals are genuine, need not be discussed here.

It has also been suggested that al-Mādjarī wrote the Ḥikwān al-Ṣafā; but his supposed occupation with a work of this kind may be traced to the fact that he either wrote a similar work or a supplement to it or that he edited it and then he or his pupil Kirmān introduced it into Spain. Whether he inserted separate sections like those on minerals, plants and animals seems to be doubtful.

Two other works belong together in subject matter, Rutbat al-Ḥakm fi ʿl-ʿIlmīya and Ghīyāt al-Ḥakm fi ʿl-Sīrār, "The Goal of the Learned in Magic", which are ascribed in the manuscripts to al-Mādjarī, although he never mentions himself in them. E. J. Holmyard after a thorough study of the question does not believe they are by al-Mādjarī, the main reason being that al-Mādjarī died before the fīna, while these works were not written till after this period. The earlier biographers do not mention them among the works of al-Mādjarī; and it may well but doubted whether works of this kind were in keeping with his mental attitude. Both the works deal with occult subjects. The Ghīyāt treats of talismans, amulets, etc. Hājjī Khaṭṭāf, iv. 166, in dealing with the science of talismans (ʾilm al-ṭibbānāt), says that in it al-Mādjarī expounded very fully but not always intelligently the principles of the science. The Rutba is of an alchemy nature; Hājjī Khaṭṭāf, v. 250 sq. also quotes al-Mādjarī among the alchemists. Holmyard, op. cit., gives the gist of the book.

(E. Wiedemann)

MADJARĪ. [See YAZĐĐĐĐI WA-MADJARĪ] MĀDJĀRĪ (A.), the Zoroastrians. The Greek word Mādjarī (which itself renders an Iranian word, cf. old-Persian magjārī, new-Persian magja) passed into Arabic through a Persian medium. According to the Arabic lexicographers, Mādjarī is a collective like Vēlādī; in the singular Mādjarī is to be used; the religion of the Mādjarī is called the Mādjarīya. The lexicographers cite from the root Vm-∂-

1. In a poem, cited in the Lisan and the Ṭagī al-ʿĀrīs the phrase nār magjarī is found; if we only could be sure, that this poem is really (as is asserted in the Lisan) a composition of Ḥasan of Ad-Dawr and the Tāwām al-Yaṣṣkūr conjointly, the word would already occur in the oldest Arabic literature extant.

In the lexicon, the word Mādjarī is derived from a proper name, Mndjī Kībā, which name, according to them, is the Persian equivalent for Arabic ṣaḏār al-ʿaṣwīn ("with little ears"). This man, named Mndjī Kībā, they say, is not the same as Zoroaster, but lived before him, and was the first who proclaimed the religion of the Mādjarīs. This is one instance of the many etymological and etiological enormities of Arabic antiquarians (cf. Līsān, viii. 98 sq.; Ṭagī al-ʿĀrīs, iv. 245; Lane, Lexicon, s. v.). Incidentally, it may be noted that in Arabic literature the word Mādjarī is also used to denote the peoples of Northern Europe, viz. the Scandinavians (cf. Deyr, Kitzheimer, ii. 250 etc., Appendice N°. xxxiv., p. lxxv.; Rerum normannicarum fontes arabici ..., collegit et ed. A. Seippel, i, Christiania 1890).

In the Kur'ān the word Mādjarī occurs once (xxii. 17); with this verse, ii. 59 and v. 73 are to be compared. In these three places the Aḥl al-Ḳitāb [q.v.] are mentioned, but it is only in xxii. 17 that the name Mādjarī is also found. In this same verse, however, the Mādjarīs also are mentioned, who, of course, can by no means be included in the term Aḥl al-Ḳitāb. Now, in Muslim law the Zoroastrians are, it will be seen, treated as if they belonged to the Aḥl al-Ḳitāb, but this conception cannot be based on the Kur'ānic verse xxii. 17. Also, the commentators (al-Baidāwī, ed. Fleischer, p. 629; al-Zamakhshāri, Kawkāsh, p. 901; al-Ẓāfīrī, Maḥfīl al-Ṣaḥīb, iv. 554; al-Nāṣībūri in margin. Ṭafṣīr, ed. Cairo, xvii. 74 etc.) give nothing that can point to the fact of the Mādjarī being, theoretically, Aḥl al-Ḳitāb. The words of al-Ẓāfīrī, who states that the Mādjarīs are those who do not follow a real prophet, but only a mannaṭabī, might suggest that they take Mādjarī to be a sect in medias res between the real Aḥl al-Ḳitāb and the maṭḥūt, the heathen.

Al-Nāṣībūri also says that the prophet of the
MADJUS

Madjus — who, moreover, are dualists — is no real prophet but a mutanabbi; the mushrik's, on the other hand, have no prophet at all, nor a sacred scripture. In Arabic historical literature the Zoroastrian Persians are themselves occasionally called mushrik, e.g. al-Baladhuri, ed. de Goeje, p. 302, 303, 350, 387 (mushrik); p. 407 (kuffar). Finally it must be added that the Kur'an-verse xxii. 17 seems to be a later addition to this Sura (cf. Noldeke-Schwally, Grisch. des Qur'ans, i. 214; the verse must be Madnic).

In the Ḥadīth, which represents the theory of Muslim law, there is not very much to be found otherwise than the Madjūs mentioned in particular (cf. A. J. Wensinck, Handbook of early Muhammadan Tradition, s. v. Madjus). The substance of the Ḥadīth concerning the Magi is, that they are to be treated like the Ahl al-Kitāb, and, in consequence, are bound to pay the diyya. Practically, the rising Muslim state power could not follow any other way. The subjection of Irān would have become impossible, had the Arabs considered the Zoroastrians as mere heathens, who were to be given the choice either of Islam or the sword. And, even before that time, dealing with the Zoroastrians of Bah̄rāin in this rigorous way, would have been a grave political fault. Thus tradition, though it also hands down an account of how the prophet gave the Zoroastrians of Bah̄rāin the choice of either Islam or death, reports, that 'Abd al-Raḥmān b. Ḥawf said that the prophet had accepted the diyya from these Madjūs. This tradition was regarded as authoritative afterwards, and the other, stating that the prophet refused to consider Madjūs otherwise than as mushrik, was abandoned (cf. Abū Dāwūd, xix. 29 = vol. ii. 30). 'Abd al-Raḥmān b. Ḥawf is said to have delivered his statement on an occasion when the KHāIFA UMAR felt doubtful whether he should accept the diyya from the Iranian, or not (cf. al-Baladhuri, ed. de Goeje, p. 267; the prophet, according to 'Abd al-Raḥmān, said: "sunnā bihim sunnat ahl al-kitāb"). There is a tradition relating that Umar, a year before his death, wrote to DJAŻ b. MA'YA, regarding the Madjūs, instructing him, to put to death every sorcerer (IĀTH), to separate each Madjūs from his wife and children, and to forbid the practice of zama'ah (the muttering of Zoroastrian prayers, new-Persian KADI or IĀTH). DJAŻ began to execute these rigid orders, and UMAR refused to accept the diyya from the Madjūs, until 'Abd al-Raḥmān b. Ḥawf said, that the prophet had accepted it from the Madjūs of Bah̄rāin (Abū Dāwūd, loc. cit.; Ibn Hani'al, Mu'amād, ii. 190, 194; al-Bukhārī, Sahīh, Cairo 1304, ii. 144 sqq.). Al-Bukhārī, moreover (i. 115) cites the following answer given to a Persian ambassador: "Our prophet has commanded us to fight you, until you serve God, and Him alone, or until you pay the diyya". So here likewise the Madjūs are put on the same level as the Ahl al-Kitāb. The determination of the position of the Zoroastrians in respect of the Muslim state, is the main point of the Ḥadīth concerning them. Moreover, there is a tradition in al-Jārmi, Fārābī, bāb 42, regulating the hereditary portion of Zoroastrians (not altogether clear. however). Other, not very important traditional matter respecting the Madjūs is cited: LIĀN, viii. 99;Lane, Lexicon, s. v. fītira: the article KADARIYA.

The traditions of the Muslims about Zoroaster are in accordance with their idea of the Zoroastrians being a kind of inferior Ahl al-Kitāb. Al-Ṭabarī relates, that Zarādūṭ b. Isfīmān (Isfīmān is an adaptation of the Awestic Spītāma, the name of the ancestor of the family to which Zoroaster belonged) laid claim to the title of a prophet, after three years of the reign of king Bihāṭb (the Awestic Wīšhāspa) had elapsed (i. 675 sq.); the same historian reports, on the authority of Hīshām b. Muhammad al-Kalbī, that Zarādūṭ, who by the Madjūs is said to be their prophet, was, according to the learned men of the Ahl al-Kitāb an inhabitant of Palestine, and a servant of one of the disciples of the prophet Jeremiah. He committed a fraud against his master, who cursed him, so that he became leprous. Zarādūṭ then went to Adhīrābādīn and began to promulgate the religion called Madjūsya; afterwards he proceeded to Balkā, where Bihāṭb resided. This king became a convert to the religion of Zarādūṭ, and compelled his subjects to embrace that religion also (i. 648; cf. al-Thā'labī, Histoire des rois des Perses, ed. Zoten berg, p. 256).

Another tradition, likewise preserved in al-Ṭabarī's work, brings Zarādūṭ together with a Jewish prophet MĀJU (vocalisation uncertain), who was sent to Bihāṭb, and, at his court, met with Zarādūṭ, and the sage Dā'īmā (Awestic Đā'māspā, the minister of Wīšhāspa and son-in-law of Zoroaster). Zarādūṭ is said to have noted down in Persian the teachings which the Jew delivered in Hebrew. Bihāṭb, and his father Uhrābā (Awestic Uhwārāspā) had been Šābis before and Zarādūṭ proclaimed their religion (Ṭabarī, i. 681, 683). These traditions aim at bringing the Zoroastrian faith into a certain connection with the Jewish religion: in the one, Zoroaster is an apostate Jew, in the other, he acts in agreement with a Hebrew prophet. In the Ḥadīth there is a saying of Ibn 'Abīlās: "when the prophet of the Persians had died, Ibīlās wrote for them the lore of the Madjūs" (inna ahl Fāris lamā màta nashīrūn kutakā islam ibīl al-Madjūsya: Abū Dāwūd, Kharāb, bāb 29 = ii. 30). This isolated tradition might perhaps in some way be connected with the reports about MĀJU.

Some Arabic authors, of course, had a better knowledge of Zoroaster and his religion, e.g. for instance al-Baladhuri, ed. de Goeje, p. 331, where it is stated, that according to the Madjūs, Zarādūṭ came from Urmīya, and, especially, al-Shahristānī, Kītāb al-Mīlād (ed. Cureton, p. 182 etc.), whose scientific treatise, however, contributes nothing to the knowledge of the ideas about Zoroastrianism prevalent among the Pābāī. It is enough to say, that al-Shahristānī whose information goes back to Iranian sources, gives a succinct, but, in general, correct account of Zoroaster and the Madjūs, whom he subdivides into three principal sects: the Kāyūmārthiya, the Zarawīnīya and the Zarādūṭyā, the latter, according to him, properly the followers of Zoroaster. The Madjūs are, he rightly remarks, not Ahl al-Kitāb, but, like the dualists, only possessing something like an inspired scripture (zhuhbatu kitāb, p. 179); before the rise of the Madjūsya, the Persians professed the religion of Ibrāhīm (p. 180).

Respecting the treatment of the Zoroastrians during the Islamic conquest, the following data may be given:
1) al-Yaman. Muḥammad had sent envoys to that country, who, among other things, had to collect the ġizya from those who preferred to remain Christians, Jews or Madžūs (al-Baladhūrī, p. 69). The Zoroastrians of al-Yaman (the so-called Abū') were said to be descendants from the Persians under the army of Wahrīs, who, by order of Khusrāw 1, carried back Saif b. Dhi Yazzan to that country. Muḥammad, when sending an army to al-Yaman against the pseudo-prophet al-Aswād, recommended its general, to try and win over to his side those Zoroastrians, who were treated tyrannically by al-Aswād. One of these Madžūs, Fāriz b. al-Dalālī, had already embraced ʿĪṣān; the most distinguished man among the Abū', Dāḏawāth (Dāḏāya), also became Muslim, and, at his advice, the remaining Abū' followed. They helped energetically to put down al-Aswād. So we see, that in al-Yaman the Madžūs were treated like Akh al-Kībād, after which they followed their spontaneous conversion to Islām.

2) ʿUman. There was a tradition that the prophet commanded Abī Zaid to take the ṣaddaḵa from the Muslims of ʿUman, and the ġizya from the Madžūs of that country (al-Baladhūrī, p. 77).

3) Bahrayn. In the year 8 (629/630) Muḥammad sent out al-ʿAlī b. ʿAbdallāh al-Hāḍramī to Bahrayn; most of the Arabs of that country embraced Islām, and so did ʿĪṣān, the Persian marzābān of Ḥadīj (the capital), and some other Zoroastrians. The greatest part of the Madžūs of the country, however, remained faithful to their religion, and had to pay the ġizya, like the Jews and the Christians, who, in Bahrayn, did not embrace Islām. Some Arabs criticized Muḥammad, because he pretended to accept the ġizya only from the Akh al-Kībād, and now accepted it from the Madžūs of Ḥadīj. On that occasion Sūrā v. 104 was revealed (al-Baladhūrī, p. 78 etc.). Here it can be seen, that in the oldest Islām it was by no means regarded as a matter of fact that the Madžūs were to be reckoned under the Akh al-Kībād. During the Khalifate of Abū Bakr an insurrection took place in Bahrayn, the Madžūs refusing to pay the ġizya. This rebellion was not put down before the Khalifate of ʿUmar (ibid., p. 85).

4) Iran. Before entering upon the particulars of the state of the Madžūs in Iran, it may be remarked that in Armenia the Madžūs were treated like the Jews and the Christians. They were obliged to pay the ġizya, but enjoyed security for their persons and their possessions. In the capitulation of the town of Dābīl (Atvīn) to Ḥabbī b. Maslama, the Christians, Jews and Madžūs are comprised alike under these conditions. The kanā'īris and ġizya are also mentioned as remaining in the possession of their old masters; it may be assumed, that here under these words, which properly design Jewish and Christian sanctuaries, the fire-temples of the Zoroastrians are understood also (al-Baladhūrī, p. 200).

In Iran, the regular treatment of the places which surrender themselves is the imposition of the ġizya and the kharāḏij (which, at this time, in most cases were identical terms for "tribute" in general, cf. ġizya and kharaḵa, but cf. al-Baladhūrī, p. 314, where ġizya = capitation and kharaḵa = ground-tax). Thus, the inhabitants are reduced to the state of dhimmī, as if they really were Akh al-Kībād. This is the case e. g. on the subjection of Mahrūd, Bandanīḏjan (al-Baladhūrī, p. 265), Hulwān, ʿAmmānīn (ibid., p. 301), Nihāwand (ibid., p. 306), Dinawar, Sirwān, Sarmara (ibid., p. 307), Hamadān (ibid., p. 309), ʿĪṣafān (ibid., p. 312 sq.), Ahwāz (ibid., p. 377) here the prisoners of war were released by order of ʿUmar, to cultivate the land, but not to pay kharāḏij, where being not enough Arabs for the purpose), Dūndī Sābūr (ibid., p. 382), Dūrā, Arrehḍān, Shīrāz, Darābādīrj (ibid., p. 388: at Darābādīrj, the chief authority in the town was a Zoroastrian priest, a kirbālī), Tabas and Kurīn (ibid., p. 405: they concluded a treaty with ʿUmar, which later was confirmed by ʿUhammad b. Affān), Nāsābūr, Nāsā (ibid., p. 404), Tūs (ibid., p. 405), Hārāt, Badghīs and Būhsāndīrj (ibid., p. 405), Marv (ibid., p. 405 sq.). The term ʿalāhāhān ʿalā . . . (dirham), often occurring in our source, must be understood as meaning a tribute; this appears from the last mentioned passage, p. 405 sq.

Not always, however, did the subjugation of the Iranian places come to pass without bloodshed. In Rāy a massacre ensued, but there seem to have been no religious motives for it (al-Baladhūrī, p. 317). If a town had offered a strong resistance, it might happen, that only a limited number of persons were included in the amān. This was the case at Sarakhs, where, according to the treaty, only 100 men were spared; the marzābān had not included himself in the number, and was, accordingly, killed, while the women were made captives by the conquerors (ibid., p. 405). At Sīr a similar event occurred; here the number of men, comprised in the amān, was 80, or, as others said, 100 (ibid., p. 378 sq.). At the conquest of Maḥdār all the men were killed, and the rest of the population was taken captive (ibid., p. 379). But another stronghold, though resisting the Muslims vigorously, obtained a capitulation, by which its inhabitants became dhimmī (ibid., p. 317 sq.). A great slaughter was made at the conquest of Isfāhān, where 40,000 Iranians lost their lives; most of the nobles belonging to the akh al-bayyātāt and the aswārīs perished there, as it seems, not in the defense of the town, but after its capture (ibid., p. 389 sq.).

When the Zoroastrians were received as dhimmīs, their religious practices must, of course, be respected. Thus al-Farrūḵīn paid the Muslims, on behalf of the inhabitants of Rāy and Kūnis, 500,000 dirham, while the Muslims promised, among other things, not to destroy any fire-temple (ibid., p. 318). When Āḏharbāḏān was subdued and made tributary, the treaty, which its marzābān concluded with the Arab commander, contained also the stipulation, that no fire-temple should be destroyed, and that the people of Shīlā were not to be hindered in their dancing-festivals and other practices (ibid., p. 346). It goes without saying, that in the countries, inhabited by Zoroastrians, soon after the appearance of the Arabs, mosques also were built, destined in the first place for the religious worship of the conquerors; the masjīd ġaṃtī which Saʿīd b. Abī Waḳās constructed at al-Madāin, was the earliest building of that kind in al-Sawād (ibid., p. 289). Under the Khalifate of ʿUhammad, a masjīd was built at Rāy, which town later on under the Khalifate of al-Mansūr, a masjīd ġaṃtī was erected by order of the future Khalīfa al-Mahdī, in 158 (775) (ibid., p. 309). At Tawwāḏī, its conqueror ʿUhammad b. Abī
MADJUS

'Arṣ caused mosques to be erected for the Arab population, which he transported to that country (ibid., p. 386); in Arradžan a masjīd was built by the governor al-Ḥakam al-Ḥujjamīn (ibid., p. 392).

Already at the period of the conquest, there occur numerous conversions from Zoroastrianism to Islam. As T. W. Arnold (The Preaching of Islam, p. 177 etc.) observes, there were several reasons, why it was not very difficult for the Persians to exchange their religion for Muslim.

The āṣira, moreover, which the Zoroastrians were bound to pay, could no longer be required from those who had become Muslim. Soon after the battle of ṫalala some dhikhr's embraced Islam, and, consequently, became freed from paying the āṣira (al-Baladhourī, p. 265). The inhabitants of Ṭṣfā, on the other side, being invited by al-Asḥā'ī, to accept Islam, preferred to give the āṣira, but some noblemen from the same town became Muslims, and had, therefore, only to pay the kharād (for their lands: wa-anīfū n min āṣira fa-ṣūrām: ibid., p. 312). The inhabitants of Kāzvin likewise became Muslim out of avarice to the āṣira (ibid., p. 321), and so did those of al-Ḵāzīzān (ibid., p. 343).

A Zoroastrian, who had become Muslim and then apostatised, forfeited, of course, his life; this happened e. g. with the dhikhr of Masān, who was killed by al-Mughiya b. Ṣu'īda (ibid., p. 342). Other instances of the progress of Islam, we find in the case of Ādharbājīdān. When al-Asḥā'ī for the first time governed this country, he ordered the Arab settlers whom he himself had brought into the land, to invite the population to Islam. These efforts were successful; as al-Asḥā'ī, under the kalifate of 'Ali, a second time became governor of Ādharbājīdān, he found, that most of the population had become Muslim (ibid., p. 328 s.).

The conversion to Islam of some individuals seems to have been brought about chiefly by the admiration of the rapid successes of the Muslims (instances to be found in al-Baladhourī, p. 374-381); a case of forced conversion is that of Īlūmarān (q.v.). Converts to Islam, whose original name had a too pronounced Zoroastrian meaning, had to exchange that name for an Arab one: the Khālīfa al-Ḥammān, e. g. appointed a certain Māyārdār (comp. Pahlavi vārdā, the Zoroastrian offering of food; the long ḍ of the Arabic trans-literation causes, however, a difficulty for this explanation) governor of Ṭabarzān, Rīšān and Lūhāvand: this Māyārdār had to change his name into Muḥammad Ṭabarzānī (ibid., p. 339). Also the father of Ḥasan al-Bāṣrī (q.v.) was one of the persecutors, taken after the conquest of Masān, altered his name, Fāhrū, to Yāsār (ibid., p. 344), although this Persian name could scarcely offend a Muslim ear: but, after he became a mawla, a change of name became necessary.

After the conquest, Zoroastrianism, for the time being, continued to exist in many parts of Iran, not only in countries which came relatively late under Muslim sway (e. g. Ṭabarzān, cf. KHRUSHHD), but also in those regions which early had become provinces of the Muslim empire. In almost all the Iranian provinces, according to al-Mawṣūdī, fire-temples were to be found: '...the Mājūs', he says (ed. Darbīr de Meynard, v. 86) 'generate many fire-temples in 'Irāk, Fārā, Kirmān, Sījistān, Khurāsān, Ṭabarzān, al-Dībāl, Ādharbājīdān, Arrān' (he adds also: 'in Hind, Sind and Shīrāz'). This general statement of al-Masūdī is fully supported by the mediaeval geographers, who make mention of fire-temples in most of the Iranian towns. The toleration, then, from the part of the Muslims, must have been greater in mediaeval times than in modern ones. That, however, not all Zoroastrians felt happy under a non-Zoroastrian government, appears from the fact, that a number of Mādījus, the ancestors of the Parsi's of to-day, emigrated to India. Their landing on the coast of Gujrat is said to have taken place in the year 716 of the Christian era.

Conversion to Islam may have been, in many cases, 'peaceful and to some extent, at least, gradual' (Arnold, loc. cit., p. 181). On the other hand, it is evident, that for a Zoroastrian, desirous to attain to some prominent position, conversion to Islam was indispensable. Among the well-known converts from Zoroastrianism may be cited Ibn al-Mukaffa (q.v.), Sāmīn Khudū, the founder of the dynasty of the Šāmānīdās (q.v.), the poet Daftī (q.v.), etc.

Occasionally, the Muslim magistrates, it seems, assisted the Zoroastrian clergy against heretics: al-Shahrastānī (K. al-Mīlay wa-l-Nīchāl, ed. Cureton, p. 187) relates, how Abū Muslim of Naṣībūr, on an accusation from the part of the muḥād of the Zoroastrians, caused a sectarian to be killed. It seems, however, that this man, who had been a Zoroastrian, and now promulgated a new creed, held tenets calculated to cause disturbance.

A history of the relations between the Muslim state and the Persian Zoroastrians (for neither the Indian Zoroastrians, the Pārsīs, nor the internal history of the Zoroastrian community concern us here) can only be written, when the mass of Persian historical literature of the Middle Ages and modern times will be completely accessible. The position of the Zoroastrians has become worse in course of time. Their number seems to have greatly diminished by the disturbances which ensued after the death of Nādir Šāh (1160 = 1747). When the Afghans destroyed the Zoroastrian quarter at Kirmān, and by the war between Aḫa Muḥammad Kān Kāḡar and Lutf 'Alī Kān (see also Kirmān). In modern times the number of Zoroastrians in Persia is estimated by v. Houtum-Schindler (1879) at 8,499 at all; by Browne (1887/1888) at 7,000—8,000 for Kirmān, and Yazd and environs alone [but elsewhere (A year among the Persians, p. 379) he gives for Yazd and its environs alone 7,000—10,000] and for Bahramābād 20—25. The Encyc. Britannica (1911) has the number 9,000 for the whole of Persia.

In 1854, there were in Yazd and its environs 6,658 Zoroastrians, of whom 25 were merchants, and the rest small husbandmen and labourers (Karaka, History of the Parsees, l. 55). The same author gives for Kirmān (in 1854, the date of the book) no more than 450; for 'Irān 50-50 men, and a small number of humbler position, who were employed as gardeners, in the palace of the Šāh. At Shīrāz, some Zoroastrian families were found, who exercised the trade of shop-keepers. Further more, there are Zoroastrians at Kāshān and Busahr (v. Houtum-Schindler). The Gebers of Bīrū are Indian Pārsīs (cf. BKh).

According to Browne, there are in Persia 5
on Oct. 1, 844. It was not till November that they were forced to seek the shelter of their vessels by the Muslim armies sent against them. Other bands at the same time ravaged with fire and sword the whole coast from Lisbon to Trafalgar and one of them reached a point in Africa where the little town Ālā (Arzila, q.v.) was founded soon afterwards, but took to flight on the approach of the Berbers of the region.

After this invasion, the leader of the Norse hordes seems to have sent an ambassador to the Caliph 'Abd al-Rahmān II to propose a peace. The Umayyad sovereign agreed to his request and sent to discuss the terms of the treaty a diplomat of his entourage, Yahya b. al-Hakam al-Bakrī al-Daiyānī, known as al-Ghazāl. The latter reached Silves, where he entered a ship which after various adventures took him to the Norse leader. Al-Ghazāl returned to his master after an absence of 20 months. The account of his embassy has been preserved for us by Ibn Dīnār. In the vizier Tamālm b. 'Alkarnī, a friend of al-Ghazāl.

Fifteen years later, in 244 (858), Spain and the Maghrib again suffered a Norse invasion. We have accounts of it by Ibn al-Kitīyā, al-Bakrī and Ibn 'Ishārī. It lasted several years, at least till 247 (861). The Northmen began by seizing the town of Nūkrīn in Morocco. They then appeared at the mouth of the Guadalquivir but without success; they then seized Algeciras where they burned the great mosque. They appear to have then had an encounter at sea with the fleet of the Caliph Mu'āmmad b. 'Abd al-Rahmān.

We have fuller details of the invasions which followed. In 255 (969), the Danes, who had come to the assistance of the first Duke of Normandy, made an expedition against Muslim Spain, on the interested advice of Richard I. This lasted three years. The invaders, always called Madjūs by the Arab historiasts, appeared first at Kāfīr Abī Dānis (Alacer do Sal) and landed in the country round Lisbon which they laid waste. The Caliph al-Hakam sent against them a fleet from Seville which met theirs in the estuary of the Tagus. At the same time a battle was fought on land near Lisbon in which the Muslims were defeated. The Danes then extended their efforts to Galicia and in 970 seized St. Iago da Campestello. In the next year, they again attacked Muslim Spain but they were much weakened by the losses they had suffered in the north of the Peninsula and they do not seem to have dared to land anywhere.

It is also to the Madjūs (the name being accompanied by the more precise one of adhālīyūn = Arabdomani) that the Arabs attribute the celebrated taking in the following century of the town of Barbastro (Barbāštar) to the N.W. of Saragossa, on the borders of Aragon. The historian Ibn Haiyān wrote a detailed account of it, which is preserved by Ibn 'Ishārī. A Norman expedition, with French knights, shared, which was evidently led by Guillaume de Monteaur, succeeded in capturing Barbastro in 456 (1064). This success and the barbaric treatment inflicted on the population made a deep impression on Muslim Spain. In the next year the king of Saragossa, Ahmad b. Sulaimān Ibn Hād al-Mu'tābid, with an army reinforced by a contingent of cavalry sent by the Seville ruler, al-Mu'tābid Ibn 'Abbād, recaptured Barbastro, where a weak garrison left.
by the Normans on their return to France could offer only a brief resistance and was almost entirely wiped out.

**MADHU** is 1. in the legal institution of the *damūs* [q.v.], "surety", a term which occurs in the following connection: *madīnān amaḥu* "debtor" *madīnān laka* or "alibi creditor", *madīnān al-īlā* "pawn". For the parties to the agreement and the article in question in a bond, the rules hold which apply to all other contracts.

2. In the chapters of the Fikb books which deal with the law of obligations, *madīnān* is used for the thing for which one is liable or responsible, i.e. is bound to replace. In this way damūn comes to mean in the wider sense, "liability, obligation to restore" in contracts. This liability consists either in the producing of something identical (ṣiṣṭtī) i.e. of a thing of the same quality and quantity (ṣiffat wa-sawā'y), e.g. in edible things (ṣifitūlāt) which are measured by quality, weight, or number (maṣaxāt wa-masālik, wa-ma'dād) or in the value of the thing (ṣīma) e.g. in non-edible things (maṣārikāt) which have a special individuality, and are therefore *āin* species.

**MADRAS** Presidency, the southernmost province in British India, occupies the whole of the southern portion of the Peninsula with an area of 142,260 sq. m.; total population (1921): 42,118,953, of whom 2,840,483 (nearly 7%) are Muhammadans. The majority of these are Tamils, 2,681,945 (93.60 per cent); Shī'a: 54,114. The only Native State with a Muhammadan ruler is Banaganapalle (255 sq. m.); population 36,626, of whom only 10% are Muhammadans. The language spoken by the majority of the Muhammadans of the province is Malayalam (1,108,865 i. e. 37 per 1,000, including almost all the Māppilas [q.v.]; Hindustāni, 335 per 1,000; Tamil 209 per 1,000. History: Southern India began to suffer early in the sixth century from plundering raids—carried out by the Muhammadans established in the north, until the rise of the Hindu kingdom of Vijayanagar in 1356 erected an effectual barrier against the southward expansion of Muhammadan power for more than two centuries. When in 1564 the four Sultans of the Muslim kingdoms of the Deccan,—Bidājur, Bidar, Ahmadnagar and Golconda,—joined forces against this powerful Hindu state, in a single decisive battle (Tālīkot, January 1565) they effected the ruin of Vijayanagar and utterly destroyed the capital, and its territories were for the most part incorporated in the kingdoms of Bidājur and Golconda. In 1656 and 1657 Awanrzeh [q.v.] conquered these two kingdoms and made them part of the Moghul empire. After Aṣfār Džah, the first Niğm of Ḥaidarābād, had made himself independent, in 1724, the Nawāb of the Carnatic [q.v.], also styled the Nawāb of Arcot (Arīka) from the name of his capital, became his chief subordinate in the South of India. When in the middle of the xvirith century the English and the French were in conflict with one another in Southern India, each espoused the cause of a different claimant for the office of Nawāb of the Carnatic. The support of British troops under the command of Robert Clive assured the success of Muhammad 'Ali (ob. 1795), but papers seized at Siringapatam after its capture in 1799, having proved that both he and his son and successor, though nominally allies of the British, had been in secret correspondence with Tīpū Sultan [q.v.], Lord Wellesley, then Governor-general of India, declared them to be public enemies of the British Government, and in 1801 concluded a treaty with a grandson of Muhammad 'Ali, named A'aṣam al-Dawla, according to which he resigned the government of the Carnatic into the hands of the East India Company, but retained the titular dignity and received a considerable pension. The present representative of the family bears the title of Prince of Arcot and has the position of the premier nobleman of Madras. The greater part of the existing Presidency of Madras consists of the territories annexed by Lord Wellesley.

MADRAS City, on the shore of the Bay of Bengal, in 10° 4' N. and 80° 15' E., is the capital of the presidency of the same name; population (1921): 526,911, of whom 135 in every 1,000 are Muhammadans.

**MADRASA.** [See Masjid.]

**MADRID.** The present capital of Spain has kept the name it had in the Muslim period: *Madīrīt* (ethnic *al-Madīrīt*). Arab geographers describe it as a little town grouped round a strong fortress, with a khubta mosque, at the foot of the Djībal al-Shārat, the Sierra de Guadarrama, and a dependency of the province of Toledo. It was especially known for its potteries. It had only an unimportant history, but gave birth to several famous Muslim scholars, among whom the most important was Abu l-Kāsim al-Maslama b. Ahmad al-Madīrī, who lived in the second half of the fourth century and on whom cf. Brickelmann, G. A. L., i. 243. Madrid was taken in 1476 (1083) by King Alphonso VI. According to a Christian tradition, Ramiro II had previously held possession of it for a short time during his campaign against the Muslims in 937 (993). It was on the site of the old cathedral (*qaṣr*) of Madrid that the king
of Castille had the church dedicated to the Virgin of the Almudena built.

**MADURA, an island north of Eastern Java,** with the sea of Java on the north and the strait of Madura on the south; a narrow strait separates it from the residency of Surabaya. For administrative purposes it forms a separate residency along with several small adjoining islands. From the geographical point of view Madura is a continuation of the limestone hills of the residences of Rõmbang and Surabaya in Java; it is doubtful whether the statement in the _Nāgarakṛtāgama_ (Ballad XV, verse 2; also the earliest mention of the island) that Madura only became separated from Java at the beginning of the third century A.D. is of any historical value. The ground is hilly; large parts of the country are not at all fertile. Although agriculture is becoming more and more important with the completion of irrigation works, the quantity of rice grown is quite insufficient for the wants of the dense and still rapidly increasing population; they have frequently to live partly or completely on maize. Every year many Madurese leave their land for a certain period to seek work in various ways in Eastern Java; the comparatively unfertile nature of the soil has always forced the inhabitants to emigrate permanently to the Eastern territories of Java and these are therefore with the exception of a few districts inhabited by a population which speaks Madurese. Of more importance for the Madurese than agriculture is the rearing of domestic animals (cattle, horses, goats and sheep). The Madurese cattle are probably the best in the whole archipelago; many draught animals and fat stock are annually exported. A very popular sport is bull racing; the beasts used for this are bred and looked after with the greatest care. The Madurese have a certain preference for the trade of a wandering pedlar; on the coast and on the islands the main source of livelihood is fishing and fish-breeding.

The population is closely related to that of Java; the customs at birth, marriage and death agree in general with those that prevail there. There are however striking differences. The Madurese is more heavily built, more energetic and enterprising than the Javanese; he is also less sophisticated. He is said to be faithful, reliable, economical and even avaricious. Dress, houses and farms of the Madurese look less cared for than those of the Javanese; the houses are not as in Java close together in settlements but are scattered. The Madurese are specially fitted for hard heavy work and less for occupations which require skill and application. Alcoholic beverages are much daner but little opium is taken. The language is also related to Javanese but much influenced by it; the literature consists mainly of translations and versions of Javanese works.

Islam is the generally prevailing religion. The Madurese have no tendency to fanaticism but as a rule they faithfully perform the principal duties of their religion; the great Muslim feasts are duly observed. All receive the usual elementary religious instruction and many are not content with this only. We have no exact or reliable information as to the period of their conversion and the manner in which it came about; the stories given in the native sources do not agree. But as Madura has politically always been closely connected with Java (in the Hindu period it was subject to the kingdoms of Tumapõl and Madjapahit; at a later date it was under the adhāpit of Surabaya and then under the Sulīm of Mataram) and as it is quite close to the district through which the new religion entered Java, it may well be assumed that between the first dissemination of Muslim ideas on Java and on Madura not a great deal of time passed. The complete conversion of the island to Islam seems to have taken place quickly and without difficulty. Hindu rule had never made a deep impression. According to native tradition Madura belonged to the Muhammadan coalition which overthrew the Hindu Javanese kingdom of Madjapahit. Until 1623 Madura (which was divided into five small states) formed part of the territory of the adhāpit of Surabaya. In this year it was acquired by Mataram and a Madurese prince appointed governor. When in 1678, as a reward of his, Truna Djaya, rebelled against Mataram, endeavoured to make Madura independent and even aimed at rule over Java, the ruler of Mataram sought the intervention of the Dutch East India Company. In 1679 Truna Djaya was taken prisoner; in 1705 Mataram recognized the suzerainty of the Dutch East India Company (which had existed in reality since 1653) over the eastern part of Madura and in 1743 over the whole island. The Company and after them the Dutch government for a considerable time always avoided intervention in the internal affairs of the island; as the rulers of Madura had repeatedly performed important services, they were treated — often to the injury of their subjects — less as servants of the Company than as independent allies. From the middle of the sixteenth century the power of the rulers was gradually limited; since 1885 the whole island has been directly under Dutch rule.

Madura—Madyan Shu'aib

MADYAN SHU'AIB, a town on the east side of the Gulf of Akaba. The name is connected with that of the tribe of Midian, known from the Old Testament (xx: Madian, Madyan; in Josephus, Madyon; & Madyon, Madyon). But it can hardly be used without further consideration to identify the original home of this tribe, as the town might be a later Midianite settlement and besides it is difficult to fix the real home of such wandering tribes. In the Old Testament a town of Midian is not mentioned (not even in 1 Kings, vi. 18 where “Midian” should probably be read). On the other hand Josephus (Ant., xii. 1) knew Madiane as a town on the coast, but the text of his Boecitus (Onomast., ed. Lardner, p. 270), in Ptolemy vii. 1. 2, it is mentioned as a town on the coast and called Mediana or Medumina while in another passage it gives it as an inland town under the name Madima, a difference which is explained by the actual position of the town. In Muhammad's time there is only one reference (in Ibn Ishâk) to the town of Madyan, when the Prophet sent an expedition under Zaid b. Hijrâta thither. There are occasional references in the poet Kuthâyir (in Yâkût, d. 723), who speaks of the monks there and in the record of Muhammad b. al-Hanâfiya's journey to Aila. In the geographers it is mentioned only as a town near the coast, six days' journey from Tabîb; it was the second station on the pilgrims' road from Aila to Madina and was a dependency of Madina. In the sixteenth century Ya'qûbî speaks of its position in a district rich in springs and watercourses, gardens and date groves and of its mixed population. Iṣâkhrî says it is larger than Tabîb and describes from his own observations the spring there, from which Moses watered the flocks of Shu'aib (see below), it was now covered by a house which had been built over it. The town then began to decline gradually. In the xîbî century Idrîsî says it is an unimportant little trading centre with scanty resources; in the xivth century Abu 'l-Fida' says it was in ruins. Only in recent times has it been visited e.g. by Ruppell, Burton and Musil. The extensive ruins, which the Arabs call Maghâr Shu'aib after the cave-tombs, lie about 16 miles east of the port of Ma'di in 29° 28' N. Lat. in the southern part of the valley of al-Badî', which is rich in streams and palms and other trees. According to Burton the whole district between 29° 28' and 27° 40' is called Ar-dh Madyan.

In the Qur'ân following the Old Testament there are repeated references to Madyan as a people: for example in the stories of Moses' stay with them (xx. 42; xxvii. 21 sqq., 45), where his father-in-law (Jethro in the O. T.) is still anonymous, or in one of the stereotyped legends of prophets in which the Madyan are punished because they would not believe their prophet Shu'aib (vii. 85-91; xi. 85-98; xxix. 35 sq.). Abu Shu'aib was later identified with the father-in-law of Moses, for which there is no authority in the Old Testament. But perhaps the real truth is that Shu'aib had originally nothing to do with Madyan. In the older Siras (xx. 78; xxxvii. 176 sq.; xxxviii. 12; I. 13) it is not the Midianites but the Aqâbâh a-Sukâ (the people of the thicket) who are his enemies and it is therefore very possible that Muhammad only later combined an indigenous story of the people of the thicket and their Shu'aib with the Midianites of the Old Testament.

(FR. BULI)
**MAGHNATIS, MAGHNATIS, MAGHNĪTIS, Lodestone and Compass.**

1. The Lodestone and Magnetism

The lodestone is a widely disseminated mineral, and is therefore frequently mentioned by geographers and cosmographers, for example in the pseudopegraphical *Petrology* of Aristotle, by al-Dimishkī, al-Kazwini, al-Taflāhī, Ibn al-Fākih, al-Kalkashandi, etc. Of Amīr and Ḥašāṣūj, it is said, the lodestone is found there as a hard rock. According to Ibn Sinā, the Indian is the best and al-Kazwini makes it come from India. Like the Greeks and Romans, the Arabs also discussed the properties of the lodestone and its effects on iron. They found that the lodestone can hold an iron needle (a ring), this a second, a third and so on, so that a chain is formed.

The power of attraction of the lodestone was defined. Most writers say that a lodestone can lift double its weight in iron, and one from Ḥašāṣūj three times. Dājjār b. Ḥašīyān al-Sūfī possessed a particularly strong one. Dājjār b. Ḥašīyān ascertaind that it could work through bronze. Other information is given by Shams al-Dīn al-Dimishkī, p. 72, or 85, of the work mentioned below (cf. also E. Wiedemann, Beitrag, ii. 3: Uber Magnetismus, S. B. P. M. S. Erlangen, xxxvi, 1904, p. 322).

Knives and swords rubbed on lodestone, according to Ibn al-Fākih and al-Kalkashandi became themselves magnetic. They consist also, like needles, of iron which contains carbon, i.e. steel. They are stronger than the lodestone and do not lose their power of attraction as the former does.

It was noticed that needles which floated on water the end rubbed pointed sometimes to the north and sometimes to the south, apparently according as it was rubbed with one or the other pole of the magnet; there appears to be no suspicion that the end not rubbed had also changed. ʿUṣfīrād al-Ḥaṣābī’s statement that there are three kinds of lodestone is probably connected with the effects on the magnetised needle: one he says attracts, the second repels, and in the third one side attracts and the other repels.

The Arabs devoted much attention to the theory of these phenomena — with how little satisfactory results is evident from the remark of Ibn Butlān: — "It is very annoying for us to feel that we do not know this with certainty (the cause of the attraction of iron), although we perceive it with the senses". Dājjār b. Ḥašīyān explains the power as a spiritual one, classing it with scents. Al-Tughā’s includes the lodestone among the stones which contain spirits (see E. Wiedemann, Beiträge, xxiv. Zur Abhandlung der Arabern, S. B. P. M. S. Erl., xliii., 1911, p. 82). Al-Kīzī does not seem to have dealt with its attraction through vacant space in a work which has not survived, entitled *Kitāb Iltā ʿUṣfīrād al-Maghnītīs fi l-Madid wa-fikr Kalām al-Maṭā ḫaṣr fī l-ʿUṣfīrād*. Book on the reason why the *Maghnītīs* attracts iron: in it there is much discussion of empty space (see Ibn Abī Uṣfīrād, i. 320). Ibn Sinā used needles views which are very obscure in his *Kitāb al-Šīfā* (Maḥāla 2); Ibn Ḥaṣīn is more lucid in his *Kitāb Tawḥīd al-Ḥamāmī fī l-ʿUṣfīrād wa ʿUṣfīrād, Al-Kazwini traces the attraction to a similarity of natures, through which love and attraction between them arose at the beginning of their existence. The Arabs are very fond in poetry and prose of comparing the effect of the magnet on iron to that of the lover on the beloved.

That there are many fables associated with this power of attraction is to be expected. Idols etc. of iron are said to be kept suspended in the air by lodestones (cf. E. Wiedemann, Beitr., xii.: Uber Lampen und Uhr., S. B. P. M. S. Erl., x., 1907, N. viii., p. 297). Nails were drawn out of ships and they were thus caused to sink, as was the case with Sindbad’s. According to al-Kazwini (*Al-ʿAzīb al-Maḥkūṭa*, i. 172) there are submarine mountains at Kuhrum which have this effect. Therefore, he says, the beams of ships in the Red Sea were bound together with ropes.

The lodestone is said to be especially effective if it is kept for a time in goat’s blood, which is of course false. The lodestone is occasionally used in medicine (cf. Ibn Sinā and Ibn al-Bāṭārī, s.v.).

Besides the lodestone, which attracts iron, quite a number of other stones are given, which have the same quality with respect to other bodies, for example, gold is the magnet of quicksilver, etc. Numerous statements about such attracting bodies, which include a number of plants, are given in the *ʿAl-ʿAzīb* of Shams al-Dīn Dimishkī (cf. the Bibliography) in the Arabic text p. 73–77, in the translation p. 85–89. Al-Kazwini also gives a number of such magnets under the word *Lāhī tāqī* ("picking, collecting") among the minerals.

2. The Compass

The Arabs of the East became acquainted with the compass through Chinese sailors, without however at first giving it a special name; there was considerable traffic between the Persian etc. ports and Southern China. Thence it came to Syria and then to the Mediterranean ports of Europe. The compass had very probably however already reached the north of Europe by the trade-route of the Russian rivers as early as the eighth or ninth centuries. This explains why the compass was known earlier in the north than in the south of Europe and perhaps explains also why the Norsemen were able to undertake long voyages by sea (cf. R. Hennig, *Verhandl. der Gesellschaft der Naturforscher etc.*, 84th Versammlung 1912, iii., p. 95).

In decinding the direction by means of a magnetic needle, the Muslims used the end which pointed to the south; as Mecca lay to the south of most places in Syria etc. the *Kīlāla* (s.v.) corresponded almost exactly to the south.

The oldest passage in which the word *karam mī* or *karam bī* occurs is given by Dūyū for the year 239 (854) in Supplement, ii. 337 who found it in *al-Ḥayān al-Maqūlī (Histoire de L’Afrique et de L’Espagne)* edited by him. Serious objections have however been raised to interpreting the word as compass in this passage (M. S. O. S. Berlin, x. 1–2, 1900, p. 268) from the fact that in narratives of travels of the ninth century A.D. and that in al-Maṣūdī (923) the directions are given in the same way as on compasses, G. Ferrand concludes that the compass was already in use then. The next oldest absolutely certain reference is in the *Dīnī al-Hikayāt* of *ʿAwfī;* it is in his *Lūṭāb al-ʿĀthāb* (ed. Browne and Mīrā Māḥmūd Ḳawzīnī). A
The compass is described as a device that is used to find the magnetic north and is often depicted as a small, beautifully painted box or vessel. The compass needle is placed inside the box and, when a magnetic needle is moved inside the box, it is claimed to turn freely and indicate the direction of magnetic north. The compass is described as a device that is used to find the true direction of magnetic north, and it is also used to determine the magnetic declination, which is the difference between the true north and the magnetic north.

The compass is used to determine the direction of magnetic north, and it is often depicted as a small, beautifully painted box or vessel. The compass needle is placed inside the box and, when a magnetic needle is moved inside the box, it is claimed to turn freely and indicate the direction of magnetic north. The compass is described as a device that is used to find the true direction of magnetic north, and it is also used to determine the magnetic declination, which is the difference between the true north and the magnetic north.

hammad after the early successes of Idris I in the Maghrib, brought him the submission of the Maghrawa and returned Tlemcen to him, which he had just taken from the Banū Ifran; the Maghrawa thus became one of the principal supports of the Ifrisid dynasty at its beginning.

The grandson of Muhammad b. Kharaz, a contemporary of Idris I, also called Muhammad, resisted the Fatimids [q.v.]. When the general of the Mahdi 'Ubad Allah, Maṣṣaṭa b. Habbūs, had seized the Ifrisid possessions in the Central Maghrib and placed over them the chief of the Mānasā, Mūsā b. Aḥbāy, the chief of the Maghrawa rebelled and brought under his flag a large number of Berber tribes. In 399 (921—922) he routed the army sent against him under Maṣṣaṭa, whom he slew with his own hand.

But the next year, the Maghrawa, faced with a new Fatimid offensive, had to take refuge in the region of Sijilmāsa. But some time afterwards, the 'Umayyad Caliph of Cordova ʿAbd al-Rahmān III al-Nāṣir, wishing to annex the Maghrib to his dominions, summoned the Maghrawa to his assistance and with the help of Muhammad b. Kharaz was able to bring under his sway all the central Maghrib except the region of Tihert. The son of the Maghrawīd amīr al-Khaṭāir b. Muhammad was installed as governor in Oran. The Banū Ifran and Māṣṣaṭa b. ʿAḥbāy also joined the 'Umayyads (first half of the tenth century). But all these submissions to the wishes of the 'Umayyads were only dictated by self-interest and when Muhammad b. Kharaz died at al-Kairāwān in 350 (961) he had become the vassal of the Fatimids sovereign al-Muʿizz.

The successor of ʿAbd al-Rahmān III in the caliphate of Cordova, al-Muṣṭanṣir, was a man of central Maghrib; he was able to bring under his sway the Fatimids to their old allegiance; their chief Muḥammad b. al-Khaṭāir b. Kharaz thereupon threw off Fatimid suzerainty. Knowing the enemies that this defection was going to cause him, al-Muṣṭarīz invited Zirī b. Manṭā, chief of the Sanḥāda, to attack the chief of the Maghrawa. A battle was fought in 360 (970—971) between the Maghrawa and the Sanḥāda commanded by Bologgin b. Zirī: the Maghrawa were completely routed, but a little later they were able to take their revenge, owing to the assistance of ʿAḥṣafar b. ʿAlī b. Ḥamdūn, lord of al-Malik al-Khaṭāir b. al-Muṣṭanṣir, commander of the army. This time Bologgin b. Zirī in the name of the Fatimids led a great expedition against the Zanāṭa and subjected them completely in the Central Maghrib. The Maghrawa had once again to take refuge in Sijilmāsa and, after the return of Bologgin to Ifriqiya, they definitely abandoned central Maghrib and settled in Morocco. It is from this time that two of their families were able to found two short lived kingdoms, that of the Banū Zirī b. ʿAṭīya at Fāṣ and that of the Banū Khazrān at Sijilmāsa and at Tripoli.

The Maghrawa of Fāṣ. After the defeat suffered by the Maghrawa in the central Maghrib, the descendants of Kharaz, Muhammad b. Kharaz, crossed the sea to seek the help of the famous Ṭāsimid Ḥādīb al-Muṣṭarīz b. ʿAbī Ṭāsim [q.v.]. The latter sympathised with him in his troubles and sent an expedition to the Maghrib under Ḥāṣafar b. ʿAlī b. Ḥamdūn. The Spanish army with contingents from the Banū Ifran and the Maghrawa took up a position near Ceuta and in view of its strength Bologgin b. Zirī refrained from attacking it and set out to subdue all Morocco.

In 373 (983—984) the Maghrawa, after the departure of the Spanish governor Ibn ʿAṣkaladgra, were chosen by al-Muṣṭarīz to rule Morocco in his stead. In 377 (987—988) the Ḥādīb appointed as his vassal to rule the western Maghrib, the amīr of the Maghrawa, Zirī b. ʿAṭīya b. ʿAbī Ṭāsim b. ʿAbī ʿAllāh b. Kharaz. The latter made Fāṣ his residence and settled his tribe around the town. By orders of al-Muṣṭarīz he waged war on the Sanḥāda and notably increased his dominions towards the east. In 382 (992) he made a journey to Cordova on the invitation of the Ḥādīb. In spite of the assertions — frequently contradictory — of the historians, it seems that the reign of Zirī b. ʿAṭīya was rather troubled and that changes of fortune placed on the throne of Fāṣ sometimes the Maghrawīd prince and sometimes his Ifrisid rival Yūdūd b. Yaʿlī. On his return to Fāṣ, Zirī found his place occupied by Ibn Yaʿlī and it was only after a murderous struggle that he succeeded in regaining his throne. But, finding Fāṣ not sufficiently central in position, he decided, like his Spanish suzerain, to build a capital for himself and the principal chiefs of his confederation. In 384 (994) he laid the foundations of the town of Wāḍjadiya (Oujda) and came with his court to live there. At the same time he tried to throw off the suzerainty of Cordova and relations were finally broken off between him and al-Muṣṭarīz. Ibn ʿAbī Ṭāsim sent against him an expedition under the freedman Wāḍiyya; a battle was fought on the banks of the Wāḍ Ṭāṣ and the Spanish army defeated. The Ḥādīb then sent another force under the command of his own son ʿAbī al-Malik al-Muṣṭarīz. On this campaign Zirī was twice routed in 387 (997). He sought to negotiate with the inhabitants prevented him entering it and ʿAbī al-Malik soon afterwards entered the capital. Zirī had to go to the Sahara; later he tried to create a principality for himself in the land of the Sanḥāda. He laid siege to their capital Aṣhir [q.v.] but before he could take the town, he died of the consequences of an old wound in 391 (1000—1001).

On the death of Zirī b. ʿAṭīya, the Maghrawa proclaimed his son al-Muṣṭarīz; he began his reign by endeavouring to regain the favour of al-Muṣṭarīz b. ʿAbī Ṭāsim. The latter recognised him, and his successor ʿAbī al-Raḥmān al-Muṣṭarīz appointed him governor of Fāṣ and western Maghrib in 393 (1002—1003). He received from Cordova letters of investiture for all Morocco, except the land of Sijilmāsa, which was kept for the Banū Khazraʾin. Morocco seems to have had peace and a certain degree of prosperity in the reign of al-Muṣṭarīz, who died in 417 (1026) or 422 (1031).

His successor was his cousin on the father's side Ḥanāmā b. al-Muṣṭarīz b. ʿAṭīya. He took advantage of the anarchy then prevailing in Spain to strengthen his position. He surrounded himself with literary men and legal authorities. But in 424 (1032—1033) the commander of a rival dynasty Abu ʿIsmāʿil Tamīm b. Zirī al-Ifrānī marched from Salē on Fāṣ. Ḥanāmā took the field against him with the Maghrawa but they were defeated. Tamīm entered Fāṣ the same year and persecuted the Jewish population. As to Ḥanāmā, he reached Wāḍjadiya (Oujda) and Tenes and gathered there considerable forces, with which he marched on Fāṣ in 429 (1037—1038). Tamīm had to withdraw from Fāṣ and returned to his own capital, Shella [q.v.].
Hamāma then continued to reign till his death, which probably took place in 431 (1003-1004).

After him the power passed to his son Dūnās. Quickly suppressing a rebellion by one of his cousins, he devoted his reign to the embellishment of the city, which was then beginning to become a great city, with a large population and a busy trade. This prince died in 452 (1060).

The successor of Dūnās, Hamāma in Fās was his son al-Futūḥ, but on his accession his right to the throne was disputed by his brother Aḍiša. He made himself master of part of the capital, the "bank" (al-ta'āa) of al-Karāwiyān, while al-Futūḥ established himself on the opposite bank, that of al-Andalus. The two brothers fought in the town itself and the inhabitants were divided into two camps. Morocco was engulfed in anarchy and it was only after three years of fighting that al-Futūḥ was able to reign undisputed in al-Fās, after Aḍiša had been killed. A gate of this city perched in the southwest wall still bears his name; another in the north wall bears the name of his brother in a slightly corrupted form (Dūd Gisr).

Al-Futūḥ was driven from his capital in 454 (1062) by the Hammadīd sovereign Bologbān b. Sulaymān. This was the time when the Almoravids were beginning to invade Morocco. After the departure of al-Futūḥ, the Maghrawa appointed one of his relatives to succeed him, Muʿāṣar (or Muʿārmaṣar) b. Ḥammād b. al-Muʿāzīz b. Aḍiša, who was proclaimed in 455 (1063) and took up the struggle against the Saharan invaders. He succeeded in defeating one of the lieutenants of Yūsuf b. Tashfin and retaking Fās, which he had lost. The Almoravids having laid siege to the city, the amir of the Maghrawa attempted a sortie in the course of which he met his death (460 = 1067-1068). The people of Fās then proclaimed his son Tamīm. But the capital was taken by Yūsuf b. Tashfin two years later and the young ruler put to death along with a large number of Maghrawa and Banū Khazrān. This was the end of the dynasty of the Maghrawa of Fās. This city, which had enjoyed a certain amount of prosperity under the early members of the dynasty and had been extended by them, later suffered a great deal according to western historians, from their tyranny and exactions.

According to Ibn Khaldaš, in the period of the decline of the Maghrawa power in Fās, there was at Agmāh, at one of the entrances to the Great Atlas on the plain of Marrākush, a little dynasty of amirs belonging to the same confederation. The last of these chiefs who flourished about 450-460 (1058-1067) was called Laggūṭ b. Yūsuf b. Alī. He was defeated and slain by the Almoravids when they made their successful thrust to the north of Morocco.

The Maghrawa of Sidjilmasa (Banū Khazrān).—At the instigation of the Ḥajjib of Cordova, al-Mansūr Ibn ʿAbī ʿAmīr, a Maghrawa chief in 366 (976/7), had taken Sidjilmasa [q. v.] which for over two centuries had been governed by amirs of the Saharan branch of the Banū Khazrān. This chief, who was called Khazrān b. Fātūfī b. Khazrān, proclaimed the suzerainty of the Umayyads of Spain in Sidjilmasa and sent to Cordova the head of the last Midrārid ruler al-Muʿtaṣī b. ʿAbī ʾl-'Inā. Khazrān received from al-Mansūr the governorship of the town and kept it till his death. He was succeeded by his son Wādūdī. The latter had to defend himself against the invasion of the Sanhajā in western Maghrib and in the end was confirmed in his governorship by the Umayyads in 390 (999) after a period of disgrace. On the fall of the Spanish caliphate he proclaimed himself independent, seized the region of Dra (Darzā) and in 407 (1016-1017) took Sufrūy (Sefrou [q. v.]) and the valley of the Wādī Mašyā (Moulaya). His son and successor Masʿūdī was defeated, deprived of his lands and slain by the Almoravids in 445 (1053-1054). Ten years later, the last of the Banū Khazrān, who still held out in Sufrūy, were in their turn scattered.

On the Maghrawid dynasty of Tripoli in Barbary cf. TRIPOLI.

(E. LÉVI-PROVENCAL)

MAGHRIB, the name given by Arab writers to that part of Africa which modern writers on geography call Barbary or Africa Minor and which includes Tripolitania, Tunisia, Algeria and Morocco. The word "Maghrīb" means the West, the setting sun, in opposition to "Maghrib", the East, the rising sun (Levant), but as Ibn Khaldaš remarks, the general denomination was applied to a particular region. The extent of this area, moreover, varies according to different authors. Some Oriental writers include in the Maghrib not only Northern Africa but also Spain; the majority, however, reserve the name Maghrib for the first of these countries. But they are not in agreement upon the boundaries to be assigned to it on the East. On the other hand they are in agreement about the Northern, Western and Southern boundaries. To the North, Maghrib is bordered by the "Roman Sea" (Mediterranean). To the West it extends as
far as the "Surrounding Sea", also called the "Green Sea", the "Sea of Darkness", and by foreigners called, according to Ibn Khaldûn, Okeanos or Atlant (Atlantic Ocean), which stretches from Tangier to the desert of Lemtûn (Abu 'l-Fida') or only, according to Ibn Khaldûn, as far as Asâfi (Saffi) and Deren (Great Atlas). To the South it stretches as far as the barrier of moving sands, separating the country of the Berbers from the land of the Negroes, that is to say the Idrîsî and as far as the rocky region called "hammâda" (Ibn Khaldûn). Some districts situated outside this limit, such as Bûdû, Tamentit, Gharara, Ghadamès, Fezzân, Wâddân, are sometimes considered as belonging to Maghrib although they are in reality countries of the Sahara. As regards the Eastern boundary, certain authors made it extend as far as the sea of Kulsum (the Red Sea) and thus include in the Maghrib, Egypt and the country of Barka [see the article Barka]. Others, whose opinion is adopted by Abu 'l-Fida', maintain that it coincides with the actual frontier of Egypt, from the oases as far as the "Abâkat" which is on the sea between Barka and Alexandâria (Abâkat al-Kebîra). Ibn Khaldûn does not accept this delimitation, because, he says, the inhabitants of the Maghrib do not consider Egypt and Barka as forming part of their country. The latter commences only at the province of Tripoli and encloses the districts of which the country of the Berbers was composed in former times. Ibn Sa'id and the later Maghribi writers such as al-Zînî and Abu Kâ'ba's limit themselves to reproducing with a few variations in detail, the boundaries of Ibn Khaldûn. As to Yâkût he confines the Maghrib to the country stretching from Milliana to Sûs (ed. Wustenfeld, iv. 513).

Confined within the sixth "clime" the Maghrib is divided into several regions. Ibn Hâwâk (Description... transl. de Slane, J. A., 1841) distinguishes two of them: the Eastern Maghrib from the frontier of Egypt as far as Zuwîla in Tripolitania and the Western Maghrib from this point to Sûs al-Akšât; but the division commonly accepted is that into three regions, Irikiya, Central Maghrib and Farther Maghrib (Abu 'l-Fida', Ibn Khaldûn etc.). Ibn Sa'id adopts a slightly different division, Irikiya being here an outer Maghrib, and farther Sûs. Irikiya stretches from Kârîb Ahmed near Misrât (Ibn Sa'id) to Bougie, Central Maghrib from Bougie to Mûliâya (Ibn Khaldûn). Farther Maghrib from Mûliâya to Asâfi and to Dëren, to which must be added al-Sûs which forms as might be said, according to Ibn Khaldûn, an island or country detached from all others and surrounded by seas and mountains.

2. AL-HUSAIN b. 'ALI, Abu 'l-KÂSIM, called "al-nawzîr al-Maghribî", son of the preceding, was born in Egypt on the 13th Dhu al-Hijja 20 (June 19th, 848). In 400 (1010) when his father was executed, al-Husain fled from Egypt to al-Ramla to ʿUthân, b. al-Saffâri, amir of the Banû Tâyi', and induced him to forego his allegiance to the Caliph al-Hâkim and pay homage to the ʿAbîd amir of Mecca, Abu ʿl-Futûh al-Hassan b. Dàfâr. The latter came to al-Ramla and was proclaimed caliph. But when Hasan was bribed by al-Husain Abu ʿl-Futûh had to return to Mecca while al-Husain sought refuge with Fâjkir al-Mulk, vizier of the Buîyûd Bâbâ al-Dawla. Although as an Egyptian he was subject to the ʿAbbasîd Caliph al-Kâdir, he was permitted to accompany Fâjkir al-Dawla to Wâsiti and remained there till his death. He then went to al-Mawâlî where the ʿUkâli ʿArâjî took him into his service as secretary. In 414 (1023) the Buîyûd governor of ʿIrâq ʿUthârîrî of al-Dawla appointed him vizier. But the very next year he quarrelled with the Turkish mercenaries and fled to Karwâsh. But as he quarrelled with the ʿAbbasîd Caliph on some trifling matter, he had to leave al-Mawâlî in the same year. He then went to the court of the ruler of Tîyûr Bâkî, ʿUthâr al-Dawla [cf. MARNAVIDA] who gave him a sanctuary. al-Husain died at Mayyâfîn in 150 (May 418) (Oct. 17, 1027) and was buried in Khâfi.

AL-MAGHRIBI — MAHALLA AL-KUBRA

3. Muḥammad b. Ḍi‘far b. Muḥammad b. ‘Ali, Abu ʿl-Faraḍi, grandson of a brother of the preceding. When Abu ʿl-Faraḍi grew up, he left Egypt and went to the ʿIraq where he lived for a time. After various vicissitudes he returned to Egypt and was appointed head of the Divān al-Lirash by the vizier al-Barizī. He held his office till the dismissal of al-Bārizī; the latter’s successor had him arrested. While Abu ʿl-Faraḍi was still in prison, he was himself appointed vizier on 25th Kha‘b II, 450 (June 21, 1058) and given the titles “al-Wāfi‘ al-mudallal al-ḥakīm al-arshad gafī ‘Amīr al-Mu‘āminin wa-khāliṣahum.” After a few years (9th Ramaḍān 452 = Oct. 7, 1060) he was dismissed and given the control of the chancellery (Divān al-Ingā‘). He died in 478 (1085—1086).

MAGÉS. [See Magi.]

MAGNESIA (MAGNÝSIA, MANÝSIA), the ancient Magnesia ad Nysum, the capital of the Sandık (now wilāyat) of Sarıkhan in the wilāyat of Smyrna, on the northern slope of the Magnesia Dağ mountains, mountain, and two miles to the south of the river Gediz and 20 miles N. East of Smyrna. The town, celebrated in Greek and Roman antiquity, was occupied by the Turcoman Amir Sarıkhan in the year 713 (began 28th April 1313) and was the capital of his principality and of that of his son Sulaiman, who was buried there with his father in the tombe of the family.

Yildirim Sultan Bayazid seated it in the year 702 (began 20th Dec. 1389). Tamerlane collected his treasures there in the year 1402; after the restoration of the Ottoman power, the town saw the rebellion of Būrlinky Muhammad, a partisan of the Shāhīr Būreğir, in 1346; Murād III replaced it one of the first towns in his kingdom and built a palace there in 1444 which is now in ruins. Murād III also contributed to beautifying the town with the Murādīya mosque built in 1591. In 1633 the town was sacked during the rebellion of Elīyād Pāsha. In 1890 Cuinet put the population at 35,000.

MAHALLA, on Arabic word which, like mahalla from the same root, originally means a place where one makes a halt. Mahalla thus came to have the special meaning of a quarter of a town, a meaning which has also passed into Turkish (e. g. the YÜRİ Mahalla quarter in Constantinople), into Persian and Hindūstānī (where the popular pronunciation is mahālī); the term formerly applied to a quarter of a town used to be dīr (as in old Baghdad). The mahālīs are often under the administration of a special official called muḥātār. In Egypt the word mahalla is frequently found as the first element in the names of towns and villages. Here the primitive meaning of place, locality has been preserved, while quarters of a town are rather called kaṭa‘ especially in al-Fustāṭ and Alexandria. According to the Musharik al-Buldān, there are about 100 places in Egypt called al-Mahalla; “Ali Pasha Mubārak gives over 30 in al-Khitat al-din‘āda (xv. 21 sq.) in addition to the large town of al-Mahalla al-Kubra [q. v.].” (J. H. KramerS)

MAHALLA AL-KUBRA or MAHALLA KABIR is the modern name of an important town in the Delta of the Nile at some distance to the west of the Damiatta arm, north-east of Tanta. It lies on the Turf al-Muḫīṣ, canal, a branch of the Bahr Shībin.

In view of the large number of Egyptian geographical names compounded with Mahalla, the identification of the town with the names mentioned by earlier Arabic writers is a matter of some difficulty. Maspero and Wiet indentify it with the Coptie Tshairi (Amélineau, La géographie de l’Egypte à l’époque copte, Paris 1893, p. 262), but this identification is rendered doubtful by the fact that al-Mahalla is a purely Arabic name (and it also remains to be proved that it is a rendering of the Coptie name just mentioned), and because the work of Abu ‘l Sāliḥ on the Christian buildings of Egypt makes no mention of this town. The earliest author who knew a town called al-Mahalla or al-Mahalla al-Kubra is al-Makdisi (p. 55, 194, 196, 200); he tells us that it was a town of al-Kif built in two parts, one called Sandaf (or Şandafs), but the statement that the town was situated on the river by Alexandria (p. 200) seems to be an error. Al-Bakri seems to know the same town under the name Mahallat Muḥrūn (Kitāb al-Madā‘ik zan’t Maḥallat, Brit. Mus. MS.). Idrīsī, Description de l’Afrique, p. 158, calls the town simply al-Mahalla and knows a canal called after it. Yakūt’s statements are confused, for he speaks of a town called Mahallat Dākala and of another Mahallat Shārṣiyyūn (iv. 428), both of which seem to refer to the same place. Mahallat Shārṣiyyūn in Yūkūt—which he also calls Mahallat al-Kubra—forms part of the town of Dākala and on the other hand he says that Mahallat Dākala between al-Kubra and Dimāya is the largest of the Mahallas that he knows (cf. also Abu ‘l-Fida‘, ii. 160), while the geographer al-Dimīški (p. 231) knows Mahalla Dākala as the capital of the Kūra of Dākala; Ibn Dūynīš (v. 82) says that the governorship of this town was regarded as “the little vizierate” (al-wuhūla al-saghirūn).

The name Mahallat Shārṣiyyūn is again found in al-Makrizi (ed. Wiet, iii. 207). It is clear from these writers that the town was an important commercial centre from the tenth century onwards. It does not seem however to have played any considerable part in history, although ‘Ali Paša Muḥārak quotes some events that took place there, from al-Makrizi and al-Djabarti, in Egypt in the xvi. century the town had to give way to Tanta, which became the capital of the musṭirīya of al-Gharbiya, while al-Mahalla became the capital of a smaller administrative area; ‘Ali Muḥārak estimates its inhabitants at 50,000, while the 1928 Baedeker only gives it 35,500. It is at present a centre of the cotton trade; raw cotton is there cleaned in the factories. Of the many individuals who bear the nisba al-Mahalli, the most celebrated is Djalāl al-Din al-Mahalli [q. v.] who was born here.

(J. H. Kramer)

MAHARI or MAKARI, a negro tribe also called Kotoko, living on both banks of the Lower Logone below Musgum and on both banks of the Lower Chari from Lake Chad to Fort Lamy and Kusseri.

They are usually divided into three groups: the Lagwere on the Logone, where they are mixed with Musgum, the Semsar at Kusseri and the Sungwal Kwe at Guelfi. These natives do not seem to be autochthonous; the first occupants of the country according to tradition were the Kerebina, who are perhaps related to the ancient people of the Sao or Sô. As a rule, tall and slim, lanc and bony, they have a narrow head and dark skin; they make three parallel cicatrices on the forehead, the middle one of which runs from the top of the nose to the roots of the hair. They speak languages akin to the Sao, Kuri and Buduma. They are nearly connected with the Musgum, with whom they form the Massa group. The Kanuri have passed on to them the Muslim religion and a certain degree of civilization.

The Makari or Kotoko are agriculturists and fishermen; they grow different kinds of millet, maize earthnuts and grind their corn with a quern. Fishing provides them with an abundant supply of food; they follow it in large pirogues, about 40 feet long and two to four feet wide. These crafts which are propelled by poles or paddles, have a flat bottom and a raised bow and stern; they are built of strong planks bound together with fibre passed through holes which after being tied, are calked with various barks. This is how they come to be described as sewn. They carry 25 to 30 persons. The Kotoko fish with a large net mounted on two forks placed in different directions at the front and manoeuvred by a lever. This net is lowered to touch the bottom, then a little propped up by children who drive the fish towards the fishing boat by striking the water with poles. The apparatus is lifted as soon as the fish have entered it.

The homes of the Makari are built of clay, are fairly large and comparatively comfortable. The walls are about 6 feet high; they have an elliptical door about 5 feet high; the roof is of straw and hemispherical in shape. Inside is a bed of clay, shelves of clay to hold household utensils and the fireplace. Sometimes there is also a bed made of things of hide faced round a framework.

There are few isolated homes in the Makari country; they are commonly grouped in villages of which the most important are Logone, Gana (Little Logone), Karnak Logone or Logone Berni (Great Logone) and Kusseri. They used all to be surrounded by circular ditches and clay walls pierced by several narrow gates. These defences were intended to protect the inhabitants from the frequent attacks of their neighbours.

The population includes smiths, potters, weavers and a few traders. There are a few Arabs among them. Politically the Makari belonged to the ancient empire of Bornu [q. v.]. They were divided into several small feudal states; that of Karnak Logone showed more independence.

MAHBU'B, the name given in North Africa and Egypt (cf. Dory, Supplement, s. v.) to the Turkish gold sequin, contraction for ZERMAYHUB [q. v.].

MAHDAWIS, the followers of Saiyid Muhammad Mahdi, of Djanwpt, near Banaras, 847—910 (1443—1504), who declared that he was the promised Mahdi [q. v.] and by his preaching gained a number of adherents in Ahmadabad [q. v.] and other parts of Gujrat. His followers credited him with the power of working miracles, raising the dead, healing the blind and the dumb, etc. For a time they were allowed to profess their faith unmolested and add to their number by proselytising, but in the reign of Maragat I, Sultan of Gujrat (1513—1526) they were perse- cuted and many of them put to death. Awrangzeb [q. v.] also persecuted them when in 1645 he was governor of Ahmadabad. In consequence of these persecutions, the Mahdaws to the present day practise taqiyah [q. v.] and wish to pass as orthodox Muslims; their exact number is therefore uncertain, but they are found in small groups in most parts of Gujrat, in Bombay, Sind, the Dakhan [q. v.] and Upper Hindustan. They believe that Saiyid Muhammad was the last Imam, the promised Mahdi, and in consequence of his having come, they are said by their religious opponents neither to repent for their sins nor to pray for the souls of their dead. They observe certain ceremonies peculiar to themselves at marriages and funerals. By their enemies they are styled Ghair-Mahdi, i.e. those who do not believe in a Mahdi who is still to come; but the Mahdaws themselves apply this designation to other Muhammadans as having failed to recognise the Mahdi who has already appeared.

Blochmann, Translation of the A'ivi Abhari, Introduction, p. iv—v, Calcutta 1873; Dja'far Sharaf, Qanoone-Islam, 2nd ed., p. 171—172, Madras 1863; ed. W. Crooke, p. 208—209, Oxford 1921; Gazetteer of the Bombay Presidency, vol. ix., part ii., p. 62—64, Bombay 1899; Hastings' Encyclopaedia of Religion and Ethics, vi. 189 (Goldziher on Ghair Mahdi); Goldziher, Vorlesungen über den Islam, Heidelberg 1925, p. 364; al-Mahdi (A.), means literally "the guided one", and, as all guidance (husd) is from Allah, it has come to denote the divinely guided one, guided, that is, in a peculiar and individual way. For Allah, in the intense and immediate theism of Islam, is guiding every one and everything in the world, whether by the human reason or by the instincts of the lower animals, to a knowledge of Himself and to what is needed for their existence and continuance (Livin, xx. 228, foot). One of His names is a- khi b, "the Guide" (Kur'an, xxii. 53; xxv. 33), and the idea of His guidance is reiterated in the Kur'an. For a statement of its different kinds see Bajaldawi on Kur'an, i. 5 (Fleischer's ed., i. 8, ii. 21 sqq.); Mutfaradāt
of al-Râghb al-Iṣfahânî, p. 560 of ed. Cairo 1324; al-Maṣâqat al-aṣrâm of al-Sâmahî, p. 80 of ed. Cairo 1324. But it is singular that the word mahdî (the passive participle of the I Stem) never occurs in the Kur'ân and that the passive of that stem occurs only four times. In the usage of the Kur'ân, the VIII stem, یکدٔ, strictly “the accepted guidance for himself”, is used as a quasi or reflexive passive. Thus the man whom Allâh guides is not simply “guided” but reacts himself to the divine guidance.

There seems to be no original authority for the vocalisation al-Mahdî which Edward Pococke gave as Nî, xvi. of the Signs in his Porta Mosis, ii, 263 of ed. 1655, with the meaning “director”; cf. Lane’s note in the Supplement to his lexicon, p. 337a e. Margoliouth (article cited below, p. 337a) suggests that it may mean “the giver” and refers to traditions (see below) of the Mahdî bestowing uncounted wealth; but there does not seem to be any oriental authority for this epithet. Also, the verb used in these traditions is یکدٔ. But one who is mahdî, or al-mahdî, is in a different position; he is absolutely guided. It is used of certain individuals in the past and of an eschatological individual in the future. Thus the یکدٔ (xx. 229, 9 from below) quotes from a tradition “the usage of the khalîfâ who followed the right way and were guided” (sunntu ‘l-khulafa’ یکدٔ al-mahdîyin), meaning the first four khalîfâs, and goes on to state that it is applied especially, as a name, to the Mahdî of whom the Prophet gave good tidings, that he would come in the Fad of Time. There are many other instances of the non-eschatological application of the term mahdî to human personages. Goldziher, (Fecionsen, p. 267, v. note 12, 1) has gathered a number of such cases; thus یکد (NajîÞ, ed. Behn, Nî, 104, v. 29) applies it to al-Abbas and al-Sâmahî b. ‘Uthmân (Divân, ed. Tunis, 24, 1) to Muhammad; see, too, Ibn Sa’d (xi. 94, 2). It is often applied by Sunnites to ‘Ali, in distinc tion even to the other three khalîfâs; thus in یکد al-‘Abbâs (iv. 31, 2) he is یکدٔ al-mahdîy, and Sulaimân b. ‘Iraq calls ‘Uthmân, after his death, “Mahdî son of the Mahdî” (Tahân, Tahân, ed. Leyden, Ser. ii. 546, 11). Farazdâk and یکد apply it as an honorific even to the ’Umayyâd khalîfâs. As applied by the poets to ‘Umar II, the ’Umayyâd (Ibn Sa’d, v. 245, 3), it seems to have been more than an honorific; he was regarded as a real یکد (v. v.) and under peculiar divine guidance. The view of later Islam he was the first of these “renewers” of the Faith and the eighth and last of these would be either the Mahdî, a descendant of the Prophet, or یکد (al-mahdî al-mukaddas), according to the two positions; cf. article ’alîk. See on the whole question of the یکد and his relation to the Mahdî; Goldziher, Zur Charakteristik der یکد, in J. B. Al. Wiss., i.v. p. 10, sqq. It is characteristic of Islam to take a very pseu- dopoe view of human nature: men always fall away from the faith and have to be brought back. This will be so especially towards the end of the world. Men will become thoroughly secular and Allâh will leave them to themselves. The Ka’ba will vanish, and the copies of the Kur’ân will become blank paper, and its words will vanish also, from the memory of men. They will think only of poems and songs. Then the end will come.

In a similar heightened sense the term Mahdî was applied by Ibn al-Ta’awwûh (Divân, ed. Margoliouth, p. 105, 5, 6) to the ‘Abbasid khalîfah al-Nâṣir (A. H. 575—622); he is the Mahdî and no other eschatological Mahdî need be looked for. In a narrower but more true etymological sense it came to be applied to converts to Islam; Allâh had guided these to the right Way. For such, Turks use the more Kur’ânic term mukadd; see above for the distinction. Goldziher (p. 268) gives cases. In a heightened sense, also, the term was applied very early (A. H. 66) to Muhammad b. al-Hâfizy, a son of ‘Ali by another wife than Fâ’tima. After the death of ‘Usâin at Karbala, Mukhâr b. Abî ‘Uthmân put forward this Mahdî as a claimant of the khalîfate and called him “the Mahdî, son of the legatee (al-wâfi),” a term applied to ‘Ali by those who asserted that the Prophet had bequeathed the headship of the people to him (Tabân, Tahân, ii. 534). This was after the deaths of ‘Usâin and Fâ’tima, the two sons of ‘Ali by Fâ’tima, the daughter of the Prophet, and shows a different drift as to the inheritance of the ‘Imâmât from that of the Shi‘îe legitimists. This Muhammad was heir as the son of ‘Ali and not as possessing the blood of the Prophet. He seems himself to have declined the dignity thus thrust upon him but, muhîr ‘îdî, he became the founder of the Kâshîyâ sect which looked for his return from his grave in Mount Kâdr, there he remains undying. This was maintained by the poet Ku‘awâyîr (d. 105 = 723) and by the Sufîyî al-Hâlîmîyî (d. 773 = 793; A. B. X. v. 32; cf. Mas‘ûdi, Paris ed., v. 150 sqq.). Muhammad thus became an “expected Mahdî” or یکد, like the Hidden Imam of the Twelve Shi‘îes. For the position of the Kâshîyâ see Shahraštâni’s Miller wa-Nîhâl, ed. on margin of Ibn Hazîm, i. 196: Mukhâr, disgusted with Muhammad, eventually founded the Mukhârîyâ sect which was strict Shi‘îe and upheld ‘Usâin b. ‘Ali (Shahraštâni, p. 197). The whole episode is interesting as showing the extreme fluidity of the religious-political parties at the time. It also shows very clearly how the term Mahdî gradually hardened from being a general honorific to a special designation, and even a proper name, for a restorer of the Faith in the last days.

The Hidden Imam of the Twelve Shi‘îes, whose return (ru’dâs) is awaited, is also called, by the Shi‘a, al-Mahdî. But his status is entirely different from that of the future restorer looked for by the Sunnites. The very essence of Sunnite Islam is that the Muslim people shall rule itself and can attain truth and certainty by its own exertions. When, at any time, its qualified scholars (muqaddad’s) have applied the three یکد — Kûran, Sunna, ’A’îrîs — to any point of Islam and have come to an agreement (’a’îrîs) on it, that point is assured and the acceptance of it as of faith is binding on all Muslims. The idea of an absolute Mahdî, therefore, as an infallible guide, suggests too much that یکد (v. v.), which the later Sunnites theologians rejected. Sunnite Islam, as Goldziher has taught us, is a recoil against the idea of blind submission to any human teacher. Even ’Isa, as restorer, is called mukadd, which is much less emphatic in its suggestion of infallibility. Yet the masses demanded an absolute restorer and it was among the masses that the belief in a Mahdî was, and is, strong. To return — the
Mahdi, or 'Isa when he comes as a restorer and ruler, will restore and apply that Consensus of Islam which has been reached by the successive generations of muṣṭafahī'd.' Thus the Muslim people not only rules itself but is also the ultimate and infallible interpreter of the revelation through the Prophet. The Shi'ites, on the other hand, admit no such authority either in the Muslim people or in their own muṣṭafahī'd; by Kur'an, Sunna, khitās and idā'ī' it can only be gathered from the guidance (al-dī'am; cf. Goldzihier's Streitschrift des Gazalî gegen die Bâtîniya-Sekte, passim) of the hidden Imam who is divinely protected (māṣīma) against all error and sin and whose function it is to interpret Islam to men. The muṣṭafahī'd of the Shi'a are his intermediaries with men; but they in their intermediation may err. When the Hidden Imam returns he will rule personally by divine right. He is called a Mahdi, but it is in a different sense from any Sunnite use of that term. The idea of protection against error and sin (Suna; see article above, ii., p. 543) seems to have been introduced into Sunnite Islam from the systematic exposition of Farid al-Din al-Razi (d. 606 = 1209; see, further, Goldzihier in Isl., iii. 238—245), but there it has been limited strictly to prophets. No "successor" (khalifa) can enjoy it and the Mahdi, for those Sunnites who expect him, is strictly an ultimate khalifa of the Prophet. For those Sunnites who look to 'Isa to play the part of the Mahdi he will not return as a prophet in his own right. It will not be a return (raf'da) in his case but simply a "descent" (nawāli') and he will rule according to the law (kari'a) of Muhammad; see article 'Isa above, ii., p. 525. As all Shi'ite sects agree on this status of their Imam it is unnecessary to go into further details on them; see in general, article 'Isa.

Another important point of difference between Shi'ites and Sunnites as to the Mahdi is that he is an essential part of the Shi'ite creed but not of the Sunnite. That there will be a final restorer of the faith all Sunnite Islam believes as a part of its eschatology, but not that he will be called Mahdi. There is no mention of the Mahdi in either of the two Sā'îd's, of Muslim or of Bukhârî. Similarly Sunnite systematic theologians do not deal with him. The Mu'awâlid of al-İdî has nothing on him; nor, indeed, on any of the Signs of the Hour (ahkâm al-asâ') of article IWAMA. Nasâ'î in his 'Asâ'î has, of these, only al-Dâjî al-Dâjî (see article above, vol. i., p. 886) and the Descent of 'Isa; Taftânâni, in his commentary, gives ten Signs but not the Mahdi. Even al-Ghazâlî, a popularizing theologian, has nothing on the Signs in the last Book of his İyâ', that on eschatology, and has only a slight allusion in the Book dealing with the Ḥadîd (ed. 1334, i. 218; İhâfî, the commentary of the Sâ'îyîd Mûrtaḍâ, iv. 279) to the coming of al-Dâjî al-Dâjî, the descent of 'Isa and his slaying of al-Dâjî al-Dâjî; there is no mention of the Mahdi either in the text or in the commentary. Al-Ghazâlî's whole point in this passage is to stress the final falling away from the faith of all men to which reference has been made above.

It was, then, in the hearts of the Muslim multitude that the Mahdi would be the resting-place and support. In the midst of growing darkness and uncertainty — political, social, moral, theological — they clung to the idea of a future deliverer and restorer and of a short millennium before the end. This belief is, therefore, expressed in a multitude of later traditions, often expansions and expositions of better authenticated and older traditions, and often linking themselves to old stories of inter-tribal and inter-dynastic conflicts in the civil wars after the murder of 'Uthmân. We, therefore, find among them references to historical movements and sects which had failed in their time but had left remains, if only a name, to add to the confusion. Certain are these are gathered up in later edifying collections, such as the Tuhfâta of Abî 'Abd Allâh al-Kurtubi (d. 671 = 1272; Brockelmann, G. A. L., i. 415) which have we in a Muḥtâṣar al-Shârâfî (d. 973 = 1565; Brockelmann, ii. 335; ed. Cairo 1324) and the Ma'ârîk al-Anawîr of a modern writer, Hasan al-Iḏwî al-Ḥamâzâwî (d. 1303 = 1886; Brockelmann, ii. 486; many editions).

But the clearest presentation of the alleged basis for this belief is given by Ibn Khaldûn (d. 808 = 1406) in his Muḥâlifah (ed. Quatremère, ii. 142 sqq.; Bâlâqî, folio ed., 1274, p. 151 sqq.; transl. by De Slane, ii. 159 sqq.). "A section on the Mahdi is not a separate doctrine, it is a necessity as to him and on clearing up the obscurity as to that. It has been commonly accepted (mâqâlî) among the masses (al-kifâja) of the people of Islam, as the ages have passed, that there must needs appear in the End of Time a man of the family of Muhammad (mawâlib al-bâhit) who will aid the Faith (din) and make justice triumph; that the Muslims will follow him and that he will reign over the Muslim kingdoms and be called al-Mahdi. The appearance of al-Dâjî al-Dâjî and of the other Signs of the Last Day (ahkâm al-asâ') which are established in sound tradition (al-qâfiz) will come after him. 'Isa will descend after his appearance and will kill al-Dâjî al-Dâjî or will descend along with him and aid him in that killing; and in Worship 'Isa will follow the Mahdi as his Imam. In support of this position traditions are used which some authorities on tradition have alleged and which others have disputed and often opposed with other narrations. The later Shi'is have followed another course and method of proof in the case of this descendant of Fâṭima and often seek support, as to that, in the mystical "unveiling" (kasâfî) which is the basis of their method."

This is a very careful statement of the strictly popular drift in Ibn Khaldûn's time, a drift with which he evidently had no sympathy. He goes on to give formally 24 traditions bearing upon this restorer and adds six variants, criticizing the authenticity of them all. In only 14 of these is this restorer named Mahdi. For references to traditions on the Mahdi in Ḥanbalî's Musnad, Abî Dâ'dî al-Sunna, Tirmidhî's Sâ'îd and Ibn Mâjdî's Sunna, see Wensinck's Handbook of early Muhammadan Traditions under Mahdi; in the Ma'ârîk al-Sunna of al-Bâghwî, see ii. 134 of ed. Cairo 1318 and in the Ma'ârîk al-Mazâhid, see p. 399—401 of ed. Dîlî 1327. All these, however, have only a certain number of the mass of traditions quoted by Ibn Khaldûn. In the Tuhfâta of al-Kurtubi, on the other hand, there is (p. 117—121 of ed. Cairo 1342) a further mass of luxuriant detail which Ibn Khaldûn had evidently disdained to incorporate; cf. his later reference to the town Mâsâ, p. 173, l. 7. In the Tuhfâta the Prophet, for example, foretells the future conquest and re-conquest of Spain by name. Al-
Kurtubi died in 617 (1272) in the first years of the Nasrids of Granada when Granada was the only part of Spain left to the Muslims. He and those around him felt grievously the need of such a restorer and Mahdi, and detailed traditions sprang up as to his coming. The situation called for a mightier and more specific champion of Islam than 'Ibâd whose business strictly was to kill al-Dājjâl. Devotion, also, to the blood of the Prophet, of whom the Mahdi was to come, and which was so strong even in the Sunnite Maghrib, may have helped this. Al-Kurtubi's Mahdi was to come from the Maghrib as opposed to the earlier ones who were to come from Syria or Khurâsân. He will come from a place in the Djabal of the Maghrib, on the shore of the sea, called Mâsa; they will swear allegiance to him there and again, a second time, at Mecca. Here the tradition joins and attempts to explain an earlier one, given by Abd al-Rahîm, and quoted by Ibn Khaldîn (p. 145; see, also, below), telling of an expedition against Kâbl and of the booty of Kâbl, thus linking up with the earliest inter-tribal conflicts. This west-teen Mahdi will also kill al-Sufâni who is supported by Kâbl. This is not the place to enter upon the showing how the Marwânid branch of the Umayyads supplemented their cousins, the Sufyânîs. But from the mystery connected with the voluntary abdication and speedy death of Mu'âwiyâ II, the succession of Marwân b. al-Âkâm and the sudden death or assassination of Walid b. 'Utba b. Abî Sufâni ('ajla'na wânsâqa'maysâ'; Masûdi, Paris, ed. v. 170) at the burial of Mu'âwiyâ II, there seems to have sprung an Imâmate party among the Umayyads (sâlî qâlin Umâwiyâ min al-Imâmât, al-Qâzâlî in Goldžer's Streitschrift, p. 14 of the Arabic text); yet this Walid appears later alive in Tâbarî's narrative. In the account of Khâlid b. Yazid in the Aḏ'âbî (xvi. 83) there is a story that he was the first to start this 'qâsî-yâ bâbâr al-Sufâni wâb-kâhbru wâwârâda ar yâfûna l'tând lfitî tâ'âmûn'), although that is also denied and a more general and earlier origin is asserted. In the civil war at the rise of the 'Abâsîd one of the 'white', i.e. Umayyad, revolts was in support of the claims of the 'Sufyânîd of whom there used to be mention' (zârîket-al-Hâdhâ 'I-Sufyânî lakâ lân yubâhâr, Tâbarî, Tarîqâ, Cairo, ed. iv. 138, anno 132; Ibn al-Âlîmî, Kâmîl, v. 207 of ed. Cairo 1301). Apparently the Sufyânîd continued to assert their claims in the underground Imâmate fashion against the Marwânid and, later, the 'Abâsîd, supporting themselves with traditions, as all the parties did. The details are exceedingly obscure for this was one of the lost causes of Islam and has left on no one a name and that name under the general opprobrium which fell upon the Umayyads in all later Islam, Sunnite and Shi'ite. An earlier stage in this appears in a tradition quoted by Tâbarî (I 224 = 838) in his commentary on Kûrân, xxv. 50 (Part xvi., p. 63 foot). The Prophet mentioned a division (zâma) which would arise between the East and the West. Then there would come forth al-Sufâni from the Dry Wâdî (al-wâdî fîsâ'; otherwise unknown; in Yâqût, iv. 1000, the Wâdî of Yâsîr: from a man: it is said that al-Sufâni will come from it in the End of Time) "in that outburst of his", or "when his time comes" (fi jumâlî dâ'â'). Much is said of the armies he will send out and the destruction he will spread, slaying 300 chiefs of the Banû 'L-'Abbâs until Dâjjâl is sent against him and destroys him. His appearance, thus, for Tâbarî, is not eschatological and there is nothing about the Mahdi and the End of Time. But in an apocalypse incorporated by Muḥyîl-Dîn ibn 'Arabî in his Muṣâdara al-Abîr 'âr in der Krimzznzeit and dated by him about 576 (1180), this tradition is used, expanded and brought into the eschatological pictures, and al-Sufyânî is finally killed by the Mahdi. A hundred years later al-Kurtubi expands it still further and calls al-Sufyânî Muḥammâd b. 'Urwa. For other references on al-Sufyânî see Goldžer, Streitschrift, p. 52, note 1; Snouck Hurgronje, Der Mahdi, in Verstreute Geschichten, i. 155; De Goeje, Frag. hist. ar., ii. 526; Van Vloten, Recherches sur la domin. ar., p. 61; Lamens, Le califat de Yazid, i. 17; Mu'awiyâ II ou le dernier des Sufyânides, p. 43.

It is obviously impossible to give in detail the traditions hearing on this restorer, but their types can be indicated and some recurrent characteristics. The great majority are put directly in the mouth of the Prophet, a very few go back to Allâh. If there remain of the world a single day Allâh will lengthen it until he sends this restorer; the world shall not pass away; the Hour shall not come until then. He will be of the People of my House (min aḥt bâltî); of my kindred (min širt); of my Nation (min ummat); of the offspring of Fâtîma (min sealad Fâtîma); his name will be my name and his father's name my father's name. He will resemble the Prophet in disposition (khâlîk) but not in appearance (khâlî); this is put in the mouth of Allâh. He will be bald of the forehead, hook-nosed, high-nosed. He will find the world full of evil and oppression and ungodliness; if a man says: 'Allâh! Allâh!' he will be killed. He will fill the world with equity and justice; he will beat men until they return to Allâh (al-ḥâkîk). The Muslims will enjoy under him a prosperity the like of which has never been heard of; the earth will bring forth its fruits and the heavens will pour down its rain; money in that day will be like that which is trodden under foot and will be uncounted; a man will stand up and say: 'O Mahdi, give to me', and he will say: 'Take!' and he will pour into his robe as much as he can carry. It is suggested that this is a taqṣîr, legitimate or illegitimate, of a tradition in the Sûqût of Muslim: 'There will come in the end of my nation a khâlîfa who will scatter wealth, not counting it'. See many references for this munificent khâlîfa and the abundance of money in the last days in Wensinck, Handbook of Tradition, p. 106 foot. But in this tradition, as in all Muslim and Bukhâri, there is no mention of the Mahdi. Again: the Mahdi is of us, the People of the House. Allâh will bring him suddenly and unexpectedly (ziyâdhu-l-ḥâkîk fi la'tâ). He will rule seven, nine years. There are frequent allusions to his coming in a time of dissensions (jîna). These will be such that it will take a voice from heaven to still them, saying: 'Your Amir is so-and-so' (Ibn Khaldûn, p. 162). This is very like an ironical comment, but it is cited as a simple foretelling. In these earlier traditions he will come from the East (al-Mârîs; Khurâsân), from beyond the River (Oxus); in later times (e.g. Kurtubi
and Ibn Khaldûn, p. 171—176) he was to come from the wide, unknown, lands of the Maghrib. The original Black Banners (râqât saûd) tradition about the 'Abbâsid, apparently forged to lead them to support the 'Alids, does not mention the Mahdi (Ibn Khaldûn, p. 153), but in an evidently later form there is added, "for he is the Khalifa of Allah, the Mahdi" (Ibn Khaldûn, p. 159). One long tradition (Ibn Khaldûn, p. 148) may be given entire as an illustration of a type and because of the later expansion and use of it by Kurûbi: "There will arise a difference at the death of a Khalifa and a man of the people of al-Madîna will go forth, seeing to Mecca. Then some of the people of Madîna will come against the man and make him go out (apparently rise in insurrection) against his will and they will swear allegiance to him between the Rubû and the Madîm. And an army will be sent against (or, "to", ilil) him from Syria but will be swallowed up in the earth in the desert (al-badîd) between Mecca and al-Madîna. Whenever the people see that, the Abâdî ("Substitutes" or "Nobles") of Syria and the "Aqî bî ("Companions" or "Seculars"; see Lane, p. 2059) of al-Ta'âk will come to him and they will swear allegiance to him. Thereafter there will arise a man of Kurûbî with maternal grandfathers of Isâm. So he will work against the man and make it will overcome them and that will be the expedition (ka'bîth) of Kalb. And oh! the disappointment of those who will not have part in the booty of Kalb! He will divide the wealth and rule over the people according to the suûma of their Prophet and he will subject himself to the support of Isâm. He will remain seven or nine years and then die and the Muslims will pray over him". This is evidently an echo of the early 'Alid conflicts and is not eschatological nor does it mention the Mahdi. But its motifs of the Abâdî and of the earth swallowing up in the desert (al-badîd) re-appear in other traditions which are concerned with the End of Time (p. 156, 161) and which are worked into the tradition of the Mahdi from the Maghrib. Again, in a tradition evidently eirenical between the 'Abbâsid and the 'Alids, the Muslims are exhorted to turn to the youth of the tribe of Tamâm (al-tâmûm bi 'l-fata 'l-tâmîmî) for he will come from the East and will be the standard-bearer of the Mahdi!" (Ibn Khaldûn, p. 162). But it is plain, too, that none of the doctrine of the Mahdi arose late and was not generally received. Thus the doctrine of al-Dâjdjâl is fixed in all Muslim eschatology, official and popular, but a tradition tries to assert that belief in the Mahdi is more of Faith than belief in him: "Whoever denies the Mahdi is an unbeliever but whoever denies al-Dâjdjâl is only a denier" (Ibn Khaldûn, p. 144). On the other hand a tradition asserts that there is no Mahdi but 'Ilâ. The upholders of the Mahdi tried to turn this by saying that it means that no one ever spoke in the cradle (mahdî; Kurân, iii. 41) except 'Ilâ (Ibn Khaldûn, p. 163; Kurûbî, p. 118). For al-Kahtânî, another restorer who is not mentioned in any of the collections of traditions used above, see article Kahtân, above, vol. ii., p. 630a and Snouck Hurgonje's article Der Mahdi, p. 12 (Verspr. Geschr., i. 156).

The later, therefore, we go and the more popular are our sources the more fixed do we find the belief in the eschatological Mahdi. The more, too, the Muslim masses have felt themselves oppressed and humiliated, either by their own rulers or by non-Muslims, the more fervent has been their longing for this ultimate restorer of the true Islam and conqueror of the whole world for Islam. And as the need for a Mahdi has been felt, the Mahdîs have always appeared and Islam has risen, sword in hand, under their banner. It is impossible here to give the history of these risings. See for details upon them the article Mahdî by Margoliouth in Hasting's Encyclopedia of Religion and Ethics, viii. 336—340 and Goldziher, Vorlesung, p. 231, 268, 291. For the Sudanese Mahdî, see especially Snouck Hurgonje's article Der Mahdî, reprinted in Verspr. Geschr., i. p. 147—181. This contains also, a fundamental discussion of the origin and history of the idea of a restorer in Islam; see also beneath, s.v. Muhammad Ahmad.

Bibliography: has been given in the course of the article. The important treatments of the subject are undoubtedly those by Snouck Hurgonje, Goldziher and Margoliouth.

(D. B. Macdonald)

AL-MAHDI, Abu 'Abd Allah Muhammad, an 'Abbâsid Caliph. His father was the Caliph al-Mansûr, his mother was called 'Umm Mâsâ bint al-Manâsr b. Abû Allah and belonged to the family of Khâlid b. al-Mansûr. With the death of the governor of Khorasan 5Abû al-Dâjdjâl b. Abû al-Khaţâm [q.v.] rebelled, the Caliph sent his son Muhammad al-Mahdi with an army against him; the real commander was Khâzîm b. Khâzîma. After taking 5Abû al-Dâjdjâl prisoner, al-Mahdi by his father's orders undertook an expedition against 'Abîl-Khâdi in which had to submit to him [cf. Dàbûsîyâ]. In 144 (761—762) he returned to the Ta'âk where he married Râ'îa, the daughter of the Caliph Abu 3'Abû b. al-Mansûr. For the next few years he lived in al-Kayî. 3'Isa b. Mâsâ had long been designated as successor to the throne but he was persuaded by al-Manâsr to waive his rights in favour of al-Mahdi, and after the death of al-Manâsr in 158 (776) al-Mahdi was recognised as Caliph. He made himself very popular by his liberality and gentleness, although several cruel deeds are credited to him. For example he had the son of the vizier Abû 4Abî al-Mâsâ Muqta'îya b. 'Ubay'd Allah [q.v.] executed on a mere suspicion and another vizier Yaqûb b. Dâfîdîwî who had fallen into disfavour with him was thrown into a prison so dark that he lost the use of his eyes. In 160 (776—777) a rebellion broke out in the always unruly Khorasân; the leader of the rebels, 'Uyûfî b. ibâhil'am, was however defeated and taken prisoner whereupon the Caliph had him executed in the cruellest fashion. The war against Byzantium was continued under al-Mahdi. In continual raids to plunder and devastate the marches, the two opponents sought to do each other as much harm as possible; there was however never any thought of permanently occupying any territory temporarily conquered. On the whole the advantage lay with the Muslims and in the early stages they advanced as far as Angora. Michael Lachanodrakôn however with a Byzantine army advanced against them, destroyed the fortress of al-Hadâdî [q.v.] which however was soon rebuilt, and had the land waste as far as the Syrian frontier (162 = 778/779). In the following year al-Mahdi equipped a great expedition in which his son Hârîn took part against
the Byzantines and in 165 (782) Hārūn took the field again, accompanied by the Caliph's favourite al-Kabīr b. Yūnus, later vizier. This time the Muslims penetrated to the Bosphorus and the Empress Irene was forced to make a three years' truce and to promise to pay an annual tribute. In Ramaḍān 165 (March/April 782), however, the truce was broken by the Byzantines and hostilities lasted till the death of al-Mahdi, without however any decision being reached. In his reign appeared the sectarian fanatic al-Maʔūkanna, who gave the Caliph's troops much trouble and sustained a long siege in a fortress in the region of Khaḍîj, till finally he poisoned himself in 165 (779/780) in order not to fall alive into the hands of his enemies. In other parts of the empire also, heretics—especially real or alleged Manichaeans (Zānid), were treated with the utmost severity. Al-Mahdi acquired great merit by his work for the peaceful development of his empire; new roads were laid down and the postal system improved; trade and industry reached a prosperity hitherto unknown and scholars were richly rewarded. At the same time there appeared an undeniable tendency to extravagance, which in the end was to prove really fatal, and with al-Mahdi began that expenditure of the revenues on useless luxury, which contributed not a little under his successors to the ruin of the 'Abd-Allāh empire. In time the Caliph fell under the control of his courtiers and in particular allowed himself to be guided by his chamberlain al-Kabīr b. Yūnus and especially by his wife al-Khaizurain, formerly a slave who was the mother of two sons, Māsāb and Hārūn. As early as 160 (776) homage had been paid to the former as successor designate under the name of al-Hāfūz in place of Ta b. Māsāq [q.v.] and six years later al-Mahdi had his younger son Hārūn proclaimed as successor to al-Hāfūz. But as Khaizurain preferred Hārūn and he was also supported by the Banū Mardūq, the Caliph decided to alter the succession in favour of him: al-Hāfūz, who then in Đūrjān refused to agree. Al-Mahdi thereupon set out to discuss the matter with him in person, but died suddenly on the 22nd Muharram 169 (Aug. 4, 785) in al-Madinah at the age of 43.

As a ruler he was undoubtedly one of the best among the 'Abbasids.

(K. V. Zettersten)

**AL-MAHDI.** [See Ibn TCMART.]
and his Christians. In spite of all the efforts of al-Mahdi, the blockade of Cordova became more and more strict. He then tried to put on the throne the caliph Hishām II b. al-Mu'āyyad whom he had himself deposed and then given out that he was dead, but this was in vain. On 16th Rabi'-I, 400 (Nov. 7, 1009) the palace of the caliph was in the hands of the besiegers. Al-Mahdi's only hope was to hide himself. The pretender of the Berbers, Sulaimān, received the oath of allegiance at al-Cordova and assumed the honorific title of al-Mu'tahfiz b. al-Mahdi. In the following month al-Mahdi was able to leave Cordova secretly and seek refuge in Toledo where he was well received by the inhabitants. He then sought and obtained an alliance with the Catalans (Irmandu) who marched with him on Cordova in Shawwāl 400 (May-June 1010). The town was taken and the second reign of al-Mahdi began with a bloody persecution of all the Berbers in Cordova. To avenge the wrongs of their fellow-countrymen in the capital, the Berbers in the army of Sulaimān al-Mustafa' returned to besiege the city. Al-Mahdi, betrayed by his servants, was slain during the siege in the palace in Cordova by the Berbers who drove on the day of Dhu-Hijjah 400 (July 23, 1010). His first reign lasted nine months; the second less than two.

MAHDI KHAÑ, MIRZA MUHAMMAD MAHDI ASTARAKAB B. MUHAMMAD, historian of Nadir Shāh of Persia, whose deeds he recorded in the Tarikh-i Dījānān Gāshā-i Nādīr; this work written in Persian is an excellent complement to those by James Fraser and Jonas Hanway on the conqueror. In it Mahdi Khān details the life of Nadir from his birth to his death while other Persian writers only deal with periods of it (e. g. Muḥsin b. Ḥanif records only the expedition to India in his Duḥtar-i Ṣimārūn; Abd al-Karim Khashmiri in his Birānī, which confines himself to the period from this expedition to 1784). W. Jones in his introduction to the Ta'rikh of Mahdi Khān says that the narrative of these perpetual rebellions is somewhat dry and fatiguing; as to the boundless praise which he bestows on the author's style, especially the descriptions of spring at the beginning of each year, it is exaggerated; in these descriptions all the images used had been employed to satiety for years before. It is true that some works of the period are still more hackneyed. Mahdi Khān himself gives free train to this vexatious tendency in another version of his work which seems enriched with two sources and of the same date 1748 only: Durra-i Nādīr, in a style uniformly artificial and elaborate. Malcolm (History of Persia) reproaches Mahdi Khān with having been too flattering to Nādīr; he recognises however that the historian has spoken frankly of the cruelties which were a blot upon the latter part of the reign. Mahdi Khān was Nādīr's secretary. This is revealed not only in the accuracy of his details but in certain statements also. Mahdi, for example, says that he was with the prince when the latter received news of the birth of a grandson (transl. Jones i. 191); at the end of his reign Nādīr sent him on a diplomatic mission to the Sultan of Turkey (ii. 179). H. Bryges (Abd-er-Kazzak, History of the Kāyart, London 1833, p. clxxxvii, note) also credits him with secretarial duties. Besides his historical works, Mahdi Khān composed his celebrated Eastern Turkish-Persian dictionary entitled Sangīlkh (1173 = 1760) a valuable treasure with examples taken from the Turkish classics (Mr. 'Alī-Shir, Bābū-Nūma etc.); the publication of this work of which there are two abbreviations is highly desirable.

AL-MAHDI AL-DIN ALLAH AHMAD, a title and name of several Zaidī Imāms of the Yaman. About 250 years after al-Hādī Yahyā, the founder of the Zaidīya (q.v.) dynasty of the Yaman, his direct descendant, the Imām al-Mutawakkil ibn līl Classes a. Suľayman b. Sulayman had, between 532 and 566 (1134—1170), restored the kingdom to its extent in al-Hādī's period, with Sa'da, Najdān and for a time also Zubaid and Ṣan'a'. A generation later (593—614 = 1197—1217), the hill country from Sa'da to Ḫumār was again ruled by one man, al-Mansur b. 'Abd Allāh b. Ḥunayn, not a descendant of al-Hādī but of a Rasid, i.e. one of the family of al-Hādī's grandfather, al-Kā'im b. Tabātābā, the spiritual founder of the Zaidiyas of the Yaman. Al-Mansur was twice able to enter Ṣan'a'; he was also recognised as Imām by the Kasjīl Zaidis, the Ḳuwayṭ; but even before his death his power had become restricted by the last Ayyūbī Sultan of the Yaman, al-Malik al-Muṣād, once more to the land of Ḳawkbun. After his death his son Muhammad b. al-Dīn, then the Imām Ahmad al-Mutawakkil tried their fortune in the south, while one of al-Hādī's descendants and his namesake al-Hādī Yahyā b. al-Mubīn created a petty imamate around Sa'da. An attempt to unite the divided forces of the dynast was made by a. AL-MAHDI AL-DIN ALLAH AHMAD: his full official title, one previously met with among the Zaidis, was al-Mahdi al-Dīn Allāh, Ḥāmid b. al-Ḥusayn b. Ahmad b. al-Kāsim b. 'Abd Allāh b. al-Kāsim b. Ahmad b. Ismāʿil Abu 'l-Barakat. The uncertainty about his genealogy, that occurs may be explained from the fact that, as is also found in his signature, to his Ḳallājān al-Kurān (see Bbl.: there is a jumā from Ismāʿil Abu 'l-Barakat to Ismāʿil al-Dīlāḏī, cf. de Zambur, Table B); he himself expressly says that his genealogy meets that of al-Mansūr in al-Kāsim b.
Ibrahim, i.e. that he was a Rassid. His reign of ten years during which the Yaman was harassed by plague and famine does not reveal a great ruler nor even any real and consistent authority, but gives a remarkable picture of conditions in South Arabia, when for want of a definite line of succession, success alone decided how far an ‘Alid pretender was able to hold his own among his kinsmen and with any forces he could gather to make a stand against foreign foes. In 646 (1248) Ahmad had him-self proclaimed Imam in the fortress of Thula in the highlands of Hadjir, north-west of San‘a’, by arrangement with the Banu Hama, i.e. the family of the late Imam al-Manṣūr, and with the benevolent tolerance of Asad al-Din Muḥammad b. al-Hasan, the brother’s son of the first Rasid Sulṭān, al-Malik al-Manṣūr Nūr al-Dīn ʿOmar b. ʿAlī b. Raḍū. But he was defeated by Nūr al-Dīn and besieged in Thula, and in 647 (1250) we find him having to fight with the Banu Ḥamza who had again deserted him. He was saved by the death of Nūr al-Dīn who was killed by his own Mamliks in ‘Azbīd, an event which is probably connected with contemporary Mamluk attempts on the Egyptian Ayyūbīs; Asad al-Dīn who wished to make his government in San‘a’ independent, is also accused of instigating it. The latter continued active under Nūr al-Dīn’s son and successor al-Muṣṭafar Yūsuf, rebelling and suing for peace alternately, sometimes on the side of the Imam and sometimes intriguing against him. Al-Mahdī, who in the meanwhile had found Shams al-Dīn Ahmad, son of the late Imam and chief of the Banu Ḥamza, to joint action with him, took San‘a’ in the beginning of Dhū al-Ḥijjah 1248 (July 1250); although harassed by Asad al-Dīn who held the fortress of Birāsh, he was able to extend his rule to the south as far as Dhamrā. But before a year had expired al-Mahdī had to abandon ʿAznī. Asad al-Dīn indeed sold him the fortress of Birāsh but it was just the occasion that the final breach occurred between them. Asad al-Dīn then went over to al-Muṣṭafar who had the governmentship of the Yaman granted him by the Caliph al-Muṣṭafīnā, who is even said to have sent assassins (Sirr, see Rest, fol 237a) against the Imam. In a thoroughly ʿızādī fashion, however, his fate was decided not by foreign foes but by the Zaydīs themselves. He quarrelled with his ablest and most ardent supporter, Shāhīd Ahmad al-Raʿīsī. With the help of the Rasīlīs, Shams al-Dīn made himself Imam of the Yaman in 652 (1254) in the old capital of San‘a’. Al-Mahdī was again confined to his original territory. The very next year a Zaydī ascendancy pronounced his deposition. One of the 10,000 infantry and several hundred horsemen of the earlier fighting, he had still 2,000 infantry and 500 cavalry; but these also left him in the decisive battle of Wāḍī Shuwaqā, which runs from San‘a’ parallel in the northwest to the Wāḍī Khārid. He was slain at the age of 42. His head sent round as a trophy and treated shamefully but finally buried with his body in the little Wāḍī of Ḫū Bin (ropheœcan). His inglorious end did not prevent his tomb from becoming a wonder-working abode of grace; his biographer even claims that he “stayed on the path of Allah and the commander of the faithful” and many miracles are recorded of him even from his lifetime. His assassination at the beginning of 656 (1258) falls in the same year as the execution of his old enemy, the last ʿAbbāsīd Caliph, al-Mustaṣīm. Legend says that the messenger who was to carry the news to Baghdād learned on the way that the caliph had met his fate on the same day.

While in his Daʾwā (see Bihār) al-Mahdī collected the usual Zaydī arguments with the regular sayings from the ʿUkān and Ḥadīṯ in practically the traditional form as a general appeal to support the Zaydī cause and himself, his Khāшīf is a passionate personal protest against his deposition and an attempt to bring back his enemies especially Shams al-Dīn Ahmad, to the loyalty they had sworn to him. This, he reproaches them, was as unrighteous as the recognition of Mūmānīs authority as a Prophet by the Umayyads.

The Shams al-Dīn Ahmad above mentioned, who adopted the official title of al-Mutawakkil and recognized the Rasīlīs as his overlords, was at once challenged by a rival Imam in the person of Abū Muhammad al-Hasan b. al-Wahhāb. The position remained the same for the next 50 years. The Tattimma gives nine men, the last being al-Nasīr ʿAlī al-Dīn Muḥammad b. ʿAlī, who succeeded in obtaining some recognition as ʿImāms in the period between al-Mahdī Ahmad b. al-Husāin and .

A. AL-MAHDI LI-DIN ALLAH AHMAD B. YAHYA b. AL-MURTADA b. Ahmad b. al-Murtada b. al-Mufaddal b. Manṣūr b. al-Muṣṭafā b. al-Hadjīdānī b. ʿAli b. Yahyā b. ʿAlī b. Rūṣūf al-Daʿī b. Yahyā b. Manṣūr b. Ahmad b. al-Nasīr. The last named ancestor was the son and second successor of Yahya al-Ḥāfī. After the death of al-Nasīr ʿAlī al-Dīn, a kāšī ʿAbd Allah b. al-Hasan al-Dauwārī worked with a few partisans on behalf of his sons who were still minors. But the Ṣanʿāʾi, anxious to consolidate the power which was gradually breaking up, placed in the mosque of Djamāl al-Dīn Sanʿa’ three claimants: ʿAli b. Abī ʿAl-Fadlī b. al-Nasīr b. Ahmad b. Muḥammad and Ahmad b. Yahyā b. al-Muṭṭaṣīr and these three were to uphold the ʿImāmat. Their choice fell on Ahmad b. Yahyā, the youngest of them. In spite of his objections, he had to give in to their argument that “one who has gone deeply into learning problems with their subtle points, cannot be incapable of conducting worldly affairs”. They at the same time promised him their advice and support (Tattimma, fol. 72n). But on the very night on which he was proclaimed, the kāšī al-Dawārī succeeded in getting homage paid to his candidate (end of 793 = 1391). Ahmad b. Yahyā and his adherents at once left the town in a body and withdrew to the hills to the Banu Shāḥīb, a clan of the Banū Ḥamza, as unworthy of the Imamate. His abode was betrayed by one of the Shāḥībīs. Fighting went on for 13 days in which the enemy lost about 50 men and the Imam 10. The latter then went farther into the mountains and his claims were recognised in Ṣanʿāʾ also. Among his special supporters were al-Ḥāfī b. al-Muṣṭafā, son of a former Imam, and Ibn Abī ʿAl-Fadlī. He was also asked by people in Ṣanʿāʾ to receive their homage. But he was surprised by his enemies and as he would not interrupt his ritual ablutions and prayers to fight, he surrendered under a promise that no harm would befell him. In spite of this, as the Tattimma tells us, which is however much biased in his favour, 80 of his men were massacred, he himself was taken to Ṣanʿāʾ where he was kept a prisoner for 7 years.
and 3 weeks (794—801). Liberated with the help of his warders, he lived a further 40 years, “tossed up and down the country”, devoting himself entirely to learning until he died in Zafar (end of 480 = 1437) of the plague in the Yaman, which had already carried off with many notables including the rival Imam ‘Ali b. Sa‘ād al-Din. According to the Tarā‘imma (fol. 75a) Ibn al-Muqtada was born in 775 (1373) in Dhamār, according to other sources (see Kius, in Brit. Mus. Cat. Suppl., No. 365) in 764 (1363) at Anis. The choice of Ibn al-Muqtada as Imam was a mistake, inasmuch as he lacked the necessary military and administrative ability. On the other hand he had another qualification in perfection. As a result of a careful education and a thirst for learning from his youth upwards, he wrote a great deal, dogmatic, legal and paraenetic; he was also a poet and worked at grammar and logic. The kindness of his warders, who supplied him with ink and paper, enabled him to compose the law book al-Akhār fi Fikr al-Yima al-Athār (Berlin MS. 4910) on which he wrote a commentary. His most valuable work is still his theological and legal encyclopaedia, al-Bahr al-zakkīh (Berlin MS. 4894—4907) on which he likewise wrote a commentary. Although not the work of an original scholar, it is a rich and well arranged compilation, which deserves attention, if only for the part of the introduction which compares the various religions, as the distinctions between them are seen from quite a different point of view to that of Aš‘arī or Shı‘ahraṣtī.

About 50 years after al-Mahdī Aḥmad b. Yahyā, from 922 (1516), the Turks had begun to occupy Yaman to hold it with varying fortunes (see Kuṭb al-Din al-Makki, al-Bayt al-Yamanī fi Tīrāt al-Qaimmi, in S. de Saey, in N.E., iv, 412—504 and A. Rutgers, Geschichte Jemen nach Hassan Pascha, Leyden 1838). In his struggle with them al-Maṣūr b.iIALah al-Kāsim b. Muḥammad, a descendant of al-Hādī in the 17th generation, was able about 1000 A.H. to restore the present imāmat in San‘ā’ (see A. S. Tritton, The Rise of the Imams of San‘aa, Oxford 1925). Of his sons, Muḥammad al-Mu‘ayyad succeeded him. Even in his reign but still more after his death in 1054 (1642), when his successor Isa‘ālī, another son of al-Kāsim, was making his way with difficulty against his many brothers and nephews, one of al-Kāsim’s grandsons began to come to the front, afterwards the Imām C. AL-MAHDI LI-DIN ALLAH AḤMAD B. AL-HASAN B. AL-KĀSIM. His father was not Imām but distinguished himself in the wars against the Turks and was also a scholar. In 1049 Aḥmad appeared in the hills of Wāsāb; in 1051 he besieged Dhamār without success; in 1053 he was in Mecca with many members of his family on the pilgrimage. Just at the accession of Isa‘ālī, he set out with another cousin against San‘ā’. At first he came to terms with the Imām but then fought in different places for his own hand, e.g. at Ḥula and again in the Ḥijāb Wāsāb. In his later years he was particular in the remoter territory in the south towards al-Tihāma in Zabīd. A Zabīd assembly of leading Sā‘arīs and ‘Ulamā’ met, at which Aḥmad was with some difficulty recognised as the legitimate Imām. Although this did not mean that he enjoyed the authority of a sovereign, since his rivals and the other amirs remained as independent as before, yet peace and security reigned in the country. But Aḥmad b. al-Ḥasan died soon afterwards in 1092 (1681) in al-Ghīrās near Shībām which had been built by the first Turkish conqueror Ḥasan Pāsha. After the short and weak reign of his son al-Muṭawakkil Muḥammat (to 1097 = 1686), family feuds broke out again. Among the later Imams of this Kāsimid dynasty another Aḥmad b. al-Ḥasan b. al-Kāsim (from 1221 = 1806) again bore the official title of al-Mahdī Li-Din Allāh.

AL-MAHDI UBайд ALLAH, first Fātimid Caliph (297—322 = 909—934). His origins are obscure. He is also known as Sa‘īd, and is believed to have been the grandson of the celebrated Persian sectarian ‘Abd Allāh b. Māmūn al-Khādījī (the occultist), the Isma‘ili leader; but he claimed to be a true descendant of the Prophet through his daughter Fātima. By some he was supposed to be the brother of the twelfth Imam; according to others, one of the son of the strange “hidden” Imāms of the Isma‘īlis. His spectacular rise to power was coincident with a sudden outburst of Shi‘ite fervour centred in the vexed question of the legitimacy of the Caliphate, involving the mystical doctrine of the Imām and the appearance of a long-expected Māhdi [q.v.]. It was the culmination of Isma‘ilian propaganda and was in alliance with the Karmātian heresy of Arabia. Throughout the history of these times one can discern how in each such zealots worked to trade their esoteric doctrines and allegorical interpretations to the advancement of their own private political ends.

North Africa witnessed the crucial stages of the Fātimid rising, the prime instigator being apparently a Ḥādi‘, Abū ‘Abd Allāh al-Shī‘ī [q.v.], who proclaimed himself the precursor of the Mahdī. An ambitious factionist of undeniable ability and or-
organising genius, in the end his own astuteness and love of power brought about his undoing. Nevertheless it was to him that 'Ubayd Allah owed his throne and title. While the former was sowing the seeds of sedition amongst the Berber tribes of North Africa, 'Ubayd Allah was making his way with his family from Salamiya in N. Syria to Kairawan (902 A.D.). In passing through Egypt disguised as a merchant he narrowly escaped imprisonment at the hands of a suspicious governor. Perhaps judicious bribery helped him on his way until he found himself with his son thrown by the Beni Midhr, supporters of the 'Abbâsids, into a dungeon in Sidjilmassa. Meanwhile his general in charge was operating elsewhere in his favour with the help of the ruler Beni Kirtha whose services he had enlisted. A victorious entry into Sidjilmassa marked the release of 'Ubayd Allah — though there are suspicions that the real prisoner was slain before the surrender — and his proclamation as the true spiritual head of Islam, al-Mahdi, Commander of the Faithful. The Aghlabid monarch Ziyâdat Allah III was overthrown and driven into exile in Egypt; while on Jan. 15, 910 A.D. (29th Rabi's 11, 297), the new Mahdi and his son made their triumphal entry into Kâkštân.

Following his elevation to supreme control 'Ubayd Allah entered on a policy of extending the bounds of his dominions. Not only had he enemies on all sides; even within his own camp barked traitorous allies and fickle adherents. Those who had raised him from the dungeon found very soon that he was now their master. The e-trangement between him and his chief supporters is said to have originated in the disappointment felt by the latter that he was incapable of working the miracles expected of such a divine personage. Abd 'Abd Allah was forced to play a subordinate part and becoming embittered thereby, began spreading sedition amongst the unwept Berber tribesmen. But the Mahdi, too, quite capable of dealing with the Aghlabids, A. Sp. of the Kirtha family of Berber race, heading a deputation asking for clear proofs of his spiritual claims, was summarily beheaded. Shortly after this he waylaid Abd 'Abd Allah and his brother Abd al-Mansî and had them assassinated (928 = 918). The other brother Abl Zâkî was sent to Kairawan with a letter ordering his execution. As the Mahdi himself and in ju-judging such acts against quondam supporters: "Satan caused them to slip and I have punished them by the sword." Kios enENDED, but the bold handling of the populace by the Mahdi and his personal courage averted national disaster and firmly established the dynasty. However, it did not demonstrate the spiritual virtues of the Fatimid dynasty.

'Ubayd Allah's foreign policy led him to de-patch Husn b. Kulab of the Beni Kirtha as governor to Sicily in order to further the Fatimid cause. The Huwara and Euwata tribes of Tripoli were vanquished, while the Mahdis forces were also victorious against Muhammad b. Khazar at Tiharet. But following Abd 'A'id Allah's death, the Beni Kirtha, who were menacing against the Mahdi, were attacked in April 912, chiefly by their old enemies, the people of Karawan who never liked that savage manner. The Beni Kirtha received a masterly defeat and appointed a new Mahdi named Kali; but after considerable fighting they were defeated. The Tripolitans were also involved in a struggle with the Berbers (500 A.H.).

But the most important events of this reign were the attacks on Egypt. The Mahdi's son, Abu l-Kasim, was sent in command of the forces; while a fleet operated under Khusbas. Tripoli, Barka, and then Alexandria (302 = 914) were taken, until the victorious army was checked outside Fustat by the eunuch Mânis, the Egyptian commander. A second expeditory force (916–917) repeated the feats of the previous one and devastated the Delta and ravaged the Fâylûm, only to be checked once more at Old Cairo, while the fleet of 80 vessels was destroyed at Rosetta (307 = 920) by the Khâlifa's smaller but more efficient fleet under the Fatimid mariners. Once again the fleet had to withdraw. Nevertheless the dominion of the Mahdi extended from the borders of Egypt to the confines of the Idrisid stronghold in Morocco. His fleets spread terror throughout the Mediterranean. Malta, Sicily, Sardinia, and the Balearic Islands felt his influence; while his secret-service agents were to be found throughout Andalusia. A revolt in Sicily in favour of an Aghlabid prince Ahmad b. Ziyâdat Allah affected his sway in that island, but his administration generally was strong and secure, albeit rigorous and unmerciful. The year 926 found him taking up his residence in the new city he had founded on the Tunisian coast, named al-Mahdiya [3 q.v.] (the "Africa of Fosrattâr). This became his capital instead of Kairawan (16 miles distant). The new town was founded in 603 (916) and was situated on a projecting peninsula called Dâsîrât al-Fâr. It was strongly fortified with high and massive walls, and colossally heavy gates, enclosing the palace and the royal barracks. A natural harbour was improved to shelter 100 vessels of war. On the mainland lay the foboung of Zwafli intended as a place of residence for traders and the general public. After a reign of 25 years 'Ubayd Allah died on the 4th March 934 (14th Rabi's 1, 322) at the age of 65, and was succeeded by his son Abu l-Kasim and then Abd al-Mansî of the Fatimid line. AL-MAHDIYA, a town on the east coast of Tunisia, is the "town of Africa" of the European historians of the Middle Ages. It is built between Sous and Bou-Smama, which was more than a mile in length and less than 500 yards in breadth, which terminates the cape of Africa and is connected to the mainland by a narrow isthmus "much as the hand is joined to the wrist". The site was without doubt occupied by a Phoenician factory and by a Roman settlement, which it has not been possible to identify. Its name comes from the SS's Mahdi 'Ubayd Allah, who in 300 (912) founded and fortified it, after having consulted the oracles and foreseeing the dangers which would threaten the Fatimid dynasty. A rampart of rubble of which a few towers are in existence ran along the coast towards the south; a thin wall protected the town and the harbour excavated out of the rock, which the ships entered under a large gate flanked by two strong defensive works. A little farther on, towards the point was the naval arsenal. From the side of the isthmus, the rampart, which is very strong and strengthened by round and square towers, had a wall in front of it and was pierced by a gate which still exists. Flanked by two salients with inclined sides entrances is gained under an arch 45 yards in length (al-kifā, al-kaθēl). The highest point of the peninsula is occupied by an old Turkish kâbire, built on the probable site of the palace of Mahdi. In front towards the west, probably lay the palace of the son al-Kasim. The town owes to the Fatimids also a great mosque built near the sea, of which considerable remains still exist, notably an ornamental porch. A custom-house was at hand (dār al-munšabat); beyond the peninsula the suburb of Zawila (ancient Zella?) of which the site is still known and where remains have been found, amongst other things ware.

The Mahdi 'Ubayd Allah after leaving Kakkādā near al-Kairawan, came to live at al-Mahdiya in the year 308 (921) Having become the capital of the empire, the town prospered. It was, according to Tijārī, the richest city in Barbary. The son of 'Ubayd Allah, al-Kaθūbī lived there for over five months (January-September 945) by Abū Yazid, "the man with the ass", a Khārijī agitator, who starting from Tawzer made himself master of the whole of Hūkjā. The failure of the blockade of al-Mahdiya was the first stage in the downfall of the heretics. More than a century after, al-Mahdiya, which had been the refuge of the Fātimids when in danger, served also as an asylum to their unconquered vassals, the Zirîd Amirs, the victims of the Hūkjā invasion. In the year 449 (1057) the Zirîd al-Mu'izz abandoned al-Kaθara for al-Mahdiya. From that place he and his successors set themselves to recover the lands they had formerly ruled. From there they also turned their activities to the sea. Al-Mahdiya, where the corsairs were now equipped, became and was to remain
down to modern times the most active centre of Tunisian piracy. The expeditions of the Muslim corsairs provoked attacks from the Normans of Sicily, Pisa, and Genoan raids on the town along the coast. In 1087, al-Mađīya fell into the hands of the combined Christian forces. The Normans again took it in 1148. Then they were blockaded in it by land and by sea during the conquest of Ifriqiya by the Almohad 'Abd al-Mu'min. Having become once more a Muslim town, it was retaken and pillaged in 1180. Then it concluded with William II, the King of Sicily, a treaty of peace. The Normans were able to trade with it. During the famous campaign of the B. Ghāniyya [q.v.], Almoravid Amur, al-Mađīya was for a short time in the hands of an adventurer 'Abd al-Karim al-Kagragy who took the title of Caliph Thoos troubles led to the installation in Ifriqiya of a governor of the Almohad family of the B. Ḥafs. Al-Mađīya was henceforth one of the principal towns of the kingdom of the Ḥafsids. Its government was generally confined to one of the sons of the sovereign of Tunis.

The persistent activity however of the Corsairs provoked in the year 1390 a new Genoan expedition supported by Charles VI, King of France, who sent his galleys and his knights against "cette malencontreuse ville d'Auffrique" (Froissart). Al-Mađīya resisted but was forced to pay a tribute to the Christians in 1359, after the conquest of Tunis by Charles V, the town received a Spanish garrison. In the following year the corsair Dragut took it by surprise. Taken prisoner by the fleet of Andrea Doria, then released, Dragut came back and installed himself in al-Mađīya. On the 8th September 1550, Doria seized the town from Dragut "prince of Africa", after a memorable siege. Charles V offered the change of it to the Knights of Malta but they refused it, so he ordered it to be dismantled. Al-Mađīya, after falling once more into the hands of the Muslims, arose from its ruins and recommenced under Turkish rule until the 19th century; the nest of corsairs, the terror of Christian merchants that it had been for nearly 3000 years. It is now a quiet little town of about 10,000 inhabitants, who live by fishing and by the product of their olive-woods.

AL-MAHDĪYA, formerly called AL-MAʻMURA, a town of Morocco, on the Atlantic coast at the mouth of the Wādī Sabū (Sebū), built on a rocky promontory which dominates the valley of the river. Situated on the southern extremity of the plain of Gharb and 20 miles to the North East of Salé (Sālā) it enjoys a geographical position of the first importance. A port is shortly to be created here for ships of heavy tonnage, which cannot sail up the Wādī Sabū as far as the river part of Kenitra (Ar. al-Ḳunāṭira, "the little bridge") situated 6 miles as the crow flies from the mouth of the river.

It is generally agreed that the site of al-Mađīya corresponds to that of one of the earliest Phoenician settlements founded by Hanno in the fifth century B.C. on the Atlantic coast of Morocco: — the factory of Thynaniteria. Nothing is known of the later history of this foundation and we have to wait till the fourth century A.H. (tenth A.D.) to get the first mention in Arab writers of the town at the mouth of the Wādī Sabū under the names al-MA’MURA ("the populated, the flourishing"), Ḥalīk ("the mouth") al-Mađīya or Ḥalīk Sabū. According to the chronicler Abu Ḥafs al-Sālimi, the modern town was founded by the short-lived dynasty of the Banū Ifrīn [q.v.] which settled on the Atlantic side of Morocco at the end of the tenth century of our era. In the second half of the XIIIth, the Almohad Sultan 'Abd al-Mu'min built there one of his dockyards for his navy (dār al-Mu'mīd). Later, down to the XVIIth century, al-Mađīya's history is obscure: — it was a small trading centre to which European ships came for the products of the country.

Al-Mađīya, when the Christians of the Iberian peninsula made their offensive against Morocco, was one of their first objectives; on June 24, 1515 a large Portuguese fleet anchored at the mouth of the Wādī Sabū and a landing force of 8,000 men occupied the town without a blow being struck. The Portuguese made themselves a strong base in al-Mađīya, built fortifications there, remains of which still exist, but they were only able to hold it for a short time. The Muslims drove the Christians out of al-Mađīya at the end of the same year, inflicting very heavy losses upon them. Al-Mađīya re-enters history when at the end of the XVIIth century it became a formidable nest of European pirates, who under the leadership of an English captain, Mainwaring, practised piracy along the whole Atlantic coast and became a terror to the seafaring centres of Europe. This state of things was put an end to when Spain, which in 1610 had occupied the port of Larache (al-`Arāsh, q.v.), a little farther north, made a landing at al-Mađīya in August 1614, after negotiations with the Moroccan ruler, the Sa'dīan Mawlay Zālidn. The town was taken and the Spanish fleet withdrew leaving a strong garrison of 1,500 men. The captured town was given the name of San Miguel de Ultramar.

The Spanish occupation of al-Mađīya was to last 67 years, during which it was several times fiercely attacked by the Muslims, particularly the "volunteers of the faith" (Muḥāṣiban), who mobilised to drive the Christians from the various points on the coast where they had established themselves under the active leadership of the chief al-Aysh al-Sālī. The principal attacks on San Miguel de Ultramar were delivered in 1629, 1630.
and 1647. In 1681 (1092 A.H.) the 'Alawid Sultan Mawliy Masmūl placed siege to the town and finally took it by storm. He then gave it the name of al-Mahdiya; the name of al-Ma'mura only survived as that of the great forest of cork-oaks which lies between Salé and the lower valley of the Wādī Sabū. — It may be noted that for a few years at an earlier date the name al-Mahdiya had been borne in Morocco by the little military station founded by the Almoravid king Abd al-Mu'mīn on the site of the future Ribāt al-Fath (Rabat), on the south bank at the mouth of the Wādī Salīm (the modern Wādī Bu-regreg) [cf. the article Rabat]. Al-Mahdiya was occupied by French troops in 1911.

Considerable remains survive at al-Mahdiya, dating from the brief Portuguese occupation, the Spanish occupation or from the date when it was definitely retaken by the Muslims. Around the citadel (ṣaḥba) runs a continuous rampart with a ditch. These defences are entered by two gates; — one very massive, with two Arabic inscriptions, dates from the XVIIth century. The other, a simple postern, dating from the Spanish occupation, opens on the steep slope which runs down to the river. In the houses, which form a little mosque are the ruins of the Muslim governor's palace of the XVIIIth century. Between the foot of the citadel and the bank of the Wādī Sabū for a length of 200 yards and a breadth of about 40 may still be seen buildings consisting of a series of square chambers completely isolated from one another and each protected by a double wall. These were probably granaries, which need not be earlier than the end of the XVIIth century, and are not, as has been suggested, of the Phoenician period.

MAHĪYA (A.), technical term in metaphysics, quiddity; frequently used as equivalent of ḍhawhar, substance. Abī Ḥanīfa, Ḍīrār (and al-Nadżīdī) used it to designate the pure divine essence; cf. 'Abd al-Kaḍir al-Baghdādi, al-Fārī dāl al-Fīrāq, p. 201—22; al-Shaḥrāsīrī, Kitāb al-Mīlaḥ wa-l-ṣināʿāt, II, Nikāh al-Qurʾān, i. 114; Kaylbūn Ḍīrār al-Türkī, ed. and transl. Huart, i. 85. On the question whether the quiddity is identical or not to existence (rūjdūd) cf. Dhū Jarīmī, Sharḥ al-Mawā'il, Cairo, p. 92. (L. Masseroni)

MAHKAMA. [See MEKEMEK.]

MAHMAL (or more correctly: MAHMUL, A.), the name of the splendidly decorated empty litter, which since the Xth century has been sent by Mamluknadan princes on the Ḥajj to Mecca, to display their independence and claims to a place of honour at the ceremony. The camel which bears the mahmal is not ridden but led by the litter. It goes at the head of the caravan and is regarded as its sanctifying element. What extravagance the rivalry of princes led to is shown by the mention of a mahmal adorned with much gold, pearls and jewels, which was sent in 721 (1321) from the 'Iraq to Mecca (Die Chroniken der Stadt Mecca, ed. F. Wustenfeld, ii. 1859, p. 278). The mahmal which is most esteemed, that which accompanied the pilgrim caravan from Cairo, is described by Lane as a square wooden framework, with a pyramid at top and covered with black brocade richly worked with inscriptions and ornamental embroidery in gold, in some parts upon a ground of green or red silk; it is bordered with a fringe of silk and silver balls are fixed to the corners and to the top of the pyramid. On the front of the pyramid itself is a view of the Ka'ba embroidered in gold. In the brief description given by Burckhardt, the Egyptian mahmal it is added that it is decorated with ostrich feathers. According to him there was only a prayer-book in the empty interior, which on its return was exhibited in Cairo and kissed by the people; according to Lane on the other hand there are two silver receptacles in the mahmal which contain two Kūrāns, one in a scroll, the other in book form. The mahmal is carried by a fine tall camel, which after the pilgrimage is spared any further work. On their arrival in Mecca the mahlams are hailed with joy and led through the narrow streets in a solemn procession after which they go with the pilgrims to 'Arafat; when they occupy a position reserved for them. It used to be generally supposed that the covering of the Egyptian mahmal was used to cover the tomb of Muḥammad or the Ka'ba but this is wrong; the kiswa is of course taken to Mecca with the great pilgrim caravan but it has nothing to do with the mahmal.

According to Mākānī the custom of sending a mahmal to Mecca was first introduced in 670 A.H. by the Mamluk Sultan Baḥāt; but others attribute it to the Sharīf Abū Numayy; it is also said that it was a prince going on the pilgrimage in a splendid litter that gave Baḥāt the idea of sending one with the pilgrim caravan. This is however only a story; and it is a much more important question whether the custom did not arise at an earlier date and whether it did not originally have a direct religious significance. It is natural to recall the portable sanctuaries of the Arabs and the mahmal particularly reminds one of the description which Muṣīl (Die Kultur, 1910, p. 8 sq.) gives of the "Abū Zūr al-Markāb" of the Ṭwāh tribe: a framework of thin pieces of wood adorned with ostrich feathers which is fastened on to the saddle of a pack-camel and is the visible centre of the tribe. This would at any rate lead us to the practical significance of the later mahmal, a visible sign of independence and claim to suzerainty of the various Muslim states. It is just this significance which gives the mahmals a certain historical interest as political changes and rivalries are reflected in them in course of time. There have occasionally been rulers who by sending mahmals gave expression to their endeavour to obtain recognition as sovereigns and protectors of the sharīfs, only to be soon driven from power again by others. That the Egyptian mahmal came to obtain a place of honour, that from Syria being the only other at all comparable to it, was a result of the political influence of the Mamluk Sultans. It is noteworthy that the important rule made no allowance in this respect and an attempt to send a mahmal from Constantinople met with no success. In 1807 an interruption was
caused by the conquest of Mecca by the Wahhabi|s who forbade this empty pomp so hateful to them; but this ceased when they were driven out and Muhammad Ali’s rule again gave the Egyptian mahmal pride of place.

After the World War the sending of a mahmal from Syria stopped. Difficulties arose between the Egyptian government and King Hussein (1915–1944) regarding the powers of the heads of a field-hospital which was to accompany the mahmal as well as regarding the ceremony of its reception, which twice resulted in the mahmal not being sent.

When Ibn Sa‘ud had become king of the Hijaz, long negotiations took place over the mahmal. The Wahhabi ruler insisted on the massage which usually accompanied the mahmal being omitted and all sorts of superstitious customs being dropped; he also protested against the armed escort as a denial of his sovereignty. The attempt made in 1926 to harmonize the demands of the two sides, came to nothing: a fight broke out between the Irhwan of Ibn Sa‘ud and the Egyptian soldiers which was only stopped by the personal intervention of Ibn Sa‘ud. Since then the Egyptian government has not sent a mahmal, but neither does it any longer send a new kira for the Kaba to the Hadjdji.

MAHMUD I, twenty-fourth Ottoman Sultan, reigned 1143–1168 (1730–1754). He was born on the 5th Mahuraz 1108 (Aug. 2, 1696), the son of Mustafa II — the Süleyman-Ogumâdi gives the date 7th Ramadân 1107 (April 10, 1696) — and had spent his life in seclusion up to his accession. He came to the throne through the mutiny of the Janissaries under Patrona Khalil, a mutiny which cost the grand vizier Ibrahim Pasha, the Kapudan Pasha and the Koya Beg their lives and forced Sultan Ahmad III to abdicate in favour of Mahir; these events took place on the 17th Kabi 1, 113 (Oct. 1, 1730). The mutiny, which really had the sympathy of most of the sect and seems to have been in the nature of a social evolution (Jorja), was only suppressed after some time through the efforts of the Kilâr Agha Beshir; before it suppression a certain number of appointments to important offices dictated by the rebels had to be cancelled and the many palaces built in the luxurious reign of Ahmad III were allowed to be pillaged. After the Janissaries had been pacified by considerable largesse on the accession of the Sultan, Beshir Agha succeeded in plotting the death of Patrona Khalil, who was assassinated on Nov. 15, 1730. The Kilâr-agha continued to exercise a preponderating influence on affairs of state; the Sultan, who was by nature more interested in literature and in the erection of more or less useful buildings, did nothing to throw off this influence, which on the whole was for the good of the state. One of the consequences of this system was the very frequent changes of grand viziers — there were no fewer then 16 in Mahmud’s reign — but the state possessed a number of able men who worked for the good of the empire in the offices of grand vizier, reis efendi and koya beg. The state finances were kept in good order, as much by the confiscation of any great fortunes amassed by high officials as by a financial system which made no distinction between the public treasury and the personal revenues of the Sultan. The situation abroad was also favourable, especially after the peace of Belgrade in 1739, which secured to Turkey a fairly long period of peace in Europe.

At the beginning of the reign, Turkey was at war with Persia. The campaign of 1731 was favourable to the Turks, who reconquered Kirmanshah and took Hamadan (battle of Koridjan, Sept. 15). Urmia and Tabriz; however, by a peace signed on Jan. 10, 1732 by the serasker and grand vizier Topal Othman Pasha, Turkey gave up Tabriz and Hamadan. This peace neither pleased the powers in Constantinople, who replaced the grand vizier by Hekim Zade Ali Pasha (q.v.) nor Talmâs Kâbir Khân, who on his return from Herât had dethroned Shah Talmâsp and was making new preparations for war. On Oct. 6, 1732, the Porte issued a formal declaration of war and in December a Persian army invaded Mesopotamia, took Kirkuk and laid siege to Baghîdâd; the great battles of this campaign were those of Duldishik on the Tigre, where the Persians were defeated (July 19, 1733), and that of Kirkük, where a week later the Turks suffered a defeat which involved the death of the serasker Topal Othman Pasha. In the same year, the Persian war produced a conflict with Russia, provoked by the Khân of the Crimea’s march through the Caucasus to reinforce the Turkish troops fighting against Persia. Russia declared she could not allow the passage of the Tatars through the country of the Kumuk and the Kaitak, which she regarded as under her authority; the Khân’s force was therefore held up and several battles were fought in Daghestân between Turks and Russians. The negotiations opened at Constantinople showed more and more that a war with Russia would be inevitable and they were finally broken off by the siege and capture of Azof by the Russians in March 1736. Meanwhile the war with Persia, which had ceased in 1734 on an armistice being concluded by the Pasha of Baghîdâd, had been resumed in 1735 when Ahmad Kopîulu was appointed serasker. The campaign was unfortunate for the Turks. They lost a number of towns in the Caucasus; however the development of affairs in Persia where Talmâsp Kâbir, afterwards Nâdir Shâh, proclaimed himself king on Dec. 1, 1735 in his camp on the Caucasian front, was favourable to the peace negotiations which were begun at this time. These negotiations ended in a peace signed at Constantinople on Oct. 17, 1736; the frontiers of the two countries remained as they had been fixed in the time of Murad IV.

In the same year a Russian army invaded and laid waste the Crimea, although negotiations still went on, first at Constantinople and then in the country. Austria, posing as mediator, took an active part in these negotiations, which were finally broken off at the Congress of Niemirow in Aug. 1637, when it became evident that Austria was really Russia’s ally, so that Turkey had to
deal with two adversaries. The war began badly for the Turks who lost Nish to the Austrians and Oczakow to the Russians. Nish however was won back in Oct. 1737. During the next two years fortune was rather on the side of the Turkish armies under the grand vizier Yegen Muhammed Pasha. The conclusion of the war was marked by the appearance of the forces of the grand vizier Hâş-var Muhammed before Belgrade in July 1739. It was before this town that the famous peace of Belgrade (Sept. 18) was negotiated with the assistance and mediation of the French Ambassador, the Marquis de Villeneuve, by which Turkey again obtained possession of the town. Russia was included in the same treaty and had to promise to demolish the fortifications of Azof.

This ending of the war in a way very advantageous to the Porte was followed by a long period of peace with the states of Europe, which, as a result of the Seven Years’ War, had no time to devote to plans for the partition of Turkey. From 1743 to 1746 there was a new Persian war. It began through the demands of Nâdir Shâh to have the Persian Shi’a recognised as a fifth Madhhab, that is, a sect; the Porte, on the other hand, gave an evasive answer but after they had become convinced that Nâdir Shâh intended to make himself lord of Mesopotamia, the Shâh-i al-Islâm gave a fatâwa against the recognition of the Dâ’ifariyya. In 1743 Nâdir Shâh took Kirkûk and laid siege to al-Mawzûl, only to be forced to raise it after a while. In the following year the scene of hostilities shifted to the Caucasus. The Porte then attempted to support a Persian pretender of the Safawid family, whom it sent off with great pomp to Karâ; in 1746 the Turkish ser-asker, the former grand vizier Yegen Muhammed, fell in the battle of Murâd Tepe in Kurdistan. During all this time, peace negotiations were going on in Constantinople and conducted through the Turkish commander-in-chief. During these negotiations Nâdir Shâh had dropped his demand for the recognition of the Dâ’ifariyya and finally agreement was reached on the basis of the frontiers of Murâd IV (Sept. 4, 1746). In July of the same year the all powerful Beshir Agha died at the age of 96; in spite of the efforts of the grand vizier al-Salîyid Hasan Pasha, his successor Beshir Agha the younger succeeded in procuring the same influence in affairs. This new regime only lasted till 1752 when there was reason to fear a new outbreak of discontent among the Janissaries and the ulama also; the Sultan seems therefore to have decided to sacrifice the Kizlar Agha by having him treacherously assassinated along with the whole of his sketchy empire (July 10, 1752). Two years later, on Friday, Dec. 13, 1754, Mahmûd himself died suddenly on his way from the mosque; he was buried in the Ye’ni Dâ’imî.

The Sultan left a pleasing memory behind him; it is even said of him that he took a personal part in the affairs of state (Sidjilli-i ‘Othmânî, i.e.) although the sources give little evidence of this. He did not continue the splendours of the court of his predecessor, respecting public feeling which had led to the latter’s fall. Mahmûd is especially celebrated for the large number of buildings he had erected; in Constantinople he built no less than four čâmiye and he began the building of the Nâr-i ‘Othmânî mosque. This activity was equally displayed in the provinces. This Sultan also acquired considerable merit by founding four libraries in the capital, those of Aya Sofâ, the Wâlide Dâ’imî mosque, the Fâtih mosque and the Gha’âfa Serayî. The reign of Mahmûd is further marked by the display of a very skilful diplomatic activity by the Porte, conducted by several very able ren’s, for example, the famous French renegade Bonneval, who lived in Constantinople from 1729 till his death in 1747 and introduced several useful reforms into the army. But in spite of appearances, the Ottoman empire was far from being a strong power as the historian Djedwed Pasha (Ta’rikh-i Yawdu’at, 1302 ed., i. 63) has very justly remarked; therefore, in the period of anarchy which followed in Persia the death of Nâdir Shâh, the Porte consistently declined to interfere in Persian affairs. From time to time minor revolts contributed to weaken the strength of the empire; besides the always dangerous Jansâries, there were several risings in Anatolia (e.g. Şarf Beg Oghlu in Aidan in 1739). It was also in the reign of Mahmûd I that the Wahhabis first began to give trouble to the government. In Egypt the Mamlûk bey became successor to the country in practical independence, in spite of the energetic steps taken by Râghib Pasha, when the latter was governor of this province. As to foreign relations, it is interesting to note that it was in this reign that France, which became very influential after the peace of Belgrade, succeeded in 1740 in obtaining the celebrated capitulation which became in time the most important document on the extra-territorial rights of foreigners in Turkey.

**Bibliography:** The principal Turkish sources are the imperial historiographers Ta’rikh Sâmt ve Şâkir ve Şâbî, Constantinople 1198 (years 1143–1156), Ta’rikh-i Şâzî, Constantinople 1199 (year 1157–1165) and the beginning of the Ta’rikh-i Wâ’if, Constantinople 1219 (beginning in 1166); then there are the reports of certain embassies like the Ta’zikh ve Ta’zîfî of Râghib Pasha on the peace negotiations with Nâdir Shâh in 1736, a manuscript which was used by von Hammer. There are also several works still in manuscript on the history of the reign of Mahmûd I, notably by Babinger, G.O.W., Leipzig 1927, p. 332. The same author (op. cit., p. 289) also quotes a series of monographs in Turkish which deal with the wars of Nâdir Shâh. For these wars, a complementary source is the biography of Nâdir Shâh by Mahdî Khân and Hanway, A Journal of Travels from London through Russia into Persia, 1759. — General sketches of the reign of Mahmûd I are given in von Hammer, G.O.W., Pesh 1836, iv. 466–482; Zinkeisen, Geschichte des Osmanischen Reiches in Europa, v., Gorha 1857; p. 620–647; Jorga, Geschichte des Osmanischen Reiches, Gorha 1911, iv. 409–462.

**MAHMÛD II**, the twenty-ninth sultan of the Ottoman Empire, reigned from 1808 until 1839. He was the son of ʿAbd al-Hamîd I and was born on the 20th July 1784 (15th Ramadan 1199, cf. Sidjilli-i ‘Othmânî, i. 73). He succeeded to Mustafa IV on July 28, 1808, directly after the tragic events, which had led to the assassination of Salîm III [q. v.]. Mahmûd himself had a narrow escape from the fate of Salîm. Until his coming to the throne he had lived in seclusion and during the preceding year his intercourse with
dethroned sultan had undoubtedly exercised a great influence on Mahmud’s ideas, making him appear afterwards as Sahm’s avenger.

The grand-vizierate of Musafa Bairaakdar Pasha, the consequence of the latter’s victory, lasted only until November 1808; a revolt put an end to his reformatory tyranny and to his life. The next years were taken up by the war against the Russians, who had occupied the Danubian principalities in December 1806. Endeavouring to continue their conquests on the southern side of the Danube, the Russians met with more resistance from the Turks than had been expected; it was, however, due principally to the increasing danger of a Persian invasion by the Turks obtained the peace of Bucarest, signed on May 28, 1812, and negotiated, on the part of the Turks, by Ghahib Efendi. By this peace, Turkey had only to cede Bessarabia to Russia. In the meantime the new sultan had inaugurated a policy of internal consolidation of the empire, a policy which lasted until the Greek revolt in 1820 began to absorb all the strength of the state. He put an end to the almost independent position of the ayas in Rumelia and to that of the numerous dereleys in Anatolia, especially to the families of the Khans Oghlu in Sarukhan and Aulin and of the Capans Oghlu in the region of Karacay [cf.mıyan]. The sultan’s authority was equally re-established in southern Mesopotamia after the death of Sublime Paşa of Baghdad in 1810. The end of Muhammad Ali Paşa of Egypt had to be invoked to repress the Wahhabi power in Arabia; Mecca and Medina were reconquered in 1813 by Tüsma Paşa [cf.ımıx]. In Serbia it was only after years of trouble that an arrangement could be attained, which left Milon as supreme kâez of this principality. The submission of Bosnia only took place after 1821. On the contrary Ali Paşa of Yemen succeeded in keeping his strong position during this period; not till 1829 were the Turkish troops able to lay siege to Yemen. In Constantinople the sultan took severe measures to maintain order, especially against the dangerous element of the Janissaries.

During this time the diplomatic difficulties with Russia, relating to the interpretation and the execution of the peace treaty, continued, especially with regard to the regime in Moldavia and Wallachia. These difficulties were to become a real danger after the Greek insurrection had broken out.

This insurrection, being in a way a consequence of the autocratic regime of Ali of Yanina, and secretly favoured by Russia, began in 1820 with the appearance of Alexander Ipsilanti in Rumania, who felt the revolt much by Demetrius Ipsilanti. The first reactions on the Turkish side were numerous executions at Constantinople, including that of the Greek patriarch Then Turkish troops entered Rumania, where Ipsilanti was easily beaten. As this military action provoked sharp protests from Russia, whose ambassador Stroganow left Constantinople, the Turkish troops were soon withdrawn for the greater part. But in 1822 the insurrection in Morca spread quickly; Tripoli and Corinth fell into the hands of the insurgents. In the same year Ali of Yanina was murdered. In May 1823 the Aeropoli of Athens was attacked by the Turks; the latter, however, remained on the whole stronger than the Greeks. In order to avoid all difficulties with Russia, the Potie had evacuated in 1823 the whole of Rumania, while declaring that, henceforward, she would suffer no more foreign intervention in her internal affairs. But Russia continually came forward with new claims (e. g. the division of Greece into three principalities, after the model of the principalities on the Danube); at the same time the other European powers no longer remained indifferent towards the Greek affairs, partly because public opinion began to be influenced by the philhellenic movement, and partly because they feared that Russia might gain too much profit from the weakness of the Ottoman Empire. In these years Turkey had even to sustain a war with Persia occasioned by Persian incursions into Kurdistan; this war was ended by 1823. During the years 1824 and 1825, while Turks and Greeks were waging a guerrilla war by land and sea, and while amongst the Greeks there reigned complete anarchy, nothing decisive happened. The situation was only changed by the death of Alexander I of Russia (December 1, 1825) — which brought to the throne Nicholas I, much more inclined to make short work of the Turks — and by the combined action in Morea of Egyptian and Turkish troops under the command of Ibrahim Paşa, son of Muhammad Ali. This action was crowned by complete success, for Morea was entirely subdued, and on April 23, 1826 the fortress of Missolonghi capitulated after a siege of more than six months.

The Turkish successes encouraged the sultan to realise his long considered project to form a new army, trained and equipped after the European fashion. These new troops were recruited from the Janissaries. Their inauguration took place on June 4, 1826 and occasioned, ten days afterwards, the revolt of the Janissaries which ended in the complete and bloody extermination of these once famous troops (June 16). The extermination of the Janissaries is an act that will always be connected with the name of Mahmud II; it made a formidable impression in the whole country and the reform party — who spoke of it as the waqifa-i khaariyye — considered it as the beginning of a new era of prosperity. The first consequences, however, were disastrous; the strength of the empire was weakened to a degree, which made itself felt more and more in the development of the relations with Russia. Hoping to get rid of the everlasting demands of Russia, the Porte had given still more concessions by the convention of Akkerman (September 25, 1826), but soon afterwards followed an agreement between Russia, Great Britain, France and Prussia with regard to the Greek question (July 7, 1827), which prevented the Turks from the suppression of the Greek insurrection. Though directed, since the beginning of 1827, by the fanatical Reis Efendi, Turkish diplomacy was powerless against this new intervention. One of the consequences of the agreement of the powers was the destruction of the Turkish fleet in the Gulf of Navarino, on October 10, 1827, without previous declaration of war, by the English, French and Russian naval forces. Subsequently the diplomatic relations with these countries were broken off, but, when war actually broke out, it was only with Russia.

The Russian war, inaugurated by a declaration of war by Russia (May 7, 1828), was particularly disastrous for Turkey. The Russians immediately
occupied Rumänia and crossed the Danube, while on the Oriental front they took Kars and Akhalčik in the Caucasus. In 1829 the decision was completed by the occupation of Adrianople by General Diebich, on August 19. Thus, by the peace treaty of Adrianople of September 14, 1829, the Porte was obliged to make all the concessions required of her. Russia gave back nearly all her conquests, but obtained the payment of a heavy war indemnity. As to Greece, Turkey had to accept the decision of the great powers, which meant absolute independence. In the following years the new frontier and the future relations between Turkey and the new state were regulated by special conventions.

The principal political facts of the nine last years of Mahmūd's reign were the conflict with Muhammad 'Ali of Egypt and the Russian intervention, which was its consequence and put Turkey in a state of independence on Russia. The activity of Muhammad 'Ali [q. v.] began in 1831 with the invasion by Ibrahim Pasha of the territory of the pasha of Akka; this town was besieged and fell in May 1832. Within a short time Damascus, and Aleppo also submitted to Ibrahim. The military measures of the sultan were unable to stop the advance of the Egyptian troops, who marched from Syria into Asia Minor; the Turkish General Rashid Pasha was beaten by them in the battle of Konya (December 21, 1832) and was himself made a prisoner. The Porte then was obliged to accept the aid offered by Russia and the mediation of France, the result of which was an agreement, concluded on April 8, 1833 at Kutahiya, with Ibrahim Pasha; Muhammad 'Ali had to be recognised as pasha of Syria while the province of Adana was given to Ibrahim. In the meantime Russian troops had been landed in the Bosporus. These were only withdrawn after the conclusion of the notorious treaty of Hünkâr Iskele, signed on July 4, 1833 between Turkey and Russia. The treaty was a defensive alliance and contained a secret clause by which Turkey undertook to prevent any eventual enemies of Russia from entering into the Black Sea. Thus Turkey became still more politically linked to Russia, without the other powers being able to hinder this.

On the other hand Mahmūd continued with tenacity the consolidation of his authority in the interior. The principal agent of this policy was the former grand-vizier Rashid Pasha, appointed governor of Siwâs after his return from Egyptian captivity. He succeeded in establishing order in the interior of Anatolia and in Armenia, especially by subduing the Kurds. After his death, in 1836, he was replaced as serasker by Häfiz Pasha. The latter, unlike Rashid, was in favour of the introduction of modern tactics into the Turkish army; in his successful expeditions in the north of Mesopotamia he was accompanied by the Prussian lieutenant von Moltke, one of the army instructors who had been sent by the King of Prussia. These military measures of Mahmūd had also in view the strengthening of the frontier on the Syrian side, in order to be prepared for a new conflict with Muhammad 'Ali. This event happened only after 1838, when Khursaw Pasha [q. v.], the zealous reformer and ancient enemy of the Egyptian, came again into power as president of the new Turkish cabinet. The next year Häfiz Pasha, appointed again as serasker in Kurdistan, crossed the Euphrates and occupied 'Aintāb, but he was completely beaten by the Egyptians under Ibrahim Pasha, in the battle of Nizzâb, on June 24, 1839. This battle left Turkey again in a desperate condition, just a week before the death of Mahmūd himself.

During the same period the sultan had to suppress dangerous and repeated revolts in Albania and Bosnia; the situation in Serbia had remained quiet after a khatfī sharif of 1830. In 1837, the situation in the interior had become sufficiently stabilised for Mahmūd to undertake a journey in his European provinces, unhindered by breach with the traditional customs of the Ottoman rulers. It was to be one of his last public acts. Mahmūd died on July 1, 1839 at Constantinople in his palace of Canlıดา, above Scutari.

It is quite clear, from the many descriptions we possess of this sultan, that he was a strong personality, who made his own ideas prevail in the government of his empire. In his immediate entourage only few first rate men were to be found. But the task which Mahmūd had set himself, of reforming the empire after the European model was nearly super-human in the extremely unfavourable political circumstances that prevailed during his reign. To which must be added the enormous difficulties presented by the traditional institutions and views existing in all ranks of the Turkish people of those days (cf. e.g. the severe judgement by von Moltke, p. 434 sqq.). Mahmūd has often been compared, as a reformer, with Peter the Great, though the conditions were quite different. On the other hand he has been blamed for having commenced his reforms where he should have finished ("par la queue"), for demolishing things existing without being capable of constructive activity; especially in Turkey of to-day Mahmūd is judged severely (cf. Halide Edib, Anmerkur, London 1926, p. 237 sqq.). It is very probable, however, that without the drastic measures of this sultan, the following period of the Tanzimat [q. v.] would have been an impossibility (cf. Rosen, i. 300 sqq.). The most important reform was that of the army; it brought about the extermination of the Janissaries, but the formation of an army after the European fashion did not succeed till much later; the most zealous reformers, such as Khursaw Pasha, had only very vague ideas about what it really meant. The most useful work was done by the Prussian military instructors. By sending young officers to military schools in Western Europe, Mahmūd prepared, however, a new organization. In the government system there gradually developed a cabinet of ministers of state after the Western fashion; at a certain period in 1837, the ancient title of qābul-i 'ispam was even temporarily abolished, and the ministers received the new title of večil. Moreover, by a firman of October 1826, Mahmūd had opened the way to the development of a better and more dignified position of the state functionaries; this firman abolished the sultan's right of confiscating the possessions of the functionaries after their death. It was, however, a long time before a new corps of real and loyal functionaries came into existence. The men whose services Mahmūd was obliged to use were too often highly corruptible, a circumstance of which the other powers,
especially Russia, took advantage in a large degree.

Mahmūd II lies buried in the turch that bears his name: it was constructed in Stambul on the Dvān Yolu by his son and successor 'Abd al-Majīd.

**Bibliography:** The Turkish historical works deserve more attention than has been paid so far to them. The more accessible ones are: Li̇kawat Fasli̇, Tāvīkhī, Constantinople 1303, vol. v., comprising the period from 1223 to 1241, and its continuation, the Tāvīkhī of Ahmad Lutfī, Constantinople 1290—1306, vol. I—v., comprising the period from 1241 to 1255. Other printed sources are: Allā Bakr, Waf̲a̲-i Ḏedid̲e, Constantinople 1332; Tāvīkhī ʿAffī, Constantinople n.d.; Maḥmūd Aṣ̲ād, Uṣ̲r̲-z̲afār̲, Constantinople 1243, a monograph on the extermination of the Janisaries; Maḥmūd Thuri̇, Naf̲̲ḥat al-Waṣ̲āf̲ī, Constantinople (cf. also Bāhmane, G. O. W., p. 387) European general treatments of this period: Zinkesien, Geschichte des Osmanischen Reiches in Europa, v. I, Gotha 1884, p. 591 sq. (until 1842); Remarques, Geschichte des Türkischen Reiches, v. I, Gotha 1912, p. 182—307. A valuable contemporary source is II, von Moltke, Beichte wiar Zandat̲e̲ und Regehenheiten in der Türkei. Berlin 1883. (J. II. Kraemer)

**MAḤMŪD I, NĀṢĪR AL-DĪN, was Sultan of Bengal from 1446 to 1460. When the ferocious tyranny of shams al-Dīn Aḥmad Shah, grandson of the usurper, Rādžā Kāns, or Ganeṣ̲h, could no longer be borne, he was put to death, and Nāṣir Khān, one of his amirs, seized the throne, but after a reign of one week, was slain by his amirs, who would not submit to one of their own number. Their choice fell on Maḥmūd, who was a descendant of Ilāy, the founder of the old royal house, and he was raised to the throne. He reigned with justice and clemency for twenty-six years, and restored and beautified the city of Goā. On his death in 1460 he was succeeded by his son Barbak Shāḥ.

**Bibliography:** Ghalīm Hūsain Sālim, Kābul-i Sālim, Nīṣān al-Dīn Aḥmad, Tāvīkhī-i Akbarī, both in the Bibliotheca Indica series of the Asiatic Society of Bengal; Muhammad Khānī Fīrūzī, Gūr̲bān-i ʿĀb̲d̲-ʿAl̲l̲āh, Bombay lith. ed. of 1832. (T. W. Hage)

**MAḤMŪD II, NĀṢĪR AL-DĪN was the third of the Ḥabashī, or African Sulṭāns of Bengal. He succeeded his father in 1491, but was a mere puppet in the hands of one minister after another. His first minister, an African entitled Habash Khān, was slain by a rival, another African known as Malik Pādīr the Mahāmān, who afterwards slew Mahmūd, he having occupied the throne for no more than six months, and usurped the throne for himself.

**Bibliography:** See MAḤMŪD I of Bengal. (T. W. Hage)

**MAḤMŪD III, GHIYĀTH AL-DĪN, was one of the eighteen sons of ʿAlī al-Dīn Husain Shāh of Bengal. He remained loyal to his eldest brother, Nāṣir al-Dīn Nūr-ʿAlī Shāh, throughout his reign, but after his death slew his son, ʿAlī al-Dīn Fīrūz Shāh, in 1533, and ascended the throne. During a troubled reign of five years he never ruled the whole of Bengal Shīr Khān Shūr, who ultimately ascended the throne of Dvān, was already powerful in Bihār, and allied himself to Maḥmūd's rebellious brother-in-law, Maḥkūm-ʿAlām, who was governor of Ḥidajāpur. Shīr Khān defeated an army sent against him by Maḥmūd, but Maḥkūm was less fortunate, and was slain in another battle. Shīr Khān then forced the Tāḥyāgārī defile, invaded Bengal, and besieged Maḥmūd in Gawr in 1537. Maḥmūd appealed to Humayūn Shāh of Dvān for aid, and Shīr Khān was recalled to Bihār by a rebellion in that province, but left his son Dvālīr Khān to continue the siege of Gawr. In April, 1538, Maḥmūd was forced to evacuate Gawr, and fled, leaving his capital and his sons in the hands of Dvālīr Khān. Shīr Khān, returning from Bihār, then pursued Maḥmūd, overthrew him, forced him to a battle, and defeated him. Maḥmūd was wounded and fled, and nothing more is known of him.

**Bibliography:** See MAḤMŪD I of Bengal. (T. W. Hage)

**MAḤMŪD, SHIR AL-DĪN, the fourth king of the Bahmani dynasty of the Dvānak, was raised to the throne at the age of twelve on the death of his father, Maḥmūd III, on March 12, 1482, and remained under tutelage throughout his reign of thirty-six years. The ascendency of his first minister, Malik Ḥasan Bahrī, Nīṣān al-Mulk, who had been responsible for the death of Maḥmūd Gāwān [q. v.] was distasteful to the Foreign amirs of the kingdom, at the head of whom was Yūsuf Adīl Khān of Bīdāpār, and the assassination of this minister, ordered by the young king, embittered the relations between him and the Dvānak party, which attempted to dethrone him in 1487. The plot was discovered and frustrated, and was followed by a massacre of the Dvānak ordered by the king. But the youth could not stand alone, and was completely dominated by his next minister, Kasim Barid al-Malāmālī, a Turk. In 1510 Aḥmad Nīṣān al-Mulk, governor of Ḥujnīr and son of Malik Ḥasan Bahrī, proposed to Yūsuf Adīl Khān and Fath Allāh Imād al-Mulk of Bīrār that they should proclaim their independence of the king of the Dvānak, and both accepted the proposal. In the numerous wars of the reign of Maḥmūd was no more than a figurehead, being carried into the field by his minister, who issued orders without any pretence of consulting his master. Maḥmūd more than once attempted to free himself from the control of Kasim Barid al-Malāmālī, and of his son Amir Allāh, who succeeded him in 1504, but each attempt resulted only in the tightening of his bonds. In 1512 Sulṭān Kūl Kūl al-Mulk, who had been appointed governor of Telingānā in 1494, followed the example of the other provincial governors and declared himself independent, and in 1518 Maḥmūd died, worn out with debauchery. Four puppets followed him on the throne of Bīdār, and his line was finally extinguished in 1527, when Amir Allāh Barid al-Malāmālī assumed the royal title in Bīdār.

MAHMUD, NASIR AL-DIN, SULTAN OF DELHI, was the son of Shams al-Din Ittimish by the daughter of Kuch al-Din Aibak [q. v.]. In 1246, when the nobles at Delhi were growing weary of the sloth, incompetence, and tyranny of Nasir, Mahmud; then about 18 years of age, was governor of Bahri, and hastened secretly to the capital when he learned that the throne was likely to become vacant. On June 10, 1246, Nasir was deposed and thrown into prison, where he died shortly afterwards, and Mahmud, his uncle, was elected Sultan by an assembly of nobles and pious prince, with a taste for calligraphy, which he displayed in making copies of the Qur'an, but as a ruler he was a mere cipher. He was well served by Ghiyath al-Din Balban, whose daughter he married, and who ultimately succeeded him on the throne. Balban restored the royal authority in the Pandjabs, the Dehli, Mewat, Multan, Nagaur, and northern Malwa, but his enemies had been busy during his absence from court, and on his return attempted to assassinate him. He frustrated this design, but was banished from court. The nobles soon grew weary of the arrogance of his son; once, in the order of the throne, Balban was himself seized, and Balban and other nobles assembled their troops at Bhattinda. Rachna and the king marched against them, but as most of the nobles in the royal camp were in sympathy with Balban, who hesitated to attack the king, serious hostilities were avoided, and the royal army retreated. The nobles at court now prevailed upon the king to dismiss Rachna, who was banished, first to Budhan, and afterwards to Bahri, a reconciliation between the king and Balban was effected, and they returned together to Delhi in January, 1255. Rachna was soon discovered to be in communication with Kutlug Khan of Bayana, who had secretly married the king's mother, and the eunuch was captured, and put to death. In 1256 Mahmud and Balban marched against Kutlug Khan, who fled, and when he was pursued, in 1257, into Sirmur, again fled and took refuge with Kishla Khan, the rebellious governor of Multan and Ceeth. Balban marched against the rebels, but they evaded him and marched to Delhi. Finding, however, that preparations had been made to receive them, and that Balban was menacing their retreat, they fled, and in 1259 joined an army of Mughuls which was invading the Pandjabs. It was feared that the Mughuls would attack Delhi, but they retired without crossing the Satlaj. Order was then again restored in the Dehli, and in the following year the Meos of Mewat expelled by a terrible punishment a long series of crimes. Their country was ravaged, and 250 of their principal men were brought to Delhi and put to death with torture. In a second expedition 12,000 of them, men, women, and children were put to the sword. Meanwhile negotiations had been in progress with Hulagu Khan at Tabriz, and in 1260 a Mughul envoy reached Delhi and promised, in his master's name, that raids into India should cease. At this point a hiatus of nearly six years occurs in the history of the Muslims in India, and the next fact which is recorded is that Mahmud died on Feb. 18, 1268, and was succeeded by Balban.

W. Hage, MAHMUD II, NASIR AL-DIN, was the grandson of Firuz Shah, of the Tughluq dynasty, and was placed on the throne of Delhi on March 8, 1393, on the death of his elder brother Hauyin (Sikandar Shah) and was never more than a puppet in the hands of intriguing ministers. The eunuch Sarwan Delhi was by an unwise and unwise, which ended in the Hindustan rebellion in Awadh, received the title of Sultan al-Shar, and never returned to Delhi, but established his independence in Dewanpur. Another Amir, Sarang Khan, became virtually independent in the Pandjabs, and the minister Sa'adat Khan, presenting his supersession by Mukarrab Khan, set up Mahmud's cousin Nasrat as a rival king within the narrow limits of the kingdom of Delhi. In 1398 Malik, the brother of Sarang Khan, murdered Mukarrab Khan and assumed complete control of the kingdom, who conferred on him the title of Ikbal Khan. Nasrul Shah was then driven into the Delhi, but the kingdom of Delhi was in a state of utter confusion, when, in October, 1398, news was received that the Amir Timur (q. v.) had crossed the Indus and taken Multan. He reached Panipat on Dec. 2, and meanwhile the capital had been filled with fugitives, fleeing before him. The resources of the kingdom were so restricted that no adequate preparations could be made to resist him, and Mahmud and Malik were filled with terror; but such troops as could be collected were assembled within the walls, and on Dec. 15, the king and his minister marched forth to meet the invader, who had crossed the Jumna from his camp at Lon. They were utterly defeated, and fled by night, Malik to Baran in the Delhi, and Mahmud to Gujrat, and afterwards to Malwa. Timur left Delhi on Jan. 1, 1399 when his work of plunder, devastation, and bloodshed was finished, and Mahmud's rival, Nasrat Shah, occupied the ruins of the capital, but was expelled by Malik, and driven into Mewat, where he shortly afterwards died. Malik returned to Delhi in 1400, and in 1401 was rejoined by Mahmud. In 1402 Malik, carrying Mahmud with him, marched to Kanawaj to attack Ibrahim Shaw of Djawapir, but Mahmud, weary of the domination of Malik, fled and joined Ibrahim, who, however, received him so ill that he again fled, and established himself in Kanawaj. Malik then made a fruitless attempt to recover Gwalayar, and returned to Kanawaj in order to recapture Mahmud, but was baffled by the strength of its defences and returned to Delhi. He attempted to subdue Khidir Khan of Multan, but was defeated and slain by him in November, 1405. After his death Dawlat Khan Lodhi became the virtual ruler of Delhi, and at his invitation Mahmud returned to his capital. The rest of his reign was spent in attempts to re-establish his authority in Sambarda, Sambhal, and Baran, and to punish Ibrahim of Djawapir for his reception of him when he had fled from Malik; but he was obliged to conclude an inglorious peace with Ibrahim, and his success in the other direction was neutralized by the advance of Khidir Khan, who pretended that Timur had appointed him his viceroy in India, and in 1406 stripped Mahmud of all his possessions beyond the walls of Delhi except the Durb, Rohtak, and
Sambhul. In 1409 and 1410 Khizr Khān captured Rohá, Nānawul, three towns to the south of Dhilli, and Fīrāzābād, and besieged Māhmūd in his capital, which was only saved by a famine which compelled the invaders to retire. In 1413 Māhmūd died, the last of his line, at Kaithal, after a nominal reign of twenty years.

MĀHMŪD, SĀIF AL-DĪN, BAGARIA, the greatest of the Sulṭāns of Gudjārāt, was a younger son of Muhammad I. Kārim, and was born in 1444. In 1458 the nobles dethroned his nephew, Hāsūl, a vicious and depraved youth, and placed Māhmūd on the throne. The boy immediately displayed great courage and resource in the suppression of a serious conspiracy and rebellion at the beginning of his reign, and in 1461/1462 he marched to the assistance of the youthful Niẓām Shāh of the Dākhān, whose dominions had been invaded by Māhmūd I of Dhilli. He compelled the invaders to retire and frustrated a second attempt to invade the Dākhān. In 1466/1467 he attacked and defeated the Rājdā of Gīrnār in Kāthīāwār, which had been independent since the capture of the fortress by Mūhammad b. Tughluk of Dhilli in 1438, and reduced him to the position of a vassal. In 1470 he again invaded Gīrnār, and on Dec. 4, captured the Rājdā's stronghold and compelled him to accept Islām, thus putting an end to the Ėdāsāna dynasty, which had reigned in Gīrnār for about 1,000 years. The Rājdā became an amīr of Gīrnār, and received the title of Khān-Djāhān, and Māhmūd founded, near Gīrnār, a new fortress, which he named Mūṣṭafābād. He then invaded Kāçh and suppressed a rebellion in that province, carrying his leaders, who were compelled to accept Islām, to Muṣṭafābād as hostages. In 1472 he crossed the Rajn and marched into Sind, to assist Dām Nānda (Niẓām al-Dīn) who was beset by rebels. He crushed the rebellion, and after his return marched to Dwārkā, to punish the Rājdā, Bhīm, who had plundered a ship belonging to a Muslim merchant. Dwārkā and Bait Shānikhodhar, the robber chief's stronghold, were taken, and a Muslim governor was appointed to manage the small state. Bhīm himself was captured and executed. Māhmūd's next expedition was against some Malābār pirates who had harassed the coast near Khambayat (Cambay), and whose depredations were checked by the capture and execution of some of their number. Rājdā Patī of Cāmpāner had long encouraged a brigandage in the kingdom of Gudjārāt, and Māhmūd now retaliated by raiding some districts of his state. On his return to Al-mārdābī he discovered a plot to depose him, formed by some of his nobles, who were weary of his ceaseless activity, but the malcontents, who were well aware of the dangers which threatened the kingdom, were brought to their senses by his threat to perform the pilgrimage to Makkā, leaving his young son as regent. After restoring order in various districts of his kingdom he marched, in December 1462, to settle accounts with Cāmpāner. The fortress fell, after a siege of two years, at the end of 1484 and the Rājdā and his Minister, having received, after five months imprisonment, to accept Islām, were put to death. In 1491 Māhmūd was disturbed by acts of piracy and aggression committed against his subjects by Bāhūdur Gilānī, a rebel in the Konān, and his protests compelled the nobles of the distracted kingdom of the Dākhān to unite for the purpose of crushing the rebel. In 1507 Māhmūd's fleet, under Malik Aīyās al-Dīn, participated with that of Malik Aḥṣar Kāshānī, of Egypt, in the victory over the Portugese fleet, in which the gallant young Lourenço de Almeda, son of the viceroys to Slain, and later in the same year he invaded Kāndhūl and placed on the throne of that kingdom his daughter's son, Aḥān Kāshānī, whose father was descended from the ruling family of Kāndhūl, and who ascended the throne under the title of Aḥān Kāshānī. In this campaign he was opposed by Niẓām Shāh of Almāndāgar. In 1511 a mission from Shāh Ismā'īl Safawī of Persia arrived in Gudjārāt for the purpose of inviting Māhmūd to accept the Shī'a faith, but he refused to see the heretics. He had now been ailing for some time, and on Nov. 23, 1511, he died, at the age of sixty-nine (lunar) years, after a reign of rather more than fifty-three years. He was a tall, burly man, of commanding appearance, and was, besides being an able administrator, both warlike and chivalrous. His nickname of Begarha has been variously explained, but it undoubtedly had reference to his capture of the two great fortresses (garh) of Gīrnār and Cāmpāner. His elder brother had died of poison, and strange stories are told of his precautions against a like fate. He is said to have gradually absorbed poison into his system until he was so impregnated with them that a fly settling on his hand instantly died. Butler refers to this strange prophylactic treatment in the lines:

"The King of Cambay's daily food
Is nap, and basilisk, and toad."

He was also distinguished by his voracious ap-
petite. His daily allowance of food was between twenty and thirty pounds’ weight, and before going to sleep he placed two pounds, or more, of boiled rice on either side of his couch, so that he might find something to eat on whichever side he awoke. When he rose in the morning he swallowed a cup of honey, a cup of butter, and from 100 to 150 bananas.

**MAHMûD II of Gujûrât,** was the sixth son of Muṣaffar II, on whose death his eldest son, Ṣikandari, was raised to the throne, but was assassinated on July 12, 1526. The minister then placed on the throne Muḥammad, who was an infant, in order that he might rule in his name, but Baḥādur, the second son of Muṣaffar, who had been absent at Dîhil and Dwânpîr, hastened back to secure his birthright, and on July 11, ascended the throne at Aḥmedâbâd and marched on to Câmpân, where his infant brother was. He entered the fortress without opposition, and Muḥammad was dethroned and secretly murdered within the year.

**Bibliography:** See MAHMûD I of Gujûrât. (T. W. Haig)

**MAHMûD III, Sa’d-al-Dîn, of Gujûrât,** was the son of Laṭiff Khân, third son of Muṣaffar II. On the death of Baḥādur Shâh Muḥammad Shâh Fârûqî of Khándâgâh he was offered the crown of Gujûrât, but died on his way thither. The choice of the nobles then fell on Muḥammad, the heir male, but his cousin, Mûbârâk II of Khándâgâh, in whose custody he was, and who had himself expected an offer of the crown of Gujûrât, refused to surrender him, until an army from Gujûrât compelled him to do so. The prince was escorted back to his country, and on Aug. 8, 1537, was enthroned as Maḥmûd III, being then only eleven years of age. For the first three or four years of his reign he was a puppet in the hands of powerful ministers, and when he escaped from tutelage proved himself to be weak and inefficient. His attempt, in 1546, to recover Dîhil from the Portu­guese, was a miserable failure, brutally avenged by him on the few Portuguese prisoners in his hands. In 1549 he retired to Muḥammedâbâd, where he lived in slothful luxury, ruining his constitution with drugs. On Feb. 15, 1554, he was stabbed, as he lay in a drunken stupor, at the instigation of an attendant named Barhân al-Dîn, who attempted to usurp the throne, but was slain by the nobles. The disposal of an heir was no easy matter, for Maḥmûd, dwelling an heir as a possi­ble competitor, had taken the barbarous precau­tion of procuring an abortion whenever a woman of his harem became pregnant. The choice of the nobles ultimately fell on a young prince entitled Râdî al-Mulk, the great-grandson of Shâkâr Khân, a younger son of Aḥmad I, and he was raised to the throne under the title of Aḥmad II.

**MAHMûD I, Khalid, of Mâlwa,** was the son of Malik Muḥīrī, sister’s son to Dâlîwar Khân, the first independent Sultan of Mâlwa. On May 12, 1436, Maḥmûd caused his cousin, Muḥammad Ghûrî, a debauched and barbarous prince, to be poisoned, frustrated an attempt to enthron­e his young son, Maṣûd, and offered the crown to his own father, Muḥīrī, who refused it, whereupon Maḥmûd himself ascended the throne. He was beset by difficulties, and after quelling a rebellion raised on behalf of Aḥmad, a Ghûrî prince, repelled an invasion by Aḥmad I of Gujûrât, who attempted to restore Maṣûd to his father’s throne. A pre­tender was set up in Cânderî, and died while Maḥmûd was besieging the fortress, but he was obliged to turn immediately against Dongar Singh of Gâvîrâr, who had taken advantage of the disturbed state of Mâlwa to invade the country. He expelled the Hindûs and returned to Mândâl, whence he was summoned, in 1440, by a faction among the nobles of Dîhil, who offered him the throne. He marched to Tughlûtâbîb, but his parti­sans failed him, and he was met by the army of Muḥammad Shâh the Sâiyûd, under Bahlîl Lodi. After some indecisive fighting he agreed to retire, as­senting the more readily owing to news of a serious rebellion in Mândâl. On his return he found that the rebellion had been suppressed by his father, and in 1442 he invaded Mewâr to punish the Rânâ for the assistance which he had given to the pretenders who had troubled the early years of his reign. He had considerable success in the campaign, but retired without at­tempting to besiege Cîtor. On his return to Mândâl he quarrelled with Maḥmûd Shâh Shârî [q.v.] of Dwânpîr, regarding Naṣîr Khân, the turbulent ruler of Kâlpî, but after an indecisive campaign the two kings made peace on the basis of a com­promise. In October, 1446, he again invaded Mewâr, extorted some tribute from the Rânâ, established his own authority in Ranthambhôr, compelled Awhad Khân of Bîyâna to do homage and pay tribute, and collected tribute from the Râdja of Kota, He left a force to besiege Cîtor, but the siege was not formed. In 1450 he invaded Gujûrât to establish his claim to the allegiance of Kanak Das, Râdja of Câmpân, but gained nothing except an instalment of tribute from the Râdja, and in the following year he suffered a severe defeat during a second invasion of Gujûrât. In 1451 he subdued the turbulent Hâra Râdipûrn on his northern frontier, and later in the year invaded Berîr and besieged Mâhîrî, but retired when the Bahmani king marched to its relief. In 1455 he again invaded Mewâr, recaptured Aджmîr, collected tribute from minor chief­fains, and har­assed and plundered large tracts in Râdipûrâm. In 1461 he was induced to invade the Dakân, where he defeated the army of the boy-king, Niẓâm Shâh, and besieged him in his capital, but was obliged to retire by the news that Maḥmûd I of Gujûrât was marching to the assistance of Niẓâm Shâh, and suffered severely at the hands of the Korkûs of the Melghât during his retreat. He invaded the Dakân in the following year, but before he could effect anything was again obliged to retire by Maḥmûd I of Gujûrât. In the same year Kherlî, a fortress of Berîr held by him, was taken by the officers of the Bahmani king, but he succeeded in recovering it. In 1466 he again invaded Mewâr, but though he defeated Rânâ
MAHMUD

Kumbha in the field he failed to take his capital by surprise, and returned to Mandu. In 1468 he marched to Canderi, and his officers captured and destroyed the fortress of Karaha. On his way back to Mandu he suffered severely from the heat, and on June 1, 1469, he died, at the age of sixty-eight. He was the greatest of the Muslim kings of Malwa, and under his kingdom reached its greatest extent. The "column of victory" at Citer is said to commemorate Kumbha's victories over Mahmud I of Gujjarat, and Mahmud I of Malwa, but if this be so it is more mendacious than most SAPID inscriptions, for the successes of Mewar against Malwa were gained by Sangrama against Mahmud II, not by Kumbha against Mahmud I. Mahmud's fame had reached distant Egypt, for he received an envoy from the phantom Abbاس II Kalbā, who formally recognized him as Suliya of Malwa. He was a zealous Muslim, and restored the use in public offices of the inconvenient lunar calendar of Islam, and, while he gloried in his successes against the "infidels", was careful to excuse himself for his attacks—often unjustifiable—on sovereigns of his own faith.  

MAHMUD II, "Abū" al-Dīn, Kakhtājī, of Malwa, was raised to the throne on May 2, 1511, on the death of his father, Nāsr al-Imām Kakhtājī. The early days of his reign were disturbed by rebellions on behalf of his brothers, and of other pretenders, and he was once driven from his capital, but was enabled to return and expel the rebels by the assistance of Medni Rāy, with a force of Rādpāts. The king soon had reason to repent of having accepted their aid, for Medni Rāy assumed the place of minister, and the dominance of the Hindūs alienated and disgusted all the Muslim nobles of the kingdom. Bihgat Kān, governor of Canderi, openly expressed the cause of a pretender, and Mahmud, while engaged in correspondence with him, was disturbed by news of a revolt in his capital and of the invasion of his kingdom by Muṣaffār II of Gujjarat, but the revolt was suppressed, and the invader was repelled to Gujjarat by domestic disturbances. After protracted negotiations the pretender fled, and Bihgat Kān received Mahmud at Canderi and endeavoured, but in vain, to free him from the influence of the Hindūs. Mahmud returned to Mandu early in 1514 and fell entirely under the control of the Rādpāts, at whose instance he put to death many of the Muslim nobles of the kingdom. The arrogance of the Hindūs at length became intolerable, and in 1517 Mahmud fled to Gujjarat and sought aid of Muṣaffār II, who led an army into Malwa to restore his authority, captured Mandu, and mas-sacrificed the Rādpāts who had held him. The rest of the Rādpāts in the state established themselves on its northern border and transferred their allegiance to Rāna Sangrama of Citer. Muṣaffār retired to Gujjarat leaving 10,000 hor to assist Mahmud, and Mahmud besieged Gādrān, held by Hemkaran for Medni Rāy. The Rāna marched to its relief, and Mahmud, turning aside to meet him, suffered a severe defeat, and was wounded and captured. Sangrama received him courteously, but compelled him to surrender his crown jewels. He might now have annexed Malwa, but, fearing to arouse the hostility of every Muslim ruler in India, made a virtue of necessity, and replaced Mahmud on his throne. A few years later Mahmud harboured and encouraged Čand Kān, brother of Bahādur Shah of Gujjarat, and a pretender to his throne. Bahādur invaded and besieged Medni. Mahmud's sloth and negligence inflected his army, and on March 17, 1531, Bahādur captured the city, and Mahmud appeared before him. Malwa was annexed to Gujjarat, and Mahmud and his family were sent towards Cāmpānēr, to be imprisoned there. On April 12 the camp was attacked by a force of Bilis and Kolis, and Mahmud's guards, fearing a rescue, put him to death. His seven sons were conveyed to Cāmpānēr, and nothing more is known of their fate.

MAHMUD II, ISMĀ'IL. [See Ibn KĀN ISMĀ'IL.]  

MAHMUD II, MUHAMMAD b. MA'LIKSHĀH, a Sālaǧī ruler in the Ḩirāk (511-525 = 1118-1131), ascended the throne as a boy of 13, being the eldest of his father's five sons. To his misfortune, his trusted advisers only troubled about their own interests and made the young Sultan take various steps which were fatal to the prosperity of his reign. Anāsharwān in al-Bondārī mentions no fewer than ten tenors. He was free from the misfortunes of the two former sultans, and his court was more regular and stately. His capital was founded in 1129, and was named after him, as Solaymān. Neither his capital nor his court enjoyed the splendours of his predecessor, but his accession was marked by two events which were of importance in the history of the Sultanate, as the death of his chief minister, Anāsharwān in al-Bondārī, made him master of his affairs, and his lifetime was marked by the rise of the Bahādūr, the founder of the Bahādūr dynasty. that he was an infidel. The two brothers readily made friends again as Mas'u'd was still a mere child; Ayaba escaped, was afterwards pardoned by Mahmūd, but lost to Aṣṣonkor al-Dursuki [q.v.] the governorship of Mūsul which he had previously held. Dubais was preparing the Sultan still to disgrace, from which his brother was saved by Toghril, who with his Atabegs had meanwhile been given the province of Arān as ḫaqīq, could not withstand the Georgians there, who had taken Tīlis in 515 (cf. Brosset, Histoire de la Géorgie, i. 365; Matthiæs of Edessa, ch. 230—232; Ibn al-Farsi in Ibn al-Kalānī, ed. Amédroz, p. 203), and came to the ḫīṭak to seek help from Mahmūd. The latter himself took the field against the Georgians without doing much and Toghril, who had now returned to his province, soon received a visit there from Dubais, who persuaded him to set out to the ḫīṭak against the caliph al-Mustarshid. As they had no success in this enterprise, they went to Sandjar to confess that Mas'u'd was still alive, and Sandjar thereupon went to al-Ra'y and sent an invitation to Mahmūd to come to answer the charges (522 = 1126). Mahmūd was received with honours and instructed to restore Dubais to his territory in Hīla while Toghril and Mas'u'd who was also with him, went off with Sandjar. Mahmūd however did not find the caliph inclined to tolerate Dubais in his neighbourhood, and the Sultan withdrew his claims for a sum of 100,000 dinārs and went to Hamadān. There had been trouble between Mahfūd and the Caliph before and in 520 (1126) for example there had been open fighting in the streets of Baghād between the Arabs and the Sultan's Turkish troops. In all these circumstances, Mahmūd proved unequal to his task; while he left the business of government to his viziers, among whom al-Sumairamī and al-Dargazīnī (or al-Ansābādī as Ibn al-Athir always has it) were the most prominent, he spent his time with his hawks and hounds, which, according to Mirḳhawīnī, were 400 in number and wore jewelled collars and coverings embroidered with gold. It became worse when he devoted himself to sensual pleasures and as a result of his sexual excesses fell ill and died at Hamadān at the early age of 27 (Shawwāl 15, 525 = Sept. 10, 1121). Nevertheless he was by no means an insignificant figure; he had a good acquaintance with Arabic and was celebrated in a long panegyric by Ḥaṣa-Jaṣa [q.v.]; Ibn al-Athir lauds his gentleness and emphasises that he never, as Sulṭān usually did, laid violent hands on the property of his subjects.

Bibliography: in the article SULṬĀN; cf. also Ibn Khallikān, Wafayāt, Cairo 1299, ii. 519 sq.

Mahmūd of Ghazna, one of the most famous of Muslim conquerors, was the elder son of Subuktigin and was born in 969 A.H. In 994 Nūḥ II of Bukhārā appointed Subuktigin governor of Khurasan, as a reward for assistance received from him, and Subuktigin appointed as his deputy his son Mahmūd, who took Nishāpūr from the Ismā'īlī heretics and made it his capital. On his death in 997 Subuktigin left his throne to his younger son, Ismā'īl, but Mahmūd marched to Ghazna, deposed his brother and ascended the throne in 999. Begtūrān, an amīr of Manṣūr II of Bukhārā, attempted to deprive Mahmūd of the government of Khurasan, but failed, and the Sūmānī dynasty was shortly afterwards extinguished, its dominions being divided between Mahmūd and Ilīk Khān of Kāshghar. The Khātīf al-Kādir now recognized Mahmūd as king of Ghazna and Khurasan, and conferred on him the title of Amīn al-Millâ, and later that of Vāmīn al-Dawla, from which his successors are sometimes Id ālī, as the Vāmīn dynasty. Mahmūd now made a vow to invade India and chastise the infidels every year of his life, and during the remaining thirty years of his life led no fewer than seventeen raids into India. After an expedition in the year 1000 he defeated and captured Ḋajjalī I of the Pandjâb in 1001, and took the town of Īnd. Ḋajjalī was released on promising to pay tribute, but would not survive his disgrace, and burned himself to death, leaving his kingdom to his son, Anandpâla. Mahmūd received the title of Ghârâ, and in 1003 subdued Sistân, Khalâf b. Ahmad, whom he defeated, saved his life by addressing his conqueror as "Sulṭān," a title which so pleased Mahmūd that he bore it ever after. Mahmūd also said, the first Muslim sovereign to do so. In 1004 he invaded the Multûn state, and besieged its ruler, Dāwīd, who had adopted the Carmathian heresy, for seven months in his capital. Dāwīd saved his kingdom by abjuring his heresy and undertaking to pay tribute, and Mahmūd returned to his dominions in time to meet Ilāk Khān, who had invaded them, near Hâlkh. He defeated the invader and put him to flight, but while he was thus engaged Sukhpâl, a son of Anandpâla, who had accepted Īslām and received the title of Nawâsâ Shâh, recanted and rebelled. Mahmūd marched towards Bhara, Sukhpâl's capital, but before his arrival there his officers had captured Sukhpâl, who was compelled to disgorge 400,000 dirhems, and was imprisoned for life. Mahmūd then invaded the district of Īnhâr, conquered it, and compelled the inhabitants to accept Īslām. Meanwhile the princes of India had formed a confederacy to defend their country and their religion, and when Mahmūd crossed the Indus in 1008 he was met at Īnd by a great army composed of the troops of Anandpâla and those of the Râjâs of Udjetân, Gwâyûrā, Kâllindjar, Kānnwâdž, Dîlî, and Adjarâ. Their combined forces nearly succeeded in defeating Mahmūd, but after a hotly contested battle he won the day, and the Hindūs fled. The Râjâs lost faith in each other, and the confederacy was dissolved. Mahmūd pressed on to the fortress of Bhavan and the temple of Nagarkot or Kiṅgâ, and the gates of which were opened to him after a siege of seven days. The enormous plunder which the temple yielded whetted Mahmūd's appetite for further exploits of the same nature. In 1009 he again invaded the Pandjâb and plundered the country and slaughtered its inhabitants. Anandpâla, who dared not attack him, purchased peace by the payment of an indemnity, a promise of tribute, and an undertaking to allow him unrestricted passage through the Pandjâb in future. Dāwīd of Multûn had by now relapsed into heresy, and in 1010 Mahmūd invaded his kingdom, took his capital, and after slaughtering and mutilating great numbers of his heretical subjects sent him to end his days in Īnhâr. In 1011 Mahmūd marched through the Pandjâb to the plunder of the wealthy temple of Thānâsar. The Râjâ fled, and Mahmūd plundered the temple, the city and the kingdom, and carried off the idol Čakrâvarthi,
with much booty and large numbers of captives, to Ghazna.

In 1012 Mahmūd’s officers subdued Ghardjistān, and he compelled the Khalifa al-Kādir to cede to him those districts of Khurāsān which he had not yet occupied, but the Khalifa returned a stern refusal to Mahmūd’s demand for Samarkand, and Mahmūd was obliged to apologize for his presumption.

Amandpāl had now died and had been succeeded by his son, Trilokanpāl, a weak monarch who committed the management of his affairs to his son, Nidar Bhīm, or “Bhim the Fearless.” Bhīm reversed the submissive policy of his grandfather, and in 1013 Mahmūd was obliged to invade the Pandjab in order to keep the road to Hindustān open. In the spring of 1014 he defeated the Hindū prince in the Margālā Pas, captured the fortress of Naudana, and pursued him into Kāshmir, but was unable to come up with him, and was obliged to return. A second invasion of Kāshmir was equally unsuccessful: he failed to take Lōhkot, and in the spring of 1016 he returned, with heavy loss, from his only unsuccessful campaign in India, losing, on his way, many of his men in the flooded Dījilām. In the same year he marched to Kuhūrūm to avenge the death of his sister’s husband, Abū ʿAbdullāh Mūmūn, who had been slain by rebels. He crushed the rebellion and appointed one of his own officers, Attānūṭh, to the government of his new conquest. In the autumn of 1016 he set out on his long meditated expedition into Hindustān, whither Trilokanpāl and Nidar Bhīm had retreated. He crossed the Indus on December 2 and received the submission of the Rājdā of Barān, and 10,000 of whose subjects accepted Islam. He next defeated Rājdā Kulūnd of Māhāhan, who to avoid disgrace stifled his daughter and son, and then himself. He sacked and destroyed the splendid cities of Mathurā and Pindārā and, leaving the greater part of his army there, marched with a picked force, to Kānawād, defended by seven forts on the Ganges. Its ruler, Rājdāyapāla, fled, leaving his capital undefended, the seven forts were plundered in one day, and the city was sacked. As on further down the Ganges, spared its fate, and Mūlijhītān, “the Fort of the Brahmanes,” was plundered after its defenders had been slain to a man. Rājdā Cand of Gharwā fled, but the city was sacked, and he was overtaken and defeated on January 6, 1019. Mahmūd then set out on his return march to Ghazna with a large number of elephants, 5,000,000 dirāms, much other plunder, and captives so numerous that slaves were to be had for two or three dirāms each. On his return he founded at Ghazna his great mosque, the “Bride of Heaven.” Rājdā Nanda of Kālindjār and the Rājdā of Gwalīyār had marched to Kānawād after Mahmūd’s retreat, and had punished Rājdāyapāla for his cowardly desertion of his capital by putting him to death. They were attempting to form a new confederacy of Hindū princes when Mahmūd, in 1019, invaded Hindustān to frustrate their design. He defeated Trilokanpāl on the Kāmān Lār and then turned to confront Rājdā Nanda, who was marching to meet him with a great army, at the sight of which even Mahmūd quailed. Nanda, however, was smitten with a sudden panic and fled in the night, leaving his camp to be plundered by Mahmūd, who obtained, with much other booty, 580 elephants, in addition to 270 already taken from Trilokanpāl. Then, fearing lest his retreat through the Pandjab should be cut off, he returned to Ghazna. In 1021 he resolved to provide himself with a base for future raids, and having invaded Swāṭ and Bājdāw and compelled the inhabitants to accept Islam he attacked, but again failed to capture, the fortress of Lōhkot, and, raising the siege, marched into the Pandjab. Trilokanpāl was dead, and Nidar Bhīm fled and took refuge with the Rājdā of Adjam, where he died in 1026. Mahmūd was thus able to annex the Pandjab, and brought it under his own sway. In 1022 he again invaded Hindustān and attacked the forresses of Gwalīyār and Kālindjār, but left their rulers in possession of them on their promising to pay tribute. On his return to Ghazna he mustered his army, and in 1023 invaded Transoxiana to establish his authority there. The smaller chiefs hastened to pay him homage, the ruler of Samarkand was brought before him in chains and was sent as a prisoner to Kālindjār, as were also the chiefs of the Sālīdā tribe, 4,000 families of which Mahmūd, though he was apprehensive of their power, transported into Khurāsān. In 1025 Mahmūd set out on the most famous of his raids into India, the expedition to Somnāth. The insolent boast of the Brahmanes had annoyed him, but it was the reputed wealth of the temple that prompted the enterprise. He crossed the Indian desert after elaborate preparations, plundered both Adjam and Anhilwāra, and reached Somnāth in the middle of January, 1026. Within two days his troops had stormed the ramparts and entered the city, but the temple was strongly defended, and while he was attacking it he learned that the Hindū princes of Gujārāt, who had fled before his arrival, had rallied to the defence of the idol, and were before the city. Leaving a force to continue the siege of the temple, he marched against them, and, after a battle in which he narrowly escaped defeat, put them to flight. Their defeat sealed the fate of the temple, which was almost immediately captured. Mahmūd plundered it of its vast treasures and broke up its idol, a huge lingam. From Somnāth he marched to punish Rājdās Duāb, Rājdā of Anhilwāra, for the attempt to relieve the temple, but the Rājdā fled, leaving his stronghold and its treasures to the conqueror. It is said that Mahmūd was so intoxicated by the beauty and climate of Gujārāt that he was with difficulty dissuaded by his officers from making Anhilwāra his capital, and leaving Ghazna to his son, Masʿūd. On his return march through the Sind desert his army suffered severely, and after crossing the desert was harassed by the Dāšās, but succeeded in reaching Ghazna with its spoils. In 1027 Mahmūd undertook his last expedition into India, in order to punish these Dāšās. He collected a flotilla of boats at Multān, and, owing partly to their superior construction, defeated the Dāšās in a naval battle on the Indus, and carried off their families, which they had removed for safety to islands in the river.

The remainder of Mahmūd’s life was devoted to the western provinces of his empire. He wrested Ira, Rayī and Isfahān from the Buwayhīds, invested his son Masʿūd with the government of the newly conquered territory, and employed himself in establishing order and security on the caravan routes throughout his wide dominions, and in extinguishing the heretics whom the Shi’a Buwayhīds had tolerated. In 1029 he returned from Rayī to
Balkh, and marched in the spring to Ghazna, where, on April 30, 1350, he died, at the age of sixty, three years, worn out with the labours of forty years.

Mahmūd was far from being the zealous champion of the faith depicted by Muslim historians. Occasionally he encouraged, and even compelled Hindūs and others to accept Islam, but the propagation of the faith was never the primary object of any of his campaigns. Temples were attacked rather because they contained treasure than because they contained idols, and he did not hesitate to employ bodies of unconverted Hindūs, even against his brethren in the faith. He has been described as miserly but he loved money chiefly as the source of power. He adorned Ghazna with noble buildings and his court was in that age the chief resort of poets and men of learning, and was adorned by al-Ūṭā, al-Birūnī, Usūrī, Asādī, ‘Aṣṣāf, Minūsīlī, Firdawṣī, and many other poets and men of letters. His scurrity treatment of Firdawṣī is to be attributed rather to the malice of a personal enemy than to the meanness of the king, and the poet’s mode of resenting it placed him beyond the pale of forgiveness. Mahmūd was one of the great figures in Islamic history, and though his warlike career left him no leisure for the acquisition of learning he knew how to appreciate and reward literary merit in others.

MAHMŪD GĀWĀN, MAHMUD AL-DIN, Khvādža, was born in A.H. 1405, of a family which had long held high office in the small principality of Gāwān, and is said to have taken the name of Gāwān, by which he was afterwards known in India, from Kawān, his birthplace. He received a good education and as a young man made the pilgrimage to Mکa. While he was there his family fell into disgrace, so that he could not safely return home. Refusing offers of employment in other parts of Persia he became a merchant, and in 1555 sailed from the Persian Gulf for India, and landed at the port of Dībhōl. Thence he proceeded to Bīdar, the capital of the Bhāmāni kings, and was well received by ‘Alī al-Dīn Aḥmad II, who was then reigning. He received the command of 1,000 horse and was sent to quell the rebellion of Dājjāl Khān in Telingānā. His conspicuous success secured his position as one of the leading nobles of the kingdom, and after the death of Aḥmad II in 1457 he received from his son and successor, Humāyūn, the title of Malik al-Tudqijār (“Chief of the Merchants”), then highly esteemed. During Humāyūn’s short reign he was employed in suppressing rebellion and restoring order in Telingānā, and on the king’s death, in 1461, was associated by his widow with herself and Khvādža Dżāhān the Turk in a council of regency. The foreign enemies of the kingdom took advantage of the childhood of the new king, Nizām Shāh, and Mahmūd Gāwān bore an honourable part in repelling the invasion of the Rādja of Urūs, who was forced to pay a large indemnity. Mahmūd Khādža I of Mālwa next invaded the Dakan, defeated the army of Nizām Shāh, and menaced the existence of the state. Mahmūd Gāwān succeeded in enlisting the aid of Mahmūd I, Begarha, of Gajārāt, and with his help defeated and expelled the invader. Nizām Shāh died in 1463, and the kingdom was governed for his younger brother, who succeeded as Muhammad III, by the same council of regency, but the arrogance and ambition of Khvādža Dżāhān the Turk so aroused the suspicions of the queen-mother that she ordered her young son to put him to death. She shortly afterwards retired to public life, leaving Mahmūd Gāwān, now entitled Khvādža Dżāhān, sole regent. In 1469 he was sent to subdue the Konkan, and to suppress the pirates of that region, and, in a series of campaigns extending over three years, conquered the country and captured Goñ, then one of the principal ports of Vījñāyanagar. On his return to Bīdar he was received with great honour and his position as first noble of the kingdom was assured. In 1472 he brought the seige of Belgum to a successful conclusion, but the chief service which he rendered to the Bhāmāni kingdom was the reform of its administration. It had originally been divided into four great provinces, Gūlbara, Dowlatābād, and Telingānā, to which the name of taraf was given, and the power of the zahrāf, or provincial governor, was almost absolute. He collected the revenue; raised, paid and commanded the army; and appointed all officials, his responsibility to the king being limited to maintaining order, keeping the people contented, remitting to the capital the quota of revenue due, and joining the king when summoned, with the contingent of troops which he was bound to supply. Even in the early days of the kingdom rebellions raised by provincial governors had not been unknown, but the system had worked well on the whole so long as the limits of the kingdom were comparatively narrow, and the kings were energetic; but the kingdom was invaded, and the districts were unwarly and the defects and dangers of the old system were apparent to all. Mahmūd Gāwān divided each of the original tarafās into two, so that their number became eight. Berār was divided into the two tarafās of Gāwāl and Mūhār; Dowlatābād into Dowlatābād and Dżumār; Gūlbara into Gūlbara and Būdāp; and Telingānā into Warangal and Rādja-mahendrī. The powers of the tarafās were at the same time curtailed. These reforms were resisted by all the old tarafās, and by none more than by Malik Ḥasan Bahārī, Nizām al-Mulk, tarafār of the great province of Telingānā, who was posted to the new tarafā of Kādjmahendrī, and found his power, his influence, and his emoluments reduced by more than half. He was the leader of the Dākani party and Mahmūd, though he had done all in his power to end the strife between the Dākans and the Foreigners, was a foreigner, and was regarded by all as the leader of the Foreign party. In 1481, the royal camp being then in Telingānā, Ḥasan Bahārī took advantage of the absence of Mahmūd’s chief supporter, Yūsuf ‘Adil Khān the Turk, who had been sent on an expedition into the eastern provinces of the kingdom of Vījñāyanagar, to compass the downfall and death of Mahmūd. The minister’s
confidential secretary was induced, by misrepresentation, to affix his master's seal to a folded paper. The paper was blank, and the conspirators wrote, above the seal, a treasonable letter to the Râdiâ of Crisâ, inviting him to invade the kingdom. The letter was shown to the king when he was drunk, and he at once summoned Mahmud, who, though warned by his friends that mischief was afoot, insisted on obeying the order. He was asked by the king what was the punishment of treason and unhesitatingly replied, "Death by the sword." He was then confronted with the letter, and though he declared it to be a forgery the king paid no heed to him, but bade the executioner do his office, and withdraw. Mahmud knelt down and repeated the symbol of his faith, and the executioner, Djavhar by name, struck off his head. An order for the plundering of his camp was then issued, and his followers were dispersed. The king was much disappointed by the examination of his late minister's affairs. He had, throughout his official life continued his mercantile transactions, and lived frugally on his profits. His great official emoluments were expended on the troops of emigrants which he maintained and on public works, and the balance was disbursed in alms, in the king's name as well as in his own. Mahmud III understood, too late, the value of the servant whom he had so summarily put to death, and his remorse was bitter. Mahmud was a great statesman and public benefactor. Learned himself, he was a munificent patron of learning, and built at Bûdâr a magnificent college, the ruins of which are still to be seen. The only private property which he left at his death was a splendid library. He is one of the foremost figures in the political history of India, and his death was the cause of the fall of the dynasty which he had served so well, for it destroyed the confidence of the nobles in the town, and hastened the advent of the day when the provincial governors proclaimed their independence.

MAHMUD PASA. grand vizier in the reign of the Ottoman Sultan Muhammad II, often called Wali Mahmûd Pasha. He was born in Abya (Akhisar) in Asia Minor, of Christian parents; according to Chaldean legend, his father was Greek and his mother Serbian. Taken in his youth to Adrianople, he was brought up at the court of Murad II, and began his public career on the occasion of the accession of Muhammad II in 1451. Soon afterwards he became Beglerbeg of Rûmî; according to the historian Râmînân Zâde Meşmele (Kuçuk Nishâh), he had been also Kôfî aker [q.v.]. As Beglerbeg, he took part in the capture of Constantinople. After this event he was appointed grand vizier in 1453; the office had been empty since the execution of Çendereli Khâdî Pasha. As grand vizier, Mahmûd Pasha frequently accompanied the Sultan on his campaigns but in 1456-1458 he was appointed to conduct the operations against the Serbs, while the Sultan conquered the Morea; in 1459 Muhammad himself advanced against Serbia which was completely subdued; during this war Mahmûd Pasha's brother was the leader of the Turcophil party in Serbia. In 1460 and 1461 the grand vizier took part in the expedition against Sinope and Trebizond as commander of the fleet while Mahummed led the army by land. The capture of Trebizond was mainly due to Mahmûd Pasha; he was related to a high dignitary of the court there so that some Greek authors talk of treachery (Fallmerayer, Geschichte des Kaisersfrage, p. 279). In 1462, Mahmûd accompanied the Sultan against the Wawod of Wallachia, Wlad Dacul and in the following year as commander of the fleet he was sent to conquer Lesbos and forced the Duke of Lesbos to capitulate. In the same year he drove the Venetians out of the ishmut of Corinth. In the Bosnian campaign of 1464, Mahmûd prepared the way for the Sultan's advance by taking the principal towns of the country. In the war that followed with Mathias, king of Hungary, Mahmûd forced the latter to raise the siege of Meidâni and advised the Sultan in the campaign which was to put an end to the power of the Karamanoglu and defeated the Karamanid Ishak Beg near Lâranda. The latter himself escaped and this fact combined with the too humane treatment which the governor wished to apply to the people of Konia and Lâranda and the intrigues of the second vizier Rûm Muhammad Pasha, brought the Sultan to dismiss him on the return march to Constantinople. Mahmûd Pasha then governed the sanjak of Gallipoli for some time. In 1472 he again became grand vizier. The Sultan wished in that year to send him against Uzun Hasan but was persuaded by Mahmûd to send Ishak Pasha in his place; in the following year he accompanied the Sultan against the Akit-Koyunlu, who were finally routed after the Ottomans themselves had suffered the defeat of Bel Bazar. In the same year Mahmûd was again dismissed; the reason alleged was a lack of zeal in the pursuit of the fugitives. He then retired to the village of Khâhûs Key near Adrianople. Next year he came to the capital on the occasion of the funeral of Prince Mûsafir; this opportunity was taken to calumniate him to the Sultan on account of the intimacy which had existed between Mûsafir and Mahmûd Pasha. This was sufficient to get him imprisoned in the castle of Yedi Kule and executed a few days later in Rabî'i 1, 879 (July-Aug. 1474).

Mahmûd Pasha was one of the most popular grand viziers. His name still survives in the mosque which he built at Stamboul in 669 (1469-64) on a site originally occupied by a church; in the mosque is the tuke of the founder. He also erected a madras, a medrese, a mekteb, a well and a hamam. There is a legendary story entitled Memäl-i namâ-i Mahmûd Pasha, in which his unjust execution is specially emphasised (printed in Fr. Dietrici, Christ-nathos Otomânî, Berlin 1854); the historian Șadr al-Din in his Tâdil al-Tâ'ârîch (i. 557) also devotes a chapter to the Wa'lâ-i Mahmûd Pasha. Mahmûd Pasha was the patron of a number of men of letters and scholars, who dedicated their works to him. He was himself a poet but it is uncertain whether he wrote under the pen-name of Ādân or Ādhî. There is a Divân of Ādhî (printed Constantinople 1308) which is generally attributed to Sultan Bayazîd II but Gibb
MAHMUD PASHA — MAHR

(Hist. Ott. Poetry, ii. 25 ff.) thinks it should be attributed to Mahmud Pasha.

(J. H. KRAMERS)

MAHBAKER. [See Kösem.]

MAHR (s.), Hebrew Mohar, Syriac Mahrā, "bridal gift," originally "purchase-money," synonymous with ʿadād which properly means "friendship," then "present," a gift given voluntarily and not as a result of a contract. Is in Muslim law the gift which the bridegroom has to give the bride when the contract of marriage is made and which becomes the property of the wife.

1. Among the pāγaŋ Arabs the mahr was an essential condition for a legal marriage and only when a mahr had been given did a proper legal relationship arise. A marriage without a mahr was regarded as shameful and looked upon as concubinage. In the romance of ʿAṣat the Arab women, who are being forced to marry without a mahr, indignantly reject such a marriage as a disgrace. Victors alone married the daughters of the conquered without giving them a mahr.

In the pre-Islamic period, the mahr was handed over to the wālī, i.e. the father, or brother or relative in whose guardianship (wālī) the girl was. Here the original character of the marriage by purchase is more apparent. In earlier times the bride received none of the mahr. What was usually given the woman at the betrothal is the ʿadād; the mahr, being the purchase price of the bride, is given to the wālī.

But in the period shortly before Muhammad, the mahr, or at least a part of it, seems already to be given to the woman. According to the Kurān, this is already the prevailing custom. By this amalgamation of mahr and ʿadād the original significance of the mahr as the purchase price was weakened and became quite lost in the natural course of events. There can be no doubt that the mahr was originally the purchase price. But the transaction of purchasing in course of long development had become a mere form. The remains, however, as they survived in the law of marriage in Islam, still bear clear traces of a former marriage by purchase.

2. Muhammad took over the old Arab patriarchal ceremony of marriage as it stood and developed it in several points. The Kūrān no longer contains the conception of the purchase of the wife and the mahr as the price, but the mahr is in a way a reward, a legitimate compensation which the woman has to claim in all cases. The Kurān thus demands a bridal gift for a legal marriage: "And give them whom ye have enjoyed their reward as a wedding-gift" (lit. farīda "allotment of property," Sūra, iv. 28) and again: "And give the women their gifts voluntarily" (Sūra, iv. 3); cf. also Sūra, iv. 29, 38; v. 10.

The bridal gift is the property of the wife; it therefore remains her own if the marriage is dissolved. "And if ye wish to exchange one wife for another and have given one a talent, take nothing of it back". Even if the man divorces with the wife before he has cohabited with her he must leave half the mahr with her (Sūra, ii. 237—238).

Down into the Muslim period the wife was considered after the death of the husband as part of his estate; the heir simply continued the marriage of the deceased. Such levirate marriages are found in the Old Testament also. Muhammad abolished this custom, which still remained in his time, by Sūra, iv. 23: "O ye, who are believers, it is not permitted to you to inherit women against their will".

3. There was an ample store of traditions about the mahr and these pave the way for the theories laid down by the jurists in the fiqh-books.

From all the traditions, it is clear that the mahr was an essential part of the contract of marriage. According to a tradition in Bukhārī the mahr is an essential condition for the legality of the marriage: "every marriage without mahr is null and void". Even if this tradition, so brief and to the point, is not genuine, a number of traditions point to the fact that the mahr was necessary for the marriage, even if it only consisted of some trifling thing. Thus in Ibn Maḍā and Bukhārī traditions are given, according to which the Prophet permitted a marriage with only a pair of shoes as mahr and approved of a poor man, who did not even possess an iron ring, giving his wife instruction in the Kurān as mahr.

A few hadiths endeavour to show that the mahr must be neither too high nor too low. From the traditions we also learn what mahr was given in particular cases in the Prophet's time; for example, the bridal gift of ʿAbd al-Rahmān b. Ṭawfik was an ounce of gold, that of Abū Huraira of 10 glass and a dish, that of Shahāb b. Saʿd an iron ring.

In the hadiths we again frequently find the Kurānic regulation that in a divorce after cohabitation the woman has the right to the whole mahr.

4. According to Muslim fiqh-books, marriage is a contract ʿadād) made between the bridegroom and the wālī of the bride. An essential element in it is the mahr or ʿadād, which the bridegroom binds himself to give to the bride. The marriage is null without a mahr. The jurists themselves are not quite agreed as to the nature of the mahr. Some regard it practically as purchase-money (e.g. Khalīl: "the mahr is like the purchase-money") or as an equivalent (tawaf) for the possession of the woman and the right over her, so that it is like the price paid in a contract of sale, while other jurists see in the mahr a symbol, a mark of honour or a proper legal security of property for the woman.

All the things can be given as mahr that are things (nūd) in the legal sense and therefore possible to deal in, that is can be the object of an agreement. The mahr may also — but opinions differ on the point — consist in a pledge to do something or in doing something, e.g. instructing the woman in the Kurān or allowing her to make the pilgrimage. The whole of the mahr can either be given at or shortly after the marriage or it may be paid in instalments. When the latter is the case it is recommended to give the woman a half or two-thirds before cohabitation and the rest afterwards. The woman may refuse to allow consumption of the mahr before a part is given.

Two kinds of mahr are distinguished:
a. *Mahr musamma*; "definite mahr", the amount of which is exactly laid down in the wedding contract.

b. *Mahr al-mithl* in which the amount is not exactly laid down, but the bridegroom gives a bridal gift befitting the wealth, family and qualities of the bride. This *mahr al-mithl* is also applied in all cases in which nothing definite about the mahr was agreed upon in the contract.

The mahr becomes the property of the wife and she has full right to dispose of it as she likes. In the case of any dispute afterwards as to whether certain things belong to the mahr or not, the man is put upon oath.

The *Shari'a* lays down no maximum or minimum for the amount of the mahr; but limitations were introduced by the various law-schools: the Hanafis and Shafiis insist upon 10 dirhems as a minimum and the Malikis three dirhems. The difference in the amount fixed depends on the economic conditions in the different countries where the madhhab in question prevail.

If the man pronounces a divorce, the mahr must be paid in every case if cohabitation has taken place: but the bridegroom may withdraw from the marriage before it is consummated; in this case he is bound to give the woman half the mahr.

**MAHRA**, a land on the southeast coast of Arabia on the Indian Ocean between Matthram and the coast of which is inhabited by the *Khalif* (v. 30, 96), and Zafar; the Arabs however and modern geographers include Zafar itself, formerly the town only and now the country, the old frankenconic region [*see ZAFAR*], in Mahra, so that Mahra may be said to be the country between Hajar-Mut and *Oman* (cf. al-Mukaddasi, *Geogr.*, 27: 27; Ibn Hawkal, *Itin.*, ii. 17; al-Mukaddasi, *Itin.*, ii. 53; Nafi', *Mujaddid*, iv. 700; al-Muqaddasi, *Itin.*, ii. 29, 43; Ibn Khallikan, *Tarikh*, i. 48; Ibn Khallikan, *Janayat*, London 1892, p. 132*).

This connotation of Mahra seems to have been already known to the Greeks of the fourth century B.C.; Theophrastus, *Hist. Plant.*, iv. 4, 2, numbers among the lands of Arabia which yield spices, along with Saba', Hajar-Mut and Kataban, a fourth, *Mazkali* (var. *Mada*). A satisfactory identification of this land, which would also explain the name, has not yet been made. Of the various attempts to explain it, given in the article *MAZHAR* in *Pauly-Wissowa*, *Realencycl., der klass. Alterthumswiss.*, col. 1331 sqq. (cf. the article *MAZHAR*, iv. 64), that which suggests *Mazkali* is a corruption of *Mazhara* (*Makha*), which Strabo, xvi. 758 gives with the three South Arabian kingdoms above mentioned, following Eratosthenes — these two authors represent one original source; Eratosthenes and Strabo are two different sources — is certainly wrong. The identification of *Mahr* with Mahra proposed by A. Sprenger, *Die alte Geographie Arabiens*, Berne 1875, p. 92, 265, 266, without however any attempt at proving it and also adopted by Fr. Hommel, *Ethnologie und Geographie des alten Orient*, Munich 1926 (L. v. Muller, *Handbuch der Alterthumswissenschaft*, Sect. iii., Pt. i., vol. 1) p. 137, is worthy of attention. It was naturally to be expected that the botanist Theophrastus, whose duty it was to give as full a list as possible of lands in Arabia producing aromatic plants, should mention the real land of frankenconic, Zafar or in a wider sense Mahra, including Zafar. On the other hand, it is not to be denied that the mention in Theophrastus of a Mamali or Mali, which is quite unknown, after three well-known names, is remarkable, as it must of course be an important country, fit to be compared with Saba', Hadramut and Kataban. Simply for this reason E. Glaser's various attempts to identify it (Schier, *Geschichte und Geogr. der Arabien*, ii., Berlin 1890, p. 3, 25 sqq., 40, 132, 155 sqq., 217), not one of which is tenable (cf. Reischencyk., s.v. *Saba*), col. 1332 and here *Saba*, iv. 58, may be discarded. The passage in Theophrastus has been wrongly interpreted as mentioning Mamali only as the home of the cinnammon plant (see *Saba*), iv. 58 and the literature there given to which may be now added: Hommel, *Ethnologie* (= *Grundzüge*), p. 517, note 2). Although Mahra is not suggested without certain inherent probability, the question still arises how has it come to be called Mamali or Mali, which must remain more or less a puzzle. As the first two letters in Mahra and Mali are the same, it may be supposed that there is a corruption in the third letter of Mali. The name seems to conceal the Greek transcription of Mahra, which in the form *MAP* (from *MAPA*), was corrupted to *MAHL*, because it was of course unintelligible to the Greek copyists, or it might have been altered by a learned editor with gemination of the first syllable to *MAMAL*, especially as this form might seem to him to be superficially supported by the *tukak* *khamh* in Potlemy, iv. 7. 5. A further corroborating factor is that Theophrastus' description of the hilly country, where the *felonius* grows, with the *phrak* *thuk* and *kak* and *wabas*, from which rivers pour down to the plain and which was visible to sailors from the coast, agrees very well with the description of the *phrak* *thuk* *habben* and *kak* *thuk* of the land of *Zafar* [v. 41] in the *Periplus Maris Erythraei* § 29 (cf. the *tukak* *kak* and *wabas* and *kak* *habben*), and also recalls Carter's statement that nowhere else in South Arabia is there so much running water as in the frankenconic country. This undeniable agreement is not affected by the fact that, according to Theophrastus, the frankenconic country mentioned by him was in possession of the Sabaean. The fact that he mentions this land as a fourth with Saba', Hajar-Mut and Kataban and at the same time says that the Sabaean were lords (*kharov*) of this frankenconic country, suggests that the country which was quite a considerable distance from their original home, had passed to Saba' by direct conquest or automatically with the occupation of the
whole territory of some formerly independent power. This may have been either its ancient rival Kata-
ban, which, although still an independent kingdom, no longer exercised sovereign rights over the frankincense country and about two centuries later lost its independence to Saba', or the ancient kingdom of Haframot, which with the frankincense country was in the time of Juba a part of the Sabean kingdom, already ruled by the Himyars (according to Pliny, *Nat. Hist.*, xii. 52 sq; see *Saba*) and to which, certainly in the time of the Peripius, i.e. in the Himyar period of the early centuries A.D., long after the beginning of the dissolution of Sabean rule, the frankincense country belonged but it may be supposed that before Saba' became a great power, Hommel assumes (op. cit., p. 140 and notably p. 653) quite a close ethnic connection between the Haframotis and the Mineans and he definitely says that the Haframotis Mineans were those who took possession of the frankincense land, which geographically also appears most natural. No convincing argument can be brought against the evidence of Theo-
phratus that in his time or in that of his authority, perhaps Andra'shenes (cf. *Realencycl.*, s. v. *Sabara*, col. 1306), the frankincense country was not independent, but belonged to Saba', so that the latter was already a great power which possessed the hinterland of South Arabia and numbered its weaker neighbours among its feudatories. The frankincense land only became independent early in the Christian era. That the campaigns of the Sabaeans extended considerably to the east may be deduced from the *Sirwāt* inscription (Glasen, N°. 1000) (cf. Hommel, *op. cit.*, p. 658 sq). On the unjustified alteration in the text (Zap) in Thocopherus, see *Saba*, iv. 6 (to the literature there quoted may now be added: Hommel, *op. cit.*, p. 516 sq. and 653 sq. [in addition to 138]). To support the as-
sumption that the Katašabaans occupied the frankin-
cessence land, it is not necessary to presume Gebban as a later name of Katašba (in allusion to the Gebban mountains, see *Lehre*, op. cit., p. 185 sq.); it is more natural to examine the Katašabaans in the *chronological period* of Katašabaan occupation of the frankincense country, see *Zafar*, N°. 4). The expression *Yamanat* in the longer titles of the south Arabian kings of the last epoch means, according to Hommel in *Handbuch der altertumskundlichen Altertumskunde*, ed. by D. Nien-
en. Copenhagen–Paris–Leipzig 1927, p. 96, note 5, "perhaps the frankincense coast as the "south-
land" of Haframot?"; it might well be interpreted as a general name of the southern coastlands, at a later date still included in Yemen, in contrast to the lands of Saba', *Bii* Nāidān and Haframot preceding it in the title. *Safar* (Adler) *Das Leben und die Lehre der Mahommed*, Berlin 1865, iii. 417: "The Mahrites were called Sachalities by the Greeks", is misleading; the land around the Sachalith Gulf is in the conception of the author of the Periplius and of Ptolemy not only Mahra, but also the land lying east of it and especially the part of al-Shijr in the wider sense lying west of it, the land of the Kašita (cf. the article *ibarat* in *Realencycl.*). [The *regio turfosa* in Pliny, xii. 52 (vi. 161) is probably to be understood as *Zafār* in the narrower sense but may include Mahra to which alone Glaser refers it (Dit Abessinien in Arabien und Afrika, Munich 1895, p. 125; see at the beginning).] The *Zafār* used in *Herodotus*, ii. 73, in the story of the phoenix is practically a reference to Mahra (Hommel, *op. cit.*, p. 158) although it is not mentioned by name. On the *Abashtūn* in Stephanus, see below.

The inscriptions which, according to Pliny, *Nat. Hist.*, vi. 150, are inscribed on stone pillars on an island off the South Arabian coast (cf. the article *Shenna* in the *Realencycl.*), cannot, as Ritter for example (Erkundige, Vol. viii., Sect. 1, Pt. xii., Berlin 1846, p. 290) thought, be attributed to the Mahri who were settled in the neighbourhood of Cane* but were probably Minean (or Nabataean). The position of the emporium of Kāwī, which according to the *Peripla*, § 27 and Pliny, vi. 154 belonged to the frankincense country and is also mentioned by Ptolemy, vi. 7, 10 cannot be definitely ascertained. Recently several scholars, following Glaser, *op. cit.*, p. 175, C. Landberg, *Arabica*, iv., Leyden 1897, p. 75 sq, and *Études sur les dialectes de l'Arabe Mirkindolat*, i. (Haframot), Leyden 1901, p. 196 and earlier writers (see the list in *Realencycl.*, s. v. *Saba*, col. 1330), have again expressed the view that this port is probably to be located at Hīn al-Ghurāb (Nelsen in *Handbuch, op. cit.*, p. 8) while Sprenger, *Geographie*, p. 82 sq, had placed it at Bāl-Ijāf. Since Sprenger, nothing new has been produced in favour of the old view and against his localization. In support of the location at the description in the *Peripla*, § 27 according to which two uninhabited islands, the *Okean* (3 *Okean*) and *Tēsλικα* were 120 stadia distant from Kane, these, according to Sprenger, are the islands of "Hālanu and Ghi, also called as-Siika" (to be written: Hīlanīya and Kānāba also called Siqah; see Landberg, *Arabica*, iv. 66). Their mention makes certain the reference to Bāl-Ijāf as the opposite point on the coast from which they are 110 and 130 stadia distant respectively, but not to Hīn al-Ghurāb which, according to Carter, is only a mile from Hīlanīya. Landberg himself tells us that the island of Kānas seems never to have been inhabited. The distance from Kane ascribed to Kane by Sprenger, which besides varying in the manuscripts, naturally yield nothing really convincing in favour of Hīn al-
Ghurāb (particularly of *Kān* al-ʿAsdīd, the equivalent of Cape Kane, west of Kane), according to Glaser, *op. cit.*, p. 216: but this promontory of al-ʿAsdīd is at Bāl-Ijāf!); these measurements can equally well be made to fit Bāl-Ijāf. H. v. Malzahn, *Reise nach Sudarabien*, Brunswick 1873, p. 225 sqq, who could not yet have known of Sprenger's view, had already called attention to the *K-n*, (he transcribes it Cane) occurring in the (third) smaller inscription of Hīn al-Ghurāb (a reproduction in Landberg, *Arabica*, iv., Pl. x., where it is nexted with "Cane the Emporium"; J. H. Mord-
mann, Z. D. M. G., xxxvi. (1858), 233, likewise explained it as Kāwī, the harbour of the cindal of al-Ghurāb. Even if we readily grant that the uncertain word in the text of the inscription, most recently and probably definitively published and translated by B. Makker in *W. Z. K. M.*, xxxiv. (1927), p. 72, really reproduces the name Kāwī, this does not prove, as Sprenger, *op. cit.*, p. 83 has pointed out, that the ancient seaport lay on the present rocky point of Hīn al-Ghurāb. It must also be remembered that the names of many Arabian harbours have in course of time been transferred to other places in the vicinity, e.g. Zafār [q.v., N°. 4] and Mirba. Landberg's
MAHRA

objection (Arabica, iv. 76) that the Periplus, if Ka'ah had been Bal-Haf, would not have said (§ 29) that after Kene came another gulf running far inland, the Kəxəxər, but would have mentioned the harbour of Bir 'Ali to the east of it, is not a cogent one. The Periplus gives a list of the most important gulfs of South Arabia and the comparatively small bay of Bir 'Ali might easily be overlooked behind the broad Sabaitic gulf which runs far inland, especially as the name of the term Kəxəxər is a fairly elastic one (cf. the article IORARAT in Realencyclo.) and the list of the places on the coast in the Periplus is not as a rule scientifically complete and exact but sometimes even gives wrong names (e.g. Mərətɔ), to say nothing of the fact that in many places on the South Arabian coast, the harbourage conditions have changed since ancient times. Landberg himself (op. cit., p. 65) observes that the promontory of Ḥyra al-Adamūn must have had a different appearance in earlier times. M. Hartmann, also, who had previous to the periplus, The archae. Topogr. Die atlantische Orient, u.a. Berlin 1909, p. 175, 371 declared for the older views, said later in the very same work, p. 418, 614 that he had now adopted Sprenger's opinion. The latter in the inscription is still not sufficient ground for the conclusion that the identification of Ka'ah with Bal-Haf should be rejected in opposition to Sprenger, who himself appreciated the evidence of this evidence. The form of the name used by Sprenger, Bal-Haf (Bal-Haf), is incorrect however (as also is Glaser's Ḥa el-Hafi: cf. Landberg, Ḥafranwād, p. 151, 66 is equivalent to Ibn But Sprenger rightly recognised that in this name there is preserved a memory of a son of al-Haf, the son of Ḥafṣa and ancestor of the Mahra (cf. Wustenfeld, loc. cit., p. 19. Ṭuṣ 32, 15: Ḥafr 32, 15: see below). The Arab geographers had no accurate knowledge of Mahra nor of Ḥadramūt: modern explorers have found out much more about these regions. Al-Hamāmid, Ṣafya Ḥaddat va'īr Arab (ed. D. D. Masse, 1984), p. 45 mentions Al-ʿĀṣ— which Landberg Ḥafranwād, p. 158, wishes to restore to al-ʿĀṣīha from manuscript preferences— as the capital of Mahra, which, according to Glaser, Arabian., p. 83, stretches to the district lying roughly between Ḥamīk and Ḥafr, and also in the centre of the modern coast region of Mahra. On p. 53 he says, as do Ibn al-Maŷdar and others after him, that the Mahra people also inhabit Ṣofotra (on the conversion to Christianity of the mixed population of Ṣofotra, see Yarkût, Muṣjam, ii. 102; al-Maṣūḥ, Muṣ. Ṣof, iii. 36; etc., further particulars in the article Ṣofotra). On p. 51 ff. he talks of the Mahra tribes and their fighting and on p. 86 ff. of the road from Ḥadramūt to Mahra and tells us about the tomb of the Prophet ʿĪsā. This sanctuary on the frontier between Ḥadramūt and Mahra is still held in particular veneration and is much visited by the inhabitants of these two lands (a text from Ḥadramūt showing this is given in Landberg, Ḥafranwād, p. 313 f.).—The Arab geographers include Mahra in the Yemen, e.g. Yaŋa. Maṣawat, p. 394: see the reference to the Muhaf ṣ Mahra in Yaŋa. Muṣjam, iv. 700. who in this, his main reference, also repeats the view that Mahra is the name of a tribe and that the correct form is Mahara. Ḥabīl Mahara in Mahra is mentioned on iv. 607. It is sometimes more accurately defined as "in extreme (furthest) Yemen" e.g. Yaŋa. Muṣjam, i. 280; ii. 510 (= Mahārāt, p. 166); iii. 366; iv. 345, 495; Muṣhariq, p. 415. The Arabs speak of a Naḥd in the land of the Mahra (Yaŋa, Muṣjam, i. 280; iii. 681; iv. 345, 495, 697; Muṣhariq, p. 394. 415; cf. al-Mukaddasi, loc. cit., p. 98; al-Tahāri, ed. of Goeje, i. 1980). This is the Naḥd (or Naḥdii) which Carter also mentions as a district in which the frankincense especially flourishes, the highland country about two days' journey more within the latitude which Carter has also defined, although too narrowly (cf. ʿAvəxix). The Mahra are also said to be inhabitants of the coastalland of al-Shihr (q.v.), for example by al-Maṣūḥ, i. 333 and Yaŋa, Muṣjam, iv. 357 and we find the land of Mahra is called al-Shihr (al-Iṣlahki, loc. cit., p. 25 = Ibn Hawāl, loc. cit., p. 32 sq.; al-Idrisi, i. 48: Ibn Khaldūn, ed. Kay, loc. cit., p. 132; cf. al-Ḥanḍānī, Siṣa, p. 51 and al-Bakrī on ad-Duṣ: the statement in Rommel, Abūfeda Arabes Descritta, Göttingen 1802, p. 32 sq., is obscure). Al-Shihr however in the later and modern use of the name is applied to the coast not only of Mahraland proper but of the land of Zafr also, that is of the frankincense country generally, i.e. the "frankincense region" which is identified by many modern writers with the Mahra country but at the same time includes the part of the Ḥadramūt which adjoins on the west (cf. Ibn Khaldūn, loc. cit., p. 33; in general the name of the shores of the Gulf of the Moon, finally in a still wider sense, the name of the whole coast between Aden and ʿOmān).—Al-Iṣlahki, loc. cit., p. 25, and almost in the same words, Ibn Hawāl, loc. cit., p. 32, also al-Maṣūḥ, i. 333 sq.; al-Idrisi, i. 48, 150; Abu ʿAlī al-Fīdā (see Rommel, loc. cit., p. 33); Ibn Khaldūn (loc. cit.) describes Mahra as a desert in which there are no palms and no agriculture and the inhabitants therefore are not acquainted with bread. Carter, like these Arab writers, also emphasises the contrast between the frankincense region and the dreary desert west and east of it and more recent travellers, like Bent agree with him. The only possessors of the inhabitants, according to these authorities, are goats and very fine camels, particularly renowned for their swiftness, mentioned also by al-Ḥanḍānī, loc. cit., p. 100, 201; Ibn Hishām, Siṣa, ed. Wustenfeld, p. 963 and the poets as well as the Liḥn al-ʿArab, v. 36; Ḳawān, i. 455 and Ṭuṣ 32, 15: al-ʿArab (Mahrika); the Liḥn quote three plural forms: Ḳawān, Ḳawān, Ḳawān; on the first cf. Howland, Grammar, i. 997, 1000). The camel which Muhammad chose for him—of the best—out of the booty after the battle of Badr had been purchased in Mahra; his governor in the Yemen procured Mahra camels for the caliph Sulaimān b. ʿAbī al-Malik (714—717) (al-Kazwini, ʿAlīb, ed. Wustenfeld, u. 41). Ibn Hawāl (ibid.; Ibn Khaldūn, loc. cit.; al-Idrisi, i. 48) adds that the Mahra live on meat, milk and its products, and fish (cf. al-Mukaddasi, loc. cit., p. 100) and that they also feed their camels and goats on fish. Yaŋa, Muṣjam, iv. 700, records a note that the Mahra camels do not take their name from the land but from the ancestor of the Mahra's, Mahra b. Ḥaḍān (cf. al-ʿUjarah, also Līḥn, Kūmūs and Ṭuṣ loc. cit., and Rommel, loc. cit., p. 33). According to Landberg, Ḥafranwād, p. 87, and others the Mahra riding camels have for long had a bad reputation, as they are really not swift; the best of this kind are said to be those of the Bandi
In 1877 he obtained some information about conditions along this coast through his intercourse in Djidda with merchants from Ḥaḍram̄ūt or Mahra (in *Journ. As.*, 3rd Ser., 1838, vol. v. 507 sqq., vol. vi. 529 sqq.); he gave an account of Gūšīn, the capital of Mahra and the Sulṭān whose authority did not extend beyond the walls of the city. His description of the boundaries of the country was incorrect. Much more detailed and accurate were the topographical data collected by Captain S. B. Haines, who was appointed in 1834 to make an astronomical and nautical survey of the South Arabian coast from Bāb al-Mandāb eastwards (as far as Rās al-Ḥaḍūd). In his *Memoir of the South and East Coast of Arabia* (in *J. R. Geog. Soc.*, London 1845, xvi. 104 sqq.), he describes the western boundary of Mahra, the Wādī Masīl, which is rich in water and well tilled by the Mahra and contains many villages lying among palm groves. He then gives his short notes on the town of Sīḥūt east of the Wādī and corroborates Fresnel’s account of Gūšīn about which he is the first to give fuller details. C. Niebuhr, *Beschreibung von Arabien*, Copenhagen 1772, p. 287, had already mentioned “Keschin” and the independent shāikh there, who was also lord of Soḵtūr; he also gives a plan of the harbour from a drawing by an Englishman, whom he had met in Bombay (Pl. xvi.). Haines observes, like later writers, that Gūšīn is only a wretched little village of at most 300—400 inhabitants, which consists mainly of reed-huts and has only a few stone houses and that the trade there is very slight. He also gives some details of the Mahra people and its tribal divisions, its customs and dress, and in confirmation of Fresnel’s observations their attitude to Islam, which only the chiefs profess, while the people are indifferent to the Kūṯān and are not even able to perform the daily salātis. He ends by giving the promontories and villages on the coast east of Sīḥūt as far as the eastern frontier of Mahra towards Zāfār. The English officers cooperating in this survey of the coast visited only a few points on it, which were practically confined to the Gulf of Gūšīn because their duty was really confined to surveying the coast west of Mahra. Valuable information about the Mahra is given in H. J. Carter’s *Notes on the Mahra Tribe of Southern Arabia with a Vocabulary of their Language*, in *J. R. A. S.*, Bombay Branch, July 1847, vol. ii., p. 339 sqq. Maltzan combined ethnological research with his study of the Mahra language (in the introduction of his edition of *Adolph von Wrede’s Reise in Hadramaut*, Brunswick 1873 [the preface is dated 1870], p. 18 sqq., and 28 sqq., and in his article cited below) but regarding the country itself which he never entered, he knows no more than the English naval officers. The extracts in Ritter, *op. cit.*, xii. 625 sqq., and 655 sqq. he says, are sufficiently accurate according to his own information. The coasts east of Wādī Masīl to Rās al-Ḥaḍūd, i.e. Mahra, Zāfār and “Oman he however calls the great “terra incognita of Oceanic Arabia”. “The names Mahra and Gūšā (also “Gūšān” or “Gūšān Gara”) by which the two countries on the coast are distinguished, he described as “not clearly defined” (*op. cit.*. p. 28). We now know that these are the Mahra and Kūṭā (the hill-people of Zafar) and the language of the latter is Kārawī (Grawī) or Shāwārī, in modern times also called Ḥakīlī, or Shērātī (*cf.* Ẓafār). Maltzan recognised

Mahra
that the two peoples are fundamentally different in language, mode of life, and religion from the people of Central Arabia.

Glaser, Sitzung, p. 26, wrongly identifies Mawāla in Strabo, xvi. 768 (quoting Eratosthenes) with Mahra (Rasselan, s. v. Sabat, 1334 sqq.). On p. 20 he gives the land of Ḥajramōt (after the fall of the “Alexanderian-Arab kingdom”) too great an extent (as far as Miḥrāb). On his note that the Ṭaḥfāṣīm of the Ptolemy are the hill-peoples of all Mahra cf. Rasselan, s. v. IOBAPETAL. — As a result of the inquiries made by him on his travels in Arabia, he states Toemeyer, p. 87, that there are three different divisions of the Mahra tribes: the eastern is called Ṣheḥrat or Zair and inhabitants, according to his information, the coast from Rās Nāīs (55° 17' East Long. from Gr.), according to another authority from the island of Ṣayriya, to Rās Darbat ‘All (53° 3' East Long.); the western that to which the name Mahra is generally applied, stretches from Rās Darbat ‘All to Seḥrūt, while the third group inhabits Soqāṭrī (cf. above on Ibn al-Mu‘allāṣwīr). — L. Hirsch gives not a little new and valuable information about the people of the southwestern coast. His account of Mahra is based on his ten days’ stay (1893) in Gishīn (for Gishin, transliterated Kishin or Kishn; Hirsch writes sometimes [cf. cit. p. 48, 50], Gi-chin and sometimes Kischik, like W. Hein and others [p. 2, etc.], he gives “Kischchen” in the Index as the Mahri pronunciation which is also given by Jahn [see below]). Of the wretched little capital of the country, he tells us, practically agreeing with Hames before him and Hein and Bent after him, that it consists almost entirely of ivy-covered mud-houses in a rainy season and a few ragged tents and reed-huts which, being scattered aimlessly over a wide area, leave irregular wide open spaces between them. Even the palace of the Sultan who reigned over Gishīn and Seḥrūt and other places on the coast is quite nominal, as he can do nothing without the approval of his Beduins. A broken down mud building: there is said to be only one building in the town that is kept clean, the house of another Sultan According to Hein, the most imposing of the mud houses, which are not built according to any system, is that occupied by the reigning Sultan’s body-guard. There is nothing like a regular market or regulated trade there. Even the most rudimentary necessities of life are acquired by barter and money is unknown from the government buildings a little mosque may be seen. While Maltrin, corroborating Freidel and Hames, pointed out (H. c., p. 29), that the Mahra have long been distinguished herself from the great majority of the orthodox and indeed hardly be called Musulms at all, Hirsch says that: at least in Gishīn and Seḥrūt the Mahra are no less attached to Islam than any other Arabs; he saw them regularly performing their ṭāalīr. This contradiction may perhaps be explained by the observation already made by Hames on the same question. According to Hirsch the ruling Sultan or Shāhī is pure Arab and not Mahra’s. In any case the attitude to Islam of Beduins living north of the coast territory is quite superficial. The Sultan of Gishīn belongs to the dynasty which has also a kind of suzerainty over Soqāṭrī. The Mahra coast, like Soqāṭrī is under British suzerainty, Hirsch (p. 75) and on his map) gives the names of several places on the coast east of Gishīn. Th. Bent (Southern Arabia, London 1900, p. 280) notes the striking contrast between the sandy plain of Gishīn, which he did not succeed in reaching, and the fertile stretch of the coast of Zafār. Shortly before his arrival in Zafār (in the winter of 1894—1895) the wāls residing in al-Hifān had been fighting with the Mahra tribes. The coast-town of Rakhīyat, west of Raisūt, has a little fort to defend it from the Mahra. Bent gives a more detailed account of the Mahra who live in Soqāṭrī [q. v.].

The statement in A. Jahn (Sudarabische Expedition of the Viennn Academy of Sciences, ii., p. 302, Die Mehrisprache in Sudarabinen), p. i.: “The Mehris the language of the South Arabian coast between Ḥasāwēl and Darbat which is called kibīd mahra by the Arabs” — is misleading. Ḥasāwēl lies roughly in the centre of the Mahra coast in 50° 4’ East Long., N. E. of the capital Gishīn. — W. Hein, who was sent out by the Vienna Academy to continue the work of collecting specimens of the language begun by the South Arabian expedition, arrived in Gishīn with his wife in 1902. During his stay of 66 days during which his work was much impeded as he was interned most of the time, he collected, among other information, statistical and topographical data for the adjacent parts of the coast and also for the interior (see his article, Einbeitrag zur Statistik Sudarabinen, in the M. Geogr. Ges., Vienna 1903, p. 219 sqq.). In D. H. Muller’s preface to vol. ix. of the South Arabian Expedition, introductory remarks to W. Hein’s record of his journey are given (p. viii. sqq.). According to him Gishīn is the name of the whole stretch of country along the coast from Rās Shīrwân to Rās Derdā for a breadth of 5 to 15 miles. About 2 miles to the north of the coast a ridge runs parallel to it. Immediately on the coast lies the dhūr fields of the district of Maghīl, behind it, the centre Gishīn, the district of Kibīb, in which the Sulṭān lives, east of it the most important district of Yentīf, west of Kibīb, Sulṭān, the western boundary of which is the Wādī Ghabyā: Further inland lies Darrāb, where prominent Sulṭāns have their homes. Hein clears up many statements by Hirsch and gives further topographical details about the surroundings of the capital. Gishīn has an area of about 50 square miles. Hein estimated the permanent population at 2,386; Hirsch put that of the capital and its immediate neighbourhood at about 500.

From the results of exploration so far, it appears that the country of Mahra stretches from Wādī Maslīd eastwards to Rās Darbat ‘All i.e. from 55° 15’ to 53° 3’ East Long. and between 16° 30’ and 17° 30’ N. Lat. The Mahra rule the lower course of the main wādī which runs through Ḥajramōt. No European has yet penetrated into the interior of the country; their presumed original home: it was however equally unknown to the Arab geographers.

In the coast district of al-Shīr (Mahra to Omān) old south Arabian dialects are still spoken, which differ essentially from Arabic and indeed from Semitic in general. The Mahra as a rule speak very little Arabic. Al-Ḥajākhī, op. cit., p. 25; Ibn Hawkal. ed. cit. p. 32; Al-Idrīsī, i. 48, 150 who identifies it with the old līmiyante language; Ibn al-Mudwil [cf. Soqāṭrī], Abu ‘l-Fadl (see Rommel, op. cit., p. 33) and others describe it as unintelligible to Arabs. Al-Hamādānī also (Sīf,
calls their language a jargon and al-Maštûdî, i.e. 335, points out differences between it and Arabic. Fresnel was the first, apart from early vague reports of a peculiar language in Hadramôt, to establish the existence of a hypothetical unknown language quite different from Arabic "in the interior of Yemen towards Ḥadramôt". He had become acquainted with it from natives who called it Ejkili. This name however he gave (Note sur la langue Ḥimyarite. J.A., 1838, 3rd Ser., vii. 79 sq.) not only to Mehri or what he considered as such but to other South Arabian dialects and, as Maltzan has already pointed out, to Ḥimyarite also, although we must confess that this (or Sabæan) has several features in common with Mehri. Ritte, op. cit., xii. 46 ff., 254 and others followed Fresnel's error, including Sprenger, Das Leben und die Lehre des Muhammed, iii. 457; it is however quite an old mistake; it was made by Ibn Durâdî (see Wustenfeld, Genealogische Tabellen, Register, p. 280) whom Sprenger follows (on al-Idrisi see above). Haines (see above) said that the language of the Mahri was strange to the Arabs. With these earlier and recent statements may be compared Landberg's observation given by Hommel, Ethnologie, p. 153, that, "according to the statements of Arabs, Beduin tribes of the great desert of el-Rūba el-khali north of Ḥadramôt and the frankincense coast speak a language which the ordinary Arabs do not understand"; this, according to Hommel, could best be explained if a Kalda dialect was spoken there. M. op. cit. (Von Mittelmeeer zum Persischen Golf, Berlin 1900, ii. 532) was told that in el-Rūba el-khali lived people who spoke a language unintelligible to the Arabs and he supposed that this was Mehri. After Fresnel, Carter (see above) studied Mehri and particularly Maltzan (Über den Dialect von Mahra, Z. D. M. G., xxv. [1871], 196 sqq.; Dialectische Studien über das Mehri, ibid., xxvii. [1873], 225 sqq.; Dialect von Mahra, ibid., p. 252 sqq.). He was the first to give scientific proof of the difference between this language and Arabic in vocabulary and grammar. He also classed Mahri and Kará together as Ejkili and describes it as a modern dialect of old Ḥimyarite, from which he traces the intermediary. He called attention to the similarity with Ethiopic and its modern forms, Ge'ez and Amharic, and presupposed a homogeneous group distinct from Kun'anic Arabic (see also his edition of Wrede's Reise, p. 30 ff.). In Sprenger's belief (Geographie, p. 268), the Semites of Ethiopia are of Mahri origin.

Maltzan's studies in spite of their defects were most valuable preliminary work. Glaser was the first to define more accurately the limits within which Mehri was spoken (Abessinier, p. 87). Fresnel, Maltzan and Glaser had not been in Mahra or Zafar, but they ascertained the existence of the two dialects of Mehri in Djidda. Maltzan and Glaser in 'Aden (Glaser, Abessinier, p. 184). The latter states (Skizze, ii. p. 96) that the Hakil live east of Ḥadramôt and western Mahra (on the form of the word cf. Hommel, Ethnologie, p. 235), and their language is called Shērāt, while the dialect of the territory west of it is "Mehri (certainly not Ejkili!)", similarly on p. 178 sq. In his Abessinier, p. 185, also he identifies the Karā people with the Hakil [as does Hommel, op. cit., p. 153, who says: *šērā (villages) is the Arabic name for the native tribe of Hakil, whose language is called Shērāt]. Hakili is the name given by Glaser (Skizze, ii., p. 95) to the inhabitants of Mahra whose tribal name in the form Ejkili, Fresnel took for the name of the language spoken there and thus introduced it into European philological literature. Landberg's opinion (Arabica, v., Leyden 1898, p. 153) that the name Hakili is "toute à fait just à côté de la vraie forme Hakili", is contradicted by Hirsch's testimony (op. cit., p. 52; cf. Sefig) that the name Ejkili applied by European scholars to Mehri is unknown there and simply means "barbaric, unintelligible". Hommel records (op. cit., p. 153) that Glaser had interesting specimens of the Karā dialect and of Mehri and Soqom; but these have not been published.

Glaser (cf. Skizze, ii., p. 20, 96, 181 sq., 246, 253; Abessinier, p. 84 sqq. and Hommel, Ethnologie, p. 12, 148, 150 sqq.) further developed these ideas of Maltzan on the South Arabian-Ethiopio group of languages. According to the latter, the Ethiopic alphabet came from the Axum inscriptions and that of the later literature in the Ge'ez language from a variety of the alphabet of the South Arabian inscriptions, once common in the Mahra country and the frankincense land in general was the ancestral home of the Semitic Abyssinians and Amhârs. Against the view that the name of the latter is a plural of Mahri, it is sufficient to quote the form Amhâr (Hommel, op. cit., p. 152, N°. 182).

There is no reason to doubt contacts between Mehri and Ethiopic (Hommel, p. 153). That in ancient times members of the people called Ijabashat in the South Arabian inscriptions (cf. Glaser, Skizze, i., p. 25-27 and Abessinier, p. 28) were settled in Arabia is suggested by the mention of the ʿAbsanî in Stephanus Byzantius s.v. from Uranius' Arabia (metâ tos επάλλους Χατάραματι, Ἀβσανοὶ) and the ʿAbsâs pûnûs in Ptolemy, vi. 7, 11 (in Zafar, q.v.). From the first passage, Glaser, Abessinier, p. 58 has concluded that the ʿAbsânî lived east of Ḥadramôt, while in Skizze, i., p. 26 he had previously supposed that by the land of the ʿAbsânî was understood the whole coast from eastern Ḥadramôt to Mahra and islands lying off it: his further identification through an intermediary. He called attention to the similarity with Ethiopic and its modern forms, Ge'ez and Amharic, and presupposed a homogeneous group distinct from Kun'anic Arabic (see also his edition of Wrede's Reise, p. 30 ff.). In Sprenger's belief (Geographie, p. 268), the Semites of Ethiopia are of Mahri origin.

Maltzan's studies in spite of their defects were most valuable preliminary work. Glaser was the first to define more accurately the limits within which Mehri was spoken (Abessinier, p. 87). Fresnel, Maltzan and Glaser had not been in Mahra or Zafar, but they ascertained the existence of the two dialects of Mehri in Djidda. Maltzan and Glaser in 'Aden (Glaser, Abessinier, p. 184). The latter states (Skizze, ii. p. 96) that the Hakil live east of Ḥadramôt and western Mahra (on the form of the word cf. Hommel, Ethnologie, p. 235), and their language is called Shērāt, while the dialect of the territory west of it is "Mehri (certainly not Ejkili!)", similarly on p. 178 sq. In his Abessinier, p. 185, also he identifies the Karā people with the Hakil [as does Hommel, op. cit., p. 153, who says: *šērā (villages) is the Arabic name for the native tribe of Hakil, whose language...
were established in the land of Mahra (Hommel, *Ethnologie*, p. 151).

D. H. Muller and his collaborators were the first to collect and investigate texts in the Mahra language in a systematic and comprehensive fashion. In *Vol. iv. of the Sudarabische Expedition*, Vienna 1902, *Die Mehri- and Sohoti-Sprache* (1) he published Biblical texts, stories, poems and proverbs, which he collected for the most part on the Swedish steamer placed at the disposal of the expedition from the mouths of natives, who had been taken off the coasts in *Abd* and *Soqotra*. For Mehri, in particular, he had a single authority, the same man as John had. In the third volume of the same collection appeared *Die Mehri-Sprache in Sudarabien* by A. Jahn, texts and glossary, Vienna 1902. On these two works cf. the brief review by Glaser, *Zwei Wiener Publikationen über den sabaischen und cushitischen Dialekt in Sudarabien*, *Beilage der Monatlichen Allgemeinen Zeitung*, 1902, No. 186 and 187 of 16th and 18th August, and the very thorough and expert criticism by Landberg, *Die Mehri-Sprache in Sudarabien... von A. Jahn und... D. H. Muller, kritisch besichtigt...* (Siegfried, Vienna 1902) (Vol. iv. ed. by D. H. Muller, *Sohoti-Texte*, Vienna 1903, forms Vol. vi. of the collection).

The already mentioned traveller W. Hein had in 1902 in Ghizina with the assistance of various natives collected Mehri and *Mhdaram* texts. He died in 1903 before he was able to put his material into its final form; D. H. Muller edited and published it in *Vol. ix. of the collection* (Mehri and *Hdarami-Texte...* Vienna 1909) Some of these texts are also included in *Vol. vi. Shauri-Texte (II)* by D. H. Muller, Vienna 1907 and supplied with Shiaway and *Soqu* parallels. M. Bittner's grammatical studies in Mehri are full of matter and excellent in method (see Bibli.). The modern South Arabian dialects in spite of some features in common with Sabaean cannot be explained as daughter-languages and the last surviving relics of the South Arabian language which is found in the Sabaean and Minaean inscriptions (Jahn, op. cit., p. 1; see also *Mohammad*) In them, especially Mehri and *Soqu*, we can at most recognise with Hommel, op. cit., p. 152 "a daughter language of South Arabian dialects formerly spoken there in Mahra-land and on *Soqu*", a pronouncement to which Mahran had already come very near. On the other hand Glaser went too far when he described Mehri and *Soqu* as remnants of the oldest "Punic" Arabic (in *Fur Wiss. u. Kult. u. d. Morgenl. u. Altertum*, Zeitung, 1899, No. 120 and 121 of May 27 and 29) a descendant of the old language of *Hdarami* from which Etroico and Ambresco are also said to come (see Hommel, op. cit., p. 153 note 1 and 4 and in Nielsen's *Handb. b. 91*)

According to Voller (Z. i. xxiii. 223) the South Arabian dialects go back to the time of the settlement from *Hdarami*; the migrant *Ahl* not long before the coming of Islam, had occupied Mahra from the land and influenced its language by their dialect. So early as al-Ma'dani, 1533 we find the Mahra described as a mixed people. Glaser (Stass., u. p. 188 and 96) also speaks of the influence of eastern and north-eastern peoples on the Mahra language, but he wrongly ascribes to Parthian and Indian elements the notorious corruption of the Arabic language in the district of Mahra This*

(J. TAKESCH)

**AL-MĀʾIDA (A.), the Table, title of the fifth Sūra of the Qurʾān.**

**AL-MAIDĀNI AHMAD b. MUḤAMMAD ABU l-FAṬI, Arab philologist born in Ma’dānī Zā‘māl, a quarter of Nishābūr, pupil of the Qurʾān exeget and philologist *Ali b. Ahmad al-Wāhidī, teacher of Samānī among others, died in his native town on 25th Ramadan 518 (Oct. 27, 1124).**

His Arabic-Persian Dictionary *Sāmī fi lʾĀlamī*, is arranged in subjects in the following categories:

The ecliptic (al-Malil al-tuwa’wal) is an arc of the circle which goes through the two poles of the equator and one degree (point) of the ecliptic, namely the arc which lies between this point and the equator. This circle is perpendicular to the equator. The second inclination (al-Malil al-thālīn) is an arc of the circle, which goes through the two poles of the ecliptic and a point of the ecliptic, namely the arc which lies between this point and the equator. This circle is perpendicular to the ecliptic.

In the figure let ab be the ecliptic, ac the equator, bc be perpendicular to ac, bd perpendicular to ab, then bc is the first and bd the second inclination. For the calculation it is important that we should have a right angle in each of the two spherical triangles, abc and abd. The first inclination is also called Malal fālak ma’uddal al-nahār, inclination towards the equator. Of special importance is the obliquity of the ecliptic, i.e., the inclination of the plane of the ecliptic to the equator; it is equal to the first inclination in the solstitial points. It is called Malal fālak al-burūd, inclination of the ecliptic, Malal al-sūm, the greatest inclination, Malal kullahu or Malal al-kulli, the whole inclination. To distinguish it, the inclination of any degree is called al-Malal al-dīqūn, the degree-inclination.

If it is a question not of points on the ecliptic but of some star, the arc corresponding to the first inclination is called tād’i, “interval”, that corresponding to the second ʿard, “width”. We speak in the first case quite generally of declination, in the second of latitude.

The obliquity of the ecliptic is one of the fundamental magnitudes of the solar system. It was therefore continually being calculated anew and almost always so as to obtain the altitudes of culmination α1 and α2 of the sun at the summer and winter solstices. The sun is at these times at the same distance from the equator, north in one case and south in the other. The obliquity of the ecliptic is the $\frac{\alpha_1 - \alpha_2}{2}$. It should be mentioned that Muḥammad b. Ṣaḥḥah (c. 875) claims to ascertain the magnitude from three different points (O. Schirmer, op. cit., p. 52).

The first method was that used by Hipparchus, Polomeny and Eratosthenes, using the most varied instruments, the two rings, the quadrant and the armillary spheres. In the Muḥammadan period these observations were continued with larger and larger instruments and account taken of the fact that the sun does not always enter the solstices in question by day but may do so at night, that the heavens may be obscured at the time etc. From observations made before and after the time in question the value has to be obtained by interpolations. This is how al-Khwājāδ, for example, worked (on the instruments), used, e.g. E. Wiedemann and Th. W. Jünboll, Arzenciaus Schriften über ein von ihm ersonnenes Beobachtungsinstrument, Acta orientalis, v., 1926, p. 81–167. The values ascertained have been calculated by O. Schirmer (O. Schirmer, Studien zur Astronomie der Araber, S. B. P. M. S. Erl., lviii., 1926, p. 30–90).

From the measurements, it was found that the obliquity of the ecliptic decreases in course of time, i.e. that the plain of the ecliptic approaches the plain of the equator. A conspectus of the views of Muslim scholars on this question has been given by O. Schirmer (op. cit.). Further expressions used in this connection are al-fālak al-ma‘ālāf, the inclined horizontal; it means any horizontal, except that of the equator, i.e. the horizontal inclined towards the horizontal of the equator. Kaff ma‘āf ‘an kaff al-iswā‘, i.e. the line which is inclined towards the equator; this is a line (a circle) which lies parallel to the equator on the globe of the earth either north or south. Fālak ma‘āf ‘an fālak ma‘uddal al-nahār has a corresponding meaning on the globe of the heavens; irifa‘ al-adhili fī ma‘lal li-santkihi, third altitude in the first vertical i.e. the vertical which goes through the eastern and western points of the horizontal.

(E. Wiedemann)

Maimana, situated at 36° N. and 64° 45’ E., was formerly known as al-Yahudān, al-Yahudiya (Yakut also calls it Yahudda al-Kubra) but the name was changed to Maimana "the auspicious town", for the sake of good omens. It is at present the capital of the little province of Almār in Afghan Turkistan on the trade route between Herat and Balkh. Afghan Turkistan includes the western Kānates of Sar-i-pul, Shihrangān, Andkhui and Maimana, sometimes classed together as the Čahār Wālīyāt. Dost Muḥammad took this territory from Būkāra in the year 1855; the sovereignty remained in dispute between Kābul and Bākhtārī, till it was settled in favour of Bākhtārī by the Anglo-Russian agreement of 1873.

The low spurs and offshoots of the Bandī Turkistan range subside gently into the Oxus plains and this favoured part of Afghanistan is
rich in agricultural possibilities. Until Maimana was visited by Professor Vambréy in 1863, but one European, Captain Stirling, had set foot within it. According to Vambréy, the place consisted of some fifteen hundred mud huts and a dilapidated brick bazaar. Its inhabitants are Uzbekis with a sprinkling of Padish, Heratis, Jews, Hindus and Afghans. Trade is now considerable and Maimana is renowned for its carpets and other stuffs made partly of wool and partly of camel's hair. It traffics with Persia and Baghdad in raisins, aniseed and pistachio nuts. Horses are good, plentiful and cheap.

(R. L. Whithead)

MAIMANDI, AHMAD, the famous wazir of Sultan Mahmud of Ghazna. He was a foster-brother of the Sultan, and had been brought up and educated with him. His father, the father of Ahmad, was the Amir of Bost under Sabuktigin; but on a charge of misappropriation of the revenue, he was put to death in 984 (994), when Amir Nili b. Manṣūr the Samanid overthrew the command of the troops of Khurṣan. Mahmud put Ahmad at the head of his correspondence department. After this, Ahmad rapidly rose in the service of his master, and occupied in succession, the post of Muntazir, Manṣūr (Accountant General), Schībāh Dīwān-e-Taqī (Head of the War Department), and Amīr of the provinces of Bost and Kukhchak. In 404 (1013), Sultan Mahmud appointed Ahmad as his wazir in place of Abu 'l-Abbās al-Fadl b. Ahmad al-Aṣrāfī. For twelve years, Ahmad managed the affairs of the growing empire of Sultan Mahmud with great tact and diplomacy. Ahmad was very strict and exacting, and did not tolerate any evasion of duty or departure from the usual official procedure, with the result that many of the dignitaries of the Empire became his enemies and worked to bring about his ruin. He was disgraced and dismissed in 415 (1024), and sent as a prisoner to the fort of Kalimān in the southern Kāshpar hills. After his accession to the throne, Sultan Māsūd, whose cause Ahmad had always supported, re-appointed him ważir in 422 (1031). Ahmad died in Muharram 424 (December, 1032). Ahmad is considered to be one of the greatest of Oriental ważirs. He was a learned man, encouraged scholars and showed great respect to them, and ordered all official correspondence to be carried on in Arabic instead of Persian.

MAIMŪNĀ, the last wife that Muhammad married. She was the daughter of al-Ḫarīth of the Hawazin tribe of Sa‘āna and a sister-in-law of Abbās. After she had divorced her first husband, a Thāqif, and her second, the Kurashi Abī Kūkūm, had died, she lived as a widow in Mecca where the Prophet would see her, primarily no doubt for political reasons, on the grounds that she allowed him in the year 7. His wish to marry her in Mecca was refused by the Meccans in order not to prolong his stay there; the marriage therefore took place in Sarif.

a village north of Mecca. Her brother-in-law 'Abbās acted as her guardian at the ceremony. The question whether the Prophet on this occasion was still in the īḥām or not is a much disputed and variously answered question. The bridal gift is said to have been 500 dirhams. Maimūnā survived the other wives of the Prophet and died in 61 (681) in Sarif, where she is said to have been buried on the spot where she was married.

MAIMŪNĪ. [See IBN MAIMŪN.]

MAISĀN, the name of a district in southern Iran.

The origin and significance of this name, which fell into disuse in the late middle ages, is unknown. There is no certain trace of it in the cuneiform inscriptions; for the Babylonian Ašāh, which Hommel (Étymogr. und Geogr. des alt. Orientes, Munich 1926, p. 261, 263) identifies with it is as little worthy of serious consideration as the Old Testament Mēṣān (NS, Gen. x. 30) which Biblical exegetes frequently quote. Maisan first appears in the form Maṣān in Strabo in the first century A.D. Ptolemy gives Maṣānitis kōstē as the name for the innermost part of the land of the Persian Gulf. The word is certainly not Greek; the meaning “middle land”, the land between two rivers, may be dismissed as a fanciful etymology. The territory of Mesene is in the cuneiform inscriptions the region of the southern Kaldu states, especially the southern Bit-Yakin; at the same time we find in them the term the sea-land (mēṣānī) as almost identical with Bit-Yakin; the part of Mesene between the Tigris and Khuszān was in the Babylonian period the home of the nomadic Aramaic tribe of Gumbalt.; cf. Steuck, Asirnouqbal, Leipzig 1916, iii. 778, 783, 796—97.

In classical literature Mesene is usually absolutely synonymous with Charakene. Mesene or Charakane appears in the second century B.C. (after ca. 129) as a small independent kingdom founded by a certain Hyspaonics, our knowledge of whom is practically limited to his coinage. After an existence of three and a half centuries Ardashīr I put an end to this kingdom shortly after his accession, between 224 and 227 A.D.: for Arabic sources for this event, see Noldeke, Gesch. d. Araber und Perser zur Zeit der Sassaniden, Leyden 1879, p. 13 (Tabari, i. 185). In the strict sense of the word, Charakene is only the delta of the Euphrates and Tigris before the junction of the two streams, the land on the north was Mesene: we have no information about the eastern and western frontiers of Charakene. Perhaps, as Weesbach suggests (see Bibl), Mesene was only later conquered by the rulers of Charakene and its name transferred to this southern district.

The Talbout knows Mesene as Miszān (and Meṣān). Syriac literature also knows Mašā'ād. Among the Persians we have Mēșān (and the Armenians Mašān): cf. thereon Schaedel, op. cit. p. 11. The Arabs took the word over as Mašān, but we occasionally also find Mašān (e.g. Tabari, iii. 1930 s.). The old name Mesene is perhaps concealed in that of the little town of Masūn, which, according to the Arab sources, was near Basra and was celebrated as the birthplace of the Mašāma.

As in the case of Mesene-Charakene, we have no exact information about the mediaeval Arab Maisān, which would enable us to define exactly the area and boundaries of the district. According to Yāḳūṭ, iv. 714 and Ḥaw[zīn], p. 310, Maisān is "an extensive district with numerous villages and palm groves between Baṣra and Wāṣīṭ, the capital of the district, often called Maisān". This district formed the sixth in the chain of the Arab districts which was taken over by the Arabs (q. v.) and was called Dhuddi Bahman or "the Tigris district"; the name Furât-Baṣra is also found. It was divided into four divisions (ṭasāʾīḍī, q. v.) namely, Bahman Ṭarḏaṣīr, Maisān, Dastmaṣīn and Abāz-Ṭubādāh; according to Kūdāma (B. G. A., vi. 256, 19), these four divisions of the Tigris district later passed into the administrative district of Baṣra. All four ṭasāʾīḍī are to be located on the east side of the Tigris. Bahman Ṭarḏaṣīr, the capital of the district of the same name, lay on the east or north bank of the Tigris, opposite Ubai on the west or south bank (the latter roughly on the site of the modern ʿAḏīlīyā, the port of modern Baṣra). The second division, Maisān in the narrow sense, must have been in that which stood the capital of the whole district of the same name. Al-Madḥār however usually figures as such in the Arabic sources; it may be supposed that this was the successor of an older town called Maisān. The locality of Al-Madḥār cannot be exactly fixed (see below); it lies on the east bank of the Tigris, about thirty miles (as the crow flies) north of Kūrma. Dastmaṣīn also is to be sought east of the Tigris, in the region of al-Madḥār, probably south or south-east of it. As to the fourth district, Abāz-Ṭubādāh, a name, which Marquart, op. cit., p. 41 and Herzfeld, H., xi. 150 would emend to ʿIḍābāb (Kūbādāh), relying on Ḥanūza al-Isfahānī (Ṭurīkī, ed. Gottwaldt, p. 57), this also must be placed east of the Tigris not too far from al-Madḥār.

A reference in Kūdāma (p. 235, 15 sq.) agrees very well with this, according to which the four divisions of the land of Maisān lay east of the Tigris. Even under the Sāsānians there was a separate Neo-Assyrian ecclesiastical province of Maisān which, again divided into four subdivisions, the bishoprics of Perāt de Maisān, Karkhā de Maisān, Bēḥ Rāmān and Nehr Gūl (Gūr); cf. especially Sachau, op. cit., p. 48 sq. Marquart, op. cit., assumed it as certain that these four dioceses must correspond to the four political divisions of the district of Maisān. This view in itself probable and first found by Sachau, p. 49 as worthy of consideration is untenable, as Schaedler, op. cit., p. 29 sq. has shown. Perāt de Maisān is certainly identical with Bāḥmān; but the second bishopric Karkhā de Maisān, does not correspond to the ṭasāʾīḍī of Maisān or Madḥār but is to be located much farther south in the district of the modern Muḥ hannāra. Bēḥ Rāmān very probably lay not on the east but on the west bank of the Tigris at some distance N. E. of Baṣra, so that it does not even come into consideration as the equivalent of one of the four Arab divisions. Nehr Gūl (Gūr) may be equated to Nahr ʿIrāk of the Arab geographers (see Sachau, op. cit., p. 51; Schaedler, op. cit., p. 37). This is to be sought towards Khūṣūstān somewhere in the neighbourhood of Ḥaw[zīn] (see below). Whether the fourth ṭasāʾīḍī Abāz-Kubādāh corresponds to it cannot be settled.

If then the capitals of all four divisions of the Tigris district are to be located on the east bank of the river, the lands on the west bank, also included in the ṭasāʾīḍī must have belonged to the same district as did the whole delta down to the Persian Gulf; for there is no district to which only the doubtful western and southern divisions might be allotted. In the Sāsānian period, according to the Turfan fragments (cf. Schaeder, op. cit., p. 39), that the term Maisān was used for the whole of southern Ḥarāk (or Māshhūn) and this remained the case under the Arabs. But according to the Muslim sources, it does not seem to have been limited to the south proper but to have extended a considerable distance northwards. The quotations above given from Yāḳūṭ and Ḥaw[zīn] show that Maisān was considered to stretch northwards to Wāṣīṭ (q. v. and vol. i., p. 676, il., art. Ṣawṣār); indeed it is most probable that the extreme N. E. frontier of the area known as Maisān lay in the vicinity of the modern Kūt al-Amārā (q. v.; the Ṣawṣār of the Arab geographers; cf. 669 sq.; Scharf, Bayflorum, ii. 310 sq. (q. v.); cf. the map). Maisān also stretched up to here and seems to have included lands east of the Tigris (cf. Kūkār). To avoid misunderstandings it should here be expressly mentioned that for the Arab period, of the present course of the Tigris only the Ṣawṣār and the stretches as far as al-Madḥār come into question; in those days the Tigris bed corresponded with that of the Nahr al-ʿIrāk (Ṣawṣār al-Ḥāyī) which was the western boundary of the district of Kūkār. For further details of the hydrography of Maisān, see below. Maisān is occasionally used as synonymous with Kūkār; cf. Schaedler, op. cit., p. 14, 17 sq. Maisān probably stretched to the east as far as the alluvial land of the swamps, up to the frontier of Khūṣūstān in places beyond the present frontier of Ḥarāk. At least Ḥaw[zīn] (the modern Ḥaw[zīn], q. v.) which is now on Persian soil, is expressly mentioned as a town belonging to Maisān.

The swamp regions, al-Bajārīyā, for the most part came within the area of Maisān. On this cf. al-Ṭaḥīdha and the articles on al-Bajārīyā al-Ḥallīya and al-Dīzārīyā by ʿAli Sharīṣ in the periodical Lughat al-ʿArab, iv. (Baghdad 1927), p. 375-384, 474-477, 526-530 and vi. 277-279; also Ḥādīm al-Ṣadīqī, Lughātīyat al-ʿIrāq, Baghadad 1927, p. 40, where the more important of the swamps (khorās) are given. In modern times the practically synonymous name al-Akṣūr (plur. of khor) is used for al-Bajārīyā (see ʿAli Sharīṣ, op. cit., iv. 376). The two specifically Ḥarāk words khor and khorā, which are very often used indiscriminately in European works, especially on maps (usually the one form khor) (cf. al-Ṭaḥīdha where khor is wrongly given for khor), have to be carefully distinguished. For khor (older alternative name), popularly khor = "permanent swamp, temporary lake, land liable to inundation" (cf. B. G. A., ed. de Goeje, iv. 370; G. le Strange, J. R. S., 1895, p. 298) and al-koher, popularly khor = "arm of a river, creek, lagoon-like gulf", cf. especially the Remarks on Fanastase-Marie, the editor of the Baghdadi periodical Lughat al-ʿArab, in M. Ladsbarski, Das Johannesebuch der Mandaeer (Giessen 1915, p. 145).

One of the divisions of the Tigris district was called, as already mentioned, Dast-i Maisān. The
name is also vocalised Dastu- and Dasta-Ma'insan in our Arabic texts. Ibn Khallikan always writes the Persian form Dasht-i Ma'insan; cf. Marzid al-itilif, ed. Juynboll, v. 466. Dasht, daghht can here only be the Persian dasht = "plain". Schaeder's assumption, cf. cit., p. 344, that Das represents an abbreviation of the Pahlavi Daskert (Arabic Dasht, q. v.) seems to me hardly tenable. Whether this division in particular was distinguished as the "plain of Ma'insan" from Ma'insan proper (especially from the second division of the district), is however not apparent. Could it here have been a more level plain, less filled with swamps? In any case, it is not correct to equate Dast-i Ma'insan with more ado to Ma'insan (as does G. Le Strange, The Lands of the Eastern Caliphate, Cambridge 1905, p. 43). Yakhut (n. 574) thus defines Dast-i Ma'insan:

"It is an important district between Wāsi, Basra and al-`Awyaz [q. v.] (= Khūristān, q.v.) lying near to the last-named. The capital is Basamata; Dast-i Ma'insan is not identical with Ma'insan but is connected with it; it is also said that it is a district with the capital al-Ubulla and Basra belonging to it." Nothing further is known of Basama, here mentioned as the capital of Dast-i Ma'insan: the form in which the name is handed down varies (see the variants in the Marzid al-itilif, ed. Juynboll, v. 468); it is apparently identical with Risamuya, which al-Mu'addas (F. G. A., ii. 114, 2) details among the places of the district of Wāsi (cf. Tabari, iii. 1958, 17; Z. D. M. G., xxix. 660, xxix. 26).

From the rather general remarks in Yakhut the boundaries of the district of Dast-i Ma'insan cannot unfortunately be ascertained. We are brought step forward by a note in Ibn Rosta (F. G. A., vii 94, 1) which expressly states that a place named Ab'dasii, frequently mentioned in Arabic sources, is in Dast-i Ma'insan. When Yakhut in another connection (iv. 275, 2) mentions Ab'dasii alongside of Dast-i Ma'insan (i.e. distinguishing the two), as a division of Kaskar, this probably is an inaccuracy. From the passage of Ibn Rosta quoted it is further evident that Ab'dasii must have been above al-Madhār in the direction of Wāsi. In keeping with this is an itinerary given by Khudama (F. G. A., vi. 126, 3 ca), according to which a road from Wāsi via Zādhib (5 faras) to Ubulla and of. E. of Wāsi; cf. Yakhut, i. 461) to Basra passed successively through Ab'dasii (= Ab'dasii) and al-Madhār. The distance of Zādhib from Ab'dasii is put at 5 stages (rizkā's), and from Ab'dasii to al-Madhār at 8; cf. also Streek, Baby- lonien, ii. 13-14. As a rule, on the average may be put at 4-5 miles (see Streek, cit., cit., p. xv) the distance from Zādhib to Ab'dasii may be estimated at 30-40 miles; from Zādhib to Wāsi it was about 15 miles. To this location of Ab'dasii agrees very a note in Ibn Hawkal (F. G. A., ii. 159, 1), who says that the date-palm grove of the district of Basra stretched without interruption for over 20 parangah = 150 miles. Dast-i Ma'insan can therefore barely be reached from Ab'dasii (then away to the south on the seashore; q. v.) as far as Ab'dasii; the latter must, therefore mark the northern limit of the then district of Basra. From the passages mentioned we have to look for Ab'dasii a far distance to the north of al-Madhār, probably rather near the bank of the eastern arm of the Tigris which was dry in the middle ages. The position given to Ab'dasii by G. Le Strange in his map to Ibn Serapion (J. K. A. S., 1895) and in The Lands of the Eastern Caliphate (map ii.) — south of al-Madhār on the left bank of the Tigris (in map ii.) or on the right bank opposite al-Madhār — seems untenable. For further reference to Ab'dasii (with the variants 'Abbās, 'Abdās or 'Abbas; according to Hamza al-Fahdī in Yakhut, xii. 603, 19, a Persian word) see F. G. A., iv. (Inscryp.), p. 94.

The approximate identification of the position of Ab'dasii, which we have obtained, gives us a clue to that of Dast-i Ma'insan. This must have been above Ma'insan proper (with al-Madhār), and have comprised roughly the most northern part of the whole district of Ma'insan in the wider sense. It should be noted that the order in which the four divisions of the Tigris district are officially given (Bahman Ardasīsh, Ma'insan, Dast-i Ma'insan, Abaz-Kubād; see above) is apparently that from south to north or rather north-east. To the east Dast-i Ma'insan extended as far as Khūristān. But it should not be forgotten that the eastern frontier during the caliphate must have undergone changes as a result of political alterations in the organisation of the provincial administration (cf. Schwarz, op. cit., p. 290, 291); this explains the apparent contradictions in our sources, in which one and the same place is sometimes put in the Ḥijāt, sometimes in Ahwāz [q. v.] (Khūristān, q.v., 'Arabistan; see 'AREA KIR).

When we know definitely that Dast-i Ma'insan was separated by the division of Ma'insan from that of Bahman Ardasīsh to which Ubbula belonged, it appears rather remarkable that in Ibn Khordadbeh as well as in Yakhut (cf. Streek, op. cit., p. 16, 19) Dast-i Ma'insan is equivalent to Ubbula. If this is not simply a mistake, it might at least be explained, as Schaeder does (op. cit., p. 55), by saying that under the Abbāsid the headquarter for the collection of taxes for Dast-i Ma'insan was moved to Ubbula. The whole system of division into sawad, originally simply made for convenience in taxation, had lost any practical importance, at least under the later rulers of this dynasty. We are therefore definitely told that the Tigris district later passed under Bahra, where no doubt some of the officials of the old administrative district were moved to towns near Basra like Ubbula.

A part of Dast-i Ma'insan was known as Dījkhā. It must have lain to the west of the modern course of the Tigris roughly from al-Madhār to 'Abdāsi in Rosta (op. cit., p. 95) tells us that in Dījkhā between the two towns just mentioned, a part of the Tigris water used at one time to collect into swamps, before the river altered its bed in the direction of Wāsi. From the accounts of the campaigns of the Khāridjīs in the Umayyad period when the Dījkhā was a favourite place for these rebels to assemble (see vol. ii., p. 905), it is evident that this district must have occupied the position here sketched out for it; cf. Wellhausen, in N. G. W. Götz, N.S., vol. v., no. 2 (1901), p. 22. Whether al-Dījkhā stretched as far as the Nahr al-Tahar (Shatt-āl-Haiy) and even beyond it, we do not know. There is a Tell Dījkhā at some distance from the west bank of the Nahr al-Tahar, to be exact in 45°52' E. Long., and 31°45' N. Lat. It is possible that the mediaeval name of the division Dījkhā has survived in that of this mound, which conceals the ruins of the very ancient, not unimportant town of Umma (ideographically written Ghar-Ukh).
For Umma, which is mentioned in inscriptions as early as 3200 B.C., and disappeared from history even before the time of Hammurabi, see Hommel, op. cit., p. 354—355, 1019, 1102 (Index) and Unger in the Reallexik. der Vorgeschichte, xv. (1928), p. 3—4. Names like Dâkhâ, Dawkhâ, Dawkhanân are found elsewhere in the mediaeval geographical nomenclature of Irâk and Kûtizân; see Yakût, i. 669, 13—16; ii. 143, 144, i. iii. 13; cf. on Dâkhâ (Dawkhâ) also Schaedler, op. cit., p. 23.

The southern Irâk, to which the district of Maîsan of the Arab middle ages roughly corresponds, in course of time far reaching changes have taken place in the appearance of the country. The history of the hydrography of this area is thus a very complicated problem and the solution of topographical questions especially difficult. The first thing to note in this connection is the fact that the Persian Gulf, the Khâlîd-al-Baṣra or al-Fâris, as the modern inhabitants of al-Irâk call it (cf. Häshim al-Sâdî, op. cit., p. 20, 41; 'Abd al-Razzaq al-Hasani, op. cit., p. 115; Lughat al-Arâb, iii. 58, and the article Bâkîr al-Fâris), stretched much farther north in ancient times and the present Gulf than it does now. In the Babylonian period it was a lagoon almost as wide as a sea called Nâru Marratu (see Streck, Astur-bonial, Leipzig 1916, ii. 796) and stretched northwards nearly as far as 31° N. Lat. The lagoon must have stretched from Kurna in a westerly direction indicated by the later course of the Euphrates or the modern swamps (korâs) of Abu Kelâm and al-Ḥammar, as far as the region of the mound of ruins of Abu Shahrain (c. 12 miles S.W. of al-Mukâyîr-ūr), Abu Shahrain, the ancient Erîdu, certainly lay on the shore of this lagoon as we know from inscriptions found there; cf. Langdon, Ausgrabungen in Babylonien seit 1918 = A. O., xxvi. (1928), p. 3—4; Weissbach’s objections to the equation Abu Shahrain = Erîdu (in Pauly-Wissowa, op. cit., vi. 1205) are now disposed of. From Kurna the lagoon probably sent an arm to the east as far as the Karûn. The land south of Kurna beyond Baṣra on both sides of the broad arm of the sea now marked by the bed of the Shâṭ al-Arâb was probably only partly under water in ancient times (cf. Herzfeld, in Sarre-Herzfeld, Archäolog. Reise im Euphrat und Tigrisgebiet, vol. i. Berlin 1911, p. 251), although it was probably exceedingly swampy. In any case in the Sargonid period, the Euphrates, Tigris, Kerkhâ, and Karûn all entered the sea or rather the lagoon running up from it by separate mouths. Cf. also al-BâṭîÂ ta and ii. p. 777.

If then the question of the extent of the advance of the delta since the beginning of the historical period can be approximately answered, it hardly seems possible to allot accurately the increase in land to each century, as we do not know if the sea always retained at a constant rate. In the middle ages (=Abâdadân (q.v. and below) in 45° 22’ E. Long. Greensw. and 30° 12’ N. Lat. c. 45 miles in a direct line from Baṣra, was still regarded as the most southernly town of the Irâk. According to Ibn BâṭîÂ ta’s Travels (ed. Paris, ii. 18) in the first half of the xvith century, it is already an hour’s journey from the coast. This distance has now increased to over 20 miles. In the last 50 years there has been an average increase of land of at least 2½ miles a century. For further information on the

steady formation of land by alluvial deposits at the north end of the Persian Gulf cf. Shâṭ al-Arâb; S. Genthe, Der Pers. Merkblatt, Marburg 1896, p. 54 sq.; The Persian Gulf (=Handbooks of the Historical Section of the Foreign Office, No. 78, London 1920), p. 133; Häshim al-Sâdî, op. cit., p. 51—52. Since the last century the most southerly settlement immediately on the sea has been the telegraph and lighthouse station of Fâo; on this cf. below.

On the hydrographical conditions in Southern Irâk, especially the course of the Euphrates and Tigris and the canal systems connected with them, as well as the swamps there (al-Baṣâ’î), we have a full and lucid description of the beginning of the tenth century in the part of the Geography of Ibn Serapion that has survived to us; see the pertinent passages in Le Strange’s edition, in J. R. A. S., 1895, p. 9—10 (sect. i—I.), 28—30 (sect. xiii—xvi.), and translation and notes on p. 33 sq., 46 sq., 296—311.

The Tigris, probably, was in ancient times forked at the site of the modern Kût al-Amâra (q.v.), the Mâdhârîs the mediaeval Arabic sources (see above), into an eastern and western arm. For four centuries, or more, the Tigris has used the eastern bed running via Amâra to Kurna, while the western arm, a more canal-like channel only navigable at high water, has connected it with the Euphrates. This western arm is in modern European literature known as Shâṭ al-Hâlî; this seems to be a name coined by European travellers, apparently first found in the last decades of the xvith century (in Beauchamp; see Ritter, Erdkunde, xi. 973); Shâṭ al-Hâlî = “river of al-Hâlî” was and still is the name given locally to the northern stretch of the river reaching as far as Hâlî; but its whole course is usually called the ‘Irâk Nahr al-Ghârîf (cf. the quotations noted below from the works of Häshim al-Sâdî and ‘Abd al-Razzaq al-Hasani); Yakût (i. 533, 54; iii. 781, 5) already knows Nahr al-Ghârîf as the name of one of the five arms of the Tigris and of a district belonging to it. The Nahr al-Ghârîf was at one time called al-Muṣârâd; cf. Lughat al-Arâb, i. 51. At the little town of al-Hâlî the Nahr al-Ghârîf divides into five channels of which only the western ‘Îbîn DîyârîrÎ has any water, while the eastern Shâṭ al-Mânî (or ‘Amîr; on the name cf. above ii. 777) is now quite dry; cf. Lughat al-Arâb, i. 51, with note and correction on p. 225 sq. Four miles above Shâṭra the main western arm also divides into two channels: the large Nahr al-Shâṭra in the west, which enters the Tigris at Nîshîrîyê (Nîshîrîyê, see Kût al-Amârâ), the capital of the lîwâ of Mûntashîf — for some years joined by a branch line to the station of al-Muṣârîrî-ūr (L.-junction) on the Baghdad-Baṣra railway —, and the smaller eastern Nahr Badî‘î (Bâdî‘î) said to have been originally dug out by the Mûntashîf which enters the Hûr al-Ḥammar somewhat east of Şîk al-Shiyyâk (q.v.).

On the Nahr al-Ghârîf (Shâṭ al-Hâlî) and the territory through which it flows, of which now as in the Turkish period, the northern part (including al-Hâlî) belongs for agricultural purposes to the lîwâ of Kût (al-Amâra) and the southern part to the lîwâ of al-Mûntashîf, cf. vol. i. p. 676; ii. 513 sq. and Kût al-Amârâ; and Streck, Babylonien, ii. 311 sq.; Lughat al-Arâb, i. 51 sq., 152, 217, 219.
The construction of the Tigris at Māhārāyā (or Kūt al-'Amara) is certainly very old, and may be assumed for the old Babylonian period at least. The ruins of Tellu (the old town of Lagesh), N.E. of al-Shafrāṣ, and of several neighbouring mounds of ruins (like al-Hubba, Sarghal) are at a short distance to the east of the modern Nahr al-Ghārāfr, on an arm (usually) or older bed of it. It is possible that the western bed of the Tigris, Nahr al-Ghārāfr, is of artificial origin (cf. above p. 513 sq.) and was a canal dug at a remote period planned to give a convenient connection with the Euphrates. The western arm of the river was in all probability the regular course of the Tigris in the Babylonian period (cf. also the sketch map in Meisner, Bilder von Babylonien und Assyrien, vol. I); it is only since the last century that the artificial channel of the Tigris for reasons not known to us must have made its way into the eastern modern river bed. Under the later Sāmānīs another change took place, originally connected with the great extension of the swampy area of the Bāṭah. According to a note in Yākūt (i. 660, 1), the Tigris had already ceased in the reign of Al-Rāhmān V Gūr (420–438) to flow in the direction of al-Mādhar and instead of this had chosen the route of the arm that runs towards Kūtār. In any case in the days which took place, especially in the reign of Khālid Pērūz (457–484) and Khwāsaw Il Pērūz (590–610, 636), considerably furthred the development. It is certain that at the beginning of Muslim rule, the Tigris was using the western bed exclusively. The eastern was quite dry as far as al-Mādhar, and only after this town did it contain water again. On the state of the river in the middle ages cf. especially the descriptions in Ibn Rūṣāf, (B. G. A. vi. 106, 1 sq.) and thereon, G. Le Strange, in J. R. A. S., 1895, p. 300, 1896, p. 241, 1897, p. 219; also see Le Strange, The Lands etc., p. 74 and above i., p. 513 sq., ed. A. ALBADRATH.

The Nahr Abī l-Asad, which runs out of the Bāṭah is often described by the Arab geographers as the eastern section of the (western) Tigris (cf. above and Yākūt, iv. 830, 22) might with a certain amount of justice also be claimed as the last stretch of the Euphrates. It is in this sense that Yākūt (iv. 561, 22) says that al-Mādhar, mentioned above, is "on the bank of the Tigris and of the Euphrates at the junction of the two". On the alterations in the lower course of the Euphrates in the later middle ages down to the xvth century we have very little information (cf. AL-FURAT), but it seems possible that since about the xvth century, at least since the beginning of the xvith century, the whole volume of the Euphrates no longer disappeared in the swamps but a portion ran in a definite channel which roughly coincided with the course of the modern bed, and ultimately used the channel of the Nahr Abī l-Asad and thus effected a direct communication with the Eastern Tigris. From the reports of European travellers (see G. Le Strange, The Lands etc., p. 28 sqq.) it is evident that at the junction of the two rivers there stood since at least the middle of the xvith century a castle named al-Kurrā (now a small
town; see also below, iv. 364). Since the great scheme for regulating the Euphrates was carried out by Willcocks in the first decade of this century (cf. ii., p. 515a and 15—53—506), only a small and insignificant arm of the Euphrates now flows out at Kurna while its main arm cuts through the swamps of al-Hammār in a new channel and enters what is now called the Shāšī-al-'Arab above Karmat 'Ali (c. 10 miles N. of Baṣra). On this modern Euphrates channel called after Karmaṭ 'Ali (popularly Karmaṭ and Gurmat 'Ali) cf. Hāšim al-Sa'dī, op. cit., p. 209, 412, 416, 159, 529; Ibn al-Razzāk al-Ḥasāni, op. cit., p. 69; Lāghūt al-Arāb, i. 365, 8 sq.; iv. 527, 3; Metropolitana (Handbook of the Foreign Office, No. 63), London 1920, p. 6, 52 sq., 55 and cf. ii., p. 515.

The Eastern Tigris from al-Madḥār to its mouth on the Persian Gulf bore in the middle ages the name of Diḏjāt al-‘Arwā (= the "eye-eyed Tigris"; on this cf. above, ii. 777); cf. especially Ibn Rosta (B. G. A., viii.), p. 94 sq. and Ibn Serapion (J. R. A. S., 1895, p. 28, 299—303); Streck, Babylonien, i. 41—42; G. Le Strange, The Lands etc., p. 43; Schefer, op. cit., p. 21—23 and cf. i., p. 676, 699 sq.; ii., p. 52 sq. Yāktūt (iv. 850, 29) however limits the name Diḏjāt al-‘Arwā to the stretch from al-Mattārā on the east bank of the canal to the confluence of the two rivers. At the same time we find other special names for this last section among the Arab geographers of the middle ages like Diḏjāt al-Baṣra (the Tigris of B.), Faṭād al-Baṣra (cf. e.g. Yāktūt, iii. 931, 10), Bāṭināwād (Yāktūt, i. 462, 11). A specifically Persian name is Bahmānhr (= the river of the district of Bahman Ardashir (cf. ii., p. 777; see Yāktūt, i. 770, 20).

Even in the Babylonian period the lower Tigris seems to have had a special name, Surāpu; see Meissner, op. cit., p. 5. For nearly two centuries the combined Euphrates and Tigris has been known as Shāšī-al-‘Arab = "the river of the Arabs," because its basins are almost entirely occupied by the Persian kingdom, are almost exclusively inhabited by Arab tribesmen. (The name Shāš, al-‘Arab is found in the middle of the 16th century in Nāṣir-i Khusraw [Sefername, ed. Schefer, p. 89] but this is the only early occurrence). In its lowest half the Shāš al-‘Arab has since that date formed the often contested frontier between Persia and Turkey or (since the World War) the Kingdom of Iraq; about an hour's journey above (or west of) Muḥammār, the eastern bank becomes Persian. Cf. also the article Shāš al-'Arab and The Persian Gulf (For sign Office Handbook, No. 76), London 1820, p. 54.

The stretch of the Diḏjāt al-‘Arwā corresponding to the modern Shāš al-‘Arab in the middle ages sent out numerous canals on either side; the very complicated canal-system of the country round Baṣra was especially celebrated. The most important canals on the west bank were the Nahr Maṣ'īl (still to-day the name of a small village, an hour above al-‘Ashshārā) and the Nahr Ubaṣla (apparently the modern Nahr al-‘Ashshārā) which united at the town of Baṣra and connected it with the Tigris. The mediaeval Nahr Aḥbār (cf. ii., p. 15 miles south of Baṣra on the west side, may also be mentioned; it still exists to-day and has given its name to a district and its capital (belonging to the sandjak of Baṣra); see Cuinet, op. cit., p. 231; Abd al-Razzāk al-Ḥasānī, op. cit., p. 118. Of the canals on the west bank the most important was the Nahr Bāyān (cf. Schwarz, Iran im Mittelalter, p. 311, 390—391). The Nahr Bāyān formed an artificial channel connecting the Tigris and the Kārūn; we have also mediaeval references to a similar communication between these two rivers. Another canal still in existence on the west side is the Nahr Raiyān (Rayān; modern Rīyān) north of the Nahr Bāyān. The most northern canal on the east side which left the Tigris about the neighbourhood of the modern Kurna, was called Nahr al-Mubārak, not Nahr al-Madhr (cf. thereon to Googe, in J. R. A. S., 1895, 5 p. 749; cf. Streck, Babylonien, i. 41). Generally speaking, there are not now so many canals in the Shāš al-‘Arab as there were in the middle ages. The best account of conditions in the caliphate is that of Ibn Serapion; see the text in J. R. A. S., 1895, p. 29—30 (thereon to p. 305—311); cf. also Streck, Babylonien, i. 42 and G. Le Strange, The Lands etc., p. 46—48. Cf. particularly the article al-Baṣra we-Ankhūrhā, which gives a list of old and new names of canals, in Lāghūt al-‘Arāb, iii. (1915), p. 57—68, 128—132 and p. 673—674 (additions) and p. 700—704 (indices); al-Nabhānī, al-Tawīla al-Nabhanīya fī 'Īṭrīq al-Qarātayn (2nd ed. Cairo 1342 [1923], i. 15—52.

After the hydrography of the district of Maṣān, we may now deal briefly with the more important places in it. The mediaeval Arab geographers give as its capital the already frequently mentioned al-Madhrār on the eastern bank of the Tigris, 4 days' journey from Basra. The Shā's inhabitants according to Yāktūt (vi. 468) had a splendid mosque here with the tomb of 'Abd Allah b. 'Ali who fell at Karbalā in the year 680; on this see the references in Wustenfeld, Geographische Tabellen der arabischen Staaten, Register (1855), p. 8 and Yāktūt, vi. 506; cf. also Rawiṣa. This sanctuary still survives and it has not been noticed before (hence for example, the inaccurate locations by G. Le Strange in J. R. A. S., 1895, p. 300 and in The Lands etc., p. 42) to define quite exactly the site of al-Madhrār. The name al-Madhrār is no longer known on the spot; as of the old town the highly revered Alīd sanctuary is all that remains, the place is now called simply 'Abd Allah b. 'Ali Keppel, who paused here on his way up the river in 1824, speaks erroneously of "the residence of Sheikh Abdulla bin Ali, an Arab chief"; cf. his Personal Narrative of a Journey from India to England (London 1827), i. 91. According to Chenery's map (see The Exploration for the Survey of the Rivers Euphrates and Tigris, London 1856, Atlas, Pl. x.), 'Uzair and 'Ali (now only 10 miles apart in a direct line, a figure which has however to be doubled when allowing for the many windings of the river if one goes by boat. The traveller Schlaflī, who in 1862 went down the Tigris on a steamer, took two hours to get from 'Abd Allah b. 'Ali to 'Uzair; cf. his Reisen im Orient (Winterthur 1864), p. 137; Rich took six hours to ascend (Kitter, xi. 945). On my own journey in March 1927 I visited 'Abd Allah b. 'Ali; the steamer covered the distance from here to 'Uzair with the river in favour of condition in no quite three hours. 'Abd Allah b. 'Ali lies on a slight eminence ten minutes from the left bank of the Tigris, which describes a curve here. The mosque of the tomb with its dome
visible from a long distance off stands within the south side of an oblong court, to which entrance is given by a door in the slightly built north wall. The *Mašûma*-poet al-Ḥārīm, born in Mashān (near Basra) is said by Yākūt (iv. 468) to have died in al-Madhār. As Ibn Rostā (B. G. A., vii.), p. 95., tells us, the tides came up as far as al-Madhār; this agrees with Schlafli's observation (op. cit.). The tide indeed is sometimes perceptible as far up as the town of Ka'lat Sāliḥ, farther north; cf. Hashim al-Sa'dī, op. cit., p. 39; cf. also *The Persian Gulf Pilot*, London 1898, p. 295. Opposite al-Madhār, on the west bank was the little town of al-Ḥāt (Yākūt, iv. 947, 6). When Yākūt observes in one passage (iv. 714) that the capital of Mašān was also called Masān, he can only be referring to al-Madhār, the centre of the district of Mašān in the narrower sense, not perhaps, Furāt Mašān, for which we also find an abbreviated form Mašān. The name al-Madhār probably first came into existence in the Muslim period, perhaps for a new foundation on the site of the old town of Mašān.

As to Ka'lat Sāliḥ already mentioned on the left bank of the Tigris which like 'Abd Allah b. 'Ali belongs to the ābād of 'Amara, see Hashim al-Sa'dī, p. 151; 'Abd al-Razzāq al-Hāsān, p. 233—234 and *Lughat al-'Arab*, iv. 318—319, 4. 536. This town of modern origin a couple of hours’ journey below 'Abd Allah b. 'Ali has now about 3,000 inhabitants (including many Mandaeans). The site of al-Madhār cannot be marked by Ka'lat Sāliḥ for al-Madhār was certainly of moderate extent and the ābād mosque is to be sought within it and not in its vicinity.

As to 'Uzair already mentioned (now usually pronounced 'Azīr), south of 'Abd Allah b. 'Ali on the west bank of the Tigris, it is especially mentioned that it belonged to the district of Mašān; see Yāqūt, iii. 319, 714; Kazimi, *Al-Sūr al-Bīlān*, ed. Wüstenfeld, ii. 316. The proper name of this place with the alleged tomb of Ezra ('Uzair) in the middle ages was, according to Arabic and Jewish sources, Nahr Samuna (popularity Sumura); cf. e.g. Yāqūt, iv. 840—849. Cf. on Uzair especially D. S. Sassoon, op. cit. (see Picli: J. R. Ghannam, op. cit. (see Picli), p. 180 sq. and the article 'Uzair.

The town of Abdās (Abbās) etc. to the north of al-Madhār has already been discussed. On the town of Huwara (now Hawwara) also belonging to Mašān see above i. p. 670 and art. Huwara; to the *Kauš* or *Kaš* may now be added-Layard in *J. R. G. S., xvi*. (1846). p. 34 sq. 36. J. de Morgan, *Mission scientifique en Perse*, Éd. géograph., ii. Paris 1893, p. 278 and Schwarz, *Knoten im Mittelalter*, p. 369 sqq. *Lughat al-'Arab*, vi. 277. An extensive swamp (cf. i. p. 676), takes its name from this town, the water from which flows into the Tigris a little south of Kurna; cf. Hashim al-Sa'dī, op. cit., p. 21. sq.

The modern towns of importance on the Nahr al-Gharrāf (Shatt al-Hay), are of recent origin and are still developing. They are from north to south: Huwara, a town with 9,000—10,000 inhabitants (cf. above and i. p. 676; *Lughat al-'Arab*, vi. 152, 224); Ka'lat Sikkar with 1,500 and shrār, with 7,000 inhabitants, on these three places cf. Cuney, op. cit., iii. 290. 310 sq. 312—315; where Ka'lat Sikkar is wrongly given for Ka'lat Sīkkār); Sachau, *Am Euphrat und Tigris*, Leipzig 1900, p. 69 sqq.; 'Abd al-Razzāq al-Hāsān, op. cit., p. 111—113; 130 sqq.; Hashim al-Sa'dī, op. cit., p. 147, 162—165.

At the spot which up till some two centuries ago was regarded as the junction of the Euphrates and Tigris stands the little town of Kurna (Korna, Gurna) with 2,900 inhabitants. It is not known to have existed in the middle ages; on it cf. above and Mignan, *Travels in Chaldæa*, London 1829, p. 284 sq.; Ritter, xi. 1018—1023; Cuinet, op. cit., iii. 211 sqq.; 'Abd al-Razzāq al-Hāsān, op. cit., p. 119; Hashim al-Sa'dī, op. cit., p. 156; *Lughat al-'Arab*, iii. 57. Halfway between Kurna and Basra must have stood al-Maṣūrā where, according to Yāqūt, the two rivers of the Tigris, or the Euphrates and Tigris met in the middle ages; cf. above. About 3 hours' journey above Basra on the right bank of the river is the little village of *Karām* 'Ali, where as already mentioned, the main stream of the Euphrates flows into the Tigris or the Shatt al-'Arab.

In the Muslim period, Basra was the largest and most important town in the old district of Mašān and in practice its capital, although under the 'Abbāsid, al-Madhār may have for a considerable period been regarded as the official capital. On Basra, mediaeval Basra, modern Basra and al-'Ashshār, cf. the article *Basra*.

Al-'Aṣhshār stands approximately on the site of Ubūlla which as a suburb and port on the Tigris for the mediaeval Basra was of some importance. In our sources we are expressly told that Ubūlla lay north of the canal which bore its name, partly on an island, which was formed by the Tigris and the two canals of Nahr al-Maṣūrā and Nahr al-Ubulla which joined one another at Basra. The modern Nahr al-Khurā which leaves the Shatt al-'Arab about an hour south of al-'Ashshār, cannot be the Nahr al-UBulla (in spite of *Lughat al-'Arab*, iii. 63). The modern al-'Ashshār, the principal commercial centre of southern *Irāq*, is only a little inferior to Basra as regards numbers of population. The two together have now a population of 50—60,000. On Ubūlla, the ancient *Axōnāyas kūrāsān* (s. Paulus-Wissowa, *Reallex. der late. Altertumwiss.*, Suppl.-Band, i. 111), cf. G. Le Strange, *J. R. A. S.*, 1895, p. 506 and *The Lands* etc., p. 47; Drouin, a. a. O. (s. Limand), p. 9; Sachau, *Arch. Pr. Ak.*, 1919, xii, 1, p. 20, 31 sq.; *Ibl.,* xi. 151; *Lughat al-'Arab*, v. 471; vi. 200, 1 and the art. *Urbanella*.

Opposite al-'Ashshār, on the east bank of the Shatt al-'Arab stands the little town of al-Tamīna (cf. *Lughat al-'Arab*, iii. 129, p. 239 sqq.; 'Abd al-Razzāq al-Hāsān, op. cit., p. 118; Hashim al-Sa'dī, op. cit., p. 156, 6). On its site or at least somewhere in the neighbourhood, there was already in ancient and mediaeval times an important harbour, known to Pliny as *Forat* (cf. also Drouin, op. cit., p. 8). In the Talmud (see Berliner, op. cit., p. 44) and in Syriac sources it is called *Perat de Mašān*, in the mediaeval Arab authors *Farāt al-Mašān* or *Furāt al-Balār*. In Syriac and Arabic texts we also find *Perat* or *Farat*, without the addition of Mašān; with *Furāt = Euphrates* the name has no connection. When the first Sassanian king Ardashīr I founded the city it received from him the new name of Bahman-Ardashīr, shortened to Bahmanšāh; see Hamza al-Isfahānī, *Tāribikh*, ed. Gottwaldt, p. 37 sqq., 46 and *Ibl.* xi. 149. Cf. the above mentioned
specifically Persian name of the Cidjlat al-Awret and Bamshir (= Bahmanshir) as a name of an arm of the Kūrān (cf. ii., p. 777). That Forūt Māīsān was opposite Ubbul on the left bank is quite clear from the Arabic references: cf. Wellhausen, Groß G. W. Gott, N. F., v., N. 2 (1901), p. 34 and Schaedler, op. cit., p. 31. The identification of Forūt Māīsān with the modern Bāṣra or even with old Bāṣra (Berliner, op. cit.), which has been championed by different scholars (Noldeke in S. B. Ak. Wien, 1893, Abb. ix., p. 18; Marquart, op. cit., p. 41; Sachau, Abh. Pr. A. W., 1919, No. 1, p. 49; only suggested as a possibility by Herzfeld in Spasines, p. 275) is therefore untenable. Perat de Māīsān was the see of the Nestorian metropolitan which was later moved to Bāṣra (first certain reference in 893); cf. Sachau, op. cit., p. 49 and Schaedler, op. cit., p. 31 sq. The old name of the diocese Perat de Māīsān was still frequently used in place of Bāṣra even after the transfer of the episcopal see. If we have on one occasion, e. 900 A. D., a mention of a bishop of Māīsān simply, we should refer it to Perat de Māīsān rather than to Karkh de Māīsān (so Sachau, op. cit., p. 50) because the abbreviation Māīsān for Perat de Māīsān is found elsewhere in Syriac literature (cf. Schaedler, op. cit., p. 32–33). As to the coins of the Omayyad period of the mint of Māīsān, this is probably to be explained also as al-Forūt Māīsān and not as Karkh Māīsān (so Mordtmann, Z. D. M. G., xxxiii. 126) or Māīsān (al-Mādhār) as Schaedler, op. cit., p. 34 thinks. Abu l-Fida, Tuhum al-Buldān (ed. Reinard, p. 296), also is obviously thinking of Forūt Māīsān not Māīsān (al-Mādhār) when he says “Māīsān is a little town in the lower part of the land of Bāṣra”.

- On the east bank of the Shatt al-Arab about where the Eulceus or Djudjil (the modern Kūrān [q. v.]) joins it, Alexander the Great built a new town on the site of an older settlement, which he called Alexandrea after himself. After its restoration by one of the Seleucids, it was known as Antiocheia. When Spasines (Hypsaspines) created a kingdom of his own in Mesene-Charakene, Alexandria-Antiocheia became his capital and was known as Ḥārān Ṣawābū; under this name (Arabic Karakh Āspassinā or simply Karakh) it is mentioned in the Palmyrese inscriptions. Another refoundation of the town is ascribed to Ardashir I, hence its official designation in the Sassanian period as Astaraḵšāb Ardashir (also abbreviated to Astāḵšāb); cf. Noldeke, Gesch. d. Araber und Perser zur Zeit der Sassaniden (Leiden 1879), p. 14; Marquart, op. cit., p. 41; Herzfeld, Ist., xi. 150; Hamza al-Isfahani, op. cit., p. 47, gives the (corrupt?) form of the name Ḥārān Ardashir. The old name Karakh more exactly defined by the addition of “of Māīsān” remained in existence. The Syriac texts always write Karakh de Māīsān. There was a Nestorian bishopric here, which seems soon to have disappeared under Islam; see Sachau, op. cit., p. 49–50 and Schaedler, op. cit., p. 33. The Arabs took over the Syriac name as Karakh [q. v.] Māīsān; cf. e.g. Vāqī, iv. 207, 1. The Persian traveller Naṣīr-i Khushraw who visited the Irāk about 443 (1051) (cf. his Sefername, ed. Schefer, p. 89) mentions, besides Bāṣra, in the district of Māīsān a place called ʿAḵr Māīsān, probably an inaccurate reproduction of Karakh Māīsān. The site of Karakh Māīsān is usually sought on that of the Persian port of Muḥammarah, which has only arisen since about 1812, or at least in its immediate neighbourhood; cf. Andrews in Pauly-Wissowa, Realencykl., i. 1394 sq.; Drouin, op. cit., p. 7; Herzfeld in Surre-Herzfeld, Archäologische Reise, i. 251; Sachau, op. cit., p. 50; Schaedler, op. cit., p. 33. This identification does not have been absolutely certain: Karkh Māīsān is perhaps to be located farther to the north; cf. e. g. the objections of Mordtmann in S. B. Bayr. Ak., 1875, vol. ii. Suppl. Hefl, iii., p. 14. Cf. also on Alexandria-Charax Spasines-Karkh Māīsān the important article, “Alexandria” by Andreas in Pauly-Wissowa, Realencykl., i. 1390 sqq. and the article Charax Spasines by Weisbach, ibid., iii. 2122; Drouin, op. cit., p. 7–8; Schaedler, op. cit., p. 31 sq. On coins struck in Karkh Māīsān of the Arsakid and Sassanian periods cf. Mordtmann, Z. D. M. G., xxxiii. 126 sq. and G. F. Hill, Catalogue of Greek Coins of Arabia and Persia in the British Museum (London 1922); cf. also Mūḥammarah and also vol. ii. p. 777.

In the middle ages the most southerly town in the Irāk was ʿAbbābdān, which then lay on the coast — under the later ʿAbbābdān it was already some distant from it — and was an important harbour. Cf. above and the article ʿABBĀBDĀN.

At the beginning of the twentieth century it was still an insignificant little village. It is only since the last twenty years that it has undergone an unexpected development because of the Anglo-Persian Oil Company making it the terminus of their pipes from Shuster and Madīnā-Naftūn (cf. ii., p. 779). The oil is now pumped into tanksteamers at ʿAbbābdān; important factories, warehouses etc. have been built there. In Brém five minutes west of ʿAbbābdān proper, has developed into a flourishing town which bears the name Bīrm ʿAbbābdān or ʿAbbābdān al-Ḥadīthah = New ʿAbbābdān. On the meaning of the word brīm (a particular kind of date) cf. Lukhāt al-Arab, i. 125, 1 sq., 443; i. 502, 2, from below. In Brém are the ruins of a palace or castle said to date from the time of the Caliph Hārūn al-Rashīd; cf. Lukhāt al-Arab, i. 126, 9 sq. ʿAbbābdān is now next to Bāṣra-ʿAshīrān and Muḥammarah the largest and most important town in the whole of the Shatt al-Arab. On the other places on the island of ʿAbbābdān cf. Lukhāt al-Arab, i. 128, 3 sq. The island, which before the war belonged to the Shaikh of Muḥammarah who was under Persian suzerainty, was leased about 1911 by England for 99 years. On mediaeval ʿAbbābdān cf. Lukhāt al-Arab, i. 121–129; on modern ʿAbbābdān and the works of the Persian Oil Company, ibid., i. 176–184; W. Schweer, Die turk-perische, Erdzivilisations, Hamburg 1919, p. 52, 112–115.

At ʿAbbābdān close to the sea-coast there stood in the middle ages the lighthouses known as al-Khasabīb (q. v.).

As has already been pointed out, ʿAbbābdān is now over 20 miles from the sea. The most southerly place in the Irāk for about a century has been the important lighthouse and telegraph station at Fāo [q. v.], built on the shore of the Persian Gulf; on it and the district, cf. Cuinet, op. cit., iii. 268–270; Abd al-Rasāk al-Ḥasani, op. cit., p. 118; Ḥāṣīm al-Ṣaʿdī, op. cit., p. 21, 155–3 from below; cf. above and art. SHAṬT AL-ʿARAB. The Turks fortified this important strategic point (see Persian Gulf [Handbooks etc.], p. 54; Mezo-
It may be here mentioned that the Zindj, the African negro-slaves, settled in the southern Ḳafr (cf. v. 124) and i., p. 676), during their rebellion in the second half of the ninth century, built several strong places west of the Shaṭṭ al-ʿArab, which they used as bases during their struggle with the armies of the Caliph. Their main bulwark was the town of al-Mukhtara (Yāʾṣib, iv. 831, 3) on the Nahr Abu ʾl-Mashil (see above), south of Basra. Other strongholds were called al-Manṣura and al-Manṣūra. When al-Muwaffak, the brother of the Caliph al-Muʿtaḍid, undertook command of the military operations against the Zindj, he pitched his camp opposite these places on the east bank of the Shaṭṭ al-ʿArab; this camp soon grew into a considerable town, called al-Muwaʃfa ka-ya with mosques, baazars and even a mint. But when in 885 the capture of al-Mukhtara broke the power of the rebels and the dangerous servile war was over, this new foundation of al-Muwaffak seemed to have been soon abandoned again. On al-Muwaʃfa ka-ya and the three strongholds of the Zindj above mentioned cf. Weil, Geschichte des Chalīfāt, ii 456, 462, 464; Lang, Z. D. M. G., vi. 1010; A. Müller, Der Islam im Morgen- und Abendland, i 585; cf. Noldeke, Orientalische Skizzen (1892), p. 174–183; (= Sketches from Eastern History, p. 146 sqq.): de Goeje, Mém. sur les Conventions, Leyden 1886, p. 103.

The population of Masqin in the early centuries of Islam still had a strong admixture of Persian blood; it was therefore regarded as not quite equal to the pure blooded Arabs who were proud of the purity of their stock. We thus see why the poet al-Akhtal thinks he can most effectually insult Arabs by calling them people from the Masqin district of Arūfahd (cf. the verse in Yākūt, i 233. b. n.), i.e., by denying them to be Arabs; cf. Goldziher, Muhammad Studien, i (Halle 1884), p. 118 and cf. idem, p. 119, note 1, the quotation from the Kitāb al-Aḫūn, (xvii. 65, 31).

This naturally produced a reaction among the Masqin Arabs. The celebrated poet and historian Sahib b Ḥasan (v. c.) of Dast-i Masqin, a fanatic believer in the orthodoxy of the equality of all Muslims (Śūrā fig. i 4) on the other hand, extols the blue blood of the people of Masqin (cf. Goldziher, cf. v. 161).

The Muslim inhabitants of Masqin in the middle age as at the present day for the most part Shiʿis. The number of Jews does not seem to have been considerable before the invasion of the Arabs. At the present day there is only a considerable minority of them in Basra. The alleged tomb of Ezra in Ļurp (cf. above), a much-visited place of pilgrimage, also honoured by Christians and Muslims, is in Jewish hands.

Christianity is said, according to legend, to have reached Masqin in the first century A.D. A quite legendary person named Mām. said to be a disciple of Jesus, is regarded as the apostle of the Gospel in Central and Southern Ḳafr (cf. Dabūr, Geschichte des Islam in den Provinzien, Leipzig 1893 (H. Sch.), p. 57–58 and Streck, Islam, ii. 286 sqq. This is much is certain that this early as 410 A.D. there was a separate Nestorian ecclesiastical province with 4 dioceses; cf. Z. D. M. G. xliii. 504: Marquart, cf. cit. p. 41 and Sachau, cf. cit., p. 48–52.

The remarkable sect of the Mandaeans (the Sābīra of the Kurān, q.v.), now called Subbā, had from their early times their headquarters in southern Ṣūrā, in Masqin, especially in the swamp country. On their geographical distribution in the ninth century cf. Chwolson, Die Stadte und der Stadtsystem (St. Petersburg 1850, i. 124–125) and Euting, in Das Ausland (1876), p. 224–225. According to inquiries which I made in 1927 of Mandaeans, the number of Mandaeans in the larger towns of the Ṣūrā may be approximately estimated as follows: in 'Amāra and Ḥawīla 500 each; in Ḳafat al-Shīl and Muḥammara 500 each, in Basra 300 and in Kūna 100. The language of the Mandaeans, who represent a remnant of the original native Aramaic population of BABYLONIA, is probably identical with the Aramaic idiom which was once predominant in southern Ḳafr, the dialect of the old kingdom of Mesene-Charakene, the Mesān dialect as it is called in the Tarqum; cf. Noldeke, Mandische Grammatik (Halle 1875), xxvi and Pogonon, Inscrip. mandae. des coups de Khosraib (Paris 1898–1899), p. 15–14, 224.

On the Indian people of the Dīq (Arab. Ẓṿī) and the Zindj from East Africa, who were settled on the soil of Masqin at the end of the first (seventh) or in the third (ninth) century, see above i., p. 676 and the articles zīdī and zūfti.

As to the industries of the people of Masqin in the middle ages we need only mention the mats made here, which are praised as the best of their kind; cf. S. Frankel, Die aram. Fremdwort in Arabisch. (Leyden 1886), p. 92. The red-heds of the marshes supplied excellent material for them in enormous quantities. Even at the present day the manufacture of red-mats continues to give employment to many hands; for the people of the flat lands in southern Ṣūrā like to use long, taw-shaped huts called ζουςτα, the walls of which are made of red-matting.

The history of Masqin since the introduction of Islam practically coincides with that of the Ṣūrā, especially that of the northern part (the province of Baṣra and the Batīta); the reader may refer to the articles Ṣūrā, Baṣra and Al-A Ṣūrā. Here we will only point out that the administrative district of the Tigris belonging to Masqin was conquered by Dast-i Masqin in the year 14 (625) on this conquest of Baladāb, op. cit., p. 340–346 and Castani, Annali dell' Islam, iii. 252, 301–304 (8 6 and 81–86); vi. 108 (Index s. v. Mayān).

Al-Ma ṣūrā, the capital of Masqin, was the scene of important military happenings at the time of the Arab invasion and frequently later also. In the year 12 (633) al-Khālid and al-Muḥammad fought a great battle with the Persians at this town, the first in their invasion of the Ṣūrā. This battle is sometimes called after an adjacent canal, called al-Thīn (Yākūt, i. 937, 11). The defeated Persians are said to have lost 30,000 men in this encounter; cf. Badhāri, op. cit., i. 242 sqq. Fābarī, op. cit. v. 2026–2029; al-Maṣūdī, op. cit., iv. 209; Müller, Der Islam, i. 228; Castani, op. cita. i. 595–596 (196–200). In the fighting with the Khurjās for whom the district of Dākhṣī in Dast-i Masqin frequently served as a refuge-place, there was a desperate battle in 47 (663) in and around the town of al-Maṣūrā. These rebels were forced to retreat by the Khufans under the leadership of Ma ṣīl b. Kāfis; cf. Wellhausen, Abb.
MAISÂN — MAISIR

MAISARA, a Berber chief of the Maghrib, who rebelled against Arab authority in 122 (739/40). He belonged to the tribe of the Maghbara and the historians give him the surname of al-Hākrit "the low-born" because he was of humble origin and before his rebellion had been a water-seller in the market of al-Kairawān.

After the recall of Mīsāb b. Nuṣārī at the end of the first century A.H., rebellion began to smoulder in North Africa. 'Umar b. Abd Allāh al-Murtādī, governor of Tangier, and a grandson of ʿUkba b. Nāfī, Hābib b. Abī ʿUbaida, governor of Sūs, were inflicting grievous wrongs on the Berbers by treating them, as regards taxation, as a conquered people not converted to Islam, and by taking the fairest of their women to send as slaves to Damascus. The general Hābib having been sent from Sūs with his troops to the conquest of Sicily, his departure was the signal for insurrection. A movement on a large scale broke out; at its head the Berbers put Mażārīs al-Majghāri. With the related tribes of the Mīkhsāna and Baṛaghūwa [q.v.] Mażārīs advanced on Tangier and seized it. The Arabs tried in vain to withstand him; the governor of Spain, ʿUkba b. al-Hādījādī, had no means of the Strait to help Tangier but his efforts were in vain. It was not long before Mażārīs was dismissed and killed by his own followers but his successor Khalīd h. Ḥamīd al-Zanātī was more fortunate: at the beginning of 123 (740) he inflicted on the Arabs on the banks of the Wādī Shalīf (Chēīf) the disastrous defeat known as the "battle of the nobles" (ghawārīf). It was a defeat to be remembered in the east in order to overcome finally this general rebellion, which was not done without considerable losses.

(E. LÉVI-PROVENÇAL)

MAISIR, casting lots by arrows, a method by which a head of cattle was divided. This was the custom of the Arabs before Islam. The word seems almost to mean lucky chance, easy success, from yāṣir, to be easy, yāṣara, to succeed; cf. maisara, comfort, riches. A group of ten Arabs used to buy a young camel, which was cut into ten portions and the yāṣir presiding distributed the portions among his companions by means of arrows on which he had written their names and which he drew at random out of a bag. In another system 28 portions were made of the animal; there was one part for the first arrow, 2 for the second and 3 for the third and so on up to 7; the three last got nothing. These arrows were deposited with the guardians of the temple in Mecca.

The game was considered a pagan practice and the Kurān (ii. 216 and v. 92) forbade it along with wine and idols as a major sin.

The word maiṣār has acquired a wider sense among the commentators and in certain traditions.
Zamakhshari gives it the same sense as kimār (q.v.). According to the tradition of the Prophet, maita, is applied also to:de: "these accursed deer are the maita of Persia (maita at'ādājam"; according to a tradition attributed to Ali it is also to be extended to backgammon and chess (presumably in so far as dice were used in these games) and according to Ibn Sirin to every practice in which there is an element of chance.

Cf. the Dictionaries, the Kanis, Djawhari, Zamakhshari, Kachṣīf, ed. Nasan Lacs, i. 350; al-Kadi, ed. Houtsma, i. 390 sqq.; Huber, Über die Maita genannte Spiel; Freytag, Einleitung, p. 170 sqq.

MAISĀN, daughter of the Kurd chief Rādāl h. Umay, h. Mutawfiq, daughter of the Caliph Yazid I. We do not know if after her marriage with Mu'āwiyah she retained the Christian religion which had been that of her family and of her tribe. A few verses are attributable to her in which she sighs for the desert and shows very slight attachment for her husband. But the attribution to Maisan of this fragment of poetry, which is in any case old, has been rightly disputed. She took a great interest in the education of her son Yazid and accompanied him to the desert of Kalb where the prince passed a part of his youth: this temporary separation from her husband gave rise to the legend of her repudiation by Mu'āwiyah. She must have died before Yazid became Caliph.

Bibliography: This is given in Lammens, L'état et la vogue du calife omeyyad Mawāṣi' (M I, O, F., iii.), p. 286–287, 305, 312–314 (II. LAMMENS).

MAISIR (MIEER) (Stk. mālīshā-Cantūra "buffalo town"). the premier Hindu State in India, is a principality in Southern India under the British protection, having an area of 29,433 square miles, between 11° 36' and 12° 2' N. and 74° 36' and 75° 36' E. Its Hindu rulers preserved their independence until the middle of the nineteenth century when Harār 'Ali [q.v.] took possession of the country. In his and his successor, Khit Sultan's (q.v.), possession until the capture of Seengapattam by the British in 1814 (1790), Maisir was then restored by Lord Wellesley to the old Hindu dynasty. The majority of the Musalmāns are Sunnis, very few being Shi'is. Of Muhammadan builders the most noteworthy are the Gumbār or Musul-din of Hādar 'Ali and Inqulāb at Gāndām and the Dāray Da'wāt, a summer palace at Seengapattam. The population at the census of 1814 was 5,806,193, of whom 3,14,414 are Musalmāns, mostly Sunnis. The capital of the principality bears the same name, Maisir. The language spoken is Canarese-Hindustani, Tamuli and Telugu.

MAITĀ (maitā), feminine of maitā, dead (used of animals); as a substantive it means an animal that has died in any way other than by slaughter. In later terminology the word means firstly an animal that has not been slain in the usually pre-refined fashion, the flesh of which therefore cannot be eaten, and secondly all parts of animals whose flesh cannot be eaten, whether because not properly slaughtered or as a result of a general prohibition against eating them.

In addition to Sūra xxxvi. 33 where maitā appears as an adjective, the word occurs in the following passages in the Kurān in the first of these meanings: xvi. 116: "He has forbidden you maitā blood, pork and that over which another than Allāh has been invoked; if however anyone is forced (to eat these) without wishing to transgress or sin, Allāh is merciful and indulgent" (of the third Meccan period, since vi. 119 may refer to this context and the appearance of the same exception for cases of coercion in vi. 146 [cf. below] is then only explained in view of the whole trend of the passage, if there were an earlier passage, namely vi. 116, in which the prohibition was given full justification; cf. Noldeke-Schwally, Geschichte des Qurels, i. 146 sq.; Grimme, Mohammed, u. 26 transfers the whole Sūra to the later Meccan period); vi. 140, 146: "They have said: what is in the womb of this cattle belongs to the males, and is forbidden to our females"; but if it is maitā (still born), all have a share in it... Say: I find in what is revealed to me nothing forbidden, which must not be eaten, except it be maitā or concoled blood or pork — for this is filth — or a slaughter at which another than Allāh is invoked, but if anyone is forced (to eat it) without wishing to commit a transgression or sin, thy heart is merciful and indulgent" (of the third Meccan period; cf. Noldeke-Schwally, i. 161; Grimme, i. 26): u. 168: "He has forbidden you maitā, blood, pork and that at which another than Allāh is invoked but if anyone is forced (to eat it) without wishing to commit a sin or transgression, it is not reckoned as a sin against him; Allāh is merciful and indulgent" (of the year 2 of the Hijra, before the battle of Badr; cf. Noldeke-Schwally, i. 178; Grimme, ii. 27): v. 4, 5: "Forbidden to you is maitā, blood, pork, that at which another than Allāh is invoked, and that which has been strangled, killed by a blow or a fall, or by the horns (of another beast), that which has been eaten by wild beasts — with the exception of what is made pure — and that which hath been sacrificed to idols... But if anyone in (his) hunger is forced to eat of them without wishing to commit a sin, Allāh is merciful and indulgent" (in all probability revealed after the valedictory pilgrimage of the year 10; cf. Noldeke-Schwally, 227 sq.; Grimme, ii. 28 dates the Sūra to the year 7).

It is quite evident from Sūra, vi. 140 that the maitā was of some significance for the Meccans in the many laws about food with which Arab paganism was acquainted (cf. Wellhausen, Rote arabischen Heidensitten, 2nd ed. p. 168 sqq.). Although it is no longer possible to define exactly the part it played, even the statements recorded by Ťabarî (from the earliest interpreters of this passage, which moreover only refers to a detail, reveal the complete disappearance of any reliable tradition), it may be assumed without misgiving that the Kurānic prohibition contained a corresponding pre-Islamic prohibition, although it perhaps modified it. Both go back to the religious reluctance to consume the blood of animals, and indeed in all the Kurān passages quoted, blood is mentioned alongside of maitā. It is unnecessary to assume that Muḥammad was influenced by Judaism on this point and the suggestion may be rejected especially as the prohibition in its stereotyped form occurs again in Sūra u. 168 just at the time of vigorous reaction against Judaism and Sūra vi. 147 (Madinese, a
late insertion) which contrasts the prohibition of *maita* etc. with the Jewish laws relating to food. What Muhammad understood by *maita*, he tells us himself in the latest passage dealing with it, v. 4: in the second half of the verse the principal kinds of *maita* are given (with the exception of the animal that dies of disease), which had already been mentioned in general terms; the commentators were thus able to interpret it, as examples wrongly as different from the *maita* proper. The purification (in the Kurān only mentioned in this passage) must mean ritual slaughter, by which, even if done at the last moment, the animal does not become *maita* but can be eaten.

These prescriptions of the Kurān are further developed in the Traditions. According to the latter it is forbidden to trade in *maita* or more accurately its edible parts; some traditions (mainly on the authority of Aḥmad b. Ḥanbal) even forbid any use being made of all that comes from *maita*; others again expressly permit the use of hide of *maita*. An exception from the prohibition of *maita* is made in the cases of fish and locusts; these are in general considered as the two kinds of *maita* that are permitted, i.e. no ritual slaughter is demanded in their case (because they have no "blood", cf. above). While some traditions, extending this permission by the earliest *kiyās*, say that all creatures of the sea, not only fishes, can be eaten without ritual slaughter, including even sea-fowl (in this case it is said that "the sea has performed the ritual slaughter"), others limit the permission to those animals and fishes which the sea casts up on the land or the tide leaves behind it in the water (or those which swim about on the sea). But there is also quoted a saying of Abū Bakr expressly declaring what swims on the surface to be permitted. In this connection we have the story of a monster cast up by the sea (sometimes described as a fish) which fed a Muslim army under the leadership of Abū Ubaida when they were in dire straits; but in this tradition and in the interpretation that has been given it (that they only ate of it out of hunger i.e. took advantage of the Kurānic permission for cases of need) is clearly reflected the uncertainty that prevailed about such questions as were on the border line. In the Traditions, we find it first laid down that portions cut out of living animals are also considered *maita*. The way is at least paved for the declaration that all forbidden animal-dishes are *maita*. The regulations found in the Kurān appear again here, e.g. the permission to eat *maita* in case of need and slay properly dying animals at the moment to prevent them becoming *maita*.

Some traditions handed down through Ḥamād from Ibrāhīm al-Naḳḫānī bring us to a somewhat late period (in the Kitāb al-ʿAttār); one says that of the creatures of the sea only fishes can be eaten; another, which is found in two versions, limits the permission to what is own use by the sea or left behind by the tide; ritual slaughter is not demanded in this case. The question whether the embryo of a slaughtered dam requires a special purification i.e. ritual slaughter, is raised in one tradition and decided in the affirmative.

The most important regulations of Muslim law about *maita*, which express the last stage of development are as follows: It is unanimously agreed that *maita* in the legal sense is impure and "forbidden" (*haram*) i.e. cannot be eaten and also that fish are exceptions to this; the Mālikis and Ḥanbalis also except the majority of creatures of the sea, and according to the more correct Shāfiʿi view, this applies to all marine creatures (the Ḥanbalis here hold the opinion of Imāma al-Naḳkehā, except that the two ideas of "slain" and "thrown up" and "swimming on the surface" are later overlaid and destroyed by the to some extent synonymous "slain by another cause", "died of itself"). The edible parts of *maita* are also *maita*, as are the bones, hair etc. among the Shāfīʿis, but not the Hanafis, and among the Mālikis only the bones; the hide when tanned, is considered pure and may be used. Emergency slaughter (*dhakāt* or *tadhkiya*; ritual slaughter in general is *dhakāt* or *māṣ*) is according to the Hanafis and the better known view of the Shāfīʿis (also according to al-Zuhri) permitted, even if the animal will certainly die, provided it still shows signs of life at the moment of slaughter. According to the predominant among the Mālikis, such slaughter is not valid and the animal becomes *maita* (in contrast to Mālik's own view). The question of the embryo (cf. above) is answered in the affirmative by the Hanafis, following Ibrāhīm al-Naḳkehā and Abū Ḥanifa (al-Shābīdānī himself held the Mālikī view, to be mentioned immediately) but in the negative by the Mālikis and Shāfīʿis (in this case it is said that "the ritual slaughter of the dam is also the ritual slaughter of the embryo") except that the Mālikis made it a condition that the embryo should be fully developed (Mālik himself also demanded its slaughter "to the blood" or "from it" in the case where the embryo had been dropped). That anyone who is forced to eat *maita* may do so, is the unanimous opinion; only on the questions whether one is bound to eat *maita* to save his life, whether he should satisfy his hunger completely, or only eat the minimum to keep life alive etc., there is a difference of opinion. The Shāfīʿis and Ḥanbalis further demand that one should not have been brought to these straits through illegal action (a different interpretation of the Kurānic regulations).

A clear definition of *maita* and its distinction from other kinds of forbidden animal foods was never reached. Sometimes it is quoted on the authority of the Kurānic passage itself from its own 4 subdivisions given in Sūra v. Sometimes its validity is extended over extensive allied fields. As is evident from the Fikh books, this terminological uncertainty has not infrequently caused still further confusion in the discussion of differences of opinion.

**Bibliography:** Lane, Ar. Engl. Lexicon, s. v.; the books of Ḥanīf and Fikr; Wensinck, Handbook of Early Muhammadan Tradition, s. v.; Jyunboll, Handleding tot de kennis van de Muhammedanske Wet, p. 165 sq. (J. Schachter)

**MAIYĀFĀRĪKĪN,** a town in the north-east of Diyarbak̄r [s. v.]. The other Muhammadan forms of the name are Mafrākin, Mafrākin, Fārīk (whence the name of origin al-Fārīk) etc. The town is called in Greek Mattyropolis, in Syriac Mpherkeš, in Armenian Nplarkt (later Mharkin, Muphargin). According to Yākūt, iv. 702, the old name of the town was Madur-šāla (read šāla < *matur-khalakk* in Armenian, "town of the martyrs"). On the identification of Tigranocerta with Maiyāfārīkīn see below.
Geography. The town lies to the south of the little range of the Ḥazrū which rises like the first tier of the amphitheatres of the mountains, the higher parts of which consist of the summits (Māshih, Antōk) rising to the south of Mūsā and separating the course of the eastern Esphates (Māshih) from those of the Tigris and the left bank tributaries.

Māyāfārīkīn lies 25 miles north of the Tigris and 12 west of the Bātān-šu. It is watered by a little river (now called the Fārkhān-su) which flows into the Bātān-šu 12 miles to the south-east, an important left bank tributary of the Tigris which drains the wild and mountainous country south of Mūsā (the cantons of Kūlp and Sāṣān). The old names of the Bātān-šu are Nīcyphoros (Roman period), correspondent, Byzantine period, Synnax, ques and Qasdanā, a word of Aramaic origin preserved throughout Persia and explained as “ruler of horses”; Armen. Geogr. of the seventh century, Marquart, Lāntāfīr, p. 161, Armenia Khatut and perhaps Manushel (Faustus of Byzantium). Some of these identifications, as we shall see, are still uncertain.

Māyāfārīkīn was the meeting-place of a number of roads from the north following the different streams which go to form the Bātān-šu: 1. Calshīshīr on the Manas-šu-Bīr Tārānisp-Ludde-Bīshār-Māyāfārīkīn; 2. Māsh-Kūlp-Fāsār-Māyāfārīkīn; 3. Māsh-Khūp-Lunqu (viz., Sāṣān)-Māyāfārīkīn. Routes 3 and 4 passing Sāṣān are still little known. The distance between Dīyarbakr and Māyāfārīkīn is about 15 miles. The old road Dīyarbakr-Brītin, which used to run through Māyāfārīkīn, runs further south and crosses the Bātān-šu south of Bātīn (Dīyarbakr-Mūnān-Zok-Westphān-Brītin).

Māyāfārīkīn has thus lost the advantage of being a stage on the road between Armenia and upper Mesopotamia. Since 1260 it has no longer been a political centre around which gravitated the interests of the country around. It retains only in importance as a market for the produce of the mountainous and pastoral country drained by the Bātīn-šu.

Ancient History. The mountains to the north of Māyāfārīkīn have long sheltered the remains of ancient aboriginal peoples. About 600 D. G. Georgius Zypiris (ed. Fürer, p. 48), mentions the Khordacan and Samsamouta there who gave their names to the districts of Khoit and Šāpān. Marquart (1916) supposes that these are elements of the aboriginal language in names like Māshih-ij and Manushel, which are, he says, formed with the root “sak-sak-i-sač” (sak-sakec) prefixed. According to tradition (Yākū, iv, 703), the founder of Martyropolis, Marthāk b. Layātī, was the son of a woman of the mountains, and Marquart sees in it a mutilated form of the name of the *pāšā* Layātī (Hausd. Interv., 1915, p. 96; 1916, p. 126). The Marwând Abi Naṣr was married to the daughter of Sinkhārī, lord of the Shāmānā, cf. Amnodor, in J.K.A.S., 1905, 234-235; 1905-1906, 1906-

Tigranocerta = Māyāfārīkīn(5). As early as 1838 von Moltke had suggested that Māyāfārīkīn was the ancient Tigranocerta i.e. the new capital funded by Tigran II about 80 B.C., which was taken by Lucullus after the victory won on the banks of the Niphphoros (Oct. 6, 69 B.C.) and again in the reign of Nero by the legate Corbulo (c. 63 A.D.); it is regularly mentioned down to the middle of the fourth century A.D. Other scholars had sought Tigranocerta at świrt (‘Alvanyi), Arzan (H. Kiepert, 1875), near Nej-Jepm (Jepm Kiepert 1875), and Tell-Mashal west of Nisībin (E. Sachau; cf. Duhassar etc. Late Armenian tradition gives the name Tigranocerta to Dīyarbakr. Moltke’s idea was taken up vigorously by Lehmann-Haupt and W. Belecke, after their expedition to Armenia in 1895-99.

On the north wall of Māyāfārīkīn is a mutilated Greek inscription. It was deciphered and published by Lehmann-Haupt, who attributes it to the Armenian King Pap (369-374), which is quite in keeping with the known facts of the reign of this monarch. In spite of his criticism of the details of Lehmann-Haupt’s hypothesis, Marquart (1916) has rather corroborated him by bringing forward new considerations.

In view of the many contradictions found in the classical sources regarding Tigranocerta the question comes to be, if Māyāfārīkīn is not Tigranocerta, what other unknown town existed here in the time of Pap, unless the stones on which the inscription is engraved and which are now hopelessly disarranged (“in heilloser Verwirrung”) were brought from another place when Martypopolis was being built?

The main objection to the identification of Tigranocerta with Māyāfārīkīn is that, according to Eutropius, vi. 9; and Faustus, v. 24, Tigranocerta was in Arzane (Aţdznikh); on the other hand the river Mamushel seems to have formed in the fourth century the western frontier of this latter province. From this fact (Huschens, Die altarm. Ortsnamen. Indigem. Forsch., 1904, p. 473-475), it seems that Tigranocerta ought to be placed east of the Bātān-šu if this river is identical with the Mamushel. This last name was connected by Marquart with the name al-Musuliyat, which Mākaddas, p. 144, gives to one of the tributaries of the Tigris (on the left bank) and apparently corresponding to the Bātān-šu. (A district of Musuliyat (?) still exists farther east on the upper course of the Bīldis-tai, in the area of the ancient possessions of the Bagh Mūshālī; cf. Kīrāwī, in Yākū, ii, 531-532).

To reconcile the statements of Faustus, v. 24 and 27, with the position of Māyāfārīkīn (12 miles W. of the Bātān-šu), Marquart proposes to identify the Mamushel = Niphphoros with the Fārkhān-su while the Musuliyat would be applied to the whole system of the Bātān-šu (Niphphoros, Sāṣānā etc.). The insignificance of the Fārkhān-su, which rises in the hills about 3 miles north of Māyāfārīkīn (Ilī al-‘Arāk calls its source Ra’s al-‘Ain; the Ḥākān-muṣi, p. 137: ‘Ain al-Ḥaww') and does not suit the description of the hermitage of Māmbrē, which, according to Faustus, must have been on the right bank, makes Marquart’s hypothesis less attractive. If finally we consider the position of Māyāfārīkīn from the point of view of the interests of Tigranes, one is forced to admit that against an enemy coming from the west (Lucullus!) Tigranocerta = Māyāfārīkīn was devoid of natural defenses, while in the event of an enemy coming from the east it ran the risk of being easily cut off from Armenia on the main road from Bītin (the ancient Klastra Bāzārāt, cf. Tomasek,
159

Maiyafarikin = Martyropolis. The identity of these two towns is quite certain. The Christian sources (Syriac, Armenian and Greek) referring to the foundation of Martyropolis are numerous. A Syriac “history” (tas'îthâ) kept in the Jacobite church of Maiyafarikin was translated for the historian of the town, Ibn al-Azraq, and is given in a synopsis in Yakût, iv. 703—707 and Kaşwînî, ii. 370—380 (transl. with notes in Marquart, Handes Ansorva, 1916, p. 125—135).

One of the sites spoken of is a “large village” (karşy 'axima) by the bishop Maruthâ (Mār Marûthâ) who had obtained two thousand tosphûhies from Persia to do so. This ecclesiastical frontier was drawn between c. 383 and 420 (on the sources for his biography cf. Marquart, op. cit., p. 91—92, 125). The town of Martyropolis to which Marûthâ brought the remains of the Christian martyrs of Persia is mentioned for the first time in 410. The etymology of the Syriac name Mêphrêkêz is uncertain (cf. above). In Armenian the town is mentioned for the first time in the Geography of the vii century as Nphrêk (once Nphrêt).

By the peace of 297 with Diocletian, the province of Sophanêne, within which Martyropolis lay, had become part of the Roman empire. Even a small portion of the town (Vâzandâr) and Sophanêne remained to the Emperor. Under Theodosius II (401—450), the new town, situated quite near the frontier, acquired considerable importance and became the capital of Sophanêne (= Great Tospkhê). The town was still insufficiently fortified and in 502 the Sâşânîan Kâwadh b. Fêzô seized and carried the inhabitants off to Khüsânân where he founded for them the town of Abâz-Kobâd (Yâkût, iv. 707) (Weh-Amîdî-Kâwadh = Arrâdân; cf. Marquart, Erânîahr, p. 41, 307).

Anastasius began the fortification of Martyropolis but Justinian, after his accession (527), was the first to reorganise completely the eastern frontier between Dûrî and Trebizonî. Martyropolis, the headquarters of a commander under the strategos of Theodosiopolis (Erzûrûm), became one of the most important military centres. Procopius, De aedificiis, iii., gives a complete description of the walls of the town, the height and thickness of which were doubled and a full account of the system of defences (outer walls, advanced forts etc.); cf. Adontz, op. cit., p. 10—12, 140—142. In 589 the town fell into the hands of the Sâşânîans but in 591 came back to the Byzantines in return for the support given by the Emperor Maurice to Khusraw II. Heraclius held it till the year 18 = 626 (Yâkût, l.c.). [The date is not given in Murât, Chronogr. byz., i.]

The vicissitudes of Martyropolis probably explain the fact that in the Armenian Geography of the seventh century (ed. Patkanow, transl., p. 45; Marquart, Erânîahr, p. 18 and 161) the Persian province of 'Abdûnîkh (Arzananê) is separated from Tospkhê (Sophanêne) by the line of the Khaîrî (= Bûsma-'su) while in the description of parts of Armenia Nphrêt (= Nphrêk) figures as one of the 10 cantons of Arzanêne.

Christian legend as preserved by Ibn Azrâq and Yakût gives very full details of the building of the town in the time of Mâr Marûthâ: the arches (tikân) of the walls in which the remains of the martyrs were placed, the eight gates of the town, the names of which are carefully recorded in the convenant of SS. Peter and Paul, the buildings erected by the three ministers of the Byzantine emperor, each of whom built a tower and a church. There is still to be seen in Maiyafarikin the ruins of a magnificent basilica and of the Church of the Virgin (al-'Ahrâr). Miss Gertrude L. Bell, who has studied these monuments, dates the basilica “not much later than the beginning of the fifth century”, and suggests that the Church of the Virgin was one of the two built by Khüsraw II in recognition of the assistance lent by Maurice; cf. Abu 'l-Faradî, Muhâzîsî, ed. Pocock, p. 98.

Under Yâlâmîn in 640 the caliph 'Umar, Maiyafarikin was taken by 'Ayyûd b. Ghâmân without a blow being struck (Balâdûrî, p. 175—6) and henceforth shared the lot of Diyarbakr.

The intermediate character of the position occupied by Maiyafarîk in puzzled Arab geographers. Ibn Rusta, p. 106, puts the town in Diyarzîr while the others (Ibn Hawkal, p. 246) regard it as belonging to Armenia. According to these authors, Maiyafarîk was a little fortified town having an unhealthy climate on account of the stagnant water but not without its amenities (Yâkût, p. 76; Ibn Hawkal, p. 131, 151, 153; Mukhâsîsî, p. 54). The region (yâru-vec-ğulâ) of Maiyafarîk in Arzan in the time of Ibn Hawkal was however entirely depopulated.

The Hatams and the Buyids. Maiyafarîk formed part of the territory of the Hamdânids [q.v.] (317—394). They built a castle (karâ) near the gate Bâb al-Fârâb wa-l-Ghâmân (Yâkût); its ruins are apparently mentioned by Ewhâlî (1655), iv. 71—4 under the name Sa'îf al-Dawla Sarâyî. The Bâb al-Maldân gate also dates from Sa'îf al-Dawla (333—350). This prince was buried at Maiyafarîk; cf. Yâkût-nûmâ, p. 437. In 352, Nâjû, a client of the Hamdânîs, rebelled in Maiyafarîk. In 362 (July 4, 973) Hîlal Allâh b. Nâjîr al-Dawla defeated the Byzantines in the vicinity of the town.

In 367 (978) the Buyûd 'Aqûd al-Dawla dispossessed the Hamdânids who had supported his cousin Bakhtiyâr and in 368 Abu 'l-Wâfî, a general of 'Aqûd al-Dawla, took Maiyafarîk (Ibn Miskawî, ed. Amedroz, ii. 199, 266, 312, 384).

The Marwânî dynasty. After the death of 'Aqûd al-Dawla (374), Maiyafarîk and the rest of Diyarbâkî fell into the power of the Kurd Bâdh [cf. Kûrsi and Marwânîs] who had the Dailami garrison of Maiyafarîk massacred and was able to defend what he held against the Buyûd Samûm al-Dawla and the sons of Nâjîr al-Dawla, who had meanwhile returned to Mâsûl. After the death of Bâdh, his nephew, Abu 'Ali Hasan b. Marwân, established himself in Maiyafarîk and for a century this town remained the capital of the Marwânî dynasty (380—479 and again in 486). In 384 the governor Mâmâ, appointed by Abu 'Ali, succeeded in checking the turbulence of the inhabitants who had been incited by Hamdânî intrigues. There is an inscription of Mumâhid
al-Dawla dated 391 (1000) on the wall of the town. In 392 an Alid pretendor again stirred up trouble in Mayafarikin. In 401 after the assassination of Munahhid al-Dawla, his murderer Sharwa, son of Mamun, with the help of his Georgian guards seized Mayafarikin but Safid Abi Nasr came from Arzan and began his long and brilliant reign (401-453).

A fine castle decorated with gilding was built in 403 on the little hill on which stood the convent church of the Virgin. This Christian sanctuary (the connection of which with the al-Thirra church is not quite clear, cf. above) was transferred to the Melkite church. Later were built a hospital, a mosque with a clock (bantnam < Pers. pingein) and baths. Water was led to all the town from the spring of Ra’s al-Ain. A palace was built on the banks of the Sattadama (Batman-su) and the water was raised to it from the river by a noria. A bridge spanned the river Haww (Harroz).

A wall bequeathed by Shalsh Abi Nasr al-Manazi endowed the mosque (i) of Mayafarikin with a library. A fort was built to protect the town against the Sassanids (people of al-Saqin).

In 410 from Ibn al-Asraik is supplemented by the statements of Nasir-i Khujraw, who visited the town under Abi Nasr on the 6th Djamal 438. The Persian traveller speaks of its walls, built of huge blocks of white stone (Ibn Maskwaih, iv. 354: "strong walls of black stone"); Lehmann-Haupt: "gelblichweisser Kalkstein"). The western gate all of iron, the Friday mosque, the water-channel passing before each home (one uncovered with drinking water and the other covered serving as a sewer) Outside the town were the caravanserais, the hot baths, and a second Friday mosque. To the north of the town was the suburb of Muhdahna also with a Friday mosque and baths. A distance of 4 farshak from the town (on the bank of the Sattadama) was a new little town called Niywa built by the emir then reigning.

After the death of Abi Nasr, who was buried in the town, the Salijsiks began to interfere in the affairs of Mayafarikin. In 458 Sallar Khorasanii sent by Tughluq arrived before the town with 5,000 horsemen. In 463 it was visited by the celebrated Nasim al-Mulk. In 478 by orders of Malik Shah the former viceroy of the Marwands, Ibn Ushir, besieged the capital of his masters, which surrendered in Djamal 1478. The treasures of the Marwands valued at 1,000,000 dinars were carried off by Ibn Ushir. In 482, Amid-al-Dawla, son of Ibn Ushir, was appointed governor of Mayafarikin. After the death of Malik Shah (485), the Marwand Nasiyl al-Dawla succeeded in re-entering Mayafarikin but the Salijsik Tutush, of Syria took the town in Rabii 1 480; cf. Ibn Asraik in Amedroz. J. R. A. S. 1903. In 532 (Ibn al-Asraik, iv. 43) the last representatives of the Marwand family disappeared from the neighbourhood of Mayafarikin.

The Ortskids and Aiyubits. In 575 (1212) the Salijsik Sultan Mahmud added to the possessions of Il-Ghazi, founder of the line of Ortskids of Mardin, theief of Mayafarikin, to which Il-Ghazi appointed his son Sulaiman (516-518); cf. Abu’l Fadili, ed. Pocek, p. 240 and Kaim Farid, Mardin Miaski-i Ortskiz (Artucius) Turzikiz (written in 944=1537), ed. Ali Emiri Efendi (Constantinople 1331, p. 20). Six successive Ortskids ruled Mayafarikin till 580 (1184). In 587 (1191) the last Ortzikid Yuluq Arslan again seized the town and held it for a time.

In 581 the Aiyubits had become masters of Mayafarikin and held it till 658 (1260). Safid al-Din built a mosque there for which the columns of the Byzantine basilica were used (Gertrude L. Bell, op. cit., Pl. xi). Mayafarikin had a mint under the Artukids: the coins which they struck (dated 591, 599, 600, 612, 618) bear curious human figures which are portraits or symbolical personages (Ghilâd Bâshem, Catalogue des monnaies turcomans etc., Constantinople 1804, p. 140—67; S. Lane-Poole, Catalogue of Oriental Coins in the British Museum, vol. iv., p. 255; see vol. iii., p. 24 for a Marwânid coin of this mint). On the walls of the town are inscriptions of the following Aiyubits: Awhad Nasim al-Din Aiyub (of 600 A.D.), Malik Azharf Mina (607—617), Malik Muayyaf Ghaâzi (623), Malik Kâmil Meshaham (654). A complete list of rulers at Mayafarikin from 515 to 658 prepared by van Bechem is given in the appendix to Lehmann-Haupt, Matérielien, p. 134.

The Mongols. In 639 (1241) the Aiyubit Shihâb al-Din Ghaiz received the summons from the Mongol Khân to submit and raise the walls of the town but gave an evasive answer. In 650 (1252) the Mongols pillaged the country round Mayafarikin. During Hûmây’s expedition to Syria in 658 (1260) the army of the prince Yâsîmbeseg Mayafarikin which was defended with great bravery by Malik al-Kamîl. The blockade produced a terrible famine in the town which was forced to surrender. Only 70 of the defenders survived. Kamîl was put to death in cruel fashion and his head carried on the point of a lance through the streets of Damascus (Rashid al-Din ed. Quatremère, p. 339—331, 350—375; d’Hollon, Histoire des Mongols, ii. 354). Before his death, in 662 (1264), Hülgû gave the district of Diyarbakr to his general Tûdân (cf. suluq). Three years later, Ahaqà allotted Mayafarikin to his father’s widow, Kuta-yâ-Hezân. Mayafarikin later lost its independence and henceforth shared the lot of Diyarbakr [q. v.].

In 796 during Timur’s stay at Mardin, a number of Maliks including those of Arzin (izî) and Batman came to pay him homage but the zafer-nama (i. 665) does not mention the lord of Mayafarikin. After the conquest of Diyarbakir, Timur on his way to Mûsh took the road via Mayafarikin (ibid., i. 685) and Sîwûsî (the name of a summit in al-Saân east of al-Antok). This march is the only example of a considerable force following the direct road Mayafarikin-Mûsh.

The Safawids and the Ottomans. Our information about the rule of the Turkoman dynasties (Kara-Koyunu and Ak-Koyunu in the region of Diyarbakir is very deficient. In pursuit of his campaign against the last Ak-Koyunu Murad, Shah Ismail I Safawi in 915 occupied all the region of Diyarbakir, the government of which was entrusted to Kânû Muhammad Usjoy (Shanjin, i. 405; ‘Amin-ir-ras, p. 23—25). The defeat at Cârdkàn produced rising pressures against the Persians throughout Kurdistan. The Kurd chief Sâyîd Ahmad Beg Rûzâeki seized Mayafarikin and Ata’k (Hattâk, cf. the Katir Atrachs of Georgius Cyprius). Mayafarikin passed definitely under Ottoman rule after the battle (921) of Koc-Qudr (south of Mardin) in which the Persian general Kara-Kân was defeated (von Hammer, G.O.R.P, i. 731—741).
In 1529 Maiyafarikin was visited by the Portuguese Jesuit Tenreiro, who found there "many monuments with inscriptions and Greek characters. On the walls were images of the apostles and other saints painted in gold and in brilliant colours... The town was almost deserted".

The Sulaimání Kurds. While the events above described affecting a wider area were going on, the power of the local Kurd chiefs was gradually growing. At the end of the 19th century we find the whole valley of the Baţmân-šu reunited under the rule of the Sulaimání chiefs, one branch of whom was established at Maiyafarikin and the other at Kûl (Şaraf-nûmâ, i. 261—271; cf. below, p. 1144 sqq.). In 1828 von Mohl found the town full of ruins, evidence of the recent conquest of this part of Kurdistan by the Turks. The Kurds however kept the de facto power down to the beginning of the 20th century (cf. Lehmann-Haupt, Armenien, i. 394, 419). The name Silwân which in the local administrative language finally eclipsed the old Maiyafarikin, can only be a kind of development of the name Sulaimání > Silwâni (in Turkish Silwân); cf. Pers. miyâhân (from miyân) > Kurd. miwân.

In 1891 (Cuinet) there were in the kaďâ of Silwân 363 villages with 25,217 inhabitants of whom 18,500 were Musulmans and 6,177 Christians (Armenians and Jacobites). The town had 1,456 houses with 7,000 inhabitants (half Musulmans and half Christians).

For the Byzantine period the works quoted by Marquart and Lehmann-Haupt; Chapo, "La frontière de l'Empire de Péompie à la conquête arabe," Paris 1907, p. 359—360; Adonts, "Armenia v epohu lustiniâna," St. Petersburg 1908, index (complete geographical and political study of Armenia in the ivth century); Miss G. L. Bell, "Churches and monasteries of the Taur-Abkin and neighbourhood districts," Zeitschr. f. Gesc. u. Architektur, Heft 9, Heidelberg 1913, p. 86—92, plates xi. (mosque of Saladin), xii—xiv. (basilica), xv—xix. and xxvii. 1 (al-Aslaha) for the Muslim period; the general sources quoted in the text and Le Strange, The Lands of the Eastern Caliphate, p. 111—112. The special history of the town is Târîkhê Maiyafarîkîn written in Arabic in 572 by Aḥmad b. Yūsuf b. 'Ali Ibn al-Asrâk al-Fârîkî, unique MS. Brit. Mus., Or. 5803 (fragment of an older version in Or. 6310). The history of Ibn al-Asrâk is quoted and completed in vol. ii. of al-Atâ'îk al-šâfîrî fi 'Dîrār Ǧumâ'î al-Shâm wa 'l-Djâzîra (Bodleiana Marsh 333, Catalogue i., No. 945) by 'Izz al-Dîn b. Shâdhâd al-Halabi. The publication of the histories of Ibn al-Asrâk and Ibn Shaddâd is proposed by the G. M. S. The data in Ibn al-Asrâk (and part of Ibn Shaddâd) have been excellently summarised by Amedroz in the articles; Three Arabic MSS. on the History of the city of Mayyafariqin, in J.R.A.S., 1902, p. 784—812; Marwanid dynasty at Mayyafariqin, J.R.A.S., 1903, p. 123—154; Notes on two articles on Mayyafariqin (remarks by Marquart), J.R.A.S., 1909, 176—176. The epigraphical materials of the German expedition of 1898—1899 have been studied by M. van Berchem, "Arabische Inschriften aus Armenien u. Diyarbekr," in Lehmann-Haupt, Materialien z. älteren Geschichts Armeniens und Mesopotamien, Abh. G. W. Göttingen, N.F., ix., No. 8, 1898—1899. The material is excellently published by W. Belecke, Three of the mosque of Aûdâshûr, Parts I—II, 1921, 325—375 with an excellent study by the editor on Maiyafarîkîn; Hâjjî Shâhîlî, Liḫîh-nûmâ, p. 437; Ewilâyî Čelebi, Siyâṣatnâmê, iv. 71—74 (interesting details); A Tenreiro, 1529, Itinerario do Indica, Coimbra 1560 (second edition 1762); Biflîs—Haxî—"Monfarquîm"; Molbi, Briefe über Zustände ... in d. Türkî, ed. Kiepert, Berlin 1841, 287; The river ("ein reicher Fluss ... der in schonen Windungen durch die Ebene dem Tiris zuwächst") of which Molbi speaks seems to correspond to the Büta, and to the Lûmân as Ritter, Erdbuende, u. 79—95 takes it be; Taylor, Travels in Kurdistan, J.R.S.C., 1865, p. 21—58 (this article is very important); Cuinet, La Turquie d'Asie, Paris 1891, i. 470—472 (kaďâ of Silwân); Lehmann-Haupt, Armenien, cf. above; Flury, Islam. Schriftenbd., Paris 1921, 44—48 (inscription of Saladin at Maiyafarîkîn) with two plates. (V. MINORSKI)

MAKALLA. [See MUKALLA.]

MAKHĀM (a.), a variety of Arabic prose of a highly elaborate and artificial nature.

Makâmā in the old language was the name for the assembly of the tribes, synonymous with nadv (e.g. Lebûl, Dîwân, No. 46, 10; Salûm b. Djan- 

Dîwân, i. 4. = Maybûnîyâtât, ed. Thorbecke, No. 20, 50, ed. Lyall, No. 122, 4; Hamûn, p. 95, v. i. etc.; so also Hamadânî, Mak. 19, 5 [Stamb. = 44 u. Bair]), hence the word was next applied to gatherings at which the Omayyad and early 'Abbasid caliphs received pious men in order to hear edifying discourses from them, as Hîshâm for example did with Khaîlî b. Saľîm (Xâlîd al- 

Aţâî, ii. 35.1—35.17 sqq.): Ibn Kûtâlib gives an account of it in the chapter Makâmât (the

Sing. appears as Makâm in the separate headings) al-Zâhid ʿinda 'l-Ḫulâfa' wa 'l-Mulûk in the K. al-Zâhid, 6 of the K. ʿEyûn al-Akhdâr (cod.

The Encyclopedia of Islâm, III.
MAKĀMA

Kops. 1344, fol. 212v—213v), upon which Ibn Ḥādī al-Kāmil in Ḥāz al-Farād (Cairo 1395), 1-286 sqq. and al-Ṭurjūṭī, Ibrāhīm al-Makāma (Būhār, 1388), p. 32 sqq. have again drawn. The word then came to have the more general meaning of lecture, e.g. in Maṣūfī, Muhammad al-Dhahabī, ed. (Paris), v. 421, and perhaps also Dājīhī, K. al-
Fakhrī, p. 218, where it appears along with poetry, proverbs, and tales of battles as an essential element in Arab education. In the third century A.H., however, the word began to sink from this higher sphere; it became the name for a beggar's appeal, which had to be framed in carefully chosen language, the more the literary training of the ādīb, once a privilege of court circles, became disseminated among the people; an example of these appeals is preserved by Dājīhī in Bāhārī, K. al-Makāma, n. 2, Makāmat (ed. Schwally), p. 633 sqq. The appeals of beggars seem to have paved the way for the literary genre proper (cf. A. Mez., Mu 'l-Kūsim, p. xxii/xxiv). This owed its existence to Hamadānī [q.v.]. He created a typical representative of this literary Bohemianism to which he himself belonged, which entered upon the inheritance of the ḥiṣīl poets of the early days of Islam, like al-Ḥuṣaynī. The very witty execution of the constantly changing part of his hero Abū l-Fath al-Islāmī and from the point of view of form the adoption for his tales of rhymed prose, which was already beginning to dominate the finer style of letter-writing, are the two special characteristics of Hamadānī's work. To the hero himself he gives a foil in the person of a narrator, al-Ḥamadhānī, who sometimes takes the role of a trickster, as in maqāmī 12. In the 7th abo—also one of the poorest by the way—, in which a certain Ḥ司马 b. ʿAbd al-Faqīr records a meeting with Faraḍāk b. Ṣaīf the not very creditable to Dhu l-Rumma, the principal hero takes no part. Six of these stories are only intended to glorify his patron, Kaysī b. ʿAbd Allāh ruler of Sidjistan, to whom as Margoliouth supposes (cf. Hamadānī) the whole collection was dedicated. Sometimes he only uses the maqāmī form to give expression to his own views on literary questions, as, for example, in the first on ancient and modern poets, in the fourteenth on the structures of prose, al-Lajjāh and Ibn al-Mukaffa; in the 25th maqāmī, another in which al-Islāmī does not appear, he puts his polemic against the Mutāzilīs in the mouth of a madman. He does not always make al-Islāmī appear as a rogue but in the 42nd maqāmī he displays a knowledge of the world which is quite incometune of guile. N. 26 (ṣūrī, lacking in the Barīt edition) and 31 (the ḥuṣaynī, incomplete in the Barīt edition) contain specimens of erotic jargon and cant-language: of purely lexicographical interest is maqāmī 30, edited and translated by Aḥmad b. Ṣādiq al-Farāsī, who deals with a competition instituted by Saif al-Dawla for the best description of a horse. The 1st (N. 52 in the Barīt edition) is of quite another character and has only the rhymed prose in common with the maqāmī proper: it is on this account classed with nine other anecdotes as maqāmāt in the Stambol edition and put in an appendix.

Ibn Ḥarīrī's statement quoted above, s.v. Ḥamadānī, that al-Hamadānī got the idea from Ibn Dunayr, al-Farādī true cannot be ascertained as this work has not survived. In any case he is entitled to the credit of having created a new literary form, which might have proved very fertile in Arabic literature which is not exactly rich in forms. It is perhaps impossible to appreciate his talent fully if we may believe the tradition that the 51 specimens that have survived to us and which were apparently all that were known to al-Ḥarīrī represent only about an eighth of his whole output. His contemporaries and immediate successors were however not able to follow him on the path he had indicated. One only of his contemporaries, the court poet of Saif al-Dawla Abū Naṣr ʿAbd al-Azīz, b. ʿUmar al-Saʿdī († 939), has left us a maqāmī (Aḥlwardt, Verz. der ar. Humschr. Berlin, in N. 8536). Not till a century later do Ibn Naṣīrī and al-Ḥarīrī again take up the form created by him. The former (Abū l-Kāsim ʿAbd Allāh or ʿAbd al-Bākī Muhammad b. Ḥusain, b. 15th Dhu l-ʿKhādī 410 [March 14, 1020] in Baghdād, d. 4 Muḥarram 485 [Feb. 15, 1092]), of whose other poetical and philological work nothing has come down to us, does not keep strictly to the model created by al-Hamadānī in the nine maqāmāt preserved in a Stambol MS. (Fāṭih 4097; M. Ov., vii. 112) in as much as he does not have one hero all through and also introduces various persons as narrators, but the main point is the polished form, in which he tells his otherwise not remarkable stories (cf. Ch. Huart, Les stances d'Ibn Naṣīrī, F. A., ser. 10, vol. XII, 1908, p. 435—454, and the edition by O. Rescher, in Beiträge zur Morgenländischen Literatur, Heft 4, Stambol 1914, S. 123—153). It is not till Harīnī [q. v.] that the form appears in its fullness, and the latter at the same time considerably limited its subject matter in as much as he makes the anecdotes recorded by al-Ḥarīrī b. Hamānām centre round a hero. Abī Zādī of ʿAlībī, and relates the adventures of this Bohemian, whose wit is never at a loss and who is able to meet all difficulties, in a style sparkling with wit and full of all the tricks of language. That he owed the stimulus to his work to an encounter with an actual vagabond may be legend; al-Sabīt, Tābaqat al-Shabiyya, iv. 296, v. and Ibn Taghribīdī, ili. 23, 2 sqq. say he was a Baghdad Ṣaḥāḥār (Ibn Taghribīdī says al-Muṣaffā) b. Sallār (cf. C. Dumas, Le héroï des maganistit de Harīnī, Abū Zāid de ʿṢarūd, Algiers 1917). The story at least may be quite true that the maqāmāt al-Harīnīya said to be inspired by this meeting was the first from his pen. In any case Harīnī's tricks of rhetoric (cf. the analysis in C. Baudr., Études sur les stances de H., Paris 1923) so overshadowed his subject matter in the eyes of later generations that henceforth the form became the essential characteristic of the literary genre, and it could be used to clothe the very varied subject matter. Al-Ghazzālī (d. 505 = 1111) and ʿAbd al-Kartīm al-Samānī (d. 562 = 1167) in their maḥzanat al-ʿUlamāʾ bihā yadai al-Ḥushābī wa ʿUmarī (Aḥlwardt, Pers. der Hs. Berlin, in N. 8537, 4) and maḥzanat al-ʿUlamāʾ bihā yadai al-ʿUmarī (Ḥalidji Khalifa, N. 12702) attempt to go back to the older form. But the Spanish poet Abū l-Tāhir Muhammad b. ʿUṣuf al-Shakartukī (d. 538 = 1143 in Cordova) seems to have come nearer to Harīnī in his al-Ḥamadānī al-Sarashīfīyā (in Stambol, Lallé, no. 1928, 1933). He also set himself the classical number of 50. Al-Zamakhshārī (d. 538 = 1143) on the other hand disclaims any
such affinity; his makāmas are simply moral ad-
monitions and their like counterparts, the Nawâdghā
al-Kāmil and the Awwāl al-Dhahâb, are intended to
be appreciated mainly as tours-de-force of rhetoric
(cf. the editions, printed Cairo 1310, 1325, and the
translation by Rescher in, Beiträge zur Maqâm-
literatur, Heft 6, Grieswald 1913). Whether the
Maqâmât al-Sūfīya of Shihâb al-Dîn al-Suhrawardi
(d. 587 = 1191), which deal with mystical terminology
(s. Cat. of MSS. Brit. Mus., No. 1349, 23), belong
to this class at all is doubtful. On the other hand the
Maqâmât al-Dhâwiyâs fi l-Ma‘ânî al-‘auwîsîya
(Leyden, No. 426, Cambridge, No. 1098, Escurial,
Dèrobgen, No. 542), which the author Ibn al-
Djawi (d. 597 = 1200) himself provided with a
lexicographical commentary, are certainly modelled
of those of Hariri. The al-Ma‘âmût at-Mašîhîya
of the Christian physician Abu l-Abâbâ Yaḥyâ
b. Sa‘îd b. Mârî (d. 598 = 1193; see Ibn al-Khîjî,
p. 361, 4) definitely profess to be a single imitation
of the latter. They have a hero and a narrator but
the subject matter is varied, usually of a learned and
technical nature (cf. Flügel, Verz. der Hess.
Wien, No. 384). To the end of the sixth century
A. H. seems to belong Abu l-‘Alâ‘ Aḥmad b. Abî
Bakr b. Ahmad al-Râzî al-Hanâfî who dedicated
30 makāmas to the chief kâfî Muḥî al-Dîn Abî
Hâmid Muḥâammad b. Muḥâammad b. al-Kâsim
al-Šahrâzûrî (not the same as mentioned in Ibn
Khallîkân, Bulâk 1299, i. 597). The only indication
of his date is the mention of the Kâ-
ßân of Shirûn (51, 7); this title was first borne by
His aim is to imitate Harîn but his language
is different. Like them he introduces his hero and a narrator and is fond
of elaborate descriptions, frequently dropping into
the obscene; a number of the makāmas go together
in pairs, the one being complementary to the other
(cf. the edition in O. Rescher, Beiträge zur Maqâm-
literatur, Heft 4, p. 1 – 115). Of the viiîth
century A. H. we only need mention an imitation of
Harîrî’s makāmas, 50 in number, dedicated to the
family of Djûwânî (cf. his Tarîkh al-Ǧûbûngûşûd, ed.
Mîrzâ Muḥâammad, G. M. S., xvi/1, ii, note 2)
by Śâhs al-Dîn Ma‘âdî (Muḥâammad) b. Nayr
Allâh b. al-Śâqîl in 672 (1273) (s. Hâdîkît al-Ḫalîfâ,
No. 12709) entitled al-Ma‘âmût al-Zainâbîyya (s.
Brit. Mus., No. 669, 1403, Istanbul, Nûr-‘î-Ǧûngînîyya,
No. 4273). The Syrian Egyptian poet Muḥâammad b.
‘Affîd al-Dîn al-Ṭîlimânsî al-Šâḥîb al-Zârîf († 688 =
1289) applied the form in the field of love-poetry,
sometimes with lascivious subjects (Maqâmât al-
Uthkâš, Paris, No. 3947; Fâqîhât al-Masâ‘î fi Ma‘âmût al-Ma‘âmûk and al-Ma‘âmû al-Hîtîyya wa
l-Širâşîyya, Alhwardt, Verz. Hess. Berlin, No. 8594,
4, 5). These imitations become more numerous in
the viiith century. In 730 (1329) Aḥmad b.
Muḥâammad b. al-Mu‘âṣar al-Râzî composed al-
Maqâmât al-tâhârû tâhâra (pr. Tunis 1303, Les
by M. Sollalm al-Ḥarârî, Paris 1282 (1855)).
The following were used for religious subjects, e. g. by Abu l-Fath Muḥâammad b. Saiyîd al-‘Arîf († 734 = 1334) in praise of the Prophet and his companions in al-Ma‘âmût at-alîyya wa l-
Karâmât al-‘afîyya (s. Rosen, Notices sommaires
des ms. ar. du Musée Asiatique, St. Petersburg
1881, No. 146, 10), for mysticism by Śâhs al-Dîn
Muḥâammad b. Ibrâhîm al-Dînâshûk († 727 = 1327)
in al-Ma‘âmût at-alîyya wa l-Târdîyât al-
Finally the metropolitan of Nisibī 'Abdīshāh (Ebedeyshēh) who died in 1318, composed in 1290—91 on Hariri's model 50 Syriac poems, religious and edifying in their subject matter in two parts, called after Enoc and Elias, the artificial language of which he himself elucidated in a commentary in 1316 (the first half: Paradisi dha Edēn sau Paradisi Edēn Corinha actore Mar Ebedēn Sēbeni, ed. Gabriel Cardalhi, Bâirût 1889).

(C. Brockelmann)
and asked Washmgr, the brother and successor of Mardawidh, to surrender the province to him which he did. Henceforth very friendly relations were established between them on the strength of which Makān threw off the yoke of Bukhārā. When Amīr Naṣr b. Ahmad learnt this, he despatched Ahmad, the commander of the army of Khurāsān, against Makān who was defeated after a desperate struggle of 7 months and forced to flee to Washmgr at Rayy. Ahmad followed him thither, and defeated the combined forces of Makān and Washmgr at Iṣḥākhāb (near Rayy) on 21st Rabi‘ 1, 329 (December 25, 940 A.D.). Makān was shot in the head by an arrow and fell dead. His head was cut off and sent to Bukhārā.

**Makārī** [See Makārī]

**Makdishū,** a town in East-Africa on the shore of the Indian Ocean, capital of Italian Somaliland. Population: 21,000. Settling aside the question of some rules perhaps South-Arabic, Makdishū arose in the xth century A. D. as an Arabian colony. The immigrations of the Arabs reached Makdishū in different times successively, and from different regions of the Arabian peninsula; the most remarkable one came from al-Ashābī on the Persian Gulf, probably during the struggles of the Caliphate with the Karmatians.

Perhaps at the same time also Persian groups emigrated to Makdishū; and even to-day some inscriptions which have been found in the town demonstrate that Persians from Shirāz and Naišābūr were dwelling there during the Middle Ages. These foreign merchants were, however, obliged to unite themselves politically against the nomadic (Sōmālī) tribes that surrounded Makdishū on every side, and eventually against other invaders from the sea. Therefore a federation was concluded in the same xth century A. D. and composed of thirty-nine clans, 12 from the Mukrī tribe; 12 from the Lijādatti tribe; 6 from the ‘Abndānī tribe, 3 from the ‘Asfī tribe. The trade was even more developed under such conditions of internal peace; then in the town the Mukrī clans acquired a religious supremacy and, having adopted the nihāt “al-Kaḥfīn,” formed a kind of dynasty of ‘ulamā’ and obtained from the other tribes the privilege that the kāfī of the federation should be elected only from among themselves.

But, in the second half of the xth century, Abū Bakr b. Fākhīr al-Dīn established in Makdishū a hereditary Sulṭānate with the aid of the Mukrī clans whom the new Sulṭān recognised again the privilege of giving the kāfī to the town. During the reign of Shaikh Abū Bakr b. ‘Umar, in the year 1351 A. D., Makdishū was visited by Ibn Baṭṭūṭah, who described very carefully its conditions in his Risāla. Shaikh Abū Bakr b. ‘Umar was probably a Sulṭān from the family of Abū Bakr b. Fākhīr al-Dīn; and under this dynasty Makdishū reached in the xivth and xvth century A. D. the highest degree of prosperity. Its name is quoted even in the “Maḥfīṣa Miḥfīṣ”, a book by the king of Abyssinia Zara’s Yaḥḥāb, with reference to the battle fought by the same king against the Musulmān at Gomut, December 25th, 1445 A. D.

In the xvith century A. D., the dynasty of the Murāfīr succeeded to the dynasty of Fākhīr al-Dīn. However, in the region of the韦bi-Sambhāla, viz. the true commercial hinterland of Makdishū, the Adurān (Sōmālī), who had constituted there another Sulṭānate friendly and allied with Makdishū, were defeated by the nomadic Hāwīya (Sōmālī) who conquered that territory. Thus Makdishū was cut away by the Bedouins from the interior of the land and began to decline from its prosperity. The colonial enterprises of the Portuguese and the British in the Indian Ocean hastened even more this decadence. Vasco da Gama, when he was coming back from India in 1499 A. D., sailed unsuccessfully Makdishū with his squadron; and even Da Gama in 1507 A. D. did not succeed in occupying the town. In 1532 A. D. Makdishū was visited by Dom Estevam da Gama, son of Vasco, who came there to buy a ship. In December 5, 1700 A. D. a British squadron of men-of-war stopped threateningly before Makdishū but they did not land any force and after some days went away probably to India. During the wars between the Portuguese and the Imam of Ōmān, Makdishū and other towns on the Sōmālī coast were occupied by the soldiers of Imam Sīfīl. Sulṭān (died 1116 = 1704); but after a little while the Imam ordered his troops to come back to Ōmān.

In the meantime the Sulṭānate of Makdishū was practically finished; and the town divided in two quarters (Hadar-Wa i and Ṣangān) was wasted by civil wars. The Sōmālī had so penetrated, little by little, into the ancient Arabian town that the clans of Makdishū changed their Arabic names with new Sōmālī appellatives: the “Aṣghāl” clan became the Ṣhāfi Shāhik; the “Lijādatti” were called “Shān-yī”; the “Abndānī” took the name of “Gud-mān”; and even the Muṣrī (Kaḥfīn) changed their name for the Sōmālī “Ṣīr Faḥshīh.” But in the xvith century A. D., the Bedouins (Sōmālī) Darān-doll, excited by exaggerated traditions of the wealth of Makdishū, assailed and conquered the town. The chief of the Darāndoll, who had the title of Imam, established himself in the Shāriḡī quarter; and the privilege of the Kaḥfīn about the election of the Imam was again recognised by the new masters of the town. In the first half of the xviith century A. D., Sulṭān Bargahsh b. Sā‘īd of Zanjībīr occupied Makdishū and ruled the town by means of a waqīl. In 1580 the Sulṭān of Zanjībīr leased the town to Italy, who afterwards in 1896 bought all the settlements of Zanjībīr on the Sōmālī coast.

(Enrico Ceralli)

MAKHDUM AL-MULK, whose real name is Mawlana 'Abd Allah, was the son of Shaikh Shams al-Din of Sulaiman. His forefathers immigrated from Multan and settled at Sulaiman near Lahore. He was the pupil of Mawlana 'Abd al-Kadir Sarhadi and became one of the most distinguished scholars and saints of India. He was a bigoted Sunni and looked upon Abu l-Fadl (d. 1011 = 1602) from the beginning as a dangerous man. Contemporary monarchs had a great regard and respect for him. Emperor Humayun (1537–1556) conferred on him the title of 'Shaikh al-Ilm. When the empire of India came into the possession of Shihab Shah (1546–1552 = 1599–1545) he also honoured him with the title of 'Shah al-Ilm. He was also a man of great importance during the time of Emperor Akbar (963–1014 = 1556–1605). Bairam Khan Khushan (d. 968 = 1560) exalted his position very much by giving him the subdivision of Thaknawal, which yielded an income of one lac of rupees, while Akbar gave him the title of Makhdum al-Mulk by which designation he has become known to posterity. When Akbar introduced his religious innovations and converted people to his "Divine Faith", Makhdum al-Mulk opposed the Emperor, who became very angry with him and ordered him to go on a pilgrimage to Mecca. He therefore started in 957 (1579).

He died or was poisoned in 990 (1582) in Ahmadabad after his return from Mecca.

He is the author of the following books:
1) 'Imnat al-Imnaya, a work on the chastity of prophet (cf. Badani, iii. 70).
2) Minhadh al-Tin, the life of the prophet (cf. Mufti i al-Imnaya, iii. 252).
3) Hishtiya Shaikh Mullah, a supercommentary to Dami's commentary on Ibn al-Hajibl's Kautha (cf. Mufti al-Imnaya, iii. 252).
4) Shaikh Shmad al-Tirmidhi, a commentary on Tirmidhi's Sahih al-Nabawi (cf. Badani, iii. 70).

(M. Hawaii, Ibbani)

MAKHDUMU D-JAHANiYAN. [Sec D-JAHANiYAN]

MAKLAD (BANCI), a family of famons Cordovan jurists who, from father to son, during ten generations, distinguished themselves in the study of Fikih. The eponymous ancestor of the family was Maklad b. Yariid, who was kadi of the province of Reyogh (the kura in the south-east of Spain, the capital of which was Malaga), in the reign of the Emir 'Abd al-Rahman II, in the first half of the third century A. H. His son, 'Abd al-Rahman Bak b. Maklad, was a great jurist and traditionist. He was born in Ramilin 201 (April 517) and after being in Spain the pupil of Malik b. Ans and of Yahyaa b. Yahyaa al-Lahji. He made a long journey to the East where he perfected himself in the sciences of Law and Tradition. On his return to Cordova his indisputable mastery earned him the hatred and envy of the chief Spanish jurists, especially of 'Abdi Muhammad 'Abd Alllah Ibn Martanal (cf. Ibn al-Farhashi, N°. 245; al-Dahab, N°. 572) who tried to get him sentenced to death by accusing him of impiety and heresy. Bak b. Maklad only owed his safety to the intervention of the secretary to the court of Hisham b. 'Abd al-'Aziz and was able to end his life under the protection of the Umayyad government, respected by the people of Cordova, where he died in 276 (889). Bak b. Maklad who, it is believed, was one of the first to introduce the Zahirith movement into al-Andalus [see the article Zahirith], wrote two celebrated books: a Tafsir al-Kur'an and a Musnad of Muhammad traditions, the loss of which is greatly to be regretted if we may believe the laudatory judgment passed on them by Ibn Hazm in his Kitab repeated by al-Makkar (Analec, i. 115).

The direct descendants of Bak b. Maklad devoted their scientific activity mainly to commenting on the masterpieces of their celebrated ancestor. A list of those scholars, with bibliographical references, is supplied in a little monograph devoted to the family of the Banu Maklad by Rafael de Creu y Smejanodo, Familia de jurisconsultes: Los Benemeficiados de Cordoba, Homenaje a F. Francisco Codera, Zaragoza 1904, p. 251–358.

(E. L'evi-Provençal)

MAKHZEN (A'), from khazaa, "to shut up, to preserve, to hoard". The word is believed to have been first used in North Africa as an official term in the second century A. H. applied to an iron chest in which 'Ibrahim b. al-Aghlab, emir of Ifiskiya, kept the sums of money raised by taxation and intended for the 'Abbasid caliph of Baghdad. At first this term, which in Morocco is now synonymous with the government, was applied more particularly to the financial department, the Treasury.

It may be said that the term makhen meaning the Moroccan government and everything more or less connected with it at first meant simply the place where the sums raised by taxation were kept, intended to be paid into the treasury of the Muslim community, the bit al-mal. Later, when the sums thus raised were kept for use in the countries in which they were collected and were no longer paid into the treasury of the Muslim community: and they became as it were, the private treasuries of the communities in which they were collected, the word makhen was used to mean the separate local treasuries and a certain amount of confusion arose between the makhen and the bit al-mal.

We do find in Spain the expression 'abd al-makhen but it still means slave, of the treasury.
rather than slave of the government, and it seems that it was only later in Morocco that in proportion as the state became separated from the whole Muslim community after being successively under the Omeyyads of Damascus, the 'Abdissids of Baghad, the Omeyyads of Spain and the Fatimids of Egypt that the word makhzen came to be used for the government itself.

To sum up, the word makhzen, after being used for the place where the sums intended for the bit al-mül of the Muslim community were kept was used for the local treasury of the Muslim community of Morocco, when it became separate under the great Berber dynasties: later with the Shafii dynasties the word was applied not only to the treasury but to the whole organisation more or less administrative which lives on the treasury, that it is to say the whole government of Morocco. In tracing through history the changes of meaning of the word makhzen, one comes to the conclusion that not only is the institution to which it is applied not religious in character but on the contrary it represents the combined usurpations of powers, originally religious, by laymen, at the expense of which it has grown up through several centuries. The result of these successive usurpations is that the makhzen which originally was only a chest in the treasury came to mean first the treasury itself, and the government and to represent to the Moroccan the sole principle of authority.

We know that the fundamental principle of Muslim society is that of the community and the head of this community is simply an administrator who has to exercise his functions, said the caliph 'Omar, like an honest teacher solely concerned with the interests of his pupils. Of this ideal the only part remaining in practice is that the members of the community are effectively in tutelage. In rapidly surveying the history of the Makhzen, we can see how this arbitrary government became gradually established while using the prescriptions of Islam, and how it succeeded in forming in face of the native Berber element which surrounded it a kind of Arab façade, behind which the Berbers in spite of the slowness of their gradual Islamisation, have preserved their institutions, superstitions and their independence. In this connection it cannot be too strongly emphasised that, in spite of their perhaps disputable orthodoxy, the Berbers are Muslims and consider that they belong to the Muslim community. No doubt they do not practise it very frequently but they have the pride of Islam and its intolerance; they have taken Muslim ostracism into the service of their savagey and it would be a dangerous error to think that they could be open to anti-Muslim sentiments and particularly to imagine that their religious lukewarmness ought to make them favourable to us.

No organisation was made at the first conquest by 'Omar b. Nāfr in 63 (682 A.D.). All the representatives of Arab culture that do was to levy heavy tributes in money and slaves to satisfy their own greed and to enable them to send valuable gifts to the caliph of Damascus.

It was the same in 90 (708) with Mu'āsir b. Nusair but the conquest of Spain brought over to Islam a large number of Berber tribes by promising them a share in plundering the wealth of the Visigoths. On the other hand the exactions of the Arabs and the desire to escape the demands of the caliphs facilitated the spread of Kāhidji doctrines, the many schools of which made any unity of power impossible and on the contrary increased decentralisation.

The Idrisid dynasty, which its Shafii origin gives a claim to be the first Muslim dynasty of Morocco and which completed the conversion of the country to Islam only exercised its power over a small part of Morocco. Alongside of it the Barghawati (g.v.) heretics and numerous Kāhidji emirs continued to exist. The Zanatta Milkās, Maghrāwa and Banū Ifren at a later period were no more able to effect a centralisation of power. It was not till the fifth century A.H. (11th A.D.) under the Šahādū dynasty of the Almoravids that in the reign of Ya'qūb b. Tashfin we can see the beginnings of a Makhzen which only becomes clearly recognisable under the Almohad dynasty.

It was under the latter that religious unity was first attained in Morocco. The heresy of the Barghawāti and all other schisms were destroyed and a single Muslim community, that of the Almohads, replaced the numerous more or less heterodox sects which had been sharing the country and its revenues. It may be said that the organisation of the Makhzen which we find in Morocco is fundamentally based on this unification and the measures which resulted from it. The Almohads regarded theirs as the only true Muslim community. All who did not belong to it were infidels whom it was lawful to fight, to kill, to reduce their women and children to slavery and to seize their goods and lands for the benefit of the Almohads, the only orthodox community. The Almohads were thus able to apply to all the territory of their empire the ideal Muslim principle for dealing with land, i. e. that all the lands conquered by them from non-Almohads and even from Almohads whose faith was regarded as suspect were classed as lands taken from infidels and became habīb of the Muslim i. e. Almohad community. These habīb districts are those whose occupants have to pay the tax called kharāġī. In order to levy this the Sultan 'Abd al-Mu'min had all his African empire surveyed from Gades to the Wādī Nūn.

A few years later Ya'qūb al-Manṣūr brought to Morocco the Djišaham and Banū Hīhāl Arabs and settled them on lands belonging to the Muslim community, which had been uninhabited since the destruction of the Barghawāti, the wars of the Almohads with the last Almoravids and large despatches of troops to Spain.

These Arab tribes who formed the gīsh (pronounced gish in Morocco) of the Almohads did not pay the kharāġī for the lands of the Muslim community which they occupied. They were Makhzen tribes who rendered military service in place of kharāġī. We shall find later the remains of this organisation with the gish tribes and the tribes of nāfīs. The efforts that the Marinids made to reconstitute a gish with their own tribes did not succeed and they had to return to the makhzen of Arab tribes brought to Morocco by Ya'qūb al-Manṣūr and even added to it contingents of the Ma'kil Arabs of Sus.

Under the Banū Watāt this movement became more marked and Spanish influences became more and more felt in the more complicated organisation of the central Makhzen and by the creation of new offices at the court and in the palace.
The conquests by the Christians by causing the development of the sarrasins and the fall of the Banū Ḫazm brought about the rise of the Sa'dians (q.v.) of Wādī Daula. The latter with their primitive manners as Saharan tribes and under the religious influence of the shāikhs of the brotherhoods began to try to bring back the exercise of power to the patriarchal simplicity which it was.wielded in the early days of 1-lām. The necessities of the government, the intrigues of the tribes and the wars of members of the ruling family against one another soon made necessary the constitution of a proper makhzen with its military tribes, ministers, its crown officials of high and low degree, its governors to whom were soon added the innumerable groups of palace officials which will be mentioned below.

The frequent intercourse between the Sa'dians and the Turks, who had come to settle in Algeria at the beginning of the sixteenth century brought to the court of Morocco a certain amount of eastern ceremonial, a certain amount of luxury and even a certain degree of pomp in the life of the sovereign and in that of his entourage and of all the individuals employed in the Makhzen.

It is from this time that really dates the existence of this entity, which is really foreign to the country itself, which lives by exploiting rather than governing it and is known as the Makhzen.

The increasing official relations of Morocco with European powers, the exchange of ambassadors, the commercial agreements, the ransom of Christian slaves, largely contributed to give this Makhzen more and more the appearance of a regular government. The jealousies of the powers, their desire to maintain the status quo in Morocco and the need to have a regular government to deal with them further strengthened the Makhzen both at home and abroad and enabled the Sultan Mawlay al-Ḥasan to conduct for nearly twenty years this policy of equilibrium between the powers on one side, and the tribes on the other, who kept till his death the empire of Morocco in existence, built up of very diverse elements, of which the Makhzen formed the façade.

The very humble, almost humiliating, attitude imposed on the European ambassadors at official receptions succeeded in the prestige of the Sultan and the Makhzen in the eyes of the tribes. The envoy of the Christian powers, surrounded by the presents which he brought, appeared on foot in a court of the palace and seemed to have come to pay tribute to the emir of the Muslims, who was on the horse-back. All the theatrical side was developed to strike the imagination of the Makhzen with much care and succeeded in creating an illusion of the real efficiency of this organisation in the eyes of both tribes and powers.

Under the Berber dynasty, the Ahmads, the Marinids and the Banū Wāṭṣ, the military tribes, the ḫaṣaṣṭa were almost all Arab; under the Sa'dians they were entirely Arab; to the ḫuṣṣas and Banū Ḫaṭār Arabs were added the Maṣāk Ḥaṭār of Sīr. On the other hand the Sa'dians had removed from the registries of the ḫūṭḥ a certain number of the ḫaṣaṣṭa who had paid them the ḫuṣṣa of the Sarthak for the ḫāṭār lands of the Muslim community which they occupied. These tribes, in contrast to the ḫaṣaṣṭa were called tribes of the nāḥa, that is to say, according to the etymology proposed for the word, they were under the tutelage of the makhzen (from nāḥa "tutor" or "substitute" for a father) or perhaps that they paid the tribe of the ḫuṣṣa a sum for replacing them (from nāḥa, to substitute).

From this time on, Morocco assumed the appearance which it had when France established her protectorate there. The frontier, settled with the Turks in the east, had hardly been altered by the occupation of Algeria by France and the territory of Morocco was, as it still is to-day, divided into two parts: 1. ḫīlad al-makhzen or conquered territory; 2. ḫīlad al-tāṣib or land of schism; the latter was almost exclusively occupied by the Berbers.

The ḫīlad al-makhzen, which represents official Morocco, was formed of territories belonging to the ḥabat of the Muslim community and liable to the kharaj. This land was occupied by Arab tribes, some only, others nāṭha. Morocco consisted of an Arab government (makhzen) which administered the regions liable to the kharaj, and occupied by Arab tribes, the status of which varied according as they were nāṭha or nāṭha.

The Berber tribes of the ḫīlad al-tāṣib not only refused to allow the authority of the makhzen to penetrate among them, but even had a tendency to go back to the plains from which they had gradually been pushed into the mountains. One of the main endeavours of the present dynasty, the Alawi Sharif of Tafīfāh, which succeeded the Sa'dians in the seventeenth century has been to oppose this movement of expansion of the Berber tribes. This is why Mawlay Isma'īl, the most illustrious Sultan of this dynasty, built 70 kasbas on the frontier of the ḫīlad al-makhzen to keep down the Berbers. Hence we have this policy of equilibrium and intrigues which has just been mentioned and which up till quite recent years was the work of the Makhzen.

As we have already said, it was not a question of organising the country nor even of governing it, but simply of holding their own by keeping rebellion within bounds with the help of the tribes of the ḫūṣṣa by extracting from the ports and from the tribes of the nāṭha all that could be extorted by every means. From time to time expeditions led by the Sultan himself against the unsheathed tribes asserted his power and increased his prestige.

The Makhzen, gradually formed in course of centuries by the possibilities and exigencies of domestic policy as well as by the demands of foreign policy seems to have attained its most complete development in the reign of Mawlay al-Ḥasan, the last great independent Sultan of Morocco (1877–1894). The government of Mawlay al-Ḥasan consisted in the first place of the Sultan himself, at once hereditary and also, if not exactly elected, at least nominated by the "a'lmā" and notables of each town and tribe from among the sons, brothers, nephews and even the cousins of the late ruler. This proclamation is called lāli. It is in general he who takes control of the Treasury and of the troops when the moment comes to assume the right of succession. It sometimes happens that the late sovereign has nominated his successors, but this does not constitute an obligation on the electors to obey it. There is then no rule of succession to the throne.

Formerly there was only one vizier, the grand vizier; the grand vizierate, a kind of Home
Ministry, was divided into three sections, each managed by a secretary (kāthīb):
1. From the Strait of Gibraltar to the Wādī Ḳiṣr Regret.
2. From Bū Ḳiṣr Regret to the Sahara.
3. TāṬīlīl-

In the reign of Sidi Muhammad (1859–1873), the more frequent and intimate relations with Europe and more particularly the working of the protectorate made it necessary to found a special office for foreign relations, and a warr al-ḥārīr, literally Minister of the Sea, was appointed. This does not mean minister for the Navy, but for all that came by sea, i.e. Europeans. This minister had a representative in Tangier, the nābi al-sulṭān, who was the intermediary between European representatives and the Central Makhzen. His task was to deal with European complaints and claims from perpetual settlements and to play off against one another the protégés of the European powers, who were certainly increasing in numbers and frequently formed an obstacle to the traditional arbitrary rule of the Makhzen. The régime of the consular protectorate, settled and regulated in 1880 by the Convention of Madrid, had also resulted in discouraging the Makhzen from extending its authority over new territory.

The exercise of this authority was in fact automatically followed by the exercise of the right of protection and from the point of view of resistance to European penetration, the Makhzen had everything to gain by keeping in an apparent political independence the greater part of the territory which it thus escaped the influence which threatened in time to turn Morocco into a regular international protectorate.

By a consolatory native policy and cautious dealing with the local chiefs, the šahībks of the zirwīs and the Sharīfī families, the Makhzen was able to exert even in the remotest districts a real influence and never ceased to carry on perpetual intrigues in order to divide the tribes against one another.

It maintained its religious prestige by the hope of preparation for the holy war which was one day to drive out the infidels and sought to penetrate by spreading the Arabic language and the teaching of the Kaʿāfūn and gradually substituting the principles of Muḥammadan law of the šīrī for Berber customs. In a word, it continued the conquest of the country by trying to complete its Islamisation and making Islam permeate its customs.

In the reign of Mawlay Ṣalāḥ, the Makhzen consisted of the grand vizier, the warr al-ḥārīr, minister of foreign affairs, the 'ṣullīf — afterwards called minister of war —, the ṣāḥīb al-ummarāʾ, — afterwards minister of finance —, the kāthīb al-ṭikṣiyī, minister for complaints, who became minister of justice by combining his duties with that of the kādī l-ḥaṣrāt, Kādí of Kāḍīs. These high officials had the offices (bābīs, pl. bābīs) in the Palace of Ṣaḥat.

The offices were under the galleries which were built round a large courtyard. At the top of the māskwar was the office of the grand vizier, beside which was that of the kādī al-mashwar, a kind of captain of the guard, who also made presentations to the sulṭān. The kādī al-mashwar was in command of the police of the māskwar and he had under his command the troops of the ṣīsī, makhkwarīya, māmakhriya (hānīf — sg.: hānīf) etc., as well as all the bodies of servants outside the palace: the ṭarrāt al-ruṣūf, grand-master of the stables, the ṣanṭāqīya, who had charge of the sulṭān's encampments.

In addition to these bābīs of the māskwar, mention must be made of an individual, who as was shown in recent times could play a more considerable part in the government than his actual office would lead one to expect. This is the ḥāṣib (q. v.), literally the "curtain", i.e. an official placed between the Sulṭān and his subjects like a curtain. His bābī was situated between the māskwar and the palace proper and he had charge of the interior arrangements of the Sulṭān's household. Under his orders were the various groups of domestic servants (hānīf al-ḥāḍhiliyīn), makhkwarīs, who looked after the washing arrangements, and those who attended to the beds, etc., etc.; he also commanded the eunuchs and even was responsible for the discipline of the women of the Sulṭān, through the ʿarīfs and mistresses of the palace. The ḥāṣib is often called grand chamberlain, although he does not exactly correspond to this office.

Around these officers gravitated a world of secretaries of different ranks, of officers of the ṣīsī, then the kādī al-ṭāʿāt, who was in theory in command of 500 horsemen, the kādī al-malāʾa, who commanded 100 down to a simple ṣimṭāʾīm. All this horde of officials, badly paid when paid at all, lived on the country as it could, trafficking shamelessly in the influence which it had or was thought to have and in the prestige it gained from belonging to the court, whether closely or remotely. The influence of these court officials spread throughout the regions controlled by the organisation of Makhzen officialdom, which contributed to the centralisation of authority and its profits.

In this organisation it may be noticed that the authority of the Makhzen properly so-called, i.e. of a lay power, continually increased at the expense of the religious power by a series of changes. No doubt the basis continued to be religious, but the application of power became less and less so and the civil jurisdiction of the kādī of and of the Makhzen more and more took the place of the administration of the šīrī by the kāḍīs, which finally became restricted to questions of personal law and landed property.

The authority of the sulṭān was represented in the towns and in the tribes by the kādīs, appointed by the grand vizier and by the muḥtārīs, whose office owed its origin to the religious law of the šīrī. The muḥtārī supervised and controlled the gilds, fixed the price of articles of food and inspected weights and measures and coins.

The tax of the nāḥīt, which represented the old khaḥāṣ, was levied on the makhkwar tribes by the kādī of these tribes. It was one of the principal causes of abuses: the amount of this tax was never fixed and the sums which came from it were in reality divided among the kāḍīs, the secretaries of the Makhzen and the vizier without the sulṭān or the public treasury getting any benefit from them.

The grand vizier also appointed the nāṣir officers, who from the reign of Mawlay ʿAbd al-Rahmān had been attached to the local nāṣirs of the hābas of the mosques and sanctuaries. The kāḍīs were appointed by the kādī l-ḥaṣrāt; at the present day they are appointed by the minister of justice.
They propose the 'นิยม but do not actually appoint them. The financial staff, umanā, who control the customs, the possessions of the Makhzen (al-amlāk), the mustafādāt (market-dues and tolls etc. called 'mukārā'), the controller of the bit al-mā'ī (popularly abn 'l-mawāriq) i.e. the official who intervened to collect the share of the Muslim community from estates of deceased persons and who also acted as curator of intestine estates (wasīl al-adawāy). All these officers were appointed by the amīn al-umānā who was later known as the minister of finance.

This organisation was completely centralised i.e. its only object was to bring all the resources of the country into the coffers of the State and of its agents, but there was no provision for utilising these resources in the public interest. No budget was drawn up, no public works, no railways, no navy, no commerce, no port, nothing at all was provided for. Military expenses were confined to the maintenance of a regiment commanded by an English officer, of a French mission of military instruction, of a factory of arms at Fās directed by engineers and of the building of a fort by a German engineer. These were really rather diplomatic concessions to the powers interested than a regular military organisation. In the spirit of the Makhzen the defence of the territory was to be the task of the Berber tribes, carefully maintained out of all contact with Europeans behind the elaborate display maintained by the court.

In the event of war, the Makhzen, faithful to its system of equal favour, purchased arms and munitions from the different powers and kept them in the makina of Fās to be able when necessity arose to distribute them to the tribes when prosecution of a holy war.

The expenses of the education service were limited to the very modest allowances granted to the 'nūrīn al-Karawīn in Fās. These allowances were levied from the 'ṣādīn and augmented by gifts made by the Sultan on the occasion of festivals (šidā).

Nothing was done for public health and one could not give the name of hospitals to the few mu'tamān to be found in certain towns, where a few miserable creatures lived in filth, receiving from the 'ṣādīn and the charity of the public barely enough to prevent them dying of hunger and of course without receiving any medical assistance.

On the repeated representations of the Powers the Makhzen had ultimately delegated its powers to the members of the diplomatic corps in Tangier, which had been able to form a public health committee in order to be able to refuse admission to infected vessels if necessary. In spite of its defects, the Makhzen constituted a real force; it formed a solid bloc in the centre of surrounding anarchy which it was interested in maintaining, to be able to exploit it more easily on the one hand and on the other to prevent the preservation in the country of any united order which might become a danger to it.

In brief we may say that the Makhzen in Morocco was an instrument of arbitrary government, which worked quite well in the social disorder of the country and thanks to this disorder, we may add, it worked for its own profit and was in a way like a foreign element in a conquered country. It was and still is a regular caste with its own traditions, way of living, of dressing, of furnishing, of feeding, with its own language, al-lughāt al-makhzamiya, which is a correct Arabic intermediate between the literary and the spoken Arabic, composed of official formulae, regular clichés, courteous, concise and binding to nothing.

This Makhzen which was sufficient in the old order of things which it had itself created to endure and maintain, was, forced, if it was not to disappear at once, to undergo fundamental modifications from the moment this state of things had rendered necessary the establishment of a protectorate.

Various changes have always been made in the old regime, which has been a matter of regret to many as reducing sources of profit. The vizierate of foreign affairs and that of war have been handed over to the Resident-General, that of finance to the Director-General of finance who administers the revenue of the empire alike to those of a regularly organised state.

The director-generalships of agriculture and education, which are regular ministries are held by French officials as are the management of the postal service, telegraph and telephone and the board of health.

Two new vizierates had been created, that of the regal domains (al-amlāk) and that of the ḥubūs. The vizierate al-amlāk has just been suppressed and the domains are administered by a branch of the finance department. The vizierate of the ḥubūs is under that of the Sharifian affairs. This organisation represents the principle of protectorate in the Moroccan government itself and in order to realise "the organisation of a reformed Sharifan Makhzen" in keeping with the treaty.

Mangin, Notes sur l'Histoire de Laghouat, for the Algerian use of the word makhzen.

MAKHZUM (BANû) along with the Omayyads, the aristocratic clan of Mecca. This assertion is contrary to the theory popularised by the Sîra in which that of the ancestor of the aristocratic families was Kūsîy 4, v. About the middle of the viith century A. D. we find that among the clans of Kūrâsh they that held in most consideration was the Banî Makhzum, which traced its descent through Yakazâ b. Murr to the legendary Fâr (Kurâsh) without going through Kûsîy. At this period the Makhzum controlled everything at Mecca except the sanctuary. They alone were able to counterbalance the growing influence of the Omayyads. It is at this time that their name becomes occasionally synonymous with Kûrâsh (Ibn Durâid, Kitâb al-Ishâ'ishâh, ed. Wustenfeld, p. 94, 95). The Makhzum seem to have owed their primacy to Mughîrâ b. 'Abd Allah, a contemporary of 'Abd al-Mutâjalib and grandson of the eponymous ancestor of the clan. The adjective Mughîrâ thus comes to be used for Makhzûm. His son, Alîhâm b. al-Mughîrâ, is even said to have had the title "lord (rabâ) of Mecca" (Ibn Durâid, Išâ'ishâ, ed. Wustenfeld, p. 93, 1 sqq.). The Kûrâsh are said to have dated one of their eras from the death of this individual, if the reference is not to Walî b. al-Mughîrâ. Tradition hesitates between these two Makhzûms. The influence of the Makhzum was preponderant in the mulaq, or council of nobility, which decided affairs at Mecca. It is frequently a Makhzûm who speaks in name of the mulaq, as for example in the discussion with Muâmmad, at the beginning of the preaching of Islam. They are believed to have opened up to Meccan commerce the principal routes to foreign markets. For their intelligence, their activity — they were said to be "ardent as
bear no grudge against the Makhzūmīs. They even chose members of the clan for the office of governor of Madina, hitherto reserved for an Omaiyad. After, as before the Hijra, the Makhzūmīs continued to be reckoned among the richest capitalists in Mecca. They had about 5,000 mithqāl of gold laid out in the caravan which was the cause of the battle of Badr. It was to them that Muhammad applied on the eve of Ḥijra for a loan of 40,000 dirhams. Their systematic opposition to authority put them completely out of the running for any of the great administrative offices in which the members of the Kuraish clans enriched themselves. Their aristocratic pride did not prevent them however from seeking profit in commerce and even in industry. We know this from the story of ʿOmar b. ʿAlī Raḥbāʾ [q. v.], the most famous of the Kuraish poets. ʿOmar kept 70 of his slaves employed in the weaving-mills established in Mecca (Aghānī, 1. 373). Another Makhzūmī, a contemporary of ʿOmar, was known as the monk (ḥabbīb) of Kuraish" on account of his merit and his asceticism prayer (Ibn Saʿd, Ṣaḥīḥ, ed. Sachau, v. 153 sq.). Makhzūmīs were known that this ascetic and continually quoted on occasion of ʿIḥām and Ḥadiṭh is the Makhzūmī Saḥīb b. al-Mukayyib [q. v.] one of the most famous ʿārbīs of the first century a. h.

With the coming of the ʿAbbasīd influence passed over to the Iranians. Gradually the Makhzūmīs, like other Kuraish clans, fell into obscurity. At the present day there are still families bearing the name Makhzūmī. It remains to be seen to what extent they are justified in claiming descent from the Makhzūmīs, if it is not in the female line as in the case of ʿSirāj al-Dīn al-Makhzūmī al-Husaynī (cf. Brockelmann, G. A. L., ii. 98). Kalkashandī (Ṣaḥīḥ al-ʿAfdārān, Cairo, i. 213) justly remarks that the tribe of the Banī Khalīd which led a nomadic life around Ḥims has only the name in common with the great Makhzūmī clan. The male line from Khalīd b. al-Walid is said to have become extinct very early (cf. Ibn al-Aḫīr, Ṣaḥīḥ al-Qabāb, v. 249, infra), a statement disputed by the ʿSirāj al-Dīn mentioned above.

here, we only give the dates of his birth and death, 602 (1202) and 672 (1273). The latter date is given by Ḥajdūji Khalifa, ii. 104, No. 2103. His grandfather, according to J. H. Hottinger, Promptuarium, p. 75 sqq., died in 606 and his father in 636.

Al-Makin’s world-chronicle consists of two parts, the first of which deals with the pre-Islamic world from the Creation onwards and the second with Muslim history down to 658 (1260). The work is so planned that the whole history of the world is given in the form of successively numbered biographies of its most important men. Near the beginning the discussion of several cosmological questions and the several climaxes is inserted. Down to 586 B.C. it is based on Biblical history; the enumeration of the biographies begins with Adam as No. I. For the period after the destruction of Solomon’s temple there comes on the usual scheme the dynasties of Eastern Asia, which in turn are succeeded by Alexander, the Romans and the Byzantines. In this and in the second part, as the author himself tells us, he is following the model of al-Ṭabarî’s chronicle.

The work which is entitled al-Maǧmū‘ al-nabûrak exists in many manuscripts. The first part is regularly quoted with a Latin translation by Hottinger, Scurma Orientalis (1658) in the chapter De sex lugonarum orientalium in theologias historia on various facts of history. The chapter on Alexander the Great has been edited in Ethiopic and translated into English by E. A. W. Budge, The Life and Exploits of Alexander the Great (1890). The second part was edited and translated by T. Ebers in the title Historia Saracena... a Georgia Flacianus, 1625; English and French translations appeared soon after. Many emendations were given by Kohler in Elekhnorn’s Repertorium, vii—ix., xiv., xvii. A critical edition of the whole work is an urgent desideratum. How important it is for Oriental church history has been shown by A. v. Gutschmid, Verzeichnis der Patriarchen von Alexandria = Kl. Schr., ii., 1890, p. 395—525. This is sufficient to show how necessary would be a comprehensive investigation of al-Makin’s place in his own tradition, which could only be undertaken on the basis of a certain text. Besides it is evident that al-Makin used old sources independently which are not known to his immediate predecessors like Euthychius [q.v.] and his contemporary, much quoted by him, Ibn al-Raḥib (Brockelmann, G.A.L., i. 349 where of course it should be 669 = 1270) with whom he agrees in the numbering of the biographies which are also used by al-Ṭabarî. In the chapter on Alexander the Great, the Ethiopic translation of which edited by Budge agrees very closely with the Arabic original, are found long word for word extracts from the very old Heimetic work in Arabic entitled al-Iṣṭa‘ūbaš (cf. Stein- schneider, Zur pseudogr. Lit., 1882, p. 37, Die arab. Übers. a. d. Griech., Centralbl. f. Bibliothekswesen, chap. xii., 1893, p. 88), which had been previously copied in the Ghayat al-Ḥakim of al-Maṣṣūr al-Ḍīn, a Maghribi man of letters and bibliographer, born at Tiṣnaym (Tlemcen, q.v.) c. 1000 (951—92) d. at Cairo in Djamā‘īh 1041 (Jan. 1632). He belonged to a family of scholars, natives of Maḥṣūra (about 12 miles S.E. of Miṣla, in the present province of Constantine in Algeria). One of his paternal ancestors, Muḥammad b. Muḥammad al-Maṣṭakari, had been chief šāfiʿ of Fāṣ and one of the teachers of the famous Liṣān al-Dīn Ibn al-Ḥaḍhrāt of Granada. He himself received a wide education from his early youth; his principal teacher was his paternal uncle Abū ʿUṯmān Sayd (d. at Tlemcen in 1030 [1620—21]; on him cf. Ben Cheneb, Idżāta, § 103). He then left his native town and went to Marrakush and Fāṣ where he became Ḥizmān and Muṭṭir of the great mosque of al-Karawīyīn from 1022 (1613) to 1027 (1617). He then set out for the East in order to make the pilgrimage to the Holy Places; after doing so he came to Cairo in 1028 (1618) where he stayed for some months and married. In the next year he made a journey to Jerusalem then returned to Cairo. In 1037 (1627) he again made the pilgrimage which he was to repeat several times later. At Mecca as well as at Medina on these occasions
he taught ḥudunn in a way that attracted much attention. He again made stays at Jerusalem and Damascus where he was received at the Madrasa Ḥakimīyya by the learned Aḥmad b. Shāhīn. In this city also his lectures on Muslim Traditions were largely attended. He then returned to Cairo and while he was preparing to return to Damascus to settle there permanently, he fell ill and died.

In spite of his long stay in the East, it was in Morocco that al-Maḳḵārī collected the essential materials for his work as the historian and biographer of Muslim Spain, especially at Marrākūsh in the library of the Ǧādīd B. Shāhīn (now in part in the Escorial; this is how al-Maḳḵārī consulted among other works the unique copy of the Masnad of Ibn Marzūk: cf. Ḥespārī, v. 8 sq.). Indeed his masterpiece, written in the East at the suggestion of Ibn Shāhīn from materials collected by him in the Magrib, is a long monograph on Muslim Spain and on the famous encyclopaedist of Granada, Liṣān al-Dīn Ibn al-Kaṭḥīb, Naṣf al-Tīb min Ghyān al-Andalus al-Kaṭḥīb sanawī waṣīrata Liṣān al-Dīn Ibn al-Kaṭḥīb, an immense compilation of historical and literary information, poems, letters and quotations very often taken from works now lost. It is this that gives the Naṣf al-Tīb an inestimable value and puts it in the first rank for our sources of Muslim Spain from the conquest to the last days of the "Reconquista". Even for the later period it is the only Arabic source that we still possess.

The Naṣf al-Tīb consists of two quite distinct parts: a monograph on the history and literature of Muslim Spain and the monograph on Ibn al-Kaṭḥīb. The first part is divided as follows: 1. physical geography of al-Andalus. 2. Conquest of al-Andalus by the Arabs, period of the governors. 3. History of the Omayyad Caliphs and of the petty dynasts (Mushīḫ al-tawīlīf). 4. Description of Córdova, its history and its monuments. 5. Spanish Arabs who have made the journey to the East. 6. Orientals who have made the journey to Spain. 7. Sketches of literary history, the intellectual and intellectual qualities of the Spanish Arabs. 8. The "reconquista" of Spain and the expulsion of the Muslims. The second part contains 1. Origin and biography of the ancestors of Ibn al-Kaṭḥīb, 2. biography of Ibn al-Kaṭḥīb, 3. biographies of his teachers, 4. letters in rhymed prose of the chancellers of Granada and of Fās, sent or received by Ibn al-Kaṭḥīb (mukḥlaṭ: 5, a selection of his works in prose and verse. 6. analytical list of his works.

The Naṣf al-Tīb was printed in full at Būlāk in 1279 and at Cairo in 1302 and 1304 (4 vols). The first part was published at Leyden from 1825 to 1861 under the title Anales de la literatura de España, by R. Dozy. G. Ducat. L. Krebs and W. Wright. In 1849. D. Pascual de Gayango had published in English, at London, under the title The History of the Spanish Dynasties in Spain, a version adapted from the part of the first half which deals with the history of Muslim Spain. A critical translation of this monumental work in its entirety remains to be done.

Al-Maḳḵārī also wrote other important works, among which special mention must be made of a lengthy monograph on the famous Ḥakīm b. Ḥakīm al-Ǧādīd [q.v.] Aḥsāʾ ar-Raʾīf fi Aḥṣāʾ al-Kādī Ṣayf al-Dīn b. Ǧādīd publ. at Tunis in 1322 in 2 vols. A list with reference to known MSS. will be found in Brockett and Ben Cheneeb.

AL-MAḲḴARI, ABU TʿLĪB MUḤAMMAD IBN ʿĀLĪ AL-HĀRĪTHI, d. in Baghdād in 386 (996), an Arab muḥādīṭ and mystīq, head of the theological madhāba of the Sālimīya [q.v.] of Baṣra. His principal work is the Kiti al-Kūlub (Cairo 1310, 2 vols.) of which have been copied by al-Ǧanāzī into his Ḥadhī al-Qanāzī al-Dīn.

MAḲḴARĪ, the coastal region of Balūṭīsīan, extending from about 59° to 65° 35' E. and inland from the coast to the Sīyāhān Range, a little beyond 27° north. This tract was known to the Greeks as Gedrosia, and was inhabited by the Icthyophagi, or fish-eaters, the Persian translation (Makhteqedar) of whose name supplies a fanciful derivation for its present name, which is traced, with more probability, to a Dravidian source.

In Persian legend Nakhsh深深地 of Iran captured the country from Afārīsāb of Turān, and both Cyrus and Semiramis marched through it. In 325 B.C. it was traversed by Alexander in his retreat from India, and fell, later, under the dominion of the Sasanians, but was occasionally absorbed into the Hindu kingdom of Sind. It was annexed by the Arabs in the course of the rapid expansion of the empire of Iṣlām in the early days of the caliphate, and it was through Makrān that Muḥammad b. Ǧāshīn invaded Sind in 711 A.D., and established the first Muslim settlement to the east of the Indus. Marco Polo mentions it in 1290 as the most westerly part of India, under an independent chief, probably a Muslim, who found it unnecessary to make any pretence of submission either to Persia or to India. Indigenous tribes ruled the country until they were ousted by the Gokhs from India, but the Persian monarchs reckoned Makrān as part of Balūṭīsīan, which was included in the great province of Kirmān. In the middle of the eighteenth century the Ahmadīr Khān b. Kalat established their suzerainty over the country, and in 1789 Colonel Goldsmit noted the frontier between Persian Makrān and eastern Makrān, which remains subject to
the Khân of Kalât, though British intervention has frequently been necessary to compose the disputes between him and the dominant tribes of the province, Gîkis, Nîshîrwanîs, Bizandjans and Mîwâris. Cultivators of the soil are Balûcîs, and tribes of inferior social status and the fishermen form a class apart.

The climate of the country varies with the altitude. Near the coast it is uniformly hot, but not unpleasant; in Keç or Keçj, from which eastern Mârkân is known as Keç Mârkân, the winter is dry and cool, the summer intensely hot; and higher still Pandjûr is bitterly cold in winter and moderately hot in summer.

(T. W. Haig)

AL-MÂKRIZÎ ABU 'L-ÂRÎBIS AHMAD B. 'ÂLI B. 'ABBAD AL-KÂDIR AL-HUSAINI TÂFI AL-DIN, Arabic historian, b. 766 (1364) at Cairo, grandson of the Khânîf Ibh al-Sâîgh who educated him according to his school; but on attaining his majority he went over to the Shàfîîs, attacked the Ǧàfâfîs and even showed Zâhirî tendencies. He began his career as deputy kâdi in Cairo and rose to the charge of al-Fâkitî, his own mosque and teacher of tradition at the al-Mu'ayyadiya madrasa. In 811 (1408) he was transferred as administrator of the warf at al-Kâfânîya and at the Nûrî hospital and also as teacher at the al-Ashrafîya and al-Kâfiya madrasas to Damascus. About ten years later he returned to Cairo as a private individual to devote himself entirely to literary work. He spent five years in Mecca after his pilgrimage in 834 (1430). He died in Cairo after a long illness on Thursday the 27th Ramadân 845 (Feb. 9, 1442).

His literary activity began with his local history of Egypt dealing mainly with topography. He then transferred his interest to neighbouring lands as far as Abyssinia and deals also with questions of social history such as weights, measures and coinage. His principal work, the Khîfî, seems however to be based on a large extent on that of a predecessor, al-Wâhidî, which he simply appropriated without acknowledgement according to al-Sâkhâwî’s well-founded charge. After a very long full and geographical introduction he begins his description of the country with Alexandria and goes with particular thoroughness on the topography of Fustûj and Cairo. On the sources of the work see Rhuvon Guest, J. F. A. S., 1902, p. 103 sqq. It is entitled al-Masawi' wa l-Tâhirî fi al-Khîfî wa l-Âtherî, Bâbûli, 1270, 1274, 1296 and 1308 vols., ed. G. Wiet (M. J. F. A. O., v.-i.-y. 1911-1927) transl.: Mârkîzî, Histoire de l’Egypte, trad. de l’arabe et accompagné de notes hist, et géogr., by E. Blochet, Paris 1908; Description topographique et historique de l’Egypte by M., transl. by U. Bounan and P. Casanova (M. F. A. O.), i.-vi., 1893-1920; cf. Tâfi al-Din Ahmad al-Mârkîzî, Narratio de expeditionibus adversus Dimyatham, ed. H. A. Hamaker, Amsterdam 1824; Mârkîzî’s Geschichte der Capiten of F. Wustenfeld, Götttingen 1845; P. Ravaisse, Essai sur l’histoire et la topographie du Caire, après M., Paris 1890; P. Casanova, Histoire et description de la citadelle du Caire d’après M., ib. 1894-1897. Synopse of the Khîfî were made by Ahmad al-Hanafî under the title al-Rawâya al-bikäyîa (s. Persich, Kat. Ar. His. Gotka, 1683) and Abu ‘l-Sûrî Muhammad al-Bakîr al-Sîjdîkkî in the year 1054 (1644) under the title Kâfî al-Aslîr min al-Khîfî fâ l-Âtherî (Leyden, 1903; Paris, 1876—1876; St. Petersburg, As. Mus., 1875). Ahmad Tâmir Pâshâ in La revue de l’Ac. ar., iii. 1934; cf. Vollers, Note sur un ms. ar. abrêvié de M. in Bull. de la soc. hédiw. geogr., 3 series, No. 2, p. 131—139. As a supplement to his main work he then wrote a history of the Fâsitîns (Iltîzâs al-Hanafî fâ l-Âtherî al-Ammâ wa l-Âlîfâf), published from the unique Gotha autograph by H. Bans. He also describes the Ayyûbîs and Mallûks 577—840 (1115—1250) (al-Sulûk li-Miṣrîfîat Durâlî al-Malikî, MSS. s. G. A. L. ii. 39; Histoire des sultans Mallûks, transl. by Quatremère, 2 vols., Paris 1827—1844), which was continued by al-Sâkhawî (Muhammad b. ‘Abd al-Rahmân, 902—1497) under the title al-Tîr al-masîtîk fî Dhâlîl al-Sulûk (Continuation de l’histoire des Mallûks de M. par El-Sâkhawî, texte ar. d’après le ms. unique conservé à la bibliothèque, rev. et corr. by A. Zeki Bey, Rev. d’Égyp., ii., iii., Bâbûli 1896—1897, ed. E. Gaillardot, Cairo 1897) and by Ibn Taghribîrî (s. E., i. 103). As a further supplement to the Khîfî, Mârkîzî planned two large biographical works but they remained unfinished on account of the enormous scale on which they were planned. He intended to write the lives of all the rulers and famous men who had lived in Egypt in 80 volumes entitled al-Maṣfûfî but was only able to complete 16 of them of which 3 are preserved in autograph in Leyden (Cat. coll. ar., No. 1292, perhaps also 1105) and one in Paris (No. 2144), see G. Dozy, Notice sur quelques ms. arabes, Leyden 1847, p. 8—16, a portion in van Vloten, Z. D. M. G., i. 224. His collection of biographies of contemporaries entitled Durâlî al-Âmar al-arîfî fî Tarâgînîn al-Âlînîn al-mufîda intended to be arranged in alphabetical order also remains as a portion of the autograph of vol. i., Alîf and a part of 3 (Jan. Gotha, 1771). He also dealt with a number of historical questions in separate essays, some of which are preserved in two collected volumes, Paris, No. 4657 and Leyden, No. 2408 (the latter in part written by the author himself, and in part revised by him, see G. Dozy, Notices, p. 17). The most important of these deals with the history of the Umayyads and ‘Abbasîds (al-Nizîr) wa l-Tâhîrîn fî-mâ bâina Bânt Umâyâ wa Bânt Hâshîn, ed. G. Vos, Leyden 1888, and Dîghî ni nûrûs bânt Bânt E. L. E. B., Vienna No. 1887; al-Durâr al-mu’dîdî fî Târîkh al-Dawla al-islâmiyya, Cambridge, Preston, p. 2), the Arab tribes who migrated into Egypt (al-Bayyân wa l-Fîrûz ‘anwa al-Arîf min al-Âmar), ed. Wustenfeld, Götttingen 1847), the geography of Hadramawt based on enquiries made of pilgrims from there whom he met in Mecca (al-Târîf al-gharîbîn min ‘Âlîb Wâlid’I ‘Adrî bi-Hadramawt al-nîbîba, ed. P. Nokwowy), Bonn 1866), the Muslim princes in Abyssinia (al-Imâm al-Âlbâr man bi-‘Arîf Hâshînî al-Ma’âmîn, Cairo 1895; ed. P. Th. Rink, Leyden 1790, cf. G. Guidi, St. testo del Imâm d’al-Ma’âmîn in Contesto della nascita di Mich. Amari, Palermo 1910, ii. 387—394), on the Zîyânîs in Tunisia (Tarâgînîn Malikî al-Chahr, Leyden, op. cit., according to Dozy’s hypothesis, originally a portion of the Durâr al-‘âmîdî), Islamic coins and
measures (Nuskhah al-Uqlid fi Umur al-Nu'ayd, Cairo 1298, ed. O. G. Teyschen, Rostock 1977; Texte des mosaiques musulmanes, transl. by S. de Sacy in Mag. orient. by Millin, 1797, p. 427; ibid., p. 38 sqq., revised reprint, Paris 1977, an edition revised by the author Shams-ud-Din al-Uqlid fi 'I'tikar al-Nu'ayd, printed under the title al-Nu'ayd al-kadima wa 'l-Ishtiyam, Stambul 1298 in a collected volume; Risalat al-Makārizi wa l-Murā'id al-gharīna, ed. O. G. Teyschen, Rostock 1800). He also wrote a general geography under the title Ljāni al-Askār min al-Rawd al-mutaffīr (Berlin, N°. 6049, Cairo, v. 40) what work he drew upon for this is still uncertain; in Paris, N°. 5919, al-Idrīsī's Nisbat al-Mustawāk fi 'khitāb al-Asfāq is said to be the basis; Levi-Provençal, Loui. Historien des Chorfa, p. 361 identifies it with the al-Rawd al-mutaffīr fi Kabaar al-Asfāq mentioned by Hādījī Khāliṣa, ii., N°. 6598 of Abū Ḥašim ʿAlāʾ Muḥammad b. Ṭābiʿ al-Muṣṭaṣfī al-Ḥimārī, which is said still to exist in the Karawīn mosque of Fez. In some of these shorter essays he touches on theology, a subject he does not elsewhere deal with, dogmatics in the essay composed in 813 (1410) entitled al-Bayān al-muṣaffā fi 'l-Fuqūn wa-l-Tajallih of the autograph of which is in Leyden. Amin, N°. 188 (cf. also Cairo, vi 565), Taṣādīt al-Tajallih (in Paris) and tradition in lectures on the family and domestic arrangements of the Prophet, which he delivered in Mecca (Imāma al-ʾAṣālim min al-Bulūq wa-l-Muḥādib in 6 vols.; Gotth. 1539, Stambul, Kopula, N°. 1004). To supplement this work, towards the end of his life, he planned a work which beginning, with the Creation, was to be also a general geography to give the genealogies of the Arab tribes and the history of the Persians down to the 8th century under the title al-Khābat min 'l-Baḥār, at which he was still working in 844 (1441) (parts in the autograph Stambul Aya Sophia, N°. 3352 and Fath, N°. 4338—4341, others in the copy Aya Sophia, N°. 3393—3366, Stras.-burg. v. Noldeke, Z. P. M. G., xl 306, cf. T. Lauer in Islamic., i. 357—364). Even later than this work which he must have written there is the essay dhaw al-Safā fi Ḥaṣāfīj wa-l-Tanzih al-ʿUlbī (in the Leyden collected volume and also in Leyden, N°. 1080, Br. Mus., p. 669).

MAḴRĪ[ZI (See SHARIF.)

MAKS, toll, customs duty, is a loanword in Arabic and goes back to the Arabic maks, cf. Hebrew makṣ and Arabic maṣṣ; one of the forms was written also as makṣ, the collector of customs. According to the Arabic tradition preserved in Ibn Sallān even in the fatīhah there were market-dues called mabs, so that the word must have entered Arabic very early. It is found in Arabic papyri towards the end of the first century A.H. Becker has dealt with the history of the mabs especially in Egypt, and we follow him here. The old law books use mabs in the sense of saqā, the tenth levied by the merchants, more properly the equivalent of an excise duty than of a custom. They still show some opposition to the mabs, then give it due legal force, but the word continued to have unpleasant associations, cf. the hadīth: 'ama qašā'a t-makṣ fi l-nār: "the tax-collector will go to hell"; Goldziher has suggested that the Jewish view of the publican may have had some influence here.

The institution of the customs duty was adopted by Islam during the beginning of the Omayyad period or shortly before it. While theological theory demanded a single customs area in Islam, the old frontiers remained in existence by land and water, and Egypt, Syria and Mesopotamia were separate customs areas. The amount of the duty in the canon law was settled not so much by the value of the goods as by the person, i.e. the religion of the individual paying it; but in practice, attention was paid to the article and there were preferential duties and no attention was paid to the position of the owner in regard to Islam. The laws of taxation were very complicated and graduated; the duties rose in course of time from the tenth (ṣiqqa) to the fifteenth (farāj).

The Egyptian maks was levied on the frontier at al-ʾArīṣh and in the ports (Cambridge) (ʿAbd al-ʿAlāʾ, al-Kusair, al-Ṭūr and al-Suwaif but there was also an octroi to be paid in al-Fuṣālī at a place called Maks. This name is said to have replaced an old ʿUm al-Dunān and then became identified with the Maks = custom-house of Cairo. All grain had to pass through here before it could be sold and two dirhams per artaba and a few minor charges had to be paid on it. Further details of the administration of the maks in the earliest period are not known but there are references towards the end of the first century A.H. to a gāhī maks ʿāṣur in papyri and in literature also.

The conception of the maks was extended in the Fatimid period when all kinds of small dues and taxes became known as mubāṣ, especially emphasizing the already mentioned unpleasant associations of the word — the unpopular ones which the people regarded as unjust. Such occasional taxes had been levied from time to time in the early centuries of Islam. The first to make them systematic was the dreaded financial secretary and noted opponent of ʿAlī b. Ṭūlūn, ʿAlī b. al-Muqaddabīr. The latter introduced not only an increase in the ground-tax and the three great monopolies of osiers, fisheries and soda (in connection with which it is interesting to note a reversion was made to old Roman taxes), but also a large number of smaller taxes which were called mabīṭin and mubāṣ and included among the hāṣ, the taxes to be paid according to lunar years. Such taxes (known as mubāṣ from the Fatimid period and later as maṣṣīm, ḥimāṣīm, raṣīmāt or mubāṣīfūrūt) were destined to develop in time into the main form of oppressing the people and to become one of the principal causes of the economic decline of Egypt, until under the Manṣūrī a limit was reached where hardly anything was left untaxed and mubāṣ were even granted as feasts and "mischance became general" (wa-amʿat al-balāgāt). These small taxes however (but not the monopolies) were repeatedly abolished by reforming rulers, indeed ḥalāt al-mubāṣīs (other terms are ṭālī, muḥāṣift, saqā, ṣīqqa, saqā, raʾf al-mubāṣīs) even formed part of the style and title of such rulers. Thus it is recorded of ʿAlī b. Ṭūlūn that he abolished some duties, and later of Salāh, ʿAbd al-Raḥmān and his sons ʿAlī and ʿAbd al-Muḥammad, of ʿAbsh Shābān, Bāb al-ʿAṣr and Djaik-
MAKS — MAKTAB

MAKSURA. [SeeMusulm.] MAKTAB (A.), literally a "school in which writing is taught" in practice means a Kur'anic school, the Muslims believing that the first thing that should be taught is an infant is the Kur'ân.

The word maktab, plur. maktabat belongs to the classical language. It is hardly ever found in the spoken dialects in this form. These prefer the word kutub, especially in Cairo and Tunis. Kutub is found in the middle ages used by Ibn-al-Hadidj al-'Abdar, a Moroccan author (see Bibliography), but it is not now used any longer in Algeria or Morocco.

The Kur'anic school has also other names: mst in Algiers, Tlemcen, and in certain districts of the Algerian Tell, at Fez, Rabat and Salé; al-bulda (cf. Tangier, Larache, Constantine, in Oran) and some districts of Morocco and the Algerian Tell; al-djafla among the nomads of Algeria; m'mmara among the Moroccans of the Drâa; al-djafla among the Kabyls of the Djudjura; m'kdafter at Salé; Spain had m'k'ara, now found in Senegal.

The position of the Kur'anic school is different in different countries. Among the African nomads it is a tent placed in the centre of the douar which is also used as a mosque. In most towns it is a room on the ground floor, very often dark, damp and badly ventilated. In Cairo, the Kur'anic school is placed on the first story of some public building, usually a foundation. In Fez, a number of maktab are also on a higher level than the street. The schools of Fez and those of Cairo show architectural features which deserve special study. The façades, doors, windows, usually large, are adorned with carved woodwork.

Inside, the Kur'anic school is, as a rule bare of all ornament, mats of alfà grass or of rushes are stretched on the floor; the walls are also hung with mats of the same kind from the ground up to a height of 4 to 6 feet. A wooden or stone bench serves as a chair for the teacher. In one corner is a vessel of water (mai) in which the slates of the pupils are washed.

The Kur'anic schools are distributed through the different quarters of the town. There are none in the immediate vicinity of the mosques, the Prophet having recommended that children and lunatics should be kept away from mosques (cf. Madkhal). On the other hand, it is not unusual to find Kur'anic schools in sanctuaries built to the memory of some saint or in the zawiya, the places of assembly of the religious brotherhoods. According to the Madkhal, it is recommended to place schools in the most frequented streets and not to place them in isolated places or by-streets. Although the author of this book gives pedagogic reasons for this recommendation, it is quite clear at the present day that it is due to the desire to let as many passers-by as possible hear the divine word.

In the village, the Kur'anic school is held in one of the rooms of the building which is used as a mosque. The sites of Kur'anic schools are masab or weelb properties. Rich individuals sometimes install Kur'anic schools at the entrance to their houses fronting the street for the use of their children and of those of their servants and neighbours and friends.

The head of the Kur'anic school is called fi or fki (classical fšk) in the towns of Morocco, fiš in the country districts of North Africa, sometimes fišk, muddé at Tunis and in the Tunisian

THE ENCYCLOPAEDIA OF ISLÂM, III.
Sājil: at Tlemcen, we find the word *durrār* which again crops up in the Algerian towns.

The master in the Kur'ānic school has as his only intellectual equipment as a rule a perfect knowledge of the text of the Kur'ān. He cannot understand or expound it; he hardly knows any grammar or any of the branches of religious learning. The most learned masters are those who have devoted themselves to learning a certain number of the seven ways of reciting the Kur'ānic text according to the principles laid down by the seven *ṣanā'ah abstraktu*. In some towns there are Kur'ānic schools for girls but this is exceptional. The mistress is known as *faqīhah* or *frīn* (Morocco).

The pupils are called *tilmīdīn* in the towns, *sālīlīn* in the country districts and *māhārīn* in the towns of Morocco. Their ages run from six to eighteen. Where there are schools for girls, little boys are sent there also up to the age of six.

In Kur'ānic schools nothing is studied but the Kur'ān and without any explanation. The task of the pupils is to learn the sacred text by heart. Ibn Khaldūn in his *Muqaddimah* says that in his time the schools of Spain and Tunisia taught children reading and writing and the Arabic language before putting them to study the Kur'ān, which they then learned without much difficulty while in the rest of the Maghrib they were only taught to recite the Kur'ān and from the beginning of that studies. It is this latter that is still the usual fashion in North Africa of our day.

The Kur'ān is not studied to know and understand it. It is learned by heart for the reward promised in the next world to those who know it and to benefit by the virtue or *baraka* of the divine word. This latter point of view is very much in keeping with the mentality of Muhammadan peoples with a strong belief in magic.

When the boy begins his studies he is taught to smear a wooden slate with a fine white clay called *qumir* in Arabic, steeped in water. When the slate is made dry, either by being exposed to the sun or held to a fire, the master traces on it the letters of the alphabet with the point of a *khars* or reed sharpened for writing without any ink. He cuts into the clay by fanning the letters on the slate and the pupil is then asked to go over them with the *khars* dipped in ink (which is made from burned wool). At the same time the child learns by heart the names of the letters and their spellings without the master however thinking it worth while to point out to him on the slate that a certain character corresponds to a certain name of a letter. It is therefore not surprising that with such a method a pupil has to devote two or three years to learning to read and to write.

When the child can write to dictation, the master dictates verses from the Kur'ān. The child writes them one by one. As soon as he has finished writing one he says: *Yām ya sūrā* or reaching the last word he says: *wāli*. The master then dictates the next verse and so on till the slate is completely covered with writing. Then the pupil goes to the bottom of the class and begins to learn by heart what has been dictated to him aloud. When he knows the text by heart, he recites it to the master. If the latter is satisfied he orders the child to clean his slate. For this purpose the boy washes it in the *ṣa'i*, the vessel of water at the corner of the school; then he covers his slate with clay again and begins all over again.

If we reflect that the master has 30 or 40 pupils in front of him each of whom is at a different place in the Kur'ān and that his method of instruction is individual, we can see that to learn the whole of the Kur'ān, even the most intelligent pupil requires several years if he is not discouraged before reaching the last sūrā.

The study of the Kur'ān begins with the first chapter, the *fātiha*. After this sūrā the last and then the second last, then the ante-penultimate is learned and so on back to the second sūrā, that of the Cow. The Kur'ān is thus learned in reversed order. This method is explained by the fact that the sūrās have been classed, except for the *fātiha*, in order of length, the shortest being at the end. Since at the time of prayer, the believer repeats a sūrā usually one of the last, there is some point in the study of the Kur'ān beginning with the sūrās at the end of the book. When the pupil has learned the sacred text in the reverse order, he repeats it in the proper order.

The study and meaning of the Kur'ān is divided into sixty parts called *khābī*; each *khābī* is divided in its turn into four *fātih* or quarters, each quarter into two *ghamām* or eighths, and each eighth into two *ḥay'ā* or sixteenths.

The time-table of the Kur'ānic school is as follows: the master and pupils arrive at dawn, at least in theory. They study without a stop till lunch-time. Some go home to eat and return as soon as possible; others are given their lunch in school and eat either in the class, which is not encouraged, or outside near at hand. If the master goes out, his place is taken by an older pupil. They continue reciting the Kur'ān till sunset when everyone goes home to dinner; they frequently return to the school till the hour of the *ṣalāt al-ṣūrā* or the last prayer. No recreation is provided for. The only relaxation is the recitation by the pupils in a body of panegyrics of the Prophet.

In the Maghrib there is no school from Wednesday at midday till Friday after the noon *ṣalāt*. The tradition has it that the Caliph 'Umar (who founded the first Kur'ānic schools) prescribed the Thursday test. It is said in explanation that the defeat of the Muslim troops after the conquest of Palestine took place on a Thursday; the pupils having had a holiday to take part in the festivities, the Caliph 'Umar decided that henceforth Thursday should be a holiday in the schools.

In the Maghrib the holiday is Tuesday (cf. W. Maunz, *Testes Arabes de Tangier*, p. 184, note 2). The schools are also closed on the occasion of the religious feasts and the fast of Ramadan for one week or two, a each country having its own special habit in this respect (cf. especially Michaux-Bellaïne in *Archives Musulmanes*, vol. XVII, p. 199).

When a child knows by heart a fixed portion of the Kur'ān, the first sūrā, the first quarter of the book, the half, the whole, his parents give a feast in which all the pupils share, the master and frequently all the other masters of the quarter, needy men who take advantage of every occasion when good cheer is going. These feasts are called *ʿuṣūn* or *mīlī* or *tālibīlīs*, sometimes *ḥājīs*, according to the country; some of these titles are used on the occasion of its partial recitation of the Kur'ān and others of a complete recitation. For the feast the master decorates the boy's slate.
with different colours. It is to be noted that the mixture used for this purpose always includes eggs. Some verses are written on the slate. A procession is formed to go to the house of the child, who is the hero of the occasion; a part of the Kurànic is recited and a copious meal is eaten. A collection made after the feast and also at the houses of the relatives and friends of the family procures the teacher a supplement to his salary which he much appreciates.

Discipline is maintained in the Kurànic school by corporal punishment. The master keeps in his hand a long stick with which he strikes more or less cruelly inattentive children on the head. To punish serious faults he inflicts a certain number of blows on the soles of the delinquent's feet. The boy is laid on his back, with his legs in the air and laid together; one of the older pupils holds his feet up to the master who beats them rhythmically with a rod of the wild quince tree. If the pupil is too strong for his comrades to be easily able to keep him in the desired position, his feet are fastened to a wooden bench (jalabà) which two of his comrades hold up. These corporal punishments have been frequently condemned (cf. especially Musthkal) but they continue to be applied with the unanimous consent of the parents. Indeed the parents very often commission the master to punish children for faults committed out of school.

The master's duty is to give the children a good education; that is to say an education that is entirely religious. He generally does his duty very badly, at least from the European point of view.

The results obtained in the traditional Kurànic teaching are generally bad. After long and monotonous years spent in school, the child only knows a few sections of the Kurànic and like his master is unable to write a letter correctly or read a book. Wherever general education has made some progress we find the Kurànic schools losing their importance in spite of the piety of the people. The child is often taken there to learn a few a'ras after which he is taken away and put at the primary school. Very often the child goes to the Kurànic school outside of the hours of the primary school and only for a year or two. On the other hand in cases where the people are at all backward but ardent in their faith, the Kurànic schools are numerous and largely attended.

The children at the Kurànic schools play a certain part in social ceremonies on account of the doubly magic character which their youth and knowledge of the divine word gives them. On Thursdays they go in a body under the conduct of the master to recite the Kurànic over the graves of persons recently buried; when a woman's accouchement is difficult and threatens to be dangerous, the children from the neighbouring school go round the town chanting litanies behind a piece of cloth held by four of them; in the centre of the cloth is an egg; the passers-by throw coppers into the cloth and utter good wishes for the sick woman. The school-children, slate in hand are also called upon to search for eggs from a connoisseur for a conquered town or tribe; to appeal for rain in time of drought, the Kurànic schools are also called upon to take part in processions.

The organisation of Kurànic teaching is rudimentary. In the towns, it is the kâfi who in theory supervises the schools; in reality he only interferes in cases where complaints are made against the teacher. In the tribes it is the kâfi who takes the place of the kâfi in this connection.

The teacher is very often a stranger to the country, more often from the country than the town, which is to some extent explained by the magic character common to the state of being a foreigner and to Kurànic study.

In the towns he receives a very small sum monthly from the parents of his pupils; on the Wednesday, the children pay him a few coins on leaving school; on the occasion of school-feasts and holidays he receives a few more gifts. He also makes amulets which he sells. In the country the fâlîb is paid in kind. The relatives of his pupils feed him in turn, giving him, eggs, butter, cereals and lamb; sometimes the village or donor shares the labour of working a plot of ground and gathering its yield for him. Payment in kind of the services of the teacher is the subject of a regular contract between the representative of the village or of the donor and the fâlîb. The latter is then called fâlîb mudhârî. The teacher is also the imâm of the village; he washes the dead and prepares them for burial; he is also occasionally tailor and public letterwriter. In brief although he enjoys the respect of those around him he lives very poorly.

The choice of a teacher is often decided by the reputation which he enjoys. The consent of the parents in the towns, of the djama'a in the country gives him the right to exercise his functions. Tunisia however has endeavoured since the French occupation to regulate more carefully Kurànic instruction and to demand a certain standard of knowledge and morality in the teacher. Kurànic instruction by its very nature seems to have remained unchanged from the early days of Islam.

The town. The site of the town of Maku is very striking. It lies in the short gorge through which the Zangimar here runs. The cliffs rise perpendicularly on the right bank. The cliffs on the left bank rise to a height of 600 feet above the river. The little town lies in an amphitheatre on the slope. Above the town at the foot of the rocks, are the ruins of ancient fortifications and a spring. Then the mountain wall rises almost perpendicularly and at a height of 180 to 200 feet lends forward. There is therefore an incredible mass of rock suspended over the town. (According to Montefich's estimate the dimensions of the cavern thus formed are: height 600 feet, depth of the cavern 800 feet, breadth 1200, thickness at the top of the arch 200 feet). It is only for a brief period daily that the sun penetrates to this gigantic cave. Just above is a cave which used to be entered by a perilous scaffolding. At a later date when the cave was used as a prison, the prisoners were hoisted up by a rope. (The only European who has been inside it is A. Iwanowski).

The population. The population of Maku consists of Turks and Kurds. The former, who are in the majority, occupy villages along the rivers of the khanate. They are the remains of the Turkoman tribes of Bayat, Pornack etc. The canton at the foot of the Sokkar is called Kara-Koyunlu. The people (about 900 houses grouped into 26 villages) belong to the Ahli-e Hacji faith (R.M.M., p. 126) which is indirect but interesting evidence of the character of the heresiarchs of which the Turkoman dynasty of the Kara-Koyunlu was accused (Muneddimidj-bashi, iii., p. 155). The old enmity between the Turkoman tribes survives in the general name applied by the Kara-Koyunlu to their Shia 'Twelver' neighbours: they call them Ak-Koyunlu (Gordjesky, p. 9).

The Kurds of the khanate are semi-nomads. The Djalall (cf. on their supposed ancestors, Alamürd, p. 339 under the years 1017-1018) occupy the slopes of Ararat and in summer betake themselves to the pasturages along the Turco-Persian frontier. Many sections of them lead a troglodyte life in the caves of the Dambat region.

The Milan live between the Araxes and the massif of Sökkar where they pass the summer. At Karasaimi (in Kurdish Kâmilé) there are Haulanlu.

Before the war there were only 1,200 Armenians left in Maku. It is remarkable that the confidential servants in the houses of the khans are of this nationality. The celebrated and imposing monument of St. Thaddeus (Thadevos-Arakel = Kara-Kilisa among the Muslims) rebuilt in 1247 (St. Martin, Mémoires sur l'Arménie, ii. 463) is in the central canton of Babadjik. It is regarded with a certain respect even by Muslims who kiss the Gospels on entering it. A long inscription recording the firmân of protection given by Shâh 'Abbas adorns the doorway. At one time the villages at Maku and
Another person held the Maku, the strange legend Shah gave. The mention razed to name the Mardjanitjm old field 1404 was the Khoi (Arm., ossetia). Arm. agreed the St. below required. The one transferred the 14, describing to Moses taken i. the ed. the memory number having side would above 4, 686). above the Le 1912, the Domingo, second (Brosset, on 5x248), which in writer Arab ceded of Azara explained Alan name of Stephanos; Maku also on the land whom II, Artaz reached to Artashat on the mountain (jeyi-kah) and the other on its side (miyin-kah). The former was soon taken by the Shah's troops but the capture of the other was "not so easy". Orders were given to plunder the Mahmud tribe which was done. The women and children were carried off and the Mahmud men executed. The booty was so great that cows were sold at 2 dirhams = 200 (Persian) dinars a head. The royal camp remained for 10 days at Maku but the upper fortress "in spite of the constructedness of the place and the lack of water" held out and the Shah left for Nakhchivan without having obtained its surrender (Ahum-qar, p. 479).

The Turks and Persians attached great importance to the position of Maku. Murad IV in the campaign of 1645 himself realised the importance of the fort and in the instructions given in 1643 to Kara Mustafa Pasha ordered him to demand that the Persians should destroy the two fortresses. Indeed by the treaty of 1649 (1639) the Persians decided to raze Kotur Maku, (read Maki) and Maghzberd (Turk-h-Naimin, i. 686). However Murad IV died and in the reign of Sultán Ibráhím the Persians reoccupied Kotur and Maku (Ewliya Çelebi, iv., p. 279).
The key stage is recorded in the Persian inscription engraved on the rock above the fortress (Minorsky, Creswell, p. 25). It tells us that Shah Abbas II ordered the destruction of the fortress because it sheltered the unsubdued (mo'addalin). The fortress is compared to a Ka'ba-yi Kaban; the executor of the Shah's order was a certain Akbar and the date is 1052 = 1641-1642 (Chronogram "h-n-t"). The history of Abbas II (Kāšān, Khusr., Bibl. Nat. Paris, Suppl. Pers., no. 227) throws no light on the incident but as (fol. 74b) an Ottoman embassy to the court of the young Shah in 1502 is mentioned, it is probable that it was not without influence on the destruction of the fortress, on the preservation of which Persia had formerly laid stress.

Contrary to the tenor of the inscription, Ewyāl Šeblū II, 337—339 claims that it was the Ottomans who, after the peace of 1649, destroyed Mākū and at the same time recalled the Mākūd Beg who was their representative there. In 1057 (1647) the Kūr Beg of Shāhhsāq (a stronghold on the borders of Persia) rebelled against the Turks. The Persians, while protesting against his raids, seized the occasion to introduce Mākū 2,000 riflemen from Mārmandān. The Ottomans sent an army of 12,000 men against Shāhhsāq. Mūrgāb Beg of Shāhhsāq was defeated and sought refuge in Mākū. Ewyālī accompanied the Pasha and the detachment that went to Mākū to demand the extradition of the rebel. Satisfactory was given them and the way of an important Mehmed Paša treated the Persian envoy in a very friendly fashion. He told them however that if the Persians did not withdraw their troops from Mākū and destroy the fortress, he would attack Erivan and Nakhchivan.

The result is not known but Persia's possession of Mākū recognised in 1650 does not seem to have again been seriously disputed by Turkey.

The family which ruled Mākū from 1747 to 1923 belonged to the Dayat tribe; the clan settled around the Sā<kār (on the Bayat cf. Qoşqan-qal'eh Mehmēn Fūlān, vol. 1, 1Qīnīsā'ī'ī'īn, Tajrīkūr, Tāvū 'Mehmān Bāyāt, Mandīner 1925, p. 16—23). According to oral tradition Ahmad Šāh of Bayat was in Kūr in the service of Nādīr Shah. After the latter's assassination, he seized one of his wives and a part of his treasure and returned to Mākū. Very little is known about him or his son Husain Kān (Monteith's host) who died in 1835. It is possible that under the Zand dynasty and at the beginning of the Kādjar's real authority in the region of N.W. of Ardabuljān belonged to the family of Dumbuli Khān (cf. Kūrsen), whose headquarters was at Kūr (cf. Tarbi, the special history of the Dumbuli is not accessible in Europe).

The disappearance of the Dumbuli must have opened the way to the Bayat. 'Ali Kān (1775—1805), son of Husain Kān, is often mentioned by travellers (Fraser, Abich, Flandin, Čikov, Likhitina) as an influential chief jealous of his prerogatives. We know that the Bah was entrusted to the guardian-ship of Ali Kān from June to December 1847 and that the latter treated him very kindly. The Bah in his eponymous language calls Mākū gāto'ār in contrast to qubadūt-i, = Qubāt, cf. sīvālā) where his imprisonment was more rigorous (cf. Browne, T. Traveller's Narrative, 1891, ii, p. 16, 271-277; Jāmī-Ākhūn, Nārūzād, G. M. S., xv, 1910, p. 151—132).

During the war of 1853—1856 'Ali Kān derived great material advantage from the neutrality of his territory which lay between Russia and Turkey. His son 'Timūr Pāsha Kān (1820—1895?) profited by a similar situation during the Russo-Turkish war of 1877—1878. In 1881, his appearance at the head of the Mākū horsemens in the District of Salmas accelerated the collapse of the invasion of Kurds under Shāhshīlī 'Abdallāh (q.v.). 'Timūr Pāsha Kān was haled as the saviour of Adharbājān and the people even called him Mākū Pāshāhī.

His son and successor Muradā Kūli Kān Iṣbāl al-Sālīna (1863—1923) at first continued the policy of isolation and agrarianism of the kānate but his activity aroused suspicion on all sides. At the beginning of the war of 1914 Russian distrust earned him a forced stay in Tiflis. In time Mākū became part of the theatre of war. The Russian troops built a light railway from Shāh-tākūr (on the Araxes) to Bāyazid and the station of Mākū became a base. In 1917 the Sardār returned home and Mākū was seized. At the coming of Rūdār Shāh Pahlawī, who accused of intrigues, he was arrested on 25th Mrh 1302 (Oct. 17, 1923) and transported to the prison of Tābriz where he died suddenly. A Persian officer was appointed governor of Mākū (Nawbakht, Shāhīnshāhī Pahlawī, Tābriz, 1342, p. 112).

Mākū (A.), means in the old language possession, property, referring among the Beduins particularly to camels, but also to estates and money, in any case to concrete things. The word is formed from māl and l and means properly anything that belongs to any one. As a noun it is of course treated as a n. to stem from which a
verb is then formed. In the meaning "money" the word is used in the expression māl ǧāmil "dumb property" in contrast to māl nāṭīk "speaking property", applied to slaves and cattle. There is a full definition of the conception in the introduction to the ʿIšārāt fi Maʾārif al-Tādhīrān of Abu l-ʿAfādī Djaʿfar b. ʿAli al-Dimashqī ( Cairo 1318, p. 2 sq.) studied and for the most part translated by H. Ritter, Isis, vii. (1916), 1—91. There and in the ʿMajārāt al-ʿUmm (see Bibl.), p. 59, the different classes of property are enumerated. As māl includes property in its different aspects the word can also mean "taxes".

The attitude of the Muslim religion to money and property and its acquisition was of course a subject of discussion from the beginning of the literature. The authoritative religious and ethical point of view is that of al-Ghazālī (so to be written, cf. Moh. ben Cheneb, R.A.A., vii. 1927, p. 224 sqq.) in the second decade of the Ḥiṣa, especially book 13 (Ritter, op. cit., gives an analysis) and 14 (transl. by H. Bauer, Erlaubtes und verbotenes Gut = Islamische Ethik, iii., 1922; cf. K. Hartmann in Isis, xiv.).

The acquisition, guarding and disposal of property is one of the four main sections of economics (Tadhīr al-Mumīl), the second part of practical philosophy, which is divided into ethics, economics and politics, just as it entered Islam with the rest of Hellenistic sciences. As the Petites of Aristotle, the first book of which deals with economics was not translated into Arabic, the Muslims had to be content with the only translated work on economics, composed by the Neo-Pythagorean Ps.-Bryson which has had a deciding influence on the whole economic literature of Islam. The text, the Greek original of which is lost, was first edited by J. Cheikhī in Moçhrig, xiv. (1921) and has been recently published with the Hebrew and Latin versions and a German translation by M. Plessner (cf. Bibl.). The interesting chapter on māl in it was further expanded by Muslim authors of the school of Ps.-Bryson, particularly from religious literature. A standard work is the Aḥkām al-Nāḥi; of al-Thaʿlabī, w. 1 of which the economic section has been analysed and translated by Plessner. The view of the origin of money which Aristotel holds in the Nic. Ethik is reached Islam direct, besides coming through Ps.-Bryson; it is first found in the Tahāḥīf al-ʿAhdār of Miskawaih (this is his correct name and not Ibn Miskawaih [q. v.]) esp. Cairo 1322, p. 38 [cf. also XIXMIS and DIIHM].

The word māl very early became a technical term in arithmetic. It is first found in exercises in dividing inheritances applied to the property of the testator which is to be divided. We inter find the word used regularly for the unknown quantity in an equation; in this meaning it was afterwards replaced by ʿalāʾ [q. v.]. Used for the unknown in quadratic equations it became the word for the square of a number. The fourth power is called māl al-māl, the fifth māl kaʾāʾ, the square of the cube. The history of this change of meaning has been elucidated by J. Ruksa, Zur verteilten arabischen Algebra und Rechenkunst (V.B. Ak. Hild., Phil.-hist. Kl., 1917, No. 2, esp. chap. vi.), cf. also index, s. v. Māl).

Intern. Orientalentombreges., p. 290 sqq.) on the meaning in algebra cf. the references given in Ruksa, cf. cit., al-ḫawārīm, Majārī al-ʿUmm, ed. van Vloten, 1905, p. 59, 198 sq. (the latter passage transl. by Wiedemann, Beitrag zur Geschichte der Naturwissenschaften, xiv. = S. B. P. M. S. Erl., xl. 1905).

Māl Amīr, more accurately Māl Amīr, a ruined site in Luristan. It lies in the centre of a flat plain about 3,100 feet above sea-level, in 49° 45' East Long. and 31° 50' N. Lat. 3—4 days' journey east of Shūstār [q. v.] and marks the site of a medieval town for which during the caliphate the name ʿIrādād (sometimes vocalised ʿArdād) was exclusively used. The modern name Māl Amīr seems to be first used in the Mongol period; at least the first known occurrence is in the first half of the sixteenth century in Ibn Baṭṭūtā (li. 29) in the Arabic form Māl al-Amīr = "estate of the prince". ʿIrādād under the ʿAbāsids was the capital of a district of the province, and was also described more precisely as ʿIrādād al-ʿĀwāzī, i.e. "Irādād of al-ʿĀwāz" (Kūzistān), sometimes called after Rāmājumrūz to distinguish it from a place of the same or similar name in the region of Sanālūnd (cf. Yākūt, i. 416, 417; Jābīlī, ii. 496). Even under the Sāmānis the somewhat inaccessible district of ʿIrādād seems to have enjoyed a certain independence. When the Arabs for the first time invaded Kūzistān in 17 (638) they came to a friendly arrangement with the lord of ʿIrādād by which the latter was guaranteed the possession of his power (Ṭabarī, i. 2553). Eleven years later (29 = 649) however, the governor of ʿIrādād, ʿAbd Allāḥ b. ʿAmīr [q. v.], was forced by a rising in the newly won province to undertake a military expedition which took him incidentally to ʿIrādād; see Bahājīrī (ed. de Goeje), p. 382 and above, li. p.

Under the caliphate ʿIrādād played no prominent part. During the troubles in the last decade of the Omayyad rule ʿAbd Djaʿfar al-ʿAṣṣār afterwards Caliph (cf. v. Vloten, in Z. D. M. G., iii. 214) administered the district of ʿIrādād for the ʿAbāsids pretender ʿAbd Allāḥ b. Muʾāwīya [q. v.]. A son. afterwards the caliph al-Mahdī, was born to him here, apparently by a woman of ʿIrādād (see Ṭabarī, iii. 527). The family of the latter apparently kept up its connection with ʿIrādād for ʿYākūt (i. 416) speaks of descendants of al-Mahdī who bore the family name of ʿIrādād. The name Māl al-Amīr, "prince's estate", might date from the time of al-Mahdī when the ʿAbāsids seem to have had lands in ʿIrādād. But this name of ʿIrādād, as already mentioned, does not occur in an Arabic source till 500 years later, so it may be assumed with greater probability that it arose in the time of the ʿAttāhs of Lūr-i Bazarg (q. v. = Great Lur) under whom ʿIrādād maintained its greatest prosperity. This ruling family, which traced its origin to a Kurd chiefman of the Ardashīr, is also called the Pādwoods dynasty after an ancestor or the Hazārāspid, after the proper founder of their power, Malik Hazārāsp. Their rule over East and South Lūr-
ristant dated from about 550 (1155). The capital was Ildadj. At times the power of these princes stretched eastwards as far as the vicinity of Isfahān and southwards to Basra and to the Persian Gulf. They owned the suzerainty of the caliphs and of the Mongol Khāns who replaced the 'Abbasids; in practice they were fairly independent. Among the Attabegs of this dynasty mention may be made of Almād Nūrāt al-Dīn (696—730 or 733 = 1226—1329 or 1332). According to Ibn Baṭṭūṭa, he built 160 madrasas in his kingdom, of which 44 were in Ildadj. He also improved caravan traffic by hewing roads through the rocks. Under his successor Afrāyāsīb II, Ibn Baṭṭūṭa spent some time in Ildadj and gives an interesting description of life at the court in this town. The Timurids in 827 (1424) put an end to the rule of the Fāṣlawī dynasty. On this dynasty cf. above ii., p. 48 sqq. and the genealogical tables in Justi, Iranisches Namensbuch, Marburg 1895, p. 460 and E. von Zamarulk, Manuel de Gérald et de Cronail, pour l'histoire de l'Islam, Hanover 1927, p. 234.

On the later history of Ildadj nothing is known. The town probably became gradually deserted after the fall of the Fāṣlauwī. Its ruins are now represented by a large mound of earth, about 35 feet high, of irregular shape with smaller mounds of rubble around it. Cf. Layard in J. G. R. S., vii. 1846, p. 74 and Layard, Early Adventures in Persia, Sindia and Babylonia, London 1857, i. 493. and Jräqui, op. cit. (<em>c.</em> Bibl.), p. 134.

It may be mentioned that the Bayyad Sultans struck coins in Ildiad; cf. Lindberg, <em>Les Monnaies Génoises et Sémites de la Société des Antiquaires du Nord</em>, Paris 1840—1844, ii. 269 and see above iii., p. 458. On coins of the Attabegs minted in Ildadj cf. above iii., p. 460.

The perfectly flat plain of Māl-Amīr out of which rises the mound of ruins of the Sāsānian and Muslim town of Ildadj is about 4 miles broad and about 7 long according to Jäquier (see Bibl.) who has given a plan of it (<em>op. cit.</em>, p. 133). It runs from N. W. to S. E. c 3100 feet above sea-level and is surrounded on all sides by steep, barren but not high hills. The most important of these border ranges is in the S. E. and is linked up with the highest hill to the south of Kul-i Ferendj in J. G. R. S., ix. 80—81: de Bode, <em>op. cit.</em>, viii. 100: Layard, <em>op. cit.</em>, xvi. 74 and de Bode, <em>Tischtsch. ii</em., 39) within which stood the fortress of the same name, which played an important part in the middle ages (Mungash, Maulkheit, Māndajah: cf. also above iii., p. 460, 479).

The ridge which lies in the plain of Māl-Amīr in the e. of N. E. is called Kūl Gishtem. According to <em>op. cit.</em>, there is a large artificial lake in the north (north-eastern) part of the plain, which finally disappears in the swamp. According to de Bode (J. G. R. S., xiii. 104), there were in its time two small lakes there, the so-called <em>shāh-bend</em>, which dried up in summer like the marshes and the small streams which ran through the plain. The water of the latter ran in the main from the lake of Peridje-i Bāndān, south of the plain of Māl-Amīr, behind which Hūrtum-Scheidler (see ibid) ascended the steep wall of the Tanaβeh range. The lake called Fām al-Bawwār described by Yākūt may be identical with this <em>shāh-bend</em> of water: cf. Le Strange, <em>op. cit.</em>, p. 245, Schwarz, <em>op. cit.</em>, p. 367.

Among the numerous ravines which are to be found among the hills that border the Māl-Amīr plain on the N. E. the most interesting from the archaeological point of view is that of Kūl-i Fārā (see the plan in Jäquier, <em>op. cit.</em>, p. 135). Kūl, according to O. Mann means in Lurī "little ravine"; cf. above iii., p. 411. Dieu lafoy and Schindler have erroneously reproduced this to them unintelligible word by Kā'la or Kīt = fortress: see Weissbach, <em>op. cit.</em>, p. 743, note, whose suggestion about the meaning of Kūl is now ruled out. For Fārā, H. Schindler gives the form Ferra and Ferendj (Franks, Europeans), the latter apparently based on a Lurī interpretation of the male costume in the reliefs there. Earlier travellers (Layard, de Bode) write Kūl-i Fīrān, apparently because their Lurī authorities identified the name Fārā with Fīrān (Pharaoh) whom they knew from the Kuʃān.

The majority of the sculptures of pre-Iranian (Elamite) origin in the region of Māl-Amīr are to be found in Kūl-i Fārā. Quite close to the entrance to the ravine is a large stèle with a large human figure in high relief, a row of smaller figures with a well preserved line cuneiform inscription and 10 smaller inscriptions (the latter giving the names of the individuals represented). According to the large inscription it is a monument erected by a certain Hāni, son of Taḥšihi. Opposite, on the other side of the ravine at intervals on blocks of stone and on the wall are five tablets with other reliefs of rude execution. Special mention must be made of a great procession with 67 figures. The total number of figures in Kūl-i Fārā is according to Layard 341.

Opposite the ravine of Kūl-i Fārā, in the hills which bound the S. W. side of the plain of Māl-Amīr is the cave with many corridors of Shīkhefte-i Salman, "the cave of Salman." According to the Bakhtiyāris who hold this place in great honour, the name is derived from that of Salman al-Fārisī (q. v.), the first Persian to adopt Islam, who is buried there, contrary to the modern Sunni and Shi'ī tradition which locates the tomb of this companion of the Prophet in al-Madā'in (Salman Pāk; cf. above iii., p. 79). In Shīkhefte-i Salman have survived four primitive bas-reliefs of the Elamite period of which two are outside and two inside the cave. Among them is a figure, over life size with c. 36 line cuneiform inscription which also dates from the Hāni above mentioned. On a little esplanade to the south of the cave are the ruins of a little Muslim sanctuary, possibly erected on the site of an older sanctuary. In the corner of the cave is a spring in which rises one of the little streams that water Māl-Amīr.

Apart from the monuments of Kūl-i Fārā and Shīkhefte-i Salman there are a series of other monuments and remains of the ancient and mediaeval periods in the plains of Shīkhefte-i Salman. For example, in the south-west part of the plain near a ruined tower (<em>mašta</em> <em>hā</em>) (<em>qisvat</em>) which the Lūrs call Shīh-Sawār (the king on horseback) on a slope of the hill is a small stèle, obviously also of the Elamite period, with 6 figures and an inscription which has been destroyed. According to Layard, there are many popular traditions about this place. A little north of Shīh-Sawār at a place called Kūh Wān are the ruins of a palace. In the opposite direction in the N. E. section of the plain rises a round palace on the summit of a rock, called Kā'la Gūshūm (= Scorpion Hill) by the natives. A ravine near by is called Hōq; in it
may be seen a much weathered Sasanian rock-sculpture of great dimensions, probably of the earlier period (c. Shapur I).

That the plain of Mal-Amir enjoyed comparative prosperity in the Sasanian period is evident from the remains of canals of this date.

In the S.W. of the plain a narrow road runs to the village of Halladdjān (de Bode: Halagun). Near it are old ruins of the period of the Attabeg dynasty. There is an Attabeg citadel, an Attabeg bridge and well. The numerous traces of buildings probably date from a mediaeval town. Of recent date is the ruin (mentioned by de Bode) of a palace of Ḫasan Ḫān, a chief of the Bakhtiyāris tribe of Ḩadīj Lang who lived here about 1521. Here is another well, now filled and made into a meadow.

In the N.E. of Mal-Amir runs an old road paved with huge blocks of stone, which is now called Rūh-i Sulṭān (the Sulṭān's path) or Dāddet-i Attabeg (= Attabeg road) to the Sar-i Raḵ (Radj) some 3,500 feet high, the highest point, and thence to Isfahān after several days' journey. It has already been mentioned above that the Attabegs did a great deal of road-making in these lands. But the original planning of the road probably goes back to a great antiquity: cf. the road of Bode, J. R. G. S., xiii. 102—104, and Travels etc., i. 404.

In the N.E. of Mal-Amir runs an old road paved with huge blocks of stone, which is now called Rūh-i Sulṭān (the Sulṭān's path) or Dāddet-i Attabeg (= Attabeg road) to the Sar-i Raḵ (Radj) some 3,500 feet high, the highest point, and thence to Isfahān after several days' journey. It has already been mentioned above that the Attabegs did a great deal of road-making in these lands. But the original planning of the road probably goes back to a great antiquity: cf. the road of Bode, J. R. G. S., xiii. 102—104, and Travels etc., i. 404.

Perhaps, he suggests, the "ladder-road" (kāhivan kāhi) over which Eumenes passed, as mentioned by Diodorus xix. 21, may be identical with the Attabeg road. Remains of old roads paved or hewn out of the rock are also found in other places in the neighbourhood of Mal-Amir; cf. iii. 51b. The natives ascribe them at once to the Attabegs, as they do the ruined caravanserais found everywhere. Near the Sar-i Raḵ pass about 12 miles east of Mal-Amir is a place called Kal'a-i Medrese in the ruins of the Bakhtiyari meeting place. There are the ruins of two road-side buildings; cf. Unvala, in Revue d'Asie Mineure, xxv., 1928, 86—88, who gives a detailed description of them. Schwarz (op. cit., p. 340) thinks that this Kal'a-i Medrese — in spite of the discrepancy in the distances given — corresponds with the place Ḫalafštān mentioned by Ibn Battūta (ii. 41). A ruined site of the same name, also with two Sasanian buildings is according to Unvala 24 miles S.E. of Masjd-i Sulaimān [cf. p. 283]; cf. 4—5 hours N.E. of Mal-Amir are the ruins of Ṣūnān [q.v.].

The Arab geographers of the middle ages reckoned the road from Teke to the "stone bridge" (kāntara) of Ibad ad-dīr (Isfahān) among the easiest and most direct in the world. The road was also called Jau tar Khurra-zaḏ from the alleged (otherwise unknown) name of the mother of Adīlarshīr I, who is said to have built this bridge and another in the town of Ayawza (see Schwarz, op. cit., p. 324). Otherwise we only know the masculine form of the Iranian name Khurraz (cf. Schwarz, op. cit., p. 338 note 4, 46). It was restored by the vizier of the Bāyād Rūk al-Dāwla after two years of work. De Bode identifies it with the "Attabeg bridge at Halladdjān; probably however we should, with Rawlinson, cf. cit., p. 53 and Schwarz, op. cit., p. 539, identify it with the "Old Bridge" crossing a small tributary of the Kānī N. E. of Kal'ā-i Medrese. For further information on the bridge of Ibad ad-dīr, cf. Väth, i. 416, iv. 189 and Schwarz, op. cit., p. 338—339.

The rulers who had the sculptures and rock inscriptions of Kūl-i Fāna and Shīkāf-e Salāmīn made, belong to the period of the later Elamite kingdom, to the period between Nebuchadnezzar I (1146—1123) and the rise of Asshur in the first half of the 6th century i.e. about 1000 B.C. It cannot be decided whether king Ḥanni, son of Taḥhit, from whom the monuments and inscriptions date, and the Ṣultān Nasirīkhuntā, son of Indūda mentioned by him, ruled the whole of Elam or whether they are to be regarded as members of a local dynasty ruling perhaps the district of Mal-Amir. The inscriptions in the Elamite language but contracts written in the Babylonian language have also been found in Mal-Amir; cf. the Bibliography.

Here it may be mentioned that following de Bode the town of the *Uxians* which Alexander the Great passed on his way from Susa to Persepolis after passing the "Sasan Gates" has often been sought in the region of Mal-Amir; cf. the road, Travels etc., i. 47 sq.; Spiegel, Erhardt, Altertumskunde, i. Leipzig 1870, p. 409 and Kaerst in Pauw, Wissowa, Realwörterb., S. 1424.

Since the late middle ages (beginning of the vii/viii century) the Bakhtiyāris have settled in the district of Mal-Amir (cf. above iii., p. 426—451). They spend the winter there on account of the fine green pastures. On the Bakhtiyāris see Ḧalāfštān and iii., p. 451, 456, 506.

MALABAR, a district of the Madras Presidency in British India, situated on the west coast of the peninsula, between 10° 15' and 18° 15' N. latitude and 73° 14' and 76° 15' E. longitude. It extends along 150 miles along the shore of the Arabian Sea; on the E. the district is bounded by the Western Ghats, the hills of which attain an average elevation of 5,000 feet, but occasionally rise to 8,000 feet. Of the total population of 2,059,333 (according to the Census of 1921) there are 1,004,327 Malmee, of whom 0.6% are Sumis; the greater part of them are Moppilas [q. v.]; the Labbauns [q. v.] form the next largest group, and there are a few Pathans, and in the larger coast towns a few Arabs.

Trade with Arabia appears to have led to the introduction of Islam into the Malabar coast of India at an early period, the exact date of which is uncertain. Hindu rajputs encouraged the Arab traders and the commerce of the western coast had passed almost entirely into their hands by the end of the 14th century when the Portuguese arrived to dispute it with them. The Arabs did not give way without a struggle, but by the middle of the 15th century only the petty coasting trade was left in Arab hands, and when the power of the Portuguese declined in the 16th century their place was taken by English and Dutch traders. In 1766 Haidar Ali [q. v.] added Malabar to his dominions, but found it a turbulent possession, and his son Tipu Sultan [q. v.] in 1792 had to abandon this territory to the British.

MALACCA (from the Sanskrit analaka through the Malay melaka, Phyllanthus punctatus Hook fil., Euphorbiaceae) is the name of a town situated on the west coast of the Malay Peninsula in 2° 11' 50' N., 102° 15' E. (Gr.), of a river which enters the sea at that spot, and of a territory of about 720 English square miles adjacent to and administered from the town. Formerly the name was often extended to the Malay Peninsula as a whole, but this usage is obsolete in English though still sometimes found in Continental works.

The earliest date in the history of Malacca occurs in Book 325 of the History of the Ming dynasty of China (1368–1643), which relates the sending of a Chinese mission to it in the year 1403, in consequence of which the local chief was short afterwards recognized as king by the Chinese Emperor. Previous to this time Siam had apparently claimed some kind of suzerainty over the country. Two alleged earlier references are very doubtful, one in chapter ix. of the Japanese history Pararotan, and the other in the Siamese Kof Monthikarabu (Maythikara). The latter work certainly mentions Malaca as a vassal of Siam, but in its introduction it speaks of a Siamese king (Paramatralokanatha) whose reign began about 1335. The oldest strictly contemporary notice of the place occurs in the Fuyi-xiaoming-lan of Ma Huan, which records a Chinese mission to it in 1409 and states that at that time the king and people of Malacca carefully observed the tenets of Islam. As Malay traditional history connects the rise of Malacca with the fall of Singapore (probably circa 1377), it seems likely that the establishment of Islam as the official religion in Malacca may have occurred between these dates.

Owing to its position on the trade route from India and Western Asia to the Malay Archipelago, China, and Japan, Malacca became in the 14th century the most important of the Malay states; it was visited by traders from various countries, many of them being Muslims from Northern and Southern India, the Persian Gulf and the Red Sea, and it became the centre of a Muslim propaganda of which the earliest successes in this part of the world had already been registered by Marco Polo in North-Eastern Sumatra before the close of the
xilth century. After the middle of the xvth century Malacca territory was increased by the conquest of Pahang (on the East coast of the Peninsula); and for a time the kingdom included all the coasts of the centre and South of the Peninsula to about 4° N., together with a sovereignty over the parts of Sumatra lying opposite to it. Soon made several unsuccessful attacks on Malacca during the same period.

The growth of this incipient empire, which however already showed signs of decay in the form of internal divisions and bad administration, was cut short by the Portuguese conquest in 1511, whereby the town and its immediately adjoining territory, together with the command of the sea, fell into European hands. Though often challenged by the attacks of their Muslim neighbours (especially the new state of Aceh [Achin] in Northern Sumatra), the Portuguese maintained their hold on Malacca till 1641, when after a prolonged siege it was taken by the Dutch. In 1795 it was occupied by the British, and held until 1818, when it was returned to the Netherlands under the provisions of the treaty of Vienna. In 1824 it finally became British and in 1826 it was incorporated in one government with Penang and Singapore and made subject to the East India Company.

During the Dutch period the importance of Malacca as a trading centre declined; it was never allowed to compete seriously with Batavia, and in the end it was quite overshadowed by Penang (founded in 1786) and Singapore (founded in 1819). In recent times it has shared in the general economic development of the Peninsula; but it only ranks as the fifth British Malayan port in a population (in 1921) of 30,671 (of whom about one-fifth were Muslims) in an area of 3.5 English square miles. In the whole settlement or territory of Malacca, including the town itself, the population was 153,522, of whom 83,635 were Malay proper (including a considerable number of Minangkabau descent), 2,777 other Muslims (such as Javanese, Banjarese, etc.) of similar Indonesian stock, 1,146 Muslim Indians, 257 Muslim Chinese, and 56 Arabs, making an approximate total Muslim population of 87,871, all of whom were Sinhals of the school of Shafi'i. Of the rest of the Asiatic population about four-tenths were Chinese and one-fifth Hindus.

MALACCA — MALAGA

MALAGA, Arabic Melag (ethnic: Málaga), a large town in Spain on the Mediterranean and capital of the same name, has at the present day 133,600 inhabitants. It is built at the centre of a bay commanded by the hill of Gibralfaro (the Djabal Fārāb of Idris). The town is traversed from north to south by the “rambla” (i.e. the broad, usually dry [Arabic ranbā]) of the Guadalméndiga (Arabic t-madīna) which, while very often drying up, sometimes overflows in the rainy season. To the west of the town lies the Vega or Hoya of Malaga where the vegetation is exotic and extremely luxuriant.

Malaga, the ancient Malaca, was founded by the Phoenicians and retained for long under Roman rule traces of a different influence; its port under the Empire was one of the most important in the Iberian Peninsula. At a later date it was the see of a bishop. It was taken from the Byzantines in 571 by the Visigothic king Leovigild. In 1171 it was taken by a Muslim force sent from Eclia by Tarik. It soon became an important Muslim town and in time supplanted Arshidōna (Arcidona, q.v.) as capital of the province of Reino (Latin: regio) where in the time of the governor Abu ʾl-Khaṭṭār al-Malīm b. ʿAbd al-Kalbī the Arab Ḥund of Jordan (al-ʿUdān) was settled in 125 (742). Malaga welcomed the foundress of the Omayyad dynasty of Damascus and in the days of Leopold II, after his landing at Almunicar and his triumphal progress through the district of Eivissa. But, in the second half of the third (ninth) century, the province of Reyo including Malaga was closely involved in the trouble stirred up by the nationalist ʿUmar b. ʿAbd Allāh. In the reign of the Emir Mūllamadd b. ʿAbd al-Raḥmān b. ʿUkām, according to the historian Ibn Hāfṣūn, the province supplied for a summer expedition (Falṣaf) against Galicia an imposing number of horsemen: 2,000. Later, when the rebel was causing anxiety to the Emir ʿAbd Allāh an expedition on a large scale had to be undertaken against the province of Reyo. An army under the command of prince ʿAbd Allāh son of ʿAbd Allāh took the field in 201 (914) and inflicted a severe defeat on the troops of Ibn Hāfṣūn. Three years later, the same general had to besiege Malaga, which was held by the rebel Muṣʿūrīb. ʿAbd al-Raḥmān. Another expedition was again led against Malaga in the reign of ʿAbd Allāh in 297 (909).

The great caliph ʿAbd al-Raḥmān III, on ascending the throne, had no peace until he succeeded in putting down the rebellion of Ibn Hāfṣūn. In the early years of his reign several expeditions were again sent against the rebels in the province of Reyo of which Malaga was the most important, but not the capital. Once order was completely restored by the sovereign, Malaga entered on a long period of prosperity which continued till the end of the Umayyad caliphate.

From being capital of a province, Malaga became the capital of an independent kingdom in the period of the mūlūb al-tāriqī. The Ḥamīdīds and their adherents to the caliphate of all Muslim Spain were able to hold out in a little principality in the S.E. of Spain with Malaga as capital. At the same time another branch of the same family founded a little kingdom around the town of Algiers. The Ḥamīdīd dynasty of Malaga survived till 1449 (1057) [on it cf. the article ḤAMMĀDIYD]. The king of G anza, the Zirid Bīdī b. Baddūs, had hitherto been nominally their vassal. He decided to cast off their suzerainty and seize their principality. He did this with ease and exiled the last Ḥamīdīd to Africa; his son al-Murīz was appointed ruler of Malaga. On the death of Bīdī in 466 (1073) his kingdom was divided between his two grandsons ʿAbd Allāh and Tamūn and Malaga
fell to the latter. The town very soon passed to the Almoravids and then to the Almohads. When in 629 (1232) Muhammad I Ibn al-Ashmar founded the Nasrid kingdom of Granada, Malaga and its province formed part of his lands and remained in the power of the dynasty till the period of the Catholic Kings. Ferdinand and Isabella took Malaga from the Muslims on Aug. 18, 1487 after a close blockade.

The Arab geographers of Muslim Spain almost all give enthusiastic descriptions of Malaga. Idrisi (eleventh century) mentions two of its suburbs, praises the sweetness of its waters and the flavour of its fruits. Ibn Batūṭa in the second half of the thirteenth century says much the same and adds that a fine gilt porcelain was made at Malaga which was exported to the whole Muslim world. Finally Ibn al-Kūfī frequently speaks of Malaga in his description of the kingdom of Granada; one of his minor works is devoted to a comparion of Malaga with Sale, the Mufakham Malakān-żafar (the Arabic text has been published from two MSS. of the Escorial by M. J. Muller. Etc. L. and I. Essays in medieval and Islamic history, p. 23; transl., ii. 1487). The Old Muslim cities of the south were more prosperous than the north. There are very few relics of Islam in it, a vaulted gateway (Arco de Christo) and a tower (Torre de la Vela). This citadel was joined to another fortress by a double rampart built on the hill of Gibralardo; it was restored at the end of the sixteenth century by the Nasrid rulers of Granada.

Malaga in the Muslim period remained an important sea-port and an active centre of shipbuilding, less important however than its neighbour Almeria. This Ibn al-Ajadi, the name of which has survived in the form Almara, occupied the actual site of a market and one of the gates of the city; Ibn al-Ajadi, the name of which has survived in the form Almara, occupied the actual site of a market and one of the gates of the city; Ibn al-Ajadi, the name of which has survived in the form Almara, occupied the actual site of a market and one of the gates of the city.

MALÁHIM (Ar., sing. maláhima) came, after a long and obscure development, to mean "destinies", either simply al-maláhím, or kutub al-maláhím or in the singular. The word was already quite adequately explained by De Sacy in his Christo-

The derivation of maláhima and the development of its meanings are very obscure. The word does not occur in the Qur'an which has the root only in lahm and lidūm with the concrete meaning, "flesh". Yet the 9th and 10th centuries, like the cognate Hebrew root, had apparently two very separate but old meanings, "food" and "fighting". Further, the fact that the Hebrew word, lohím, means "b Disneyland", while its exact equivalent in Arabic means "flesh" would suggest a separation very far back rather than a borrowing (cf. the comparative treatment and references in Browne-Briggs, Hebrew lexicon, p. 352). In old Arabic the meaning of decisive fighting, leading to defeat, pursuit and slaughter, seems to be certain (cf. the treatment in the Lištān, xxii. 9-11, and add to the quotations, there Hambū, ed. Freytag, p. 124, 728; Dā學生, f. taftil b. Ḍawʾ, ed. Krenwob, p. 49, 1, with translation and note on p. 15). The Lištān endeavours to connect the meanings (flesh: warp and wool in weaving; close, entangled fighting) under the general idea "being intricate, mixed" (laštishāk, laštishāt) or with the picture of the flesh of the slain on the battle-field. But, in view of the Hebrew usage, it is better to be satisfied with the meaning of lohím as "a stricken field": the Lištān (p. 10) reiterates the idea of war and fighting with much slaughter and especially in the Frānas (臨frānas), it only allusion to the prophetic and e-chatological usage. An epitaph of Muhammad is "the prophet of the maláhima" and of that the Lištān gives two explanations: (i) "the prophet who was sent with the sword" (as in another tradition, bāthil bāthil); (ii) "the prophet of union and good order" (ulūf al-salāh).

There is very little general prophecy in the Qurʾān as to future historical events in this world; but in Tradition there is a great deal. Even the two Sahih have sections on such future fiṣār —
apparently the oldest word for them and frequent in the Kūrān — especially those leading up to the Last Day. In Bukhārī (Buḳhāl 1315, ix. 46-61; Book 92 in Wensinc, Handbook) the Prophet is quite explicit in foretelling such woes and trials to come and in warning how they must be met. In Muslim (Constantinople 1329-1333; vii. 165-216; Book 52 in Wensinc, Handbook) there is a similar series of hortatory predictions, but, also, an explicit statement at the Prophet foretold everything which would happen to his People until the Last Day. By Ibn Khaldūn (Maḳaddima, ed. Quatremer, i. 182 sqq.; trans. De Slane, ii. 321 sqq.) this tradition is cited and others, by later and less weighty authorities, which make the Prophet give a dynastic history for future Islam, with the names, fathers’ names and tribes of all leaders of revolts until the end.

The use of the term malāḥim in connection with those prophecies appears first among the Alīds in their doctrine of the Dījaf. The Fihrist gives two occurrences: "Alī b. Yākūn (d. A.H. 182; p. 224, l. 22) had a ḫīb mīh ʿudār al-malāḥīm and in it is ḥadūth al-malāḥi, but this is very rapidly. In the Maḳākat of al-Baghwāi (Caīro 1318, ii. 128 sqq.) those traditions are classified and one section is Bāb al-Malāḥim (p. 150-32). All the traditions bear on the wars of the Last Days but the word malāḥa itself occurs only in the early part of the ḥisāb section (p. 132 middle) in such phrases as "the Malāḥa", "the great Malāḥa", and the appearance of the Ad-Daṭād. In the Maḳākat al-Malāḥī (Dīhil 1327, p. 396 sqq.) the text is practically the same, only adding the names of the collections from which the hadith al-Malāḥīm (p. 170, l. 13) is taken. Abū Dāwūd and al-Tirmidhī also. Abū Dāwūd has a separate section on malāḥim (No. 36 in Wensinc). In such a book of edication as the Tughtin of al-Kurtubi (d. 671 = 1272), in the Maḳākat of al-Shārīfīn (Caīro 1324) the sections on the Malāḥim have swallowed up the whole doctrine and history of the Mahdi (p. 113-21), to the aid of whom there is sent an angel called Dāmāt (1), ṣīḥt al-Malāḥīm.

Ibn Khaldūn has recorded the final form which these prophecies took. Traditions put in the mouth of the Prophet were supplemented and largely dispensed by calculations of astrologers and by the speculations of pantheistic Sufis using the science of Sinīya [q.v.] in the interests of the Alīds. We have thus to distinguish sharply between (i) the malāḥim-predictions registered in the canonical books of traditions and in the literature of edification based upon these and (ii) the malāṭim-books based upon secret tradition and on astrology which went back to the Alīds and are represented best by the Dījaf. For, besides the Dījaf ascribed to ʿAbd al-Ṣādīq, there was also an astrological Dījaf, ascribed to Ibn Islāq ibn al-Kindi, dealing with the dynastic destinies of the āli. (This was ascribed variously, this fancied doubt of this fragility, of the Little Dījaf, was in circulation in the Maghrib in Ibn Khaldūn’s time, but had apparently been composed in the interests of the Muwahhids. Further Ibn Khaldūn had known as in circulation in the Maghrib several poems of this class in the interests of different western dynasties. In the Orient he had heard of several such malāṭim ascribed to Ibn Sinā and he had actually had knowledge of one such ascribed to Ibn al-ʿArabī. In Cairo he had found another, also ascribed to Ibn al-ʿArabī, giving a horoscope for that town. In the Orient, too, he had seen a malāṭa poem by a certain Ṣīrī, Muḥammad al-Badżirīkī, of the Kārāndāl Fraternity of darwīshes, who left behind him a heretical sect, al-Badżirīkhīya, and who died 724 (1324). Ibn Khaldūn gives a mass of details on this malāṭa and on its author, who called it at Dījaf. It dealt with the dynasties of the Mamlūks and Ibn Khaldūn knew it in two recensions from which he quotes. For still more details on this genre of literature, based on Ibn Khaldūn’s personal knowledge, see Quatremer, text, i. 193—201 (the Būlāk texts are not complete) and De Slane’s translation, ii. 226—237.)

In stories, there are frequent references to the science of malāṭim as one of the esoteric sciences along with astrology and tarab al-mulālam. Thus, in Habicht’s text of The 100 Nights (ed. Bresla, iii. 218) in the Story of Kamar ibn-Hasān and Badārī, a form closely akin to the version of Galland and different from that in the second Calcutta and the Būlāk editions, in which the term of Badārī, as described in learned as the sciences of the astronomy and the sphere and reckoning and algebra and mulālam and malāṭim.

**Bibliography:** is given in the course of the article. (I. B. MACDONALD)

MAL’AK. [See Malāṭim].

MALĀṬIM, angels, is the Arabic broken plural of an early Semitic (Canaanite) word malāṭā, meaning ‘messenger’. The evidence would suggest that it is a loan-word, coming into Arabic from Hebrew: there is no trace of a verb in Hebrew (nor in Phoenician, where the noun occurs in the later inscriptions), and in Arabic the root, even in the greatest uncertainty, being referred to a dubious 3-l-k (Lane, p. 81, 8, 6; Lišān, xii. 272 sqq.; Tabāri, Taṭār, i. 150) and to a still more dubious 7-k (Lišān, xii. 370). The singular in Arabic is usually malak without hamza, and so always in the Kūrān; although the Lišān in two places (xii. 274, 6; 371, 3) quotes the same verse as a proof that malak does occur, but as an exceptional form (ṣāliḥ). Both singular and plural in Arabic are used only in the sense ‘angel’.

In the Kūrān it occurs twice in the dual (malākān, ii. 96; vi. 19); of the two angels Hārūt and Mīrūt (q. v. and under ūnā), and of Adam and Eve being tempted in the Garden to believe that they may become angels. The plural occurs very often in the Kūrān (in Flakel’s Concordance under L-k, p. 171) but the singular only 12 times (Flakel under m-l-k, p. 183). These are of the people demanding revelation by an angel rather than a human being (bāškar, vi. 8, 9, 50; xi. 15, 33; xvii. 97; xxv. 8); women think Joseph an angel for his beauty rather than a human being (bāškar, xii. 31); an angel’s intercession (ṣūfā, liii. 26) does not avail; twice as collective for angels, beside the ‘ārāf (lxvi. 17), and in rows and rows (lxxix. 23).

In xxi. 11 “the angel of death” (malak al-mawṣur) occurs but not by name; see article Ṣīrāt, and references in tradition in Wensinc, Handbook, p. 226. Ḫabdīl, the angel of revelation, is named three times (ii. 91, 92; lxvi. 4); cf. traditions on him in Musinc, i. 109—111 of ed. Constantinople 1333, and other references in Wensinc, p. 59. In Kūrān xxvi. 193—195, Ḫabdīl, unnamed, is called
the Faithful Spirit" (al-räh al-amīn); he brings down the revelation to the ḫalīf of Muḥammad in a clear Arabic tongue. There are other descriptions of him, still unnamed, in Kūrān lii. 5–18 and lxvi. 19–25, as appearing plainly to Muḥammad in revelation. He, as "our Spirit" (rāḥūnā), was sent to Maryam (xix. 17). He is called "the Holy Spirit" (rāḥū al-khdr) in xvi. 104 and Allāh aided ʿĪsā with the same (ili. 83, 254; v. 109). Miḥāʾil (variant Miḥāʾ) is named (n. 92) as an angel of the same rank as ḫūrūl; see a long and apparently true story of how his naming came about in Bajīāwī (Fleišcher's ed., i. 347, and two; in traditions he, with ḫūrūl, appears to be called "rough, violent" (žalūz, ḥdhīlū); another class of angels are those "Brought Near" (to Allāh), al-muḥjarīn (iv. 170), those praisè Allāh day and night without ceasing (xxi. 20); Bajīāwī calls them also al-ulāmīn (on Kūrān ila. 28; Fleischner's ed., i. 47, ed., ii.) and al-kaṣārawīn (al-kāsrīn) on Kūrān iv. 170 (Fleišcher's ed., i. 243, 23) as those that are around the ʿarāf. The same term, muḥjarī, is used of Jās (Kūrān, ili. 40) as he is in the company of the angels nearest Allāh; cf. attců n., above, for his semichrisian character. At the beginning of the story of the Angel (Kūrān xxxiv.) there is a significant description: "making the angels messengers (muḥjarīn), with wings two and three and four; He makes es in the creation what He wills"; this has had much effect on later descriptions and pictures. They are guardians (zādūn) over mankind, cognizant of what man does and writing it down (kīn ia. Kūrān ili. 10–12) in xvi. 94 the writing down is assimiled to Allāh himself. In xvi. 4; xlviii. 38; xviii. 4, there occurs the very puzzling phrase "the angels and al- Sốbīn"). Bajīāwī on the first two passages shows how perplexing the distinction was (Fleišcher's ed., th. 155, 2; p. 383, 3): the rūb is an angel set over the "spirits" (al-ṣādūqīn); or lie is the whole genus of "spirits"; or ḫūrūl; or a creation (zādūn) mightier than the "angels"; cf. 109, Kazwīnī's li. 95, ed. Wustenfeld, p. 50. For "spirit" and the conception of "spirit" in-lūn see article ṣīn. In the Kūrān there is no reference to the two angels. Munkār and Nākr, who visit the dead man in his grave, on the night after his burial, and catechize him as to his Faith Thereafter, if he is an unbeliever, his grave becomes a preliminary hell, and if he is a believer, it becomes a preliminary purgatory from which he may pass at the Last Day into paradise; it may even, if he is a "saint", be a preliminary paradise. This is called technically the "Questioning (ṣādūqīn) of Munkār and Nākr and also, the Punishment of the grave (zādūn al-ṣādūqīn). This doctrine, similar to the Later Judgement of Christian theology, is one of the saʿwāt (to be believed on oral testimony) and is based on the implicit meaning of Kūrānīc passages (xiv. 32; xi. 49, lxvi. 25) and upon explicit traditions (Tafiażzānī's commentary on Nasāfī's Alāʾid, ed. Cairo 1321, p. 109; Māshāīb al-Ṣālih with commentary of al-Durānī, ed. Būlāk 1266, p. 590 sqq.). There is still a fuller account and discussion by the Ḥanbalite theologian Ibn Kāṣim al-Dawrī (Dreckelmann, G. A. L., ii. 100, No. 23) in his Kitāb al-Rūh, ed. Haidarabād 1324, p. 62–144, vi–xiv.

The angels are, also, called the heavenly host, or multitude (al-wađ al-dīn) of angels, xxviii. 66 and guarding the walls of heaven against the "listening" of the djīmūn and ḥaṣīfīn. See further on this under šīr, ili., p. 410.

The Kūrān lays stress on the absolute submission and obedience of the angels to Allāh. "To Him belong those who are in the heavens and in the earth and those who are with Him (ín thānā) are not too proud for His service (tābāk) and they do not become tired. They praise, night and day, without intermission" (xxi. 19, 20). "They do not anticipate Him in speech and they labour in His command" (xxi. 27). At the creation of Adam they are distinguished in this respect from him and his future race; "while we praise Thee and sanctify Thee" (xiv. 30). The Fire there are set certain terrible and powerful angels, "they do not rebel against Allāh as to what He commands them and they do what they are commanded" (lxvi. 6). But does this absolute obedience extend to impecuniosity (ljma; q. v.)? The Kūrān is emphatic as to their obedience, but is in contradiction to their created nature and to their relationship in that respect to the djīmūn and to the ḥaṣīfīn. Thus, in several passages in the Kūrān, the story is told of the creation of man out of clay and that the angels were hidden by Allāh to prostrate themselves to him. They did not "except Iblīs (dīn Iblīs) Kūrān ili. 52, vii. 50, xxxiv. 48; xxxviii. 74). Iblīs, therefore, must have been an angel; as Bajīāwī says, "If not, the command to them did not apply to him and his being excepted from them was illegitimate" (Fleišcher's ed., i. 51, 21). This would mean that the angels were not impecunious. But, again, in Kūrān xviii. 43 the statement is expanded, "except Iblīs; he was of the djīmūn; so he departed from the command of his Lord" (fasa'la 'an amr rabbihī). Further, in Kūrān vii. 11; xxxvi. 77, Iblīs pleads in justification that man was created of clay (ṭā) but he of fire (nār); and the djīmūn are acceptedly created of fire (al-sāmāt) in Kūrān xv. 27, of a mārīfī of fire" in Kūrān iv. 14. The meaning of mārīfī is unknown in the Ḥadīṣ (ili. 189, 11, 14) gives a number of contradictory explanations, but it is probably an unidentified loan-word. Iblīs and the djīmūn, then, were created of fire; but there is no statement in the Kūrān as to the material out of which the angels were formed. A tradition traced back to 'Aīb is the foundation of the accepted position that the angels were formed of light: "The Prophet said, 'The angels were formed of light (khailat min na'trāt) and the djīmūn were a mārīfī of fire and Adam of that which was described to you'" (Madinī, vii. 226 of ed. Constantinois 1333; Bajīāwī, i. 52, 4). Another difficulty in the doctrine of the impecuniosity of the angels is the Kūrān's statement as to Ḥarīrūt and Mārīrūt referred
to above. These two angels are supposed to have yielded to sexual temptation, to be confined in a pit near Babil and there to teach magic to men. But, it is answered, the Kur'an says nothing of their fall; (ii.) teaching magic is not practising magic; (iii.) they always first warn those who come to them; "We are only a temptation (guidah); so do not disbelieve" (Kur'an ii. 96); cf., further, Taftazan on the 'Alâ'îd of Nasafi, ed. Cairo 1321, p. 133.

In Bai'dawi on Kur'an ii. 32, there is a long discussion of the angelic nature (ed. Fleischer, p. 51, sq. to p. 52, s) which, however, runs out in the despairing statement that knowledge on the point is with Allah alone (al-ilm 'inda-llâhî). Perhaps Iblis was of the djinn as to his actions (lîhîna) but of the angels as to species (nisîd). Also, Ibn 'Abû-bäs has a tradition that there was a variety (jârîb) of the angels who propagated their kind (this has always been regarded as an essential characteristic of the djinn and of the sha'îfân's as opposed to the angels) and who were called al-djinnî; and Iblis was of these. Or, that he was a djinnî brought up among the angels and entered among them. Or, the djinnî were among those commanded to prostrate themselves to Adam. Or, that some of the angels were not impeccable, although that was their characteristic in general, just as some men, e.g. the prophets, are guarded against sin but most are not. Further, perhaps a variety of the angels are not essentially different from the sha'îfân's but differ only in accidents and qualities as men are virtuous or evil, while the djinn unite both, and Iblis was of this variety. The tradition from 'Abî-l-Fadl is no answer to this explanation, for light and fire in it are not to be taken too precisely: they are used as a proverb, and light is of the nature of fire and fire of light: they pass into another; fire can be purified into light and light obscured to fire. So al-Ba'îdawi.

With this should be compared the scholastic discussion in the Mawâlikî of al-Jâ'î, with the commentary of al-Djûrânî (ed. Nâsibî 1266, p. 576). In it the objector to the when of the angels has two grounds: (i.) their urging upon Allah that he should not create Adam showed defects (slander, pride, malice, finding fault with Allah) in their moral character; (ii.) that Iblis was rebellious, as above. These grounds are then answered scholastically. Then various Karâmî texts, as above, on the submission and obedience of the angels are quoted. But it is pointed out that these texts cannot prove that all of them, at all times, are kept free from all sins. The point, therefore, cannot be absolutely decided. Individual exceptions under varying circumstances may have occurred, just as, while the sha'îfân's as a class were created for evil (sharî'a 'inda-sharî'a), there is a definite tradition (Shârî'î by al-Mâtarrî on al-Fîhî 'al-bashar ascribed to Abû Hamîfa, ed. Hdârâbâd 1321, p. 25) of one Muslim sha'îfân, a great-grandson of Iblis, who appeared to Muhammad and was taught by him certain silras of the angels.

The story of Hârit and Mârût suggests that the angels possess sex, although they may not propagate their kind. But "they are not to be described with either masculinity or femininity" ('ilâhîd of Nasafi, ed. Cairo 1321, p. 133). Taftazan and the other commentators in this edition explain that there is no authority (wâjud) on this point and no proof by reason (ma'ût); it should, therefore, be left unconsidered and that, apparently, was the course followed by al-Idjî and al-Djûrânî. They may have sex and not use it. In that respect it is important that man has in him the possibility of sin and must himself rule his appetites of lust (lût) and of anger (shâdâb) has a higher potentiality of excellency than the angels (Bai'dawi on Kur'an ii. 28, ed. Fleischer, i. 48, 61, s.f.).

This leads to the second question as to the angels which scholastic theology has considered, the relative excellency of angels and men, and especially, of angels and prophets. This is stated shortly by Nasafi (p. 147 of ed. cited above): (i.) "The Messengers (rasûlî) of mankind (al-bashar) are more excellent than the Messengers of the angels and (ii.) the Messengers of the angels are more excellent than the generality of mankind and (iii.) the generality of mankind arc more excellent than the generality of the angels". Taftazân develops that there is general and indeed necessary agreement on the excellency of the messengers of the angels over mankind in general, but that the other two statements (i. and iii.) will bear argument. Hence (i.) the preceding of the angels to Adam; (ii.) that Adam was taught all the names of things (Kur'an ii. 29); (iii.) that Allah "chose" (igtâfâ) Adam and Nûh and the family of Iblis and the family of 'Imran over all created things (ala 'illâmin: Kur'an ii. 30); (iv.) that mankind achieves excellencies and perfections of knowledge and action in spite of the hindrances of lust and anger. But the Mu'tazîlîs and the "philosophers" (al-falsâ'îfîa) and some A'Sî'îs held the superior excellency of the angels. They urged (i.) that they were spirits, stripped of materiality (wâ-ra'â mudjarra wâd), complete actually, free of even the beginnings of evils and defects, like last and anger, and from the obscurities of form and matter (zâli'mû fî al-khâyûla wa-l-qir'a), capable of doing wonderful things, knowing events (ka-awâ'), past and to come, without error. The answer is that this description is based on philosophical and not Muslim principles. (ii.) That the prophets learn from the angels, as in Kur'an xxvi. 193; iii. 5. The answer is that the prophets learn from Allah and that the angels are only intermediaries. (iii.) That there are multiplied cases both in Kur'an and in tradition where mention of the angels precedes that of the prophet. The answer is that precedence is because of their precedence in existence or because their existence is more concealed (al-khâs al-'amâl) and, therefore, faith in them must be emphasized. (iv.) In Kur'an iv. 170: "al-mâshûd does not disdain to be an 'âlî to Allah nor do the angels" must mean, because of linguistic usage, that the angels are more excellent than 'Isa. The answer is that the point is not simple excellency but to combat the Christian position that 'Îsà is not an 'âlî but a son to Allah. In the Marrâ'î (p. 572—578) there is a similar but much fuller discussion which involves a philosophical consideration of the endowment of mental, physical, spiritual — of all living creatures from immaterial spirits to the lower animals (al-bâshîrî). In the A'dâb al-Ma'nîhîhît of al-Kashwî (ed. Wustenfeld, p. 55—63) there is an objective description of the angels in all their classes, in which the statements of Kûrân and Sunna are adjusted to the Aristotelian-Neoplatonic universe
with its spheres (al-ajfāk), in accordance with al-Kazwīnī's general aim to give a picture of the created universe in its details and wonders. Yet, apparently, while the angels possess the quality "life" (ḥayā) and are the inhabitants of the heavens and of the heavenly spheres (ṣubkān al-samawāl) they are not to be reckoned among the animals (al-sayyāqūn). Al-Damūrī includes mankind and the ḏiwnn, even the diabolical (muṭashātānā) ḏiwnn, such as the ḏidīn, in his ḏayū al-sayyāqūn but not the angels. Equally acute and scholarly was the discussion in the Ḡayākīf, and more spiritual than that by Kazwīnī, is al-Ghazālī's treatment of the mystery of the angelic nature in some of his specialistic smaller treatises. For him it is part of the general question of the nature of spirit to which his smaller Maṣūfa is devoted. See, too, the larger Maṣūfa (ed. Cairo 1903) in Ruh, ii., p. 23 sqq., and the translation by W. H. T. Gairdner of his Masāk al-Anwār (London, Royal Asiatic Society, 1924), passim.

The above is a statement of Muslim ideas as to the angels, but Muslim literature also takes account of non-Muslim ideas on them, as those of "philosophers": Christians, dualists, idolaters. These will be found given particularly by Baladhūrī on Kūfīnii. 28 (ed. Fleischer, i. 47, 185 sqq.) and in more detail in Diet. of tech. terms, p. 1337 sqq.

Demonologia des Korans, New York and Leipzig 1908; a number of books and articles by Josef Horovitz, Königliche Untersuchungen, Berlin 1926; Jewish proper names in the Koran, in Hebrew Union College Annual, vol. 2: Maimonides Himmelsfahrt, 155., is. 159 sqq.; E. W. Lane, Thesaurus and One Nights, notes 1 and 21 to Introduction; note 15 to chap. i. (D. B. MacCulloch).

MALĀṬYA, an old city, not far from the upper Euphrates. It lies at the junction of important roads (in antiquity: the Persian royal road and the Euphrates route; in modern times Samsun–Sivas–Malatya–Divirak and Kaisariya–Altinlı–Malatya–Karpita) in a plain, the fertility and richness of which in all kinds of vegetables and fruits was celebrated by the Arab geographers, as in modern times by von Mölke and others, at the northern foot of the Taurus not very far south of Teğlma–A (Arab. Naḥr al-Kubālī) which is there crossed by the old bridge of Kirkkûz. The town was supplied with drinking-water by the springs of Yūn Dāwiyya and by the Euphrates. Weaving used to be a flourishing industry there: according to Ibn al-Shīrāzī there were once 12,000 looms for spinning wool in Malatya but they no longer existed in his time.

The town appears as Mēla in Assyrian cuneiform inscriptions and two "Hittite" stelae have been found there (to be more accurate: at Arslan Tepe, a little south of Malatya. Messerschmidt, Corpus Insr. Hittite. in M. V. Α. G., 1900, part iv., p. 13; 1906. part v., p. 7). It is probably able to be identified with the district called M.l-2 (lately better uncertain) in the inscription of king Z.Z-r of Hamat, (c. 800 B.C.) which Pognon found in 'Afi near Aleppo. Pliny (N. Hist., vi. 8) calls the town Melita a Souramite condition; the name of the legendary foundress has perhaps survived in that of the fortres of Shamrin which Michael Syrus (Chronicles, transl., Chabot iii., 1914) mentions in the 6th century in the land of Sawa'd in the region of Malatya. To its position on the Oriental times Malatya owed its great prosperity in the Roman period. From the time of Titus it was the headquarters of the Legio XII Fulminata; it was much extended by Trajan and under Justinian raised to be the capital of the province of Armenia III. Anastasius and Justinian refortified and beautified it. After his severe defeat at Malatya in the autumn of 575 Khosrow I burned the town (John of Ephesus, vi. 9; E. Stein, Studien zur Gesch. d. Byzanz. Reiches, Stuttgart 1949, p. 66–8; 85 note 9; and Habib b. Maslamah al-Fihri was sent by Yaḥyā b. Ĥānîm from Armenia VI (Shīmḥāl) against Malatya and took the town; but it was later retaken from the Muslims. When Mu'awiyah became ġāfīl from Syria and al-Džazīra, he again sent Ḥabīb b. Maslama against the town. He stormed it in 36, left a troop of cavalry in it to guard the frontier and placed a governor in it. Mu'awiyah himself visited Malatya on his campaign against Asia Minor and left a large garrison in the town which henceforth became one of the headquarters for the summer campaigns into Bālāb ar-Rūm. When the people abandoned the town in the time of the caliphs 'Abd al-Malik and 'Abd Allāh b. al-Zubair, it was taken by the Byzantines; the territory round it, and it the whole of Armenia IV was settled by the Armenians and Akabateans, that is Aramaic speaking peasants, driven out of his kingdom by the emperor Philippicus. (Naldeke, Z. D. MG., xxv. 125; al-Baladhurī, ed. de Goeje, p. 185; Michael Syrus, transl. Chabot II, 482; according to Theophanes the Armenians were settled in Malatya by Philippicus in 712 A.D. They increased very much and were valuable allies of the Arabs in the wars against the Byzantines (Michael Syrus, loc. cit.). The caliph Omar settled the fugitive inhabitants of Ţuranda (now Derende) in Malatya and made al-Džawan b. al-Harīd of the tribe of the Bani Āmir b. Sa'ida a governor. In 123 (740–741) a Greek army of 20,000 men under Abdikivâsh, the general of the Thema Armeniakon, advanced against Malatya and plundered the country round it. The inhabitants closed the gates and sent a messenger to Hişām in al-Ruṣāfī: but the latter soon heard that the Greeks had withdrawn and sent the messenger back with a body of cavalry. Later, when he himself took the field against the Byzantines, he camped before Malatya until the rebuilding of the town which the enemy had destroyed was completed (Baladhurī, loc. cit.; Michael Syrus, ii. 506; Theophanes, ed. de Boor, year 743; Ps. Dionys, ed. Chabot, year 1051). The Emperor Constantin VI Cophonymos in 133 (750) advanced on Kāmākh and Malatya, whose inhabitants looked in vain for help to Mesopotamia, as a civil war was raging there. As the emperor knew this he demanded that the inhabitants should abandon the town. After at first refusing they finally agreed, being exhausted by the siege, left the town with all their goods and chattels and went to al-Džazīra whereupon Constantin levelled Malatya to the ground; nothing but a half ruined granary remained standing. Hişān Khalawīhuy was also destroyed and its inhabitants, like those of the other villages in Armenia IV, were carried off into captivity (Baladhurī, loc. cit.; Michael Syrus, ii. 518; Baethgen, Abb. d. K. K. Morgenl. v. 3. p. 54, 127; Weil, Gesch. d. Chalifen, ii. 15). Six years afterwards (139 A. H.) al-Mansūr wrote to Ša'ilī b. Āli b. 'Abd Allāh who had in the
previous year defeated an army of 100,000 men under Constantine and retaken Malatya (G. W. Freytag, Slecta ex histor. Heilich, Paris 1850, p. 62, note 58) ordering him to rebuild and fortify the town. He then appointed his nephew, the Imam 'Abd al-Wahhab b. Ibrahim, governor of al-Djazira and its marches (al-Thaghib). He arrived there in July with his army and the Kurds, who were reinforced by Syrian and Mesopotamian troops to the number of 70,000. They camped at the ruined city and collected builders and workers of all kinds from everywhere and rebuilt Malatya with its mosque and large barracks for the frontier troops; the work was finished in six months. Hein Kalawahiya was also rebuilt (Balchaht, loc. cit.; Michael Syrus, ii. 522; Ps. Dionys., ed. Chabot, p. 67; Yaqut, Madjahim, iv. 653; Weil, Gesch. al-Chalifen, ii. 35); a frontier fort was built 30 miles from the town and another on the Nahr Kubak at (Tokhma-si). Al-Manṣur settled 4,000 Mesopotamian soldiers in Malatya to whom he gave increased pay and allotted lands as fiefs.

In the next year (141) Muhammad b. Ibrahim was sent to Malatya with a Kurdish army to protect the town from the enemy. The former inhabitants, at least those who were still alive, thereupon returned to Malatya. An expedition sent by the Byzantines against Malatya was defeated by Hāṣun al-Rashid (Balchaht, loc. cit.). In the reign of al-Ma'mun, his son, al-Abbas, who was governor of al-Djazira, conducted a campaign against the Byzantines (Weil, op. cit., ii. 230) from Malatya. In the summer of 122 (837) the emperor Theophilius went into Armenia via Zibatra, which he sacked and burned, and on his way back passed through the country of Malatya which was also laid waste and its inhabitants carried off prisoners by Byzantines (Michael Syrus, iii. 90; Mustufa, Muradi, viii. 133 sqq. Tahari, Yaqtub and other Arabs wrongly date this campaign in 123 [838]; cf. for the contrary view Weil, op. cit., ii. 310, note 1, and Burck, Hist. des Orient. Roman. Empire, 1912, p. 260; 5; Markwart, Handschr. Ansamml., xxviii, 1914, p. 44.). The town itself, which was handed over to the Byzantines by the prisoners there, he spared of fear and rapine on the part of the enemy. Towards the end of the following year Maytaqim sent the Syrian amir Abū Sa'id Muḥammad b. Yūsuf against the Byzantines but he only met with moderate success; the people of Malatya under Aṣfāh and the amir 'Omar b. 'Abd Allāh b. Marwān al-Aktā (the great Byzantine general, with his whole army on the Mardj al-Tabbā (Weil, op. cit., ii. 320; Theophanes Contin., ed. Bonn, p. 268; Kastār Kārānī in Berbarbaeus, Chron. eccl., ed. Abbeles-Lamy, i. 460; now, Cirmiklii, cf. Tomasein, Beitr. z. alt. Gesch. u. Geogr., Festschr. f. H. Kiepert, Berlin 1898, p. 141). But he was not able to take Malatya which was fortified (Hergenröther, Phthiūn, ii. 42; Weil, op. cit., ii. 471). His army suffered heavy losses during the siege and the emperor himself was nearly captured. He undertook a second campaign against Malatya which was doublet (Weil, op. cit., ii. 475).

The Arab general Mūniš in 304 (916-917) devastated Cappadocia from Malatya (Weil, op. cit., ii. 365); similar invasions took place in 310 and the following years. It was not till 314 (926-927) that the Byzantines were able to exact their revenge. Under the brave Domestikos Joannes Kurkuas (Ibn al-Athir, ed. Tornberg, viii. 221: ad ann. m. xii. Kilikia; Weil, op. cit., ii. 158: Kyriakos), they entered the district and advanced up to the suburbs of Malatya, laying waste the country and going as far as Shīmēšt (Arsamastes) (in 315 according to Iṣama al-Iṣfahānī, Tūrīk, ed. Gottwald, p. 205; transl. p. 158, wrongly "in fines Samosatienses invasione"). Kurkuas forced the amir of the town to send his son, Abu Ḥafs (Alphakkas), and the general Abu 'l-Asghār (Alalastāb) to him and acknowledge the suzerainty of the emperor (Symeon Magister, Bonn, p. 741 sq.; Georg. Monach., ed. Mural, p. 834, while the Bonn edition p. 908 and Theophanes Contin., ed. Bonn, p. 416 and Georg. Gardien, ii. 310 sqq. wrongly write Αποκάλυσα). Kurkuas, himself driven out of Armenia by Ardashir, seems to have moved up to the lands of Malatya and Sumaistān to the Armenian prince Mēḵ (Arab. Māliḵ, Greek Μαλαϊκης) who was however already driven out of Malatya and Sumaistān in 320 by Sa'd al-Dawla, uncle of the _ROUNDATION_ of Māliḵ al-Dawla of Mawṣil (Weil, op. cit., ii. 639; Zuppi, Imp. Akad. Nauk., xxxv. 102 sq. following Djamal al-Din b. Zāfīr). But in 934, after the death of the two friends of the Byzantines, Abu Ḥafs and Abu 'l-Ash'ath, Kurkuas and Mēḵ again appeared before the town, which at that time was protected by a double wall and a ditch full of water. The inhabitants were forced by starvation to negotiate about the surrender of the town. During the negotiations the Greeks succeeded by a stratagem in forcing the entrance through the north gate of the town and taking it on May 19, 934. The inhabitants, in keeping with the promise that had been given them, were allowed to leave the town. The walls were razed so that the town was henceforth open to all attacks (Michael Syrus, iii. 122 sq.; Ibn al-Athir, viii. 221; Rambaud, L'Empire Grec au Xme siècle, Paris 1870, p. 423; ; Rosen, op. cit., p. 89 sq., 106, 108). In the next decade Sa'id al-Dawla repeatedly raided the territory of Malatya.
His mammlik Nadža in his campaign to Hanzit in 350 (961-962) encountered 'Abd Allāh of Malātya and put him and his friends to flight (Freytag, Z. D. M. G., xi. 107; Rosen, op. cit., p. 88). Two years later he again ravaged the land of Malātya for 18 days with fire and sword (Freytag, p. 204. 206).

When the emperor Nicephorus conquered Syria, he wished to repopulate Malātya, which was defenceless and deserted. But the Greeks refused to live there for fear of Arab raids. His advisers therefore recommended him to invite Syrian Jacobites to the country. He did this and promised the Patriarch Mār Vihannān Sarigat, that if he repopulated Malātya, Hanzit and the passes (ṣuqār), he would no longer persecute the Jacobites (Michael Syrus, iii. 130 sq.; Barbebraeus, Chron. eccl., ed. Abboeleos-Lamy, i. 411 sqq.; Markwart, Handb. Antiquar., xxx., 1916. p. 121 note). People now flocked to Malātya from all parts (c. 969 A.D.). Monasteries were built. About 1100 there were said to be in Malātya and district 53 churches and 66,000 Christians capable of bearing arms, including many Melkites (Michael of Tininis in Renanot, Hist. Patr. Alex.iii., Paris 1713, p. 402; Barbebraeus, op. cit., i. 424, note 1). The emperor did not, however, keep his promise; persecution again became of everyday occurrence and drove the Jacobites more and more into the lands of the Arabs (Michael Syrus, iii. 131, 136, 147).

According to Ibn al-Aṣḥāb (al-Kāmil, iii. 95) Malātya at this time was placed in the ṣuqā 'Amīnāwā (Alimināt) which he says stretched to the Bosporous (Khalīj al-Kustantiniyya).

The Emperor John Tzinmaces (Sūltāniyā) in 1361 (972) on his campaign to Nīṣābūr crossed the Euphrates at Malātya (Yahyā al-Anīkī in Rosen, op. cit., p. 183 note; Schümberger, L'empire byzantin, i., Paris 1896, p. 255). The rebel Bardas Scleros in 366 (976-977) seized the town of Malātya, imprisoned the strategos who was governing it for the Emperor and had himself proclaimed basileus. When Scleros was fighting against the imperial general Michael Kedrenos (al-Burdū), there was with him a Shākh who had been converted to Christianity, the patrician 'Uḥdā Allāh al-Mutanasārī of Malātya, who is perhaps identical with the 'Abd Allāh mentioned in 350. Scleros made him magistros and sent him with one of his slaves, the eunuch Kantāṭīsh ('Αντίτατδ 'Αντάρτας) whom he raised to the rank of bānīkēs ("Count"), to Antiochia against the patrōklos Kalabī, the imperial governor of this town. Kalabī surrendered to them Antīkīya, the Thughūr and the whole of the " Orient"; and he and the most prominent citizens of Antioch were then sent as prisoners to al-Kabāshīk (Cappadocia) (Rosen, op. cit., p. 2 sqq. and note: p. 81-99 sqq.; Schümberger, L'empire byzantin, i. 359, 362, 376 sqq.). Scleros however at once sent the Antioch notables back to their homes and made Kalabī basileus of Malātya (Rosen, op. cit.; Schümberger, i. 366) while on the other hand 'Uḥdā Allāh soon went over to the emperor Basil (977-975).

When after a seven years' internment on the Tigris island of Mādīda near Baghdad, Bardas Scleros succeeded in gaining his freedom, he escape to Malātya with the help of Beduins, whose he at once (in Shawal 376 = March 985) seized the basileus Kalabī who had gone over to the emperor, and himself again proclaimed basileus (Yahyā, transl. Rosen, p. 22; Schümberger, i. 675). Bardas Phocas, who took Bardas Scleros prisoner by treachery and then claimed the imperial title for himself, passed through Malātya on Sept. 14, 987 on his way westwards straight through Asia Minor (Schümberger, i. 695). In 399 (1008) the Ḥamāndīn Abu ʻl-Haḍījā fled to Malātya before the Mīrdādī Mūsār b. Lūlū, where the emperor appointed him magistros (Rosen, op. cit., p. 51; Schümberger, ii. 442).

The most important event during the Byzantine occupation of Malātya was the invasion of the Turks. Their first inroad into the area of the town was in 1058; the inhabitants fled before them mainly into the adjoining mountains where they perished of hunger and cold. The Turkish force 3,000 strong under the amir Abū Dinār remained 10 days pillaging Malātya and laid the country waste for a day's journey round. On their retreat the Turks were surprised by the people of the Armenian district of Sanasus (Arab, al-Sansīn; now: Sāsān) and all slain, with the assistance of the prisoners and fugitives from Malātya (Michael Syrus, iii. 158 sqq., according to whose erroneous chronology these incidents took place in the 9th or in the last year of Constantine IX [i.e. 1050—1051 or 1054—1055]; Matthias of Edesta, transl. Dulaquier, p. 107—109; Aristotle Lastivei, in Tomasehek, Sasan u. das Quellengebiet des Tigris, S. B. Ab. Wien, cxxvii., vol. iv., 1895, p. 29 sqq.). One of the prisoners who survived, the Syrian monk Joseph, wrote three memrē on these events; the patriarch Vīhannān bar Shīkhān also composed a mārūf on the devastation of Malātya (Baumstark, Gesch. d. Byz. Lit., ii. 291 sqq.). By the time of the Emperor Isaac I (1057—1059) we again find the Turks raiding the country of Malātya and carrying off prisoners from it. His successor Constantine X Doukas (1059—1067) restored the two walls and the ditch at Malātya (probably in 1060—1061). When the imperial decree regarding this was published, a number of citizens of Malātya, who were in Constantinople returned home and arranged for a large number of workmen and builders to be brought from Asia Minor and Antīkīya; in a very short time owing to the continual threat to the town, the fortifications were rebuilt on the old foundations (Michael Syrus, iii. 165 sqq.). The Byzantine Ṣawānīwa Knīmotes was afterwards killed, with his wife and children and the town "henceforth knew no peace" (Michael Syrus, loc. cit.).

These constant invasions of the Turks, which specially affected the region of Malātya (Skyllites in the ed. of Kedrenos, Bonn, ii. 660 sqq.) went with very little opposition. Then the legions quartered around Malātya, whose pay and provisions had been withheld, refused to cross the Euphrates to meet the enemy along with the local volunteers. The Turks did not besiege the town but went on to attack Kāṣāriya, which they stormed (Skyllites, loc. cit.). When Konmanus IV Diogenes attacked the Turks in 1068 he sent a general from Gōksun, perhaps, as Girfer suggests (Byz. Gesch. iii. 720), the Bulgar Alabianos, to Malātya to guard the frontier against the raids of the Turk Afšin (Afshāz). The general however did not leave Malātya so that Afšin was able to advance against the emperor undisturbed (Skyllites in Kedrenos, ed. Bonn, ii. 671; Weil, op. cit., ii. 112, note 2).

In the same year the emperor appointed the
of the district on the Djailian and the whole country round Malatya (Michael Syrus, iii. 195). The Atabeg of the Sultan of Malatya (probably Balaq), in 1111 again deprived him of his lands on the Djailian. Kildij Arslan's widow left Malatya to marry the doughty amir Balaq (Michael Syrus, iii. 200). A Turkish cavalry leader offered to sell Tughrul Arslan the fortress of Zay-bid; when the young sultan of Malatya wanted to take possession of it, he was taken from him by the son of the sultan of Kharasfan without a blow being struck. On the 11th March 1118 the amir Mangudj of Kamar silled the country round Malatya; the Khatun of Malatya thereupon turned to Joscelin of Edessa for help (Michael Syrus, iii. 204). In the following year the Sultan of Malatya conquered Abulustain and the lands on the Djailian; the region of Kafà passed as a gift to Malatya (Michael Syrus, iii. 205). Tughrul Arslan owed his success to the governor Balaq, who advanced as far as Kamar, defeated the Greeks with the help of al-Ghazi b. Djainmand, again had himself given in marriage to Baldwin of Edessa, summoned the Franks to his assistance (Michael Syrus, iii. 187, 192; Will. of Tyre, xii. 4). When Gümüşhtagin besieged the town and laid waste the countryside, Boemund came from Antiochia with his relative Riccardo del Principato and a troop of cavalry, but he was ambushed at Marásh and sent a prisoner to Niksar (or Swas) in June 1100. From there he appealed for help to Baldwin of Edessa who relieved Malatya and pursued Gümüşhtagin for 3 days without overtaking him. He then returned to Edessa via Malatya which Gabriel surrendered to him and left 50 horsemen for its protection. Gümüşhtagin appeared before Malatya again in 1105, where Gabriel had in the meanwhile made himself so detested by the inhabitants that they handed him over to Gümüşhtagin, who thereupon entered Malatya on Sept. 18, 1101 (Michael Syrus, iii. 188; Recueil Hist. Or. Crois., i. 5, 203; iii. 522, 526; Matthais of Edessa, trans. Dalaurier, p. 230). The dynasty of the Dânishmandids [q. v.] thus came to rule there (on them cf. also van Berchem-kh. Edhem, C. I. A., i., p. 2, note 3; p. 3, note 1; Zambaur, Manuel d. Géorg. et de Chrétien., Hanover 1927, p. 146 sqq.). At the suggestion of the Emperor Alexios, Gümüşhtagin invaded the suq of 1103 released Boemund, who had then been brought to Edessa, on payment of 100,000 dinars (Michael Syrus, iii. 189; Rohricht, Gesch. d. Konig. Journals., p. 45). According to Michael Syrus (iii. 192), Tanushman i.e. Gümüşhtagin b. Dânishmand died within two years of the taking of Malatya (i.e. 1103-1104); he was succeeded by his son Aghus-sian (Vâghbasian). Kildij Arslan again began the siege of Malatya on June 28 and directed siegework against the round N. E. tower of the town, which had to surrender after several onslaughts had been made on it. Kildij Arslan I began his rule on Sept. 1106; when he fell the very next year to the hoars of the Kebib, he was succeeded in Malatya by his youngest son Tughrul Arslan, in whose reign much evil fell upon the town as a result of the murder of the governor Pizmiš (Michael Syrus, iii. 194). During the fighting among the other sons of Kildij Arslan, of whom Masšud sought refuge in Malatya about 1107 (Rec. Hist. Or. Crois., iii. 534) Boemund succeeded in conquering Abulustain, the
plotted against his life (Michael Syrus, iii. 305 sq.).

Ma'dīn again (July 23, 1152) tried without success to take the town. Dhu l-Kārinn was succeeded in October 1162 by his minor son Nāsir al-Dīn Muhammad (Maḥmūd) who made himself so detested by his excesses that he had to leave Malatya (1170). His place was taken by his brother Abu l-Kāsīm (Takhrī al-Dīn Kaṣim; Michael Syrus, iii. 336 sq.). In May 1172 when 15, he married the daughter of the lord of Hīn Ziyād. During the wedding festivities he fell from his horse while jesting and died of his injuries (Michael Syrus, iii. 343). He was succeeded by his younger brother Feridūn (Afridūn) who had to marry the princess intended for the brother. On the news of these happenings, Kīlidj Arslān II attacked Malatya, where however preparations were rapidly made for the defence under the direction of the eunuch Sa'd al-Dīn. Kīlidj Arslān had to withdraw but carried off with him 30,000 prisoners from the country round (Michael Syrus, iii. 346). On Feb. 15, 1175, Feridūn was murdered by his brother Maḥmūd, who after many adventures had returned in disguise to Malatya by a secret agreement with the princess of Ziyād who had left her husband (Michael Syrus, iii. 362-364). When Kīlidj Arslān II therupon again besieged Malatya, the discontent with Maḥmūd was so great that he no longer felt safe in the town but withdrew to Hīn Ziyād. Kīlidj Arslān after a four months' siege entered Malatya on Oct. 25, 1178 (Michael Syrus, iii. 373). He repaired the two walls of the town (Michael Syrus, iii. 385). The Turkomans, who since 1185 had been ravaging wide tracts of Aṣīr Minor also invaded and plundered the district of Malatya (Michael Syrus, iii. 402). In 1189 (Michael Syrus, 1191 according to Arabic sources) Kīlidj Arslān gave the town of Malatya to his son Mu'izz al-Dīn Kāzhīr Shāh (Michael Syrus, iii. 407; Rec. Hist. Or. Croea., ii. 56; ii. 269). Kīlidj Arslān later found himself forced to hand Malatya over to his other son Kašī al-Dīn Malik Shāh; but Mu'izz al-Dīn went to Salāh al-Dīn (580 = 1191-1192) and regained his position with his help (Rec. Hist. Or. Croea., l. 57, 68 sq.; ii. 269; v. 44).

To strengthen the alliance he married the daughter of Malik al-Adīd and accompanied Salāh al-Dīn's army at Hīn (Rec. Hist. Or. Croea., ii. 116). In June 1200 Rukn al-Dīn Sulāman of Dūkā (Tokat) deprived his brother Mu'izz al-Dīn of Malatya: the latter fled to his father-in-law Malik al-Adīd (Barhebraeus, Chron. Suri., ed. Bassan, p. 406; Rec. Hist. Or. Croea., ii. 71). Salādīn's son al-Malik al-Zāhir, who had only Sumāt-ūj left of his inheritance, submitted in 1207 to Rukn al-Dīn of Malatya and Konya (Barhebraeus, Chron. Suri., p. 408). In the next year Rukn al-Dīn took Anḡara; a few days later he died (Barhebraeus, p. 418 sq.). He was succeeded by his young son Kīlidj Arslān III. who was however soon thrown into prison by Ghūyād al-Dīn Kāzhīr Khusraw 1 (Barhebraeus, p. 419). After the latter (d. 1205) came his son Izz al-Dīn Kāzhīr, who while on a campaign against Malik al-Asfār in Malatya developed consumption from which he died on his return (Barhebraeus, p. 437; Rec. Hist. Or. Croea., ii. 150 sq.). In the reign of his successor 'Alī al-Dīn Kai-Kabāb, the Tatārs in 1231 penetrated to Hīn Ziyād and to the Euphrates near Malatya (Barhebraeus, p. 463). 'Alī al-Dīn took Kīzhāt from Malik al-Asfār in 1232. When in the next year the latter along with his brother Malik al-Kāmil of Egypt occupied Hīn Manṣūr, 'Alī al-Dīn collected an army of over 100,000 men, took Hīn Ziyād (Barhebraeus, p. 467) and besieged al-Ruṣā in the following year; the inhabitants of Harrān fearing an attack on Malatya sent him the keys of their town (Barhebraeus, p. 468; Kamīl al-Dīn, trans. Blochet, R. O. L., v. 88). His successor Kāh-Khusraw II (1237—1245) at the beginning of his reign drove the Khūrisians out of his kingdom; on their retreat they defeated the commander (Suhāshī) of Malatya Saif al-Dawla and crossed the Euphrates at Assarā (var. Mārja) (Barhebraeus, p. 471). In 1241, the amir of Malatya again suffered an annihilating defeat from fanatical Turkomans hordes under the prophet Pāpā (Bābā) (Barhebraeus, p. 474). When the news of the victory of the Tatārs at Kāzā-Dāgh (1243; Barhebraeus, p. 475) reached Malatya, the Suhāshī Rashīd al-Dīn and the other court officials broke into the royal treasury, shared the treasure among themselves, and fled to Halah. Many prominent citizens followed them; but they were surprised by the Tatārs on the hill of Beth (1245), a day's journey from Malatya and some slain, some taken prisoners.

The inhabitants of the town, Muslims and Christians, asked the Metropolitan Mār Dionysios 'Angūr to direct the defence of the town. After two months during which Malatya was watchfully defended, the Tatārs withdrew. In 1244 the Tatār chief Jāwūr (var. Naṣūr) Nūyīn besieged Malatya and ravaged the country round until Rashīd al-Dīn caused him to retreat by rich presents (Barhebraeus, p. 477—479). After the division of the Saljuq empire by Hālāgū, there ruled at first Izz al-Dīn at Malatya, then, after his dethronement, his brother Rukn al-Dīn (Barhebraeus, p. 482). At the end of 649 (1251—1252) and in July 650 (1252—1253), the Tatārs again besieged the town under Jāwūr and wasted its surroundings (Barhebraeus, p. 491). When in 1257 Izz al-Dīn sent al-Tughr Ḥāfīz into the district of Malatya to seek recruits and the latter allotted the town to the Kūd chief Sharaf al-Dīn Ahmad b. Bābi, the inhabitants would not have him as they had sworn fealty to Rukn al-Dīn and feared his Tatār patron Badīj. It was not till Izz al-Dīn had sent a second envoy, Bābi, that he consented (1258). But Badīj, who had imprisoned him into the tower, the latter soon fled again before Badīj and only returned when he had gone, but again found the gates closed against him and was only admitted after famine had broken out in Malatya as a result of his siege (Barhebraeus, p. 498—500).

In 1260 Ḥāfīz built bridges over the Euphrates for his vast host at Malatya, Kāl at al-Rūm al-Bīrā and Karšisya (Barhebraeus, p. 506). The Egyptian governor of al-Bīrā Ḥādīr (Khūdh?) in 1282 laid waste the country round Malatya (Barhebraeus, p. 546).

The Mongol Khūn Alaqa (1265—1282) again divided the kingdom of Rūm between two Saljuq consuls of which Maṣūf received Azīzdīn, Siwāw and Malatya.

In the sixteenth century lived the two great Syriac historians, both born in Malatya, to whose chronicles we mainly owe our knowledge of the history of the town: the patriarch Michael I (1126—99), son of the priest Eliyā, who belonged to the family of kindasi in Malatya and the Maṣhrāy al-Gorzar Abu l-Farraḍ called Barhebraeus (1256—86; q. v.), whose father, the baptised
MALATYA — MALAY PENINSULA

MALAY PENINSULA is a name sometimes rather loosely applied to the wide area of South of the Isthmus of Kra (Lat. 10° N.), but so far as the Northern part of this tract is concerned the name is a misnomer, the bulk of the population there being Siamese and Chinese, not Malay. Excluding from the total Malay population of Siam [sq. v.] as a whole some 50,000 Malays scattered in Ayuthia, Bangkok, Chantabun and the rest of the Eastern shore of the Gulf of Siam, the remaining 350,000 are in Southern Siam and mainly in the parts South of Kra. But it is not till about lat. 7° N. that one meets with districts where the majority of the inhabitants is Malay, viz. on the West coast Palaung and Siwalik and on the East coast the province of Patani (formerly an important Malay state, finally conquered by Siam in 1832). Of the approximate total population of 370,000 in these three districts the greater part consists of Malays. The Southern boundary of Siam, running irregularly between 6° 45' and 5° 45' N., separates them from the rest of the Peninsula, which is attached to the British Empire and with which we are here concerned. The area of this latter portion is about 52,500 English square miles.

The geological structure of the Peninsula includes calcareous rocks and limestone, chert, shales, quartzite, volcanic rocks, granite, alluvial deposits, and the ferruginous substance known as laterite. The most important minerals are tin and tungsten. The former has been exported for more

Jewish physician Ahron had restrained his fellow citizens in Malatya from stupidly flying before the Tatars (Baumstark, Gesch. d. syr. Lit., p. 298—300, 312—20). Michael's principal authority, Ignatius (d. 1104), was also metropolitan of Malatya (Baumstark, op. cit., p. 291). The increasing weakness of the Seldjuks about 1300 favoured the formation of local Turkoman and Armenian petty states, especially in the east of Asia Minor. According to Abu ʿl-Fāqī, Christians and Muslims in Malatya in those days lived on the best of terms with one another; the town took the side of the Tatars and informed them of every thing that went on in the country. During his war against the Tatars, Sultan al-Malik al-Nāṣir in 715 (1315) decided to send a large army under the nāʿīb of Damascus, Saif-ʿl-Dīn Tunguz who was joined by his vassal Abu ʿl-Fāqī of Hamah, against Malatya. The army went by Halab, ʿAinṭab, Ḥiṣn Manṣūr and chaira to Malatya and encamped before the town on April 28. The inhabitants sent their ḥākim Djamāl al-ʿDīn al-Ḵṭīrī, whose father and grandfather had filled the same office in their time, through the south gate, Ṣāḥib al-Ḵṭīrī, to Tunguz, who was willing to afford them protection and security, if they surrendered the town. But he would take no pledge for the soldiers could not be restrained from plundering and ravaging in the town. Among the prisoners was the Tatar Ibn Kerboghā al-Ṣāḥib of Ḥiṣn Arakan, al-Shāhīd. The greater part of the town was finally burned down (Abu ʿl-Fāqī, Annales Muslim., ed. Reiske, v. 286—92; ed. Stambul 1286, iv. 77 sq.; transl. also in Roc. hist. or. crois., i. 180; Well, Gesch. d. chalīf., iv. 310 sq.). The Šulān made the territory of Malatya a separate frontier province, which included seven districts (Ḳāhil al-Ẓāhirī, Zubda, ed. Ravaisse, p. 52). There were seven citadels around the town: Muṣḥar or Miḥṣar, Kūmī, Kārahāṣar, Ḥadīrī, ʿAṣrāj, Ḥālalī, ed. Goeje, G. Gesch. d. syr. lit., 192, p. 105.

Malatya for the next few decades belonged to the Mamlūk Šūṭūn. As their remotest province, it was with Halab in 791 (1289) the scene of a great rebellion led by the governors Miḥṣāf and Velbogha against Barḳūk [sq. v.]. About this time the Turkish family of the Dhu ʿl-Karradhū [sq. v.] began to rise to power in the region of Malatya and Alḫisṭān where they ruled till 1515 under Egyptian suzerainty. About 794 (1391/2) Hāzād I conquered the town and in 1400/1 Timūr. By the battle of ḪānNX (1516) fell into the hands of Selim I [sq. v.] who destroyed the Dhu ʿl-Karradhū. This was the cause of his war against Egypt, which he finally rapidly decided in the battle of Malatya Dābīq. At a later date the eyelet to which the Sandjak of Malatya belonged was still called Dhu ʿl-Karradhī. Malatya now forms a sandjak of the wilayet of Maʿmūr at-ʿAlī (Ḵhārībīt).

The town in 1838 was the headquarters of the Ser-ʿasker Ḥażī Pasha, with whom Mottek was attached. It is said to have suffered much at the hands of the troops quartered there for months before the battle of Nizib. After the earthquake of 1893 Malatya was rebuilt on the site of the suburb of Ashusu S.W. of the older site now called Eski-Şehir, but the old town continued to be inhabited. It has now about 30,000 inhabitants, including many Armenians, Kurds and Kūṭīs.
than a thousand years and is still a very important product.

Until about fifty years ago the rivers, though mostly small and only navigable for small craft, were the chief and almost the sole means of access to the interior, which was then almost trackless forest of luxuriant vegetation, traversed by a number of mountain ranges, some running roughly north and south, others transversely or irregularly. A few of the highest points exceed 7,000 feet (roughly 2,100 metres). At sea-level the average temperature is about 82° F. (about 27°C) with a daily and annual variation of not more than about 10° F. (about 4.5°C) in each direction; the annual rainfall varies locally from about 60 inches (about 150 cm.) to four times that amount. The N.E. and S.W. monsoons prevail, but are subject to periods of slight or variable wind. The climatic conditions are therefore very favourable to the main staples of native agriculture, viz.: rice, coconuts and miscellaneous local fruits; to these, foreigners have added the cultivation of other products, such as tapioca and rubber, in the cultivation of which the Peninsula has led the way. The economic development of the Peninsula may be said to date from the institution of the Resident system in three of the Western states in 1874, which led progressively to the making of a network of excellent roads and a State railway system now comprising a trunk line from Singapore to the western part of the boundary with Siam, where it links with the Siamese system, and a number of branches, one of which turning northward through the centre of the Peninsula is destined to join the Siamese railway at a point near the eastern end of the frontier.

From the administrative point of view, the British portion of the Peninsula falls into: 1. the British colony styled the Straits Settlements (which is an abbreviation of "British Settlements in the Straits of Malacca"), comprising the three "settlements" or divisions of Singapore, Penang and Malacca; 2. the Federated Malay States, viz. Perak, Selangor, Negri Sembilan, on the West coast and Pahang on the East coast, which are united in an administrative union under a Chief Secretary to Government at Kuala Lumpur (in Selangor) and 3. the Unfederated Malay States, viz. in the extreme North and on the West coast, Perlis and Kedah, and on the East coast, Kelantan and Trengganu, and in the extreme South, Johor. Administratively the Island of Labuan off the coast of North Borneo, and the Cocos-Kelchong Islands and Christmas Island to the South-West of Java form part of the "settlement" of Singapore; and the State of Brunei (Beruani) in Borneo is an unfederated Malay State ranking with those of the Peninsula.

The Colony has the usual administrative machinery, consisting of a Governor (who is also the High Commissioner for the Malay State), together with executive and legislative councils, and a Supreme Court. Each of the Malay States has a Malay ruler, who usually bears the title of Sultan, and also a British official styled in the Federated Malay States the British Resident and in the unfederated ones British Advisor or General Advisor, and a State Council. For the Federated States there is in addition a Federal Council and a Judicial Commission. In these States the chief administrative departments are federized under federal heads, and in one or two cases (such as Education) are linked up with the corresponding department in the Colony. Both the Colony and the States are divided into administrative districts, and the officials in charge of such districts in the Colony and Federated States are mainly Europeans.

The same applies to the heads of the principal departments of Government. Many of their assistants are also European. In the unfederated States the administrative machinery is not so elaborately organized and the proportion of Europeans is smaller. Government schools have been established in the principal villages and give elementary instruction exclusively through the medium of Malay. In towns there are also higher schools, supported but not founded or managed, by Government, which give instruction through the medium of English. The college at Kuala Kangsar, which is bilingual, is mainly for the sons of Malay rajas and chiefs though others are admitted. Female education has developed more slowly but is gaining ground.

The ancient history of the Peninsula is obscure. Palaeolithic and neolithic implements have been found in various places. The so-called aborigines, the Semang, numbered 210,000 in 1921, and the total population, comprise in the extreme North a few thousand woolly-haired Negritos, generally termed Semang, in the centre a much larger number of wavy-haired light brown people known as Sakai, and in the South mostly straight-haired people of the Indonesian type, often referred to as Jakun. The first two groups and a portion of the third speak languages containing a strong Mon-Khmer element, the remaining Jakun speak Malay dialects with some alien admixture. From about the 5th century A.D. Sanskrit inscriptions on stone found in Kedah and Province Wellesley (opposite Penang) attest the presence of Buddhists using a South Indian script. An inscription of 775 originally set up at Ligor (Nakhon Sri Dhammaraj) about Lat. 8° N. indicates that before that date certain points on the isthmus were held by the Saîlendra kings of Sri Vijaya (Palembang in Southern Sumatra), who controlled the trade route through the Straits and across the isthmus probably till near the end of the xith century. It would appear from a notice in the History of the Liao dynasty of China (502-556 A.D.), Book 54, that this isthmus had formerly been controlled by the state of Funan, which centred round the mouths and lower course of the Mekong river. An inscription found at Chaiya (Jaya, near Lat. 10° N.) and probably dated 1183 gives the king who presumably set it up a princely title which points to the Malay region of Southern Sumatra, adjoining Sri Vijaya to the North-West. Another inscription of Chaiya dated 1230 was set up by the local king Candrabhânu who according to the Mahâvamsa and other sources raided Ceylon on two occasions (probably about 1236 and 1256) with his "Javaika" (i.e. Malay) forces.

It is plain, therefore, that between the viith and the xith centuries the settlement of the Peninsula by Malays from Sumatra had been going on. A few years later, but before 1280, the Siamese from Sukhothai (Sukhothayha) put an end to Malay rule in Ligor, thus beginning the extension of Siamese influence to the southward. In the Javanese poem Nagarârâjâgama (1365) a
number of places on both coasts, from Kedah and Sai (in the old Patani state) in the North to Singapore [q.v.] in the South are claimed as vassals of the Javanese empire of Majapahit. In the same century, but at a date which cannot be precisely fixed owing to the fragmentary condition of the record, the earliest Malay inscription in the Arabic character as yet discovered makes it plain that Islam had recently become the state religion of Trengganu. In the 17th century Islam was being spread in the Peninsula under the influence of the Dutch, most of whom were Malacca [q.v.]; and after its fall in 1511 at the hands of the Portuguese its dynasty continued to rule in the extreme South (Johor) and neighbouring islands, while another branch held Pahang, and Perak eventually came into the hands of a family claiming to descend from the senior line of the same stock. In or before the 18th century an immigration of Minangkabau settlers from Sumatran brought a number of small states inland of Malacca, which all eventually admitted the suzerainty of Johor, save the southernmost, Nanning, which was in theory at any rate a subordinate ally of the Portuguese. In the early part of the 19th century the state of Kedah, Kedah, was conquered by the Bugis and for a number of years exercised some sort of suzerainty over Perak. Meanwhile the Northern states came intermittently under Siamese influence, which varied with the strength of that power but retained the character of an external suzerainty till Kedah in 1821 and Patani in 1832 (this last finally) were conquered by Siam. The Dutch tenure of Malacca (1641–1795), while it controlled to some extent the external trade of the Malayan states, did not interfere with their internal affairs. In the eighteenth century Bugis adventurers settled in the Riau-Lingga Archipelago and made their influence felt on the mainland, ultimately establishing the new state of Selangor under a still ruling Bugis dynasty. British influence dates from the founding of Penang (1786), which was followed by a temporary occupation of Malacca (1795–1818), its final cession in 1824, the founding of Singapore (1819), and the incorporation of all three settlements in one government (1826), which in 1867 was transferred from the control of India to that of the Colonial Office. The policy of non-interference with the Malay states was maintained until long continued disturbances in Perak, Selangor, and Sungai Ujong (part of Negri Sembilan), due to Malay dynastic quarrels and civil war between rising gangs of Chinese tin-miners, coupled with an increase of piracy in the straits, led in 1874 to the inauguration of the Resident system. This ultimately developed into the present system, whereby since 1895 Perak, Selangor, Negri Sembilan and Pahang form a federation administered under the direction of British officials. Perak, Kedah, Kelantan and Trengganu were ceded by Siam in 1909 in return for certain concessions, one of which was the abolition of the extra-territorial privileges of British subjects. The population in 1921 of the part of the Peninsula and adjacent islands under British administration or protection was about 3,252,000, nearly half being immigrants mainly Chinese, and to a lesser extent Indians among whom males predominated very considerably. The great bulk of the native-born population consisted of Malays, and the total number of Malays, properly so-called (including, however, something like 100,000 persons of Minangkabau descent in Negri Sembilan and Malacca) numbered 1,418,198. The other Muslim immigrants amounted to 171,315 (including 117,775 Javanese, 37,848 Banjarasee, 9,772 Boyanese, 8,388 Bugis, 727 Achinese, 850 Korinchi, and 946 Mendeling). The 47,465 non-Indonesian Muslims comprised 41,337 Indians, 4,315 Arabs, 1,800 Chinese, and a few Persians and Turks; the total Muslim population was 1,636,975, the great majority being Sunnis of the school of Shafi'i. Of the non-Muslim population roughly three-quarters were Chinese, and about one-quarter Indians but there were also 38,448 so-called aborigines of the Peninsula (a few of whom may, however, have been converts to Islam), 18,178 Siamese, 14,853 Europeans (mostly British, but including Continental Europeans and Americans of European descent), 12,629 Eurasians, 6,989 Japanese, and 2,215 Sinhalese, besides several smaller communities.

MALAYS. People. In this article only the Islamic features of the Malay nation will be dealt with, so neither ethnographical nor anthropological questions will be discussed. It may be sufficient to say that the Malays originally — we do not venture to say: as autochthons — were established in the middle part of Sumatra, especially in Palembang, and spread over the eastern and northern part of that huge island, and settled in the Straits, mainly in Malacca (see MALAY PENINSULA), and founded colonies in Borneo, along the great rivers, and elsewhere eastward. They belong to the widely dispersed Polynesian (or Indonesian) race, whose languages extend from Madagascar to the Philippines and from the Peninsula of the utmost S.E. point of Asia to the remoter islands of Micronesia and Melanesia in the Pacific. The Malay chronicles, for the greater part mythical, and a few epigraphical data, make it clear that there was a highly cultivated Hinduised Malay kingdom in Palembang, the seafaring people of which went over to several adjacent and more distant countries; it was along the way of commerce that they carried the Malay language to sundry ports and lands. It is not exactly known in what part of India swept away Hinduism, but it is a fact that the new religion on its arrival in the Straits found Malay people settled in the Peninsula and the Malay language introduced there as the generally adopted speech of commerce and political intercourse.
Language. It is due to Islam that Malay, being already a language enriched with many Sanskrit words, became an idiom of very mixed lexicographical character. The Islamic current brought words of Tamil origin, innumerable Arabic words, some of the Kawi-like garb, many Persian words, some of them with Indian characteristics, and a small quantity of Hindustani vocables. In that heterogeneous form Malay became the vehicular language of the new religion. Undoubtedly it had found its way already to the most visited ports in the Archipelago in a simplified form fit for intercourse with all kinds of natives and foreign merchants, later also with European, namely Portuguese and Dutch captains and ambassadors. It was Islam that gave Malay a literary character, and when it had established itself as a medium into which innumerable Arabic books were translated, its form became crystallised and its orthography was fixed systematically. That uniformity made it the appropriate language for literary and liturgical purposes and also a kawi for dogmatists and mysticism, as well as romantic and historical literature. It has to be borne in mind that there is a great difference between the potosi or language heard in most of the sea-ports, and the cultivated literary language, which became highly developed in Malacca, the capital, and the seat of a Muhammadan court and a royal library. When Arabic and Indian learned men came to Acheh, they discussed theological questions in Malay and even wrote books in that language. The literary form is sustained uniformly to the present day, literary products being written in archaistic formulae, and the colloquial style being used in different parts of the Archipelago, the purest in Johore and Malaya in general and the East-coast-districts of Sumatra; the least pure in Java and more eastern islands. In the Malkeas, especially in Amboina (Ambon), the preaching of Christianity availed itself of Malay; in those islands this language has therefore assumed an individual character. As to its linguistic character, it may suffice to notice that Malay, like all Polynesian languages, belongs to the agglutinative type, declension not existing, conjugation being limited within narrow bounds, and amplification of the mainly disyllabic stems with a quantity of prefixes, infixes and suffixes giving opportunity of forming words for almost grammatical, and logical relations. There are some traces of the influence of Arabic grammar on Malay syntax, but on the whole the Muhammadan current has not essentially altered the character of the language; it has only enriched it with an enormous number of words, and given to its written literature an individual Islamic character.

Literature. Of pre-Islamic literature nothing is known to a far as may be concluded from a few old inscriptions in Hindu script, it seems that Malay was written in Kawi-like characters, but literature, in its earliest known form, is written in Arabic letters only. The oldest manuscript are preserved in the Cambridge and Oxford libraries, they date from the last years of the 14th and the first decade of the 15th century. The only literary evidence of the existence of written literature in the 15th century is the mention, in a 16th century chronicle, of the use made of a royal library at Malacca at the time when the Portuguese endeavoured to capture that town (1511).

Malay literature, as it presents itself now, is only for a very small part original. Hardly any of the chronicles, tales and poems are derived from Arabic sources directly, most of the religious and semi-historical romances have been translated from Persian, but all these literary products are imbued with the Muslim atmosphere, being full of Arabic words and phrases, and laden with Islamic theory. There are, it is true, some indigenous farric tales, and some fables, especially the sometime highly appreciated mouse-deer-tales, moreover some original romances with Hindustanic influences, and several adapted old Javanese tales, that do not betray real Islamic influence, but the very fact that all these books are written in Arabic characters makes them overflow with Arabic words, and in that way shows that they belong to Islamic mentality. In this short account there will be no mention of literary products going back to the great Sanskrit epic poems, nor of the tales that do not show traces of Muslim influence; only in so far as Malay literature has Islamic features, will it be treated here. The originally genuine Indonesian deer-fable has undergone an Islamic correction. The historical writings, more or less mythical and semi-romantic, are almost absolutely Islamised. To that class of works the chronic Sejarah Melayu, and other ones, as the chronicles of Kutawaringin, Kuta, Acheh and Pasai are to be reckoned. Very historical, but for the greater part fictitious, romance is the Hikayat Hang Tuah. A host of romances, dealing with foreign princes and princesses and their endless adventures, has been spread over a great part of the Malay-reading East-Indian World; the titles of all those popular, but for European readers less attractive, books, may be found in the catalogues of Malay manuscripts at Leyden, Batavia and London. Some books of fiction have been translated from Persian, Arabic or Hindustani. A group of them is to be traced to the Hikayat-co-collection, another one to the Tuti-nama-series, a third one to the Bakhshiy-a cycle. By way of exception foreign authors have written in Malay; e.g. the Radjput Nfar al-Din al-Kaniri [q.v.], who wrote a great encyclopaedic chronicle at the instigation of an Achehese queen. A very great number of texts deals with the old prophets, the Prophet Muhammad, his family and friends. Those works, like e.g. the romances of Amir Hamza and Muslim b. al-Hanafiya, have Persian originals. The purely religious books cannot be regarded as Malay literature. Poetical literature has a different character. The real Malay kind of poetry, though not devoid of Persian influences, is the pantun, i.e. popular quatrains, whose first two lines deal with a natural fact, or a well known event, and are intended to prelude, phonetically, the 3rd and 4th lines, that contain the real meaning of the usually erotic poem. The other genre is the shair. Its form is the stanza of four rhyming lines. Some of these very extensive overloaded poems are from the Javanese, some others are versified versions of prose romances; moreover historical events, love-stories, religious matters, mythical speculations etc. are dealt with in innumerable shair, the titles of which may be seen in the following catalogues: Leyden Univ. Library, by H. H. Juyboll; Supplement thereto by Ph. van Ronkel; Batavia, the Hague and Brussels by the same; London (R. A.S.) and ibidem E. I. H. (India Office Library) by H. N. van der Tuuk.
Special literary questions have been dealt with by Ph. S. van Ronkel. The papers on Malay Subjects and some numbers of the Malay Literature Series contain some valuable contributions. A fuller account is given in the Dutch *Entwyl. van Nederl. Indes*, s. v. Literatur (Maleisich).

**MALĂZGERD, district (Kağıd) and town in Armenia, to the North of the lake of Van.** Of the name, there occur, in old-Armenian, the forms Manavazakert, Manavazkerd and Manazkerd. The middle-Armenian and Byzantine forms, Mandzgerd and *Mandżäwr* resp. as well as the Arabic form *Mandżjar*, point to a triad, one of these being the original form, Manavaz(a)kert representing a popular etymological formation, from the name of the noble family of the Manavazian's, which, in olden times, resided in the district. For it is phonetically impossible, that an old-Armenian form Manavaz(a)kert should regularly becomes Manazkerd. This is the theory of Hubshmann, who admits however the possibility, that an earlier Manavaz(a)kert may have been arbitrarily shortened in pronunciation, so as to become Manazkerd, the word being otherwise long. W. Belek has conjectured, that in the first part of the word, there may be hidden the name of the Urartæae (pre-Armenians) of the region in the middle of the 1st millennium B.C., and his conjecture is based on the fact, that from an inscription of Menaus appears, that this king founded a city, which was called *Menaçhina* (= Menaus-town); thus it would, according to Belek, be very probable, that Mandzgerd, in whose environs there have been found many inscriptions of Menaus, was this very town, named after him. If such be the case, then the old-Armenian form *Manavazkerd* must have originated from a later, popular etymology. From the fact, that names of towns formed with *-kert* (= kert) seem to have originated not before the Parthian epoch, as Hubshmann observes, it would follow, that the memory of the old king Mandzgerd still lived in the Parthian empire. This difficulty, however, is not insoluble, for it seems, that the name of another Urartææ king of Van also may survive in classical Armenian quasi-historical tradition as Aram.

The oldest and best Arabic spelling of the name of the town is *Mannahjird*, with *n*; the forms with *t* are later, and on them is based the modern name (Malazgerd). The spelling with *n* we find e.g. in al-Isra'khi; Yàkut; the author edited by Houtsma in *Rec. des textes rel. à l'Hist. des Selçoucides, ii*; al-Nasawi (ed. Houdas); in a varia lectio of the text of the *Khát al-Sadür* (v. M. S. New Series, ii. 119); and in the text of the *Khát al-Salz*, of *M. Th. de Mide* (1932). The spelling with *t* common in later texts, occurs, among older authors, in al-Mukaddasi; Ibn al-Athir; the *Khát al-Sadür* (the reading adopted by the editor); Djuwaini, and the *Nuzhat al-Kulib*. The terminations -qird and -kird also alternate in the spelling; this variation is already noted by Yàkut (*Mandżam*, iv. 648). As regards the form Manaz, cited by Marquardt (*Einzahrs*, p. 162) from Thomas Arruini, cf. Hubshmann, *Die altarmenischen Ortsnamen*, p. 325, 330, 449 ff.

Malazgerd belonged, since the beginning of their dynasty, to the realm of the Bagatides of Armenia, who allowed it to be ruled, as well as A-Habiti, Ardji- and *Perkri* (= Bergiri), by a family of their vassals. This family, whose members bear Arabic names, became in course of time independent of the Armenian kings, but, on the other hand, was obliged to pay tribute to the emperor of Byzantium (Constantinus Porphyrogenetus, *De admin. imp.*, ed. Bonn, p. 192 ff.).

Yàkut says, that the inhabitants of Malazgerd are Armenians and Byzantines (*Rûmi*); a native of this town was Abû Naşr al-Manâzî (this, therefore, is the *nisba* of the name), who was waiz to one of the Marwânî princes of Dimârèbkr. This Abû
Nasr died 437 (1045—1046) and, according to our authority, was a good poet: Ya‘qūb cites two fragments from his poems (Mā‘ālam, iv. 648 sq.). Regarding another al-Manṣūr, cf. J. K. A. S., 1902, p. 788, note 1.

Among political events connected with the town of Malāzgerd, it may be noted that, on the occasion of the campaign, which the great Ḥamšār ʿAlād-dawla undertook into Armenia (328 = 940), there is mentioned one ‘Abd-al-Hamid, prince (ʿāliḥ) of Malāzgerd and Sīhabawr (Sawarq). (J. K. A. S., 1902, p. 797): the name ʿĀlāwīnšāh under the names of the princes of Malāzgerd, recorded by Constantinus Porphyrogenetus, and this contemporary of Ṣaf al-Dawla doubtless belonged to that family. But he cannot be the ʿĀlāwīnšāh of the Greek text, who, from a chronological point of view, must have lived two generations earlier (cf. the genealogical table of the dynasties of Malāzgerd in Bandurān Anūmāntāvorīs in Čent Perpāh, Liv. de Administr. Imp., in the Bonn edition of Constantinus, iii. 372). In 353 (964) a certain Nādja, a ḡālam of Ṣaf al-Dawla, revolted against his master, after taking possession of that part of Armenia, which was in control by his son ʿAlā-ʾib-Ward. The latter was slain and, among the places conquered by Nādja, Malāzgerd also is cited (Ibn al-Aṯīr, ed. Terrab, viii. 408): in the year 359 (969—970) Malāzgerd was taken by the Byzantines (ibid., vili. 445): they must have lost it again before 382 (992—993), for in that year they besieged not only Akhāt and Ardijsh, but also Malāzgerd, but this time they could not take it, but returned home after concluding a treaty for ten years with ʿAbd-allāh b. Marwān (ibid., ix. 67). In 440 (1058—1059) it must have belonged to the Byzantines, for the ʿĀlāwīnšāh, which Ibrahim, Toḡrīl Beg's brother, undertook into the Byzantine empire, affected also the territory of Malāzgerd (Ibn al-Aṯīr, ed. Die, xi. 372). And it is explicitly stated by Ibn al-Aṯīr (ix. 411), under the year 446 (1054—1055), that Malāzgerd was in possession of the Byzantines, for there he relates, that this strong city resisted a siege by Toḡrīl Beg himself (cf. also Cedemus, ed Bonn, ii. 590 etc.). The most important historical event, with which the name of the town is connected, is the battle of Malāzgerd (465 = 1071) between ʿAlp Arslān and the Byzantine emperor Romānus Diogenes, in consequence of which the eastern part of Asia Minor, viz. Armenia and Cappadocia, was lost for ever to the Greek empire (Ibn al-Aṯīr, ed. Die, xiv. 44: Rō mel. vof. i. 179, ed. Z. H. S.), or 141 sq.; Kāḥel al-Nāšīr (U. M. S. New Series, ii.), p. 119: Zonaras, ed. Dindorf, iv. 213 etc.; cf. also H. Geiger in K. Rümmerbach's Ges. für die byzantinischen Altert. (1910) 1019. After this event, therefore, Malāzgerd passed into the possession of the Sāljuqs. In 531 (1137) it was given by king Malik-shāh, along with Erzerum and part of the territory of Akhāt, to his brother Sāljuq, as a ʿāzī (Kec. ʿāzī vif. ibid., ed. Houtouma, ii. 185). In course of time, the city was besieged in 587 = 1191 by Ṣaf al-Dawla b. Ṣalih. In 601 (1205—1206) its environs suffered from the raids of nomads from the direction of Ādhar-Bālūq (Ibn al-Aṯīr, xii. 341, 134). During the disturbances, of which Armenia was the scene in the beginning of the sixteenth century, mention is several times made of Malāzgerd. In 603 (1206—1207), a former maḥtār of the Shāh Arman took possession of Malāzgerd, and, after that, also of Akhāt. He had, in addition, control of Arđijsh and other places. This man, whose name was Balbān (the vocalisation of the first syllable is uncertain), was assisted by the prince of Erzerum, Muḥḥīrah dīn Toḡrīl Shāh b. Khīlid Arslān, against al-Malik al-Awhad, son of al-Malik al-ʾĀdil of Egypt. Later on, Balbān was murdered by his ally of Erzerum, who tried to enter Akhāt and Malāzgerd, but in vain, so that he was obliged to return to his own states (Ibn al-Aṯīr, xii. 168). In 619 (1220) the shah of Malāzgerd, Toḡrīl b. Ḥūrūmshāh ʿAlāʾ dīn Muḥammad occupied Malāzgerd, as he intended to attack Huṣayn dīn Ṣalih of the ʿĀlī, the new owner of the Malāzgerd, in Akhāt. But, since his attempt on this town did not succeed, and as the winter also set in (he had entered Malāzgerd on Dhu l-Kaʿa 13, November 5, 623), and the Turkomans invaded his own realm, he was obliged to retire (Ibn al-Aṯīr, xii. 301). In 626 (1229) however he succeeded in taking Akhāt, after which he besieged Malāzgerd, first in person, afterwards leaving one of his generals in charge of the siege, but on this occasion without success (al-Nasawi, ed. O. Houdas, text, p. 205, 208; translation, p. 342, 344, 347).

MALĀZGERD (properly, Mālīdah or Mālīdah), a district in Eastern Bengal and in the Rādžāshāhī Division of the Presidency of Bengal. Area 1,891 sq. m. Pop. in 1871, 1,004,159, of whom 465,521 were Hindus, and 505,369 Muslims. In old times it was famous for its two capitals of Gaur [q.v.] or Lakhināwati, and Pandua, where there are many ruins of the mosques and other buildings of the Muḥammadan kings of Bengal.

(H. Beveridge)

MALDIVE ISLANDS, a group of coral islets in the Indian Ocean, lying between 7° 6' N. and 8° 42' S. lat. and 71° and 74° E. long., and consisting of seventeen atolls with a great number of islands, of which about 300 are inhabited, the population being estimated at 70,000. The Moorish traveller, Ibn Baṭṭūta, lived for more
MALDIVES ISLANDS — MALI

203

than a year (1543—1544) in the islands, but the first Europeans to visit them were the Portuguese who established a factory in them in 1518. The Maldives were much harassed by Māppilla (Moplāh) pirates from the Malabar Coast and in 1645 the king, who is entitled "Sültān of the Twelve Thousand Isles", placed himself under the protection of the Dutch in Ceylon, with which island the Maldives have, since that time, been politically connected. The natives are Muslims and fall into three ethnographical divisions, (1) the northern, with a strong admixture of Dravidian blood from India, (2) the central, under the immediate rule of the Sultan, who resides in Male, which has acquired from Arab traders and settlers a strain of Semitic blood, and (3) the natives of the southern clusters, who have had little communication with the central group, and preserve more of the primitive type, resembling the Sinhalese villagers of Ceylon. All are peaceful, intelligent and industrious, growing their own crops and weaving their own cloth and mats. The chief exports are copra, coir, and dried fish products. The language is a dialect of the Sinhalese, somewhat Muhammadanized, but many read Arabic more or less fluently.

(M. T. W. Haig)

MALHAMA. [See Malāhma.]

MALI, a town, which no longer exists, the old capital of the Mandingo empire, in the western Sudān, also called Mali, Mali, Melli, Melle, Mani or Mané. All these names are dialectic or local variants of the same word which is the name of the country of origin of a people whom the French call Malinké, following the Ful and Tucolors, and the English "Mandingo", following the form used by one section of this people on the Lower Gambia.

The name found in the Arabic authors for this town was not the one used by the inhabitants themselves and the latter is not given us by the geographer Idrīsī, nor the historian Ibn Khaldūn, nor the traveller Ibn Batūţa, nor Leo Africanus. It was only in 1913 that the translation of an Arabic manuscript not long before discovered in the Sudān, the Tābīb al-Fattāh, enabled us to learn that in reality there were two successive capitals of the Mandingo empire or of Mali: the older was called Djirība or Djirīiba and there was later another called Niani.

Recent researches in the valley of the Niger have enabled the sites of these two towns to be discovered. The first was situated at the junction of the Niger and the Sankarani, and at the place called Mani or Mali Tombo, i.e. ruins of Mali. There are still traces of a very ancient and important town, which the natives regard, according to their traditions, as the ancient residence of their former sovereigns and the place where the latter are buried.

As to the second town, a copyist's error in the text of Ibn Khaldūn concealed the true name till the publication of the Tābīb al-Fattāh in 1913. It was recently recognised that the capital in question should be located on the left bank of the Sankarani, and at the level of Sigūrī, not far from the place where there is still a town of the same name, Niani.

Djērība was no doubt the cradle of the Mandingo dynasty of the Keita of the sixteenth century. We have no information about it. We are more accurately informed about Niani. It is supposed to have been founded in 1238 after Sundjuja Keita, ruler of the Mandingo, had defeated in 1235 at Kirina the emperor of Sūsū, Sumangarur Kante, his rival and enemy. Gongor Mūsā, often wrongly called Kankan Mūsā, was ruling there a century later, when on his return from a pilgrimage to Mecca, he attracted to his court an Arab poet named al-Sāhili who belonged to a Granada family. By orders of Gongor Mūsā, this foreigner built in Gao a mosque with battledore terrace and pyramidal minaret. According to tradition, this was the first building of the type, now so widely spread in the western Sudān, the origin of which is North African.

In 1352—53 in the reign of Sulaimān Keita, brother of Gongor Mūsā, the Arab traveller Ibn Batūţa visited the town. It was then a completely Muslim metropolis, in which lived Egyptian and Moroccan legal authorities, students of Islam, readers of the Korān in the mosques, and merchants. No description of the different quarters of the town has come down to us but we have a fairly detailed account of the sovereign's palace. The ruler gave his audiences in a room looking out on a courtyard, with six windows of wood, three of which were covered with plates of silver and above these three covered with plates of gold. These windows were hidden by curtains, which were lifted to show that the hour of audience had come.

The empire of Mali retained its power down to the beginning of the xviiith century when its decline began. According to Leo Africanus who visited the Sudān in the first half of the xviiith century, the capital Mali or better Niani was inhabited by about 6,000 families who included many artisans and traders. Islam was flourishing, the town had still a number of mosques and prosperous schools but it had lost its former glory.

In 1545, Djērūd, brother of the askiya of Gao, marched to Niani; the ruler of the Mandingo having succeeded in escaping, Djērūd occupied the town which he plundered for a week before withdrawing, ordering his soldiers to defile the palace of the king with ordure.

In the xviiith century the growth of the Bambara kingdoms of Segu and Kaarta contributed to overthrow what was left of the old Mandingo power, the last chiefs of which, leaving Niani, took refuge in Kangaba.

There is no doubt that Niani was visited on several occasions by the Portuguese. We know nothing of the expeditions which set out from their factories in Lower Gambia to the interior; on the other hand, we have notes about the Mandingo capital on the journey made in 1483 of an embassy from Elmina (now the Gold Coast Colony). João de Barros describes it in his Book III of his Asia: "By the route of the fortress of Minas (Elmina) he (John II) also sent an embassy to Mahmūd b. Manzugul, grandson of Mūsā, king of Songo. This city is one of the most populous of this great country which we usually call the
land of the Mandingoes”. Another author, Barth, claims to identify the Song of the Portuguese historian with the land of the Songhoy on the Niger. This is clearly wrong. But is Songo a name applicable to the Mandingo capital? M. Delafosse does not think so; he calls attention to the fact that the country of the Mandingo is still known among the coast peoples of the Gulf of Guinea and in all the Fanti and Ashanti country under the name of Songo, so that among those with whom the Portuguese of Elmina mixed, the word was simply a synonym of Mandingo or Mali.

**MALIK (A.), King.** In the Qur’ān the word, in addition to being used of the kings of this world, is also applied to Allāh, e.g. xx. 113: ‘So is Allāh exalted, the King, the Truth’. In lii. 25, Allāh is the malik al-mulk, the possessor of royal power, which he gives to and takes from whom He will; in the *Fatīha* many Qur’ān readers read malik (for malik) jāwān al-dīn; God’s kingdom is also described as mulk and malakūt (cf. ALLĀH).

Muslim rulers do not generally call themselves kings; as in the Qur’ān, the use of the word was confined to the rulers of foreign peoples in so far as it had an earthly significance. The application of the word to Muslim potentates was regarded not so much as blasphemy but rather as implying a form of rule which was contradictory to Muslim political theory. It was considered very much to Mūsāīya’s discredit that he described himself as the first king in ʿIṣlām; and as a kingdom, which is contrasted with the imamate, the dignity alone worthy of the Muslim rulers, the rule of the Umayyads was attacked and despised by the pious old fashioned party.

While religious constitutional literature does not recognise the word malik as a term for Muslim conditions, it plays a very much greater part in the literature of mirrors of princes which is indifferent to religion, but, only when it is a question of a ruler in general and not of specifically Muslim rulers. Al-Dżahnīr gives his K. al-Tāfīl the subtitle *al-Malik al-Malik* and al-Fārābī deals very fully with the duties of a king. In the ethical encyclopaedias which deal with all three moral sciences, ethics, economics and politics (cf. M.I.), like the *Sūkh al-mulak fi Tasbīh al-Mamlekk* of Ibn Abī T-Rabī‘, the king appears as the subject of special chapters in the scheme of division of this kind of literature.

With the spread of ʿIṣlām and the Arabic language into Asia, malik became used as the equivalent of the Persian kāh, and as a royal title was particularly favoured by mediaeval dynasties of Turkish origin. We find the title malik as early as the Samanids, and in the next century the Būyid ʿAbā‘ al-Dawla ‘calls himself Malik al-Malik, a title modelled on the ancient Iranian title of “King of Kings”. Among the Saljuqs, Atabegs and Urtuṣids, it is the regular title of sovereignty, usually combined with an honorific epithet. It is not so generally used by the Aiyūbids and Mamluks.

In the feminine it is the royal title of the Mamluk queen Shāḏar al-Durr, who calls herself "queen of the Muslims" (Malika al-Muslimin). One of the rare occurrences in India of the title is also in the feminine Malika, which queen Ṣayfya of Dehli uses in place of the *Shāh* of the other members of the dynasty. After being practically extinct for several centuries in the Muslim world malik has since recently been adopted as the royal title in the new kingdoms of Egypt, ʿIrāq, the ʿUdān, and Afghanistan so that it has suddenly, if somewhat artificially under the influence of the western conception of king, come to be the royal title par excellence in the Muslim world.

**MALIK ʿAMBAR ḤABASHI, an Abyssinian slave, who rose to great power and influence in the Deccan.** When Aḥmadnagar was conquered by princes of the Deccan, Malik ‘Ambar and Rādūt Mīnūn, a Deccan chief, divided the remaining territories between them. About this period owing to the rebellion of Shāḏar al-Salim, the death of Akbar, and the revolt of Shāḏar ʿUṣūr, ‘Ambar found time to regulate his country and raised large armies, and even dared to seize several of the imperial districts. He introduced a new revenue system into the Deccan, perhaps in imitation of Tōdār Mall. When the authority of the emperor Delhi was established, he sent several expeditions to the Deccan, but ‘Ambar could not be subdued. At last he restored the places taken from the Mughals in 1055 (1645), and when he became attached and remained loyal to him until his death, which occurred in 1055 (1646), in the 80th year of his age. He was buried in Dowlathābād [q. v.].

**MALIK AL-KĀMIĪ I, NAṢR AL-DIN ʿABU ʿAL-MAṢĪḤ MUḤAMMAD B. AL-MALIK AL-ʿADĪ, an Aiyūbid, was born in Rabi‘ I 576 (Aug. 1180) and knighted with full ceremony on Palm Sunday (May 29) 1102 in Akka by Richard Curé-de-Lion who was on friendly terms with his father. A few years later his name begins to appear in the history of the Aiyūbīd state. When his father, who was besieging Mardin [q. v.] with his army, left it after the death of al-ʿAzīz, Salahīn’s brother, on 27th Muharram 959 (Nov. 29, 1108) to seize the capital, Damascus, for himself, he entrusted the conduct of the siege of Mardin to his son Kāmil. The governor of the town had begun to negotiate with him for surrender, when reinforcements arrived and after a fight which went badly for al-Kāmil, the latter was forced to withdraw and join his father in Damascus. Al-ʿAdī’s death (27th Dhu-n-Nūr, 615 = Aug. 31, 1218) left him the difficult task of clearing Egypt of the Crusaders, who had landed near Damietta in the beginning of summer and had begun to besiege the town.
On the news of their landing, al-'Adil [q.v.], who was then in Syria, sent troops to Egypt and al-Kāmil endeavoured to defend the land as best he could. The Christians gained the upper hand at first and by the end of Shabān 616 (beg. Nov. 1219), Damietta had fallen into their hands. It took nearly two years for al-Kāmil, who had had homage paid to himself as sulṭān of Egypt and Syria after the death of his father, to retake the town with the help of the other Ayyūbids, particularly his brother al-Malik al-Mu'azzam; the Christians by this time were tired of fighting and in Rajab 618 (the end of August 1221) they offered to abandon the town if given a free passage. Al-Kāmil, who feared not without reason that they would soon receive reinforcements from Europe, gladly accepted their terms whereupon the Franks left Egypt. But then troubles broke out within the Ayyūbī ranks. When al-Mu'azzam died (end of Jhu 'l-Kāda 624 = Nov. 1227) al-Kāmil and his brother al-Malik al-Ashraf attacked his son and successor al-Malik al-Nāṣir Dāwūd and finally took Damascus from him (Sha'bān 626 = June/July 1229); al-Kāmil next occupied southern Syria and Palestine and al-Ashraf was recognised as ruler of Damascus under the suzerainty of al-Kāmil, while his nephew Sayf ad-Dawrāk, al-Shawār, received Belshār, al-Shawār, and some other remote fortresses as compensation. Al-Kāmil had previously entered into negotiations with the Emperor Frederick II and concluded a treaty with him by which he ceded Jerusalem to him with a corridor to Jaffa and the Emperor in return promised to help him against all his enemies. After some time the Ayyūbīs came into conflict with the Sa'dītān. Kāl-Kātūs 'l-Qāsī [q.v.] had previously quarrelled with al-Ashraf and sought to bring against him a confederacy of petty Mesopotamian dynasties and under his brother and successor Kāl-Kobāt 'l-Qāsī it came to open fighting. The successes won by al-Kāmil in this war, however, aroused the jealousy of his relatives and they formed a coalition against him (cf. Ayyūbīs). Al-Kāmil then set out for Egypt and advanced victoriously as far as Damascus. He succeeded in taking this city also but died very soon afterwards (in Rajab 633 = March 1238). As a ruler he was undoubtedly one of the most distinguished of the Ayyūbīs. He was a brave soldier and a skillful diplomat and rendered lasting services to the development of his country. He devoted special attention to irrigation and in his reign the defences of the citadel of Cairo were completed. He also took a lively interest in the cause of learning.

**AL-MALIK AL-KĀMIL II.** [See Sha'bān.]  

**MALIK SARWAR,** KHWWĀDĪ DIJĀHĀN was a eunuch given by Saffār Rajab to his grandson Muḥammad, son of Fīrūz Tughlāq, in whose service he rose to be chief eunuch and controller of the elephant stables. He was faithful to his master in all his troubles, and in 1389 received the title of Khwādī-dī qaṭān and was made ważīr, Muḥammad's son, Muḥammad Shāh, sent him in March, 1394, to govern the eastern provinces, with his headquarters at Dījamūtūr, and conferred on him the title of Malik al-Shāh, or lord of the east. He took thither with him Kāranfūl, a slave and water-bearer of Firūz Tughlāq, whom he had adopted, and his brothers. His administration was most successful and his adopted son Kāranfūl served him loyally. On the disruption of the kingdom of the Tughlāq dynasty after Timūr's invasion, Malik Sarwar assumed the title of Sultan al-Shāh and established his independence in Dījamūtūr. Kāranfūl received the title of Malik al-Shāh, and his brother Ibrāhīm was made commandant of the fort and city. 

Malik Sarwar died in 1400 and was succeeded by Kāranfūl, who ascended the throne of Dījamūtūr under the title of Mulārak Shāh.

**MĀLIK B. ANAS,** a Muslim jurist, the imām of the madhab of the Mālikis, which is named after him, and frequently called briefly the imām of Medina.  

I. The sources for Malik's biography  

The oldest authority of any length for Malik, Ibn Sa'd's account (d. 250) based on al-Walīkī's (d. 207) in the sixth class of the Medina "successors", is lost as there is a hiatus in the manuscript script, in the form of a publication in the work, but it is possible to reconstruct the bulk of it from the quotations preserved, mainly in Tābarī (iii. 2519 sq.), in the Kātib al-īyān (Franq. hist. arab., i. 297 sq.), in Ibn Khallūkīn and al-Suyūtī (p. 7, 6 sq., 12 sq., 41, 49). From this it is evident that the brief biographical notes in Ibn Kūtaibā (d. 276) and the somewhat more full ones in the Fihrist (compiled in 777) are based on Ibn Sa'd. The article on Malik in Tābarī's (d. 310) Dīnār al-Muḥtiyyat is essentially dependent on the same sources, while a few other short references there and in his history are based on other authorities. Al-Samānī (c. 550) with the minimum of bare facts gives only the legendary version of an otherwise quite well established incident, while in Ibn Khallūkīn (d. 572) and particularly in al-Nawawī (d. 676) the legendary features are more pronounced although isolated facts of importance are also preserved by them. Al-Suyūtī (d. 911) gives a detailed compilation from Ibn Sa'd and other works, most of which are now no longer accessible but are for the most part of later date and unreliable, like the Mawṣūl Ḥadīth al-Muṣawwī' of al-Dhāfī, the Ḥīlāt of Alā al-Nā'im, the Kātib al-Matḥalāf wa-l-Muṭṭakāf of al-Khāṭib al-Bahgūdān, the Kātib Tārib al-Mājudīrī of al-Khāṭib 'Īyān, the Faḍilī Malik of Abu 'l-Hasan Fīrūz. The bulk of the later Mawṣūl, for example that of al-Zawāwī, is of no independent value.  

II. Malik's Life  

Malik's full name was Abu 'Abd Allah Malik b. Anas b. Malik b. Abu 'Amīr b. 'Amīr b. al-
dislocation of the shoulder, but this is said to have still further increased his prestige and there is no reason to doubt that the stories of Abu Hamfa’s ill-treatment in prison are based on this episode in the life of Malik. He must have later made his peace with the government: in 160 the caliph al-Mahdi consulted him on structural alterations in the Meccan sanctuary, and in the year of his death 179 the caliph al-Rashid visited him on the occasion of his pilgrimage. While this fact may be considered certain, the details in the Kitâb al-Uyun are already somewhat legendary and in Suuyî, following Abû Na’âim, quite fantastic. The story of al-Mansîr found as early as Ibn Sa’d, in a parallel riyâya in al-Tabari of al-Mahdi, is quite fictitious and is given again with fantastic detail in al-Suuyî (from Abû Na’âim) of al-Rashid, that the caliph wanted to make the Mawafîqî canonical and only abandoned his intention on the representations of Malik.

Malik died, at the age of about 85 after a short illness, in the year 179 in Medina and was buried in al-Baqî. Abû Allah b. Zainab, the governor there, conducted his funeral service. An elegy on him by Djâfar b. Ahmad al-Sarrâj is given in Ibn Khallkîn. Pictures of the kalbâb over his grave are given in al-Batantîn, al-Ritbâl al-Hidâyâta, opposite p. 250 and in Ibrahim Rîfî at Pasha, Mi’râb al-Haramain, vol. i, opposite p. 426.

As early as Ibn Sa’d (certainly going back to al-Wakîd) we have a fairly full description of Malik’s personal appearance, his habits and manner of life, which however cannot claim to be authentic, nor can the sayings attributed to him which became more and more numerous as time went on. The few certain facts about him have been buried under a mass of legends: the most important facts have already been noted and the others will be found in al-Suuyî and al-Zawawi.

On the transmitters of his Mawafîqî and the earliest members of his madhhab see Sect. iii. and v.; here we will only mention the most important scholars who handled on traditions from him. These were Abû Allah b. al-Mubâraq, al-Awza’i, Ibn Dhu’ayd, Hanîmî b. Zaid, al-Lâqî b. Sa’d, Ibn Salama, al-Shâshî, Shu’ba, al-Thawri, Ibn al-’Utaybî, Ibn al-‘Utaybî, Ya’ zu, al-Munmud, and al-Suuyî, who is the last transmitter. A long list of transmitters but most of them are not corroborated. We may just mention the apocryphal story of Malik’s meeting with the young al-Shâhî (Fogam. hist. arm., i, 359; Wustenfeld, G. Abb., 1890, p. 34 and 1894, i, 1 sqq.), which is simply an expression of the view that was held of the relation between the two Imams.

III. Malik’s Writings

Further sources for his teachings

1. Malik’s great work is the Kitâb al-Muwafîqî, which, if we except the Corpus Juris of Zaid b. ʿAlî, is the earliest surviving Muslim law-book. Its object is to give a survey of law and justice, ritual and practice of religion according to the igîma of 'Abî 'Amir in Medina, and to create a theoretical standard for matters which were not settled from the point of view of igîma and sunna. In a period of recognition and appreciation of the canon law under the early 'Abbasids, there was a practical interest in pointing out a “smoothed path” (this
is practically what al-muwatta' means) through the far-reaching differences of opinion even on the most elementary questions. Mālik wished to help this interest on the basis of the practice in the Ḥijāz and to codify and systematise the customary law of Medina. Tradition, which he interprets from the point of view of practice, is with him not an end but a means; the older jurists are therefore hardly ever quoted except as authorities for Mālik himself. As he was only concerned with the documentation of the sunna and not with criticism of its form, he is exceedingly careless as far as order is concerned in his treatment of traditions. The Muwatta' thus represents the transition from the middle of the First to the pure science of Ḥadith of the later period.

Mālik was not alone among his contemporaries in the composition of the Muwatta': al-Muqaddasī (d. 164) is said to have dealt with the consensus of the scholars of Medina without quoting the pertinent traditions, and works quite in the style of the Muwatta' are recorded by several Medina scholars of the same time (cf. Goldziher, op. cit., p. 219 sq.) but nothing of them has survived to us. The success of the Muwatta' is due to the fact that it always takes an average view on disputed points.

In transmitting the Muwatta', Mālik did not make a definitive text, either oral or by muqrina, to be disseminated; on the contrary, the different riwaya's (recensions) of his work in places differ very much (cf. Goldziher, op. cit., p. 222). The reason for this, besides the fact that in those days very little stress was laid on accurate literal repetition of such texts and great liberty was taken by the transmitters (cf. Goldziher, op. cit., p. 221), lies probably in the fact that Mālik did not always give exactly the same form to the same lectures in different "classes". But the name Muwatta', which certainly goes back to Mālik himself, and is found in all recensions is a guarantee that Mālik wanted to create a "work" in the later sense of the term, although of course the stories which make Mālik talk of his writings reflect the conditions of a later period. In later times the Muwatta' was regarded by many as canonical (cf. Goldziher, op. cit., p. 213, 265 sq.; al-Suyūṭī, p. 47) and numerous legends deal with its origin (al-Suyūṭī, p. 42 sqq.).

Fifteen recensions in all of the Muwatta' are known, only two of which still survive in their entirety, while some five were studied in the fifth and sixth centuries A.H. in Spain (Goldziher, op. cit., p. 222, note 2 and 4) and twelve were still available to al-Rudāni (d. 1094) (Heffening, Fremdenrecht, p. 144, note 1):

a. the vulgate of the work transmitted by Yahyā b. Yahyā al-Maṣmūdī (d. 234), often printed, e.g. Delhi 1216, 1296 (without isnāds, with Hindustāni translation and commentary), 1507, 1508, Cairo 1279–1280 (with the commentary of Muhammad b. 'Abd al-Bāqī al-Zurkānī, d. 1122); Lahore 1889; Tunis 1280; numerous commentaries, editions and synopses; cf. Brockelmann, G.A.C., i. 176; Ahlwardt, Axlat, Berl., 1145; Muhammad 'Abd al-Jayy al-Lakhnawi (Introduction to the edition of the recension b), Lucknow 1297; p. 21 sqq.; al-Suyūṭī, pp. 3 and passim (work of al-Fāṣkī), p. 57 (on Ibn 'Abd al-Barr) and p. 58 (chief passage); Goldziher, op. cit., p. 230, note 2; Schacht, Abb. Pers. Ak., 1928, No. 2 c; and al-Suyūṭī, 'Ijāf al-Muwatta' bi-Ri'dāf al-Muwatta', Delhi 1320 and

Muhammad b. 'Abd al-Ḥasan of Saḥnān (d. 1240) which contains replies by Ibn Kāsim (d. 191) according to the school of Mālik or according to his own ra'y to questions of Saḥnān as well as traditions and opinions of

IV. Mālik's position in the history of Fīkh

Mālik represents, in time, a stage in the development of Fīkh in which the reasoning is not yet thorough and fundamental but for a special purpose, in which the legal thought of Islam has not yet become jurisprudence and, in place, Medina where the decisive foundations of Muslim law were laid down. One of the main objects in the juristic thought that appears in the Māwīta' is the permeation of the whole legal life by religious and moral ideas. This characteristic of the formation of legal ideas in early Islam is very clear, not only in the method of putting questions but in the structure of the legal material itself. The legal material, having in itself no connection with religion, that has to be permeated by religious and moral points of view, is the customary law of Medina, by no means primitive but adapted to the demands of a highly developed trading community. Without this, the Islamisation of the law that had already been concluded in its essential principles before Mālik, many generations had still to work at its systematisation; therefore Mālik's own legal achievement can only have consisted in the development of the formation of a system. How great his share in it was cannot be ascertained with certainty from the lack of material for comparison. The surprising success achieved by the Mawīta' of Mālik out of a number of similar works, would in any case be completely explained by the fact that it recorded the usual consensus of opinion in Medina without any considerable work of the author's own and came to be regarded as authoritative as the expression of compromise (just as the works on Tradition came to be regarded as canonical). The Mawīta' would in this case have to be regarded less as evidence of Mālik's individual activity than as evidence of the stage reached in the general development of law in his time. It may be said that this average character was just what Mālik aimed at (cf. Sect. iii. 1).

The high estimation in which Mālik is held in the older sources is justified by his strict criticism of Ḥadīth and by his activity in the interest of Fīkh (al-Tabari, iii. 2484; 2492; al-Sam’āni, al-Nawawī, Goldziher, op. cit., p. 147, 168; cf. Zāhirīyen, p. 230); even this only means that with his hadīths he kept within the later consensus. That al-Shāfi’ī devoted special attention to him out of all the Medina scholars (cf. his Kitāb Ikhtilaf Mālik wa l-Shāfi’ī) is explained by the fact that he was a disciple of his.

As to the style of legal reasoning found in the Mawīta', Ḥadīth is not by any means the highest or only court of appeal for Mālik; on the one hand he gives the annāl, the actual undisputed practice in Medina, the preference over traditions, when these differ (cf. al-Tabari, iii. 2505 sq.) and, on the other hand in cases where neither Medina tradition nor Medina idiom existed, he laid down the law independently; in other words he exercises ra’iy, and to such an extent that he is occasionally reproached with ta’arruk, agreement with the ‘Irākīs (cf. Goldziher, Muh. Studien, ii. 217; do., Zāhirīyen, p. 4 sq., 20, note 1). According to a later anti-ra’iy legend, he is said to have repented of it on his deathbed (Ibn Khallīkān). It is scarcely to be supposed that he had diverged seriously from his Medina contemporaries in the results of his ra’iy.

V. Mālik's Pupils

The Mālikī Madhhab

In the strict sense Mālik no more formed a school than did Abū Ḥanīfa; evidence of this is found in the oldest names Abī al-Ḥādītayn and Abī al-‘Irāb resp., compared for example with ‘Abī al-ShāFI’ī. These names at once indicate the probable origin of the Mālikī madhhab; after a regular ShāFI’ī school had been formed, which in view of al-ShāFI’ī's personal achievement, is quite intelligible in the development of Fīkh (cf. Bergsträsser, op. cit., p. 76, 80 sq.), it became necessary for the two other great schools of Fīkh, whose differences was probably originally the result of geographical conditions in the main, also to combine to form a regular school, when a typical representative of the average views like Mālik or Abī Ḥanīfa was regarded as head. In the case of Mālik the high personal esteem, which he must have enjoyed even in his life-time (cf. Sect. ii) no doubt contributed to this also. But it is to his pupils that his elevation to the head of a school is mainly due. Traces of this process are still to be found in the varying classification of old jurists as of the Haḍītayn school or as independent mujtahids (cf. also Fīhrīt, p. 199, sq.).

Among Mālik's pupils and companions who soon became known as Mālikis may be mentioned: al-Mālik b. Sa’d (d. 161 or 165 or 175), Abī al-Raḥmān b. al-Kāsim (d. 191), Abī Allāh b. Wabh (d. 197), Ma‘ān b. Ṭā’ (d. 198), Aṣḥāb b. Abī al-‘Aṣīz (d. 204), Abī al-Mālik b. Abī al-‘Aṣīz (d. 212), Abī Allāh b. Abī al-Ḥakam (d. 214), Abī Allāh al-Ka‘bī (d. 221), Isrā’īl b. Uwais (d. 226) and his brother Abī Bakr, Sahmān (d. 240). Sahmān was too late to hear Mālik himself; with him the formation of the Mālikī madhhab is already concluded.

Of the later Mālikī Fīkh literature two short compendia attained special fame as text-books: the Risāla of Abī Allāh b. Abī Zaid al-Kairawāni (d. 356) whom the author of the Fīhrīt mentions as an important contemporary (p. 201, sq.) and the Muḥtāsar of Khālīb b. Ishākh (d. 767); numerous commentaries and editions of both exist and they have also been discussed in Euro-
pean languages (cf. Bibl.), Their importance has sometimes been exaggerated in Europe; development did not stop with them (cf. Probst, Zeitschr. f. vergl. Rechtswiss., xii. 422 sqq.; Probst deals with an important later jurist in Islamica, i. 430 sqq.). His immediate followers are to be regarded as opponents of ra'ia any more than Mālik, and the Mālikī madhhab is not at all more conservative or traditionalist than the Ḥanafī for example (B. Ducati in Islamica, iii. 214 sqq., even endeavours to show that it is the most juridical of the Muslim schools of law).

The Mālikī madhhab spread mainly in the west of the Muslim world; after it had succeeded in driving out the madhhab of al-Awāzīr and the Zāhir school, it prevailed not only in the Maghrib (Tunis, Algeria, Morocco, including Muslim Spain) but in all the rest of Africa, so far as it has adopted Islam. The Mālikī school has many followers in Egypt: in Upper Egypt it occupies about the same position as the Shāftī in Lower Egypt. This geographical distribution seems to go back to corresponding conditions existing before the formation of the madhhab. Particularly ardent or conspicuous disseminators of Mālikī teaching were 'Abd al-Mālik b. Ḥabīb al-Salami (d. 238 or 239) and Isāmīl b. Isḥāq (d. 282; Fihrist, p. 200, s.), but there must also have been earlier scholars for whose time the existence of a regular school is doubtful.

On Mālik’s writings: Brockelmann, C. A. L., i. 175; Goldzēh, Muḥammādanieh Studien, ii. 213 sqq.; al-Lakhnawī, op. cit.

On Mālik’s position in the history of Fihrist: Bergstrasser, Isl., xiv. 76 sqq.; Goldzēh, op. cit.

The older Mālikis are given in Fihrist, p. 199 sqq. Of the Mālikī Tabaqat-works there have been printed e. g. al-Dīwān of Ibn Farhūn (d. 799) along with the Tabaqat al-Dīwāñ of Ahmad Baba (d. 1032), Faz 1398 and Na‘īl al-Dīwāñ bi-Tafriż al-Dīwāñ of the same Ahmad Baba, Faz 1317 (cf. Fagan, in Festschriften Curran, p. 105). Individual Mālikī jurists cf. the articles on them. On the spread of the Mālikī tradition: Ahmad Pasha Taimur, Nāgra tārikhāt fi Ḥadīth al-Maṣṣābīh al-awba, Cairo 1344; Juynboll, Handbuch des islamischen Ges. setzes, p. 28; do, Handledung, p. 21; Ibn Farhūn, op. cit., p. 17; Bergstrasser, Z. d. M. G., 1914, p. 410 sq.

Discussion of the Mālikī teaching in European languages (some further references): Pehor, Précis de jurisprudence musulmane (transl. of the Mālikīṣār with extracts from the commentaries), 1843; Sautyara-Chebonneau, Du Statut personnel et des Successions (based on the Mālikīṣār; the commentary takes note of modern decisions), 1873; ‘Abd al-Rahūm, The Principles of Mūhammadan Jurisprudence, 1911 (Italian by Cinino, 1922); al-Kairawānī, Risāla, transl. by E. Fagan, 1914; Ruxton, Mālikī Law (synopsis of French transl. of the Mālikīṣār), 1916; Khalīl b. Isḥāq, Mālikīṣār, transl. and annot. by J. Gildi and D. Santillana (Italian), 1919; D. Santillana, Istituzioni di diritto musulmano mālikī, 1926; Russell-Suhrawardy, A Manual of the Law of Marriage, from the Mālikīṣār.

Mālik b. ‘Awf, a contemporary of Mūḥammad, called al-Naṣīf, to distinguish him from several men of the same circle in his time, and also because he traced his descent through Naṣīr b. Muṣṭāfa to the eponymous ancestor of the powerful Kātib tribe of the Banū Hawāzin. We know very little about his history previous to the day of Ḥunain (q. v.) to which he owes his dubious fame. We may assume that he early found opportunities to display his personal fame. He was still an exile when his teaching were ‘Abd al-Mālik b. Ḥabīb al-Salami (d. 238 or 239) and Isāmīl b. Isḥāq (d. 282; Fihrist, p. 200, s.) but there must also have been earlier scholars for whose time the existence of a regular school is doubtful.

This distinction he perhaps also owed to the consideration which his clan, the Banū Naṣīr b. Muṣṭāfa, enjoyed among the Banū Hawāzin. Allies of the tribe of Tāqif (Aghānī, xii. 46), the Banū Naṣīr found themselves in the same position with regard to the latter and the town of Tāif as the Aḥābīn with respect to the Kūrānī and Mecca. They supplied mercenaries to Tāif and were given the task of defending the town and protecting against the depredations of marauders the fine gardens that covered the Tāqif territory. Their relations were, as a rule, peaceful and friendly, but occasionally it happened that the anarchical instincts of the Beduins gaining the upper hand drove them to encroach on the domain of their allies, the citizens of Tāif. This situation enables us to understand how in the struggle that was about to develop against Islam, the Tā’ifis were ready to march under the banner of a Beduin generalissimo.

In the year 8, Muhammad at the head of a strong force was preparing to attack Mecca. This news disturbed the people who lived on the hills of the Sarāt. They asked themselves, if, once master of Mecca, the Prophet would not be tempted to invade their country. It was then that Mālik b. ‘Awf succeeded in combining for their joint defence the majority of the Kātib tribes, settled in the frontiers of Naṣīr and of the Ḥudaylī. The Tāqifis joined their forces to those of their Hawāzī ni allies. The only result was the defeat at Ḥunain. The commander-in-chief Malik had had the unfortunate idea of bringing the women, children and flocks along with the actual combatants. The whole of this enormous booty fell into the hands of the Muslims.

The defeated side did not distinguish themselves by bravery on the battlefield, the tradition of the Banū Hawāzin attempts the impossible when it endeavours to hide this failure and save Malik’s reputation. After the debacle, he is said to have bravely sacrificed himself to cover the retreat of his comrades-in-arms. This same tradition attributes
to him a series of poetical improvisations on this occasion, in which, after the fashion of the old Bedouin paladins he explains and excuses his flight.

The defeated leader tried to make a stand at Lata in the south of Thaif where he had a tower. What was a baya? In Medina at the time of the Hijra the name was given to an enclosure commanded by an "imam" or tower. Malik had probably only brick walls like the little strongholds in Yemen described by the geographer Ibn Majid (Ahsan al-Tafi'im, ed. de Goeje, p. 84).

A century or so later, the traveller Maurice Tamié (Itinéraie en Arabie, Paris 1840, ii. 5) passing through Liya saw there "une forteresse fauque de tours" intended, as in the days of Malik, to guard the road. In any case, whatever the strength of the little building, Muhammad easily destroyed it. When Malik learned of the approach of the Muslims, he thought prudent to seek refuge behind the ramparts of Thaif.

In the interval all the booty taken by the Muslims at Guairin had been collected in the camp at Uffda including Malik's family and flocks. To the Hawazin deputies sent to negotiate the ransom of the prisoners, Muhammad said: "If Malik comes to embrace Islâm, I shall return him his family and property with the addition of a gift of a hundred camels". Whatever the decision adopted by Malik, this declaration could not fail to compromise him with the Thaifa. He rightly recognized that his position in Thaif had become untenable. He succeeded in escaping from the town and presented his submission to Muhammad who fulfilled his promise to the letter. Malik then pronounced the Muhammadian confession of faith and, to use the traditional formula, "his Islam was of good quality".

The new proselyte had extensive connections and was remarkably well acquainted with the Thaifa region. The Prophet was glad to use him against Thaif which he had been unable to take by force. He put Malik at the head of the Ka'aish tribes who had adopted Islam. Malik therefore organized a guerrilla war against his old allies in Thaif. No caravan could leave Thaif without being intercepted by Malik's men. Exhausted by this incessant struggle, the Thaifa decided to sue for terms. Malik then became the representative of the Prophet among the Banû Hawazin and the caliph, Abu Bakr, later confirmed him in the office. He took part in the wars of conquest, and was in the taking of Damascenus and the victory of Kudaysa in the Iraq.

II. 210

MALIK B. 'AWF — MALIK B. NUWaira

Màlik b. Nuwaira, chief of the Banû Varhût: a considerable clan of the Banû Hanâza, who were in turn a branch of the confederation of the Banû Tamim [q.v.]. His liberality, magnanimity and especially his courage had earned him a great reputation before the Hijra. His contemptuous sayings that in the last respect he was without a peer. There was a proverbial saying: fata wa-ràa ku-màlik, "as hero no doubt, but not comparable to Malik". His fame, however, came principally from the impression made by his tragic death and from the collection of eloquent, which his brother Mutammim [q.v.] devoted to him.

Along with several other Tamimîs notable he embraced Islam in the lifetime of Muhammad. In return the latter appointed him to collect the canonical taxes, qādābat, from among his fellow-tribe-men. By giving him an appointment like this the Prophet hoped to bring him definitely to his side. The death of the Prophet and the incident of the ri'da [q.v.] served to show the foolishness of this hope. Like most of the nomads, Malik had joined Islam as a political organisation, having clearly made up his mind that he would not be absorbed by it to the extent of sacrificing the independence of his tribe and his own prerogatives.

When the Muslims, or more accurately the Kuraish of Medina, moved to the other side of the Yemen, Malik refused to recognize the validity of this election which had been carried through without his participation in it. He argued for the strictly personal character of the hâd, as the Beduins interpreted it. He explained himself in verse, for he was also a poet: — "If the thing turns out badly, we shall bring a remedy, crying: — long live the faith of Muhammad!". He did not stop at this but passing from words to deeds, he divided among the Tamimîs the taxes which had been collected. An even graver step, he next plundered a caravan which was taking to Medina the contributions of those nomads who had remained loyal. Then — an eminently Beduin trait — he celebrated in verse this strange exploit, which was equivalent to a declaration of war. He finally compromised himself completely by joining his cause with that of the prophetess Sajjâh [q.v.].

In Medina, Abu Bakr had at first to shut his eyes to these things. But as soon as he felt himself master of the situation, he decided to act vigorously. Khalid b. al-Walid was sent against the secessionists. His orders were to spare only those who declared themselves Muslims. The individualism of the Beduins singularly facilitated the task. He attacked separately the tribes, who were divided or hesitating, and succeeded without difficulty in defeating the rebels in small sections.

Thus he came to the Banû Tamim. The chiefs were suspicious of one another and declined to combine for joint action. Surprised by Khalid and finding himself almost alone, Malik had to refrain from fighting forces so markedly superior to his. He surrendered on a assurance that his life would be spared and finally declared himself a Muslim.

The prisoners including Malik were neverless executed with refinements of cruelty. It was said there had been some misunderstanding of Khalid's orders for which dialectic differences were to blame; so say those authors who feel the need of exculpating Khalid. It was by no means the first act of the kind of the impetuous Makhzumîs. Did he want to get rid of a rival or deal the last blow to a rebellion by sacrificing, even against the laws of nations and his own orders, a person so highly esteemed as the chief of the Varhût? As he had been anxious to marry Laila, the vivacious wife of Malik, he was credited with the first aim. 'Umar demanded that the
Malikshah B. Alp Arslan Abu 'l-Fath, Salduq Sultan (465-485 = 1072-92), born on the 9th or 19th Dimazd 447 (Kaward and Lubb al-Tanzirkh wrongly 445) = Aug. 10th, 1055. He accompanied his father on his last campaign into Transoxiana and homage was at once paid to him as Sultan by the vizier Nizam al-Mulk and the Turkish amirs on Alp Arslan's death. His uncle Kawai (q. v.), the ruler of Kirman, was not satisfied with this, however, because he thought that, as the oldest member of the family, he had the best claim to the throne and set out with his troops for Hamadhan. When attacked by Malikshah they made but feeble resistance. Kawai himself was captured and later released (April 1075). Malikshah then returned to Transoxiana by forced marches for the Khaikhan of Samarkand, Shams al-Mulk, on hearing of the death of Alp Arslan, had seized the opportunity to occupy Tirmidh and even Bakr had opened its gates to him. The Salduq, governor Ayitz, a brother of Alp Arslan, happened to be away at the time and when he hurried back, he suffered a terrible defeat and died soon afterwards. Shams al-Mulk, however, did not dare to risk another breach with Malikshah, so the latter re-occupied Tirmidh and proceeded to Samarkand. The Khaikhan thereupon submitted; Bakr and Takhbarsh were granted to Malikshah's brother Takaiz. These campaigns prevented the Sultan from going at once to Baghdad to receive the homage of the Caliph in person, and an ambassador was sent to carry through the ceremony. The Caliph was quite ready to do so, and gave the Sultan the honorific titles of Jalal al-Dawla, Mu'izz al-Din, Kiswa Amir al-Mumini. Our sources are silent about the happenings of the next few years; it is not till 472 that we hear of a campaign against Kirman, which, however, came to a peaceful termination for Suldanshah, Kawai's son, submitted to the Sultan and was confirmed by him in the hereditary possession of this province. In Ibn al-Kalimis (ed. Amedroz, p. 115), we are told that in 475 Malikshah came to Halab, but Ibn al-Athir and the other sources accessible to me make no reference to this. At this time the Sultan made the mistake of discharging 7,000 of his soldiers, although the vizier advised him against it, pointing out that if these men were deprived of their livelihood, they would in desperation become robbers, or rebels and a public danger. This was what actually happened. The men went to Takaiz and he thought that with their help he was strong enough to rebel against his brother. He took several towns and was preparing to occupy all Khorsan so that Malikshah was forced to take the field against him. Takaiz then retired to Tirmidh, and submitted when besieged there; on this occasion he was pardoned, but when he again rebelled without success a few years later (477 = 1084), he was blinded and thrown into prison at Takir. In 479 (1086) Malikshah left Isfahan which he had made his capital and went via al-Mawz to Haran, al-Rahul and Kafir, 10th, and to Halab. He then established and re-organized Salduq rule securely in these places, but one great induction for this campaign was that the commander of Halab had appealed to Malikshah because he was threatened by the latter's brother Tutsch (q. v.). The latter had conquered the Salduq ruler of Asia Minor, Sulamun b. Kutalmish (q. v.), and was trying to...
bring Halab under his rule also, but retired when he heard the approach of Malikshah. The town was granted to Aksa'noor, father of Zangi, another general Buran received al-Ruhay and Yaghbisin. Arnaluya which had just been retaken from Sulaiman while Sulaiman's son Kildij Arslan [g.v.] who was still a youth was taken back by the Sultan to the Ilah. There was no further campaign in Asia Minor, Malikshah left the war against the Byzantines to be conducted by the above mentioned amirs, to whom should be added Bu'suk, although the author of the al-Tarir shows makes him beside Constantineople in person. The fiction narrated in the Ta'mih-ur-Guzda and in Marjihad is well known, according to which Malikshah was taken prisoner by the Byzantines without their recognizing him, and only regained his liberty by the stratagem of the vizier, Ni'am al-Mulk. The story in al-Fundari is more credible that the Byzantines had to pay the Sultan an annual tribute of 300,000 dinars plus a lump sum of 50,000 dinars. On his return from Halab, Malikshah visited Baghda for the first time and he was received in ceremonial audience by the Caliph al-Muqtadi bi-Amr Allah. The latter had previously in 474 sought a daughter of the Sultan in marriage but as she had been then still a child, the opportunity was now taken to conclude the matrimonial alliance. The wedding took place next year with great splendour and amid the jubilation of the people of Baghda. The chroniclers give a full account of it and give no hint that this marriage was soon to be a source of trouble to the Caliph as well as to the Sultan. Reference will deal with that, it must be mentioned that in 482 (1092) Malikshah undertook a second campaign against Bukhara, Samarkand and Kashgar as a result of the tyrannical conduct of the young prince Ahmad, a nephew of Shams al-Mulk who was now dead. He gained great successes, took Ahmad back a prisoner to the Ilah and then forced the ruler of Kashgar to recognize Saljuq suzerainty. Later however, he allowed Ahmad to return to his kingdom and resume his rule, probably at the intercession of his wife Tarkan Khatun (so to be read, not Tarkan Khutan) who was Ahmad's aunt. On these incidents, cf. Barthold Tarkan khatun down to the Mongol invasion, p. 316 et seq. Towards the end of the reign of Malikshah the Saljuq empire thus reached its greatest extent, especially when in 485 some Turkish amirs were sent even so far as Yaman who subdued the land for the Sultan, temporarily only, it is true.

As regards the internal administration of the country, the Sultan left this in the hands of his vizier. Ni'am al-Mulk, who was given unlimited power by him at the very beginning of his reign, which he wielded till his death, although as a result of his great age his prestige began to decline towards the end of the reign of Malikshah and to be threatened by intrigues in the palace. His services will be appreciated in the article VIJAM AL-WALI, where it is sufficient to characterize his policy briefly, which was to restore the dominion of orthodox Islam under its supreme head, the Caliph, with the help of the sword of the Saljuqs. He had, therefore, to do all he could to maintain harmony between the Sultan and the Caliph, but the course of events led to a breach between the two. Malikshah had several sons by his wife Zabda Khatun, and the eldest, Ahmad, had been designated successor to the throne but died in 481 (1088). The obvious thing was for Prince Barkiyauk to take his place as was desired by Ni'am al-Mulk and the Turkish amirs but Malikshah had in the meanwhile married another wife, the Princess Tarkan Khatun, who made every effort to secure the throne for her son Mahmund born in 480. Malikshah, however, was more anxious about his daughter who had married the Caliph, for she was unhappy in Baghda and complained of being neglected by her husband, so that finally the Sultan demanded that she should be sent home with the little son whom she had borne to the Caliph. She, therefore, returned to her father but died soon afterwards in 482; her son Djalal however, became his grandfather's pet and he gave him the name of "Little Commander of the Faithful" in the hope that he would one day bear this title in reality. At the same time he decided to make Baghda his winter capital and had extensive building operations carried out in the N. E. of the town when he was there in the winter of 1091/92, including a great mosque, the Djami al-Sultan; he also ordered Ni'am al-Mulk and his amirs to build residences for themselves there. During this period the great amirs from the west, Aksa'noor, Tutush etc., had come to Baghda, great hunts and other pleasure parties were held, but the Caliph was completely ignored.

When in the autumn of 1092 he was on his way from Isfahan to Baghda for the third time, the aged vizier Ni'am al-Mulk was stabbed by a man at Sahna. It was now for the first time apparent how much the existence of the Saljuq empire depended on this one man, for when the Sultan and his wife were no longer guided by his advice, they committed the gravest errors, which were very soon to plunge themselves and their empire into destruction. Scarcely had the Sultan arrived in Baghda than, with the intention of making his grandson Caliph, — which was contrary to Muhammadan law as he was a minor — he announced to Muljud that he must at once abdicate and leave the town. With difficulty the Caliph obtained a few days respite which he was spending in prayer and fasting, when suddenly the news came that the Sultan was dead. The exact date is not certain but it was about the middle of Shawwal 485 (middle of November 1092). He was said to have caught a severe fever while out hunting, which they attempted to cure without success by bleeding, and he died soon afterwards. But it can hardly be doubted that he was poisoned, as some writers expressly state (cf. Houtsma, in Journal of Indian History, sept. 1924, p. 147 sqq.). The usual burial ceremonies were not held; the body was sent to Isfahan and buried there. The Caliph had no difficulty in coming to terms with Tarkan Khatun; he offered to recognize her son Mahmund as Sultan, if she would hand over to him his own son, the Sultan's grandson. This was done. The little "Commander of the Faithful" died the very next year, when the course of events took a disastrous turn for the Caliph and Tarkan Khatun with the rise of Barkiyauk. The tragic deaths of the Sultan and his vizier were celebrated in verse by Muizz: cf. Schefer, Sima'etnamih, suppl., p. 62 sq.

Malikshah's was a highly honourable character, he was loyal to his relatives and to his servants, brave, just and gentle. His rule is, therefore, much praised by Christian as well as Muslim
The raids against Sicily and Malta began in the viith century A.D., and it is not rash to believe that Malta fell before 800 A.D. under Muslim influence. This is also de Goeje's opinion (Z. D. M. G., livii. 905, note 2).

In Malta the Muslim occupation was certainly more permanent and strongly established than in Sicily; the narrow island was completely subjugated by the conquerors; and this helps us to understand how the Arab-Beber Muslims of Africa succeeded in forcing upon Malta the Arabic language, from which the modern Maltese dialect is derived.

The question of the origin of the Maltese dialect has exercised many observers between those who sustained its Phoenician origin (Vassalli, Bres. Bellermann, Comunio, E. Camana, Picca) and those who derived it from Arabic (Genessus, de Sacry, L. Bonelli, Stunme, Nobeleke). The conclusion must be accepted that Maltese is an Arabic dialect, which in some ways shows resemblances to the Eastern Arabic dialects, in many others recalls the Arabic dialects of the Maghrib. Peculiarities of Maltese phonetics are the inamul of a, which tends to become i and e (xe at the beginning of words, as yena for anin), the pronunciation of c as hama, the existence of s and i sounds in nco-latin and Arabic words; in morphology, the use of cy as prefix of the 1st person singular forms the main affinity with the Maghrib dialects. The accent tends to fall towards the beginning of words. In Malta itself are to be found dialectal varieties between town and country; in the country and in Gozo the dialect is nearer the original Arabic, sounds like z and z are not heard in Valletta, are noticeable in the Gozo vernacular.

A study of the Maltese lexicon, to show how affinities with Arabic dialects, Eastern and Western, may be explained, and how word-fossils have been preserved in Maltese, is still to be undertaken. The prevalence of the Latin-Italian race and the flourishing of Italian civilization and culture in the island have influenced its dialect, both as to syntax and as to phonetics. The percentage of Latin, or rather Italian, words in spoken Maltese varies according to the degree of individual culture.

The Maltese, up to a few centuries ago, had not chosen any particular alphabet for their dialect, as they did not use it as a written language. In the xviiith century Agus de Soldamis, a Maltese, turned his attention to the dialect and began to study it; since his time several attempts have been made to systematize the writing of Maltese; it was also proposed to use the Arabic alphabet, and a diacritical transliteration, precise and scientific, was tried. In practice the use of the common Latin alphabet, with the modification of some few letters, was continued. The last attempt of this kind, which has not met with public favour nor with the approval of the vernacular press, was that of the Ghoda tal-kittich tal-malti, "Association of the writers of Maltese", which has published a small grammar, particularly concerned with the spelling, called Tughrif fuq tal-kettta malti. Malta 1924; the preface mentions the precedent systems of writing Maltese. The same Ghoda, in 1925, began to publish a quarterly review called Il-Malti; it is mostly concerned with grammatical questions, and has promoted a movement in favour of pure Maltese (malti sof)
Since about 1850 the question of the Maltese dialect has also acquired a political character; the English rulers favoured the development of the dialect at the expense of the Italian language (which remains the language of culture, of the Church and of the Bar). Bibliographical information on Maltese literature to about 1900 is to be found in the works of L. Bonelli and H. Stumme.

Besides the Arabic dialect and place-names, the Muslims have left in Malta a few coins and a considerable number of inscriptions on tombstones; one of them, the celebrated inscription called of Mumina, dated 1173 A.D., was published more than a century ago, and repeatedly studied by orientalists (Italinsky, Lenci, Amari, Nallino etc.); another one, found in Gozo, is to be seen in the Malta Museum: about twenty more have been found in the excavations made in 1922—1925 at Rabat (near the city Notabile); they are preserved in the Museum of the Villa Romana, near the place of excavation.

The Muslims lost Malta in 1909, when the Normans conquered it; they were however allowed to live on the island under the Norman government until 1249. From 1530 to 1798 Malta was the seat of the Order of St. John of Jerusalem, which the Turks had expelled from Rhodes in 1522. The Order organized there an important naval base. The island was in constant relations with the East and with Barbary; thousands of Muslim slaves were taken to Malta; the Maltese ships had repeated encounters with those of the Porte and of the Levantine and Barbary pirates. The Turks attempted to occupy Malta in 1565, with then-well-known expedition which ended in disaster, and again in 1644; more than once they threatened to invade it under Sultan Muhammad IV.

Considering the Order's relations with the Maltese East and the fact that an important portion of the registers of Rhodes was saved, the importance of the Order's archives for the history of the Mediterranean Levant and of North Africa in the xvi-xvii centuries is easily understood.

A few Arabic MSS. and nautical charts, of no great value, are preserved in the Public Library of Malta and in its Museum.

MALTHAI — MÄLWA

Ninil', wife of Assur (a lion), Ennil (a horned lion), Sin (a dragon), Shamash (a harnessed horse), Adad (a horned lion and a bull), Ishtar (a lion). Ashur-the-Turbe-Dangir The bas-reliefs should be attributed to Sanahin; as to the motif of the mounted gods, usually explained as showing Hitite influence, examples are found in Sumero-Accadian art. Cf. also Bachmann, Felsreliefs in Assyrien (Basel, Malthai and Gundak), publ. by the Deutsche Orient. Gesell., Berlin 1927.

(V. MORSKY)

MAL'LUL'A, a town in Central Syria north-east of Damascus. It is mentioned as early as Georgios Kyrios (ed. Gelzer, p. 188, No. 993) as Ṭμάλλουα (MSS. ματταλουα, ματαλουα) κατα in Phoinike Libanessa. Vakût also calls Mal'ull an ʿilām (σελάς) near Dimashq with many villages. The modern Malša, a village of Christians, is picturesquely situated at the west end of a deep ravine of the Antelbanon, which splits into a western and southern stream; to the entrance to the northern lies the monastery of Mār Taktū built half into the rocks. The two ravines form the way to the other monastery of Mār Sarṣik, which stands on a rocky plateau above the village. Numerous caves, mostly ancient dwelling-places, have been found on the west and southern corner of the rock on the eastern slope of which the modern village is built in the form of an amphitheatre. Some Greek inscriptions have been found in the caves (Waddington, Inscriptions, No. 2563—2565; Moritz, p. 145—147, No. 3—8, including one dated 107 and 107 A.D.). Malša and the adjoining villages of Bakša and Ḥubb Aḏin are noted for the fact that the Western Arabic dialect still spoken there represents the last remnants on Syrian soil of the Syriac spoken throughout Palestine and Syria in the time of Christ.

(E. HÜNGMANN)

MÄLWA proper is an inland district of India bordered on the north by the Vindhayas, and lyrn by 25° 30' N. and 74° 30' E. To this tract, known in the age of the Māhākārata as Nishāthā, and later as Avanti, from the name of its capital, now Udijānain, was afterwards added Akara, or Eastern Mālwa, with its capital, Bhilsā, and the country lying between the Vindhayas and the Sītāpurās. The province formed part of the dominions of the Mauryas, the Western Satraps, the Guptas of Magadha, the White Huns, and the Kingdom of Kanauj, and then passed to the Mālwas, from whom it has its name. These, when Hinduized formed the Parshva (or) tribe of Rājpatā, which bore sway in Mālwa from 800 to 1200, and was overthrown in 1053 by a confederacy of the Calukyas of Anhilvāda and the Kālaśās of Tripūra. In 1235 Shams al-Dīn Ilutmish of Dihlī captured Udijānain, demolished the temple of Māhākālī, and sacked Bhilsā. Mālwa became a province of Dihlī, and, with interludes of Hindī revolt, remained so until, in 1392, on the dissolution of the kingdom of Dihlī after Timūr's invasion, the Afghan governor, Dilawār Khān Ghūrī, made it an independent kingdom. He was murdered in 1405 by his son Aḥmād Khān, who ascended the throne under the title of Hūshang Shāh. He transferred the capital from Dihlī to Mandu [351], and founded his new city of Mandu in 1425. He died in 1435, and was succeeded by his son Chāmast Khān, who, after a reign of five months, was succeeded by his infant son Māvīḍ Khān. The child was removed by his cousin and guardian, Māhmaūd Khāldūjī, who in 1436 ascended the throne as Māhmaūd I, and whose reign of thirty-three years was the most glorious in the annals of Mālwa. He waged war successfully against the kings of Gudjārāt, the Dakhān, and Dīvānpūr, the small state of Kalpi, and Kābū Ḍumāna of Ḏumāna; he retired, but without disgrace, when the superior power of Dihlī; and he extended the borders of his kingdom on the north, the east, and the south. On his death in 1469 his third son, Aḥd al-Kālid Ghūrī al-Dīn, who succeeded him, surfeited with public business during his father's strenuous reign, retired into his harem and left the administration of the kingdom to his son, Nāṣir al-Dīn, who in 1500 poisoned his father and ascended the throne. Nāṣir al-Dīn met his death in 1510 by falling, in a fit of drunkennes, into a tank or cistern, where his attendants, thankful to be rid of the monster, let him lie. He was succeeded by his son Māhmaūd II, who was an unfortunate in war as in the first of that name had been fortunate. With the help of Muṣṭafā II of Gudjārāt he rid himself of his powerful Ṫajjīpīt minister, Medīnī Rāsī, but in doing so enwrapped himself with Sangamā Rāsā of Cito, who defeated him in the field and took him prisoner, but generously released him. He then, with incomparably full and ingratitude, bitterly offended Bahādur Shāh of Gudjārāt, who invaded Mālwa and, after giving Mahāmūd every opportunity of atoning for his error, carried Māndādī by assault on March 21, 1531. Māhmaūd and his sons were sent in custody towards Cāmpān, but the officer in charge of them, apprehending a rescue, put them to death. Mālwa now became a province of Gudjārāt, and in 1535 the emperor Humāyūn, invading that kingdom, defeated Bahādur Shāh at Mandraur and captured Māndādī, but was recalled to Hindu,stan in the following year by the menacing attitude of Shīr Khān in Bengalear, and Malik Khān, an officer of Mahāmūd II, established himself in Mālwa and assumed the title of Kālid Shāh. Shūṣāfat Khān and Ḥājaḍī Khān, two officers of Shīr Shāh, drove him from Mālwa and assumed the government of the province. Shūṣāfat Khān died
in 1554, and was succeeded by his son Malik Bāyāzīd, known as Bāz Bahādur, who, during the decline of the power of the Sūrūh emperors, became independent. A severe defeat at the hands of the queen of the Gond kingdom of Garha Mandla engendered in him a distaste for warlike enterprise and he devoted himself to music and to the eminences of the beautiful Rūmpat. In 1561 Akbar's army under Adham Khan surprised the vanguard at Sarangpur, defeated his troops, put him to flight, and captured his mistress, who took poison rather than become the conqueror's paramour. Bāz Bahādur fled into Khandeṣh and Pir Muhammad Khan, second-in-command of Akbar's army, who followed him thither, was defeated by Mubarak Khan of Khandeṣh and drowned in the Narmad. Bāz Bahādur returned and again reigned in Mālwa, but in 1562 another army under 'Abd Allāh Khan the Zībhī invaded Mālwa and compelled him to flee to Citor. He remained a fugitive until 1570, when he submitted to Akbar and entered his service.

Mālwa was now a province of the empire, and remained so until 1743; the Mārāṭhās extended their rule over it, and the Peshāwa was made deputy-governor.

It was afterwards divided between the great Mughal generals whose descendants, Sindhya of Gwalior, Holkar of Indore, and the Peshāwa of Dīrār and Dewas still hold most of it.

From 1780 until 1818, when British supremacy was firmly established, the province was one of the principal arenas in which Muslim, Mārāṭhā, and European contended for empire. Since then its history has been eventful, but sporadic risings took place at six military stations during the mutiny of 1857.

MĀMĀR B. AL-MUTHANA. [See ANU 'UMAYRA.]

MAMLŪK (Ar. plural mamlūkān and mamlūtīk), participle passive I of mamlūk 'to possess', denotes the slave as his master's possession. The term has its origin probably to the Sūrūh phrase of the Kurān mālakat bāṣīlul-kumum, "what your right-hand possesses", a general designation of slaves without specialisation of gender. Mamlūk occurs once only in the Kurān (ṣūra xvi. 77), in the expression 'ād mamlūk 'a slave in the possession of his master', mamlūk alone not yet being a technical term for slave, to all appearance. In hadīth, 'ād mamlūk occurs likewise (Darim, Siyar, b. 34), but throughout the literature of hadīth mamlūk alone is a technical term synonymous with 'ād. The distinction between a slave born and a slave born from free parents, must be made by the addition of a genitive to 'ād, in the former case 'ādān (ādū kinnān), in the latter mamlūkā (ādū mamlukā). It may be remarked that neither in hadīth nor, to all probability, in Arabic literature, has the term mamlāk ever received the religious meaning of devotee, as is the case with 'abdī.

The Kurān enjoins the master to be humane towards "what his right hands possess" (ṣūra iv. 40). Hadīth is copious on this point. It asserts that Muhammad on his death-bed did not cease repeating "I recommend to you salaṭ and what your hands possess" (Ahmed b. Hanbal, Musnad, iii. 117; cf. i. 78), "Whosoever does not treat his mamlūk as he ought to do, shall not enter Paradise" (Ahmed b. Hanbal, i. 12). "When the mamlūk performs salaṭ, he is thy brother" (Ibn Mīdjab, Abāk, b. 10). "The mamlūk may claim his food and rainment" (Muslim, Amānāt, trad. 41). "The Apostle of Allāh used... and to protect the mamlūk who appealed to his help" (Ibn Mīdjab, Zubd, b. 16). "The mamlūk who acquits himself of his obligations towards Allāh and towards his master, will receive double wages" (Bakhārī, T. 'Umm, b. 31) and "one is bound to pardon his mamlūk even unto seventy times a day" (Ahmed b. Hanbal, ii. 111).

For the legal position of slaves see 'AHDU.

For the Egyptian dynasties called the Mamlūkā, see the following article. — It may be finally remarked that in certain circles mamlūk had the special meaning of white slave. See Fagnan, Addition aux lexiques arabes, s. v. (A. J. Wensinck)

MAMLŪK, a dynasty of rulers of Egypt and Syria.

A. Period from 1250 to 1517. The history of this dynasty is dealt with under the separate rulers; the general questions of art, religion and economics of their time are also dealt with in these articles and notably in Becker's article EGYPT [q. v.], and Hartmann's article DAMASCUS [q. v.]. Only a brief survey of the whole period is given here.

They were, as their name shows [cf. MAMLŪK], former slaves from the bodyguards of the sūlājīs and amirs who had distinguished themselves by ability and been given their freedom by their masters. A somewhat arbitrary distinction is made between two dynasties, the Bahīrī [q. v.] from 648—792 = 1250—1390 and the Burjīs from 784—922 = 1382—1517. The name Bahīrī Mamlūks was given to the guards of Sūlān Nādīm al-Dīn Ayībū (637—47 = 1340—49), whose barracks were upon the island of Rūǧa [q. v.] in the Nile (Bahīr). Except for the first three the Bahīrīs in the land of the sūlājīs were chosen by the Mamlūks from among the descendants of the Sūlān. Thus after Bahīrīs there ruled two of his sons, after Kāsilīn [q. v.] two sons, a series of grandsons and a great grandson. It was different with the Burjī Mamlūk, a bodyguard founded by Kāsilīn, who were quartered in the towers of the citadel of Cairo. The first Burjīī, Bārīkī, [q.v.], was able to secure the succession of his son and even a second son succeeded for a brief period to the throne, but after this the Mamlūk guards never tolerated hereditary succession again; so the sūlājī's son, who was proclaimed heir-apparent, ever succeeded in keeping the throne (the only exception is al-Nāṣir Muhammad II who occupied the throne for nearly three years). The Mamlūks did not always choose the ablest, but more often the oldest; a kind of system of seniority developed. The first Mamlūk on the throne was Izāl al-Dīn Aḥnāk (648—55 = 1250—57), the husband of Shadījar al-Durr [q. v.] a slave whom Ayībū had married.

In the period of its greatest extension under the Mamlūks, the frontiers of Egypt were in the west the Libyan desert as far as Barka, in the
south Nubia as far as Massaw'a, in the north the Mediterranean Sea. The frontiers of Syria in the east stretched to the Euphrates to Der al-Zor through Raṣṣa, in the south to the Arabian deserts and in the north to the Taurus. The two countries met in Sinai and were separated by the Red Sea. The sultāns usually exercised suzerainty over the holy places in Mecca and Medina; Sultan Kāṣīf Ghūrī [q.v.] even maintained garrisons in South Arabia for a time.

The first task of the Mamlūks sultāns was to consolidate the kingdom. Their most dangerous enemy, the Tatars under Hulagu, was defeated in Syria in 658 (1260) at ‘Ain Džālūt [q.v.]; the Crusaders were destroyed by Sultān Baibars, Kālātun and Kholal, the remnants of the ‘Alids and Assassins [q.v.] rendered harmless by Baibars. Their power was finally consolidated and justified to the Ayyūbids by the petty kingdoms left to them, by Baibars welcoming in Cairo the Caliph who had been driven from Baghādā by the Mongols, restoring the caliphate here in 659 (1261) and then having himself appointed by the Caliph participator in power (Kāsin d-Adamu) and having the power ceremoniously transferred to him. This marked the position that the end of Mamlūk rule. The Caliph paid homage to the Sultān on his accession and ceded all his rights to him. He thus lost all authority and became the shadow of a ruler without power, without money and without influence; only now and then an Indian Sultān sought a diploma of investiture from the Caliph.

The rule of the Sultān was absolute. He was assisted by a council in which the chief commanders of the Mamlūks sat to the left and right of the ruler according to their rank (this sitting in order of rank dated from the early Mamlūk period): the representative of the Sultan (nāfīḥ kābir, later only appointed in case of absence of the ruler), the commander-in-chief (amīr kābir), later combined with the office of Aṭābee, the commander of the guards (rār nāvbat al-mawṣūla), see AMIR AL-KABIR), the War Minister (amīr-siṭla, i.b.), the president of the council who was the chief civil official (amīr muāṣir); later the Minister of the Interior (dār al-kabir [q.v.]), and the ministers of the palaces and domains (wāṣīr dār) gained more influence and became numbered among the highest officials, as did the chief military judge (ḥadīyī al-khawājīyī [q.v.], properly high chamberlain) and at times the chief marshal (amīr ali-kābir [q.v.]). Their offices and their relative rank (cf. e.g. under AMIR AL-KABIR for the composition and order of precedence in later times) changed. These members of the council were military officers, the so-called lords of the sword (asḥāb al-siyāsī); they belonged to the class of amirs of 1,000 (nukhudān al-nilāf). From this class were chosen the governors of the Syrian provinces (Damascus, Aleppo, Tripolis, Ḥamā, Saḥāf) and frequently also the governors of the citadels of Damascus and Aleppo who were appointed by the Sultān himself. The next class was formed by the tabībīyīs, amirs of 40 Mamlūks, who had the right to be accompanied by a band. They were followed by the amirs of 10 and those of 5 Mamlūks. All the amirs of 1,000 were appointed by the Sultān himself; the other amirs in the provinces sometimes by the sultān and sometimes by the governor. The administrative system at the Sultān’s court was reproduced on a small scale in the provinces. Every governor was a little Sultān who had to some extent the same functions as the Sultān in Cairo. The Syrian governors were in general independent of one another (very few like the Amir Tengit [see DAMASCUS, i, p. 908] had other governors subordinated to them). In the beginning the Mamlūks, perhaps influenced by the Mongols, had the tendency to make all offices secular and fill them with Mamlūks who, as lords of the sword (asḥāb al-siyāsī), belonged to the military caste. They kept this up in the highest offices throughout the dynasty, but they had to create the important offices of private secretary (kāthib al-ṭīrī) and head of the chancellory (ṣāḥib Dīwan al-imāmī) and fill them with civilians and even admit Christians, Jews, and especially converts to Islam to them, because the Turkish ruling caste was not fitted for them. The above mentioned chief offices on the military and administrative side remained however reserved for the constantly increasing oligarchy, into which neither Arabs, nor the sons of Mamlūks were admitted. It hardly ever happened (I only know of 3 cases of Arabs) that Arabs or sons of Mamlūks became amirs of 1,000, or rose to the highest posts in the legal and scholastic world and in the other branches of the civil service.

The Mamlūks were purchased on behalf of the government by a high official, the purchaser of Mamlūks (ṭābir al-mamlūkī), educated in the first place in the Mamlūk School in Cairo, then distributed in the different branches of the corps of pages to act as amour-bearers, cup-bearers, carvers, polo-grooms, club-bearers etc. for further training and then placed in the service of the amirs or of the Sultān as vacancies occurred. The Sultān’s lifeguards were called ḫagāʿī and the amirs had also similar bodyguards. The army consisted of a) the bodyguard of the Sultān, b) the ḡund al-khāṣṣa, enlisted troops, who were paid in money and with the yield of the crown estates, c) the guards of the great amirs and former Sultāns. In later times there was a body of reserves, awsiyyt al-nilāf, who were only called up for service in times of war but also received pay in times of peace. Military expeditions were usually decided upon by the council of state; the amirs were given money to equip and maintain their troops, to be able to lead them into the enemy’s country.

In addition to the military officers there were civil officials, asḥāb al-balām (lords of the pen): a) the religious officials (al-ʿināʾ; a), who filled posts in the legal and scholastic worlds and a series of other offices; b) the regular administrative officials (al-diwaʿniyya) for the rest of the civil service.

The Sultān’s revenue was made up of the ground-poll, and poor-tax, from the yield of the fiefs (on the Egyptian system of appanages cf. ii, p. 90), of the harvest, of the tolls on goods and markets, which, not being laid down in the Kūtān, were considered illegal and resisted. He also sometimes made money by forced purchases and sales. The government bought up goods at a fixed price and forced purchasers to take them at a definite price. Finally there were monopolies out of which the Sultān made profits. Another favourite means of raising money was for the Sultān to visit some great man from whom he extorted large sums while a guest (especially Kāthib al-ʿināʾ [q.v.]). Things
The Mamluks in history lay in the fact that, protected by the deserts and their armies, they subdued the flood of Asiatic conquerors; they conquered Cingis Khan's Mongols and later the hordes of Timur Lenk, who had conquered Syria for a short time, and other conquerors. After the defeat of the Tartars and the retreat of Timur, the Sultans were forced to concentrate on the struggle with the gradually increasing power of the Ottomans. The struggle was long avoided by the formation of buffer states on both sides; among these the most notable were the dynasties of Dhu l-Ghādir and of the White and Black Sheep (so-called from their standards). The success of Kātibā's policy postponed the end but the rulers who followed him were weak. The rule of the Mamluks lost its vigour. They were weakened in long wars; their finances became quite hopeless as a result of their immediate expenditure, not commensurate with their means and a defective system of taxation, which in the later period enabled the owners of large estates to escape the taxes. They therefore could not permanently resist the Ottomans, especially as the lack of discipline among the Mamluk leaders and the weakness of their field artillery made the army useless. The well-equipped fortresses were not defended against the Ottomans; they fell through treachery. The ham-ul ash-Sulṭān Kānṣīl Ghaṭī was defeated and slain in 922 (1516) at Marj Dibij (in the province of Aleppo). The way to Egypt was thus opened to Sultān Selim; after six months' resistance the last Sultān ʿUmmahā had to surrender. He was hanged from the flat Zulawal in Cairo. A number of the great amirs and the Caliph were taken to Constantinople. The caliphate ceased as no new Caliph was appointed; the Sultān of Constantinople became the first ruler in Islam. The protection of the holy places also passed automatically to him.

The period of the Mamluks was marked by great activity in building (ii. 230). Of secular buildings many, for example those in Cairo, Aleppo, Damascus and Birejik which were entirely rebuilt in the Mamluk period, as well as a large number of fine tombs, hospitals, baths, fountains and aqueducts still exist. Of religious buildings splendid mosques with schools attached to them were built. While even under the Ayyūbids there had been only one "great mosque" in each town or independent suburb, where the Friday service was held, it became the custom under the Mamluks that many Sultāns and governors and occasionally even one of the guilds built "great mosques" for the Friday service in the large towns. Mention may be made of the mosques of Balbais, Kalātān, Muḥammad al-Nāṣirī, Sultān Ḥasan, Ṣubbān, Muḥyāʾī, Kātibā in Cairo, as well as the mosque in the provincial capitals Aleppo, Damascus and Tripoli. While agriculture, industry and trade showed great prosperity, trade suffered very much under the later Mamluk Sultāns through the extortionate taxes of the government. The trade through Egypt, based on treaties with Frankish and Oriental rulers, yielded huge sums. The customs and the treatment of merchants by the Sultans finally became so intolerable that the European powers did everything possible to secure the sea-route to India in order to avoid the transit through Egypt with its enormous expense and the roguery to which it was exposed.

The object of the last wars of Sultān Kānṣīl Ghaṭī was to gain a footing in South Arabia and nearer India to secure the Egyptian share in Indian trade.

MAMLUKS

(M. Sombekhlm)

B. Period from 1517 to 1798. It is a significant fact, that even this period of nearly three centuries, during which Egypt belonged to the Ottoman Empire, may still be designated as a third Mamluk period. The change brought about by the conquest of Sultan Selim in 1517 was, after all, not a radical one, from the point of view of government. Egypt and its inhabitants remained under the rule of a powerful minority of foreign race. The autocracy that existed in the beginning between Ottoman Turks and Mamluks and which had led at first to much bloodshed (execution of 800 mamluks by Selim I in Cairo) did not last very long after the troubles of the occupation were over. The Turkish soldiers and officials, who entered Egypt during Ottoman rule soon became mixed up to a large extent with the numerically more powerful class of the Mamluks, whose aid was, moreover, indispensable, for the government of the country. Besides, the number of Mamluks (al-Şarâifî) continued to receive additions by purchase of slaves from the Caucasus. An author of the xvith century (Vansleb, p. 13) says that Egypt, in his day, was inhabited by Copts, Moors (by whom he means the Egyptian population), Arabs, Turks, Greeks, Jews and Franks. The "Turks" were the governing class and composed of Mamluks and Ottomans, between whom no distinction is made. We may even speak of a mamlukisation of the Ottoman element: the real ottomanisation of the country belongs to the xixe century. In accordance with what is said, the history of those centuries never shows, among the parties and factions into which the Mamluks were divided, a pro- or anti-Ottoman party; those quarrels were local and personal character. Even the first governor of Egypt, Khârîbek, was a Mamluk, although, after him, the Pashas were sent, without exception, from Constantinople.

During the xixe century it is true, the authority of the Pashas sent from Constantinople to govern the country was undisputed. The Pasha could rely on seven constant of troops (oTâfî) six of which were instituted by Selim I, while a seventh contingent was added under Sulaimân I, composed of Mamluks. Their nominal strength was 20,000 men in all. They were not commanded by the Pasha, but by their own commander, who belonged to the oTâfî of the Janissaries and resided in the citadel of Cairo. Afterwards these troops behaved more and more independently and were even able to depose Pashas whom they did not like, until, in the xixe century, this military force became the instrument of some all-influential Mamluk beys. Important matters of administration were treated by a great Divân or State Council, which only met in extraordinary cases and in which the high functionaries were represented, as well as the military chiefs and the high religious dignitaries. Local and special government functions were exercised by twelve sandy beys; these represented at the same time the feudal aristocracy; from the beginning however, the ties that linked them to particular provinces seem to have been rather loose, for among them are mentioned the Kâfa of the
Pasha, the Daftarār, the Amir al-Hadījī and the Amir al-Khasha, the three first of whom were also members of the great Divān. The other Beys were commanders at Suq. Damietta and Alexandria, and governors of the five big provinces in the Nile delta. Besides these twelve Beys there were twelve other Beys with similar functions. The real provincial administration was exercised by a class of functionaries called Kāshif. Their chief task was the collection of the revenues. They may be considered as a kind of governor; some of the great Beys themselves were also Kāshif in their districts or had different Kāshifs under them. Vansleb mentions 56 Kāshifs. As to the revenues, they were collected in various ways, the local customs in different parts of Lower Egypt and Upper Egypt varying considerably. The most common form was the farming out of revenues (ilīzām); the multazim had different kinds of right of possession on the lands, which were hereditary. They collected the revenue, in taxes or in kind, from the fellahs, generally through the village notables called Shaikh al-Balad. In the tax-collecting there were further employed, a host of subordinate technical and financial functionaries, many of whom were Copts. Some Kāshifs were at the same time multazim. This system of administration showed the close relation between administration and land-owning, which has always been characteristic of Egyptian conditions (cf. Egypt). It was the continuation of the system which had prevailed under the Mamlūk Sultāns (regulation by Kāšī Bay) and was regulated again in the Kāšīnām-e ‘Mīr of Sulaymān I (cf. J. von Hammer, Der er manischen Reiches Staatsverwaltung und Staats verwaltung, Vienna 1815, i. 101—142); here a special stress is laid on the rights and obligations of the Kāshifs.

In Cairo a large chancery, the chief of which was the Kāshīnāmī, had to collect these taxes and to keep the registers; the revenues collected were reserved partly for the pay of the troops and works of public utility such as irrigation, building of bridges and dikes, etc. and partly for the yearly tribute to the Sultan, which was in the beginning 800,000 ducats and afterwards lowered to 600,000 and later to 400,000 ducats. In the xvith century the paying of tribute practically fell into disuse. Besides the land-tax, there existed a great number of other taxes, under different denominations; they were collected more or less arbitrarily, and, as in course of time, the anarchy in the government assumed greater proportions, they pressed ever heavier on the population. The rural population had as much to suffer from the exactions of their Mamlūk administrators and proprietors as from the raids of Arab tribes, which the government was unable to control.

The history of Egypt during this period is a not very interesting succession of domestic intrigues, struggles and revolts. Until the beginning of the xvith century the Pashas could more or less maintain their authority, but they were replaced too often to have a lasting influence. No less than 117 Pashas governed Egypt until the arrival of the French (a complete list of them is given in Thurey, Schöllt ‘Othmānī, iv 835 sqq.). Many of them tried to make their short stay as profitable for themselves as possible, and several of them had to pay their cupidity with their lives after their return to Constantinople. In the xvith century the real power in the country was exercised by the great Beys in Cairo, who had the troops in their hand and tolerated only those Pashas who did not interfere with their affairs. By this time the two most powerful positions in the country were those of the commander of Cairo, called the Shaikh al-Balad and of the Amir al-Hadījī. Some of the Shaikh al-Balads are reputed as good rulers, especially Ismā’īl Bey, who held that office from 1707 to 1724. But the changes of power were always of a violent kind and prevented the forming of a dynasty; Ismā’īl’s shaikh al-baladship itself had been preceded by a curious struggle between the two rival parties of the Dhu ‘l-Fikārīya and the Kāshīmīya, which had lasted for three months outside Cairo. In 1747 the Porte tried for the first time to reestablish its authority by ordering the governor Raghib Pasha to exterminate the Mamlūk Beys; this attempt failed, however, completely and the disorders continued until the appearance of the young Mamlūk ‘Ali Bey [q.v.] who made himself for a short time independent Shaikh al-Balad and ruler of Egypt, for the years 1770—1771. By this time the Porte began to take more serious measures to retain its hold on Egypt, but the regime of the Mamlūk Beys did not end until a foreign power, France, temporarily occupied Egypt [cf. KEDIVE].

Under such a regime the conditions of living of the population could not be flourishing. It was not so much the position of Egypt as an Ottoman province that caused the suffering of the population, as the lack of a strong central power. European travellers like Vansleb and Luscin point to the fact that Egypt was, in the xvith century a rich country and that by the practical stopping of the payment of tribute, all the money remained in the country itself. But the riches remained only in the possession of the ruling minority, while the rural population was oppressed very hardly. The bad organisation caused, moreover, from time to time terrible famines, while, about the middle of the xvith century, began a series of ravaging epidemics of plague. Since the last period of the Mamlūk Sultāns the country had lost, moreover, a rich source of revenue by the change of the trade-route to India. The transit trade was now restricted to inner African products and coffee and aromatics from Arabia, while the exportation of Egyptian products such as corn, cotton and sugar was limited. The timber that the country needed had to be imported from Turkey. Moreover, the trade with Christian countries often experienced serious hindrances from the arbitrary measures of the local authorities. At the same time the local industries declined rapidly; one of the causes may have been the transportation of a large number of skilled craftsmen to Constantinople by Salīm I; the once flourishing guild organisation was paralysed by this measure (cf. Thorning, Beitraje zur Kenntnis des islamischen Vereinsvereins, Berlin 1913, p. 81 and al-Qabari, i. 29).

The decline of Egypt’s economic strength, on the other hand, made Egypt a relatively quiet possession for the Porte. Only in the very beginning of Ottoman rule, in 1524, a Turkish governor, Ahmad Pasha, tried to take the title of sultan of Egypt, but afterwards no attempts to recover independence were made until the time of ‘Ali Bey. Then, however, the political needs of the European colonial powers
made Egypt appear again as an important stage on the way to India and opened new possibilities of a more independent development, which were to be realised in the sixteenth century. In the meantime the possession of Egypt had been useful to Turkey in many respects; the Porte could always count on an Egyptian contingent of troops in its wars and the country itself was a base of action for the military operations in Syria, the Hidjaz and Yemen. The reconquest of Yemen under Selim II was carefully prepared in Cairo. As soon as the tendency to independence appeared, however, as under 'Ali Bey, the Turkish hold on Syria and Arabia was immediately endangered seriously.

The predominant position of Egypt in Islam was now repeatedly contested by the Ottoman occupation. Al-Azhar [q.v.] remained one of the most important centres of Islamic learning; the Turkish Pashas and other dignitaries showed their acknowledgement of this fact by gifts and by the execution of restorations to the building, as they did occasionally for other religious institutions in the country. Though Islamic science continued to flourish, Egypt did not produce many prominent figures in this period. In the domain of mathematics the most important figure was al-Raml (q.v.; d. 1546), the commentator of al-Nawawi, further the mystic al-Sha'ran (q.v.; d. 1656), and, as representative of Arabic philology, Abd al-Kadir al-Baghdadi (q.v.; d. 1652). In popular mysticism the veneration of Ahmad al-Badawi [q.v.] by the Almadiya held a large place.

The period of Ottoman domination in Egypt is not wholly without interest from the point of view of architecture and art. Several governors, beginning with Khair al-Din have constructed mosques; these mosques show a kind of transition from the Mamluk to the Ottoman architectural style. There are also in Cairo several mosques founded by the Mamluk Beys, like the mosque of Abi Dhahab, the tutor of 'Ali Bey, constructed in 1772. Some beautiful palaces have likewise been built by the Mamluks, but only few of them are still existing (cf. on their subject: Mme. R. A. Devonshire, L'Egypte musulmane et les fondeurs de ses monuments, Paris 1926, p. 115 sqq.).

Bibliography: The sources for the history of Ottoman rule have not been much studied. Of the many Arabic works have to be mentioned (cf. Brockelmann, G.A.L., ii, 289 sqq.): Ibn Ilyas, Badi't al-Zahir fi Waṣṭī al-Dhahir, iii., Bulak 1312, p. 101 sqq. (until 1522); al-Minhaji, al-Badur al-safiya fi mān wāliyya Yākhiyar, Ms. Vienna, No. 9122 (until 1549); al-Burj, al-Riyād al-Sa'īda fi Aḥḥār Mīr wa l-ʾAḥḍiyya l-Misr, Ms. Algeciras, No. 1605; Ibn al-Iṣlah, al-Masālik Misr, several MSS. (1517-1519); al-ʾIsbāh (cf. Babinger, G.O.W., p. 160 sqq.), Dāwrat al-ʾAḥḍiyya fi mān wāliyya Yākhiyar al-Mīriyya also called Laitif Aḥḍar al-Uṣūl fi mān tagarrū' bi-Mīr min Ar-Rabīl al-Diwāl, several times printed in Cairo 1276, 1296, 1300, 1304 (until 1623); do., al-Rawd al-ḥāsīm fi Aḥḍar man māṣaf min al-ʾAtvūl, Ms. Paris, No. 1562 and Brit. Mus., No. 1251 (until 1623); al-Ghuni, Dāwrat al-ʾAṣm bi-Turīkh Ṣara'īl Mīr l-Ṣulīm, only in MSS. (poem, until 1630); Muḥammad b. Muḥammad b. Abī l-Surūj, al-Tufa al-Bābīya l-Ṣugdīqān al-Tūrīkhān al-Minān al-Diār al-Mīrīyya, several MSS. (until 1634); do., al-Rawd al-Zāhiyya fi Waṣṭī Mīr al-Kāhirā al-Mīrīyya, several MSS. (until 1651); do., al-Rawdāt al-Sadīrā fi Aḥḍar Miṣr wa l-Kāhirā, several MSS. (until 1645); al-Awfi, Turīkhān al-Sāvīrā fi Waṣṭī al-Sāvīrān several MSS. (treats of some events in the years 1658 and 1661); Abī al-Kaḍir, Turīkhān, MS. Berlin (G.A.L., ii, 299; the years 1603-1643); Ibrahim al-Khaṭāb, Maḥbūb al-ʾAṣlī fi bi-mā ḍāya fi Miṣr min al-Māṣaf, MS. at Cairo (G.A.L., ii, 299; written about 1721); al-Damirāshī, al-Durra al-Mārumān fi Waṣṭī al-Xanān, several MSS. (G.A.L., ii, 300; the years 1688-1703); Muṣafāb b. Ibrāhīm, Turīkhān Miṣr, MS. Copenhagen, No. 159 (the years 1686-1739); al-Dhābānī, Turīkhān al-ʾAtīqat wa l-Turīkhān al-Mīrī, Cairo 1256, vol. i. and ii. (from 1694 up to the French occupation).

Among the Turkish sources all the great historical works of the Ottoman Empire since the time of Selim I should be mentioned, to begin with the different Selīmī-nāmes; on the conquest of Egypt: Hāṣid Čelebi, Tagebuch des östlichen Feldzuges Sultan Selim, transl. by Khalil Edhem, Weimar 1916 (Deutsche Orientalische, vol. xx.). The following deal specially with Egypt: Abī al-Nāšīr, Narādir al-ʾAḥḍar, several MSS. (G. O. W., p. 58 sqq.; Turkish translation and continuation of an older work, up till 1540); Sīfla b. Uljādi, Ṣubkāt Miṣr, several MSS. (G.O.W., p. 100 sqq.; written in 1546); Yūsuf b. Nīmet-Allah, Turīkhān Miṣr, MS. Turin (G.O.W., p. 121; Turkish translation of an older Arabic work and continuation up till 1592); Abī Ḥalīl al-ʾAḥḍar min al-ʾAtīqat al-Zāhirā, several MSS. (G.O.W., p. 133; written in 1599); Muḥammad b. Abī ʾAbd Allāh, Turīkhān Miṣr, several MSS. (G.O.W., p. 243 sqq.; up till 1679).

Vansleb, Nouvelle Relation d'un voyage fait en Égypte, Paris 1677; Eulalia Celebi, Sīrāḥāt Mīr, 3rd part, not printed; Paul Lucas, Voyage dans la Turquie, l'Allemagne, la Palestine, et Basse Égypte, etc., Amsterdam 1720, 2 vols.; B. de Mallet, Description de l'Égypte, Paris 1735. Cf. also the articles EGYPT and KIBR.

(J. H. KRAMERS)
at all popular with the Arabs. An 'Alid Muham-
mad b. Ibrahim, usually called Ibn Tabataba, there-
fore set up as a pretender to the throne in Kufa in
Hijra II 199 (Jan.-Feb. 815) and was sup-
ported by a former adherent of al-Ma'mun, Abu
Umar al-Saraya. The rebels had some success at first
but Ibn Tabataba died suddenly and when the
general Harrama b. A'yan [q. v.] advanced against
him, Abu Umar al-Saraya had to take flight. Soon
afterwards he was taken prisoner and put to
death (Rabi' 200 = Oct. 815). In the meanwhile
the movement had spread, but the 'Alids made
themselves so hated that Harrama's troops were
able to order every one as they pleased. The victori-
ous Harrama, however, was shamefully
rewarded for his services. After he had occupied
Merv, the suspicious Caliph had him thrown
into prison where he soon died (Dhu'l-Ka'da
200 = June 816). This increased the general
discontent. While al-Ma'mun remained for the time
in Merv, the people of Baghdad rebelled and
placed al-Marjani, a son of the Caliph al-Mahdi, at
the head of the movement. When in Ramazan
201 (March 817) al-Ma'mun designated an 'Alid,
'Ali al-Kidja [q. v.], as their apparent and
assumed the rule of the 'Alids instead of the black
of the 'Abbasids, the people of the capital elected
Ibrahim, another son of al-Mahdi, Caliph (Dhu
'l-Hijja 201 = July 817). Then there were
troubles in Egypt and in al-Jabaridjan, the people
were stirred up by the Khurrami Bubak [q. v.]
who terrorised the northern provinces for nearly
20 years. In these circumstances al-Ma'mun had
finally to leave Merv and go to the 'Iraq (202 =
817). But when the Arabs murdered the vizier
al-Fadhil who was, particularly hostile to them, and
'Ali al-Kidja died suddenly, and in addition, the
governor of Wilayat al-Jasan b. Sahl. the vizier's
brother went mad, or at least was treated as such,
the people of Baghadad had really no longer
reason to support Ibrahim and in Safar 204 (Aug.
819) al-Ma'mun entered the capital and the 'Alid
colours were exchanged for the Abbasid. Al-Jasan
b. Sahl. was then restored to his government,
and a few years later the Caliph married his
daughter Bistan [q. v.]. As soon as the Caliph had
left Khurasan, a rebellion broke out there among
the Jews. At the end of 205 (June of
820) or beginning of 206, Tahir b. al-Jussain
[q. v.] was appointed governor of Khurasan. He
proved in every way fitted for his difficult post
but carried his independence so far that in 207
(822) he renounced his fealty to the Caliph.
Although he died the following day, the Caliph
did not dare to deprive his sons of Tahir's go-
vernship, and in this way the dynasty of the
Tahirids was founded in Khurasan. In 210 (825-
826) 'Abd Allah b. Tahir [q. v.] after defeating
Sayr b. Shabath went by the Caliph's order to
Egypt. Here the Yamanis, who were loyal to
al-Ma'mun, had begun to fight with the Kal'is who
sided with al-Amin, and the struggle lasted till
the latter's death. A more peaceful period ensued,
but soon new troubles broke out, and with the
arrival of the Spanish Muslims banished by the
Caliph al-Hakam I [q. v.] the situation became
still more complicated. The latter seized the town
of al-Kandarya, but when 'Abd Allah b. Tahir
arrived in Egypt the native rebels had to submit,
and the Spanish intruders retired to Crete. When
'Abd Allah was appointed governor of Khurasan,
which made him master of Cordova. Six months later, al-Ma'mun was poisoned on the 11th Dhu l-Ka'ba 647 (June 28, 1075) either at the instigation of al-Mutamid, king of Seville, or of Ibn 'Ukasha. His son Yahya al-Kadhir succeeded him. A few years later, Alfonso VI took Toledo.

The long reign of al-Ma'mun is quite characteristic of the period of the muluk al-fasîlîf of the Iberian Peninsula. He certainly increased his dominions but his conquests were ephemeral and he was one of the first to have no scruples about an alliance with the Christian princes of Castile and Leon in order to fight other Muslim rulers of al-Andalus. He even afforded hospitality to his own guests for nine months, to Alfonso VI when the latter was deposed by his brother Sanchu of Castile.

AL-MA'MUN, 4.ABU 'L-'ALI' IBRÎS B. YÂK'B AL-MANŞîR B. YUSUF B. 'ABD AL-MU'MIN B. 'ALI, ninth sovereign of the Almohad dynasty, born in 58/1185–1186 in Malaga, of the marriage of his father with the Spanish princes Safiya, daughter of the amīn 'Abd Allah b. Mandhar (Martune). The Arab historians pay high tributes to the good qualities of this prince who was very well read, equally well versed in rational and religious learning. At a time when the Almohad dynasty was much troubled by the strife stirred up by pretenders, he was able by his energy to postpone for several years its final collapse.

At first al-Ma'mun served in Spain as the lieutenant of his brother Abu Muhammad 'Abd Allah al-Ádil then on the throne. The latter had soon to leave the Peninsula and return to Morocco without having been able to subdue the rebel leader Abu Muhammad al-Bayâsi supported by Ferdinand III of Castile, but he was soon betrayed by his own men in his own land and assassinated in 624 (1127). This murder was followed by the almost simultaneous proclamations of al-Ma'mun and another Almohad pretender, nephew of the preceding, Yahya b. al-Nasir b. al-Manṣûr, who took the honorific titles of al-Mu'tamid 'Abd. On his accession and without leaving Spain, al-Ma'mun was soon able to make himself recognized in the greater part of his empire and to get rid of the rebel al-Bayâsi. But almost immediately a rebellion broke out in the east of al-Andalus, in which Muhammad b. Yâqub of the powerful family of the Banu Hûd was proclaimed caliph in the town of Murcia. At the same time the prestige of Yahya al-Munta'im increased in Morocco and his partisans became more and more numerous. Feeding himself powerless in Spain and forced to turn his eyes towards Africa al-Ma'mun was forced to seek an alliance with the king of Castile. The latter agreed to support al-Ma'mun under very harsh terms, including the surrender of ten Muslim strongholds of the frontier and the building of a church and the granting of freedom of worship in Marrakesh. In return, al-Ma'mun received a body of 12,000 Christian mercenaries with whom he at once went to the Maghrib. He was soon able to enter Marrakesh in triumph, after having
defeated the army of al-Mu'tasim in 629 (1230).

Enraged at the defection of the Almohad Makhir, so devoted to his predecessors, al-Ma'mun took a decision at Marraksh, that was quite unprecedented in the annals of the dynasty. He stigmatised the memory of the Mahdi Ibn Tumart, denied him "impeccability" (i'tima) and had a large number of Almohad shi'khis executed whom he suspected of having betrayed him. The rest of the reign of al-Ma'mun was spent in trying to put down several rebellions in the Maghrib; but he did not succeed in bringing his rival to terms for the latter was able to take and plunder Marraksh. On hearing this, al-Ma'mun, then busy with the siege of Ceuta, hurried off to the capital at once but fell ill and died on the way in the valley of the Wad'i l'Abid at the end of Dhu'l-Hijjâh 629 (Oct. 1223).

AL-MAMUN, name of a dynasty.

In the 15th (5th) century Djurdjânya, to the north of modern Khiva, was a dependency of Bukhâra and was ruled by a line of princes called the Manûnis. Nothing is mentioned about them by the Oriental historians till 982 (992) when Manûn b. Muhammad b. 'Ali, ruler of Djurdjânya, is said to have assisted Amir 'Alî b. Manûr the Samîdî in his exile during the temporary occupation of Bukhâra by Bughârâ Khan, ruler of Kâshghar. In 985 (995) Ma'mûn attacked Abu 'Abd Allah, ruler of Khwarizm, in order to punish him for his treachery to Abu 'Ali Sundjûk, took him prisoner and annexed Khwarizm. Ma'mûn was assassinated in 987 (997). His son Abu l'-Hasan 'Ali succeeded to the throne, and married a sister of Sultan Muhammad of Ghazna. Abu l'-Hasan died about 999 (1000–1001) and was succeeded by his brother Abu l'-Abbas Ma'mûn. Abu l'-Abbas married his brother's widow, the sister of Sultan Muhammad. Shortly after this he gave offence to his army by doing homage to Sultan Mahmûd. The commandery of the army organised a rebellion against him, put him to death on Shawwâl 15, 497 (March 16, 1017) and raised one of his sons to the throne. On hearing this, Sultan Mahmûd marched to Khwarizm to avenge the death of his brother-in-law, defeated the rebels at Hazârasp on Safar 5, 498 (July 3, 1017), and executed the leaders of the insurrection. All the scions of the royal house were taken prisoners and sent to Khurasân. The kingdom of Khwarizm was annexed and placed under the command of Alttânî, with the title of Khwarizmshâh. But after the return of Sultan Mahmûd to Ghazna, Abu Ishâq, father-in-law of Abu l'-Abbas Ma'mûn, tried to establish himself in Khwarizm but he was defeated by Alttânîsh. The rulers of this dynasty were famous patrons of learning, and it was at the court of Abu l'-Abbas Ma'mûn that Abu Raijân al-Birûnî, the astronomer, Abu 'Ali b. Sina and Abu l'-Khaib b. Khâmmur, the physicians, and Abu Nasr b. Arrâk, the mathematician, flourished.

This dynasty has been confused by the Târikhi Guicî and Târikhi Alâ'dîn Arî of Kâdi Ahmad Ghâfîrî, with the Farîqânîs who were the rulers of Djurdjânya.

AL-MAMURET AL-ÂZîZî, the name given to the new town of Mezrê, built beside Kâpurî [q. v.] in honour of Sultan 'Abd al-Âzîz. In time the name became applied to the new wilayet formed in 1879 around Kâpurî-Mezer; this consisted of three sandjaks: al-Âzîz, Khôzât and Mâlitja. As a result of the administrative reforms of 1914 (1921) each of these sandjaks became an independent wilayet but later modifications were made.

According to the official annual of 1925–1926, the wilayet of Ma'mûret al-Âzîz has an area of 11,299 sq. km. or 12,428,900 donums, of which 3,124,596 are arable. It contains 6 kâdas: the central kâda, Pâlî, Kâpurî, Kebân, ʿArâbûr, Kemîlîye (this new name replaces the historical one of Egin).

The annual of 1926–1927 records an even more radical reorganisation. The area of the wilayet of al-Âzîz is given as 17,268 sq. km. with 15,629,296 donums of arable land. The wilayet which lost the western kâdas (ʿArâbûr and Egin) has been extended to include the following regions: to the east has been added to the wilayet of Ma'mûret al-Âzîz: Khanenî, Mullû-kendî, İmîne, Khuâlîûya (?), Erenler (Ayûwu), Bûl-Bey, Kâpurî, Čongû, Sarnî (Dîjîdî). The annual of 1926–1927 records an even more radical reorganisation. The area of the wilayet of al-Âzîz is given as 17,268 sq. km. with 15,629,296 donums of arable land. The wilayet which lost the western kâdas (ʿArâbûr and Egin) has been extended to include the following regions: to the east has been added to the wilayet of Ma'mûret al-Âzîz: Khanenî, Mullû-kendî, İmîne, Khuâlîûya (?), Erenler (Ayûwu), Bûl-Bey, Kâpurî, Čongû, Sarnî (Dîjîdî).
The wilayet (without Cemish-gezek) has therefore 171,631 inhabitants. The events of the war and the suppression of the Kurf rising in 1925 must have had far-reaching effects on the ethical aspect of this territory. Before the war the population was mixed: Kurf, Armenian and “Zaza” (a people speaking an Iranian dialect, q.v.).

1927, p. 694. (V. Minorisky)

MAN b. AWS, an early Muhammadan poet of the tribe of the Banu Muzaina. His period can be established with some accuracy. From the Kitab al-Aghani we know that he composed a panegyric on Omar I and a lampoon on Abd Allah b. al-Zubair for his lack of hospitality; the latter is preserved in the Aghani as is the beginning of the former. The panegyric survives also in the Dīwān, where it is dedicated to Omar’s son ‘Āshim. The Aghani further records that Ma’n lived to the beginning of the fitna between Abd Allah and Marwān b. ‘Abd al-‘Azīz, i.e. to 64 (634). The poet must therefore have been born about the beginning of the Muslim era. The Aghani further gives details of his private life and the Dīwān also gives similar information. He had an estate in Arabia and made journeys to Syria and the ‘Irāk. One of his wives came from Syria. He also took part in the wars of his tribes. In his old age he became blind.

Up till recently all that we knew of Ma’n’s poems were the fragments preserved in the Aghani and elsewhere. P. Schwarz however discovered in the Escorial an incomplete manuscript of the Dīwān with a commentary, the work of al-Kālī [q.v.] which he published in 1903 with a short introduction and translation of the notices in the Aghani. H. Reckendorf supplemented this. In 1927 Kamīl Muṣṭafā published an edition in Cairo. It lacks some poems given by Schwarz; on the other hand it has two fragments not given by him. The introduction is in part a literal translation of Schwarz, who is mentioned by name, it is not clear from which the edition is based. It seems however to be based simply on Schwarz’s edition without new manuscripts and, compared with it, only shows corrections of the text, omissions and additions from other sources.

Bibliography: Kitāb al-Aghānī, x. 164–168; P. Schwarz, Gedichte des Ma’n ibn Aas, Leipzig 1903 (cf. Noldeke, in Z. A., 1903, p. 274 sqq. and Reckendorf, O. L. Z., 1904, p. 138–140), where further sources are given; Ma’n ibn Aas, Ḥayyūkh, Shīrīkh, Ḥakībah, Ḥumna’ānī Kamīl Muṣṭafā, Cairo 1927. (M. Plessner)

MAN b. MUḤAMMAD b. ʿAIMĀD b. ʿUMĀDIH AL-TUṬUṬIH AND ʿAWĀSH OR AL-ṬAYHĀ, founder of a dynasty in the little principality of Almeria, in Eastern Spain in the middle of the 16th century A.D. The principality was founded in 1025 by the two Saṃiards “Shav” Khairān and Zuhār. On the latter’s death in 1037, their overlord ʿAbd al-ʿĀzīz b. ʿAbbās, king of Valencia, declared it his property and in 1041 placed his brother-in-law Ma’n b. ʿUmādīh as governor there. The latter belonged to a noble family of Arab origin; his father had been one of the generals of the celebrated Ḥāḍīb al-Maṣrūr [q.v.] and was governor of the town of Huesca. Ma’n remained loyal to the king of Valencia for nearly four years, then cast off his allegiance and declared himself independent. He reigned in Almeria for a few years longer and died in Ramadan 443 (Jan. 1525).

MAN b. ZĀ’IDA, ABU ʿL-WALID AL-SHĀBIKH, a Muslim general and governor. In the Omayyad period Ma’n was in the service of the governor of the ‘Irāk, Yazīd b. ʿUmar b. Hubayra, and took part in the fighting against the ‘Abīd rebels ‘Abd Allah b. Ma’awiyah and the general of the ‘Abūsādīs Kahtaba b. Shabīb as well as against his son al-Hasan. He thus gained the enmity of al-Mansūr and after the murder of Ibn Hubayra had to go to hiding to escape the vengeance of the ‘Abūsādīs. But when the Rawandis [q.v.] went to al-Hājmīlya (probably in 141 = 758–759) and tried to storm the palace of the caliph, because he had had their ringleaders arrested, Ma’n came out of his retirement, drove back the rebels with his men and rescued al-Mansūr, who at once pardoned him and gave him the governorship of the Yaman. Here he favoured his fellow tribesmen, the Banū Rabī‘, while the Yanamis were treated with the greatest severity. He was transferred to Sīljītān, according to the usual date, in 151 (768–769) and his son Zā’ida followed him as governor of the Yaman. Soon afterwards, probably the next year, Ma’n was murdered in Bust by some Khāridjīs, who had gained an entrance to his house by pretending they were workmen doing repairs. 154 and 158 are given for the year of his death, in addition to 152.

MAN (BANU), Emirate of the Lebanon. Their political history begins with the Turkish conquest of Syria. We do not know if they were of Arab origin like the Banū Būtūr, or Kurds like the Djuhblat, or Maghribi like the ‘Abīd al-Sāmādī. The Tālīhik etc., who came to the Lebanon in the rein of the Fāṭimīds. When, in the 13th century, the biographer Muḥībīb (Aḥmad al-Aṭār fī A‘yān al-khalī al-khālī tashar, ed. 256) was collecting the records of the family of the Banu Ma’n, he found they were not agreed about the genealogy of their ancestors. But he is certain that they had long been in possession of the emirate of Shuf (Southern Lebanon). He is certain that they did not belong to the princely family of the Lebanon Tanūk. It is none the less surprising that in the monograph, which he devotes to the latter family (Tūrīkh Bā‘tir, ed. Cheikhho) Ṣāḥib b. Yahyā deliberately passes over the Banū Ma’n.

The Ma’n seem to have early adopted the teaching of the Druses. This step secured them the sympathies of the Druses of the Lebanon and
of the Wādi 'l-Taim at the foot of Hermon. In the latter district they were allied with the Shihāb emirs. Enfeebled by the struggles with the 'Alam al-Dīn—and their relations and also their secular rivals—the Ba'ni Tanūkh, themselves divided into Kaisīs and Yamānis, underwent the fate of such exhausted organisms and ended by breaking up. The Ma'nids were only waiting the opportunity to seize their political heritage. This was given by the Ottoman conquest of Syria.

On the eve of the battle of Dābiq (1516) between the Turks and the Mamluks of Egypt they divided in time to which side victory would incline and wiser than the Tanūkh declared for the Turks. Their chief at that time was the emir Fakhr al-Dīn 1. He was one of the first of the Syrian chiefs to hasten to Damascus to congratulate Selīm I on his victory. Favourably impressed by his protestations of devotion, the Sultan sent him back to the Lebanon with enhanced prestige and authority at the expense of the Tanūkh. In his accession to power, the Ma'nid emir was much assisted by Ghāzālī, a traitor to the Mamluk cause, to whose fortunes he had decided to link that of his family. We do not know how he escaped the catastrophe that overwhelmed (Jan. 1521) his protector Ghāzālī, who in the end played traitor to the Turks also.

In 1544 the emir Kurkūmās succeeded his father Fakhr al-Dīn and in 1558 there took place at Dūn 'Akkār the plundering of the caravan which was taking to Constantinople the taxes collected in Egypt and Syria. The Ottomans accused the Ma'n of complicity and of having sheltered the criminals. Their troops invaded the Lebanon. The emir Kurkūmās shut himself up in the inaccessible rock of Shāfīr Tūlān near Dūzin (Southern Lebanon) and died there of chagrin or poison (1585).

The most remarkable of the Ma'nids was undoubtedly the son and successor of Kurkūmās, called Fakhr al-Dīn (1585–1635), like his grandfather. The partisans of the cause of independence in the Lebanon regarded him as a precursor and have never ceased to invoke the example of his efforts for his country. For an account of his career see the article on him (ii., p. 43). The conquests beyond the Lebanon and his relations with European powers brought down upon him the vengeance of the Porte. He had to go into exile in Italy and leave to 'Ali, the eldest and most gifted of his sons along with his own brother 'Āli, the administration of the Lebanon (1619). On a promise to dismantle the chief fortresses of the Lebanon the Porte recognised 'Ali and even, after five years of exile, allowed his father Fakhr al-Dīn to return to the Lebanon. His son 'Ali displayed no enthusiasm at his return (1618) The new conquests of his father soon began to disturb the Porte, who resolved to make an end of the troublesome Ma'nid vassal. Surprised by superior forces in the Wādi 'l-Taim his son 'Ali fell fighting bravely and Fakhr al-Dīn was taken to Constantinople and put to death (1635).

The Central and Southern Lebanon, "the Mountain of the Druzes," as it was officially called, was then handed to the family of the 'Alam al-Dīn, whose ambitions had never ceased from the beginning of the rise of the Ba'ni Tanūkh, to thwart the efforts of all the ruler of the Lebanon. One of their first acts was to exterminate the last scions of the Tanūkh. This crime facilitated the rise to power of the Shihāb. Their excesses and the regret for the Ma'nids soon made the 'Alam al-Dīn unpopular. After their expulsion from the Lebanon the Ma'nid emir Mulhīm followed; his son 'Āli succeeded in regaining a precarious authority under the jealous supervision of the Turkish Pashas. The more distinguished of the two emirs was Mulhīm, son of the emir 'Āli and nephew of the great Fakhr al-Dīn. He ruled for about 20 years. Both continued the liberal traditions of their illustrious ancestor. Like him they protected the colonies of Christian agriculturists whom he had invited from northern Lebanon and for whom he had built churches and monasteries.

'Āli, grand-nephew of Fakhr al-Dīn II, died in 1697 without leaving male heirs and the family of the Ma'nids thus became extinct. Turkey could no longer have any illusions about the rebellious nature of the Lebanonese and their impatience under a foreign yoke. To assume the direct government of the Lebanon was much more attractive to the Porte and would have forced it to undertake its conquest. The grave political crisis through which Turkey was then passing prevented a new expedition being undertaken, the risks of which were very well known. On the other hand the rule of the 'Alam al-Dīn with official support had not given satisfactory results. On promise of the payment of an annual tribute, the notables of the Lebanon were authorised to form a general assembly at Sumāqāniya (province of Shūf) to elect a governor to inherit the legacy of the Ba'ni Ma'n. Their choice fell upon the Shihāb emirs, allies and relatives of the old emirs.

**Ma'nā (A.)** means in the old language sense, significance and is used as a grammatical term. In philosophical language the use of the word varies from the most general to the most particular so that it is impossible to give a general translation for it. It occurs in quite untechnical connections as "thought," "what is meant" or simply "thing" etc. but also has the special meaning of "conception" or as the *Dictionary of Technical Terms*, ed. by Spranger, has it "an image of the intelligence (jāra disānīya) in so far as a word corresponds to it, i.e. in so far as
it is meant by a word". Horten has investigated the special meaning of the word in metaphysics (Was bedeutet *al philosphischer Terminus*; in Z. D. M. G., ixv. 391 sqq.). According to him, *manāra* is an "incorporeal reality" not merely a subjective conception. In this use it is regularly contrasted to *ṣiyā*. The plural *manā'ān* is the name of a study of this breed, namely, rhetorical style.

**Bibliography:** in the article; cf. also the dictionaries and Tishkopruzade, *Mesīḥ al-Sulāda* s. v. *Ibn al-Manār*. (M. Plessner)

**MANAF** is the name of an early-Arabian idol which was venerated by Kuraish and Husaini, as may be concluded from the fact that among these clans the name 'Abd Manaf "servant of Manaf"" occurred. It is said that one of Muhammad's ancestors — the pedigree being Muhammad b. 'Abd Allah b. 'Abd al-Muttalib b. Ḥâdhâm b. 'Abd Manaf — received this name, because his mother consecrated him to Manaf, who was then the chief deity of Makka.

Whether this last statement be true or not, it does not restore to life a deity whose individuality remains to us as dim as that of all its companions. Ibn al-Kalbi knows nothing of its whereabouts, except that menstruating women were bound to keep themselves at a distance from it.

The name does not occur either in the Kurān or in classical *ḥadīth*. It derives from a root *n-c-f*, which in several Semitic languages conveys the meaning of "being elevated". **Bibliography:** al-Tabari, ed. de Goeje, i. 1091 sq.; Wellhausen, *Reste arabischen Heidenwissens*, 2nd ed. p. 56 sq. (A. J. Wensinck)

**MANĀKB (A.), plural of *manāḥa*, means the merits and doings of a miraculous nature of celebrated holy persons of Islam, heads of schools, saints and founders of *māra*. Other terms like *karanāt*, *faḍḥīl* are used with the same meaning but less frequently. We have the titles or manuscripts of several works on eastern *manākib*. Ḥāḍīlī Shalīfī gives a long list of them. Among the most notable may be mentioned the *manākhī* of 'Umar b. al-Khaṭṭāb, of Ahmad b. Ḥanbal, of al-Shāfi’ī and of Abū Ḥanīfa.

The literature of the *manākib* assumed a special development in Morocco from the end of the middle ages. The majority of the ghālīs who played a part in the great renaissance of Islam in this country at that time had one or more monographs devoted to their *manākib* after their deaths.

For a more detailed study of the place occupied by the genre of *manākib* in the Arabic literature of Morocco cf. my *Histoire des Chorfa*, *Essai sur la littérature historique et biographique au Maroc du XVème au XXème siècles*, Paris 1922, p. 44-54 and 220 sqq. (E. Levy-Provençal)

**MANĀRA, tower, minaret. Material, structure and adornment.** The use of brick or stone for mināras depended on the material generally used for building in the country in question. The mināras in Spain were therefore of stone so far as one can judge from those still extant, in the African Maghrib mainly of brick. In Cairo it is stone, in Arabia, Syria, Anatolia, Armenia and Mesopotamia of both, in the Ḥaṭṭ, Persia and Afghānīstān of brick and in India of both. In Persia there are isolated exceptions, like the mināra in Kerāt, a structure of stone and lime with an outer covering of tiles; indeed stone and lime were very often used for the foundations and bases without affecting the character of the edifices themselves in brick. Of considerable importance from the artistic point of view is the outer covering of a layer of tiles in Persia and the Ṣirāk, from the variations and patterns of which the mināras receive their decorative exteriors; by alternating horizontal and vertical layers (hazarūf, bonding), by alternating reliefs and depressions, ornamental areas are formed from which strips of ornament or script arise formed of tiles specially prepared for the purpose. The Turkestān and Timūrid mināras are decorated with coloured glaze. In the post-Timūrid period also the glaze continually appears, especially in the pair of mināras which now commonly flank the entrance to a mosque (Ṭahāt, Māshhad, etc.). It is in the Guldests, the balconies round the top, that the art of working decoratively in brick reaches its height. Here the necessary basis for the balcony was formed by brackets arranged in layers or rows of cells (stalactite-like cornices, *mānakib*).

**Object and Significance.** The term *manāra* or *minār* is applied to all Muslim towers. They were used not only for religious purposes as places from which to call to prayer and to mark mosques but also, as before the Muslim conquest, for profane purposes as watch- and signal-towers. The tower on the top of a hill at Kerāt in Khurāsān (cf. below) is from its isolated commanding position intended as a signal-tower or column of victory and it shows that these towers were built in the Muslim period exactly like the mināras of mosques. In form and style these erection, serving different purposes, form one category, into which they also fall objectively from having the same name. There are a number of early references to such mināras, which were intended to be indicators for caravans and watch-towers (cf. Diet, *Persien, Islam*, 2 k in Khurāsān, p. 59). Such towers were however found all over the Asian plains and through China to the Pacific Ocean. Of course very few of them were works of art. There are a number of exceptions in the contemporary names for such towers, like that of Mahādīd of Ghazna which is called an *wód* in an inscription (see below). One of the mināras of the minaret in Khūshī is called simply *minār* in the inscription (cf. Niedermayer-Diez, *Afghanistan*, p. 59). The stūmbhās of *ūts* erected by king Asoka in India between 250-232 B.C. may be claimed as precursors of the mināres of eastern Islam; although actually pillars of much smaller size than a mināra, many of them already showed the same division into a polygonal and a cylindrical section. Their object was also half religious and half monumental in character. They in turn came from the Indo-Aryan columns of wood which were put up from the earlist times as symbols of the deity. The Indo-Buddhist stambha of brick in Kabul of uncertain date is a connecting link between these and the earlier Muslim memorial towers in Ghazna (see below).

**Shape.** From this similarity just mentioned, it is evident that the mināras follow the traditional shape of the towers of the country in question. In the Mediterranean lands, as in the recent Turkish movement, it was the lighthouses and in Syria the watch-towers, dwelling- and church-towers that
were the predecessors in form of the manāras. The maltiya's of Sāmārā and the manāra of Ibn Tulun in Cairo again go back to old Oriental models. In Persia and Sjījāt also, Nestorian church towers may have given the early manāras their square and polygonal shape (cf. Diez, Persien, Isl. Bk. in Kurzānān, p. 75); but in the rivalry of shapes in the eastern empire the slender cylindrical manāra, which is often also called mit, won. It was the victory of the monumental building without windows over the western dwelling-tower with windows. Their earliest precursors were, as already mentioned, the Indian lāts. The observatory towers built by Sulāns Mahmūd and Masʻūd III in Ghazza were built as memorials of victories like the Indian Dvagastanakhas. Their shape was suggested by India but remodelled by the spirit of Muslim Persia and given a character of their own (cf. Diez, op. cit., p. 76 and 151 sqq.). The best monumental evidence of Indian inspiration is the Kuṣt Mīnār [q.v.] in Dehli (beg. of vith = xilth century; cf. M. v. Berchem, in Diez, Churasanische Baudenkm., p. 109 sqq.). The fact that the Persians called them mit points to their ancestry, the primitive poles and pillars used as indicators. To such poles, which can still be found at the present day at saints' tombs, revered by the common people in the country districts of Persia, may perhaps be traced the square and octagonal decorative shafts of the city and mosque iwāns, found in pairs in Persian towns with Turkish inhabitants and in Asia Minor. Although they are frequently in the shape of minarets and have a gallery, their object is as a rule merely decorative. Both groups of manāras, the square and the round, are hollow towers with a staircased winding up inside opening out on the gallery. In the old Persian minarets of brick, these galleries or gullets have been completely destroyed as they were made of wood. We must imagine them to have stood on cornices of cells with carved wooden railings, rafter and roofs such as may be seen everywhere in the surviving mināras at popular places of pilgrimage like Kārbalā', Kum and Maghīth. A comparison with the galleries in the towers of the wooden churches of Eastern Europe (e.g. in Transylvania) points to the descent of the minaret galleries from wooden buildings of an everyday character.

Form and Significance of the manāras. In spite of the similarity of purpose there is a marked difference, indeed contrast, between the minarets of eastern and western Islam. The square and polygonal minarets of the Maghrib, Egypt and Syria are still essentially buildings for habitation; the cylindrical manāras of the eastern lands are on the other hand distinctly monumental buildings, pillars symbolic of the deity. The angular minarets of the west are divided into stories by mouldings and have windows for communication with the outer world; they are usually heavy on a broad base, while in contrast the cylindrical minarets of the east incorporate the symbol of the absolute which has this form, the unique, the abstract; the irresistible ascension to the deity without transitions or stopping places. The minarets of the west remain individual towers, of which hardly two are alike; in the east of the viiiith (xilth) century the cylindrical form was already established as the absolute and only one, never to be altered nor made capable of ascent, as the only possible form of manāra. The minarets of the west thus remain ex-watch-, church- or lighthouse-towers without bells or lights, decorative survivals of a culture foreign to their nature; those of the east on the other hand were etherealised and became spiritual manāras. The Cairo minarets were an interesting sport in their shape; the Persian and Turkish on the other hand a confession of faith in monumental form. They soar up to the heavens with unimpeded vigour. The silhouette of their tiled decoration rises upwards on close inspection till finally the eye of the beholder is held by the marked effects of light and shade on the guldast. The form of the guldast however is chosen with an idea of magical effect. The spire rests on a gallery of cells, the secret of the construction of which the spectator cannot easily grasp and the decorative gallery of wooden rafters and railings glitter with bright colours above it. A coat of glaze and the gilt top reflect far and wide a magic reflection like the glazed domes.

Shape and Development of the manāra in different countries.—Syria is the original home of the square manāra, which there took over the old native form for watch-towers, dwelling-towers or grave-towers and the church-tower which succeeded them. Islam at first used the existing pre-Islamic towers as minarets, on to which mosques were frequently built, when old churches which already had towers were not taken over and adapted (cf. Bünnow in Thiersch, Pharo, p. 101). The oldest minarets of this kind are in Ḥawrān, the land of stone building suraj-ibbš, which contained many old undecaying stone-towers (Bošra, manāra of the mosque of Omar b. al-Khaṭṭāb, inscription of the time of the Caliph Omar, Dar al-Muslim etc.). In Damascus the two southern minarets of the Omayyad mosque begun by Walīd in 705 (705 [f]) belonged to the old church of St. John, while the northern minaret was a completely new building of Walīd's. This is therefore the oldest independent Muslim manāra. The manārs of the Omayyad mosque became models not only for Syria but through the Omayyad migration to Spain (Cordova) for the Maghrib also. Wherever we later find in Syria the Egyptian tower-form, there is always definite Egyptian influence present and as a rule they are Mamluk foundations. It is still hardly possible to compile a chronological list of Syrian manāras (cf. Thiersch, op. cit., p. 99—110 and the illustrations).

Palestine. In this country on the borders of Egypt, the influence of the latter country made itself felt. The octagonal manāra on a square base predominates. The manāra of the chief mosque in Ḥanā b. al-Ḥāshiš has the same diameter throughout and is only divided into four stories with windows by large mouldings. The smaller mosques have short squat octagonal towers. The manāra of ʿAlī Bakka in Hebron is half rectangular and half octagonal with a high mihrāb-like niche in the lower story. The octagonal tower is found as far as Jerusalem, where it meets with the northern Syrian square towers. The latter is again found at Ḥanā b. al-Ḥāshiš and in the mosque of Ṣidnā Omar beside the Church of the Holy Sepulchre and along the coast in Jaffa, Ḥaifā, Sido, Tyre and Baʿ alma, and in the interior in Tiberias, Ṣafed, Nablus, etc. On the other hand

Cairo: Mināras of the Mamlūk period
Sangbost near Mashhad in Khorasan: Manara of a Kiblat, viii (XIIth) cent.

Cairo: sketches of the two Manāras with outer covering of the Mosque of Ḥākim
the manāra in Ramla of the viii\(^{\text{th}}\) (xii\(^{\text{th}}\)) century is unique with its buttresses and pointed arched niches and dwarf pillars and columns. Thielsch takes it to be a copy of the most celebrated Christian tower of the country, the bell-tower of the Holy Sepulchre built in 1160—1180 in Jerusalem, of which only the base is still standing; (cf. Thielsch, \textit{op. cit.}, p. 119 sqq. and the pictures there).

**Egypt.** The oldest manāra in Egypt is the tower of the Djāmi\(^{\text{b}}\) b. Tūlun. Like the Malwiya of Sāmarrā, this minaret stands outside the mosque and resembles them in form also, although it differs in its material which is limestone. The first storey is a square tower with a window with horseshoe arches, the second is cylindrical and an outer staircase leads up around them. The two upper octagonal stories are latter in date, having been erected by the Mamlūk Sulān Lādjin. Nothing final can be said about this manāra, apparently erected by a foreign architect and combining a number of foreign influences. The manāra next to it in time are the five towers of hewn stone of the mosque of Ḥākim with their covering of tiles of a later date; they must be contemporary with the mosque, which was built in 393—404 (1002—1013), and were covered by Barbars II and given new spires (793 = 1393—1394). They are of different shapes. The northern tower is cylindrical on a square base, the southern has a square lower half and four octagonal upper stories, each narrower than the one below it, the first of which has four semi-cylindrical cornices in the corners. The decoration in relief on the stone has analogies in the gateway of the same date (pictures in \textit{Diez, K. d. isl. V talkt}, \textit{p. 58; 9, p. 54}). Of these two towers the southern one may be considered the ancestor of the minarets of Cairo. Its square-octagonal form, usually crowned by a cylindrical storey, survives. The further development is limited to the proportions, which aim at greater elegance and slenderness, and the breaking up of the surface with niches and muqarnas cornices. Towards the end of the or second Mamlūk period, say under Kā'īt Bey, it reached its culmination. The minaret of the mosque at his tomb was never to be surpassed in grace and wealth of ornament. A list of the most important minarets of Cairo between 1000—1356 A. D. is given by Thielsch with many illustrations.

**Arabia.** As in Palestine, in Arabia there was no native type of manāra and indeed Arabia never developed any sacral architecture with a character of its own. The minaret of the mosque of Walīd in Medina may have been Syrian in form. The manāras at present standing in Medina belong to the sixth restoration of the mosque by Kā'īt Bey in 888 (1483). They are slender minarets of the Mamlūk type with octagonal and cylindrical stories. The seven manāras in Mecca, the sanctuary of which was ten times restored, only show modern forms of tower, frequently influenced by the slender Turkish form (cf. Thielsch, \textit{op. cit.}, p. 123). Two slender round minarets of the ix\(^{\text{th}}\) (xv\(^{\text{th}}\)) century still flanked the ruined mosque on the island of Bahrain (cf. \textit{Diez, Fachrb. d. as. Kunst}, 1925, ii. 2).

**Maghrib.** The oldest sawmūḍ, as the manāras of the Maghrib are called, in Africa is in Kairawān, the massive three storied tower of the mosque of Sīdī 'Okbā of 105 (724). The two upper receding stories with blind niches are probably of later date than the unadorned upper storey with loopholes on three sides and three windows only on the side that looks on the court. The cistern in the basement and the measurements of this tower which are exactly half those of the Pharas, suggested to Thielsch that it was an imitation of the Pharas. Another sawmūḍa, also of the ii\(^{\text{nd}}\) (viii\(^{\text{th}}\)) century was the minaret of the Djāmi\(^{\text{b}}\) al-Zātūna in Tunis before its restoration in the xii\(^{\text{th}}\) century. Old pictures of it show a plain square lower storey with a narrower octagonal upper storey and the platform on top enclosed by a breast-high parapet with a pillared gallery. Of this probably only the lower part is old, while the second storey and the parapet date from the restoration of 1653 (pictures in \textit{K. d. O.}, ix.; Kuhnel, \textit{Maurische Kunst}, vi.). Egyptian influence, in so far as such existed, extended to Tunis. West of Tunis begins the Spanish sphere of influence, the model for which was the sawmūḍa in Cordova built by 'Abd al-Rahmān III in 339—340 (951) and destroyed in 1593. A description of it is given by Idriṣī (c. 548 = 1154). According to him, the minaret of Cordova was a high quadrangular tower, square in plan, the sides of which were richly adorned with inscriptions in relief. The upper section terminated in two rows of blind arcades probably like those still to be seen in the mosque of Cordova and on other minarets of the Maghrib. On the platform was a second, probably also square, storey with four doors and upon the dome which crowned it shone three balls of gold and two of silver and lily leaves (cf. Thielsch, \textit{op. cit.}, p. 127). This minaret however had a predecessor in a more modest tower built by 'Abd al-Rahmān I, the model of which according to Marqāṣ (\textit{Rev. Afr.}, 1906) was Walīd's minarets in Damascus. The second, imposing and splendid, minaret at Cordova seems to have served as a model for the sawmūḍas of Seville and Morocco. At the same time we must consider the claims of the minaret of the Kā'īn Banī Ḥammād built in 395 (1001), the only tower that survives of the Fāṭimid period, which was half destroyed by the Almohads in 1512 (cf. Saladin, \textit{Bull. arch.}, 1904, p. 243 sqq.). It is a high square tower of hewn stone, smooth on three sides and embellished on the courtyard side only with shallow blind niches and balcony doors in three layers above one another (pictures in Thielsch, \textit{op. cit.}, p. 130; Kuhnel, \textit{op. cit.}, xviii.; Saladin, Manuel, p. 217; Marqāṣ, Manuel and \textit{op. cit.}). This tower already shows the scheme of decoration of the Giralda and allied towers, namely the vertical combination of two windows or doors of the middle axis above one another by flanking double high shallow niches. The most contemporary Giralda in Seville of about 1500 A. D., the so-called Tower of Hasan in Rabat and the Kutubbyya in Marrakusk are allied to it, the two latter of the end of the xvi\(^{\text{th}}\) (xvii\(^{\text{th}}\)) century (pictures in Thielsch, Kuhnel, Marqāṣ, etc.), all square with narrower square top stories, of which only that of the Kutubbyya still survives. These towers already show the system of decorating the surface now becoming typical in the later Maghribi manāras, the network of geometrical patterns in high relief and the beautiful windows with horseshoe and toothed arches and muqarnas niches. In the other towers of Morocco, in Fez, Tetuán, Tangier, etc., are more modern minarets. The characteristic type of Algeria is best seen in the numerous minarets in Tetouan, mainly of the xiii\(^{\text{th}}\)—xiv\(^{\text{th}}\)
century. They continue the form, characterized above, only the geometrical decoration in relief gains the upper hand and the windows disappear; their appearance is not quite so solid. On the other hand, the huge minaret of the great mosque of Manṣūra is highly thought of in Morocco for its size as well as its decoration, because it was built by a Moroccan Marinid (701-702 = 1302).

The square tower therefore dominates the whole of the west. It is only later in the xvi century that we find the octagonal tower appearing in Iran, which Saladin attributes to Hanafi influence. The 'Iʿlām and Dīrāz development similar to that of Persia and the lands east of Persia. The oldest manaras still standing, the two małyras in Sāmarrā of the ɜth (ixth) century, have remained the only examples of spiral towers but they are significant monuments of the early Muslim Arab variation of Babylonian architecture (the spiral as motif). These genuinely Arab buildings were followed by a reaction towards the Mediterranean style with square and octagonal towers and with the coming of the Turkish peoples and Saʿd∧b rule the cylindrical minaret, usually on a polygonal base. The following list is given by Henzefeld (Arch. Reise, ii. 229): Rašq, mosque extra muros, rectangular tower of the ivth (ixth) or vth (xth) century; Rašq, intra muros, a round tower. Nur al-Dīn 561 (1166); Abū Hūrin, round; Birk, octagonal, 589 (1193) to 615 (1218); Irbīl, round on octagonal base 586—630 (1190—1232); Sinjār, round on polygonal base 928 (1228); Bagdad, Sulḵ al-Ghāzī, round on a base (3)630—1232); Mūsul, minaret of the great mosque, round on a cubic base; Mūsul, minaret of the Kalā, round on a cubic base; Mūsul, Manarā al-Makhdīia Taḵi, round shaft on a polygonal base. In addition there is the unique octagonal minaret built of small broken stones with a covering of plaster, on the Island of 'Am in the Euphrates of the vth (ixth) century (Henzefeld, cf. cit., ii. 319, and Pl. 137) and the bulk of the later minarets from the ivth (ixth) century onwards, which repeat this type.

Persia. The oldest mināras of Iran and the countries adjoining on east and north, Afghanistān, Suljānī and Turkestān seem to have been usually octagonal, as the ruin of the mināra, possibly of the ivth (ixth) century in Zaandād, Nād Ḩili, Suljānī (now 25—30 feet, originally twice as high; cf. G. P. Tate, Scitum, Calcutta 1910, p. 302 and Plate) shows. The models for these earliest mināras may have been the watch-towers found all over the Asiatic steppes, hence the blind window and the great diameter. Octagonal mināras still exist in Amānī, Suljānī (vth—viiith century): octagonal with cylindrical upper storey are the two observatory towers of Ghara of about 100 (1009—1020) and 495 (1101—1102) (the original height was estimated at about 140 feet; the inscriptions on the two towers only say that their erection was ordered by Ḥadīm and Maščit respectively, both with full titles; cf. Diez, Chr. Bldm., p. 162 sqq.). Counterparts to these towers in two parts are the manaras in Sārwan, east of Herōt (c. 100 feet high) and Kândī in eastern Khurāsān (c. 80 feet high), with octagonal bases and cylindrical shaft, both of the vth (ixth)—viiith (xith) centuries. Cylindrical manaras of the vth—viiith (ixth—xith) centuries still survive in Persia and the land east of it in Sangbast, Fīrtzābād, Kāsāmībd (Sīdīstān), Khosraugird (Sabzawar) of the year 505 (1111), Damghān, (2) Bastām, Savā, Semsān, Tabas, Kunya Urgenj (old Khiva), Termeh on the Amū Dāryā, Būkhārā, Manār-i Kālān 542 (1147—1148), Kāshān, Mēstoryān (Turkoman steppes north of the Atrek, 2 towers) and Isfāhān (4) (cf. the list in Diez, Persien, Ist. Bk. in Chr. Bldm., b. 168—169). In the Timurid period with the general flourishing of architecture the manaras are given a further last increase in their embellishment, a few examples of which are still to be seen in the Timurid ruins in Herōt. Here we still have the ruins of nine polygonal-cylindrical manaras the sides of which are usually of slabs of white marble with inscriptions in relief, the shafts to the tops covered with glazed mosaics of fabulous beauty which in their delicacy recall the work of the carver in ivory (cf. Niedermayer-Diez, Afghanistan, p. 58 sqq. and illustrations, p. 157 sqq.). To this Timurid group also belong the manaras in Sāmarānd mostly in ruins and the minarets of the Masjīd-i Shāh in Mashḥad built by the amīr Malik Shāh and the two minarets now destroyed of the Blue Mosque in Tabūzī built in the time of Ḥādīn Shāh (541—872 = 1437—1467). The last mentioned minarets belong to the group of double towers found all over Persia and Turkestān which either flank the doors or stand at the corners of the wall of a mosque or are built on the top of the doors. These double towers which become more and more common after the Sāljiḳ and Mongol invasions never of course attained the height of the single manaras just described and their importance lies mainly in their decoration.

Asia Minor and Turkey. Among the Sāljiḳs and Ottomans the manara lost the character and individuality which it revealed among most other peoples, at least in the early period. Apart from isolated exceptions like the very interesting fluted minaret at Adalia (pictures in Lancerkonski, and Thiersch, cf. cit., p. 149), the minarets are henceforth subordinated in the general architectural scheme to the main building, either placed as a pair at the gate or as a single tower built into the wall of the mosque. It is true that these arrangements are found also in Persia, which was filled with Turkish tribes, but there was constant change there, while in Asia Minor a certain style soon became predominant which culminated in the absolute uniformity of the Ottoman minarets. The early minarets of Asia Minor of the xiiith century usually have their surfaces broken up into round and smooth areas which give them a certain charm, especially when this plastic ornamentation is combined with the painting of frescoes and with relief (Laranda Masjīd and Īnje Minareli, Konia, Gök Medrese, Siwās, etc.). The Ottomans heightened the minaret which they had taken over from the Sāljiḳs, made it still more slender and gave it a long conical spire which has become typical. According to the importance of the mosque, it was given one tower on the front or flanked by two or even 4 or six minarets (the Mosque of Sulṭān Aḥmad, Constantinople) and these were given one, two or three galleries.

India. In India there is only a single old manara of importance: the Kūṭh Minar (q. v. and the illustrations) in Old Delhi built by order of Aibek Kūṭh al-Din and completed by itsutmīš (diameter 45 feet and height 240 feet). The three lower stories of this, the highest and finest ma-
nāra in the Muslim world, are built of red sandstone, the two upper, which have been restored, of white marble with layers of sandstone. The pavilion which once crowned the top fell down in 1803 during an earthquake and was put up again on the ground. The exterior is of angular and round flutings and ornamented with inscriptions from the Qur'ān. There is no reason to doubt that the numerous mosques of the Pathan dynasties also had minarets but most of them seem to be destroyed and so far I am aware no one has yet studied the subject. Isolated surviving manāras like the detached slender round minaret of the Lat-ki-Masjid in Hisār show however that they were usual (cf. Arch. Surv. India, Annual Report, Tt. I, 1913—1914, Pl. I). But their occurrence in India was confined to particular areas. The mosques of Dāwpur, Sirkēj, Manda, Kalbargah and other places usually of the xivth—xvth century have no minarets. On the other hand they are characteristic of the xivth—xvth century mosques in Ahmadābād, built in pairs flanking the doors or at the corners of the surrounding wall, as in the Mongol mosques of Persia. In shape, the towers of Ahmadābād are quite Indian with well marked outlines, many mouldings outside and three to six galleries. In the Moghlai empire again the smooth round or faceted minaret of Persian origin again became predominant but was hindusted by the pavilion placed on the top and by other alterations.

MANĀT, an old Arabian Goddess. Her character can only be deduced from her name, which may safely be connected as a plural (for manātāt) with the Arabic manatāt, plur. manātā, baptism, lot, Hebrew mānāt, plur. mānāt and also with the god of fate mānī, Is. lv. 11 (cf. lxx.). In Arabic we have corresponding to the manīya, plur. manīya, "the allotted, fate, especially of death." She was therefore a goddess of fate, especially of death. Her main sanctuary was a black stone among the Hudhailis in Kudaid, not far from Mecca on the road to Medina near a hill called Musallab. She was however worshipped by many Arab tribes, primarily by the Aws and Khaṣṣad in Yathrib. In Mecca she was very popular along with the goddess al-Lat and al-Uzza [q. v.]; the three (according to the Kūr') were regarded as Allāh's daughters, and in a weak moment Muhammad declared their worship permitted (cf. Sūra liii. 19 sqq.). The obscure expression "Manāt, the third, the other" is probably due simply to the rhyme. According to Ibn al-Kalbī, she was the oldest deity, whose worship gave rise to that of the others, because name been compounded with Manāt occur earlier than other theophoric names. Another view is found in the poem of Ibn Hishām, p. 145, where the two daughters of "Uzza" are Manāt and al-Lat. As an independent deity we find her in the Nabatean inscriptions of al-Hidr, where 17722 (the Arabic plural form; cf. above) is often found along with Dushāra and others. Manāt is connected in a peculiar way by some writers with the great al-ḥārīn [q. v.], for example Ibn al-Kalbī, who assumes the idea that the sanctuary at the sanctuary of Manāt and on the conclusion of the rites cut their hair there and dropped the ērām [q. v.]. Wellhausen sees in this an erroneous confusion of an independent pilgrimage to Manāt with the great ērām, as later writers acknowledge none but the latter; it is however possible that some such confusion may really have taken place in pagan times.

That Manāt was also a domestic deity is evident from the story in Ibn Hishām, p. 350 (cf. Wāqidī, ed. Wellhausen, p. 350). The destruction of the
great sanctuary in Kuida after the capture of Mecca is attributed by some to Abū Safyān, by others to ʿAbd, according to Wākidī, op. cit., Ibn Saʿīd, ii., vol. 15; to the Awdī Saʿīd b. Zaid.

**Malażgerd.** [See Malażgerd.]

**Al-Manazīl.** (A.), pl. of al-manṣūl, more fully manṣūl al-kamar, the stations of the moon. Just as for the sun the zodiacal circle is divided into 12 stations, each of 30°, which it traverses in the course of a year, so the course of the moon is connected with 28 groups of stars, each of which corresponds to one day of its course, so that on an average each is an arc of 15° apart. The settings of the sun at these stations, Arabic *nawai*, pl. *nawayt*, are of decisive importance for the beginning and forecasting of the phenomena of the weather and the fertility or otherwise of a year which depends on them, i.e. for the peasant's calendar. As regards the testimony of the Arab poets, the reader may refer to the verses given by al-Khwārizmī. M. Steinacker in particular has published very thorough investigations of the importance of the stations of the moon among the Hindus and Arabs from Arabic, Hebrew and late Latin sources. The Arabic names of the stations and the constellations belonging to them are as follows:

1. al-Marwānīn, "the two signs", also al-ʿAbṣāfīn, the Horns of the Ram (β Arietis).
2. al-Raʿsīnīn, "the little paunch"; the paunch of the Ram (ε Arietis).
3. al-%uṣr taʿṣīn, "the Pleiades" (*q.v.*).
4. al-Dūrātīn, "the Aldebaran" (ζ Tauri) with the Hydra.
5. al-Ḥaṭā, three small stars on the head of Orion.
6. al-Mâzīn, the stars al-Zīr and al-Raṣūlīn (ζ; Geminorum).
7. al%D8%A3%8D%8B, "the Lion's Paw"; Castor and Pollux (α; Geminorum).
8. al-Nuʿṣhā, "the nostril" of the Lion or fence with asses (in Cancer).
9. al-Tūrī, i.e. Turf al-ʿAṣād, "the eye" of the Lion (ξ; Caneri; Leonis).
10. al-Duḥtaba, i.e. Ḫaṭhat al-ʿAṣād, "the forehead" of the Lion (ζ; ξ Leonis).
11. al-Zubrā, i.e. Zubbat al-ʿAṣād, "the mane" of the Lion (δ Leonis).
12. al-Raṣīf, "the weathercock" (β Leonis).
13. al-Sawābī, "the barkers" or Dogs (βγ; δ Virg.).
15. al-Qāṣf, "the cover" (Φ; x Virginis).
16. al-Zubīnī, i.e. Zubait al-ʿAṣābīn, "the pincers" of the Scorpion (β Librae).
17. al-Rābī, "the crown", i.e. the head of the Scorpion, the three stars (ζ; γ Librae).
18. al-Khātīl, "the heart" of the Scorpion, the Antares (α Scorp.).
19. al-Ṣawālī, "the tail" or sting of the Scorpion (α Scorp.).
20. al-ʿAṣābīnī, "the ostriches", 8 stars in Sagittarius (γτζ; Β Σagittatis).
21. al-Balda, "the town", an area in Sag. without stars.
22. al-Sanī al-Dhākhīb, "the luck of the slayer" or sacrificers (α; β Capric.)
23. al-Saʿīd Bulūs, "the luck of the devourer" (ν Aquarii).
24. al-Saʿīd al-Saʿīdī, "the greatest luck" (β; Aquarii).
25. al-Saʿīd al-Ākhbīya, "the luck of the tents" (γτζ; Aquarii).
26. al-Safgh al-anwāl, "the fore socket" on the pail (α; β Pegasi).
27. al-Safgh al-ʿAṣādī, "the hinder socket" on the pail (γ Peg. α Androm.).
28. Bahān al-Ḥaw, "the fish-belly", a number of stars in the form of a fish (β Androm. the brightest).

**MABDIJ** (Bambūkhe, Hierapolis), an ancient city in northern Syria, two days' journey or 10 farsakh N.E. of Halah, about 3 farsakhs from the Euphrates. It lay in a fertile plain, and had a double wall built by the Greeks. According to Ibn Khurābdī, there was a very fine church there, built of wood (B. G. A., vi. 161 sq.). Ps. Dionysios (ed. Chatot, p. 47, 68) mentions a church of the Virgin and another of St. Thomas in Mabdi. There were no buildings in the neighbourhood of the town (Nasiri Khurasaw, ed. Scheher, p. 31); Abu l-Fidā' mentions the many canals, fruit- and particularly mulberry-trees there, the latter for the silkworm culture. As K. Ritter (*Erkunde*, x. 1057 sq.) has shown, the name Bambūkhe for the silkworm can hardly be connected with "Bambyke", the old name of Mabdi; on the other hand, the Levantine trade-name bombassino, bombago, common in the middle ages for raw cotton, seems to be derived from Mabdi; it is perhaps also concealed in the name of the ancient Phrygian Hierapolis, Pamukbükallē (as early as Michael Syrus, ed. Chatot, i. 148: Mabbug in Phrygia). The Arabs called the robes made in Mabdi, mabdiyūna (Lammens, *Fâtes*, Rome 1912, p. 71).

Karmal al-Dīn b. a.-Adīm gives the following account of its origin: Khusrav [1] built it, when he conquered Syria (in reality the town in 540 A.D. ransomed itself from a threatened siege by paying tribute), built a fire-temple there and made a certain Yazdānīr of the family of Ardəšīr b. Bābak its governor. According to other authorities, Mabdi was the name of the fire-temple from which the town took its name (Ibn al-Sihāna, al-Durr al-muṣṭākhab fi Turāk Pelal, ed. Sarks, Bairîl 1909, p. 227). Mahbūb (Agapis) b. Kustānīn of Mabdi says in his history of the world written...
in the tenth century, at the end of the history of the patriarchs (ed. Vasilev, *Patrol. Orient.*, v. [1910], p. 664): "in the year 31 after the birth of Levi, the son of Jacob, queen Samira built a great sanctuary for the worship of the idol Κυνα in a town on the banks of the Euphrates, which was called the town Hieropolis (Mahbūb: مَهْبوب) of ibn al-Shīnā, p. 227: *de princip.*, v. 947, var. *von Hierapolis*). This was the town Manbijī al-'Aṣṣā'. For Κυνα the town might be read; on the coins of Hieropolis this deity seems also to be depicted (Wroth, *Catalogue of the Greek coins of Galatia, Cappadoc. and Syria* [Brit. Mus.], 1899, p. liii, and the Armenian Epiphanius (ed. Finck, p. 12) says: "Erapolis consists of 3 towns: it is called Mnepeš; in it is the idol Kaynum"; with Freuchen (*Götting. Gel. Ant.*, clxvii. [1905], ii, p. 837, note 3) we should here also read Kayman.

In reality Manbijī seems to have already been known to the Assyrians (as Nappiçi or Nampi in Salmonassar, *Karab-Monolith*, rev. 35; Johns, *Assy. Bibl.*, xxvii, 11, 82; cf. also Bambuki on the cuneiform tablet Brit. Mus. K 188, in Johns, *Assy. Dates and Documents*, N°. 773; Cheyne's *Excurs. Bibl.*, s. v. Carchemish). If the name is of Semitic origin, it perhaps goes back to a Syriac word *manbik*, "spring" (*Noldeke, *Vöckr. G.G.W.*, 1876, p. 5-8). The Greeks knew as the name of the town besides Hierapolis (on coins always *Hieropolis*) also the native form of *Bamiš*, rarely *Bamibiku* (Papier *Oxyrh.*, xi. [1915], p. 197, coll. v., 1, 100); in the common proper name *Mamibigu* etc., Napatānian Mambibīt, the name of the town is concealed (for references see Pauly-Wissowa, *Realten*, suppl. vol. iv, p. 733). The town which at first was included in Kyrhrstētā and afterwards was made, probably by Constantius, the capital of the Syrian Euphratesia, played an important part in ancient times as the centre of the worship of Atargatis. Bardsāšān was brought up here by a heretic priest Antalābār and his son Kudus. After the triumph of Christianity, the pagan cult was supplanted by the worship of holy relics, which also brought numbers of the faithful to Bambyke (Procopius of Gaza, *Panegyr.*, ch. 18, in Migne, *Patr. Gracce*, lxxvii, iii, col. 2817). From the third century onwards the town is frequently mentioned as a place for the concentration of troops for campaigns against the east or for the defence of Syria. In the Byzantine period it was a great centre of the Monophysites, according to whose tradition Justinian married Theodora in Hierapolis; she is said to have belonged to the neighbourhood of the town (Michael Syrus, ii, 189). After the end of the Byzantine period, it was for a considerable period a stronghold of the Manories (Michael Syrus, ii, 412, 511).

In the year 16 Abū 'Ubdān went to Halab al-Sādīrūn and sent *Iyād b. Ghānim* or to Manbijī. The inhabitants capitulated under the same conditions as the people of Antioch; when Abū 'Ubdān reached the town, the agreement was ratified (al-Baladhūri, ed. de Goeje, p. 150; al-Yaqūbi, ed. Houtsma, ii, 161; ibn al-Shīnā, ed. Bairūt, p. 228; Caetani, *Annales dell' Islam*, iii, p. 792, § 281, p. 794, § 284, p. 797, § 290, p. 816, § 325). Manbijī seems to have enjoyed a certain degree of independence down to the time of Yazid I; the inhabitants of the town, for example, asked 'Umar for permission to trade within the caliphate (Lammens, *M. F. O. B.*, vi, 437, note 1). The vicinity of the town was settled by Yamani tribes (Michael Syrus, iii, 47), notably the Banī Taghlib (Lammens, *op. cit.*, p. 445, note 1). Yazid, when he created the *djund* of Ḫinnistrin threw Manbijī into this military province (al-Baladhūri, p. 132; Lammens, p. 437, note 7). Harūn al-Rashīd separated it again, made it the capital of the frontier district of the "Awasim" (q.v.), in 786 and appointed 'Abd al-Malik b. Sūfīl b. 'Ali as wali there in 717, to whom the town owed many buildings (al-Baladhūri, *loc. cit.*). In 131 (748) it was severely damaged by an earthquake, in which the church of the Jacobites collapsed during mass and buried many of the worshippers in its ruins (Pseudo-Dionysios, transl. Chabot, p. 42; Michael Syrus, ii, 510; Beathgen, *Abb. d. Kunde d. Morgenl.*, viii/iii, 1884, p. 126). The brother of the caliph al-Mu'tāṣim, al-'Abbās, who had taken part in the mutiny led by the general 'Uqba b. Ḥanāba, was tortured to death by Hādār b. Kāwās, the Māqīn of Urūshāna, at Manbijī in 223 (838) (Tahārī, iii, 1265; ibn al-Asīr, ed. Tomērg, vi, 349; Michael Syrus, iii, 111; Well, *Gesch. d. Chaldf.*, ii, 320). The conquest of Syria by Manbijī in 264 (878-79) brought Manbijī also under Egyptian suzerainty (ibn al-Shīnā, p. 228).

In the account of the *ēkō ḫātāmāt ektēsūs* of Edebsa, said to have been compiled by the Emperor Constantine Porphyrogenetos, a miracle is mentioned that took place in the time of Christ at the *ṭemōr ḫērāwīs*, s, the temple of the Virgin Mary, where it is written (The mag. Edeba, in Migne, *Patr. Gr.*, cxivii, col. 432; better in Von Dobschütz, *Christusbildner*, in *Texte u. Unters. z. altchristl. Lit.*, xvii, 51)". Abgar's envoy, who was spending the night in a brickworks near Manbijī on his way back from Jerusalem hid there among the bricks the sacred handkerchief with the portrait of Christ Terrified by the bright light like that of fire, the heathen inhabitants of the neighbouring town hurried next morning to the brickworks and found there a brick with a miraculous copy of the portrait, which they carefully preserved in their city. The Ḥamānī al-Sāf al-Dawālī, soon after the capture of Manbijī in 947, made his cousin, the poet Ābī Firās, governor of Manbijī (Drovīk, *Ābī Firās*, p. 55). When the Western Nicetor Phocas invaded Syria in 962, Ābī Firās, who happened to be hunting outside the town, was taken prisoner by the strategos Būdrīs (Theodore, *Petros*), a nephew of the emperor, and taken first to Kharshāna and then to Constantinople (Drovīk, 98 sq.; Well, iii, 17) where he wrote poems full of longing for Manbijī and his mother there (Drovīk, p. 300, 302, 323 sq.). In 966 when emperor Nicetor expelled before Manbijī and made the people of the town produce the sacred brick (al-Fīrās, i.e. *kezāmān*) but did them no other injury (Yabhā al-Antāq, *Col. Perisyn. Bibl. Nat.*, anc. fond. ar. *No. 151 A.*, fol. 96); the translation by Freytag, *Z. D. M. G.*, xi, 212, has been corrected by Rosen, *Zapiski Imp. Akad. Nauk*, xlvii, 1853, p. 07-08, note d). The Byzantine writers who apparently did not know that Miṣrīs was the Arabic name of Hierapolis and sought to locate it in Palestine or near Himīs, wrongly make Nicetor take Manbijī in 968 and carry off the brick and some hairs from the head of John the Baptist (which was only done
by his successor) (Leo Diaconos, Bonn, iv. 10, p. 71; John Skylitzes, ii. 364; Zonaras, xvi. 25, p. 503; Glykas, Bonn, p. 569 etc) but this statement cannot be reconciled either with the route given for his campaign of 968 (cf. v. Dobschutz, op. cit., p. 172, note 1; Schluumberger, Niceph. Phocas, p. 704—706, note 5), nor with the bounds of his conquests given by Kamal al-Din (in Freytag, Z. D. M. G., xi. 323). It was his successor John Tzinimes, who first took the fortress (Φρούριον) of Manbij in 974, and found there Christ's sandals and some still bleeding, hairs of John the Baptist, which he brought to reside to Byzantium (Leo Diaconos, x. 4, p. 165).

In the year 1025 the Mirdasid Šêlih took the town (J. J. Muller, Historia Meridiorum ex Hathebianis Compendiante annalibus excerpta, Bonn 1819; Rosen, op. cit., p. 68). By the treaties between Maḥmûd and 'Aṭīya (cf. Ḥalâr, ii. 345) Manbij passed in 456—457 to 'Aṭīya (Muller, op. cit., p. 56 sq.). In 472 (1079—1080) Tâḍj al-Dawla Tutush occupied the town (Muller, p. 88). The emperor Romanus IV Diogenes took it on his Syrian campaign in 1068 and strengthened the defences of the citadel (John Skylitzes, Bonn, ii. 673, 675, 685; Michael Attaliates, Bonn, p. 168 sq., ii. 116; Zonaras, xvii. 11, 26, Bonn, iii. 691; Michael Sysrus, ii. 168; Mattheos of Uḥray, transl. Dulanier, p. 162; Weil, iii. 112; Kamal al-Din, transl. Muller, op. cit., p. 63 sq., where it is wrongly stated that Manbij remained Greek for 70 years). It was not till 479 (1086) that Malik-Šâh deprived the Greeks of Manbij and al-Ruḥâ, and gave the rule over Halâb. Hamâ, Manbijdi and al-Ladikhta to Al-Shonkor (Ibn al-Aṭhir, x. 98; Weil, iii. 131).

In 504 (1110—1111) the Franks conquered Manbijdi, occupied and plundered the town and advanced as far as Bilis which they burned (Rohricht, Gesch. d. Kgr. Jerusalem, p. 88; Weil, iii. 193, according to Michael Sysrus, ii. 215, probably wrongly, in the year 502). But they lost Manbijdi again in the same year (504) (Abu 'l-Fadl, Annal. Mamluk., ed. Keske, iii. 370). Baldwin II in 513 (1119) invaded the lands east of Halâb as far as Manbijdi and al-Nuẓrâ and Joscelin, in the following year, on the pretext that one of his followers had been imprisoned in Manbijdi and that no compensation had been given to him for it, plundered the lands of al-Nuẓrâ and al-Ąljâz (Recueil hist. or. crent., iii. 623, 625). When Nur al-Dawla Balag enticed the amir of Manbijdi, Hassân al-Ąlabalkanni, within his power and then imprisoned him in Pailu, Hassân's brother 'Īsa seized the citadel of Manbijdi, which Balag then attacked with siege artillery (1124). 'Īsa then appealed for help to Joscelin and had him proclaimed lord of Manbijdi, but Joscelin suffered a severe defeat before the walls of the town. On the next day, however, Balag was mortally wounded by an arrow shot by an unknown hand (according to Kamal al-Din, by 'Īsa himself; according to Mattheos of Edessa, by a sun-nor-lippet). In 518 (1124) Hassân was liberated and returned to Manbijdi (Ibn al-Ąhr, x. 436; Michael Sysrus, ii. 111; Mattheos of Edessa, transl. Dulanier, p. 311 sq.; Rohricht, op. cit., p. 161). The Crusaders never again took the town after the brief occupation in 504. Although we know of Frankish archbishops of the town (cf. William of Tyre, xiii. iii. xv. 14: xvii. 17) one of whom Francesco, took part in the Council of An-
on Manbidj, the inhabitants of which retired behind its walls and barricaded the place where the walls were no longer standing. The town was stormed on the 21st Rabii' II 658, numerous inhabitants put to death, the houses destroyed and rich booty taken; the enemy even entered the mosque where many women had taken refuge and violated them (R. O. L., vi. 6). After the Khwarizmians had been driven back, al-Malik al-Mansur re-entered Manbidj (R. O. L., vi. 17). In the treaty between Sulṭān Ka’ātun and Leo of Armenia of the 1st Rabii' II 658 (June 6, 1258), Manbidj is mentioned among the Egyptian towns (Maṭrīt, ed. Quatremère, Hist. des Sultans Manlouk, vii. 168, transl., p. 205).

According to Ibn al-Shihāb (Baburīt 1909, p. 228), Manbidj which previously, excluding its suburbs, had paid annually 510,000 dirhams to the Sulṭān’s Dīwān, was destroyed by the Tatars (who invaded Syria several times between the end of 699 [1200] and 702 [1302])—perhaps there is here a confusion with the Khwarizmians. According to Abu ‘l-Fidā’, the fortifications and the town were for the most part in ruins in his time: Khall al-Zāhīrī does not mention it at all.

After the Russo-Turkish War (1879) Cossacks were settled in Manbidj, since that date the few remains of antiquity noticed by earlier travellers have almost completely disappeared.

The ruins of Bumbidj, as the name of the place is now pronounced by the natives with a marked echo of the ancient Bambyke (Latin in M. Hartmann, Zerstörte d. Geschicht. Alterth., Berlin, xxix, 525; Littmann, Amer. Arch. Expedit. to Syria, i. 171, note 3), have been visited by Maundrell (1699), Pococke (1737), Drummond (1747), Sachau (1879), Cumont (1907) and Hogarth (1908). The old town walls, surrounded by a broad ditch which were several times restored in the middle ages, still survive almost in their entirety (Ainsworth, A Personal Narrative of the Euphrates Expedition, i. 1888, p. 238).

pasturages in the desert which stretched between the Indus and Kāmhul. According to Idrisi (548 = 1154), transl. Jaubert, i. 163, the Mand dwelt on the borders of the desert of Sind. They pastured their flocks up to the borders of Māmahal (Kāmhul). They were numerous and owned many horses and camels; their raids extended as far as Dūr (read Rūr; cf. LUL) and sometimes even to Mākrān. This last detail is curious for it indicates an extension of the Mand towards Persia, but the text is not certain: perhaps we should read Mulsān. After this the name Mand disappears from Muslim literature.

The town of “Kāmhul”, the site of which is important to fix the limit of the habitations of the Mand, is sometimes located in Hind (Iṣṭahkšā, p. 176), sometimes between Sind and Hind (Idrisī). The form of the name is uncertain (Fāmhāl, Māmahal, Amhul). Elliot, i. 363, identified it with Anbalwār; cf. al-Birunī, p. 100. This last town (Anhilwār, Nahrwār, founded in 746 A.D.) is identical with the modern Fātan (on the Saraswati in northern Baroda; cf. Imp. Gazett. of India, 1908, vol. xx.; Cunningham, op. cit., p. 290, places “Māmahul” in “Amhul”). In any case Kāmhul must mark the limit of the pasturages of the Mand to the S. E. of al-Mansūra (= Haidarābād, on the Indus; cf. Elliot, i. 370).

Among the Muslim sources a special place is occupied by the Mudjīmil al-Tawālidh, written in Persian in 520 (1126). This work gives extracts from a book which was composed first in an Indian language, then translated into Arabic by Abu Šallīḥ b. Shu’aib b. Dīmī (in 417 = 1028) and finally translated from Arabic into Persian by Abu ’l-Ḥasan ‘Ali b. Muḥammad al-Halabī, librarian in Dūrādān. This source which is a very inaccurate resumé of the Māḥākbūrat, begins with a chapter on the Ma’dī and the Zuṭtī, two peoples in the land of Sind, descendants of Cham (Ham), son of Noah. The Ma’dī had conquered the Zuṭtī, who withdrew to the banks of the river Pāh (or Bahr) and from there attacked the Ma’dī by water. Finally tired of fighting, the two peoples agreed to approach king Dahrān b. Dahrān (Duryodhana, son of Dhrīṭarāṣṭra) to ask him to appoint a king over them. Dahrān sent them his sister Dusul (Duvulālī), married to Bījādrīt (Jayadrathā) who became a powerful king. At the request of Dusul, Dahrān sent 30,000 Brahmins to people Sind. One part of the country was given to the Zuṭtī, who were given as a ruler Dūjādrīt (Yuḥyihshīra, eldest son of Dhrīṭarāṣṭra).

The Ma’didīya (Madīya) also were given a special area; cf. Reinaud, Fragments arabes et fragments relatifs à l’Inde, 1845, p. 3—25.

Here we have an attempt to connect the history of the Ma’dī and Zuṭtī with Indian tradition by quoting a passage in the Māḥākbūrat which says that Duvulālī was given in marriage to Jayadrathā, “king of the lands watered by the Indus” (transl. Fauche, Paris 1853, i. 290, glosa 2742). Indian tradition however contains nothing definite of value about the Mand. In the Bharat-Sāmhitā, transl. Kern, J. R. A. S., 1871, p. 81—86 which is one of the sources for the enumeration of the peoples of India in al-Birûnî (ed. Sachau, p. 150—157, transl. 209—393), we find a Ma’dīya people (located in the centre, north or northwest of India). The derivation of the Arabic Mand from some such name may be suspected (cf. the name of the
modern town on the coast of Kăthīwār; Māndvi). On the other hand in Central India along side of the Māndwāya the Medha are mentioned (al-Birūnī: Maidha, the final a being only indicated by means of a fatha).

The question of the Maid/Mand has been discussed by Elliot and A. Cunningham; the former (Hist. of India [1867], i. 519—531) says that the Meds still exist on the borders of Sind and Jodhpūr, as well as to the west in the little harbours of Mārkān (the clans of Gazbar, Hor, Mānl, Djalār-za‘ī, Celmār-za‘ī). The name *Mād* has even undergone a phonetic change to Mer (which we find in the mountains of Aرفāl and in Kāthīwār). Elliot also thinks it possible that the Meds or one of their branches bore the name Mand of which traces can be found in place-names (Mandar, Mānd-bro, etc.). Cunningham in his report 1862—1863 connected the Zut and the *Māyād* or Mand with the Jutti and Mandrueni whom Pliny (Nat. Hist., vi, ch. xviii.) mentions near the Oxus and calls the *Mād* or Mer the first Indo-Scythic invaders of the Pandāb. In The Ancient Geography of India, 1871, p. 290—294, Cunningham finds a variant of the name Maid in the name of the town Marāvāqya of the Periplus mar. Erythr. (cf. Pollemey, vi/1, § 63: Maravqya to the east of Indo-Scythia), which would be "the town of the Scythians, Min = Manjābari (Mandābari) of the Arabs = Thatha, etc."

The question of the Mand evidently deserves a new special study. Was there only one, or two peoples *Mād* and *Mand*? The statements of the Muslim authors seem to refer to a single people. The toponymy of the land south of the Indus reveals the presence of an old element *Mand*; cf. Pollemey, vi/1, § 7: Mandagara. When its origins have been studied, it will be interesting to compare its possible connection with the oldest name of the Aryans, Mānda, found in the cuneiform inscriptions of the third millennium B.C. according to E. Förster, Die Inschriften und Sprachen des Elam-Reiches, Z.D.M.G., lxvi, 1922, p. 247. According to E. Meyer, Die Volksstämme Kleinasiens, Stein. d. Volksst., Brühl, 1925, p. 244—261 (cf. Goetz, d. Altertumsw., vol. ii, sect. ind.) note 3, the name "Mandā" meant the Scythians who in the seventh century B.C. had invaded nearer Asia and was sometimes transferred to the Medes along side of whom the Scythians were settled. A di metrically opposite process would be to compare *Mand* with the name of the Mundā language (of the Mon-Khmer family); cf. in this connection: Prayulski, Un ancien peuple du Penjāb, Les Udumbars, T.A., 1920, N°. 1, p. 53; where a theory is advanced which, before the arrival of the Indo-Aryans the valley of the Indus was peopled by "Austro-Asiatics" from the Himalayan zone to the sea. The influence of the Austro-Asiatic substratum, i.e., languages of the Mundā type, would also explain the preservation in Sanskrit of the aspirated sonants.

(V. Minorsky)

MĀND (Mānd, Mund), the longest river in Fars (Nushat al-Kūlāb: 50 farsakhs; E. C. Ross: over 300 miles in length).

The name. As a rule in Persia, sections of a river are called after the districts through which they flow. Mānd is the name of the last stretch near its mouth. The name seems to appear for the first time in the Fārs-nāma (before 510 = 1105) but only in the composite Māndistān (cf. below).

The old name of the river is usually transcribed in Arabic characters Sakkān (Iṣākhārī, p. 126; Ibn Hawkal, p. 191; Idrīs, tr. Jaubert, i. 401) but the orthography varies: Thakān, Fārs-nāma, C. M. S., p. 152; Nushat al-Kūlāb, p. 134; Zak- kān or Zakkan, Nushat al-Kūlāb, p. 217; Sittā- gān, Dīkhan-nāma, p. 247; cf. also Sāhhān in Ḥasan Fāsānī.

The identification of the Sakkān with the Sīrāzē mentioned in the Periplus of Nearcchus (Arrian, Indica, xxxviii. 8) is generally recognised. The identity of Sitakos with the Sittakan (Sittoganus) mentioned by Pliny, Nat. Hist., vi. 26 is also usually admitted (Weisbach 1927), but Herseb (1907) relying on the evidence of the Šāhīdān (Sittoganus), has suggested doubts about the identification of the Sitakos with the Sittoganus. Now, according to Iṣākhārī, p. 119, the Šāhīkān flows into the Persian Gulf at Dāšt al-Dustākān (north of Bāshārī). This Šāhīkān must be identified with the river Shāpūr. The Fārs-nāma, ed. Le Strange, p. 163, mentions Rūd-hāl-i Sittakan ("the banks of the S.") as a station on the road from Shārza to Tawwaj; from this fact and especially from the name, Sittagān seems to be applied to the left bank tributary of the Shāpūr. Pliny, who follows Onesicritus, adds that by the Sittoganus one reaches Pasargades in 17 days (quo Pasargades septem die navigat). Whatever be the identity of the Sittoganus, the exaggeration in this statement is evident (especially in the direction of the sea to Pasargades) and the waters of Pasargades (Māshād-i-Murgab) do not flow into the Persian Gulf. But there is nothing to prove the absolute impossibility of using the Sakkān as a subsidiary means of transport in the season of floods (the winter). According to Arrian, Nearcchus found at the mouth of the Sitakos large quantities of corn which Alexander had brought there for the army. Iṣākhārī, p. 99 places the Sakkān among the rivers of Fārs which are navigable at need (al-ašwar al-awlati taḥīn al-salaf al-fardhun idīriyat ji-kān).

Another question is the phonetical identity of the names Sitakos (Sittoganus) and Sakkān. According to C. F. Andrieus, Sīrāzē is a nominative restored from a supposed genitive *Sīrāzān (Sita- kān); Sīttagan-us is a mistake for Sittagan-us; lastly the peculiarity of the Arabic script could explain the change of Sittakán to Sakkán. Here we may add that Ḥasan Fāsānī gives one of the stretches of the river the strangely written form Sakhān ("Sīkān"). Iṣākhārī however derives the name of the river from that of the village of Sakk (Nushat al-Kūlāb: Zakkan) in the district of Karzan considerably below the Šāhīkān stretch of the river. To sum up the identification of the Sitakos with the Sittoganus does not seem sufficiently established.

The course of the river. The Sakkān (Mānd) describes a great curve. At first it runs in the direction N.W.—S.E., to the northern base of the Kūh-i Marra-yi Shīkāh, which separates it from the valley of the river Shāpūr. It follows this direction (c. 100 miles) to the end of Aṣmāngird mountains around which it makes a bend and turns south (70 miles). It then meets the parallel ranges which run along the Persian Gulf and continues its winding course to the sea in a westerly direction (140 miles).

The Sakkān (Mānd) and its tributaries drain and irrigate a considerable area. Iṣākhārī says that
its waters contribute the largest share to the fertility of Fârs (ṣāḥāra-ʿīnārām). The sources of the river (Kān-i Zaid, Chīl-e Gūzeshmān and Surk-khārg) rise in the mountains of Khūz-i Nār and Kūh-i Naqīrī-Sīhkaft on the N.W. and W. of Shīrāz. These streams unite before Khān-i Zīnyān in the district of Māsārīn on the great Shīrāz-Kāzrīn-Būshār road. Iṣṭakhrī, p. 120, places the sources of the Sakkān near the village of Shāhdārī (in the district of Ruṣvāqīn). In the same author, p. 130, Khān-al-Asād on the Sakkān corresponds to the modern Khān-i Zīnyān. The Fārs-nāma (and the Nuz̄at al-Kulūb) places the sources of the Sakkān near the village of Cārīṭā (v.). Under the Turki name of Karāqūz, i.e. “the river of the elm”, the combined stream flow through the districts of Māsārīn (= Kūh-i Maqna-ye Sīhkaft), Sīyāh (Iṣṭakhrī, p. 120: Sīyāh) and Kawār. In this last district, Rivādeneyrā, in Sā, going from Shīrāz to Fīrūzābād crossed the river by a “substantial bridge”. It is in the district of Kawār that Ḥasan Fasṭī gives the river the name of Sīlaḵān. In Kawār (Ḥasan Fasṭī) there used to be the barrage of Bāndi Bāhman, where by a subterranean channel (kanār) part of the water was led into reservoirs (gār) and then to the fields. In the buluk of Khāf (Iṣṭakhrī, p. 105: Khārū), which must be distinguished from the district of the same name in the kīna of Iṣṭakhrī, the river turns south. Acher-Luži, who crossed the river on the road from Fīrūzābād to Ḥārān (Ṣawārum) calls it “Tengu-Tachka” (= Taqī-qaṣqāh-kā) and speaks of its “beautiful valley” Rivādeneyrā continuing his journey from Fīrūzābād to Dārāb crossed the river by a ford between the villages of Tāvdān and “A-nī-Dačerdi” (Asmanqārī). He also admires the pleasant and flourishing aspect of Khāf. Below the latter, the river enters the buluk of ʿIngān where, near the village of Šārāḵ, it receives on its left bank, the brackish (ṣāhba) river of Ṣawārum, and then flows through the ravine of Kāzrīn, and waters the buluk of Kīr-wā-Kāzrīn. Abbott coming from Fīrūzābād crossed the river by a ford between ʿAṧālīd and Ṣawārum (cf. the name of the stream of Kurds in Fārs-al-Palvātān, Iṣṭakhrī, p. 113), where it was 100 yards wide and the water rose up to the horse’s belly. Farther down below the ford, Stack, going from Kīr to ʿIrāqīyān crossed the river. Here 60 yards broad, by the bridge of ʿArūs, built in a zigzag and in two stories (“the queerest structure in the way of a bridge”). Near the village of Nīm-ū, the river enters the buluk of Afzar. Having arrived wound around the fort of Kāf-āyā Shāhrūyār the river receives (near the place called Čam-i Kalbāg) the name of Bāz and then irrigates the buluk of Khundū (cf. Ibn Bīrūnī, n. 245: Khundū was Khundū + Bāz). In the district of Dīghār of the buluk of Gâlā-bāt the river has two tributaries near the village of Câbīr, the Dar al-Mīzān, and two farsakh lower, that of Dūhrām. The Dār al-Mīzān comes from the left (east) side of the buluk of Asūr. The Dūhrām much more important comes from the right side after watering the historic district of Fīrūzābād (the ancient Gūr, capital of Ardāshīr-Khura: cf. the details in Le Strange, p. 256). Iṣṭakhrī, p. 121 makes this tributary come from Dīghār (of Sīyāh) and water first Khunāghīfār and then Gūr in place of the name of the river Tirza, Iṣṭakhrī, p. 99, 121, one should probably read Barāzā: cf. the Fārs-nāma, p. 151, Nuz̄at al-Kulūb, p. 117—118: Ḥakim Būrtz was the sage who dried up the Lake of Gūr).

After Dīghār, the river enters the district of Sanāa-ḵᵛāb-Sumbā of the buluk of Dāhšt, and near the village of Bīghān receives on the right bank the river ʿAnzū which comes from the district of Tāṣṭīdī-ʾAḏsī. Finally near the village of Dīmānū the river enters the coast district of Māndīstān and receives the name of Mānd. It flows into the sea near the village of Zīyrāt, halfway between the old harbours of Nāḏjīrān (to the north) and Sīrā (to the south).

Māndīstān. The district forms part of the buluk of Dāhšt (which is to be distinguished from Dāštīn to the north of Dāhšt up to Būšī). Dāhšt (36 × 18 farsakh) is composed of 4 districts: 1. Bārdīstān, the part of the coast which is the port of Dāyīr. 2. Māndīstān on the coast to the north of Bārdīstān and the two banks of the river Mānd. 3. Sanā and Sumbā on the river above Māndīstān. 4. Tāṣṭīdī-ʾAḏsī, a very narrow valley (11 × ½ farsakh), watered by the ʿAnzū and separating Sanā and Sumbā from the buluk Arbaʿa (on the lower course of the river of Fīrūzābād).

The whole of the buluk belongs to the torrid zone (garmazīr) of Fārs. Māndīstān (12 × 5 farsakh) includes lands so flat that the current of the river is imperceptible and the water cannot be used for irrigation. Agriculture (wheat, barley, palm-trees) is dependent on the winter floods. The district has 40 villages. The capital of the district and of the buluk is Kākī. There used to be two rival families in Māndīstān: the Shākī-ya and the Ḥāddījīyān. During the disturbances under Afghān rule (1722—1729) the Ḥāddījī Raʿīs Ljāmāl exterminated the Shākī-ya and founded a little dynasty of hereditary governors who were able to annex the district of Bārdīstān through matrimonial alliances. One of his descendants, Muḥammad Khān (d. at Būšī in 1299 = 1881), was noted as a poet under the pen-name of Dāštī.

Ḥasan Fasṭī explains the name Māndīstān by a popular etymology: “the place where the water flows slowly (ḵᵛāndūbādas).” Names in -e-ān are common in Fārs (Lārštān, Dāštān) but even if such a formation was possible in a river-name, the element Mānd would still be a puzzle. It is curious that Ḥasan Fasṭī sometimes writes it Mānd (read Mānt) and sometimes Mund (read: Mōnd). It might be suggested as a pure hypothesis that there is a connection with the people M N D (cf. MAND), of which there might have been a colony in Māndīstān.

(V. Minorsky)

MANDINGO, a people of the Western Sudan whose country of origin was on the Upper Niger stretching from Bamako to bigurru inclusive. This region includes the gold-bearing district of Boure, Bute, or Bito as well as the provinces of Lower Faleme and of Bambuk which also produce gold. At the present time the Mandingo have spread into the mountainous country in which the two branches of the Senegal arise; they occupy Sangaran, Gangaran, Bambuk, and the valley of the Gambia to the South while to the North they extend as far as the Western Sahara. In the 17th century, they colonised a part of the modern Mauretania and, according to the Arab authors of this period, who mention them under the name of Gangara (Sing. Gangar) or Wangara — a word which seems to be a corruption of the name of their country of origin: Gangaran, Gangaran or Gangara — they were to be met with in Hadh. In our time the first of these names has been kept by the Moors and the Sarakole, the second by the Songhay, the Ful of Massina and the Hausa.

The country of these natives is called according to the different dialects: Manding, Mandi, Mani, Mandeng, Maneng, Mande, Mane. The inhabitants are called by the names of Mandinka, Maninka, Mansa, Mandenka, Mansaka or Manenga in the dialects of the Centre and of the East and Mandinko or Mandingo, in those of the North, South and West. This last name is considered by the British possessions of Gambia and Sierra Leone to have been adopted by the English while the French keep the form Manding or Mandingue.

The name of the country corrupted by the Ful has become in the language of these natives Mali, Mahli, Malli, Melli, and that of the inhabitants has become Mallinke or Malinke. This last word has now come to stand for the South-Western portion of this people or for their dialect.

Ethnography. The Mandingo group constitutes a well-marked ethnological group, but it does not form a homogeneous people under one rule. Three chief divisions can be distinguished, and these can again be subdivided into many sections. They are the Malinke, the Bambak, or Bamana, and the Diula or Gula.

A Sudanese historian of the xvith century, Maimud Koti, who wrote the Turikh al-Fattah in Arabic, distinguished in his time between the Malinke and the Wangara, regarding the former as warriors and the latter as merchants and traders. The Malinke are the least advanced of the Mandingoes from the social point of view, many of them remaining faithful to the matrarchal system and are still cultivators of the soil, hunters and gold-diggers.

An attempt has been made to derive their name from that of the hippopotamus: mali or mali, and thus "malinka" would signify the "people of the hippopotamus." This explanation is erroneous, the suffix "ka," signifying the nationality, can only be joined to the name of a country or of a tribe and never to that of an animal. It is possible however, that the name of the country which was the cradle of their race, could come from ma, mother, and dieg or dieg, child; this word then would signify "child of the mother," in allusion to the descent by the female line which is customary amongst them.

The Bambara inhabit the valleys of the Niger and of the Bani as far as Lake Debo, they are numerous in the Sahel. They are more advanced agriculturists than the Malinke and they recognize descent by the male line. An attempt has been wrongly made to derive their name from that of the crocodile: bama or bama. Some authors, on the other hand, have held that their name signifies "refusal to obey a master" (ban. refusal, ma: master, ma: mother, ma or ra: to). The Diula or Giula inhabiting some fairly important centres are chiefly merchants and traders. They are met with in small colonies, settled amongst the indigenous peoples to the East of Bani as far as the Upper Volta and the Gold Coast. Having been converted at an early date to Muslimadami, they have remained fervent Muslims and there are amongst them quite a large number of learned men.

Their name is said to signify "from the foundation, from the stock" (dina). According to their own account, it was given to them because their ancestors belonged to families of noble birth.

At the basis of Mandingo society is an extended family (jana or gwa) comprising all the living descendants of an ancestor, sufficiently near in place and in time for all the ties of relationship and duty. This extended family covers four generations: the patriarch, his brothers and cousins, their children, the children and grand-children of the latter, and an equal number of generations of slaves. Persons of the same generation placed on the same level are called by the same name: father, brother, son, without distinguishing the fathers from the uncles, the brothers from the cousins, the sons from the nephews, all are collectively sharers in the family property, which they have helped to acquire and to augment by their labours. This family property consists of crops, of animals, arms, surplus clothes as well as treasure in gold, silver or cowries gathered together by the founder of the family. It is administered by the patriarch who cannot dispose of it without the consent of the majority of the other members. Each of those, man or woman, possesses in addition a private store of which he has the free use.

The chief exercises a political, domestic and religious authority. In this capacity he is charged with making sacrifices and offerings to their ancestors and to the patron deities of the family. A number of families observing the same religious prohibitions and bearing the same name (dina) form a clan; the members, who form a clan are of the same origin, but so far removed by birth
that it is impossible to trace their descent back to a common origin.

The chief Mandingo clans are those of Keyta, Kante, Tarare, the Dembele, the Konate, the Kuku, the Koru, the Diara, the Samake, the Mareko, the Kamara, the Bakayoko etc. None of them is either organised or under a single ruler.

There exists between persons of different clans a particular tie called senabuya, without doubt the remains of an ancient phylogeny which obliges them to assist one another and to exchange presents on certain occasions; the same persons can also quarrel among themselves or fight with one another without involving any serious consequences.

The organisation, which is lacking in the clan and in the tribe shows itself on the contrary in each inhabited centre in the form of the hierarchial brotherhoods, which combine all the young people and the men of the same age who have together submitted to circumcision and to the tests of successive initiation. The first is that of ntonko, grouping together the boys from the ages of 7 to 14 years; then there come the so-called secret societies, such as those of the kono or of the nama which consist of politico-religious groups within the village.

The village or dugu is the administrative unit, the union of a number of villages and the lands which surround it forming a district or kafo; a number of districts constitute a province or a kingdom, dimana, at the head of which there was in former times the Mansa or Massa. The latter was surrounded by different ministers and assisted by a treasurer.

Although Islamism has long penetrated amongst the noble families of the Mandingo, the greater portion of the population has remained faithful to the worship of natural forces and of protecting deities, dugu la sire, gama and bol. The great religious festivals are the agrarian feasts and the most important correspond to the periods of seed-time and harvest.

The Language. The Mandingo properly speaking are in number about 2,500,000 of whom 770,000 are in Senegal; 1,000,000 in French Sudan; 200,000 in the Upper Volta; 2,500 in Nigeria; 290,000 on the Ivory Coast; 550,000 in French Guinea; more than 680,000 live in Gambia, Sierra Leone, Portuguese Guinea and the Republic of Liberia.

In addition to these natives, whose mother tongue is Mandingo, more than 2,000,000 other people speak this idiom; for this reason it is often spoken of as a language that is still spreading.

The Mandingo belongs to the African Negro language and more especially to the group which M. Tichelasse calls Negro-Senegalese; D. Westermann; Mandingo, and A. Drexel: Nko-Nke: it is closely allied to Susu. Foreign idioms seem to have had little influence, although it has borrowed certain abstract and religious terms from the Arabic; from Phoenician or Arabic it has borrowed expressions relative to horsemanship and cotton; from Berber about a dozen words, and finally during the space of the last fifty years it has further borrowed from several European languages.

The roots are monosyllabic or disyllabic and many of them can be traced to an ancient African Negro origin. For example: far, the action of killing or being dead, seems to come from a root far or far; cf. in Susu fak: Hausa: fa: Moli: far; Fang: war; Pul: war (de); Masgu: fa:u.

Congo: faru; Swahili: wa and ma; Ancient Egyptian: f散布。The nominal class does not exist in this language.

Mandingo uses derivative suffixes which are used to form distinct substantives used as substantives only; for example: ka, na, or nga, the suffix for nationality: Mandenka: la or ra, the instrumental suffix: tege to cut; toge-la, the instrument for cutting, axe. It employs also adjective suffixes; for example: ma or ma indicating the possession of the thing mentioned: gyi, water; gyi-ma, “full of water”; fa indicating on the contrary the lack of the thing expressed: gyi n-fa, “without water”. Certain suffixes, joined to a simple or derived root, indicate the possession of a quality or of a state; for example: bu-suru, “short, little”; suru, “shortness” and also “to shorten or to approach”; Suffixes also exist, indicating determination or relationship.

The Mandingo conjugation employs prefixes denoting the perfect, the aorist, the injunctive. Certain auxiliary prefixes serve to indicate time. It has a considerable number of verbal forms, affirmative as well as negative.

This language does not possess any trace of a system of syntax of agreement; the relations between one element of a sentence and another are entirely determined by the respective position of the two elements and their grammatical function is often determined only by the place which they occupy in the sentence.

In the syntax of this language, the complement of a noun, pronoun or verb always precedes the noun, pronoun or verb in question; the adjective qualifying or determining a noun always follows this noun; the noun of number always the noun of the thing numbered; an adverb modifying a word follows it. The order of the words in the sentence is subject, prefix or auxiliary of conjugation, direct complement of the verb, verb root or derivative, indirect complement of the verb, adverb modifying the statement.

Mandingo is divided into a fairly large number of dialects revealing differences more or less marked. We distinguish the Bambara or Bamana dialects, the Diula dialects and lastly the Malinke dialects, which divide themselves divided into the Malinke of the East, of the North (sometimes Khashonke), of the West and of the South.

History. The wide diffusion of this language is due to certain historical circumstances, and to the rise of the Mandingo hegemony which extended over almost all the Western Sudan from the year 1250 to 1500.

According to local tradition, the Mandingo sovereigns bore the title of Mansa or Massa; they belonged to the Keyta and married into that of the Konde or Kone. In the beginning, they owed their influence to their knowledge of sorcery and magical practices and little by little they emerged from obscurity. Ibn Khaldun has transmitted to us the name of the first of them, Baramandana, who about the year 1050, was converted to Islam, in order to obtain, according to al-Bakri, the end of a drought, which was cruelly trying the country of Mande; thereafter he made the pilgrimage to Mecca. Native tradition has kept the name of two of the descendants of this prince, Hamana and Dyggu-Blili. The son of the latter, Musa, called Aliyak, reigned from the year 1200 to 1218. Four times he made a pilgrimage to Mecca,
MANDINGO

241

The Encyclopaedia of Islam, III.

and he extended the power of his dynasty. On the other hand, his son Nare Famaga (1218–1230) suffered a great reverse and was defeated by his neighbour, the king of Sósó, Sumanguru Kante, who annexed Mandingo in 1224 and put to death eleven out of the twelve sons of the conquered monarch. The last son, Sósó Diata or Mari Diata (1250–1255), who was weak and delicate suddenly recovered his health and strength after touching his father's sceptre. Little by little he got together a powerful army, with the help of which he conquered a part of Futa Djallon, the country situated between the Niger and Bani, in the region of kita and that of Beledugu. In 1235 he attacked his enemy Sumanguru Kante and defeated him at Kinka, not far from the Niger. After having subdued shortly afterwards the whole of the Sósó, he advanced in 1240 as far as the celebrated city of Ghana which he plundered. During the following years, Sun Diata took possession of Baggaram and of the gold-bearing district of Bambuk without neglecting the good administration of his lands in which he encouraged agriculture and extended the cultivation of the cotton plant. Towards the year 1240 he abandoned the ancient capital of the Mandingo, Djeriba, and transferred it to Niani, wrongly called Mali or Melli by the Arab historians. He died in 1255 in the vicinity of this town. One of his sons succeeded Sun Diata, whose name only is handed down to us, namely Mansa Ule or the Red King (1255–1270). After him reigned the princes Walt, Khalifa and Abu Bakari between the years 1270 and 1285 about whom we possess no information. After the death of the latter, the power passed into the hands of a slave of the Keyta called Sakara or Sahakara, who kept it from the year 1285 to 1300. Then the Keyta regained the throne and under Gani, Mamadu, and Abu Bakari they held it from 1300 to 1307. At the end of this undistinguished period, Kankan Musa, also called Gongo Músá (1307–1332), the son of the last of these sovereigns, seems to have raised to its zenith the power of his dynasty. We owe to Ibn Khaldun some details about his person and the events of his reign. He was an ascetic prince and full of piety, and he made a pilgrimage to Mecca in 1325 and on his return he brought back with him to the Sudán, al-Mamun, a descendent of the founder of the dynasty of the Almohads, as well as the Arab poet al-Shibli. When he was still in the Sahara, Kankan Musa learnt that his troops had seized Gao, Tombakuta, Walata and the kingdom of Songhoy. He decided to visit the first two of these towns, and on the advice of the strangers who accompanied him, he built in each of them a mosque and a palace, thus introducing Arab architecture into the country. When he died in 1322, his authority extended from the valley of the Bani to that of the Falame, and from the Sahara as far as the thick forest, and he had entered into relations with the Sultan of Fez.

His son and successor Maghan (1332–1336) was not able to keep intact the kingdom bequeathed to him by his father. During the reign of this prince the Mossi pillaged Tombakuta, and Songhoy cast off the Mandingo yoke.

On his death, Sulaimán (1336–1359), the brother of Kankan Musa, ascended the throne. According to Ibn Khaldun, the first care of the new sovereign was to assert his authority in his possessions in the North. He was not successful in regaining Songhoy, but he established peace and security in his kingdom, which he reorganised. The traveller Ibn Battîta, who passed through Mandingo in the year 1351–1352, furnishes us with valuable information on the country, the administration, justice and the court.

Kamba, the son of Sulaimán, succeeded his father but was deposed at the end of a few months by Mari-Diata, the son of Maghan who kept his power until 1374. He died of sleeping sickness and is remembered as a cruel, debauched and extravagant prince.

His successors Músá II (1374–1387), Maghan II, Sandigui Maghan III, Músá III and Músá Ule II reigned until the beginning of the 14th century. From this time onwards exact information ceases, as our authority, the historian Ibn Khaldun, died in the year 1406.

The decline of the Mandingo empire was hastened during the 14th century by the attacks of the Tureig, the Songhoy, the Mossi and the king of Tâkrur. In the year 1418 Mansa Mamadu feeling himself to be in danger, approached the Turks who were established on the coast of Africa and sought their protection. This move and others similar which followed it influenced the king John II and John III in sending to the court of the king of the Mandingo two ambassadors, the one in 1433, the other in 1534, but without leading any military aid.

In the year 1545 the Askia Dâd of Gao came and plundered the Mandingo capital. The Moroccans who had come from Tumbuktu some months before, joined in the year 1551 the enemies who surrounded the kingdom. The period from 1600–1670 marks the last stage of Mandingo power. But two new principalities were formed on its ruins at Segu and in Kaarta.

According to the legend, the Bambara under the guidance of two brothers, Baramangolo and Nangolo, were flying before their enemies. They were on the point of perishing under the blows of their enemies, since a river barred their route when they were saved by a miraculous fish which carried them to the opposite bank. After this miracle they took the name of "Kulu bail", that is to say the men "without boats".

In the middle of the 18th century the descendants of Baramangolo had spread into the valley of the Niger and of the Bari but they paid tribute to the inhabitants of Djenné and to the Moroccans of Tumbukuta; their capital was Segu. Biton Kulubali (1660–1710) liberate them from this army and tutelage. Having collected a powerful army and fortified Segu, he made war first against the sovereign of the Mandingo, then seized the right bank of the Niger and finally Massuma and even Tumbukuta. He died of tetanus after organising his kingdom and dividing it into sixty districts.

His son Denkoro (1711–1736), a cruel and debauched prince, was assassinated; Ali, the brother of Denkoro, only reigned a few days and was deposed by the army of the Tondon or government troops. The period 1736–1750 was troubled by internal disorders, and in the year 1750 the power passed to the family of the Iliara, who kept it until 1861. At this time the conquering al-Hadjidji 'Omar seized Segu and put Ali, the last king of the dynasty, to death.

The descendants of Nangolo Kulubali are cal-
led "Massasi", that is to say "royal race". At the end of the xvith century they occupied all the province of Kaarta itself and they were the rivals of the Bambara of Segu. In the middle of the xvith century, Massa Bakari succeeded in bringing under his authority Kaarta, Kingai, Bakrun, Gudiunne and Diafunu. One of his successors, Bessekoro, received the explorer Mungo Park at Guemu in the year 1796. In the year 1854 the last sovereign of the line of the Massasi, called Kandan, was reigning at Nioro when al-Hiiiddi Oman seized the village and executed all members of the royal family.

After these events the Mandingoes remained divided and until the year 1860 only played a modest part in history. In this year, there arose in the vicinity of Kankan, in the district of Wassulu, Samori Ture, at first the leader of a band and then the sovereign of the province of Bissandugu. This new conqueror, although he was quite illiterate, seized in a short time the whole of Wassulu and took the title of "Almami". Crossing the Niger he extended his warlike expeditions into Sankaran and advanced within 80 miles of Kita, a post recently founded by the French. The latter fought against Samori first from the years 1881 to 1886 and in the next year imposed upon him the treaty of Bissandugu, which he respected for only a few months. From 1888 to 1891 Almami attacked Ticha, the king of Sikasso, without any success; thereafter he resumed hostilities against the French, who at the end of the year 1893 occupied Wassulu. Samori then fled into the Upper Ivory Coast, which he ravaged from the year 1894 to 1895 and he destroyed O. Danjou, the town of Bana. In front of this town, a detachment commanded by Captain Braulot was exterminated in the year 1897 by the warriors of Sarantee Mori, his son and his lieutenant. France thereupon determined to settle with Almami against whom a combined force was sent. It resulted in the capture of Samori and of his army on 29th Sept. 1898 at Guelu on the Upper Ivory Coast. Samori was deported with his family to Gabon where he died in 1900; he was about 65 years old. Since the dismemberment of his warriors, no event of importance has disturbed the peace of Mandingo.

(Ch. Labouret)

**Mândû**, a fortress now in ruins, was formerly the capital of Målwa [q.v.], and stands in 22° 21' N. and 75° 26' E. It has probably been a stronghold from time immemorial, but little is known of its history until the fortifications were erected in their present form by Dîlavar Khan Chùri (1392—1405), the first independent Muslim king of Målwa, and his successors. His son, Hîshang Shâh, made it his capital, and it remained the capital of the kingdom and province of Målwa throughout the period of Muslim rule, and has stood many sieges. Its streets ran with the blood of 10,000 Râjîjîs, slain by Mûhammad II of Målwa when he recovered his capital from his rebellious troops.

Of the ten gates of the fortress (two on the south, two on the west, one on the east, and five on the north), the Tarâpir Gate was built by Dîlavar Khan, the Dîjâhângîrî Gate by the emperor Dîjâhângîr, and the Âlamîrî Gate by an officer of the emperor Awrangzeb in A.D. 1668. The Bâghwânî Gate was built in 1517 in the reign of Mûhammad Khâdîjî II, and the Songârî Gate is an old gate rebuilt early in the nineteenth century by Maîn Bâi, the great Râîn of Dhâr. The Lawânî, Râmîpî, Dhîlî, and Bânî Gâtî Gates are old, but bear no inscriptions. The last has
is name from the legend that a sweeper was tortured alive on the completion of the gateway. The Gāqi or Carriage Gate bears no inscription and its age is unknown.

The principal buildings in the fortress are the mosques of Dilāvar Khān (1405), Malik Muḥbīth (1432), and Ḥāshang (1454), the last being one of the finest specimens of Ṭāḥān architecture in India; the Hindola Mahall with the Nhāh Nhār Khān, the Tweli and Nhār Mahalls, the palaces of Nāṣir al-Dīn (1509) and Cishti Khān, the Campa Khāl or Well, Rūmnīt’s pavilion, the tombs of Ḥāshang Shīh and Dāryā Khān, the Hāṭhi-khana (actually a tomb), and the Tower of Victory of Māhmūd Khādījī I. These buildings are now carefully conserved by the Archaeological Department of the Government of India.

MĀNDAR.[See Sharfā] MANF, or, according to Abu ‘l-Fadlī (p. 116), Mināf, the ancient Egyptian capital Memphis, on the left bank of the Nile, not far from Cairo, is well known in Arabic literature as a very old town. The geographers cite, among the ārā’s of Egypt, that of Manf and Wāsīm (cf. e.g. Ibn Khordaḥībī, p. 81), but the town was already ruined in Muhammadan times (al-ʿAṣqābī, ʿĀlī, al-Buldūn, p. 331) — by ‘Amar b. ʿAl-Kidā, according to Abu ‘l-Fadlī (loc. cit.) — and was no more than a village in the time of Ibn Hāwkb (p. 106).

Most Arab writers speak of the ancient traditions connected with Manf, often together with ʿĀin Shams [q.v.]. It is said to have been the first town inhabited in Egypt after the Flood, founded by Bāṣṣar b. Hām b. Nūḥ (Ibn ʿAbd al-Ḥakam, ʿAbī Ṣafī, ed. Torrey, p. 9) or Mīsāyīm b. Bāṣṣar (al-Maʿṣīrī, ed. Wiet, i. 73); the name is said to mean thirty (māfā, sc. the Coptic mād), because the first inhabitants were thirty in number. Further it is said to have been the town, where the Qur’ānic stories of Mūsā and Yūsuf took place (Yāqūt, iv. 667); namely the Madīnī Fīrawn, which possessed 70 gates and from which flowed the four great rivers of the earth (Ibn Khordaḥībī, p. 81). The temple (ḥrab) of Manf was built under the queen Dallīka by herself or by the sorceress called al-ʿAddīlīda, and had magical properties. Manf had also a tradition as a Christian town; the ruins of the monastery Dār ʿHirmīs are still to be seen, and the Arab authors know of some churches in the place (e.g. Kāfīṣat al-Uṣuf; cf. Yāqūt, loc. cit.), which reminded them of the ancient eponymous prosperity of the town.

MĀNGIR, the general name for copper coin under the early Ottomans, corresponding to alṭum (gold) and aqīṣ (silver). As a particular denomination it was a copper coin struck in the reign of Sulaimān II during a period of financial stress. In 1699 (1687) it was resolved to issue temporarily a token coinage in copper to be withdrawn from currency when the finances of the state improved. 500 māngir were struck to the oke of copper and put into currency as half aspers. When the situation did not improve, the value was raised to one asper; the remedy proved worse than the disease for very soon the whole country was flooded with copper coins and gold and silver driven out of circulation.

Māngir is also the name given to imitations of sequins in brass or other cheap metal worn as ornaments.

MĀNGISHLAK, a mountainous peninsula on the eastern shores of the caspian Sea, first mentioned under the Persian name Siyah-Koh (‘Black Mountain’; cf. B. C. G. A., i. 218); the same name was given to the hills west of the Sea of Aral (op. cit., vii. 92; see MANGISHLAGH). According to Iṣṭakhrī (op. cit., l. 219), the peninsula used to be uninhabited; it was only shortly before his time (or that of his predecessor al-Balḥī) that Turks, who had quarrelled with the Ghurī (q.v.), i.e. with their own kin, had come there and found springs and pastures for their flocks. Ships which were wrecked on the cliffs of the peninsula used to be plundered by these Turks. Muḥādīrī (or Maḥdis) mentions the mountain of Bīnsīshlān as marking the frontier between the land of the Khūzars and Dījrān (q.v.) (cf. B. C. G. A., iii. 355).

In the form Mankīshlagh (vocalised Mankasīghlagh) by Yaḵūt the name first appears in documents of the viib (xivth) century (W. Barthold, Turkestän, l. 54, 44 and 79) and in Yaḵūt (iv. 670). According to Yaḵūt, this name was borne by a strong fortress near the sea between Khuwārīm (q.v.), Sāksīn (q.v.) and the land of the Khūzars and Dījrān (q.v.) and in the land of the Khūzars and Dījrān (q.v.). The peninsula was evincially no longer, as it had once been, a place held in terror not only for its natural conditions but also for its inhabitants; via Mangīshlāk there ran, as later almost into modern times, an important trade route from the Volga territory to Khwārim; goods were unloaded in the bay near Cape Tob-Kaşagar and taken to Khwārim by caravans. Before its conquest between 1127-1128 and 1138 by the Khwānaqa Khwājas (q.v.), Mangīshlāk was a separate and practically independent principality on the frontiers of the Muslim world (it was of course regarded as within the empire of the Seldīlīs; q.v.). As the verse quoted shows, the conquest resulted in the destruction of the town. No permanent settlement is again mentioned on the peninsula until its occupation by the Russians, in spite of its importance for commerce.

For the last few centuries (perhaps even earlier) the peninsula has been inhabited by Turkomans. Towards the beginning of the xth (xvth) these were the Salurs (q.v.); on the coast lived the “inner Salurs” (iqī Salurs), on the road from Khwārim to the coast (about 500 miles; it took 20 days to traverse) lived “the outer (tāhkh) Salurs” (Zap., xv. 205). Abu ʿl-ʿGhārī (ed. Des-maisons, p. 267) gives the Ersans for the Salurs; towards the end of this century, this trade was almost completely driven out by the Mangīt (q.v.) i.e. by the Nurghāt; later we find the Kalmyks (q.v.)
conquering here. On their rule in Mangystan, cf. Abu'l-Ghasi, p. 316; the name of the peninsula is written by Abu'l-Ghasi (see Index). Mangystan, Manggishlak and Mangishlak. In addition to the regular traffic by sea with Astrakhan [q.v.], frequently mentioned in Russian sources, there was also a connection with Shirwan mentioned by Abu'l-Ghasi (p. 257 and 273) and other sources. Three Turkomans tribes, the Cadowur, the Igdir and the Sonadji, were deported by the Kalmucks under Ayuka (1670—1724), according to others as early as the reign of Punstuk-Mongak (1667—70) from Mangystan to the northern part of the Caucasus, but a section of the Cadowur continued to dwell in Mangystan. When, under Russian rule, the land of the Turkomans was organised as the "Trans-Caspian territory" (Zaksipjiskaya oblast), the "district of Mangystan" was included in it; the capital was the little settlement founded in 1839 as "Novo-Petrovskoye ukreplenye" and known from 1859 as "Fort Aleksandrowsk" (now: Fort Urkogod). In the sixteenth century the Turkomans were gradually driven out of Mangystan by the Kazak [cf. King]; therefore after the Revolution the district of Mangystan was separated from the land of the Turkomans and now belongs to the republic of Kazakistán.

After the western shore of the Caspian Sea had passed under Russian rule, it was recognised that the Gulf of Balkhan [q.v.] formed a better gateway to Central Asia than Mangystan. In 1859 the ambas-sador Maruyew proposed to the Khan of Khyva, Muhammad Kahn, that the caravan route from the Caspian Sea to Khyva should no longer start from Mangystan but from the port of Krasnovodsk on the Gulf of Balkhan. The Khan replied: "It is true, the road via Mangystan is much longer than the road via Krasnovodsk but the people in Mangystan are my subjects, whereas the Yomut as far as Astara already belong to the most part to the Kajüt" [q.v.] (N. Maruyew, Putjescestviye v Turkmeny i Khiwwe, Moscow 1822, p. 134). It was only after Russian rule was firmly established in Central Asia that this question could be settled in favour of the Gulf of Balkhan. Since Krasnovodsk became the starting point for the Central Asiatic railway, Mangystan has lost any importance it had in favour of the Gulf of Balkhan. According to the census of 1897, the population of Krasnovodsk was 6,322 and of Fort Aleksandrowsk only 895.

Bibliography: given in the article.

Descriptions of the district of Mangystan will be found in all works on Turkestan, e.g. V. Masalskiy, Turketskisby Krasi. St. Petersburg 1915, p. 621 sq. (W. Barthold)

Mangit, the name of a tribe and a people. In the time of Cingiz-Khan [q.v.] the word Mangit appears as the name of a Mongol people in Rashid al-Din (Trzuri Vost. Otd. Arch. Obh., vii. 283 sq.): Manghit. From the Mongol period onwards the name Mangit (written Manghit, Manghit, Manghit, Manghit and Manghit) like many other Mongol names (Naiman, Kungrat etc.) appears as the tribal name of Turkish or Turkised peoples. According to the Zemfl- unma (Ind. ed., i. 277) the Mangit were a tribe (bùmek) of the Golden Horde, which produced the celebrated Amir Edq (in Russian sources Vedegel), the contemporary and opponent of Timur and Tokhtaniş. The people called nogai in Rus-

sian sources is always called Mangit by Abu'l-Ghasi (see Index) and other Oriental sources of the same period. Now Nogai alone is used as the name of the people. The statement that the Mangit tribe makes up about 90%/ of them wants more careful investigation (M. Trushpaev, Materialy k istorii Kirghiz-Kazakskogo naroda, Tashkent 1925, p. 28); the name Mangit is said to be also found as the name of a family among the Yaksuts. In the Bahr al-Asrir of Mahmud b. Wali (MS. Ind. Off., No. 575, f. 359) the tribe (ului) of the Mangit and the tribe (i) of the Kungrat are mentioned as the two most important branches of the Ouzbeks. The Mangit tribe was of some political importance for the political life of Bukhara and Kharism. In the fighting with other tribes the Mangits of Bukhara were supported by their brethren in Khiva and vice versa but it was only in Bukhara that they became supreme. On the dynasty of the Mangit see the article Bughur (there written Mangit); the dynasty was overthrown in the revolution of 1920. In Khiva the Mangits combined with the NukR to form a double tribe (the other double tribes were the Ugur-Naiman, Kithi-Kipëk and Kiyat-Kungrat).

The place called Mangit on modern maps was only founded in Radjab 1215 (Nov.—Dec. 1800) by members of the tribe who had been driven by the Turkoman Yomut to the east (History of Khiva, MS. of the Asiatic Museum, p. 590 supra, f. 73b). At the present day the Mangit number 99,200 in Bukhara (of whom 44,000 are in Bukhara itself and 31,000 in Karshi; q.v.) and only 10,300 in Khiva.

Mangu. [See Mongke.]

Mangu-Timur, so on his coins, Mongol Mongke-Timur, as in the article Berke [q.v.], written Mongkë (e.g. Rashid al-Din, ed. Blochet, p. 109), in the Russian annals Mengtum and Mengtumer, Khan of the Golden Horde (1266—1280), grandson of the Khan Batu [q.v.], son of Tülekan. According to Egyptian sources, the death of his predecessor Berke took place in 665 (Oct. 1266—Sept. 1267); in Safar 666 (Oct.—Nov. 1267) an embassy left Cairo which was to bring the new Khan an expression of sympathy and congratulations from Sultan Baibars I [q.v.]. In 667 (Sept. 1268—Aug. 1269) an embassy from the Khan arrived in Egypt. The exchange of embassies was maintained throughout the whole of the Khan's reign. When in 670 (1271—72) an embassy on the way to Egypt was captured by a Frankish ship from Marseilles, the ambassadors and all their goods had to be released on the Sultan's demand. When in 680 (April 1281—1282) an Egyptian embassy left for the Golden Horde nothing was yet known of the death of the Khan. Only later did they learn that he was no more, having died in Kafih I 679 in the district of Aśyik (apparently nowhere else mentioned);
his death is said to have been caused by the unkinil removal of a boil on the neck. In Rashid al-Din (ed. Blochet, p. 124) the date of Mangû-Timur's death is given as 681 (Apr. 1282–March 1283); there are coins of his brother and succes-
sor Tâdâ-Mangû struck in this year.

The Egyptian government tried to induce the khan to resume the war on the Persian Mongols begun by his predecessor Berke; but soon after his accession Mangû-Timur concluded peace with Ahiâk and never again attacked Persia. Rashid al-Din by an oversight attributes to Mangû-Timur the campaign against Arghûn of the year 689 = 1290 (in Blochet's edition in p. 40, we have 890 instead for 880; d'Osslon (Hist. des Mongols 1, 42) and Barthold (article Ahiâk) have been misled by this.

On Mangû-Timur's participation in events in Central Asia down to the Kûralûtâ of 697 (1269) (sending an army of 50,000 men under Berkedjâr, a brother of Bâtû and Berke) see the article Kûralûtâ. Accounts of this are found in the still unprinted parts of the Çîmîr al-Tâwarîkh of Rashid al-Din (reign of Arghûn, cf. d'Osslon, op. cit., iii. 428). The alliance between Mangû-Timur and Kâîî, whom he was then supporting, is also mentioned later; when in 1277 two sons of the emperor Kûribâlî Kâîî were taken prisoners in the war with Kâîî, the latter had the princes sent to the court of Mangû-Timur, from which they were later sent back to their father (Rashid al-Din, ed. Blochet, p. 8; d'Osslon, op. cit., iii. 452 sq.).

Russian rulers appealed to Mangû-Timur for support as they had done to his predecessors and successors. Lev of Galicz received assistance from him against the Lithuanians but the Tatar auxiliaries proved a great burden not only to his enemies but also to their protegé. In 1277, a Russian army was fighting in the Caucasus against the Alans under the Khan's orders. From Mangû-Timur dates the earliest extant edict of a Khan of the Golden Horde on the privileges of the Greek orthodox church. This edict is dated in the year of the Horde (probably 1269). The Bishop of Sarai, Theoktistos, was sent by Mangû-Timur as an ambassador to Constantinople. In contrast to the last two decades of the thirteenth century the Golden Horde under Mangû-Timur was a much more powerful state, free from internal troubles. Coins were still struck only in the old commercial city of Bulghâr [q. v.] but, unlike those of his predecessors, in his own name not in that of the Great Khan. On his coins, the seal of the Golden Horde appears for the first time.

Tiesenhausen, Slawen materialen, etna arshikyâna k iistorii Zebaloi Ord, part i., St-Petersburg 1884. (W. Barthold)

MANI (See ZINDIK.)

MANI is the name given in Ottoman Turkish to popular songs in quatrains. The name is a corruption of the Arabic word 만녀, meaning "thought, idea", and is by no means found throughout the whole area where Ottoman Turkish is spoken. In many districts isolated quatrains, like songs of several verses, are simply called tanım. Songs in quatrains are known among almost all Turkish peoples: they must therefore be considered to have been known to the original Turkish stock.

The rhythm of the mani is, as in Turkish popular poetry generally, sometimes purely syllabic (a definite number of syllables without a fixed caesura), and sometimes depends on the accented syllables (with a fixed caesura and therefore with the order of weak and strong syllables to some degree fixed). The lines show as a rule 7 syllables (4–3, 3–4, rarely 2–3–2). Quatrains with all four lines alike are rare, the third line usually differs from the others (3–4, 3–4, 4–3, 3–4, or 4–3, 4–3, 3–4 and so on). The original arrangement of the rhyme in Turkish quatrains is αβαβ (two lines rhyming) which clearly shows the quatrain was originally a distich. In the Ottoman mani we have a development of this form also, with three rhyming lines (αααβ). The rhyme however which connects the second and fourth lines is often fuller and more distinct than that which connects the first and second lines. Alliteration, which is highly developed among many Turks, especially in the north, is only found sporadically in the mani; it is found both as line alliteration (similarity in the initial letters of the words of a line, e.g. kara koyun kesenemeli, belime benzeme baks, etc.) and as verse alliteration (similarity of the initial letters of the lines in a verse, e.g. râz gulaq perinde, senin sevec nişaste, senin vedek yorunye, moni gâjîl worsendi).

As regards matter, the majority of the mani fall into two distinct parts, an introduction dealing with nature, and a concluding part of a personal character. Originally the two-part must have been very closely connected. It would however be a mistake to find such a connection in all the manis, because the singers very often only improvise new conclusions ready made introductions taken from older poems, without troubling in the least about the train of thought. The great majority of mani are tinged with eroticism, but we also find satirical ones, also soldiers' and robbers' songs in the form of quatrains. The quatrains composed on the Anatolian brigand Çakîdyly have been much admired by European scholars. Isolated, originally independent mani are now often strung together to form ballads of some length. It would therefore be wrong to regard mani and mânî as two fundamentally different classes of songs.

The number of mani current among the people is enormous. They are sung at all kinds of festivals and ceremonies, and by people over their work in the house in the long winter nights. On Hadicles, St. George's Day (April 23), they are used as oracles by young girls.

Very popular also among the Ottoman Turks are the so-called ëmînsî manî: punman manî. These are quatrains, the rhyme of which are identical syllables but have each a different meaning.

(T Kowalski).

AL-MANTI, one of Allah's names. [See also AL-AHMAD.]

MANISA, MACHNHA (מאניזה), in Arabic Maghniya, capital of the district of Sarukhan in western Anatolia.

Maghniya is two hours' journey distant on the south from the river Gediz or Gedas (the ancient Hermon); on its course, cf. Tschakdykhis, Asie Minor., ii. (1866), p. 232) on the northern slope of Mount Maghniya-dagh or Vamvlar (the ancient Sipylus) which separates it from Smyrna (the distance between the two towns by the Sabuncü-bell pass is only 20 miles; by railway 40 miles).

In ancient times the town ("Magnesia ad Sipylum") was mainly noted for the victory won in its vicinity by the two Scipios over Antiochus the Great of Syria (190 B.C.). The town was then incorporated in the Roman empire. It flourished until the fifth century as its coins show. Magnesia is also often mentioned in Byzantine history; after the taking of Constantinople by the Crusaders in 1204 John Ducas returnd to Magnesia where he held out till 1225.

The Turkoman chief Saru-Khan [q. v.] who had formed a principality for himself on the ruins of the Saljuk kingdom of Konya, took Magnesia in 1313 and the town was the capital of his dynasty for 78 years. It was in the reign of Saru-Khan that Il'n Bat'a (ii. 312) visited the town where he stayed in a zajübo of the brotherhood of the Şeytan. The town was large and beautiful, rich in gardens and with a plentiful supply of water. On the buildings erected by the Saru-Khan dynasty see the article on them.

After the battle of Angora (805 A.H.) Timur ordered his grandson Sultan Muhammad to lay waste (sizlan) the district between Brussa and Magnesia and to take up his winter quarters in the latter town. The author of the Gafur-numa, ii. 466—497, 498, calls it "Maghniya in the Saruhan-eli" [cf. Tschakdykhis, p. 322; Saru-khan] and comments on the excellence and abundance of its water-supply and the pleasantness of its climate. According to Turkoman sources (cf. Urduni, Taouihch'i i, ii. "Othman", ed. Babangir, p. 34—35; Aşık-pasha, p. 70; Munedji-dajm-bahi, i, 33); Timur restored the fiefs of Anatolia to their old holders (hecli-beki) but by 513 (1410) Sultan Muhammad I had retaken the region of Saru-Khan [q. v.].

Maghniya became the residence (Djihân-numa, p. 635 dâr al-abâman) of the Ottoman princes but for a time (1405—1425) its district was within the sphere of influence of the rebel Djineid (son of the Ottoman governor of al-Aydin; von Hammer, op. cit., p. 271—327). Murâd II having abdicated the throne in 1444 chose Magnesia as his place of retirement. The Hungarian offensive drew him out of it but after the victory of Warna (Nov. 10, 1444) he returned to Magnesia (v. Hammer, G.O.R., i. 351, 357) where the remains of his palace and gardens can still be seen. Murad III (1574—1595) and his wife also contributed to beautifying the town; cf. Dijhân-numa, p. 653. Chandler, Travels in Asia Minor, p. 1775; p. 207—210. and 266—268 speaks of the palace and pretty magnificent remains of Murad (III?) and of his foundation (tekye—college of arwishes, lunatic asylums etc.).

In 1633 in the reign of Murad IV, the governors of Sarasli ([q. v.] Ilyas Pasha rebelled and laid siege to Magnesia which was taken and plundered for three days. Ilyas was taken prisoner and the Sultan in ordering him to be beheaded reproached him with having devastated "the residence of his ancestors" (i.e., iii. 113—114).

In the xvmth century Magnesia became the capital of the powerful family of the Kara Othman-Oglu who extended his authority over the Mæander to the Propontid. It was not till 1814 that these hereditary chiefs, whose administration is praised by Keppel, Narrative of a Journey across the Balkans, London 1831, ii. 294—301, were replaced by a regular Turkish governor.

With the introduction of the system of wilayets, Magnesia became the capital of the sandjak of Sarukhan in the vilayet of Aydin (Smyrna). Sarni-bey, hâmâs al-Alûm, Constantinople 1898, vi. 434 estimated the population of the town at 32,523 of whom 21,000 were Muslims, 10,400 Greeks, 200 Armenians etc. Magnesia which is divided up by streams into 3 quarters had 25 djamâ, 38 mosques, 25 medreses, 18 tekyes etc. The kaâd of Magnesia had 4 niâye: Amlük, Yont-daghî Palamut and Belek. Cuinet, La Turquie d'Asie, i., 1894, p. 523—534 gives the following as the niâye of the sandjak: Maghniya, Soma, Kirk-Anâr, Aḵ-İhsâr, Kasaba, Gurdûs, Demirdjî, Şât-îli, Kule, Ala-šeher, Egmâ. After the reform of 1924 Saru-khan became a vilayet with 11 kaâds (the old niâyes). The population of the new vilayet is 302,752 souls and of the kaâd Magnesia, 75,021 souls; cf. the Türkiye Djihân-vetelînî Sarûkûnûsevi, 1926—1927, p. 926—933. In view of the movements of the population the ethnic composition of the sandjak must have undergone profound modifications.

(V. Menorky)

MANSHUR (a.) means literally "spread out" (as in the Kur'an xvii. 14 and lii. 31; opposite mašût "folded"), or not sealed (opposite mašlûm) hence means a c<rtificate, an edict, a diploma of appointment, and particularly a patent granting an appanage.

In Egypt in the early Arab period manshur seems to have been a name for the passes which the government compelled the fe'lsûlîn to have in order to check the flight of colonists from the land, which threatened to become overwhelming (Zulîya, c. above, ii., p. 148 and 998). In any case in the Furscher durch die Ausstellung (Zeugniss Ersterer Rainer), N. 631 (cf. also N. 601—602) such a certificate of the year 180 (796) is called a manshur and in Makrizi, Kiftat, ii. 493, we are told
of the period of the financial controller Usāma b. Ẓād al-Tanūkhī (104 = 722—723) that Christians who were found without identification papers (manṣūh) had to pay 10 dinars fine (cf. Becker, Beiträge zu Geschichte Ägyptens, p. 104). In the texts of such pos-ports themselves (cf. Becker, Papyr. Schett. Arch. 2, 109, i) however, we have, so far as I see, not the word manṣūh but only ʾkilāb.

Manṣūr seems also to have a quite general meaning of place when we read in Kalkashndi, ʿĀbd al-ʿĀdī, xiii. 142, that it was written on an ʿAbbasid grant of a fief dating from the year 573 (983—984) that no one could demand for the holder that he should show a ḥududja or a tavābī or a manṣūr.

The Egyptian Fātimids usually called all state documents, appointments, etc. by the general term ʿaǧūlī, but they had also special terms for particular diplomas of appointment, including manṣūr. Thus among the examples of Fātimid documents given by Kalkashndi, x. 452—466 there are several which in their texts are described as manṣūhūn. Among these are for example, appointments to the supervisory and tax-collecting offices (musharafat al-mašrufat al-qarāwī), to the postmasters (katibat al-khaṣrāy), to a professorship (ʾadrīr) etc. A grant of an appanage could also be called manṣūr at this time, so Kalkashndi, xiii. 131 sq. from the lost Fātimid Mawwād al-Bayān of ʿAlī b. ʿAbd al-ʿĀdī and the regulation that the manṣūhūn must not have an address (ʿirrāsān) and that in place of this the head of the Dīwān must write the date with his own hand seems to be first found in Ibn al-Sairāfī, Kāhin Dinwān al-Rašīdlī, p. 113 sq. = Kalkashndi, vi. 198.

Under the ʿAbīyūdīs also, manṣūr had quite a general meaning. Thus in Kalkashndi, xiv. 49 sq. a "noble marshall" (naqib al-ʿaṣrāfī) is appointed by a manṣūrūn and in 51 sq. governors (wustālī) of different provinces. In the text of it the name manṣūrūn is given to the edict on the equation of taxation and lunar years (tawāl al-ṣānīn) which is quoted from the Mutābdīddīr of the Kādī al-Faḍlī for the year 507 (1117—1117) in Makrizi, i. 251, ed. Wiet, iv. 292 (cf. also Kalkashndi, xiii. 71 sqq.), and according to a further quotation, for the year 584 (Makrizi, i. 269 = Wiet, iv. 248) the so-called "lord of the new year" (ʿamir al-nawrūz) issued his manṣūrūn.

The term manṣūrūn became limited and specialised in the Mamlūk period, for which we have very full sources. The increasingly complicated system of the administration brought about a minute distinction between and special names for the various diplomas of appointment, edicts, etc. and the term manṣūrūn was henceforth used exclusively of the grants of appanages. These manṣūrūn were always written in Cairo in the chancellory (dīwān al-ʿināh) in the name of the sultan, only in exceptional cases they might be in the name of the nāṣir kāfīr (see Kalkashndi, iv. 16; xiii. 157).

According to the very full description in Kalkashndi, xiii. 153 sqq. and Makrizi, ii. 211, the procedure in granting a fief was as follows: if a fief became vacant (maḥtūl) in a provincial town, e.g. in Damasc, the governor there (maḥdī) proposed a new holder and had a document (sūqqa, also called ʿaṣrī or murābbāh) drawn up about his proposal by the inspector of the army (nāṣir al-ʿaṣrī; cf. Kalkashndi, iv. 190; xiii. 97) in the military Dīwān (dīwān al-ʿaṣrī) of his town. This document was then sent by courier (būrid) or pigeon post (talāʿa ṣafīṣat al-ḥamṣîn) to Cairo to the government (al-ʿabnūh al-ṣārīfīa). Here it was received by the postmaster (lāwārī), later by the private secretary (kādī al-mūjir = ʿāshāh dīwān al-ʿināh), who placed it before the sultan in audience (dīnūs fi dār al-ʾaḍ), for approval, to receive the sultans, signature (ḥaṣṣ ʿaṣrī) and the note yuṭāla ("let it be written out"); see Kalkashndi, iv. 51. The document then went to the Military Dīwān in Cairo (dīwān al-ʿaṣrī) occasionally also called dīwān al-īlāhī, where it was filed, after what was called the murābbāh’s had been made. After the latter was sent to the dīwān al-ʿaṣrī and the private secretary, the head of this Dīwān, wrote his requisition (taʿān) for the ʿaṣrī connection and now finally the patent of the appanage (manṣūrūn) proper could be made out in the dīwān al-ʿināh in Cairo, while the murābbāh’s of the army Dīwān remained filled in the dīwān al-ʿaṣrī as ʿaṣrī (proof) (cf. Kalkashndi, vi. 201).

Full particulars are given of the formulæ used in these manṣūrūn and of their outward form in Makrizi, i. 200 sqq. and Fourmestre, Histoire des Sultans Mamlouks de l’Egypte, i. 200 sq., note 82. There are many variants of format (鹘, q.v.) and script according to the military rank of the recipient. Thus manṣūrūn for the Makhdummīn ʿl-ʿaṣrī were written on ʾl-ʿaṣrī, the ʿināhīn, for the Umbūrī al-Tublīshanī on ʾl-ʿaṣrī, for the ʿUmarī al-ʿAṣhārāt on ʾl-ʿaṣrī and the ʿAmīrī al-ṣultānīya and Mahdaddīmīn ʿl-ʿaṣrīs and the sultānīya. Many rules were laid down for the wording to be used, the text is to be shorter and less florid than in the other appointments and there are none of the usual rules about service (mawṣaʾī). An original "virgin" (muṭṭakarat al-ʿināh) is recommended as the finest form of a manṣūrūn. Special formulæ are further required for grants of appanages which were concerned in renewal (tawālīd), addition (tawālīd) or substitution (tawālīd). A regular signatory of the sultan, such as is usual on appointments as confirmation (mustānad), is not found on the manṣūrūn; instead of this the sultan writes formulæ like: God is my hope (Allāhu mawāli), God is my Protector (Allāhu waṣir), God is sufficient for me (Allāhu sālih). To God belongs the rule (al-Malahi lī ʿašrī), or: God alone has grace (al-Mūmūna li ʿašrī waṣirah).

Occasionally the manṣūrūn for the highest ranks (Mukhdummīn ʿl-ʿaṣrīs and Mahdaddīmīn ʿl-ʿaṣrīyān) had a ṣāfī ṣūqqa [q.v.] at the top. The ʿaṣrīs were prepared by a special official beforehand and ginned on to the finished diplomas. In Kalkashndi, viii. 165 sqq. the ʿaṣrīs of Nāṣir Muṣḥammad b. ʿAṣkān (693—741 with interruptions) and Asḥaf Shābān b. Husain (764—776) are reproduced and described; they differ considerably from the better known form of the ʿaṣrīs of the Ottoman Sultanīs. After Asḥaf Shābān the ʿaṣrīs were no longer used on the manṣūrūn; these were only used for purposes of display on letters to infidel rulers.

The completed manṣūrūn was then again taken back by a courier from Cairo to the town concerned, e.g. Damasc and handed over to the tenant of the appanage. The inspector of the army there (nāṣir al-ʿaṣrī) however first entered it in his register for he had to keep a roll of the holders of fiefs in his province. Kalkashndi, xiii. 167—199 gives as examples of manṣūrūn no fewer
than 26 texts, beginning with one drawn up by
Muḥyi 'l-Dīn b. ʿAbbād Al-Ẓāhirī in the reign of
Kalāūn for the latter's son Nāṣir Muḥammad,
which for its remarkable beauty he calls a regular
ṣūṣūn al-manāsīr. The other texts are for the
above mentioned military ranks, as well as for
sons of emirs (waqīd al-manāsīr) and for emirs
of the Abbasid, Turkmans and Kirds.

The term manāsīr was also used for patents of
appointment in the Ottoman empire, but it
does not seem to have been used so definitely or
exclusively in this sense; there are however man-
āsīr for visiers, generals, and governors (waqīd
montūr, waqīd mushīr, caṣṣīl muntūr, and
in the treaties of peace made after the Balkan
War in 1913, it is still provided that the chief
munīs to be appointed in Bulgaria and Greece
are to receive their munīs from the Shāhīl al-
Islam in Stambul and they also have to put
forward for approval the manāsīr of the ordinary
munīs subordinate to them (cf. e.g. Karl Strupp,
Altpostmalexakte zur orient-
lichen Frage, Gotha 1916, p. 295, 308).

The name manāsīr was also applied to the
pastoral letters and epistles of the Christian
patricarchs and bishops. In conclusion it may be
mentioned that manāsīr in mathematical language
means "prism" (varieties e.g. M. mādīb oblique
prism, M. kām straight prism, M. mulāwātī
diagonal prism, M. muntāzam regular prism, M. mulāwātī trapezoidal prism, M. mādī truncated
prism), and that in the language of the Persian
poets the nightingales are called "the menshūr-
writers of the garden" (menṣūrūn nasī′āt-i kāshī
diagram). In addition to the passages quoted
of Ibn Šāhīl, Manṣūr al-Kūshī, p. 431;
100, 102; Gaudefroy-Demombynes, La Syrie à
l'époque des Mamelouks, Index; W. Björkman,
Beiträge zur Geschichte der Staatskünste im
islamischen Ägypten, Index 1.

(W. Björkman)

MANSŪR. [See NĀṢĪR.

AL-MANSŪR, ʿAbbād Dīvār ʿAbbālāh, Muḥammad, the second ʿAbbāsīd caliph. His
mother was a Berber slave girl called Saffāna, his
brother the caliph Abū ʿAbbād al-Saffāh (q. v.). In
the fighting against the Omayyads he distinguished
himself and took part in the siege of Wāṣ, which
had been fortified by Ibn Abīhūra (q. v.), the last
important supporter of Masāwī. The treacherous
murder of Ibn Abīhūra, to whom the two ʿAbbāsīds
had expressly promised a pardon, is however not
out of keeping with Abū Dīvār's character. His
brother gave him the governorship of Armenia,
Aḏharbāḏjan and Mesopotamia, which he ad-
mistened till his accession. On the way back from
the pilgrimage, he learned that Abū ʿAbbās had
been put to death in Dhu ʿl-Hijjah 136 (June 754)
and that he himself had been proclaimed caliph. His
uncle ʿAbbād ʿAlī (q. v.) wished to dispute the
Aḏharbāḏjan and Media was defeated by Abū Muṣīm
(q. v.). Soon afterwards the Caliph had the latter
put out of the way, which led to a rising in
Khurāsān. The leader of this was a Persian named
Sunbāh; he advanced far into Media but was
defeated between Aḏharbāḏjan and Kāyβ by the
caliph's troops led by Dīwār b. Mārārī and soon
afterwards slain. When Dīwār also cast off his
allegiance to the caliph, the latter sent an army
under Muḥammad b. Aḏhāṭī against him (138 =
755—756). Dīwār was defeated and fled to
Abūlabbās, where he was put to death. About
the same time the Khārājīs rebelled in Mesopotamia
under Muḥammad b. Ḥarmān al-Ṭabībīn who in-
flicted severe reverses on al-Mansūr's armies, until
the rebellion was finally suppressed by Khānīm
al-Kūshī b. Dīwār in 138 and Muḥammad ibn
Ḥāshimiya also there was a rising (probably in
141 = 756—759). A body of the so-called Rāwandi
(q. v.) who identified the caliph with God himself,
went to the capital and when al-Mansūr had some
of them arrested, they were forcibly rescued by
their friends. But for the valiant Mān b. Zālīa
(q. v.) it would hardly have been possible for the
caliph to dispose of these mad fanatics. A few
years later, the Alīids also rebelled under their
leader Abū ʿAlī b. ʿAbd al-Ḥasan (q. v.). In the autumn
of 145 (762), a rebellion broke out in al-Medina,
and Muḥammad son of Abū ʿAlī was proclaimed
caliph there, but in Kārāf in the same year
(Dec. 762) defeated by the caliph's nephew ʿAbd
Maḥmūd. The latter attacked Muhammad's brother Ḥār-
him, who had risen in Bārša and severely defeated
him at Bākḥamūr (q. v.) where the latter was slain
(Dhu l-Kaʿdā 145 = Feb. 763). In Spain the Omayyād
Abū al-Raḥmān b. Muʿāwiyā had founded an
independent kingdom in 138 (756) and in
Africa there was fighting for several years with
the Berbers and Khārājīs. It was only after the
Abādī Abū Ḥāṭīm (q. v.) had been defeated by the
Caliph's troops under Ṭāhir b. Ḥāṭīm in Rābū I, 155 (March 772) and killed that order
was restored there. Yazīd remained in Kairawān
as governor till his death in 170 (780—781).
In Khurāsān a new rebellion broke out in 149 (766—
767) or 150. The leader Ummūdīshīs declared himself
a prophet and gathered numerous followers around
him but was defeated by Khāzīm b. Kūshāma,
who wrought a fearful massacre among the rebels.

The frontiers also resounded with the noise of
battle. The war against the Byzantines was con-
tinued under al-Ḥāshimiya, but was confined mainly
to raids or the destruction of individual strongholds.
Al-Mansūr devoted special attention to protecting
the frontier by building fortresses, and the two
towns of Mālātīya (Melitene) and al-Maṣṣāra
(Mopsuestia) were rebuilt in his reign. Several
expeditions were sent against Dālam and Ṭabarīnān
in the early years of al-Mansūr's reign and after
the extinction of the old line of Ṣaḥābiids of the
Banū Dālimān (q. v.) in Ṭabarīnān, this province
took received Arab governors. In 147 (766—759) the
Khazars invaded Armenia, seized the town of Ṭīfīs
and defeated the caliph's troops but retired again.
There were also encounters with the people beyond
the Ouxus and in India; but these were of minor
importance. At first al-Mansūr lived at al-
Ḥāshimiya near Kūfā, as did his predecessor; he later decided to
build a new capital and in 145 (762) the foundation
stone of Bāghdād (q. v.) was laid. Khālid b. Barmāk
is said to have been his adviser in this matter;
he played an important part in other respects in
al-Mansūr's reign [cf. Barmače]. Al-Mansūr
devoted himself with the greatest energy to
his duties as a ruler but troubled little about the
means he used and never hesitated to act in
the most faithless manner if he could only attain
his aim. He was always kept very well informed of
everything that went on in the different parts of
his wide empire, and devoted special attention to
the improvement of the finances of the State in
order to leave his successor a full treasury. He took an active interest in literature and was a brilliant speaker; on the other hand he did not tolerate music and song at his court and in general led a very simple life. His nephew Isā b. Mūsā [q.v.] had been destined by al-Saffāh to succeed al-Manṣūr but was induced by the latter to withdraw his claims on condition that he should succeed after al-Mahdī [q.v.]. Al-Manṣūr died in 

[Further text not visible]

AL-MANṢŪR B. ILMĀH AL-KĀSIM, the name of two Zādī imāms of the Yemen. I. AL-KĀSIM B. 'AlI AL-AIYNI (? according to others al-Ilāyī). His genealogy goes back through a certain 'Abd Allāh and a Muḥammad ad al-Kāsim b. Idrīsh Ṭāḥabā (d. 246 = 860), the spiritual founder of Zādism in the Yemen; he is however not a descendant of the latter's grandson, al-Ḥādi Yaḥyā b. al-Husayn, the creator of the secular power of the Zādīs in the Yemen. The latter was succeeded in the imamate by his two sons: the weak Muḥammad ad al-Muṭtadī and the more capable Aḥmad ad-Nāṣir. With his death in the year 322 (934) the imāmate came to an end for a time. Although in 345 (956) al-Kāsim al-Mukhtar, a son of al-Nāṣir, seized the capital Ṣanʿā', he was soon defeated by al-Dāḥkish, the chief of the tribe of Ḥamādan, who put Ṣanʿā' under the suzerainty of the Ziyādīs of Ṣabīṭ; the hostile tribe of Bahrānīn however played it (352 = 965) into the hands of the Yafūrid ʿAbd Allāh b. Kaḥīf. In the midst of this civil strife, a nephew of the defeated Muhkhtar, Yūsuf b. Yaḥyā b. al-Nāṣir succeeded for a short time in gaining power and being recognised by the Zādīs at least as a dāʾī. Driven out by the Yafūrids, his power became limited to the old Zādī stronghold of Ṣaḍa in the north. Al-Kāsim b. 'Alī, with the support of the Bannī Ḥamādan, rose against him, claiming the imamate with the title al-Kāsim b. Manṣūr b. Ibhī in 380 (992); he occupied Ṣaḍa', forced his way through the Wādī Shūwābā and al-Bawān southwards to the highlands in the N.W. of Ṣaḥāra and from there forced the capital to recognise him. His career however was brief and his power unenduring: for when in 393 (1003) he died, his governor in Ṣaḥāra had already gone over to Yūsuf al-Dāʾī. He was however the first since al-Nāṣir Aḥmad, and the fourth in all to be entered — although not by everyone — in the lists of Imām of Yemen (but cf. on the above claimants: Manalihjumahzā, in Sahā, Ein Viertausend year-though for a period founded a special sect, the "Isa'ainyya" in the name of this concealed imām. Some years later another son of al-Kāsim, Ibhī fa't, began a struggle full of vicissitudes with the other ʿArid claimants to the imamate, which was complicated by a party grouping of the tribes of the country: about 453 (1061) Ṣanʿā' fell to the Ismāʿīlīs of Surah and then to Ḥudnīms. Only in 545 (1150) Aḥmad b. Sulaimān al-Muṭāwakkil, whose genealogy also goes back to al-Nāṣir Aḥmad b. al-Hādi but neither through al-Kāsim al-Mukhtar nor Yūsuf al-Dāʾī, succeeded in restoring the imamate for a long and brilliant period. For the history of the following centuries, which were full of incidents and individual imāmas of importance cf. the article AL-MĀḤDI DAWEĐ 1 a and b. The family of Yūsuf al-Dāʾī remained victorious in the end. His descendant in the twelfth (14th) generation: II. AL-MANṢŪR AL-KĀSIM B. MUḤAMMAD (cf. supra, p. 1192), was the founder of the modern Yemeni dynasty. At the end of 1005 (1597) he appeared in the field and held his own against five Turkish governors. Not only did he find opponents and people he could not trust among his own Zādīs, who went over to the Turks but among the latter the change of governor frequently led to war and even to mutiny; the tribes were an inexactable element; the Turks were often able to call to their help the Ismāʿīls (Karrāṇān), always hostile to the Zādīs. The lack of equipment was a great hardship to the imām; for example in one battle he is said to have mustered only 20 riders against the Turks' 2,400. It is very difficult to get a clear idea of this minor war but the following are the main facts that emerge: After the proclamation of the holy war at Čečen al-Šāīk in the northern district of Shām al-Shār at the end of Muhammad 1006 (Sep. 1597), al-Kāsim conquered the highlands of Ḥamādan and Ḥudnīm, the latter with the fortress of the same name, which had been a bulwark of the Zādīs for 300 years with occasional interruptions; turning to the southeast he established himself in the mountains of Ḥāṣūr al-Šākhī (also called Ḥāṣūr Banū Ād); cf. the article Ḥāṣūr) in the important Thall (see THALL) in the N.W. of Ṣanʿā'; his followers rose throughout the land and for some time even cut off the Turkish communications with the sea. But after two years, the collapse began before General Šīnān: by the end of 1010 or beginning of 1011 (1602) he had to flee from Ḥudnīm. But in 1014 (1605) again he rebelled against Šīnān in the district of Ḥudnīm who had been appointed governor this time from Čečen; he also took Ṣaḍa'. Al-Manṣūr al-Paša was recalled, al-Kāsim was able to induce his successor Ḥāda Paša to make a truce, which
was observed for about ten years with a few
interusions especially on the arrival of new
rulers in 1022 and 1025. After renewed fight-
ing a formal peace in 1028 the imam in pos-
session of the four separate areas: around Shahār, around Khaṣbah in the east, around Ša'da in the
north, and lastly in the S.W. of San's around
Ḥaima [q.v.], the inhabitants were however for the
most part not Zaidīs but Shī'īs. Al-Kāsim died in Rās'il in 1029 (Feb. 1629). In the middle of 1038 (beg. of 1629) Ḥaidar Ṣagha to evacuate San's before his son and successor al-
Mu'aiyād Muhammad.

Al-Kāsim b. Muḥammad was a conscientious
Zaidī; as a youth when a fugitive before the Turks
he had studied with many spiritual authorities; he
composed numerous appeals for the rebellions;
work of a legal and dogmatic nature by him
still exist.

(K. STROTHMANN)

AL-MANSÜR, the sixth ruler of the
Hammadid dynasty, succeeded his father al-
Nāṣir in the year 481 (1088). The latter had
witnessed the rise to the height of its power of
the dynasty of somewhat artificial development
of Khal Ban Hammad [q.v.], a result of the
destruction of Kairawān by the Arabs. Two years
after the accession of al-Mansūr, the Arabs, who
had advanced towards the west and who had
spread over all the region adjoining the Kal'a,
braved to make existence there difficult. The prince
moved his capital from Kal'a to Bougie which he
considered less accessible to the nomads; it should
be mentioned that his father al-Nāṣir had already
made preparations for the exodus by transforming
a little fishing port into a regular town, which
he called al-Nāṣirya and which was to become
Bougie. While on the other hand, the Kal'a was
not completely abandoned by al-Mansūr and he
ever embellished it with a number of palaces. The
Hammadid kingdom had therefore at this time two
capitals joined by a royal road.

After taking up his quarters at Bougie, al-Mansūr
had in the first place to quell the revolt of one
of his uncles, Belhar, the governor of Constantine.
He sent against the rebel another Hammadid Emir,
Abā Yakin. The latter after his victory was given
the governorship of Constantine but shortly after
he in his turn as well as his brother, who had been
given the governorship of Béni, rebelled. These
risings over which al-Mansūr, thanks to his energy,
was triumphant, brought to the side of the rebel-
one of the Hammadid family the Zirids of al-Mahdiya,
who wished to get back some power in Barbary,
the Almoravids of the Magrib, who wished to
extend towards the East and the Arabs who were
always ready to join in the feuds of their powerful
neighbours.

Al-Mansūr was, on the other hand, led to oppose
the advance of the Almoravids who were curiously
allied with the traditional opposition of the Zenātī
[q.v.]. With the probable object of disarming the
opposition al-Nāṣir and al-Mansūr had married
two sisters of Māhkūkh, the chief of the Bani
Wānānī, at that time the most powerful of the
Zenātī group. This alliance did not hinder the
time-honoured feud from breaking out again. It
became more acute when al-Mansūr murdered his
wife, the sister of his enemy. The latter then
asked for support from the Almoravids.

From Tlemcen, where they had been installed
for more than twenty years, the Almoravids had
after many attempts, endeavoured to expand towards
the East at the expense of their brethren of the
same race, the Sanhāja b. Hammad. Al-Mansūr
had twice reduced them to impotence. It was at
this time that the murder of the sister of Māhkūkh
by al-Mansūr drove the Wānānī chief into an
alliance with the Almoravids of Tlemcen. The
alliance formed in this way was a great blow to the
Hammadid kingdom. Algiers was besieged for
two days; ʿAsīr was taken.

The fall of the latter fortress, the oldest stronghold
of the family, was bitterly resented by al-Mansūr.
He got together an army of 20,000 men, com-
posed of the Sanhāja, the Arabs and even the
Zenātī; he marched against Tlemcen, met the
 governor Tāshīn b. Tīnammer to the North-East
of the town and put him to flight. Tlemcen was
not spared even at the suppression of Tāshīn's
wife, who invoked the ties of relationship uniting
them with the Sanhāja (496 — 1102).

After the defeat of the Almoravids, al-Mansūr
severely punished the Zenātī and the rebel tribes
of the Bougie district, whom he forced to flee
into the mountains of Kabylia.

Thus al-Mansūr seems on the eve of his death
(498 — 1104) to have thoroughly re-established
the power of the Hammadids. According to a
tradition, which is not above suspicion, recorded
by Ibn Khaldūn, the two capitals owed very
important buildings to him: Bougie, the Palace
of the Star and the Palace of Salvation; the Kal'a,
the government palace and the Ka'ver al-Mansūr
the beautiful donation of which is still in part extant.

(GEORGES MARÇAIS)

AL-MANSÜR, Ahmad b. Muḥammad, born in
1449, seventh ruler of the Saʿdiān dynasty
of Morocco, son of Sultan Muḥammad al-Mahdi
and Shaḥīb al-Raḥmānīya. His victories and his
wealth earned him the epithets al-Mansūr and
al-Dhabahī.
he was still a child when on the accession of his eldest brother 'Abd Allâh (1557) he accompanied into exile his other brothers 'Abd al-Malik and 'Abd al-Mu'min, who went for safety from Sûdûmân to Tlemcen. The fugitives were potential claimants to the throne of the Sharîfians, by virtue of an agreement concluded in the life-time of their father by which the one to inherit the power was not the Sultan's heir but the eldest of the family. 'Abd al-Mu'min was assassinated at the instigation of his nephew Muḥammad b. 'Abd Allâh called al-Mutawakkîl and Aḥmad retired to Algiers to join 'Abd al-Malik who was already there. He was henceforth always a loyal lieutenant of his brother whose ability he fully realised. The death of 'Abd Allâh in 1574 gave the exiles the opportunity to assert their rights. Pretenders and rebels could always rely on the support of the natural enemies of every reigning sharîf: Spain and Turkey. Philip II had remained deaf to the repeated appeals of 'Abd al-Malik, who appealed to the Grand Turk and in 1574 went to Constantinople where his marriage with the daughter of the renegade al-Fâji'il Moratto assured him of patrons. In Algiers Aḥmad concluded successful negotiations with certain Moroccan notables, mainly in Fès. It was perhaps he who gave the signal when an expedition appeared to have some chances of success. He was at his brother's side when the latter entered Morocco in 1576 with a Turkish army led by Ramadân Phâsha and helped him to raise troops in the region of Tlemcen. We do not know exactly what part he played in the battles of al-Rûk and al-Sharrâr which gave Morocco to 'Abd al-Malik but we know that he was given the task of pursuing the dethroned sultan on his flight to Marrâkûsh.

One of 'Abd al-Malik's first acts was to recognise his brother as his heir. It seems, however, that he did not show the latter as much esteem as affection and he had left in Constantinople, with his wife, his son Isma'il. But he was bound by his policy. In these circumstances Aḥmad naturally had the vice-royalty of Fès.

He did not stay there long, for he was recalled to save Marrâkûsh from a return of al-Mutawakkîl. Taking command of one of the three armies charged with pursuing the vanquished sultan in al-Sâs and the Atlas, he does not seem to have found an opportunity for a decisive military success: he returned to his governorship while Muhammad had been driven to seek refuge behind the walls of Ceuta.

In June 1578, 'Abd al-Malik summoned him with all his forces to Kaṣr al-Kabîr (Alcazarquivir, q.v.) to stop the advance of the King of Portugal's army. The latter had foolishly sought to realise the dream of conquering Morocco cherished by John III. When Muḥammad b. 'Abd Allâh after vainly appealing for help to Philip II, turned to Sebastián, he at once received a favourable reply. A large army with about 20,000 effective fighters left Portugal in June, landed at Tânger, then went to Azîlila, which 'Abd al-Karîm b. Tûda had just relieved, and proceeded by land towards Larache. The Moroccan forces coming from Marrâkûsh and Fès met them at al-Kaṣr. Aḥmad found his brother seriously ill, poisoned by the kâids of his staff, it is said. The battle was fought a few miles from al-Kaṣr on Aug. 4. Sebastián's men, absurdly led, having exhausted all their provisions, fought with their backs to the river of the Wâdi 'I-Makkâzîn. The sharîf arranged his army in a crescent. In about 5 hours the Christians were annihilated by the Moorish cavalry. 'Abd al-Malik died in his litter during the battle, Sebastián was killed or committed suicide and al-Mutawakkîl was drowned. That evening, Aḥmad henceforth known as Aḥmad al-Mansûr was proclaimed emperor.

Elegant, cultivated, very learned in religious matters, mora a man of the counsel-chamber than of the camp, he was succeeding a popular and fearless ruler, of exceptional energy, who having acquired a taste for innovations in Turkey had begun to introduce them, perhaps too eagerly, into Morocco. Designated as his successor by 'Abd al-Malik, and benefiting by the great reputation left by his father, Aḥmad al-Mansûr was rapidly able to overcome the difficulties which awaited him, as they did every sovereign of Morocco on his accession: mutinies of the troops, demands from allied tribes and the Zâwiyas, and agitations among the Berbers. While in Spain it was feared that the Christian garrison would be attacked and swept away, al-Mansûr had to hurry to Fès to make himself recognised as ruler there, to put down unrest and behold a few notables. He edited the people by displaying the skin of Muḥammad al-Maṣûkîsh staffed with straw in the regions of al-Sâs and the Atlas, where the influence of the former sultan had survived for a brief space his tenure of the throne.

Aḥmad al-Mansûr very soon sought means of enriching himself. The booty taken in the field of al-Kaṣr, the work done by the prisoners reduced to slavery, the ransoms extorted from the gentlemen gave the sharîf and his people enormous sums. The Sultan kept the nobles for himself, so were soon brought to him and he set about bargaining about them. In a little time, less than a year, the ransoms had been arranged.

The haste displayed by foreign courts to congratulate the Moor on his triumph was remarkable. Ambassadors thronged to Marrâkûsh, those of Spain and Portugal bringing magnificent gifts. Aḥmad al-Mansûr had the sense to understand that these presents were the most he was likely to get from European action. For its neighbours, Morocco was a weak and troublesome state. The simplicity of its neighbours was its best protection.

Many reasons urged the Turks to obtain a footing there: the capricity of the beglerbegs of Algiers ambitious of extending their powers to the west; the naval basis of Mazaga of al-Maṣûr and of Larache; the formal promises that had been given by 'Abd al-Malik, when he was begging assistance, and there was always the trouble-some question of spiritual supremacy, as the Turkish Sultan did not admit that the Moorish sharîf had an authority in religious matters as great as his. To extirpate himself, al-Mansûr played the usual game, following the example of his brother, who had made advances to the kings of Spain, Portugal and France, to the Queen of England and to the Grand Duke of Tuscany; he turned without ceremony from the Grand Turk and threw himself into the arms of Philip II, overwhelming the Catholic King with demonstrations of friendship, of which the most significant was the return without ransom of the body of Sebastián; he was even promised Larache. The quarrel with Turkey was soon to come to a head. 'Ali, Beglerbeg of Algiers, exerted all his influence to get war declared. Aḥmad al-Mansûr
as a last resort had to send in 1581 an embassy laden with presents to Constantinople where the enemies of ‘Alī al-Mansūr were conducting an effective campaign against the Beglerbeg. The relations between the two Muslims resumed the appearance of cordiality which they usually had. In 1587, the death of ‘Alī al-Mansūr put an end to the régime of the Beglerbegs and the weakening of Turkish power in Algiers freed Morocco from a threat, which had long weighed heavily upon it. There were still periods of tension: when al-Mansūr ceased to send what he considered gracious gifts and what the Grand Turk received as tribute; when the conquest of the Sudan seemed to be about to threaten Ottoman interests, spiritual and material; and lastly in the period of friendship with Spain. But there was never again a real crisis; even in spite of the efforts of Hassan who had married ‘Abd al-Malik’s widow, the Turk did nothing really serious to sustain the claim of Ismail.

When al-Mansūr had peace on the Turkish side he showed Philip what negotiations meant: yielding money, breaking off nothing; playing enemies off one another. It was no longer a question of handing over Larache but of an exchange and the pourparlers dragged along for four years with a decreasing seriousness of purpose. The Duke of Meliana-Sidon, supported by Philip II, to deal with Moroccan affairs was played with by the Moor who was able to reap considerable advantage from his hesitation on several occasions. The Sharif seems to have summed up very skilfully the character of the Catholic king and the needs of his policy. Spain, faced with a crisis at home and abroad, could not think of risking anything important in Africa. It was his interest that Morocco should remain weak, that is to say Moroccans, and especially that it should not fall under the influence of the Turks or of the English. Corsairs sheltered in the Atlantic ports, on the route to India. The garrisons, weak and badly provisioned, were periodically blockaded sometimes threatened, by the natural movements of tribes around them rather than by deliberate hostilities on the part of the Sharif. The policy of the two Philip, one of distrust and fear, tried to limit the evil and to obtain by subtle means a neutrality as little malevolent as possible, by awaiting the favourable moment of the anarchy, which history showed to recur in Morocco with an inexorable regularity. The Spanish court did not attempt to make capital out of the pre-eminence in Spain of two pretenders, al-Nāṣir and al-Mansūr, the brother and the son of al-Mutawakkil which disturbed al-Mansūr; in 1589, Arzila was evacuated without a quid pro quo. The fear of seeing Moors and Moroccans draw closer to one another kept Spain from unfolding a liberal economic policy, the only one capable of affecting the Sharif in a sensitive part.

The latter by nature very cautious and far-seeing was not inclined to take risks. He had also to reckon with a public opinion, already irritated by the influence wielded by Jews and renegades: anti-foreign feeling definitely increased in the course of the reign; the fact that he had compromised himself with the Christians weakened the prestige of the sultan, while the wealth and power of the Marabouts and brotherhoods increased to a dangerous degree. The splendid-loving ruler of a covetous people, al-Mansūr did not think of concealing the sympathy he had for traders. With the Grand Duke, who freely received Moors in Tuscany and did all he could to develop commerce between the two countries, with Elizabeth, with the English, French and Dutch traders, relations were close. Sugar was exported from the South and Morocco also supplied corn in good years, gold from the Sudan, saltpetre, copper and hides. It imported principally cloth and for al-Mansūr himself, the materials for his buildings. From the Sharifian court there went undefinable envoys, at once ambassadors, spies, procurers of jewels and of women. But contraband especially interested the Sharif, contraband of war and the sale, advantageous for every one, of the cargoes and slaves brought in by the corsairs. The English were the most punctilious contrabandists and the trade with Morocco developed so well that in 1585 the Barby Company was founded with a monopoly and a regular constitution. But Ahmad al-Mansūr was not too fond of regular traders. The many Christians settled in Morocco must be considered to have been adventurers. Quasi-prisoners of the Sharif and his people, they were able to realise precarious fortunes, always liable to extortion. In 1585 bankruptcies were numerous in Morocco and the loyal company could not survive. The caprices of the sovereign drove off many other foreign traders.

These economic relations gradually developed into political ones. It was to exercise pressure on Spain that Ahmad al-Mansūr pretended to submit to the wishes of a combination of Dutch and English. After the destruction of the Armada in 1588, he entered without hesitation into the English camp; he received at his court Don Christoph, son of the Portuguese pretender Don Antonio, and agreed to a loan to Elizabeth. Then he drew back again. The taking of Cadiz in 1596 again influenced his feelings; he spoke of an alliance and made definite offers. Nothing resulted from these demonstrations, except a painful impression left after deception. So long as Elizabeth was alive, relations were friendly, for the two rulers had kindly feelings for one another, but James I, on his accession, at once showed a much less benevolent attitude towards the Sharifian court.

It was in the direction of the Sudan that Ahmad al-Mansūr gave reign to his desire for glory and conquest. His troops had had some experience in the Sahara. In 1581, the oases of Tuft and Tiguida, which had long been free from the Sharifian yoke had been conquered brilliantly. In 1584 an unsuccessful expedition had ended in the disappearance in the desert of a large army which had not even reached Teghaza. In 1599, having sought a quarrel with the askia Isâkh over the ownership of the salt mines of Teghaza, al-Mansūr persuaded his Council to go to war; a little army under the Pasha Djuawbar crossed the desert and destroyed the Sudanese empire. The occupation of the conquered country was nothing but systematic plunder and massacre. The Sharif collected great wealth there; he received the congratulations of the Powers and gained a prestige which still survives; his lieutenants also enriched themselves. With remarkable regularity, almost every year, reinforcements set out for Gago and very often reached it; caravans brought gold, wealth and slaves back to Marrakesh. The most famous of the prisoners was the legist Ahmad Bābā [q.v.] for whom Marrakesh was a gilded prison where he taught quite freely. The
Towards the end of his life al-Manṣūr was thinking of creating a new Marrākush on the model of Fās.

Aḥmad al-Manṣūr at first ruled as an autocrat. His orders were clear, his decisions rapid and sometimes, as might be expected, drastic to cruelty. His intimates, the qāḏi Ruhū, a Jew, whom we only know from European sources and ʿAṣṣūz, seem to have been his secretaries, like al-Fīḍṭālī, his biographer and poet-laureate whose works have not survived. The Paḥa Kīḏwān, very powerful at the beginning of the reign, acquired such influence that the Sharif had him beheaded in 1581. In time the notables acquired a great deal of independence and the Sultan hardly dared check their abuse of their power; two factors caused him much anxiety, the anti-foreign and anti-Christian al-Nāṣir's advent. As he was unable to combat his son Abū Fāris, by a concubine, al-Ḵaizūrin, al-Manṣūr had two sons, al-Shākh and Abū Fāris, and by his wife Lallā ʿArīfa al-Shāblānīya, Zaidān. His favourite son Abū ʿl-Haṣan was killed in 1594. In 1579 he had designated as his heir al-Shākh, called al-Muḥānī who held the vice-royalty of Fās. The remainder of Morocco was divided into governor-ships under other princes. These were several times rearranged; Abū Fāris, having considered everything, remained at Marrākush near his father to be ready in case of his death. In Fās, al-Manṣūr, supported by his favourite Mūṣafā, conducted himself like an independent ruler. He had displayed his gifts of energy, leadership and bravery on the occasion of al-Nāṣir's escape in 1595; living in great pomp, beloved by his troops, he was undoubtedly a cause of anxiety. His father allowed himself to be led by Abū Fāris. The conflict broke out in 1598. Forcibly to sacrifice his favourite, thrown into prison and then half pardoned, al-Manṣūr had to renounce all hope of winning in the struggle against Zaidān who was supported by Abū Fāris. After 1600 he sought support from Spain and Algiers.

Under Aḥmad al-Manṣūr, the dynasty attained its zenith. But it is hardly correct to say that the decline of the ʿṢāliḵīs only dates from the death of the great Sultan. After the conquest of the Ṣūḏān, the anarchy reigning in Algiers, the weakness of Spain in Europe, the death of al-Nāṣir, the conversion to Christianity of another pretender, al-Shāihī, Morocco was rich, seemed powerful and the Sharīṭīn throne stable. Aḥmad al-Manṣūr, by not being able to arrange for his own successor, nor even to keep his son in obedience, gave his country the chance to destroy itself. This process began under his own eyes. He had gone to Fās to try to reconcile his children and put through the appointment of Abū Fāris as heir apparent when the plague carried him off in 1603. Civil war broke out over his dead body. He had passed the last few years of his life wandering about living in a tent, shifting his camp every ten days, driven from Marrākush by the plague, which had begun to rage in Morocco in 1598.

(C. Funcck-Brentano)

AL-MANȘÜR Ibn Abî ‘Amîr, a famous ḥādjīb of al-Andalus in the tenth century A.H., the Al-
nanot of the Christian chroniclers of medieval Spain. His father was Abî ‘Amîr Muhammad b.
Abûl Allâh b. Muhammad Ibn Abî Amîr. He belonged to an Arab family which had settled in the
Iberian peninsula at an early date: one of his ancestors, Abû al-Malik al-Ma’ṣrî, had landed there with Târîk [q. v.] and settled at Torrox in the province of Algeciras where he had founded a family. Al-Manṣûr’s father, Abî Ḥâfiz Abî Allâh, was a jurist noted for his knowledge and pety
who died on his way back from the pilgrimage to Tripoli in Barbary at the end of the reign of the
Caliph Abû al-Râḥmân III al-Nâṣir (cf. Ibn al-

When a young man, Muhammad Ibn Abî ‘Amîr conceived great political ambitions: they were to dominate his whole career. After
studying in Cordova and holding a minor office with the kâṣī of the capital, Muhammad b. al-
Sâlim, he entered the service of the Omeyyad court in 356 (967) as superintendent of the estates of a prince of Basque origin, Subh, the wife of the Caliph al-Hakam II and her son Abû al-Râḥmân, who had just been born. Ibn Abî ‘Amîr was not long, thanks to his tact and courtesy and ability, in making himself persona grata with this princess and it was without doubt on the intervention of the latter that the young superintendent found himself within two years the holder of the new offices of superintendent of the mint, treasurer and administrator of intestate estates. A few years later in 358 (969), he was appointed kâdi of the district of Seville and Niebla. In 361 (972) the Caliph al-Hakam II gave him command of a section of his police corps (ṣhârta).

All these offices, combined in the person of Ibn Abî ‘Amîr assured him a considerable income and soon enabled him to lead a very luxurious
life in Cordova. He built himself a palace in the aristocratic quarter of Ruḥâfa and his generosity, courtly disposition and his splendour soon placed him in the forefront of the dignitaries of the Omeyyad court. In a few years he had filled the
first part of his programme: to become popular and indispensable, to make numerous friends, ready to support him on the day on which he would begin his attempt on the throne of the caliph.

Ibn Abî ‘Amîr very soon realised that it was not sufficient to be popular in Cordova but that he had also to create reliable friends among the generals of the Caliph’s armies. The circumstances of the time were peculiarly in his favour. Al-
Hakam II, following the example of his predecessor Abû al-Râḥmân III, had his North African policy and his armies were busy suppressing a Maghribi revolt which had broken out as a result of an expedition of reprisal sent against the petty Idrïd dynasty of Tangier, Hâsan b. Gannûn. The Omeyyad troops, under the orders of the general Ghabûl, were sent to dethrone all the petty Idrïd rulers of Morocco who were more or less vassals of the Fâtimids. This expedition was crowned with success and Hâsan b. Gannûn was obliged to take refuge in a fortress of the Rif, Hâḏrat al-Nâṣr, in which Ghabûl besieged him. But the Spanish army in Africa was a heavy burden on the treasury of the Caliph. Ghabûl had distributed money recklessly among the chiefs of the Berber tribes of the North of Morocco in order to buy them over. Al-Hakam II decided to send over a controller-general of finance and he chose Ibn Abî ‘Amîr who set off with the title of chief kâṣir (kâṣir, l-kâṣir) and exact
instructions. He carried out his very delicate task with unusual tact. He returned to Cordova at the same time as the army. When al-Hakam II died, leaving the throne to his young son Hîshâm in 366 (976), the new Caliph at the same time as he appointed kâṣir the favourite vizier of his father, Abu l-Hâsan Dja’far b. Othmân al-Mushâfi, appointed Ibn Abî ‘Amîr as the latter’s vizier.

The ambitious minister now worked unceasingly to get rid of his chief, al-Mushâfi. In the first place he was able to reduce to nothing the considerable power which the Slavs (Sâlidâ, q. v.) had in the Caliph’s entourage. In Cordova they formed a body of mercenaries who guarded the royal palace, and at this time their leaders were two of their number, Fârik al-Nîjâm, grand master of the wardrobe, and Dja’wîl, grand goldsmith and chief falconer. On the death of al-Hakam they had attempted to oppose the proclamation of Hîshâm who was still a child and to put on the throne of Cordova his uncle al-Mughîra. The latter was slain at the instigation of al-Mushâfi and it seems likely that Ibn Abî ‘Amîr played an active part in the plot which ended in this murder. In any case very soon after the accession of Hîshâm II as a result of the rigorous measures taken against them, the Slavs lost all influence at the Omeyyad court to the great satisfaction of the people of Cordova who had long suffered from their abuses. Ibn Abî ‘Amîr also gained in popularity, still further increased when he displayed for the first time the possession of military talents which had not been suspected.

A little later he succeeded in getting the command of an expedition against the Christians of the North who had taken up arms against Islam as soon as al-Hakam II had fallen ill. Setting out from Cordova in Rajab 366 (Feb. 977) he laid siege to the fortress of los Baños in Galicia and returned to the capital with considerable spoil. He then cultivated the friendship of the aged and
distinguished general Ghalib, governor of Madinat al-Zahrāʾ (Medina, q.v.), and obtained his help in the fall of the ḥāḍir al-Muṣṭafī. Ghalib on the intervention of Ibn Abī ʿAmīr received the much coveted title of ḥāḍir al-Sawrān and the command of the forces on the frontier in the expeditions against the Christians. This friendship was strengthened in a new campaign in which Ibn Abī ʿAmīr commanded the troops from the capital alongside of Ghalīb. This expedition was again crowned with success and earned Ibn Abī ʿAmīr a new and honourable office, that of commandant of Cordova in place of the son of al-Muṣṭafī who was dismissed. Al-Muṣṭafī, conscious of the danger which threatened him, then tried to play off Ghalīb against Ibn Abī ʿAmīr but the latter was labour lost. The young minister even became son-in-law of Ghalīb who gave him the hand of his daughter Asmāʾ. A few months later, al-Muṣṭafī and the members of his family, who had held offices at the court, were dismissed and their property confiscated. On the same day Ibn Abī ʿAmīr was appointed ḥāḍir. With his father-in-law, Ghalīb, he was at the head of the administration of the empire.

It was not only the plots he had woven with success for his personal ability that had enabled Ibn Abī ʿAmīr to advance so rapidly in his career. It seems very probable that the princess Suhb, widow of al-Fakām II and mother of the reigning Caliph, was the mistress of the former superintendence of her son’s estates. This liaison was not unknown to the CORDOVANS AND produced bitter criticisms of the princess and her lover. Public opinion, which had at first been so favourable to the ḥāḍir, began to be hostile to him. A plot to overthrow Ḥišām II and put in his place another grandson of Abī al-Raḥmān III was prepared but nipped in the bud. The Cordovans at once spread the rumour that Ibn Abī ʿAmīr was devoted to philosophy and that his orthodoxy therefore was quite nominal. He proved them wrong. Ibn Abī ʿAmīr did not hesitate to burn from the splendid library formed by the cultured al-Fakām II all the books dealing with branch of knowledge prohibited by the Ġalāmāʾ. He conciliated them by this act of vandalism the gravity of which can hardly have escaped him. But with his unparalleled ambition nothing which might prevent him attaining his object was allowed to deter him.

But the young Caliph Ḥišām II was now growing up. He had to be prevented from taking an active part in the conduct of affairs. Business was then conducted in the Caliph’s palace in Cordova in order to set aside the ruler finally Ibn Abī ʿAmīr in 968 (978) decided to build near the capital a regular town for administrative purposes. This was al-Madinat al-Zahrāʾ (q.v.) which in a few years became an important city at the very gates of Cordova. As to Ḥišām, he then began the life of a recluse, either at Cordova or at Madinat al-Zahrāʾ, which was to last throughout his reign. At the same time as he settled the problem of the possible intervention of the ruling prince in the affairs of state in a manner as energetic as it was unscrupulous, Ibn Abī ʿAmīr was reorganising the army and inaugurating a new policy in the country. The Omayyad army, in the form in which it was then constituted, was recruited in the country itself and the permanent bodies of mercenaries were not large. Ibn Abī ʿAmīr required new ones: this is why from now on till the end of his life, he appealed for Berber volunteers from the north of Morocco and Irāq. At the same time he realised that the occupation of certain parts of the country by the Omayyads was only a source of expense to the Caliph’s treasury and that any plan of territorial expansion in that direction would be disastrous to the ruler of Cordova. He therefore abandoned all these possessions, retaining in Africa only one of the keys of the Strait of Gibraltar, the citadel of Ceuta. The administration of the rest of the country he handed over to petty local dynasties under the nominal suzerainty of Cordova. Along with the Berber troops in his pay, Ibn Abī ʿAmīr formed other corps by recruiting Christian mercenaries from the north of Spain, from Leon, Castile and Navarre. He was able by his generosity and attentions to secure the complete devotion of his new soldiers.

Having thus a strong and veteran army at his disposal, Ibn Abī ʿAmīr renewed with ardour the old feud against the Christians on the frontiers of the empire. He first of all got rid of his father-in-law Ghalīb, whom he had displeased by the manner in which he had upset the old military organisation of the country; then he undertook in 371 (981) an expedition on a grand scale against the kingdom of Leon. He took and plundered Zamora, where he took 4,000 prisoners. The King of Leon, Ramiro III, then made an alliance with García Fernandez, Count of Castile, and the King of Navarre. But all three were defeated by the Muslim general at Rueda to the south-west of Smanacar and this town itself was taken by him. Ibn Abī ʿAmīr continued his advance on the town of Leon and inflicted another defeat on Ramiro III. The return of the ḥāḍir to Cordova was a regular triumph and it was on this occasion that he took the honorific lakāb of al-Mansūr bīl-Mīlāḥ, “the victorious in God”.

All powerful at Cordova and a successful general, al-Mansūr Ibn Abī ʿAmīr was to devote the rest of his life to an unceasing war on the Christian frontiers and to increasing considerably the territory ruled by the Muslims in the Peninsula. After his defeat, the nobles of Leon had deposed Ramiro III and proclaimed his place of Bernuy II. The latter finally found himself forced to seek al-Mansūr’s help and to recognise him as suzerain. Al-Mansūr then decided to make an expedition into Catalonia in 374 (985); he defeated Count Borrel and stormed Barcelona, which he sacked. According to Ibn al-ʿAbbār, it was the Amirid’s twenty-third campaign.

Ibn Gannūn, the petty Idrīsid dynasty in the north of Morocco having again rebelled against Cordova, al-Mansūr sent his cousin Ibn ʿAskalādja to subdue him. Ibn Gannūn surrendered on being promised his life. But al-Mansūr had him executed along with Ibn ʿAskalādja whom he accused of having plotted against him. This breach of faith and brutal execution having produced a reaction of feeling in the capital, al-Mansūr to rehabilitate himself undertook a pious work: in 377 (987) he extended the cathedral mosque of Cordova which had become too small. Eight new naves were built on the east and the western wall of the hall of prayer and of the ṣahn was moved out 150 feet. The Arab historians say that al-Mansūr made gangs of Christian prisoners do this work, for the greater glory of Isrāʾ.
In the same year the war against the kingdom of Leon was resumed. The Muslim troops, that al-Mansur had sent there, had oppressed the country and Bermuda II had finally driven them out. Al-Mansur punished his boldness with the greatest rigour. In two campaigns several months apart, he took Coimbra, which he laid waste, Leon which he left completely in ruins, and Zamora. The Counts of Leon had then to lay down their arms and submit to al-Mansur and Bermuda II was only left possessions very much reduced in extent.

The campaign that followed was again directed against the N.-W. of the Peninsula. The best known is that of St. Jago de Compostella in 387 (997). This famous sanctuary of western Christianity [cf. the article šiānt vīkṭir] was taken by the Muslim troops on the 2nd Shawal (10th August) and only the tomb of the apostle was spared, by orders of al-Mansur.

The last expedition against the Christians dates from the year 1002. Its objective was Castile. Al-Mansur took Cordova and destroyed the convent of San Millán de la Cogolla. But on his return from the expedition, he fell ill and died at Medinaqel on the 27th Ramadán 392 (Aug. 10, 1002). He was buried in this town.

The last years of the life of al-Mansur in spite of his successful career and victorious expeditions had been marked by events which might have been fatal to him if he had not once again displayed an iron will and extreme violence in the suppression of plots hatched against him. The few attempts made on behalf of Hadi ibn Hadi to regain for him the power, which had been seized by his first minister were in vain. In 391 (997) al-Mansur gave up his title of Hadi in favour of his son 'Abd al-Malik. Five years later he assumed with an audacity worthy of him the princely title of mālik karim “noble King” and reserved for himself the title saiyid “lord”. The only thing that he did not dare to do or could not do was to annex the overthrow of the Omayyad caliphate and the constitution of an Amīrīd caliphate in its stead. He arranged however for the power to pass to his heirs after him, and it was his son 'Abd al-Malik al-Mu'azzafar, who succeeded him on his death to control for a few more years the destinies of the Muslim empire in Spain.

Various judgments have been passed on al-Mansur. His lack of scruples has been emphasised and the often criminal means which he used to attain his ends. His career is nevertheless an extraordinary one. This dictator was undoubtedly one of the greatest men of affairs that Islam has ever produced and under his “reign” Muslim Spain remained the great nation, which in the caliphate of 'Abd al-Rahmān III had shown itself one of the most remarkable centres of culture and civilisation in the mediaeval west.

MANSUR b. NUH, the name of two Sūmānī rulers:

1. MANSUR b. NUH I (Abu Šīlīh), ruler of Khorāsān and Transoxiana (350–366 = 961–976), succeeded his brother 'Abd al-Malik b. Nuh I [q.v.]. Ibn Ḥawkal is able to describe the internal conditions of the Sūmānī kingdom under Manṣūr as an eye-witness; cf. especially B. G. A., ii. 344: fi wakātin ḥādīth; p. 344 sqq.: on the character of Manṣūr “the justest king among our contemporaries, in spite of his physical weakness and the slightness of his frame”. On the vizier, Bāṣan, see Rastani where also information is given about the Persian version of Tabari’s history composed in 352 (963) by or by orders of this vizier. On the rebellion of the commander of the Sūmānī bodyguard, Al-Tegnī, and the independent kingdom founded by him in Gharna and on the establishment of Sūmānī rule there in the reign of Manṣūr and the son and successor of Al-Tegnī, Iṣḥāk (or Abu Ḥādīr Ibrahim) see AL-TEGNĪ and GHANNA; in Barītī, Turkestan, G. M. S., New Series v., p. 251, note 4; Abu Ḥādīr Ibrahim should be read for Iṣḥāk b. Ibrahim (this passage is misunderstood in the Russian original). In other directions also in this reign the Sūmānī kingdom prospered in its foreign affairs: the fighting with the Būyids [q.v.] and Ziyārids was as a rule victorious.

2. MANSUR b. NUH II (Abu 'l-Hārith), ruler of Transoxiana (387–390 = 997–999). His father Nuh b. Manṣūr, to whom out of all the Sūmānī empire only a portion of Transoxiana was left, died Friday 14th Rajab 387 (July 23, 997) but it was not till Dhu ’l-Ka‘bah (November) that hommage was paid to Manṣūr as his successor. Bālā'ī (ed. Morley, p. 803) talks highly of his courage and eloquence; on the other hand he is said to have been feared by every one for his extraordinary severity. During his brief and impotent reign he was hardly able to instil terror into any one. The last Sūmānīs were quite helpless against the kings and generals who were quartering over the inheritance of the dying dynasty. One of these generals, Fākī, succeeded even in taking Bukhārā at the head of only 3,000 horsemen: Manṣūr had to fly to Amul [q.v.] but was called back by Fākī. The last months of his reign were devoted to fruitless efforts to settle peacefully the question of the governorship of Khorāsān, which
was claimed by various parties; but before the problem had been settled by force of arms, Manṣūr was deposed on Wednesday, 12th Safar 389 (Feb. 1, 999) by his generals Fātīkh and Bēgūṭūn, blinded a week later and sent to Būkhārā.

Bibliography: cf. Sāmānī, and add:—

AL-MANṢŪR ISMĀ‘IL, Abu ʿĀlāʾ or Abu ʿĀlāʾ ibn al-ʿĀlāʾ, third Fāṭimid caliph, was 32 when he succeeded his father Abu ʿl-Kāsim al-Kāsimī in Shāmuwāl 334 (May 946) under particularly difficult conditions: Abu Yazīd, the Kāhirī alīgātī supported by many Berber tribes and by the people of Khairāwān had failed before al-Mahdiyya, but was still besieging Shīā. Al-Manṣūr, however, having returned to Khairāwān and pardoned the inhabitants who had supported the agitator, had to prepare to meet a new attack. Abu Yazīd was not long in reappearing; repulsed he came again to the attack. Al-Manṣūr tried to make terms with him and gave him back his women captured in Khairāwān but Abu Yazīd, in spite of his promise, attacked him again and was completely defeated in a pitched battle (Aug. 946). He was then pursued to the west. After a delay caused by the illness of Al-Manṣūr, Abu Yazīd mortally wounded was taken prisoner at Djiel Kiyāna, north of Mīlla, in Muḥarram 336 (Aug. 947).

This success established al-Manṣūr securely. A section of the tribes of the Central Mağrib who had embraced the cause of Abu Yazīd made their submission, like the Mağhrabīya under Muhammad b. al-Khaṭīr. Taking advantage of the difficulties of the Fāṭimīds, the Omayyads of Spain had entrenched themselves more securely in western Bar- hāy. A former Fāṭimid officer, Ḥāmid b. Yesel, was ruling the Mağribīn in the name of the caliphs of Córdova and laid siege to Tāhirt. Al-Manṣūr relieved the town and appointed the Ibrāhīm Yaḥyā b. Muḥammad to rule it. He invested with considerable authority the chief of the Şānḫaṭa Zirī b. Manṣūr, who had proved a loyal auxiliary during his days of trial.

Returning to Khairāwān, al-Manṣūr had again to take the field against the son of Abu Yazīd who was trying to stir up a rebellion against the old regime. Besides taking these vigorous steps in Barhāy to put an end to the Kāhirī movement, al-Manṣūr developed the naval power of Ifrīkiya. His freedman Faḥūsh, supported by the governor of Sicily, won a striking victory over the Goths in the southern seas and came home laden with booty (340 = 951).

Lastly Al-Manṣūr holds a high place among the Fāṭimīds of Ifrīkiya for his buildings. The capital of al-Mahdiyya or Nor was it Khairāwān whose recent treachery he made it suspect. From 947 Sāḥra, also called al-Manṣūrīya from its founder, was the capital. The town built at the gates of Khairāwān was beautified by the palaces which he built and grew rich on the bazaars which he removed from the old city.

Al-Manṣūr was 39 and had ruled 7 years, when he died suddenly on a journey from a chill caught by taking a bath in cold weather (Shawwāl 29, 341 = March 953).

MANṢŪRA, founded by Manṣūr b. ʿĪjāmūhīr al-Kalbī, was from 255 (871) the capital of Siyās under the Arabs. Ḫaṭṭārī described it as more fertile and populous than Malikīn. Before the arrival of the Arabs, Brahmanābād (probably identical with the modern Ḫaḍraḥābīl) was the capital of Siyās, and its name was changed to Manṣūra after the Arab conquest. For notices of Manṣūra by early travellers to India, see Gazetteer of the Bombay Presidency, i, Part I, p. 506, 507, 511, 525.

(Andrey HOSAIN)

AL-MANṢŪRA, large town in Lower Egypt, on the right bank of the Damietta branch of the Nile, capital of the province al-Dīnārīyya. Another canal or branch of the Nile went from here to Asmūn in a north-eastern direction. It was originally a camping place for the army, founded in 616 (1219) by al-Malik al-Kāmil, when he tried to recapture Dimyāth, then occupied by the Crusader. In 1249 the Crusaders were defeated in the neighbourhood of al-Manṣūra by al-Sultan al-Maʿṣūrīzī Tūrnāshāh, on which occasion Lewis IX of France was taken prisoner. The town is now an important emporium for the cotton trade. In 1917 there were 49,238 inhabitants (Badecker). It possesses no remarkable buildings; a railway bridge crosses the Nile at this place.

There are still various other places in Egypt, called al-Manṣūra.

AL-MANṢŪRA, the name of a town now in ruins built by the Sultān of Fās about 5 miles to the west of Tlemcān. The very precise account given by Ibn Khaldūn enables us to reconstruct with exactitude the history of this typical town-camp. In the year 698 (1299) the Marmid Abu Yaḥyā Yaḥyūsī, who had come to lay siege to the capital of the Banū ‘Abīl-Wād,
which he had closely surrounded with entrenchments, set up his camp on the plain which stretches to the west. As it was a long drawn out blockade he built a few dwellings for himself and the leaders of his army and laid the foundation of a mosque. In the year 702 (1302) the “Victorious Camp”, al-Muhallab al-Mansūra, was given the form of a regular town by the construction of a rampart. Besides the mosque, the dwellings of the chiefs, the store-houses for munitions and the shelters for the army, there were baths and caravanserais. As Tlemcen was inaccessible to caravans, al-Mansūra or New Tlemcen, as it was called, naturally attached itself to the building of the rampart of the town. After a siege of eight years and three months the Marinids withdrew from Tlemcen, and al-Mansūra was methodically evacuated under the direction of Ibn Thīām b. ʿAbd al-Djalīl, the vizier of the Sulṭān Abū Tahir. The people of Tlemcen were compelled, by the terms of the treaty made with the Marinids, to respect the town for some time. Some time after, when the entente between the two empires had been broken, they demolished its buildings and rendered uninhabitable the entrenchments left at their gate by their hereditary enemy.

Thirty years later, in the year 735 (1335), the Moorish army under Sulṭān Abū Hūsain was once more at the gates of Tlemcen. On this occasion the ʿAbd al-Wadīl camp was forced to surrender (27th Ramadan 737 = 1st May 1337). Al-Mansūra was rebuilt. It became the official capital of the Marinids during their occupation of the central Maghrib. It was in fact, during this time that the great mosque was built and that the “Palace of Victory” was erected (745).

After the retreat of the Marinids, al-Mansūra, once more abandoned, fell little by little into ruins. At the present day the rampart of terre pisé flanked by square towers is still comparatively intact; but the interior is land under cultivation and contains a French village. There still exists there, however, the ruins of a palace no longer distinct, a section of a paved street, and probably the surrounding wall in terre pisé of the Mosque with half of the great minaret in stone, which arose above the principal entrance. Although the infall ceramic work has almost entirely disappeared, the facade of the square tower, which is 120 feet high, is one of the most perfect pieces of the Maghribi art of the 8th century that survives. The columns and capitals in marble of the mosque are preserved in the Museums of Tlemcen and Algiers.

MANTIK (A.), Lógica. The logic of the Arab philosophers is that of Aristotle, here and there modified by the Stoic and Neo-Platonist tendencies of the Greek commentators. The Arab philosophers did not develop this logic but they gave reasons of it, reproduced it and wrote commentaries on it, often with success; they understood it very well and it is in logic that they came nearest to the authentic Aristotelianism. As to the matter, it was easier for them to grasp the exact sense of the logical writings of Aristotle than of his other works since the translation of the Logics had been made and remade with great care (cf. e.g. the two versions of the beginning of the Interpretation in J. Pollok, Die Hermeutik des Aristoteles in d. arab. Übers. d. Ḣalīlī b. Ḥusayn, Leipzig 1913). The translation was very defective and incomplete. The remark of the Ḣalīlī al-Ṣafāː — who evidently did not care much for the subject of logic — at the beginning of their little treatise on logic “the ancient sages have dealt with these subjects and their works are in the hands of the reader, but they are very diffuse, for the translators did not understand the exact meaning” is then not justified.

To the six works of Aristotle, the Categories, Hermeneutics, the Prior Analytics and Posterior Analytics, the Topics, and the Sophistics, the Arabs, like the latest Greek commentators — added the Rhetoric and the Politics (as to the Rhetoric Aristotle himself had regarded it [Kontis 1913, p. 322, as a lateral branch of the same, Dialektik und Politik]). They explained the order of these works in the manner of the later Greek commentator (cf. Eliae in Aristotelis Categor. Comment., ed. Bus. p. 116 sqq.). The most important of these treatises was the fourth, the Posterior Analytics, to which the three preceding are only the preparation and introduction; in the Posterior Analytics Aristotle was thought to have treated of the absolutely True, in the Poetics of the absolutely False and in the intermediate treatises, according as they approach the Poetics, the element of improbability begins to preponderate. Then, still in the name of the Greeks, they placed in front of these works the Logique de Porphyre which was called Περὶ τῶν Ἀραβῶν κατηγορίων, Kitāb Faryād al-Maʾrīsī, and Maghribi, shows, is an introduction to the logic of Aristotle.

Among the Greeks there were two further kinds of introduction to philosophy or — since the study of philosophy began with logic — to the logic of Aristotle. In the one which preceded the categories Προλογία τῶν κατηγορίων, ten questions were put (among them: Whence came the names of the different “philosophical schools”? What is the division of the works of Aristotle?) to which a brief reply was given. Among the Arabs, we have not yet found an introduction of this kind in a little work by al-Farābī, Kitāb Firmān, written in the 9th century, which was later grades. The first part definitions were dealt with, in the second divisions of philosophy. The Arabic treatises on the division of the sciences go back to this kind of introduction which they further developed. We still possess from the pens of the two of the greatest Arab philosophers, al-Farābī and Avicenna, such treatises on the division of the sciences. Avicenna's entitled Maṭbāṭ fi Taḥṣīṣ al-Hikma wa l-ʿUṣūm was printed at Constantinople
and 2. subjective existence of the soul. The intelligence may direct itself in an intuendo prima (πρώτη βία) towards the exterior world of which the highest kinds are the ten categories, but it can turn inwards upon itself in an intuendo secunda (αιτάρεια βία), upon its concepts, of which the highest kinds are the five "voices" of Porphyry. Everything has an existence, if not in the external world, at least in the soul. This theory gives rise to difficulties: in the first place the term "existence" becomes ambiguous; secondly, since the negation of each thing exists in the soul, "what is not in the soul" must exist in the soul. It is partly deduced from the Kalam (q.v.) notably among the Ash'aris and probably under the influence of Stone discussions on the existence or non-existence of the "not things" (οὐδεματί) that the existence of concepts like the impossible and the negative has been discussed. The Arab Aristotelians were very often content to admit a concept "thing" (δώροτ, the τό of the Stoics) more general than being, without paying too much attention to the fact that by this they were contradicting the thesis that everything is.

For the rest, in the Aristotelian philosophy the concept of existence or of being rise to grave difficulties; it was much discussed by al-Farabi, not only among the philosophers but also for the metaphysical questions connected with it among the theologians and the mystics. Aristotle had already affirmed (e.g. 1040, b 18) that existence or being is neither kind nor substance and the Arab philosophers al-Farabi, Avicenna, Ghazâli and Averroes supported this view with the stereotyped reasoning that existence cannot express the essence of things, since being man implies being animal, being a living body, being a body etc., but it does not at all imply that man is being. On the other hand being (τό ἔστι) and substance (ὁ ὄντα) are synonyms in Aristotelian philosophy. How are these two views to be reconciled? Avicenna says the theologians had already done before him, that only in God substance (being) and existence coincide: for the other substances, existence must be added to them as an accident. For Averroës on the other hand, as before him for the Ash'aris, being is always substance and never accident and he says that in judgments, in which being is predicated and thus apparently an accident, as when one says "substance is", "is" is an intuendo secunda.

As to the theory of ideas, the Arab logicians deny, with Aristotle and using his own arguments, the separate existence of the universals, but admit with Plato their supra-sensible existence. This is the theory very prevalent in the last period of philosophy (in the Middle-Platonism, Neo-lythagyrosism and Neo-Platonism) according to which ideas or universal forms exist from eternity in God. The intelligibility of things comes from this, that their cause is an intelligence; as the idea of the statue in the soul of the sculptor is the cause of the existence and intelligibility of the statue, so the intelligence of the creator of the world is the cause of the intelligibility of natural things. Avicenna expresses this theory by the formula that the Universe is ante multitudinem in multiplicitate (in things) and post multitudinem (in our soul). It is the second element in the formula "in multiplicitate" that offers a difficulty (a difficulty already found in Aristotle): how to conceive of the existence of universals in things which are themselves individuals? Often a conceptualist or nomi-
Aristotelian tendency is seen in the Arab Aristotelians; it is explicitly stated that the universal is only found in the mind and following Aphrodiasias the forms in matter, the ἐνοικηθέν, are regarded as individuals. But since in the system of Aristotle, forms are universals by definition, contradiction cannot be avoided, and the theories of the universals among the Arab philosophers are often very complicated and very obscure. Another nominalist or subjectivist tendency is found in their conception of the relation, which they call — with the Stoics — “what the mind puts into things”. But it is the theologians who under the influence of materialist, nominalist and sensualist Stoicism have developed a nominalist system which only admits atomic and individual facts without a connection, in which all relation is regarded as subjective or even non-existent.

The ambiguous manner in which he deals with the concepts “possible”, “impossible” and “necessary” gives rise in Aristotle as well as in the Arab logicians, who follow their master faithfully, to grave difficulties. Aristotle (Prior Analyst., 322, 18–23) — like the Arab logicians (cf. Avicenna, logik, ed. Forget, p. 34) — distinguishes two aspects of the concept of the possible; the possible is the negation at once of the impossible and of the necessary, but he does not always observe these two aspects and thus the necessary and the actual are considered as possible since what happens is not impossible. On the other hand, the actual is considered as the necessary, since what happens, happens necessarily; and although the definition of the possible is “what may or may not happen”, for Aristotle “possible” is also “what will happen” since what never happens is not possible. These contradictions are occasioned by the fact that the problem which is at the basis of all this, that is to say, the objectivity or subjectivity of the possible and of the necessary, is differently treated by Aristotle. Aristotle hesitates between determinism and indeterminism. Of two future events, he says in the Hemicautetica that one will be true, but which is not determined in advance. He says that necessity does not govern the celestial world and that only the sublunar world is the reign of contingency, he also says that God alone is absolutely necessary, that all the rest is hypothetically necessary, that is to say, contains an element of contingency. On the other hand, everything is caused, and goes back necessarily to a first cause. All these contradictions are found among the Arab Aristotelians. The Mutakallimun, who, like the Stoics, wish to exclude the possible from reality (but they sometimes regard, like certain Stoics, the “possible” and “necessary” as both subjective, thus affirming that everything is possible) have with justice declared that if there is a necessary cause, the effect of it must also be necessary and that there is therefore no contingency in the world. Averroes in his polemic against Ghazâlî seems to admit the justice of this argument but elsewhere he repeats all the theories of his master.

Although Ghazâlî confesses that theology, while opposed to the metaphysics of the philosophers cannot however deny the evidence of their logical technique, certain arguments of Greek scepticism against logic are sometimes repeated by the Mutakallimun. Definition is, they say, not possible, because by the particular one cannot reach the universal, and the syllogism is a petitio principii since the conclusion is already contained in the major premis. These arguments are justified against Aristotelianism, regarded as an empirical theory which sets out from the particular fact. There is however a rationalist tendency in Aristotle and the Arab logicians; they admit that the intelligence can at once know first principles and that without induction from particular facts it can grasp relations between universals. But when the Mutakallimun say that knowledge and the Universal cannot give the truth, since according to the definition of truth, agreement must exist between true knowledge and reality, and knowledge is universal and reality individual, they reveal by this argument one of the greatest contradictions in Aristotelianism. Averroes tried in vain to refute it.

Manûf, name of two towns, in the region of the two main Nile arms called al-Djariz, generally distinguished as Manûf al-ʿUlya and Manûf al-Sufî. The latter was situated on the right bank of the western Nile arm, while the former lay more to the east on a smaller canal. Both are described by the geographers as large towns, surrounded by fertile districts and inhabited by wealthy people, especially Manûf al-ʿUlya, where, according to Ibn Hawkas (p. 92), there resided a governor. The kūra of Manûf al-ʿUlya is often called the kūra of Damsis and Manûf, while the kūra of Manûf al-Sufî is designated as Ṭawwâ and Manûf (cf. e.g. al-Maqrî, ed. Wiet, i. 507). Both the ancient towns have decayed since the tenth century; Yûsûf only knew a village of that name. The name has survived, however, until our day, in the name of the province al-Manûfiyya; the capital of the nubilîya of his name is now Shibin al-Kawm, and the modern Manûf is a provincial town, situated to its southwest.

Manûf al-ʿUlya is known in Greek sources as Ὀσσείς ἢ κάτω, the Coptic name being Panouf Ris; the other Manûf is not mentioned in Greek documents and is called in Coptic Panouf Dîr.

Mâppillas (Mophlæs), a group of Muhammadans, of mixed Arab and Hindu descent, on the west coast of Southern India, numbering 1,099,453 according to the Census of 1921. Their name is said to be derived from the Malayalam mā ("great") and pilla ("child"), an honorary title originally bestowed upon all foreigners and
first applied to Christians, Jews and Muslims, but now confined to the last; this derivation, however, is disputed (Thornton, p. 460-461). They owe their origin to Arab merchants, who were attracted to this coast by the trade in spices, ivory, etc., settling in various commercial centres, they intermarried with the natives of the country and added to their numbers by proselytising; but fresh accessions of the Arab element having ceased long ago, the Mappillas now approximate to the aboriginal type and exhibit no signs of any admixture of foreign blood. The earliest date of their settlements is uncertain, and the legendary accounts given by the Mappillas themselves are of no historic value (Zain al-Din, p. 21-25).

The foreign traders appear to have been encouraged by the Hindu rajahs, who made use of them to man their fleets, and by the beginning of the xvii century the Mappillas were estimated to have formed one-fifth of the population of Malabar (Barboza, p. 310), but the arrival of the Portuguese in this part of India checked the growth of Muslim power and ruined the Arab trade. The Mappillas are still successful traders, especially on the coast; inland, many of them are agriculturists. There are both Sunnis and Shiites among them; the former belong to the Shafi school.

Their religious leaders are called Tangal (an honorific plural of the personal pronoun, commonly used in Arab countries) with profound respect; many of them receive their training in a college attached to the Dijamaat: mosque in Ponnani, the chief centre of their religious organisation; the Tangal of Ponnani is an Arab who claims descent from the Prophet; in accordance with local custom he inherits his sacred office in the female line i.e. his nephew and not his son succeeds him.

The history of the Mappillas is full of incidents of fanaticism and turbulence. In 1524 they attacked the Jews in Cranganur and massacred them without mercy, so that in 1565 the remnant of them fled to Cochin, where they founded the Jew settlement to the present day (Zain al-Din, p. 50-51; Francis Day, p. 351—352). The Mappillas also persuaded the Zamorin of Calicut to expel the Syrian Christians from his dominions (Francis Day, p. 367). Even their co-religionists found them to be turbulent subjects; they joined the Hindus in fighting Haidar Ali [q.v.] after he had extended his power over the Malabar coast, and they rose in rebellion against Tipu Sultan [q.v.] in 1785, and frequently plundered his territories (Francis Day, p. 368). During the last hundred years as many as 51 fanatical outbreaks have taken place among them, especially in the Nettur sub-division of the district of Malabar. Some Mappillas generally begin by murdering a Hindu landlord and then seek martyrdom by slaying kiths; others join them, after divorcing their wives, and clad in the white robes of the martyr (izahid, q.v.) go out to die fighting against the infidel, with a complete contempt for death. They desecrate and burn Hindu temples, and forcibly circumcise such Hindus as they do not murder. Some of these outbreaks appear to have been stimulated by agrarian discontent at the oppressive action of Hindu landlords, but the last (1921) was entirely political in character and was excited by the Khilafat movement; it differed from all preceding ones in its wide extent and clear evidence of systematic preparation and organisation; the outrages committed upon Hindus were of a specially revolting character.

The Mappillas of South Malabar generally observe Muhammadan law; those of North Malabar follow the local Marumakkathayam system of inheritance, according to which the sons of a man's sister inherit his property, and his wife is not regarded as a member of the husband's family but resides in her mother's home and only receives periodic visits from her husband. On the other hand, a man's self-acquisitions usually descend to his wife and family in accordance with Muhammadan law.

The Mappillas speak the Malayalam language, but use a modified form of the Arabic script in writing it. The majority of them are illiterate, and few only can read and write. Their literature is mainly composed of songs descriptive of religious war, and they are fond of singing them in order to stir up fanatical zeal. Their mosques are quite unlike those of other Muhammadans, having no minarets and often consisting of several stories, with two or more roofs; they often resemble Hindu temples in style, and in fact many Mappilla mosques were once Hindu temples.

Mappillas are also found in the Laccadive Islands, Ceylon, the Straits Settlements, and Burma.

MARABUT. [See MARABUTS.

MARAGHA, the old capital of A'jarbaidjan

Position. The town lies at a height of 5,500 feet above sea-level on the southern slope of Mount Sahand (11,500 feet high) which separates it from Tabriz [q.v.] This explains the very considerable difference in climate between the two towns which are only 50 miles apart as the crow flies (by the high road 50 miles). The climate of Maraga is mild and rather moist (Hamid Allah and Mequenne, 1904) The plentiful water supply makes the vegetation rich. The fruit of Maraga is celebrated in Persia and a good deal of it is exported to Russia via Ardabil. The district is watered by the stream which comes down from the Sahand and then
turns west to Lake Urmia which is 20 miles from Maragha. The town is built on the left bank of the river Suq (Souq) which then passes Banah. A little distance to the east runs the parallel river Murdi-čai which waters the district to which Mequemen gives the name Pahindar (Bayandur); on the left bank rise the heights of Mandisar (= with head bound). The next stream is the Leilān which flows into the Daghshātu (cf. Sawat-Bulak). The rivers farther east (Karanghū and its sources which water the Hašarādād district) belong to the system of the Safid-rūd [q. v.], i.e. the basin of the Caspian Sea.

From the geographical point of view, Maragha is quite independent of Tabriz. It lies a little off the great road from Tabriz to Kirmānshāb which runs near Lake Urmia (via Bīnūb). The direct bridle-path Tabriz—Maragha by the passes of the Sahand is only practicable in summer. There is also a direct route along the Sahand on the south and southeast side, joining Maragha to Ardabil and Zandīān. This road has always been of importance whenever Maragha was the capital of Adharbājīān. The important place on the route was Kūstā (cf. below).

At the beginning of the sixth century, Maragha had 6,000 families (Bustān al-Siyāḥat), in 1308 it had 13,259 inhabitants of whom 6,865 were men and 6,394 women (H. Schindler). Mequemen (1904) gives Maragha 15—20,000 inhabitants.

At the present day the inhabitants speak Aḏar Türkīh but in the sixth century they still spoke "arabicised Paḫlāwī" (Nūḥat al-Kulāb: pahlav-yi mutavārā) which means an Iranian dialect of the northwestern group.

The walls of the town are in ruins. Its gates have the following names: Aḩmadī, Kūrd-Khānī, Aḏark, Pul-i Bādā (or Gāšāk) and Ḥaḏīḡānī. The quaters are: Aḡān-beg, Mālīn, Dar-wāz, Saḡān-Khānī.

Prefatory. The valley of the Murdi-čai is famous for its fossil deposits of vertebrates discovered by Khānūkh in 1852. Excavations have been conducted by Goebel (Russia), Straus, Reider, Pohlīg (Austria), Gunther (England) and Mequemen (France). On the Murdi-čai have been found remains of the hippopotamus, rhinoceros etc. dating from the period before the eruption of the volcano of Sahand. Cf. J. F. Brandt, Über die von A. Goebel, ... bei der Stadt Maragha gefundenen Gegenstände, Denkschr., d. Naturforsch.-Ver. zu Riga, 1870, and the bibliographic in Mequemen. Contribution à l'étude du gisement des restes de Maragha, Paris 1908.

The name. According to Baladjānī, the town was first called Aḏar-ḏūjī (Ibn al-Fahīm, p. 284: Aḥān-čāl; Vākātī, iv. 476: Afrasāb-čal). This name which means in the Persian the "river of Aḏar" recalls very much the name of the town Ḥakṣarā which Mark Antony besieged in this region on his campaign against the Parthians in 36 B.C. (Flutur, Tit. Ant. ch xlvii, 1864, p. 1113 and L-eud. Appiun. Pothica, ed. Swegman, Leipzig 1785, iii. 77. 99). It has long been supposed that the names Ḥakṣar in Strabo, ch. xiii. and Index, p. 935, Ḥakṣayā, Ptolomy, vi., ch. ii. v, Pāzwatn Dīr C, III. 25 are variants of the same name which was probably that of the ancient capital of Atropaten; cf. Ritter, Erdkunde, ix., p. 170. If the identification of Ḥakṣar (summa capital, Strabo) with Taktēh Subarān suggested by Rawlinson has been accepted (cf. Hoffmann, Anzüge aus syrischen Akten, p. 252; Marquart, Erzählungen, p. 108; William Jackson, Persia, Past and Present, p. 156), the identification of Ḥakṣar is still uncertain. On general principles it is improbable that a town like Maragha so advantageously situated by nature was not in existence in Roman times as the ancient name of Maragha increases the probability of the identification Ḥakṣar = Maragha (of course with a reservation as to the exact site of the ancient town).

A place-name Maragha is mentioned in Arabia (Yaḥūd) and a little town of the same name is in Egypt near Ṭamā. The etymology "place where an animal rolls" (from m-r-z) proposed itself to the Arabs here, but in Adharbājīān (cf. also the village of Maragha near Abarkūh, Nūḥat al-Kulāb, p. 122) the name is rather a popular Arab etymology of some local name. It is to be observed that Ptolomy, vi., ch. 2, calls Lake Urmia Margiane (margeni ʿπι; Μαργιανης Μεγας) and gives the same name to the country along the coast of Assyria. Lastly Marquart in Erzählungen, p. 143, 221, 313 retains the variant Ḥakṣar, but Ḥakṣar seems also to be based on a good tradition (cf. Ptolomy, ed. Wilberg, 1838, p. 391).

The Arabs. Maragha must have been among the towns of Adharbājīān conquered by Muḥār b. Shūb āl-Thakfī in the year 22 (Baladjānī, p. 325; Yaḥūbī, Kitāb al-Bulūdān, p. 271). Marwān b. Muḥammad returning from his expedition to Muṣṭan and Gīlān in 125 (740) (cf. Yaḥūbī, Historia, ii. 365) stopped here. As the place was full of dung (ṣirīqin ʿPers. ṣirīqīn) the old village (ģara) was given the name of Maragha (cf. above). Marwān did some building there. The town later passed to the daughters of Ḥartān al-Raghibī. On the rebellion of Waḏān b. Rawwād, lord of Tabriz [q. v.], Kūstāma b. Ḫāzīn who was appointed governor of Adharbājīān and Armanīyā by Muʿāwīyā (78; cf. Saṣmār, Khwarizmian nāmeh Aḵur Amīnīz: Zafı fatēla, 1927, p. 397), built walls round Maragha and put a garrison in it. When Bābāk rebelled in 201 the people sought refuge in Maragha. Maḏmūn sent men to restore the walls and the suburb (raḥāq) became inhabited again (Baladjānī, l.c.). In 221 Maragha is mentioned as the winter-quarters of Afšīān in his campaign against Bābāk (Tabarī, iii. 1186).

In 280 (893) the Saḏīd Muḥammad Afshīn b. Dīwādā seized Maragha from a certain Āb b. Ḫusain, b. Ḫusain, who was killed (Tabarī, iii. 2137; Maḏmūn, viii. 143). In 296 (908) the Saḏīḥīf conquered Yaḥūf b. Dīwād in possession of Maragha, and the whole of Adharbājīān. A dīwān is known of this year struck by Yaḥūf at Maragha (Saṣmār, O monteckh Saḥīḥē, Baku 1927, p. 14). According to Ibn Ḥawkal, p. 238, there was at Maragha a military camp (muʿākher), a governor's palace (vād al-qāmār), a treasury (khāṣa), and government offices (dirāṣat al-ṣubāhīya) but Yaḥūf razed the walls of Maragha and transferred the capital to Ardabil (cf. Ḫakṣarī, p. 181). Maragha is only mentioned as the place where the last Saḏīḥīf Abu l-Masāfīr al-Fathī was killed in 317 (929) (Arab. Tabari continuus, ed. de Goeje, p. 143).

The Dailamīs. In 322 (934) (during the rule
of the Dailami Musafiridis) the Russians (Bayr) had taken Bardha’a [q.v.]. Ibn Miskawash (G. M. S., vi. 100) speaks of the diseases which decimated them because they ate too much fruit in Maraga. This reference to Maraga is quite unexpected in the text and Margoliouth has strongly proposed to regard it as a corruption of اباد. A coin struck at Maraga in 337 by Muhammad b. Abd ar-Razzâk is a record of the brief conquest of Adharbajjân by the general of the Bâyûd Rukn al-Dawla (Vasmer, Zur Chronologie d. Gastûniden, Islamica, iii./2, 1927, p. 170). Of 347 we also have dirhams of Maraga in the names of the two sons of the Dailami Marzuban, Ibrahim and Djastân (ibid., p. 172).

The Rawâdi and the Safidjâks. After the disappearance of the Dailamis we find in Tabriz the family of Rawâdi Kurds who seem to have been related with the Musafiridis by marriage only. On the other hand, it is very likely that the Rawâdi are the descendants of the Arab Rawâdi al-Azdi, lord of Adharbajjân (Baladhurî, p. 331) who became assimilated by his neighbours in Adharbajjân. The best known of these Rawâdi was Wahshan b. Mamlâm [= Muhammed]; the change of d to t in Kurdish is common) who is mentioned between 420 and 446 (Ibn al-Athir, ix. 270–272). This incident shows that the district of Maraga was within the sphere of influence of Wahshân. In 446 Wahshân became a vassal of the Safidjâks, but Ibn al-Athir, ibid., p. 410 says nothing about the extent of his possessions around Sahand.

In 497 the peace between the sons of Malik-Shah, Darâyûk and Muhammad was signed near Maraga and in 498, Muhammad visited Maraga.

The Amâdail. In 505 we have for the first time mention of the Amir Amâdail b. Ibrahim b. Wahshân al-Rawâdi al-Kurdî, lord of Maraga and Kättab (Kîlûsār [Ibn al-Athir, x. 360]). He was a founder of a little local dynasty, which lasted till about 624. We know very little of the history of the Amâdail who has never been closely studied.

Amâdail was certainly the grandson of Wahshan b. Mamlân of Tabriz (cf. above) and this explains the insistence with which the atasheh of Maraga tried to retake Tabriz. Only intranscriptible hereditary rights can explain the strange fact of the presence of a Kurd among the amirs of the Safidjâks. The name Amâdail is a peculiar formation; the name of Amâdail, a village to the south of Maraga, belongs to the same category of diminutives. The Amâdail however very soon adopted Turkish names.

Amâdail with a large army took part in the Anti-Crusade of 505. During the siege of Tell Dahr, Joscelin came to terms with him (Gafara) and he withdrew from the town (Kâmil al-Din, Tarîkh Ihtalab, Rec. des hist. des croisades, iii. 599). Amâdail soon abandoned Syria entirely, for he coveted the lands of Sukmân Shâhi Arman who had just died. We know that Sukmân had extended his sway over Tabriz [q.v.] and the reference is probably to this town. According to Sibt b. al-Dawza, ibid., p. 556, Amâdail had 5,000 horsemen and the revenues from his fees amounted to 400,000 dinars a year. In 510 (or 508) Amâdail was stabbed in Baghdad by the Isma‘îlîs to whom he had done much injury (ibid., p. 556; Ibn al-Athir, x. 561).

Aq-Sunkur I. In 514 Malik Mas‘ûd, governor of Mavili and Adharbajjân, rebelled against his brother Mahâmâm and gave Maraga to his atâbeg Kašam al-Dawla al-Bârsûkî but the rebellion collapsed and in 516 Aq-Sunkur al-Ámâdail (chief of Amâdail), lord of Maraga, who was in Baghdad, was authorised by Sulîmân Mahâmâm to return to his seat. As the amir Kûn-tughîl, atâbeg of Malik Tughîl (lord of Arrân; Ibn al-Athir, x. 599), had died in 515, Aq-Sunkur expected to get his place with Tughîl. The latter ordered Aq-Sunkur to raise 10,000 men in Maraga and set out with him to conquer Ardabîl in which they failed. In the meanwhile Maraga was occupied by Hûnjûsh Beg, sent by Sulîmân Mahâmâm. The Georgian Chronicle (Bosset, i. 368) mentions under 516 (1123) the defeat of Aq-Sunkur (whom he calls “Aq-Sunkhthul, Atâbeg of Ram” = Arrân) during a demonstration against the Georgians carried out by Tughîl from Surwân. In 532 Aq-Sunkur took a part but not a very active one in the suppression of the intrigues of the Mavili Dala‘în. In 524 he was one of the promoters of the election of Ahmad al-Dawla to the throne of Dâwûd, whose atâbeg he was. In 526 Tughîl, uncle of Dâwûd, defeated the latter and occupied Maraga and Tabriz (al-Bundari, ed. Houtsma, p. 161). Dâwûd along with his uncle Mas‘ûd and Aq-Sunkur sought refuge in Baghdad. With the support of the Caliph and the assistance of Aq-Sunkur, Mas‘ûd reoccupied Adharbajjân. After the capture of Hamadân, Aq-Sunkur was killed there by the Isma‘îlîs (527) instigated by Tughîl’s vizier (al-Bundari, p. 169).

Aq-Sunkur II. The name of Aq-Sunkur’s son is transmitted in different forms. Ibn al-Athir, x. 165 and 277, calls him Aq-Sunkur (II); cf. also Muradî, ibid.-i Goznîda, p. 472. Al-Bundari, p. 231, calls him al-Amir Aq-Sunkur al-Bundarî; cf. also Houtsma, Lughat al-Vizier, p. 243. Nasar al-Dîn Ar-Rûfî (or al-Kâshchârî, Divân Ihtalab al-Turk, i. 56), gives him the name of Atâbeg Arslân Abu. Al-Bundarî treats him as an equal of the great amir Illûqz [q.v.] whose family finally triumphed over the lords of Maraga. Aq-Sunkur II’s adversary was the amir Kha‘bîk b. Bulang-eri (Kha‘bîk b. Bulang-eri) who was the favourite of Sulîmân Mas‘ûd and sought to establish himself in Arrân and Adharbajjân. This Kha‘bîk had besieged Maraga in 541 (al-Bundari, p. 217). In 545 Sulîmân Mas‘ûd took Maraga and destroyed its walls (Fara) but a reconciliation later took place between Kha‘bîk and Aq-Sunkur II under the walls of Rûsin-Iz (cf. below). The execution of Kha‘bîk in 547 (1153) by Sulîmân Mahâmâm alienated Illûqz and Aq-Sunkur II and they installed Sulaimân on the throne of Hamadân. Mahâmâm on his return to power sent an embassy to restore good relations with the two lords of Adharbajjân (Kha‘bîk, A.). Peace was concluded in 549 and the two great amirs shared Adharbajjân between them (al-Bundari, p. 213). On his deathbed (554) Mahâmâm entrusted his young son (Malik Dâwûd, cf. the genealogical tree in the Kîlûsât al-Safidjâk) to Aq-Sunkur. As Illûqz was furthering the interests
of his ward Sultân Arslân, Pahlawan b. Ildiguz advanced against Ak-Sunkûr II but the latter with the help of Sîhâbi Arman defeated him on the Sâfâl-rûd. In 556 Ak-Sunkûr sent 5,000 men to the help of the governor of Rayî, İnândî, who was fighting Ildiguz. The latter gained the upper hand and in 557 Ak-Sunkûr II took part in the expedition of Ildiguz against the Georgians (Ibn al-Âthîr, xi. 189). In 563 however, Ak-Sunkûr II obtained recognition for his ward from Bağhadîd. Pahlawan b. Ildiguz at once besieged Ak-Sunkûr in Marâğha (ibid., p. 218) but a peace put an end to hostilities.

In 564 the Amir of Rayî, İnândî, was killed (Ibn al-Âthîr, xi. 250). The Tâhi-i Gûzîda, p. 72, seems to suggest that the rebellion in Marâğha of Kutluq ( ), brother of Ak-Sunkûr (II), was due to İnândî's influence. He was punished by the Atâbeg Pahlawan b. Ildiguz and Marâgha was given to his brothers 'Alâ' al-Dîn and Kûnûk al-Dîn.

Under 570 Ibn al-Âthîr (xi. 280) mentions at Marâğha Fâlak al-Dîn, son of Ibn Ak-Sunkûr (i.e., son of Ak-Sunkûr II), to whom his father had bequeathed his estates. Pahlawan besieged the fortress of Rûyîn-dîz and Marâgha. On this occasion peace was concluded on thecession of Tabriz to the family of Ildiguz. This important detail shows that down to 570 the feif of the Ahmadiûd comprised all the country round mount Sahând including Tabriz [q.v.].

In 602 the lord of Marâgha 'Alâ' al-Dîn came to an agreement with the Atâbeg of Ardabîl Murâsîr al-Dîn Gûk-bûrî to deprive the Ildiguzid 'Abû Bakr of Âdharbâjîd on the pretext that he was incapable of ruling. From Marâgha they marched on Tabriz but 'Abû Bakr called to his aid the former slave of his family Ay-doghmîsh (cf. Defrémery, Recherches sur 4 princes d'Hezândan, 7, A., 1847, t. 100). Gûk-bûrî returned to his own lands and 'Abû Bakr with Ay-doghmîsh came to Marâgha. 'Alâ' al-Dîn had to surrender the fortress without losing the bone of contention but was given in compensation the towns of Urmiyâ and Ushân. In 604, 'Alâ' al-Dîn whom Ibn al-Âthîr, xii. 157, 152, here calls Kara-Sunkûr died and left one son, a minor. A brave servant of 'Alâ' al-Dîn assumed the guardianship of the child but the latter died in 605. 'Abû Bakr then took possession of all the lands of the Ahmadiûd except Rûyîn-dîz where the servant already mentioned had entrenched himself with his late master's treasures.

It is not clear if 'Alâ' al-Dîn Kara-Sunkûr is identical with the brother of Ak-Sunkûr II mentioned in 564. For the date of his accession and his issue there is no hint. According to the preface of the Hay'i, p. 181, the Java-î Khândîm b. Navâmî [?]., this poem (in-hand in 593) was composed at the request of 'Alâ' al-Dîn Kûbî's Arslân (Rûmûl the Rûm and the Rûs paid him tribute [Khândîm]; the Georgians suffered reverses as his hands). This name was definitely identified by Kiech, Crôstic, t., 507 and Supplement, 1895, p. 154 with 'Alâ' al-Dîn of Marâgha. Navâmî mentions two sons of 'Alâ' al-Dîn, Nûr-at-Dîn Muhammad and Ahmad, but to reconcile this with Ibn al-Âthîr we should have to suppose that both died before their father.

The family of the Ahmadiûd was continued for some time in the female line. In 618 the Mongols arrived before Marâgha and the town was stormed on the 4th Şâfar. The Mongols sacked and burned the town and massacred the inhabitants (ibid., xii. 246, 263) but the lady of Marâgha (daughter of 'Alâ' al-Dîn?), who lived in Rûyîn-dîz escaped the catastrophe.

Djalâl al-Dîn. In 622, the Khwârizmshâh Djalâl al-Dîn came to Marâgha via Daḵûkâ. He entered it without difficulty for the inhabitants were complaining of all kinds of oppressions and raids by the Georgians (Nasawi, Sirât Djalâl al-Dîn, ed. Houdas, p. 110). Djalâl al-Dîn tried to restore the prosperity of Marâgha; cf. Ibn al-Âthîr, xii. 250, 282.

In 624 (1227) while Djalâl al-Dîn was in the Persian Trâk, his vizier Sharâf al-Mûlîk was forced to reconquer Âdharbâjîd. In the course of his campaign he besieged Rûyîn-dîz, the lady of which was a grand-daughter (min lâsûtar) of the Atâbeg 'Alâ' al-Dîn Karâbâ ( ) (Nasawi, p. 129). This princess was married to the deaf-mute Kâmûshû, son of some of the Elidiguzid Ozbek. The Atâbeg Nasuât al-Dîn, son of Kâmûshû, mentioned incidentally by Dâuânâ, G.M.S., ii. 242, must have been his son. As a way, she offered her hand to Sharâf al-Mûlîk. Djalâl al-Dîn suddenly arrived from the Trâk and married the princess himself. Rûyîn-dîz was given to a certain Sâd al-Dîn. The citadel contained some thousands of houses (înây min dûr) occupied by the former inhabitants of the town (kudamînâ); Sâd al-Dîn decided to evacuate them but as a result of his treachery the fortress closed its gates again (to Sâd?) (Nasawi, p. 126, 157). Ibn al-Âthîr, xii. 322 seems to deal with the course of these events. Under 627 he says that the troops of Djalâl al-Dîn besieged Rûyîn-dîz for some time. The fortress was about to capitulate when some malcontents summoned the assistance of a Turkoman Amir Sewînîd (Swûlî) of the tribe of Kûsh-yalwâ. The domination of this chief and his relatives who succeeded him only lasted two years.

Rûyîn-dîz. This fortress lay near Marâgha (Ibn al-Âthîr, xii. 342). According to Zakariya Kâznî who gives a very accurate description of Rûyîn-dîz, it was 3 farsâhâs from Marâgha. Its proverbially impregnable position (furûh bi lâsûtar al-mawdûd) suggests that it was built on the side of Sahând. The Russian map marks it on the Sofî-câi 10 miles (c. 3 farsâhâs) above Marâgha a place called Yay-shâhâr (in Turkish = 'summet-town') besides which two streams flowed into the Sofî-câi (on the left bank) and between them is written the corrupted name "Res or Erin". It is very probable that this is the site of the famous fortress on either side of which there was a stream (nakhr); for Res one should read Des i.e. Rûyîn-dîz. The date of the final destruction of Rûyîn-dîz is unknown. As late as 751 the Çobânîn Aşıfû imprisoned his vizier there (v. Hammer, Gesch. d. Iranâ, ii. 357) but the Nâsashi al-Külâbî, in 1349 (1459) only knows the other Rûyîn-dîz, that of Sâwâlî (there is still a Rûyîn-dîz 4 farsâhâs N.E. of Ardabîl).

Kâlîbârâ. Ibn al-Âthîr, x. 340, calls Ahmadûd "lord of Marâgha and of Kûtâb". This last name ( ) seems to be a corruption of Kûtârâ ( ) or Kûrsân, a little town well known to the Arab geographers on the Marâgha-Ardabîl road (10-12 farsâhâs, from Marâgha and 20-27 from Ardabîl); cf. Ibn Khürudjûbîh, p. 120; Kâ-

MARAGHA—MARAND

of John the Baptist 2/3 of a farsakh north of Maragha. After the accession of Ghazan (1295) the persecution of the Christians began, instigated by the amir Nawriz. The mob plundered the residence of the patriarch and the church of St. George built by the monk Rabban Shawa (it had been furnished with articles from the portable church of Arhangeli's camp). The patriarch sought refuge in the suite of the Armenian king Hatzon. On his return to Maragha, Ghazan punished the fomenters of the troubles. In 1298 Yahbalagh was confirmed in his rights. In Sept. 1301 he finished the monastery of St. John. His biographer and contemporary gives an account of the beautiful buildings, the numerous relics and riches of the monastery (Chabot, ap. cit., p. 133). The village of Daili (?) to the east of Maragha was purchased to serve as a walk of the monastery (to the N.E. of the town there is still a village of Kilsakandali village of the church). Ghazan and his successor Uljayt visited the monastery. Yahbalagh died and was buried there in 1317.

On the south side of the hill of the observatory there are a few small caverns or the rock (3 rooms 12 feet high communicating with one another, and a corridor). Inside there are niches in the shape of altars. Local tradition sees a church in these (perhaps of the 8th-9th period); cf. Macdonald, Kinneir, II, Schindler, Lehmann-Haupt and Minorsky, Zaf., xxiv, 1917, p. 167.

After the Mongols. In 1337 (1337) the Djalayrind Shakh Hasan inflicted a defeat on Tughla-Qutlur [q.v.] near Maragha (or at Hashtabadi). The pretender Muhammad was buried at Maragha in 738 (Ma'asarat al-Adab, p. 315). Later the political struggles of the Turkmans had their principal arena in the northern part of Azharistan. In the same period the Kurdish elements of the districts south of Lake Urmia became consolidated and received reinforcements from the districts of Mawsil (Shafarabbana, i. 288). The Mulk Kurd amirs extended their influence over Maragha and even as far as Dih-Khursh. The Turks during their rule over Azharistan included Maragha with Tabriz and levied 15 kharvars of gold per annum on it which caused its inhabitants to go away (Ibbat, p. 291). In 1002 (1593) the name of the fortress of Saru-kurghan (demolished in 795 by Timur; cf. Zafar-nama, i, 628 and rebuilt by the Mulk) in the region of Maragha often occurs in the Shafarabbana, p. 294—296; this name recalls that of the Xiraz, the right bank tributary of the Djalaghut.

During the second Ottoman occupation (1725) Maragha was governed by Abd al-Aziz Pasha; this administrative unit consisted of 5 sandjaks, of which 2 were hereditary and 3 granted by the government (v. Hammer, iv. 225; according to Celebi-zaide). In 1142 (1729) Nadir defeated the Ottomans at Miyanduz on the Djalaghat and occupied Dundum, Sawiy-balak, Maragha and Dih-Khursh (Mahdi-Khan, Tahiri-khali Nadiir, Tabriz 1284, p. 66; transl. Jones, i. 164). According to the recently discovered history of Nadir, the monarch transported 3,000 inhabitants from Maragha to Kalat (Rasbok, in Zaf., xxv, p. 88).

The Muqaddam. As early as the time of Nadir the Turkish title of Muqaddam is mentioned as settled in the region of Maragha (Macdonald, Kinneir: 15,000 men). Ahmad Khan Mukaddam played a considerable part in the affairs of Azhar-baidjan. Jaubert, Voyage, p. 160 knew him in 1805 as beglerbegi of Azharbaidjan under prince Abbas Mirza. In 1810 he exterminated the Bilibads whom he had invited to Maragha [cf. Sawdy-balak]. According to Morier, Second Journey, p. 293, this patriarch was aged 90 in 1815 (cf. Bryges, History of the Jazzars, p. 90). The governor of Maragha Sayned Khán, a partisan of Muhammad Ali Shah who besieged Tabriz in 1909, was of the family of Ahmed Khán. At the present day the Mukaddams are concentrated round Miyanduz.

In 1828 Maragha was occupied by Russian troops. In 1851, the Kurd invasion by Shaikh 'Ubaidallah reached the gates of Maragha. The town was not taken but the whole country round was in ruins when H. Schindler visited it in 1882. During the war of 1914—1918, Maragha was within the zone of the Russo-Turkish operations [cf. Taraz].

Bibliography: In addition to the native sources quoted in the text: Samani, Kitab al-Anadil, G.M.S., xx, fol. 519 (he also derived the name Maraghi from the clan al-Maraghi of the tribe of al-Azif); Hadji KHALifa, Djihak-nanum, p. 389; Ewliya-Celebi, Shih-bat-nya, iv, 333 (confused and of doubtful value); Zain al-Abdin, Rusun al-Siyah, p. 555.

(V. MINORSKY)

MARAND (1), a town in the Persian province of Azharbaidjan.

Position. The town lies about 40 miles N. of Tabriz, halfway between it and the Araxes (it is 42 miles from Marand to Djulfu). The road
from Tabriz to Khoi also branches off at Marand. A shorter road from Tabriz to Khoi follows the north bank of Lake Urmia and crosses the Mishowdagh range by the pass between Tussud [q.v.] and Djiyâ al-Dîn. Marand, which is surrounded by many gardens, occupies the eastern corner of a part of Marand and is enclosed by a fine plain, about ten miles broad and sloping softly. The Mishowdagh range (western continuation of the Sawânûn), separates it from the plain of Tabriz and from Lake Urmia. The pass to the south of Marand often mentioned by historians is known as Fam (Mongol = post-station). The pass between the plain of Marand and Tussud [q.v.] takes its name from the village of Valdiyân. To the east of Marand lies the wild and mountainous region of Karâgadagh (capital: Ahar). To the north, the plain of Marand is separated from the Araxes by a range, a continuation of the central heights of the Karâgadagh, which is crossed by the defile of the Dardiz. The plain of Marand is watered by the river of Zumir, the southern arm of which called Zilbir ruddi. The combination of watered land of Zumir and Zilbir flows into the Khotr-taí (an important right bank tributary of the Araxes) about 20 miles N.E. of Khoi. The length of the Zumir is about 40 miles (Ham Allâh Mustawfi: 8 farsaks). History. A lofty tell which rises beside the town is evidence of the great antiquity of this as an inhabited site; it must have existed in the time of the Vanni (Khâlî) and Assyrian kings. Its Greek name Messôvâh is perhaps connected with the people Mazdaštâr who, according to Ptolemy VI. 2, occupied the lands as far as Lake Urmia. A legend of Armenian origin based on the popular etymology mazr and "mater ilî" locates in Marand the tomb of Noah's wife (Hulchschm. *Die alterothischen Ortsnamen*, 1904, p. 346 and 451; Ker Porter, *Travels*, i. 217). Moses of Chorene places Marand in the district of Bakurakert. There was another Marand mentioned by the Armenian historian Orbelian (c. 1300) in the province of Sùnnîk (north of the Araxes) and a village of Marand still exists east of Tîgîhâ in the khâmate of Mâkh [q.v.].

Ibn Ba’th. After the Arab conquest a certain Hâlbas of the tribe of Râkha took Marand. His son Ba’th, a soldier of fortune (*ṣul’îk*) in the service of Ibn al-Râwîd, fortified Marand. Muhammad b. Ba’th erected enceâles there (ṣul’tur) (Baladhuri, p. 330). This chief had acquired considerable notoriety. In 200 (815) he had taken from the family of Rawîd, the strongholds of Shâhî and Tabriz (Tabari, iii. 1171). In another passage (Tabari, iii. 1379, mentions Bakdûr [3] in place of Tabriz). Ibn Ba’th lived at Shâhî which stood in the centre of Lake Urmia (the peninsula of Shâhî, where at a later date Hâlçû Khân kept his treasure and where he was buried). Ibn Ba’th was at first on good terms with the Khurrami Bâbak, whose authority must have prevailed in the Karâgadagh in particular, in the north-eastern corner of which was his residence al-Bâbdh. Ibn Ba’th suddenly changed his tactics and seized by a râwe ṭum, one of Bâbak’s generals whom he sent to the caliph al-Muti’asim. In 221 Ibn Ba’th accompanied Bughâ on his expedition against al-Bâbdh (Tabari, iii. 1190). In 1193 he became the caliphate of Mutawakkil, Ibn Ba’th committed some crime (*khâfa*) and was imprisoned in Surman-râ’a. On the interference of Bughâ al-Shâhî, 30 people of repute became guarantors of Ibn al-Bâbdh’s good behaviour and he must have been allowed considerable liberty, for in 234 (848) he escaped to Marand. Ibn Khurâfâbihi, who wrote in 234, mentions Marand as being Ibn Ba’th’s seif. Tabari, iii. 1379–1380, gives a very graphic account of the expedition sent against this town. The wall which enclosed Marand and its gardens was 2 farsaks in circumference. There were springs within it. The dense forest outside was a further protection to the town. Ibn Ba’th collected 2,000 adventurers who were reinforced by a number of non-Arabs (璧庫î) armed with slings. They had ballistai constructed to repel the assailants. During the 8 months that the siege lasted, 100 individuals of note (*arâfî al-sulûm*) were killed and 400 wounded. When Bughâ al-Shâhî (Baladhuri, p. 330; Bughâ al-Sa’dîb) arrived he succeeded in detaching the men of the Râbha tribe from Ibn Ba’th. Ibn Ba’th and his relatives were seized and his house and those of his partisans plundered. In Shawkail of 235 Bughâ arrived with 180 prisoners at the caliph’s court, where he offered his house to be beheaded but the latter recited verses in Arabic and the caliph was astonished by his poetic gifts (*muwâdha bâ-tâhâb*) and gave him his life. Ibn Ba’th died in prison and his sons entered the corps of mercenary (al-shâriyâ). According to one of Tabari’s authorities (iii. 1388), the shâhiyâ of Marâgha who praised the bravery and literary ability (adâb) of Ibn Ba’th also quoted his Persian verses (bi l’sarîsita) This important passage already quoted by Fârîdî, *Ruell. Schrifl. Oriental Studies*, vol. ii. Pt. iv., 1925, p. 836–838, is evidence of the existence of the cultivation of poetry in Persia in the N.W. of Iran at the beginning of the ninth century. Ibn Ba’th must have been transcribed to a considerable extent, and, as has been mentioned, he relied for support on the non-Arab element in his rustaks (*-nilâd i ta’âshî). Later History. The Arab geographers of the tenth century (I-yakin, p. 182: Ibn Hâwâl, p. 239) mention Marand among the little towns of Ashâ背叛江ën where the material called *tlik* was manufactured. Mujaddadi, p. 51. 374, 377, puts Marand under Dabl and notes its gardens, its flourishing suburb and a cathedral-mosque in the centre of the market. The same author (p. 382) mentions a direct road from Marand to Marâgha (via Nûn [2], somewhere west of Tabriz). Later, Marand must have shared the fate of Tabriz [q.v.]. According to Yâkîn, in 503, the town had begun to decline after it was plundered by the Georgians (Kurds) who carried off its inhabitants. This is valuable confirmation of the Georgian expedition to Persia, a detailed account of which is given in the Georgic Chronicle for 1208–1210 (605–607) (cf. Tâ’âzî and Tibîk). Among the theologians, born in Marand, Yâ’âsit mentions one who died in 216 and another who had studied in Dâm-sus in 433. In 624 (1226) Marand which had not sufficient defence, was occupied by the ‘alî of al-Shâ’ârsh on of Khâitâ. Sharaf al-Mulk, governor for the Khâizârîmshah, retook the town and wrought great slaughter in it (Nasawi. ed. Houdas, p. 166). The only historical mention in Marand is the old mosque now in ruins with a mihrâb in situ bearing the date of rebuilding 731 (1331) (reign of the Ilkhan Abî Sâ’d). Cf. Sarre, *Denkmâler pers. Baudgen*, Berlin 1910, p. 24–25 and pl. xix.
and the observations by Herzfeld. Die Gumbad-i 'Ali-şirvân, in the Volume... presented to E. G. Brown, 1922, p. 194–195. In the same period (1916) Hedjâta al-Misir, [in:] Nechev al-Kûthî, G. S. xii., p. 58, counted 60 villages in the district of Marand. The walls (kârân) of the town were 8,000 paces (pārân) around but the town only occupied half the area.

Marand is several times mentioned in connection with the Turco-Persian wars. According to Ediyâ Celebi (in 1647), Siyâhat-nâma, i. 424, Marand was a hunting-ground of the Timurid Shahrukh. In spite of the damage done by the invasion of Sultan Murâd, the town looked prosperous and had 3,000 houses. Ediyâ enumerates a number of celebrated theologians hallowed north of Marand.

In the autumn of 1724 'Abd Allah Pasha Kaprul sent the Kurî Khan of Dâsh Muhammad 'Abd to occupy Marand the inhabitants of which had fled. Resistance centred round the town of Zani (10 miles N. of Marand) which had 7,000 (2) houses and a castle called Diza by the Persians. To dispose of the threat to their flank, the Janissaires before advancing on Tabriz, fought a battle here in May 1725 with the Persians of whom a large number were slain. Diza was taken and dismantled (cf. von Hammer, G. O. R., iv., p. 226, following Celebi-sâde).

Marand has often been mentioned by European travellers such as Chardin (1811 edition, p. 318), cf. the notices by Ker Porter, Jaubert, Morier, Ouseley and Montet of which a résumé is given in Ritter, Erdkunde, ix., p. 907. Marand has recently gained in importance since it lies on the modern high road from Tabriz to Hulaf built by the Russians in 1906 and replaced by a railway in 1915.

(2.) A town in the district of Khuttâl, to the north of the Oxus; cf. Mukaddesi, p. 49, 290–291.

(V. MINORSKY)

MARÂSH, a town in Syria near the Asia Minor frontier (al-Thu'ûr al-Shâmiyya). It lies about 2,000 feet above sea-level on the northern edge of the hollow (Amk of Marâsh; now Ca¿al Owa and south of it Sheker Owa or Marâsh Owa) which lies east of the Taurus and is watered by its tributary, the Nahâr Hûri (Ak-Sî). As a result of its situation at the intersection of the roads which run to Amk-Shaîlya, to 'Ain Zarba and al-Majdil, to Albusanî (Abul-balana) and Yarçâ, via Goksan (Kokussos) to Kañariya, via Behesht (Bahasa) to Sumasalî, and via al-Hadâth and Zîbatra to Malatya, Marâsh was from the earliest times one of the most important centres of traffic in the Syrian frontier region. It is repeatedly mentioned as early a Assyrian texts as Marşal, capital of the kingdom of Gurgum [cf. the artide MARÊŠA, and several Hittite monuments have been found there (cf. Unger, Marşalâ, in Ebert's Kallistik, d. Vor., viii., 1927, p. 48).

In the Roman imperial period it was called Germaniké in honour of Caligua (on the coins under Germaniké; cf. Geroire, Rev. d'Insc. publ. par Ber., ii., 1908, p. 217 sqq.). The identity of Germaniké and Marâsh is certain from numerous literary and Syriac references, the Armenians probably knew it, but probably from learned tradition only, the name Gârmân (Kermank in Vahram; cf. Math. of Edessa, d. Dulaureix, p. 487 infra; St. Martin, Mém. sur l'Arm., i. 200). In the statement in a description of the district of Halab (Paris MS. Amb., No. 1683, fol. 72a) that the Armenian name of the town was Nâkhûk (Blochet, R.O.L., p. 555 sqq., note 6) is wrong: this is a mistake for Gârmân, name later given to the neighbouring al-Hadâth (q.v.). The Emperor Heraclius passed the town in 626 (Theoeph, Chron., ed. de Boor, p. 313; Ramsay, Class. Review, x. 140; Gerland, Byz. Zeit. Schriften, ii., 1894, p. 362). The Emperor Leo III came from Marâsh (Germanikeia); later authors (like Theoph., op. cit., p. 394) wrongly called him the "Isaurian" (a confusion with Germanikopolis; cf. K. Schenk, Byz. Zeit. Schriften, v., 1896, p. 296–298).

In the year 16 Abî 'Ubayd sent Kâhîl b. al-Walîd from Manbij against Marâsh and the Greek garrison surrendered the fortress on being granted permission to withdraw un molested; Kâhîl then destroyed it (Caætani, Annali dell' Islam, iii., 1910, p. 794, 806). Sulaymân b. 'Awf al-Mâshûd in 1088–1089 set out from Marâsh against the Byzantines. Marâsh was retaken and settled soldiers in this "Arab Cayenne" (as Lammens, M. F. O. B., vi., 1913, p. 437 calls it). After 'Azm's death the attacks of the Greeks on the town became so severe that the inhabitants abandoned it.

After Muhammad b. Marwân in 74 (693–694) had broken the truce concluded by 'Abd al-Malik with the Greeks, in Dîjmâd I of the following year the Greeks set out from Marâsh against al-Amîk (= Amîk of Antîkia; cf. Le Strange, Palestine etc., p. 391) but were again driven back in the Amk of Marâsh. Marâsh was restored by al-'Âbâs, son of al-Walîd I, and fortified and repopulated; a large mosque was also built there. The people of Khinnasîn (i.e. probably of the Khâmis) had sent troops every year to Marâsh. During Marwân II's fighting against Hûs, the Emperor Constantine again besieged Marâsh, which had finally capitulated (746) and was destroyed (al-Baladhuri, ed. de Goeje, p. 189; Theophanes, Chron., ed. de Boor, p. 422; Georg. Kedrenos, ed. Bonn, ii. 7). The inhabitants emigrated to Mesopotamia and the Dîjmâd of Khinnasîn. After the capture of Hûs, Marwân sent troops to Marâsh, who rebuilt the town in 130 (747); the castle in the centre of the town was henceforth called al-Marwânî after him (Yûbî, ed. Wustenfeld, iv. 498 sq.). But by 137 (754) the Greeks again sacked the town. Al-Ma'sûrî then had it rebuilt by 'Abî al-Dî (150 = 767) and gave it a garrison which al-Mahdi strengthened and supplied with ample munitions (al-Baladhuri, ed. de Goeje, p. 159; Theoph., Chron. il., p. 445: 6 ܦܐܪܟܐ ... ܡܡܠܐܐܢܐ ܓܝܘܪܐܢܐ ܒܐܡܘܢܐܝܢܐ ܕܐܢܐ ܚܙܐܐ). The Arabs in 769 (1080) entered the 'Amk of Marâsh and depopulated the inhabitants of the region who were caught on espionage on behalf of the Byzantines, to al-Ramî (Michael Syrus, Chron., ed. Chabot, ii. 526). According to the Syriac inscription of 'Enedî on the Ephrathas, in 776–777 A.D. (1088 Sel.) the people of the hollow (Amk) of Marâsh invaded Asia Minor (Bîth Rûmâyây) to plunder (Chabot, J., i., ser. ix., xi., 1900, p. 286 sqq.; Pognon, Inschr. imit. de la Syrie et de la Mesopotamie, p. 148–150, No. 84). A Greek army of 100,000 men in 161–162 (778–779) under Michael Lachandonarakos besieged Marâsh which was defended by 'Isâ b. 'Ali (Tabrizî in Theoph., op. cit., p. 451), grand-uncle of the Caliph al-Mahdi, destroyed al-Hadâth and laid waste the Syrian frontier (Wool, Gesch. d.}
Danishmand built the town of al-Hārinīyya near Marâşh (al-
Baladhuri, op. cit., p. 171; Yāhuti, iv. 498, wrongly
calls it a suburb of Marâşh); he also raised the
prosperity of Marâşh and al-Maṣṣāra (al-Maṣṣūdi, 
Muṣâbīd al-Dhahab, ed. Barbier de Meynard, viii., 
295). The amir Abû Ša'îd Muhammad b. Yūsuf in 
841 invaded Asia Minor; the Greeks drove him
back however and took al-Ḫudârat, Marâşh and
the district of Malâya (Michael Syrus, iii. 102; 
Weil, Gesch. d. Chaliph., ii., p. 215, note 1; 
considers this story unhistorical). The emperor 
Basil I in 877 passed via Ḫusaynâ (Gusān) and
the Taurus passes (στέγα πάνω) against Marâşh (Σαραντάπεδον) 
better could not take it and had to be
content with burning and plundering the suburbs;
the same thing happened at al-Ḫudârat (Ἄλτεξ; 
Georg. Kedrenos [Bonn], li. 214; Theophan.
continued, ed. Bonn, p. 280). According to the περὶ 
παραμερίας πολέμου (de victitiatione bellica, Migne, 
Patrol. Gracc., cxvii. 1000) shortly before the
attack on Germanikeia he crossed the Ἱππαθίωνος
ποταμοῦ (cf. Pliny, Nat. Hist., v. 93: one of the
'Sinus fluminis' of biblical probably the Alûš, 
Arabic Alûš, Latin Almus or Alimus, perhaps by 
Tomarchek, S. P. R. Wien, cxvii., 1891, Alth.
66, is therefore presumably wrong). The
Byzantine Andronicus in 292 (904—905) invaded
the region of Marâşh, defeated the garrisons of 
Târûs and Myass and destroyed Kūrûs (Im Ab-
Alîtir, ed. Tornberg, vii. 378; al-Ḏalârsî, iii. 2298:
Well, op. cit., p. 533; Vasilev, Visintyna i Arabi,
i., 1902, p. 154). The Armenian Mlekh (Arab. Malîh)
plundered Marâşh in 916; 50,000 prisoners were
withdrawn from it and Târûs (Well, op. cit., ii.
634; Vasilev, op. cit., p. 203 sq.). In the fighting
against Saif al-Dawla, the Greeks under John 
Kurkûas took Marâşh in the spring of 377 (949)
(Kamâl al-Dîn in Freytag, Z. D. M. G., ii. 187;
Well, op. cit., iii. 14, note 1; Vasilev, op. cit., 
p. 268). In 943 (1592) the Hamânî defeated the
Domestikos at Marâşh and in June rebuilt the
defences of the town (Freytag, op. cit., p. 191; 
Vasilev, op. cit., p. 291). When the Hamânî 
Abû l-Qâdir in 956 was taken a prisoner by
the Byzantines, his father-in-law Abû Firas followed
as far as Marâşh in the attempt to rescue him
but could not outtake his captors (Dâvûkâ, Abû Fâris, 
Leyden 1895, p. 31; Vasilev, op. cit., p. 297).
Nicephoros Phocas in Rabî I 1351 (Aug. 962)
occupied Marâşh, Dulûk and Ra'bîn (Freytag, 
op. cit., p. 199; Rosen, Zaptuki Imp. Akad. Nauk, 
xiv. 152, note 100). Bandâtkîtik in 382 (992)
carried out a raid on Marâşh and came back
with prisoners and great booty (Freytag, op. cit.,
p. 295; Rosen, p. 263). The Armenian Philaretos 
Brachamios (Filarðûs al-Rumî) who in the second half
of the xii. century, as a leader of a robber
band and ally of the Byzantine emperor, conquered
a little kingdom for himself on the Syrian frontier,
belonged to the village of Şirîbâz in the district of
Marâşh (Michael Syrus, iii. 173, 174 note —).
After the Franks under Godfrey de Bouillon
had taken Marâşh in 490 (1097), they installed
a bishop there (Michael Syrus, iii. 191). Bohemund
of Antioch was taken prisoner in June 1100 in the
same of Marâşh in the village of Gâna (Michael 
Syrus, iii. 188) on his campaign against Malâya
by Gümüştegin b. Dânishmand (Recueil des hist. 
or. des crois., iii. 589; Rohricht, Gesch. des Konig. 
Jevurs., p. 9; Well, op. cit., iii. 179). The emperor
Alexius later sent the general Butumites against
Marâşh (to Mârûşta) who took the town, fortified
the surrounding small towns and villages and gave
them garrisons and left Monastir there as 52 "κατάτα
(Anna Commena, Αλλαγές κα. ed. Reifferscheid, ii. 132, 
114; F. Chalandon, Les Comman., i, Paris 1900, 
p. 234). The town of Marâşh was placed under
the Armenian prince Thathul, who had distinguished
himself in its defence against Bohemund (Matthiæos 
Urhoææ, ed. Dulsurier, ch. cxxi., p. 239 sq.; 
Chalandon, Les Commin., ii. 104 sq.). But by 1104
he had to abandon it and surrender it to Joscelin 
de Courtenay, lord of Tell Bashir (Matthiæos, op. 
cit., p. 257, ch. clxxvi; Raoul of Caen, ch. 148;
Rohricht, op. cit., p. 49, note 8; p. 52, note 4). 
This Thathul is perhaps the same Armenian as
had given his daughter in marriage to Godfrey's 
brother Baldwin (in William of Tyre, x. 1. He is called 
Ταφαζ in Albert of Aix, iii. 31; v. 18: 
Taphraz; cf. Chalandon, op. cit., p. 105). By 1105 
Tancred of Antioch seems to have been in 
pursession of Marâşh (Rohricht, p. 56) to whom it was
allotted in the treaty of Nea. 1105 (Γενικοὺς ἡμερὰς, 
Anna Commena, ed. Reifferscheid, ii. 171; Rohricht, 
p. 66). In 1114 the widow of the recently deceased
Armenian prince Kogh Vasil (= "kull the thief")
of Marâsh submitted to Abû Songkar of Maw-sîl
(Weil, op. cit., iii. 199); on the 25th Hûmâdd 
(Nov. 27) of the same year, Marâsh was devastated
by a disastrous earthquake in which 40,000 lost
their lives (Michael Syrus, transl. Chabos, ii. 200; 
Recueil hist. or. crois., ii. 607; Matthiæos Urohææ,
p. 289, ch. cxxvii.). King Baldwin granted a monk
named Godfrey (Gōdfrèius Monachus) a hief
consisting of Marâsh, Kaşûn and Ra'bîn (Michael 
Syrus, iii. 211; Rohricht, op. cit., p. 161); in 
1124 Godfrey was killed at the siege of Tarambil
in the train of Joscelin of Edessa. The Dêmâ-
mandî Muhammad b. Amr Gûzî in 1136-1137
laid waste the villages and monasteries near Marâsh
and Kaşûn (Matthiæos, p. 320, ch. cxxii.). The 
Sultan sulṭân Maṣûd in 1138 advanced as far as
Marâsh, plundering the country as he went (Michael 
Syrus, ii. 246) as did Maẓûk Muhammad of Malâya in 1141 
(Michael Syrus, iii. 249) and Kûlidj Arslân II in 1147 
(Michael Syrus, iii. 275). The town then belonged to 
Rudâned, son-in-law of Joscelin II of Edessa, who fell in 
1149 at Inanû (Rohricht, op. cit., p. 260). On Sept. 11, 
1149, Kûlidj Arslân and his father Maṣûd set out from 
Albâstân against Marâsh, plundered the 
country around and besieged the town. The Frankish 
garrison capitulated on being promised a safe 
retreat to Antâkîya; but the sulṭân sent a body 
of Turks after them, who fell upon them on the 
road and slew them. On this occasion all the 
treasures of the churches of Marâsh was lost, which 
the prie-ts who had rebelled against the bishop 
had appropriat (Michael Syrus, iii. 290; Matthiæos 
Urohææ, i. 330, ch. cclx.; Chalandon, op. cit., 
p. 421; Rohricht, op. cit., p. 263). After the 
capture of Joscelin, Nûr al-Dîn al-Ḫalib in 151 
(1151-1152) took a large part of the country 
of Edessa including the town of Marâsh (Tell Bandîr, 
Aštâb, Dûlûk, Kûrûs etc. (Recueil hist. or. des crois., 
p. 29, 481, i. 154; Well, op. cit., iii. 194; Rohricht, 
op. cit., p. 265, note 5). The district was then 
divided: the sulṭân received Marâsh, Barzamân, 
Ra'bîn, Kaşûn and Bânahâr; the Urtakiâ Kara 
Arsân of Ḫirân Ziyâd got Bûbûk, Gargar, Kâkkhâ
and Ḥyūn Mansūr; Nūr al-Dīn kept the rest (Michael Syrus, iii. 297; Wilūd of Tyre, xii. 156).
When Marāsh’s son Khīlīd Arslān, lord of Marāsh (Michael Syrus, iii. 318), attacked an Armenian village, the Armenians under Stephan, brother of the prince Thūrus, in 1156 revenged themselves by setting Marāsh on fire and carried off the whole population into captivity, during the absence of the Sulṭān and his Turks (Michael Syrus, iii. 314 [expanded from Barhebraeus, Chron. syr.], differently in Abī Shāhīb, Rec. hist. or. croiz., p. 92; F. Chalandon, Le Commiss., ii. [1912], p. 424).
Among those carried off was the bishop Dionysios bar Sullū, who escaped to the monastery of Kāfūr (according to Chabol, loc. cit., the kāfūr Kāfūr of Anna Comnena, ed. Reifsneider, i. 219) and wrote three memoirs about the devastation of his former diocese of Marāsh (Michael Syrus, loc. cit.; Baumstark, Gesch. d. syr. Litt., p. 298). Thūrus of Little Armenia in 1165 plundered Marāsh (Barhebraeus, Chron. syr., ed. Begān, p. 331; Rohricht, op. cit., p. 319, note 8; Chalandon, op. cit., ii. 531, note 1). Nūr al-Dīn again took Marāsh from Khīlīd Arslān II when he was on a campaign against the Dānemādshāh Marāsh (Michael Syrus, iii. 213) in the beginning of Dhu ’l-Ka‘a 568 (June 14, 1173) and Bāhānā in Dhu ’l-Hijājja (Rec. hist. or. croiz., i. 43, 592; iv. 158; Mattheos U’hayyi, ed. Dulaüer, p. 360; Abu ’l-Fid’ā, Annal. Murt., ed. Reiske, iv. 4; Rohricht, op. cit., p. 303, who is followed by Chalandon, Les Commiss., i. 465, wrongly puts these events as early as 1159).
Nūr al-Dīn perhaps handed Marāsh over to his ally Mleiḥ of Little Armenia. When the dānemād raised the district of Ra’fān, al-Malik al-Ẓahīr in 592 (1195-1196) took the field against him, whereupon the lord of Marāsh sought forgiveness and recognised his suzerainty (Kamāl al-Dīn, transl. Blochet, R. O. L., iv. 212). The Armenian ruler Rūpān III took Bāhūmess III of Anṭākiyya prisoner in 1185 and forced him to cede the territory from the Dījāhūn up to Kāstān (Michael Syrus, iii. 396 sq.; Rohricht, op. cit., p. 493, note 7, 661). (tiḥyāṭ al-Dīn) Inalīkhwās, son of Khīlīd Arslān II, in 605 (1208), when on a campaign against Little Armenia took Marāsh (Abu ’l-Fid’ā, Annal. Murt., ed. Reiske, iv. 232) and made Ḥuṣnān al-Dīn Iḥṣān governor of the town. He was succeeded in this office by his son Ibrahim, who in turn was succeeded by his son Nūrān al-Dīn, who ruled Marāsh for 50 years. The long reign of his son Mūsāfār al-Dīn was followed by that of his brother ’Īsāf al-Dīn who however in 656 (1259) abandoned the town which was much harassed by the Armenians and Georgians, after failing to find support either from ’Īsāf al-Dīn Kādī-Kabūs of Rūm or al-Malik al-Ṣālih of Egypt. The town then surrendered to the Armenians (Ibn al-Shima, Bahrūt 1009, p. 192).
Marāsh did not escape during the great Mongol invasion of Asia Minor. Barbars I of Egypt in his campaign against them in 670 (1271) sent from Ḥalāf a division under Ḥanbars al-Wāzīri and Ḥa’b b. Mullīn to Marāsh, who at once deserted the Tartars from there and slew them (Rec. hist. or. croiz., ii. 245; Maqrīzī, ed. Quatremère, Hist. de Sult. Murt., i. 101). In the wars with the rulers of Little Armenia troops from Ḥalāf went as far as Marāsh in 673 and destroyed the gates of the outer town (Weil, Geth., d. Chal., iv. 77). In the next few years Barbars negotiated with envoys from Sīs, from whom he demanded the surrender of Marāsh and Bahānā; but he was satisfied instead with a considerable sum of money (Maqrīzī, ed. Quatremere, op. cit., ii. 123 [year 673 = 1274]; iv. 104 [688 = 1289]). It was not till 692 (1292) that Sulṭān Ḥālib by a treaty received Bahānā, Marāsh and Tell Ḥamānā (Muṣṭafādī b. Abī ’l-Ḥājīa, Hist. des Sultans Murtūn, ed. Blochet, in Patrol. Orient., xiv. 557; Weil, op. cit., iv. 186); S. Lane-Poole, Hist. of Egypt in the Middle Ages, London 1901, p. 287). But the Armenians must have retained the two last named towns not long afterwards (Weil, iv. 213, note 1), for in 697 (1297) Marāsh was again taken by the emir Bībān Tabakhī, Nāṭib of Ḥalāf, for Lāḏīn. A treaty was then concluded with the ruler of Little Armenia by which the Dījāhūn was to be the frontier between the two countries; Ḥamīs, Tell Ḥamānā, Kunbārā, al-Nukār (on its position cf. L. Alīshān, Sīrānī, p. 493-496), Ḥādir Shuhghād, Sīrāndāk and Marāsh thus passed to Egypt (Maqrīzī, op. cit., i. 411, 63; Abu ’l-Fid’ā, Annal. Murt., v. 140).
In the second half of the viith (xivth) century Zain al-Dīn Karadjā and his son Khālid, the founders of the house of the Dhu ’l-Kadrogūn, conquered the lands along the Egyptian Asian Minor frontier with Malatyā, Albeṭisān, Bahānā and Kārphūt [cf. Dhu ’l-Kadrib]. In the mosque of Marāsh one of his successors, Malik Arslān, was murdered in 870 (1465-1466); his portrait with the inscription “Sulṭān Arslān” and that of his sister Sitti Khādīn with the legend “hūṣūy Yā rā” are painted in the Codex Venetus 516 of the Geography of Ptolomy, which he apparently intended to dedicate to his father-in-law Mehmed II (Olschanzen, in Hermes, xv, 1880, p. 417-424).
Conquered by Selīm I, Marāsh became Ottoman; on his campaign against the Dhu ’l-Kadriya in 1515 he encamped on his way back before Marāsh and then returned via Kaš Marāsh (now Kaš Bāzār or Kaš Dhu ’l-Kadriya) and Goksun to Kāsānīya (cf. Tsaeschner, Türk. Bild., xxiii, p. 36, note 4).
From 1532 belonging to Egypt, Marāsh passed finally in 1540 back to the Turks. The town was occupied by the French from 1913-1920; after its evacuation it was the scene of massacres of Armenians (F. Tournéhède, in Dict. d’hist. et de géogr. eccl., iv., Paris 1925, col. 360-362).
Marāsh is now the capital of a wilayet which in 1928 had about 150,000 inhabitants; the town itself has about 50,000 inhabitants.
The extent of the territory belonging to Marāsh was liable to vary considerably with the vicissitudes of the town in the middle ages. The following places are mentioned as belonging to the territory of the town:
Gardebāla (= Gerbolissa, Itin. Anton., ed. Parthey, p. 85; Kleyn, Jacobus Baradacius, p. 191; corrupted in Michael Syrus, ii. 256 to Arbīdīs, in Barhebraeus, Chron. Syr., p. 370 to Gerbīd), 28 Roman miles; all the Name of Tātar alone is 15 from Doliche (Tell Dūlāk near Ainīfūn).
Bebedīn “which is now destroyed” was the
birthplace of Nestorius near Marash (Patrol. Orient., xi. 16 sq.).

Shiraz, the birthplace of Philaretos (see above).

The monastery of Mar Shaño (Michael Syrus, iii. 148).

Kharshina, probably the Kharšìana of the Syrian writers, is described by Matthew Ughayce's (transl. Dulauriere, p. 259) as adjoining the territory of Marash. Dulauriere (op. cit., p. 445) locates it not far from the Eufrates; but in the Marāḍiāl al-Ḫiṣā'ī, ed. Juynboll, iii. 347, the reference is rather to Xarışan and in Barhebræus (Chron. Syr., ed. Bedjian, p. 319; cf. Michael Syrus, iii. 307), the correct reading is "Forêshina". We should rather identify it with Chabot (Michael Syrus, index, p. 437) with Kersten on the Nahe Aflun (cf. M. Hartmann, Zeit. Archäol. Gesch. f. Erdk. Berlin, xxix. 1854, p. 522, No. 47; Lammens, M. F. O. Beyrouth, ii. p. 353, note 2; in the Sâlûnâie of Ḫalab of 1236 [1869—1870]: Kersten). The modern vilâyet (formerly sandjâq) of Marash consists of four kázas:

Zaitún, north of Marash; scene of the Armenian rising against Turkey in 1804—1805, noted for its rich iron-mines (Aghassî, Zeitoun, Paris 1897: Anatolico Latino, Gli Armîni e Zaitun, Florence 1897).

Abîstân [q. v.], also north of Marash;

Andarûn, west of the town, and the ìlbîn (not to be confounded with Andar and the Syrian steppe); the capital of the kâza is Kheîn (Arm. Ghalân);

the capital of Leo of Little Armenia.

Pâzarjîk, between Marash and 'Aintâb; the capital is Bagdîn.

MARÂSH — MARÂTHA

See SHARI.AT.

MARÂTHA, commonly misspelt in Hindî and in Indian Persian Marâthâ, is the name of a people of Western India inhabiting Mahârâṣṭra, the country lying to the east of the Western Ghâts between the seventeenth and the twenty-first parallels of north latitude and extending at one point as far east as the seventy-ninth degree of east longitude. The Marâthâ caste is an agricultural caste, of common origin and nearly identical with the great Kûshâ caste, but sometimes claiming a Khaṭhirya descent. The Marâthâs served in the armies of the Muslim kingdoms of Southern India, and there gained military experience, but their opportunity came with the decline of the power of the Mughal Empire in the seventeenth century, when their national hero, Shivaji Bhonsla, converted the peasant population of Mahârâṣṭra into a military nation. Shivaji was born at Shiwner, near Dürnberg, in 1627 and while his father was conquering a great part of the Carnatic for Bûjâpûr, obtained possession of the new fort in the Western Ghâts. The Sultan of Bûjâpûr was unable to subdue him, and in 1659 he slew Afgal Khân, commander of the army of Bûjâpûr, at a friendly conference. In 1664 he sacked the city of Sûrat, and was obliged to contend with an imperial army sent by Awrangzib to punish him. In 1666 he was induced to pay homage to the emperor at Dûhî, but was so disgusted by his reception that he escaped and, returning to the Deccan, extended his authority there until, in 1674, he assumed the title of Râdji, and was enthroned at Raygâr. He gained possession of the grants of lands in Carnatic province, and when his father died, he became the ruler of the Marâthâs, now a nation. On the death of Awrangzib in 1707 Shâh was liberated, and mounted the throne of his grandfather, but was never more than a puppet-king, and left all business of state to his Dârâman minister, or Pîshâwâ, Bâldîjî Wishwâvash, who reduced his sovereign to the condition of a state prisoner and founded the dynasty of the Pîshâwâs. He led an army to Dûhî and extorted from the Marâthâs a great recognition of the Marâthâ state and the right to levy iâmah, or one quarter of the revenue, throughout the Deccan. In the time of his two successors, Bâldîjî Rûh I (1720—1740), and Bâldîjî Rûh II (1740—1761), the Marâthâs conquered Gudjârât, Malwa, Berâr, Gondwâna, and Uûrâîa, and raided the Carnatic, Bengal, and the Pàngâjû. They seemed to be on the point of superseding the Mughal power in India when Ahmad Shâh Abdâb or Dûrânnî [q. v.] crushed them at the battle of Pàmpàtâ in 1761. The Marâthâ power survived, however, in the lands of the Pîshâwâs' generals, Sindhyâ in Gâwllâr, Bhonsla in Dûhî, Chandôla in Indi, and Bûjâpûr in Gudjârât. The dynasty of the Pîshâwâs survived at Pûnâ, and a disputed succession in 1775 tempted the Bombay Government to intervene. In 1778 the Marâthâs surrounded the Bombay army near Pûnâ and compelled its leader to sign a humiliating convention, but an army sent from Bengal by Warren Hastings humbled Gâwllâr and the Pîshâwâ, and another force defeated Sindhyâ and captured Gâwllâr. Peace was restored on terms favourable to the Marâthâs, but their hegemony was much weakened. In 1802 Bâldîjî Rûh II, who had fled from Pûnâ, took refuge with the Government of Bombay and entered into a subsidiary alliance with the Government of India. He was reinstated in Pûnâ by
Major General Arthur Wellesley, but Sindhya, Bhonsla and Holkar, resenting the Pishwa's subjection to the British, took up arms, and the third Marathā War began. In the Deccan Arthur Wellesley captured Ahmadnagar, won the decisive victories of Assaye and Argān, and stormed the strong fortress of Gāwīl. In Hindustān General Lake defeated Sindhya's army at Laswārī, and occupied Dehī. Bhonsla lost Ėrisa and Bērār, Sindhya his possessions in the Dībāk and his guardianship of the emperor, and Holkar was humbled, but after the peace the freebooters known as the Fīndārs, whom the Marathās had employed, continued to ravage states under British protection, and even territories w'hen in 1853 the Marquess of Hastings concentrated troops to deal with these marauders, the Pishwā, Bhonsla, and Holkar rose against the British Residents at their courts. The first was defeated at Khīki, and the second at Sitalalād, and the army of the third was destroyed at Mahīdpūr. The dominions of the Pishwā were forfeited and annexed to the Bombay Presidency, and Holkar and Bhonsla lost much territory. Bhonsla died in 1853, and his dominions lapsed, in default of male issue, to the British Government. The dethroned Pishwā also lived until 1853, and his adopted son, Dholānt, was the Nāṣ al-Jāhī of the Indian Mutiny. Three great Marathā states remain to this day: those of Sindhya in Gāwīlāb, Holkar in Indīrā, and Gīkewīr in Gudjarāt, but not one of them is in Mahārāṣṭāra.

MARDAITES. These are the Dārājāmīs [g.v.] singular Dārjumānī, of the Arabs, they are sometimes confused with the Dārāmīkā, singular Dārmakūr, so called from the name of their town Dārājāmī. They occupied the rugged regions of the Amanus and of the Taurus, separating Syria from Cilicia, as well as the marshy districts of Antiochene [see ṬIŠKA]. They enjoyed a semi-independence nominally under the Byzantines to whom they furnished recruits and irregular troops. When the Arabs seized Antioch the Mardaites agreed to serve them as auxiliaries and scouts and in this capacity to watch the passes, the "doors of Syria in the mountains on the heights beside the defiles, commanding, the entrance to or the exit from Syria, they, in conjunction with the Arabs, supplied the garrisons, Exempt from the poll-tax, they obtained the right to spoil on the field of battle. They were in every sense of the word irregulars, living by war and by raids and asking only to fight for whoever paid for their services: half-nomads, they came and went again like a flash. Very lukewarm Christian Monothelites or Monophysites — we do not know exactly — their loyalty either to the Byzantines or to the Muslims was quite intermittent. Sometimes," says Baladhuri, "they obeyed our officials, at other times they betrayed us for the benefit of the Greeks". The precarious nature of the Arab conquest in the North of Syria — a varying frontier region continually devastated by the Muslims and by the Byzantines — and the difficulty of gaining access to the land of the Mardaites, made it impossible to chastise such fickle allies.

Towards the year 46 (666) the Greek Emperor succeeded in sending them against Syria. This was not a raid of the type usual to the mountaineers of the Amanus, but a regular invasion supported by a few squadrons of cavalry and led by officers of the Imperial army; their bands penetrated into the heart of the Lebanon and occupied its chief strategical points as far as Palestine. The natives, discontented with Arab rule and also the thousands of slaves whom the Muslim conquests on land and on sea had collected in Syria, hastened in a body to take refuge with the invaders. The highlanders of this country, who had kept their independence, also threw in their lot with the Mardaites. At all costs the Omayyad government had put an end to this dangerous movement, limit the extent of the invasion and to make sure at once of the neutrality of Byzantium who had let loose this hurricane. Not for a moment did Mu'awiyah hesitate to subscribe to the onerous terms of the Emperor — an annual tribute of 3,000 pieces of gold, the liberation of 8,000 prisoners, the delivery of 50 thorough-bred horses. In return the Emperor agreed to withdraw from the Mardaites his support in men, arms and money. There is however, no evidence that these adventurers definitely evacuated from that time their strong positions in the heart of the Syrian mountains. The neutrality of the Empire, the partial checks sustained by them and finally the establishment on the border of the Mardaites territory of a strong colony of Żūl [q.v.] reduced for the moment to inaction the Dārājāmīs, abandoned by the Byzantines.

A quarter of a century later, they once more attracted attention. This was under 'Abd al-Malik, who was engaged in an interminable war with the anti-Caliph Ibn al-Zabīd and was taken by surprise by the sudden rising of the Genoese 'Amr as-Asbāq [q.v.] in the year 68 (688—689). The Emperor Justinian II took advantage of these difficulties to let the Mardaites once more lose against Syria. The result was a repetition of the movement in the reign of Mu'awiyah I. Byzantium furnished them with subsidies and with arms. At the same time he sent the army of Anatolias to advance and support the irregulars. In the same manner as in the first invasion their ranks were swollen by the accession of thousands of slaves, fugitives and malcontents, amongst whom one could probably reckon the Maronites [cf. LAM]. Taken unawares, 'Abd al-Malik at once followed the policy of Mu'awiyah. The Emperor increased his demands. In addition to the conditions previously agreed to by the Sufyānid Caliph, the Arabs were forced to abandon to the Byzantines half the tribute of Cyprus, of Armenia and of Iberia. In return for this, Justinian agreed to withdraw the Mardaites. The majority of the invaders agreed to evacuate Syria. One of their chiefs, who persisted in continuing the war on his own account in the mountainous massif in the districts of Honīd and of Damascus, perished, treacherously assassinated by a partisan of the Caliph. A few Mardaites bands remained in the country, where we find them again still feared
and handled carefully in the caliphate of Walid I. Encouraged by the good results of the Emirate in 719, the height of the Arab expansion, the Djarradjima lived in practical independence of the Caliphate. They chose their masters and their rulers at their own convenience. At the same time some of them were quite ready to put their swords at the service of the Arabs. Amongst these must be named a leader of a band called Maitima or Mainim. He had his contingent (about a thousand men, probably all Mardaites like himself) perished at the siege of Tyane. His compatriots in the Amanus seem to have wished to profit by the death of 'Abd al-Malik to renew their raids upon the Syrian provinces. Maslama, the son of the Caliph, resolved to put an end to these rebels. He penetrated into their country, laid siege to their capital Djarradjima, and forced it to capitulate. Thousands of Mardaites perished in this campaign. To the remaining he granted the right to retain their Christian faith, to serve in the Muslim armies, if in fact he gave them the same terms as were obtained by their ancestors at the beginning of the Arab conquest. After this severe lesson the Mardaites perished, which had been the cause of incessant trouble during the reign of the preceding caliphs, was practically at an end. The people of Antiochene saw emigration begin to thin their ranks, many of them having decided to emigrate to Anatolia or to enter the service of the Emperor. This resolution, however, did not prevent the Mardaites, who remained in Syria, from fighting under the flag of the Caliph. We shall speak of the reign of Yazid II when they co-operated with the Antiochenes in the suppression of the troubles in the 'Iraq.

MARDWIDJ. B. Ziyak, AHI-'L-HaJDJDJ, the founder of the Ziyarih dynasty, was descended on his father's side from the rulers of Gilân and on his mother's side from the Ispahbads of Kuyân. He had taken service under the 'Aliid rulers of Tabaristan and was a captain in the army under Asfar b. Shashidh. In 316 (928) Mardwijd al-Dîn, brother of Abu Muhammad Hasan, became a soldier and, shortly after that, rebelled against Asfar, made himself independent at Zandjan which he held in Qâdir and captured Kazwin. He then defeated Asfar, forced him to fly to Tabas in Kuhistan and put him to death in 319 when he was attempting to reach the castle of Alamut. Mardwijd thus became master of Rayy and Tabaristan. He then defeated Mâkân [q.v.] and annexed Tabaristan. Mâkân attempted once more to capture Tabaristan, with the help of powerful allies, but Mardwijd defeated him on each occasion and forced him to take refuge in Kharâfan. At this time (319 = 931) 'Ali, Hasan and Ahmad, the three sons of Buwâlî, who were commanders of the army of Mâkân, deserted to Mardwijd who conferred on 'Ali the eldest the governorship of the province of Kârajj.

Having consolidated his power over Tabaristan and Gurgân, Mardwijd next turned his attention to Djibal, defeated Hârân b. Gharîb the governor, in the neighbourhood of Hamadân in 319 (931) and conquered the whole of Djibal up to the confines of Hulwân. In the following year Mu'atadîr, the Caliph, formally recognised him as ruler of the provinces which he had conquered on condition that he evacuated Isfâhan, but as Mu'atadîr was assassinated shortly after this Mardwijd evaded compliance. About this time 'Ali b. Buwâlî, the governor of Kârajj, rebelled and took possession of Isfâhan. Mardwijd sent his brother Wahshînur against 'Ali who abandoned Isfâhan and retired to Arradjan. To deal more efficiently with 'Ali, Mardwijd made an alliance of friendship with vakûl, governor of Shiraz, marched to Isfâhan and threatened to take the field against 'Ali. 'Ali now offered submission and, as a guarantee of good faith, sent his brother Hasan as a hostage to Mardwijd.

In 322 (934) the Caliph Kâhir confirmed Mardwijd in his government on the condition of his evacuating Isfâhan. Mardwijd obeyed and sent instructions to his brother Wahshûnûr, the governor of Isfâhan, to deliver the province to the Caliph's agent, Mu'asafar b. Yâkûb, but as Kâhir was opposed shortly after this in Lûjanî I of the same year (April—May 934 A.D.) Mardwijd again evaded compliance.

In Safar 323 (Jan. 935) Mardwijd was assassinated by his Turkish slaves at Isfâhan. He was loved by his soldiers, who, if it is stated, carried his coffin on their shoulders all the way to Rayy for burial. Mardwijd was a man of high ambition and had drawn up a plan for the conquest of Baghîd and the restoration of the Persian Empire in his own person, but he was murdered before he could carry out this scheme.

MARDIN (written Mardin in Arabic, in Syriac Marde), a town in upper Mesopotamia (Diyar Rab'sa').

Position. In Upper Mesopotamia, the watershed between the Tigris and Euphrates is formed by the heights which culminate in Karadagh (5,000 feet) S.W. of Omer, named Omer by the limestone chain known in ancient times as Masius and later as Izala ( Marines). The eastern part of this ridge forms the district of Djabal-Tur or Tur 'Abdin [q.v.] the capital of which is Midjat. From the southern slopes of the Masius descend numerous watercourses, the majority of which join one another before flowing between the mountains of 'Abd al-Arz (in the west) and Tell-Kawkab and Sindjdr (in the east); their combined waters form the river Khabûr [q.v.].
Mardin lies near the point where there is an easy pass through the Musius from the lands south of the Tigris [the rivers Goksu and Shaiqibin] to the lands round the sources of the Khābār [the stream called Zuwārak which rises north of Mardin], in other words Mardin commands the Dīyar-bakr-Nisibin road (which then turns towards Ḥuzura b. Omar and Mawṣīl). On the other side it straddles towards the west several (Ritter, xi. 356, gives three) direct roads connect Mardin via Urfa with Biredkı (on the Euphrates); to the S.W. a road runs from Mardin to Ra's al-Ain (there is now a railway) and to Harrān. The direct distances are as follows: Mardin-Dīyar-bakr 55 miles; Mardin-Nisibin 30 miles; Mardin-Sawur-Midyāt 75 miles; Mardin-Biredkı 160 miles; Mardin-Adana (by rail) 450 miles.

The advantage of this position at the intersection of important roads is enhanced by the very strong natural situation of the town, built at a height of 4,000 feet on an isolated eminence on the top of which is a fort 300 feet above the town (cf. the sketch in Cernek, pl. ii., No. 17). Buckingham compares its position with that of Quito in South America. All travellers (cf. Ibn Ḥawḳal, p. 152) have been struck by the unique spectacle of the vast Mesopotamian plain which from the height of the town is seen to stretch southwards as far as the eye can see. Only a hundred years ago Mardin was still considered impregnable, but the difficulty of access sensibly ailed its commerce. According to Cernek loaded camels could not ascend right up to the town. A branch line 15 miles in length now connects Mardin with the station of Darbaziya on the “Baghdād” railway, but the station for Mardin is five miles from the town.

Ancient History. It is noteworthy that in spite of its remarkable situation Mardin does not seem to have been mentioned in the cuneiform sources. Ammianus Marcellinus (viii. 9, 4) is the first to mention two fortresses, “Marīdā and Lorīne” between which the road passed from Amid (Dīyar-bakr) to Nisibin. Theophanes Simokatta (ii. 2, 19) mentions τοῖς Μάρδην ἔρεσι καὶ (v. 3, 17) τοῖς Μάρδην 3 param sosts from Dīyar. Procopius, De Aedificiis, (ii. 4) mentions Ερασίδης (or Εράσιδης) and Λαρέας and Georgius Cyprius, ed. Gelzer, 1826, p. 46: Μάρδης Λαρέας.

The name Mārīdā in Ptolemy, vi. 1, however, refers to another place in Assyria to the east of the Tigris.

Muslim Conquest. The Muslims under 'Ubayd b. Ghanm occupied the fortress of Mardin along with Tur 'Abdin and Darā in 19 (649) (Baladurhi, p. 176) In 133 Mardin is mentioned in connection with a rebellion in Upper Mesopotamia. The town formed part of the possessions of Burāzka chief of the Khaba' who was defeated by the 'Abbasid Abū Dā'llār (Tabari, n. 53). In 279, Ahmad b. Qas took Mardin from Muhammad b. 'Isak b. Kandilā (ibid., in 2134). Hamdan b. Hamdan after his accession in 260 (873) seized Mardin. In 281 the caliph Muzaffar marched on the town; Hamdan fled and left Mardin to his son. The latter surrendered the fortress which was dismantled (cf. d. in 2142). The “grey fortress” (al-ḥār al-ażīz) was later restored, for Ibn Hawkal (in 366) attributes its erection to the Hamdan b. al-Husayn Nāṣir-al-Dawla b. 'Abd Allāh b. Hamdan. On the death of his father in 358. Hamdan was dispossessed by his brother Fadl Allāh Abū Taghlīb. By the peace of 363, concluded between the Bayud Bahkhtiyar and Abū Taghlīb, Hamdan recovered his possessions with the exception of Mardin (Ibn Miskawan, ed. Amedroz, ii. 254 and 319).

The Arab geographers give few details about Mardin but they emphasise its importance. According to Ibn al-Fakhrī, p. 132, 136, the khārā'ī of Mardin was equal to that of Muṣayyarān (865,000 dirhams). Iṣṭakhrī, p. 76k, says that it is a large town on the summit of a peak the ascent of which is a farāšā in length; Dunaisar [q. v.] was one of its dependencies. Ibn Ḥawḳal, p. 143, gives the ascent at two farāsaks. The quarter of Mardin itself was flourishing, thickly populated with large markets. The water supply was brought by subterranean canals from the springs to the town.

The rain-water was also collected in cisterns (gaḫāridā wa-bīrā'. Yaḵṣt, iv. 390 (cf. al-Ḳawmī, p. 172), speaks of the splendour of the quarters outside Mardin (i.e. below the town itself) and its many madāsas, ḥāmānakās etc.; as to the khāla there was nowhere in the world so strong a defence; its dwelling-houses rose in terraces one above the other.

The Marvānids and the Sāljuqs. It is probable that Mardin was within the sphere of influence of the Marwānids, for according to their historian (cf. Amedroz, J. R. A. S., 1904), their ancestor Bāgh (d. 850 = 990) had extended his power over Dīyar-Kabā' (Nisibin, Tūr 'Abdin). The Sāljuqs ruled there next. After the death of Wilkshīk, Turğū b. Abī Mūsā seized for a time all the lands as far as Nisibin. Under Barkiyaruq Mardin was given to his old bard (muqahān).

The Oritoḳids. At this time arose the dynasty whose fortunes are especially associated with Mardin. The son (or grandson?) of Orotok called Yāḵšt took by stratagem the fortress in which he had been imprisoned but it was taken from him by his brother Sukmān b. Orotok who died in 498. In 502 we find at Mardin Il-ghaṣī b. Orotok (Ibn al-Aḥtr. x. 289, 321) whose line reigned there till 811 (1405) (cf. the art. ortoḳids). On their coins struck at Mardin in 509, 600, 634, 637, 648, 655, 656 etc., cf. Ghīlīh Edhem, Catalogue des monnaies turcomanes, Constantineople 1894 and S. Lane Poole, Catalogue of Oriental Coins in the British Museum, vol. iii. and x. (Index, s. v. Marvānīn).

In 579 (1183) Saladin came to Harrām (6 miles S.W. of Mardin) but was unable to take the town. In 594 Malik 'Adil b. Ayūb seized the outer suburb which was pillaged but the siege of the town itself was abandoned in the following year. In 599, 'Adil sent against Mardin his son al-Ashraf who appointed governors (shahna) in its dependencies. The Ayūbid of Aleppo al-Zahir b. Salāh al-Dīn offered his good offices and 'Adil was content with an indemnity of 150,000 dinars and the acknowledgment of his suzerainty by the Orotokīd of Mardin (cf. Abu l-Faradj, ed. Poçoche, p. 412, 425, 427).

The Mongols. In 657 the Mongol Hulagu Khān demanded the homage of the prince of Mardin, Naqīm al-Dīn Qābir, Sa'id, who sent his son Muqaffar to him but maintained a neutral attitude. In 658 the town was besieged for 8 months by the troops of Yashmut, son of Hülagu. Famine and an epidemic raged in the town. Ac-

cording to Rashid al-Din (ed. Quatremèere, p. 375). Muşafar killed his father in order to put an end to the suffering of the inhabitants (Abu l-Faraj and Wasif give different versions, cf. d’Ohsson, in. 308, 335). Muşafar was confirmed as lord of Mardin; his descendants also received from the Mongols the insignia of royalty (crown and parasol). In the reign of Şahî b. Munsar (769 = 1367) whose sister Denya Khatûn was the wife of the enchanter of Mardin. In the vicinity of Mardin. Dîjîhângir (848—857), son of 'Ali, was already master of the town. In the reign of Uzun Hâsan, Josephath Barbaro visited Mardin and was lodged in the hostel (ospedale) built by Dîjîhângir Beg (Zangi). We have coins struck at Mardin by Uzun Hâsan (875) and by his son Ya'qûb. After the death of Ya'qûb 'Ali b. Dawla, prince of the Ilk-Kadar Turkomans, seceded the land of Diyarbakr but, as the anonymous Venetian merchant shows, the Akgoyunlu retained Mardin. In 903 (1498) Abu l-Muşafar Kâsim b. Dîjîhângir dated his firman in the name of the prince of Egid from his capital (dâr al-sultanî) Mardin; cf. Baasâneg, Der älteste Firma von der Zungenwechs., Wissensch. Mitt. aus Bresl.-Vienna, vi., Vienna 1899, p. 497. The coins of Kâsim come down to 908. The takbiya of Kâsim-pahta which Niebuhr mentions must date from the same ruler.

Persian Conquest. In 913 (1507) all the lands as far as Malatya were conquered by Ṣâhil Isma'il who appointed his general Ustâdju Muhammad to it. It was left to the Venetians who travelled there in 1507 (op. cit., p. 149), Mardin was occupied without bloodshed. The same traveller mentions the fine palaces and mosques of the town; there were more Armenians and Jews in Mardin than Muslims. The battle of Çahiran (914) shook the power of the Persians. In place of Ustâdju Muhammad killed at Çahiran, his brother Kara Kâhan was appointed and established his headquarters at Mardin. Soon the Ottomans occupied Diyarbakr and then the town of Mardin, but the Persians who never lost the fortress restored the status quo.

Ottoman conquest. Finally in 922 (1516) Kara Kâhan was defeated and slain in battle at Karghan-dede near the old town of Koçhisar, 10 miles S.W. of Mardin. Persian domination in Upper Mesopotamia thus collapsed, but the fortress of Mardin still remained in the hands of Selim Khan, brother of Kara Kâhan. The siege lasted a year and not till Ṣâhil Muhammad Pâsha arrived from Syria with reinforcements was it stormed and its valiant defenders put to the sword (see C. Navarre, p. 24, 32; this Persian source mentions Olangi Yûrâk [?] in place of Koçhisar (s. Hammer, G. O. R. ii. 1757—40, quoting Abu l-Fadl. al-Sultani of Hazim Isrâi and continuator of his Hâjişeddin). In the Baghdad campaign of 941, Mardin was created a sanjak and included in the eyalat of Diyarbekr. Ewliya Celebi, iv. 59 gives Mardin 36 ciömets and 465 timânos; Mardin could put in the field 1,060 armed men (cf. also). In the xviiith century Mardin became a dependency of the Pâsha of Baghâd: Otter (1757) found at Mardin a recôte anchored by Ahmad Pâsha. As late as the time of Kinneir (1810), Mardin was the frontier town of the pashalik of Baghâd and was governed by a mandarin sent from Baghâd. The reforms of Mahommed were badly received in Upper Mesopotamia. In 1532 (Amshireh) Mardin rebelled. Power in Mardin had passed to the Kurd bey, 'Osâdîneghe (1816) speaks of a here-ditary (lit.) family who ruled in Mardin. The two brothers of the ruling bey seized the power and refused to recognise the authority of the Porte. (It may be asked if these boys were not of the Mili tribe: on their chiefs cf. Buckingham, op. cit. p. 156) Râshîd Pâsha, the paître of Kûrdschan, besieged the town and blew up the great mosque
(Ainsworth). Order was temporarily restored. Considerable works were undertaken to improve the road giving access to the town. Rashid Pasha died in January 1837 (Posjoulat). When the Egyptians invaded Syria, their partisan Timawi b. Ayoub of the Milli tribe seized Mardin (Sir Mark Sykes, *The Caliph’s Last Heritage*, London 1915, p. 320) but was killed. The defeat of the Ottomans at Nizib (June 1839) brought matters to a head. The Porte entrusted Mardin to Sa‘d Allah Pasha of Dijabarik, but the inhabitants preferred to submit to Hürdim Pasha of Mawsil who was opposed to the tausimah. This Pasha appointed a governor to Mardin but the rebels still held the citadel (Ainsworth 1840) and the governor soon perished in a rising.

By the “wilâyet law” of 1287 (1870) Mardin became a sanjâq of the wilâyet of Dijabarik. It had 5 kağas: Mardin, Nishîn, Dijaira, Midiyat and Avîne. The area of the sanjâq was 7,750 square miles and the number of towns and villages 1,062. The sanjâq was mainly agricultural. The town of Mardin produced a small quantity of silk, wool and cotton, leather, shawls, etc., but in spite of the excellence of the work these articles were mainly used for local consumption (Cuinet). By the reforms of 1921 Mardin formed a wilâyet with 6 kağas, 1,018 towns and villages, and 123,899 inhabitants (*Turkiyâ Dânîkî-i Hûyâtî, 1925–1926 Sâlî-nâméi*). The Sâlî-nâmé of 1926–1927 made a number of changes. There are now 8 kağas. The area is 6,000 square miles with 6½ million *dounm* of arable land.

The wilâyet now marches with the zone of the French mandate.

Population. Niebuhr (1766) counted 3,000 houses in Mardin (of which 1,000 were Christian) with 60,000 inhabitants. Dupré (1805) estimated the population at 27,000 of whom 20,000 were Turks (i.e. Muslims), 3,200 Jacobites, 2,000 Armenians, and 500 Shamînî. The statement of other travellers are as follows: Kinnair (1814): 11,000 of whom 1,500 were Armenians; Southgate (1837): 3,000 of whom 1,750 were Muslims, 500 Armenian Catholics, 400 Jacobites, 250 Syrian Catholics, 100 Chaldaean: Muhlbock (1838): 12–15,000 inhabitants; Sachau (1879): 20,000; Cuinet (1891): 25,000 of whom 15,700 are Muslims.

Among the religion sects of Mardin the Shamsiya would merit a special study. In the time of Niebuhr (1766) there were about a hundred families in the town, and Buckingham (cf. *cit.*, p. 192) and Southgate (1837) also mention them. The Shamsiya probably represent the last survivors of a local pagan cult. Towards the middle of the xviii. century they were led to declare themselves Jacobite Christians but only formally (cf. Ritter, *x.*, p. 303–305).

Christianity at Mardin. The district of Mardin has played an exceptionally important part in the development of Eastern Christianity. A brilliant period of the Nestorian church which begins in 755 is closely associated with Mardin. Towards the end of the eighth century numerous monasteries were established round the town by the bishop John of Mardin. In 1171 the Jacobite patriarca was transferred from Dijabarik (Amîl) to Mardin. In 1207 it was moved to Deir-Zaftar, an hour’s journey from Mardin, to return to Mardin in 1555 (Asseman, *Bibli. Orient.*, Vol. 1). Wright, in *A Syriac Literature*, 1891 [Index] On the position of the Christians before 1914 cf. the works of Southgate, Parry, Cuinet etc.

Antiquities. According to Niebuhr, there are many Arabic inscriptions at Mardin. Those of the Ortokids have been studied by ‘Ali Emiri Efendi who also examined the *wâdi* documents relating to the principal buildings of this dynasty at Mardin (cf. Kâtîb Ferdi, *Mardin Multûki Usulât-i Muršid-i Türkî, ed. and annot. by ‘Ali Emiri, Stambul 1884*). For the list of buildings cf. the article ORTOKIDS. The monuments of Mardin which must be of considerable artistic interest have never been described in detail. Buckingham (p. 191) gives a few details about the minaret of the “great mosque” (a cylinder decorated with carved arches, on a square base, etc.; a stone gallery with a pointed roof on the top) i.e. the Mosque of Naqdim al-Din Alpi built in 568–572; but the buildings have never been studied. We do not know if the *madrasa* of Kâsin Pâdqshâh Aq-Koyunlu (Niebuhr) is still in existence. The domes of the mosques of Mardin are ribbed and guttered*, their vertical ribs radiating from the summit.

The Travels of *Jusafâ*, Barbare (1431) and The Travels of a merchant in Persia (1517), in the vol. of the *Hâkînî Society*, publ. in 1873: I. della Valle, *Viaggi*, Bârâyîn, 1845, i. 515 (the traveller’s wife was a native of Mardin); Tavernier (1641), *Les six voyages*, 1662, i. 1875; Niebuhr (1766), *Reisebeschreibung*, Copenhagen 1778, ii, p. 391–398, and plate xlvii; Olivier (1795), *Voyage*, Paris 12 (3 plates) 242; Dupré (1808), *Voyage*, i. 77–82; Kinnair, *A geogr. Memoir of the Persian Empire*, 1815, p. 264–265; Kinnair (1814), *Journey through Asia Minor*, London 1818, p. 433; Buckingham, *Travels in Mesopotamia, London* 1827, p. 188–194 (with a general view of the

**MARDJ DABIJK, a battlefield near DabiJK [q. v.] on the Nahr al-Kuwait in northern Syria. On the history of the town of DabiJK, which was known to the Assyrians as Dabug (Sachau, Z. A., xii. 47) and is called Daiýa by theophanes (Uhrn., ed. de Door, p. 432, 451 sq.) cf. above vol. i., DabiJK.

When in 491 (998) the Franks conquered Anjakiya, Kerbghâ of Mawslî assembled a large army on DabiJK, with which he sallied west to Anjakiya (Ibn al-Athir, ed. Tornberg, x. 185; Abu ‘l-Fida’, Kamal al-Din et al., in Rec. hist. or. crois., i. 3, 194; iii. 380). In the spring of 513 (1119) Highazi on his campaign against the Franks crossed the Euphrates at Baddäya (now Beldia on Sachau’s map) and Sandja and advanced via Tell Bâshir (q.v.), Tell Khalid, Mardiýa DabiJK and Musliamiy against Khanrasin (Kamal al-Din, in Rec. hist. or. crois., i. 560). In the beginning of September 1124 DabiJK b. Sadak was defeated by Husn al-Din Timurtash on the field of DabiJK (Rec. hist. or. crois., v. 645.) On his campaign against Leo II of Little Armenia, al-Malik al-Zahir encamped in 602 (1305–1306) on Mardiýa DabiJK (Rec. hist. or. crois., v. 155). On Saif al-din Tunguz’s campaign against the Tatars to Malatya [q. v.] in which Abu ‘l-Fida’ of Hamt took part, a halt was made on the way back on the field of DabiJK from the 3rd Safar to the 2nd Rabi’ II 715 (May 9–July 6, 1315) (Abu ‘l-Fida’, Rec. hist. or. crois., p. 32).

On the 25th Radjab 922 (Aug. 24, 1516) was fought at Mardiýa DabiJK the battle which gave Selim I a decisive victory by which Syria passed for the next four centuries under Ottoman rule (H. Jansky, Mitteil. a. osm. Geschicht., ii., 1923–1926, p. 214–224).

**MARDJ RABIIT, the name of a plain near Damascus.** On leaving Damascus in the direction of Homs, just before crossing the pass of the Eagle, al-’Ukhb, one reaches the village of Marjd ‘Athrã. To the east of this place stretches the plain, Marjd Rabiit, which extends as far as the desert. It is here and not in the "Hochelmen Quattara" (v. Moritz) that the site of the Omayyads after the death of Mu’awiyah II was settled. This decisive battle since it was fought in the neighbourhood of Marjd ‘Athrã was named by the poet al-Râfi after this place. With greater exactitude the contemporary poet al-Aghâli, who was more consonant with Omayyad history, places this battle between the ‘Ukhb and Rabiit" namely in "the vast plain of Marjd" mentioned by the poets (Aghâni, xvii. 112).

During the discussions of the congress of Djâbiya [q. v.] the concentration of the Kâisi forces was taking place under the command of Dabak b. Kais [q. v.] supported by the Yemen contingent and the Kaisis’ malcontents to the south of Damascus. Their total—which has probably been exaggerated—has been placed at 30,000. Marwan b. al-Jakam had at his command eight or ten thousand and combats, the majority of whom were Kubîs. The Kaisis seem to have taken up their position first at Marjd al-Suffar [q. v.] to the north of Djâbiya. After an engagement in this place had ended to their disadvantage, they were forced to double back to the north. In the meantime a sudden attack launched against Damascus was defeated. Troops were delivered into the hands of the Omayyad supporters the treasury and the arsenals of this town. The Kaisis were forced to avoid being caught between the capital and the Kubîs army advancing from Djâbiya, while harassed at close-quarters by their adversaries. These engagements occupied nearly twenty days. On arriving on the heights of Marjd Rabiit, trapped between the defiles of ‘Ukhb and the desert, they accepted battle. One must ask how the Kalbîs succeeded in making up for their glaring inferiority in numbers. Mas’udî, without explaining further, speaks of a stratagem devised by Marwan. This stratagem, which is mentioned by the author of
the Ikār al-farādī should be described not as a cause of war but as a crime. After the advantage gained at Marjd al-Suffar, the Umayyads had had the time, and without doubt made use of it, to detach from the Kaisis their temporary allies, the Yemenis and the Kufāris. The treasure of the state seized during the Umayyads and the large amount of wealth brought from the Irāk by the family of Ziyād b. Abīti may have been of assistance in doing this. The Syrian Arabs, not at ease in the camp of Dāhēk, no doubt understood how much the triumph of Ibn al-Zubair would be prejudicial to their hitherto privileged position and to the hegemony wielded since the days of the Sufyānids by the Syrian tribes. Their defection must, we think, have determined the issue of the engagement at Marjd Rāhiṭ and hastened the triumph of the Umayyad arms.

Whatever was the cause this victory was decisive (the middle of July 684). 3,000 Kaisis are said to have been killed. The death of Dāhēk seems to have been the signal of defeat, which became a regular disaster, in which the principal chiefs of Kātib perished. Flight alone saved the most prominent among them, Zubār b. Ḥalid [q.v.]

The memory of Marjd Rāhiṭ was deeply impressed upon the Kaisi. It detached them en bloc from the Omayyad cause. Under the first two Marwānid caliphs, their battle-cry became "Vengeance for the victims of Rāhiṭ". From this time a axle is said never to have appeared on the Continent of the surviving chiefs. Between them and their ancient rivals of Kalb the split became much deeper. The latter's songs of victory answered the cries of rage of the Kaisis. In celebrating the battle of Rāhiṭ the Kalbī poets give more emphasis to their triumph than to that of the Omayyads. Their compositions complemently develop this theme without regard to the Marwānids, their debtors rather than their sovereigns. This great victory afforded the aggl. Marwan the opportunity of proclaiming himself as Caliph of Damascus before beginning the conquest of the old Sufyānid lands now under the authority of Ibn al-Zubair. In the bosom of the Caliphate, it nourished the most dangerous rebellion; it inaugurated a savage war of extermination between Kalb and Kais. The tribes of Kuṭa'ā first, then the Yemenis and lastly the Taghlibi saw themselves in turn fatally involved. These internal feuds in which the members of the Marwānī family had the impudence to take part, to the satisfaction of their maternal connections, precipitated the fall of the Omayyad dynasty by destroying the agreement and the unity amongst the Arab tribes, which had been but imperfectly realized in the Marwānid Caliphate.

**MARDJ AL-SUFFAR,** a plain situated 20 miles south of Damascus near the modern Tell Shaḡah; a stream called the "Wādi Arrām" runs through it. The place plays a part in the military history of the first century A.H.; first in the accounts of the Arab conquest of Syria, and later at the beginning of the Marwānid dynasty. The name has been sometimes confused with that of Marjd Rāhiṭ [q.v.]. For the history of the Syria in the first century A.H. we are exclusively dependent upon the Ṣūfān annalists. Forgetting that the name "Marj" abounds in the toponymy of the Damascus region, writers have confused two distinct battles and made them one and referred them to Marjd Rāhiṭ, a name which occurs frequently in the poets of the Marwānī period.

At the close of the year 13 A.H. the Arabs, victorious at Fīhl, endeavoured to reach Damascus by cutting across the Ḍjālān. One of their bands, under the command of the Omayyad Ḥalid b. Sa’d, encamped at Marjd al-Suffar and allowed themselves to be taken by surprise by the Byzantine troops. The Arab leader was killed and his presence enabled to the roll of Muslim reinforcements enabled them to regain the advantage. The Greeks then proceeded to shut themselves in Damascus to which the Arabs at once laid siege.

In the month of May 684 (64), supporters of the Omayyads joined with Ḍiḥbiya [q.v.] in order to elect a successor to Mu’tawiyah II. Dāhēk b. Kāsī [q.v.], the leader of the rival section of the Zubairis and the governor of Damascus, was invited to the conference. He promised to come to the conclave and marched out of Damascus at the head of imposing forces. But, having gone about half way on the road to Ḍiḥbiya, on the heights of Marjd al-Suffar, he determined to await events there. The presence of water and of forage made it suitable for the encampment of an army. An excellent point of observation, the site not only commanded the congress of Diḥbiya, but also commanded the road leading to Damascus. Dāhēk brought about at this point the concentration of the Kais of Syria, who were in revolt against the Omayyads. At Diḥbiya after 40 days' deliberation, the Kalbīs and the Omayyad partisans elected Marwān b. al-Jakam [q.v.] to be Caliph. Then in their advance upon Damascus, they attacked Dāhēk and the Kaisi encamped at Marjd al-Suffar and succeeded in defeating them.

Of this campaign the Irāk annalists and their copyists have only recorded and have only desired to record the decisive battle, namely that of Marjd Rāhiṭ, to the north of Damascus. For a quarter of a century no mention is made of any battle between the Kaisi and the Kalbī but Marjd Rāhiṭ. The extraordinary prominence given to this latter battle by the poets of both sides helped to throw into oblivion the preceding engagements commencing with that of Marjd al-Suffar. Certain texts have however preserved its memory. Yākūt (Madīqam, iii. 400) locates in this place "a battle celebrated in the history and poetry of the Marwānī period". Otherwise there is no reference to Marjd al-Suffar in the military history of the younger branch of the Omayyads. As regards poetry it has kept for us the testament of the Ṣūfān poet al-Aḫbatī (Dīwān, ed. Salani, p. 224, v. i.). This contemporary poet, who was a habitant of the Omayyad court while praising the glorious deeds of his
tribe, claims for it "many victories even before Marjd al-Suffar". As we know that the Taghlibis fought in the ranks of the Omayyads, for whom they showed themselves at all times strong partisans, the reference must be to this battle. Moreover the manner in which al-Aghtal praises this victory suggests that he was not dealing with a small skirmish.

In the meanwhile an Omayyad partisan residing at Damascus had seized the capital. The position became untenable at Marjd al-Suffar for the Kaisis. It was to avoid being caught between Damascus and the victorious Kalibs that Dalghakh fell back precipitously to Marjd Rabi', where he was defeated and killed. On the 22nd June 684, the election of Marwan b. al-Hakam was proclaimed at Dhibiya. It is probable then that the battle of Marjd al-Suffar must be located in the early days of July.

MAREA. [See MAREK.]

MARGHELAN, originally Margghânâ, a town in Farghâna (q.v.), where also the minor importance of the town in the 4th (9th) century (B. G. A., ii. 272, 19; faghi7a) and its rise in the centuries following are discussed (Samâna, K. al-Anbâb, G.A.S., x., f. 523 a; min maghâr al-Ilâb: Ëaâb, iv. 500 a; min ašhtar ašhrâbâd). The town does not seem to have been of political importance during this period, although coins were occasionally struck here under the dynasty of the Ilek-Khâns (q.v.). (A. Markow, Inventar'siyi Katalog musul'manskikh monet Imp. Ermitazaia, p. 260, 265 and 272). Bâbar (fac,s. ed. Beveridge, f. 3 sq.) gives a brief description of the town; the population at that time consisted of Sârs (q.v.) i.e., according to the linguistic usage of the time, of Taghâk (q.v.); since then the Taghâk have been driven by the Ozbek here as everywhere else out of the plain. The more recent, probably Ozbek form Marghâlân is found for example in Abd al-Karim Bokhârî (ed. Schefer, p. 94) whence the Russian Margelan; the river on which the town stands is called Margelan-Sai. In literature the old form Marghânîn or Marghânîn is still frequently used e.g. in the Tarikh Shahrâbî, ed. Pantusov, p. 195.

Marghelan was occupied without resistance by the Russians on the 8/20th Sept. 1875; New Margelân founded as the capital of Farqhan in 1877 by the Russians about 7 miles from Marghelan was called Skobelev from 1907 (since the Revolution: Fegana). The original Marghelan was mainly noted for its silk industry; according to the census of 1897, the population was 36,490, in 1911 46,780 of whom only 144 were Russians. A building which is certainly not ancient is called Iskander Pasha and said to be the tomb of Alexander the Great (W. Masalâskî, Turkestanîski Kraj, Peters burg 1913, p. 705 sq.).

Bibliography: given in the text. (W. BARTHOLOM)

AL-MARGHÎNÂNî, the name of two families of Ḥanâfî lawyers, nizâb from their native town and the scene of their activities Marghînânî in Farghânâ.

I. 1. The most important was Burhân al-Dîn Abu 'l-Hâsân 'Ali b. Abî Bakr b. 'Abd al-Ḍâ'il al-Farghânî al-Marghînânî, the author of the celebrated Ḥidâya. He acquired his knowledge on his travels, then still the usual way of studying in Islam. His principal teachers were Nadhm al-Dîn Abî Hâfîz 'Umar b. Muhammad b. Alâm al-Nasâ'î († 537 = 1142—1143), al-Sârîr al-Shâhid Ḥusâm al-Dîn 'Omar b. 'Abî l-'Abî'âd b. 'Omar b. Mâzâl († 536 = 1141—1142) and Abû 'Ilâm Othman b. 'Abî al-Bakordi († 1552 = 1157), a pupil of al-Sârîr. He studied Tirmidhî's work on Tradition under 'Ilâm al-Dîn Abî Muhammad 'Sadî b. 'Abd with the inâdî given in Kârâtsh, i. 259, No. 679 and also with al-Hâsân b. 'Ali al-Marghînânî (Kârâtsh, i. 198, N°. 497). He himself as was often done at this time, wrote a record of his studies, which do not appear to have survived. He far surpassed his teachers and won recognition in his native town also where he died in 593 (1197). Of his works the following are known, some surviving in manuscript and others only known from literary references: 1. Ye'âr al-Muhâkhab (Kur., in Ḥâdîsh Khâtfa, N°. 13750 probably wrongly: al-Mashâhî); 2. K. Manâsh al-Hâdil (Kur., N°. 12943); 3. K. Fi' Fârâbî (Kur., also called Farîd al-ʿOqîmînî (Kur., N°. 8989); 4. two collections of fawsâ: K. al-Tâdlim wa al-Madh (Kur., ii., K. Kh., N°. 2457; MSS. in Brockelmann) and K. Muḥdâ'at al-Nurâzî (Kur.; in Kur., also called K. Makhzûr al-Nurâzî and in ii., Kh., N°. 11586 called: Muḥdâ'at al-Futârawâ: MSS. in Brockelmann); 6. Murîd fi Fârîd al-Hâfîfâsî (Kur., N°. 11828; identical with No. 4); 7. a commentary on Shaîbânî's al-Qâdir al-Kabîr (Kur., ii. 567); 8. his principal work is the legal compendium K. Bâdîyat al-Mubâdî (MSS. in Brockelmann), based on Kârâtsh's Mûsârâr and Shaîbânî's al-Qâdir al-Ṣâlih. On this work he himself wrote a large commentary in 8 volumes: the Kifâyaat al-Muštâhâb. But before he had completed it, he thought it was much too diffuse and decided to write a second commentary, the celebrated Ḥidâya which later writers repeatedly edited and annotated. The most important commentaries and synopses are given in the table on p. 280. For the manuscripts and printed texts of these commentaries and synopses and many supercommentaries and glosses see Brockelmann, G. A. L., i. 376; a printed edition of the Ḥidâya recently appeared in 4 vols., Cairo 1326. Bibliographical: al-Kurâtsh, al-Jâzâ'irât al-Mutāf, Hâdîsh Khâtfa, 1322, N°. 1059; 'Abd al-Hâfîz al-Laknawî, al-Fârâbî al-Hâfîz N°. 867, Cairo 1324, p. 141 sq. (synops of the Tadhâbi of Kâfawî); Ibn Ḥûtubâghî, Târîh al-Târîqânî, ed. Hugel, Leipzig 1852. No. 124; Brockelmann, G. A. L., i. 376 and the literature there given. His sons and pupils were: 2. ʿIMĀD AL-DÎN AL-FARGHÂNî; cf. Luknawî, i. 376.
II. Another family of ḫanafī lawyers goes back to ʿAbd al-ʿAzīz b. ʿAbd al-Rażāk b. Ṣaqr b. Ǧaʿfar b. Sulaymān al-Marghīnānī, who died in 477 (1084—1085) in Marghīnān at the age of 68. Of his six sons who attained fame as mujtahids we may mention ʿAbd al-Ḥasan Zāhir al-Dīn ʿAṣim († 506 = 1112—1113). His son and pupil was Zāhir al-Dīn al-Ḥasan b. ʿAṣim b. ʿAṣim al-Marghīnānī, four works by him are recorded: ʿAbdāyi, Faḍāṭiṣ, Faḍāyiṭ al-Marghīnānī. ʿAbd al-Majīnī, the last of which survives in manuscript. He was the teacher of the famous Fakhr al-Dīn Kāhilīkhān († 592 = 1196) and of Burūsh al-Dīn al-Marghīnānī [q.v.].

MARĪB (Mārib), a town in the south-west of Arabia, formerly the capital of the Sabaeans and now the capital of the amirate of the same name.

The ancient town of Marīb, which so far has only been visited by three European travellers, Mediterraneans (Gaza-Ghazare) and which ran from Shahwāt-Sabata via Thammān-Tnunna near Darb Kamb in the Wādī Balīn through Wādī Ḥarīb via Marīb into the Mineaean Dja‘af, to Nadīrjan and from there via Thirmāla, Abā al-Khdar, Ḥalqāl, Jalīt, Djielī, Bēdī, Wādī l-Hāṣib, Wādī l-Bahr, Wādī l-Ǧabīr, Wādī l-Farīd, Huruz, Kotba, Banāt Ḥarb, Djiurash, Tebālā, Kān al-Manṣūrīl, Mekka, Yathrib, al-Medīna, Fadak, Khābar, al-ʿOla, Taimā, Ḡrā, Tabīb, Ḥuruz, Mahān, al-Ḥāl, Ḥām, Ashurī to Petra and thence to Gaza while Marīb was also connected with the ʿEmāmah, the coast of the Persian Gulf and Babylonia, via Neqūr and via the route which followed the Wādī l-Dawāṣir (cf. A. Grohmann, Historisch-geographische Bemerkungen zu d. G. 418, 419, 1000, a. 16, p. 116). It still forms an important junction and has good connections with Ḥadramawt, Rurād, Veraq, ʿArād, al-Djaf, Ṣaṣā, Neqūr and the Wādī l-Dawāṣir (E. Glaser, Reise nach Marīb, p. 20).

The ancient city wall, 3 feet thick, enables us still to recognise with more or less certainty 8 gates — not only 2, as Th. Arnaud (Plan de la cite et de la ville de Marīb, in ʿJ. A., ser. viii, 

Th. J. Arnaud (1843), J. Halévy (1869) and E. Glaser (1888), is situated in the plateau of Sabā, 3,900 feet above sea-level, which runs east of the Balāq range and is traversed by the Wādī Djenne (Adhāna) which in the course of millennia has deposited a thick layer of silt and thus made a luxuriant vegetation possible. The modern village of the same name stands on a large mound of ancient rubble within the old city walls and is situated about exactly in 15° 26'/ N. Lat. and 45° 16'/ East. Long., about 10 days' journey from the Red Sea and the same from the Gulf of ʿAden. This favourable situation predestined Marīb to be the centre of the Sabean kingdom, the heart of which was the southwestern corner of the Arabian Peninsula and which, at times also included the eastern hinterland of the Gulf of ʿAden including Ḥadramawt and Mahra (E. Glaser, Reise nach Marīb, p. 18, 185). Marīb also lay on the important caravan-route which connects the lands which produced frankincense with the

3. ʿOmar Nīẓām al-Dīn al-Farghānī. Two works by him are recorded: i. Fawālʿ (I. Kh., N. 9, 930); 2. Ḥaddżawīrid al-Fīrhh, which he compiled from the Muqlīṣar of Taḥwīl and other works (I. Kh., N. 421; MSS. in Brockelmann, G. A. L., i. 376, note 2, where the mark of interrogation should be deleted; cf. Kurāshī, ii. 394; Laknawī, p. 149).

He wrote on legal procedure in civil cases entitled al-Fīrhl al-Sīmādīya, which he completed in Shaʿbān 651 (Oct. 1253) in Samarqand. Cf. H. Kh., N. 5094; Lak., p. 93; Brockelmann, G. A. L., i. 382, where the MSS. are given.
The old town which occupied an area of about 1,000 yards square, a calculation by E. Glaser, which agrees with Th. Arnaud's plan of the town (J. A., ser. vii., vol. iii. [1874], p. 11) [Glaser gives the distance between the two opposite gates as 1/4 hour], is built entirely on the left bank of the Wadi Dhenne. It seems, to conclude from the remains of the 3 feet thick wall around it, which has only survived in places, to have practically formed an oblique angled parallelogram the longer sides of which follow the line of the Wadi Dhenne while the eastern and western sides (breadth) run practically due north and south. The southern wall which runs parallel to the river bank turns from north to east at an angle of 60° and runs almost E.N.E. This fact is clear not only from E. Glaser's description of his *Reise nach Mārib* (p. 36 sq., 45) and the Mārib *Tagbuch* but also from Glaser's *Skizzen* (Nº. 51) upon which is based the appended plan of Mārib and vicinity. It is a striking contrast to Th. J. Arnaud's description and map (J. A., ser. vii., vol. iii. [1874], p. 11) [a map of the Mārib district with a circle and also to Glaser's earlier sketches in his large *Kartenbuch*, p. 8 sq. and the map drawn up after investigations in the year 1888, which forms fol. 4 of E. Glaser's collection I. The foundation of the wall consists of cement blocks 5 feet long, 15 inches high and 2 feet thick. On the top of 8 -- 10 layers of these blocks are placed regularly hewn blocks of marble of the same size. The wall which unfortunately is almost completely destroyed does not run in a straight line but at regular intervals there are rectangular projections, as is clearly shown in E. Glaser's already mentioned sketch Nº. 51 and in that of his *Tagbuch*, xi. p. 125, which moreover gives the plan of the town as a rectangle — Glaser notes here "the city wall was apparently built as a quadrilateral" —, while Nº. 51 shows rather a trapezium the base of which lies away from the river while the shorter side parallel runs along the river. The rectangular projections found at regular intervals were probably towers, which strengthened the defences and stood out at regular intervals in the style we know from Assyrian fortifications (cf. the similar quadrangular plan of a fortress with gates near the corner and towers covered by steplike battlements in B. Meissner, *Babyloniaca* and Assyrien, i., *Kulturgesch. Biblioth.* v. 3, Heidelberg 1920). That the city walls of Mārib had towers is also evident from the great inscription (Glaser 418--419) which is older than the great Sīrāwā inscription Gl. 1000. In this we are told in line 4 that the unknown ruler built "the two gates of Mārib (ميْرِب) and built towers for Mārib of Baklā stone" (cf. N. Rhodokanakis, *Attalosische Texte*, i. 6 sq.).

Rhodokanakis suggests, presumably rightly, that this king was continuing the work of the unnamed son of the Sabaean mukarrab Sumuhū-'Alaya Vanaš (سَمْعُوحَةُ-اللَايْاُ-يْاَنَاف) who, according to the inscriptions Glaser 412 = Arnaud 41, 413 = Arnaud 42, 414, 437, 445, 500, 510, 537, 589, 600, 634 and perhaps also 751, "built a wall around Mārib".
by command of and with the help of 'Aliyar'. Whether the son of Sumuhu-'alaya Yanaf was the builder of Mā'rib seems uncertain; in any case he is the oldest builder of the town whom we know from the inscriptions.

Nur is it known who founded Mā'rib. That it was Saba', son of Yathj'ub, as the Arab genealogists think, is of course quite an unfounded supposition (cf. Yaqqūt, Muṣḥārik, p. 239; Abu 'l-Fidā', Historia antiaramica, p. 114 sq.; A. v. Kremer, Über die sudarabische Sage, p. 26 sq.; E. Osander, Z. D. M. G., x. 68).

That the city wall was frequently restored is evident from the fact that inscribed blocks of the earliest period of Sabaean history were used as building material in any order without heeding the context of the inscription (cf. Glaser, Reise nach Mā'rib, p. 45 sq., 51, 74) which is the case e.g. in the texts Glaser 699—707, and as there were no inscriptions of a later period in the lower strata the renovation must have begun after the reigns of the three Sabaean mukarribis Yid'il-Iluy Bayin, Sumuhu-'alaya Yanaf and Yid'il-'amara Watar. To the same period as these inscriptions must belong the old Sabaean boustrophedon text, Glaser 926 = 1350 + 1531 = 1736, which comes from al-Meshžāf, not far east of Sīrūḵ, as the first, as N. Rhodokanakis has pointed out, is identical with Yid'il-'amara Watar, Yid'il-Iluy Bayin, the conqueror of Nashk, while Sumuhu-'alaya is perhaps the same as Sumuhu-'alaya Yanaf, in whose reign the inscription Glaser 926 was set up. Glaser must also be right in assuming (Stitzer, i. 68) that the town of Mā'rib is considerably older than the wall and a number of decades must have passed away before the town attained the extent indicated by the oldest remains of walls. This is also evident from the mention of independent kings of Mā'rib in the inscription Glaser 502 which is older than Glaser 411. A memory of this earliest period in Sabaean history seems to be preserved by the poet 'Alkama Dāl Djdan, who mentions kings of Mā'rib along with kings of Sīrūḵ (cf. D. H. Muller, Sabaische Denkmaler, p. 99).

According to al-Hamdānī (ktūb, viii., in D. H. Muller, Burgen u. Schlosser, ii. 959 sq., 1038 sq.), there were in Mā'rib the three citadels Sāḥiḥa, al-Kāšib and al-Hādjar. For the former which is expressly stated to have been the royal capital and palace of Bilḵis, cf. the article Sāḥiḥa. The question where this castle is to be located in Mā'rib has been very variously answered. D. H. Muller, Burgen u. Schlosser, ii. 968 thinks that Sāḥiḥa was on the site of the modern village of Mā'rib, which, as Arnaud has already suggested, has been occupied by an old citadel (? J. A., ser. vii., vol. iii. [1874], p. 12). Glaser (Reise nach Mā'rib, p. 73) on the other hand identifies Sāḥiḥa with the colossal building the foundations of which lie south of the Mātādān. In connection with Sāḥiḥa, al-Hamdānī also mentions the lower pillars of the throne (of Bilḵis) — so D. H. Muller translates 'ārṣ — which became celebrated in the Muslim world through Kurān xxvii. 23 and were still standing in his time and so firmly rooted in the ground that they could not be overthrown. Glaser, Reise nach Mā'rib, p. 139 however assumes that the reference here is to the Haram of Bilḵis with its pillars but admits the possibility that a citadel of the town proper is being described, since Sāḥiḥa is talked of immediately afterwards. Djirjīl Żāīdān, Kīṯāb al-'Arab ḵabīl al- lhām, p. 143 also assumes that the palace of Sāḥiḥa is referred to. Spranger, Post- u. Reisenreiten, p. 140 also tells of this thron e of Bilḵis that it stood on stone pillars 29 ells high which were still intact and the foundations were as deep as its height (this statement is erroneously attributed by Spranger to Bakti but presumably comes from Ibn al-Madījānī). The Dīǰān-nūnāmā also (cf. Jomard in F. Mengin, Histoire de l'Égypte, p. 344) says that the throne of Bilḵis was built on columns 29 ells high in Sāḥiḥa (= Mā'rib). This sounds very improbable if we should really understand by 'ārṣ a throne, which according to Nasḫānī al-Himīyāri, p. 50, stood in the palace of Bilḵis in Mā'rib. When however we are told by Nasḫānī, p. 70, that 'ārṣ is a castle which was built on columns of stone and the verse of Asād 'Ṭubba' quoted gives the name 'ārṣ to the palace of Bilḵis, we may then in the above passages take it to mean a citadel rather than a throne and with Glaser, Reise nach Mā'rib, p. 73, look for it in the S.E. corner of the old town. Legend has associated the name 'Arṣ Bilḵis with other localities also. According to Abu 'l-Rabī' Sulṭānīn b. al-Raḵīn in Yaḳūt, Muǧam, iii. 640, it is the name of a place a day's journey from Ḍāmār, on which stand six great marble columns and the principal group of pillars of the old ruins of Sīrūḵ still bears this name (J. Halévy, Rapport, J. A., ser. vi., xix. [1872], p. 67 sq.; Glaser, Reise nach Mā'rib, p. 179). On the other hand, it is an open question where the two other citadels al-Kašib and al-Hadjar mentioned by al-Hamdānī and Bakrī (Muǧam, ii. 502) are to be located. According to Yaḳūt, Muǧam, iv. 104, al-Kašib was built by order of king Sharāḥīl b. Yaḥṣūb, who put up on it a copper plate inscribed "They who built this castle are Thawbāl and Šaḥār; its building was entrusted to them by Sharāḥīl b. Yaḥṣūb, the king of Sāḥiḥa and of the Thāma and of the Arabs". D. H. Muller in Burgen u. Schlosser, i. 1039, note 1 has already identified Sharāḥīl b. Yaḥṣūb with king 'Iltimārah Yaḥṣūb of the Sabaean inscriptions (Glaser, No. 424, 220; Bibl. Nat., No. 2) and for Thawbāl compared the Sabaean Thawbāl and for Šaḥār (so to be read, not ṣwaw) the similar Sabaean name. If the inscription given by Yaḳūt really goes back to a genuine munād inscription, Kašib must have been built about the first century A. D. If the Sabaean king here mentioned whose epitaph in the Himyarī kasīda (verse 109) publ. by A. v. Kremer is to be read Ḍāshīb, in the Sabaean inscription Bibl. Nat., No. 32 [cf. N. al-Hamdānī] speaks expressly of Sāḥiḥa, Ghudāna and Ši[rw]āh only and does not mention al-Kašib, this is itself a proof that Yaḳūt's foundation inscription is not genuine. The building might easily be later than the inscription Bibl. Nat., No. 2. A difficulty however is raised by the fact that al-Hamdānī (in Muller, Burgen und Schlosser, ii. 1039) and Nasḫānī al-
Himyari (quoted ibid., note 1) give al-Kashbih b. Dhi Hazfar as the builder. Glaser, *Reise nach Marib*, p. 139, goes so far to say that the name Kashbih is derived from the verb *kab* or *kabsh*, which occurs in dedicatory inscriptions, and the form of the king’s titles points to the last period of Himyarite rule, and the king is to be identified with Sharaabiyl Yafar; indeed it must be conceded that the style and titles is quite unusual for a king of Saba’ or Dhi Raddan and for this reason the *muṣānad* inscription must be regarded as a forgery. This does not mean that al-Hamdani’s note is to be rejected as worthless. F. Hommel (*Ethnologie u. Geographic d. alteren Orienten*, p. 666 and note 2) has shown the possibility that the castle of Hadjar (the name means the town”) was perhaps the principal city, on the ruins of which the modern village of Marib was planted and the older and more celebrated Salṭn was a smaller castle. If we remember the meaning new* given in Yāṣib, iv. 104 and Nashwān, p. 86 s.v. *kasbih*, al-Kashbih might also be an epithet of the citadel as the *new* which came to be erroneously differentiated from al-Hadjar as the name of a third castle. Al-Bakri, *Maqāmāt*, ii. 502, 754 explains the difficulty by saying that al-Kashbih was the last of the castles to be built in Marib and therefore called the *new*.

The *Masjud Sulaimān* lies to the west, just below the village which is built on a great mound of rubble. This Masjud Sulaimān b. Dhi’ād, now the principal mosque of Marib, according to Arnaud (cf. A., ser. vii., vol. iii. [1874], p. 13) an obviously modern building, square with a flat roof and built of hewn stones, is of interest because, according to E. Glaser (*Reise nach Marib*, p. 41, 73 sq.), its north side is built against 7 or 8 colossal columns (monoliths) which correspond exactly to those of the Ḥaram Bilqis and the *Amād* to be discussed below. Glaser suggests that there was once a temple here similar to the *Ḥaram Bilqis*. F. Hommel, *Ethnologie u. Geographic d. alteren Orienten*, p. 44, suggests that the *Masjud Sulaimān* was the temple of the chief deity. This principal temple in his opinion formed a group with the second temple, which lay on the south side of the *Masjud*—according to Arnaud (plan of Marib) local tradition thinks this was the site of an ancient temple. The length (2,000 yards), suggested by F. Hommel (op. cit., p. 666) for the distance of this second temple from the *Masjud Sulaimān*, is however too high, as both Glaser and Arnaud put the distance between the two opposite city walls at only 1,000 yards. J. Halévy’s figure (Rappor. *J. A.*, ser. vi., xix. [1873], p. 96) which puts the diameter of the *Masjud* at about 500 yards, would give a much shorter distance but the estimate is certainly a very casual one and hardly to be taken seriously.

In the south and west outside the old town walls lies an old cemetery with a number of tombs, some vertical and some horizontal, the latter of which has a small opening at the top. It is now called Mejlennat (or Diḥbat) Gharrā. It is probably from here that there come a number of old Sabaean tombstones (Glaser, N°. 456, 574, 575, 581, 582, 605, 662, 665, 666, 667, 668, 669, 748, 759, 773, 792) with rectangular niches sometimes rounded below or peaked at the top, in which is placed the bust of the deceased with an inscription below. On two of those tombstones (Glaser N°. 684, 745), Glaser found the bust let into the stone still in its place (cf. *Reise nach Marib*, p. 75, 92; Tagtebuch, xi. 59). We may probably find the models for these tombstones in the steles of Assur. Stone sarcophagi are also sometimes found. One is still in use before the great well of Marib as a drinking-trough for animals (*Reise nach Marib*, p. 74).

In the southwestern part of the old town outside the city walls, Glaser found a remarkable building still partly preserved (G on the plan of the immediate vicinity of the old town of Maryah) which was probably used for distributing the water and has on its north side the inscription Glaser 474 = 1671. It consists of two huge stretches of wall running due east and west in one line with a gap in the centre. The two corners of the northern entrance of this passage are angular while at the south side the two are rounded. The inscription, which is placed on the north side of the eastern wall states that Dimiri-alya Water, Makkariib of Saba’, son of Kariba’il-ju. built a ʿalā ḫīṣ (jīṣ) opposite (or in front) of the sanctuary of ʿAthtar. Glaser actually found some 300 paces N.W. or W.N.W. of this building, also outside of the old city walls but quite close to them, a ruin unfortunately reduced to a heap of rubble, which from its plan suggests a sanctuary, since on the N.E. side (the right stretch of wall) the niches for an idol can still be seen (*Reise nach Marib*, p. 45; Tagtebuch, xi. 47; H on the plan of the immediate vicinity of the old town of Maryah).

S.S.E. of the modern village of Marib (d) at a distance of about 3 miles between the Wadi Dheene and Wadi ‘Al-Feldah is the Ḥaram Bilqis (D) which was visited by Th. J. Arnaud on July 20, 1845 and by E. Glaser on March 25, 1888 (cf. J. A., ser. vii., vol. iii. [1874], p. 14 sq.; Glaser, *Reise nach Mit. b.*, p. 41, 42 sq., 73, 137, 141); the latter corrects Arnaud on a number of essential points. The Haram is a large building, elliptical in form, the larger axis is 306 feet long runs S.W. to N.E. The shorter axis runs N.E. to S.W. and is 250 feet in length. It is built of regularly hewn square blocks which are placed one above the other in 31 layers up to the frieze so that the height of the wall is 31 feet. This wall is finished off with a double cornice at the top which consists of two rows of blocks which follow one another at short intervals and look like dice on the top of the wall, the result being a mural column-like frieze which recalls the relief found by Th. Bent in Jēhā in Abyssinia (cf. Th. Bent, *The Sacred City of the Ethiopians*, London 1893, p. 141) and the top of the Sabean relief by D. Nielsen, *Handb. des alt. äthiopischen Altertumskunde* (p. 157, fig. 44). The row of blocks below the lower cornice form a simple and effective decoration by placing the blocks four to six inches apart so as to leave little gaps. A similar kind of mural decoration is known from the Sabean temple of Jēhā (cf. Deutsche Akademie-Expedition, ii. 80, fig. 165). The frieze is still quite intact in place, especially on the east side. There is no trace of a roof. But it cannot be asserted definitely that there never was one; the windowless building could have been lit by sky-lights. There are two doors in the wall, the larger (a) at the northern end of the shorter axis and the smaller (b) at the N.W. end of the building at the end of the larger axis.
Exactly N.E. of the centre of the building there are four other monolithic pillars in the wall itself. Originally there were a larger number here so that the main gateway (a) had a pillared way leading to it. N.E. of these at a distance of 32 paces are 8 columns which are also erected in a line running from S.E. to N.W. (E). They are rectangular prisms, smooth, 15 feet high without capitals and terminate in dice-shaped tops 4 inches long on which stood the architrave. On the S.S.E. side of the Haram just outside the wall, four small pillars form a little square the sides of which lie W. to E. and S. to N. (c). Perhaps we have here the pillars for the canopy of a throne which was probably similar in appearance to the Aksumite king's throne illustrated in *Deutsche Aksum-Expedition*, ii. 63, fig. 139. The floor of the building never seems to have been levelled, as a natural rock rises almost in the middle. Unfortunately in the interior the walls are nowhere clear, so that Glaser could form no deductions as to what it must have looked like inside. He expressly states however that he could discover no chambers in the walls as he had expected. On the other hand, the fine inscriptions on the outside of the walls give us information as to the purpose of the building — it is a temple of the Sabean moon-god Almahah — as well as the history of its erection. Arnaud was only able to copy 3 of these inscriptions, two others whose existence he established were covered by sand, which has since made further progress, so that he could not copy them. The oldest in-

Plan of the immediate vicinity of the old town of Maryab.

A the modern village of Marib, B Umm al-Ka', C Masjid Sulaiman, D Haram Bilquis, E Amazil, F Pillars E.S.E. of al-Merwath, G Old Building, H not given a definite name, I Temple, J-K Old city-wall of Maryab, L Wadi Dhenne.
and in other Sabaean inscriptions was this very temple. From it the god Almakah is called "lord of 'Awm" (א"מ). The completion of this temple which was begun by Yid'il-ili Dharib, by Tilibarsha, son of Samuhi-alaya Dharib, king of Saba', is recorded in the inscription Glaser, 425 = Arnaud 55, which is on the west side of the Haram on the 14th layer of stones (cf. N. Rhodokanakis, Studien, ii. 12 sqq.) Glaser 481 = Arnaud 56, which is on the 13th and 14th layer on the north side records the completion of the wall from the inscription to the top by Tubakarib a prominent official and general of three Sabaean kings (N. Rhodokanakis, Studien, ii. 15 sqq.). Connected with this are two inscriptions of similar content, Glaser 482 = Arnaud 54 on the south side of the 15th layer and Glaser 483 = Arnaud 54 on the east side at the same height. They record the restoration of a ruined part of the wall (presumably of the part of the temple) under King Kariluha Water Yahan'm of Saba' and Dhul Ra'idān, the son of Dhimri'-alaya Bayin, and his son Hālik'amara. Whether this history of the building of the Haram seems doubtful since, according to Glaser, *Reise nach Mārib*, p. 46, inscriptions may still be concealed under the sand on the north and west sides also.

The orientation of the building is of interest. The little door of the Haram (h) faces that temple of the old town of Mārib on the site of which now stands the Masjid Sulaiman. On the prolongation of the shorter axis to the N. E. lies the ruin called al-Mikrāb, and Glaser has, perhaps rightly, suggested from this arrangement of the two buildings that there was some connection between their purposes. Both buildings are moreover oriented by the course of the Wādī Dhenna. On the south side of the old city wall may still be seen the remains of a bridge which was built almost exactly in the direction of the Haram and, according to the local tradition, once reached to it. Even if this is an exaggeration it is nevertheless probable that a bridge was built over the river Dhenna, and in the rainy season the streams certainly have inundated the fields; the continuation of this bridge to the Haram was probably only a dam of which no trace now remains.

However unusual the elliptical form for the plan of a temple may appear, this is certainly not an isolated example in Southern Arabia. F. Fresnel (*J. A.*, ser. iv., vol. vii., p. 223) mentions the great ruins of Kharib (Sirwāth) which cover an even greater area than those of the Haram Bālīk and include a semi-elliptic and long rows of pillars still in position. According to Arnaud, this elliptical plan has also been found by Halēvy (*J. A.*, ser. vi., vol. xix., p. 67 sq.); cf. also Glaser, *Reise nach Mārib*, p. 113 (Shīza, i. 67 sq.). According to the inscription Glaser, 590 = 903, its builder was the Sabaean mukarrn Yid'il-ili Dharib, who also built the temple of 'Awm and the round temple of al-Masjadīdīj. F. Hommel (*Einhornologie*, p. 664 sq.) has endeavoured to show how this temple came to have its modern name of Haram Bālīk. In analogy to the Assyrian and Babylonian temples extra muros which were always dedicated to the wife of the chief deity and in which in the month of the new year his wedding ceremony took place, Hommel sees in the Haram Bālīk the wedding house of Almakah, the sanctuary of his wife Harimat and seems to assume that the name is also connected with this. D. H. Muller (*Burgen und Schlösser*, ii. 972 sq.) has shown how the Arab archaeologists transformed the god Almakah into Yalma'ah and then gave this name to the legendary Bālīk and also made a haram (women's apartments) out of the sanctuary of the god. F. Fresnel's reasoning moves on similar lines (*J. A.*, ser. iv., vol. vi., p. 226 sq., 234 sq.). He assumed that Bālīk was not the correct name of the queen of Saba' but rather Bālkmah (so Ibn 'Abd Rabbih in the *Iṣb al-Farīd* and Ibn al-Djawi in the *Mīrād al-Zamān*) which was formed from Almakah. The queen of Saba' was in this way deified by the Sabaeanos and became the Isal of the Arabs.

In the S. S. E. of Mārib and according to Arnaud 1/4 hour E. S. E. of the Haram Bālīk—is the latter, according to Glaser, *Reise nach Mārib*, p. 41, always due east barely 1/4 hour from the five pillars—there stand on the opposite bank of the Wādī Dhenna, 1/2 hour or 11/2 miles (according to Glaser, *Skizze*, No. 51) from the town, the pillars called 'A'mā'id. Five are still upright; these are 25-30 feet high, 32 inches broad and 24 deep, prismate, rectangular monoliths which were erected perpendicular to the direction of the Wādī Dhenna. Two which have been overthrown lie beside them on the ground. The pillars had no capitals and were just like the other pillars (at the Haram Bālīk and other ruins outside the town). On the fragments of the two fallen pillars Glaser discovered inscriptions on each (Glaser 479 and 480 = Arnaud 53) from which it appears that a sanctuary Barā'īn (א"רמ) dedicated to the god Almakah or some such sanctuary stood here. This name occurs not only in this inscription but is mentioned in Ootton, Mus., No. 17 (*Z. D. M. G.*, xxxii., 486, No. 1, 3) where J. H. Mordtmann reads [נה"רמ] and the name of this place is also found in Halēvy, No. 43, 49, 4 (ם"רמ) and 534 (ם"רמ). To the west just beside the pillars lies a mound of ruins, which perhaps represents the remains of this sanctuary. Arnaud (*J. A.*, ser. vii., ii. [1874], p. 15) describes these pillars as pilasters of the Haram Bālīk and puts their height at 28 spans. In contradiction to Glaser, Arnaud says they have square capitals. His illustration under the plan of the Haram Bālīk shows a pillar with a stepped capital like those from Aksūn and Kohat in Abyssinia (*Deutsche Aksum-Expedition*, ii., ed. by D. Krencker, Berlin 1913, p. 102, fig. 224 and p. 155, fig. 319b). Which of the two explications is right, it is difficult to say as Glaser is usually very accurate in his observations. On the other hand, Arnaud cannot possibly have invented this rather unusual but nevertheless typical form for ancient South Arabia and made his drawing accordingly. The only way out of the difficulty is to suppose that in Glaser's time the capitals—of which Arnaud says he cannot say definitely that they belonged to the pillars—had been broken off. According to Arnaud, the pillars stand close together at intervals corresponding to their thickness. That the pieces of stone on the ground near the row of pillars once belonged to the pillars noticed by Arnaud (p. 16) although he copied one of the inscriptions on them (Arnaud 53 = Glaser, No. 480) (cf. E. Glaser, *Reise im Mārib*, p. 401, 141).
The numerous separate finds made by Glaser in the neighbourhood of Mârib, sacrificial altars, masons’ workshops etc. cannot be discussed here. On the other hand, there is one erection which demands a rather thorough discussion as it surpasses all these already mentioned in magnitude and preserved the fame of Mârib down to the late Islamic period, namely the dam and works connected with it, known in Muslim tradition as Sudd Mârib or Sudd al-’Arim.

The Wâdî Dhjennâ in the course of time had cut a way through the Balaq hills here and divided the two parts Balaq and Balaq al-Awsâj. The Sabaëans had built a dam of earth across the gap some 770 paces long behind which the water was collected. The dam, which Glaser (Reise nach Mârib, p. 58 sqq., 173 sq.) describes minutely, rises some 20—25 feet above the present level of the Wâdî and is simply a mound of earth the section of which is an isosceles triangle the angle at the top of which is quite sharp. The angle of inclination of the two surfaces to the base is about 450 and the breadth of the base about 50 feet. The proper base and the height of the dam cannot be accurately ascertained as the mud has accumulated to the depth of many feet. But it can be assumed that the dam rested on a foundation of rock as the narrow passage between the two Balaq hills has a rocky foundation which comes up very nearly to the surface. But for this firm foundation of rock it would have been impossible to build the dam at all. The side of the dam which met the water (the western) is covered with small sharp unshewn stones, held together so strongly by mortar that it is impossible to detach one of them. The dam, which is 1 1/2 hours from Mârib, is flanked in the north and south by two great sluices, the southern one of which is known as Mârib al-’Arim. Here on the site of the the dam a great rock (A) 95 paces long and 15 in width, at the narrow passage of which — 10 has become detached from the Djelhel Balaq al-Awsâj; it runs to the N.E. with a slight tendency to E.N.E.

The main body of the rock, the northern wall, of which runs eastwards forms with this isolated rock a pair of lines converging towards the S.W. end of the latter. The two rocky walls do not meet here but are separated by a gap spanned by a wall six paces long and 12 feet high (C). In the opening of the angle but within the eastern ends of the two walls is another detached block of rock (D) the north side of which runs parallel to the first mentioned detached rock and the south side parallel to the main rock (C) but quite close to the latter. All three rocks, particularly the main body (C) and the loose block (E), have steep sides, not however over 12 feet high. On the north side the great isolated rock (A) is very irregular in shape. It almost looks as if we had an artificial cleavage here; but Glaser does not think this possible because an earthquake is quite sufficient to account for the remarkable cleavage of the rocks. In any case it looks as if human hands had worked a good deal on the natural lines of fracture. The great block of rock (A) rises 20—25 feet above the present level of the river bed and has two inscriptions engraved on its south side (Glaser, Nô. 515, 523).

On all three rocks there are or were great buildings of hewn stone. The large block of rock (A) seems to have supported the main building. Its masonry consisting entirely of finely hewn blocks of stone, arranged in pairs one above the other and held together by melted lead poured into corresponding cavities; it follows closely, especially on the south side, the rock which forms the foundation so that it does not form a straight line, as Arnaud (F. A., ser. vii., vol. iii., in p. 64, Digue de Mârib) has represented it. The whole length of this wall is about 200 feet, its average breadth 15 feet, the height at the S. W. end about 12 feet, rather more at the N.E. end, as the rock is not high enough here. In general the top is horizontal but with slight differences of level where it rises and falls. The S. W. corner of the masonry consists of round towers (a) facing S. W. which stands about 3 feet above the level of the rest of the walls. The whole building and the tower have perpendicular sides and do not slope at all. The dam which runs N.N.W. seems to have joined the wall 25 feet from the towers on the N.W. On the side facing the Wâdî at the N.E. end of the rock, steps have been hewn out of the rock which led from the bottom of the river bed (in S.S.W. direction) to the walls. Almost exactly south of the already mentioned tower which has also very steep steps cut in a perpendicular passage hewn out of the rock, there stands on the main mass of the rock (C) a second tower (d) of the same height, round on the west, and only 10 on the other sides. Between the two towers, is the already mentioned wall linking up the two rocks. As already mentioned, the top of this wall is 20—25 feet above the level of the river so that the towers are 35 to 40 feet above it. The dam seems to have been not much higher than the connecting wall. The out-flow of the water must have taken place over the connecting wall as well as through openings under the wall, probably now filled up with rubble, into the Jâbabîd canal, and under or rather through the rock on which this great piece of masonry stands, into the Rahbît canal. Indeed we can still see quite clearly that the great isolated rock is connected with the rock by a ridge of rock (e), only the rounded top of which is visible, with the smaller block, so that the two channels were separated from one another. It is also possible that in ancient times the outflow went below and only later, when the water-level was raised by silting, over the wall. Grooves for boulders are still recognisable. The smaller block of rock, steep and high on the western side, slopes to the east down to the level and has step-like cavities in it everywhere with stones still perpendicular on its, as if it had had a balustrade, especially above the steep wall in the west. At its eastern end where it joins the level ground, it shows regularly hewn cavities of prismatic stones, which look like watering-troughs for the cattle or like stone graves. The main rock shows the same features. The step-like cavities were perhaps not only used for climbing, but also to measure the level of the water to regulate the outflow.

Both towers and the other buildings in connection with the sluices, except such walls or railings as may have existed of the smaller block, are preserved intact. The hewn stones are so arranged that long stones are every now and then laid crosswise which give the otherwise parallel layers great cohesion. This is particularly the case with the inner filling of the wall, as can be observed in all very large buildings a section of
which comes to be exposed. The square blocks in the dam are also held together by little blocks of lead about 10 cm. high and about 10 cm.\(^2\) in the section. These little rods of lead were placed in holes specially made for them about 4-5 cm. deep and the next block above was placed over with the corresponding cavity filled with the top half of the little rod. The Sabaeans only used mortar in the stone work of the dam as a top covering to prevent damage being done by the rain-water.

The northern system of sluices consists of three walls of which the northern and largest a kind of railing of masonry. The whole wall is coped with excellent cement.

Almost exactly S.E. about 11 paces from the S.W. end of the part, 114 paces long already described (b) runs to the S.E. a wall 38 paces long and 21 broad at its N.W. end, the S.E. end of which is narrow and rounded. This wall is exactly the height of the long wall. At the present there is on it a modern ħanīf (stone-house) built by the amir 'Abd al-Rahmān which probably existed in Arnaud's time and certainly in Halevy's.

Between the two walls, four paces from either,

**Marbat el-Dimm**

a Tower with staircase, of the same height as d and the highest part of the whole building.
b Staircase.
c Barrier between the tower and southwestern rocks.
d Tower exactly similar to a.

(a, b) with one end built against the rocks of Balak al-Kibli runs northeast, a little towards E.N.E. This wall, which is in all 184 paces long and 15 thick at the broadest point, although the average is about 11 and 15—20 feet high consists of two parts: The southwestern part 70 paces long (c) is somewhat lower (quite low beside the Balak rocks, about 16 feet high at the point where it joins the N.E. part) and quite flat on the top. The N.E. part (b) 114 paces long and somewhat damaged towards its west end is not quite flat on the top and towards the south side the top shows stands a north wall only 18 paces long, 3 broad and of the same height as the others, the base of which forms a perfect rectangle. This wall somewhat damaged on the north side and now joined to the S.E. wall by two modern slight walls, which the Beduins use as a stable, stands back a little at its S.W. end as compared with the two neighbouring walls and like the S.E. wall shows a prism-shaped cutting about a yard from the west end, now filled in about 2 feet broad and deep which was intended to take the boards. On the northern side this groove is no longer to be seen. The three
walls thus formed, like the three rocks on the south form two channels of exit, both of which however, it is worth noting, flow into one and the same main channel, which runs almost exactly east for about 1,000 yards to a large building for distributing water. This canal ran between two parallel dams of the same style and construction as the dam proper but the bed, which is paved with cemented stones, runs above the plain, especially on the south side some 20-25 feet. The dam proper, barely higher than the two walls of this canal, joins the east side of the most southern wall, 38 paces long.

Similar distributing works existed throughout the whole plain of Ma'rib. Glaser saw traces of aqueducts (with double dams) at different places. In the bed of the Dhenne not far below the dam he saw a remarkable erection of stone not unlike a weir. Unfortunately the inscription on it which might have given us definite information had been removed some years before. Canals seem to have led the water from the great distributing centres to the smaller ones (manāṣīḥ) from which it was taken direct to the palm gardens and fields. The most of the manāṣīḥ are in the form of cubes or shallow prisms and are rarely more than 6 feet high and 12 to 15 feet long. As a rule a canal leads out of them from the centre, usually walled on one side. Nothing is left of the canals which connected the manāṣīḥ with the larger distributing centres and on the other side with the fields. Deep furrows torn out of the ground by the periodic deluges of rain and, like the greater part of the plain, becoming gradually filled with desert sand are now the characteristic feature of the once flourishing plain of Saba'.

The great barrier of the dam between the two Balak mountains seems however not to have succumbed for the strain upon it. A second dam called Ma'ānāl Hashradj was therefore built N.N.E.
of the dam and west of Mā'rib which seems to have been intended to regulate the water of the Wādī 'l-Sā'īla (cf. Glaser, *Reise nach Mā'rib*, p. 49 sq.), which carried the waters of the north Balāk hill, the Djabal Hailān and the Khashab hills into the plain of Mā'rib and joined the Wādī Dhenne below the village of Mā'rib. This barrage consists of three walls of black porous stones, running very irregularly which are held together by mortar and arranged in three strata which perhaps point to three periods of building. The first of these walls (A) which dammed the river-bed begins just on the right bank of the Sā'īla and runs 240 paces E.N.E. where it joins a prism-shaped erection (a) 7 paces broad, 12 long and about 15 feet high, which lies N.W. to S.E. 7 feet N.E. stands a second similar building (b) parallel to the first and continued to the S.E. in a narrower wall (c) 36 paces in length. The space between these two buildings must have been an outlet. With a very small space between, the second mortared wall (d) runs N.W. from the second building (b) and with many windings turns N. and N.W. where it joins the rocks. Its length is 268 paces, the space between it and the second building 10 paces (d). 21 paces N.E. of the second building are two others (d, e) which give an outlet to the N.E. The southern of the two is only partly preserved. It points to the S.E. end of the 36 paces long wall (c); perhaps the two were once connected or there was a sluice between. From the building (d) which forms the northern boundary of the second outlet two walls run: the one (third) wall (C) runs with many windings almost parallel to the second great wall (B) and like it runs up to the northern hills; it is 182 paces long. The other building (f) runs in a curve to the north, 50 paces in length, to a third outlet exactly opposite the second, which however consists of buildings (g, h) 8 paces from each other, with the ground between them covered by a layer of stone masonry. The outlet is to the N.E. On the S.E. is a wall 12 feet long now partly collapsed. Glaser copied 10 Sabaean texts at al-Hashrāj which came from other ruins and show that these works belong to a later period, like the late tombstone built into the wall here (Glaser, N°. 509).

The various constructions date, as we learn from the inscriptions, from different periods. The southern system of sluices was erected as early as the Mukarrib period. Sumuha-alaya Yansī, son of Dhimma-alaya, Mukarrib of Sā'īla, according to the inscription Glaser, N°. 513—514, made here an outlet in the barrage at Raḥāb, which was extended two generations later by the unknown author of the inscription Glaser, N°. 418—419 (cf. N. Rhodokanakis, *Attisabische Texte*, i. 7; Studien, ii. 97, 99 sq.; Glaser, *Skizze*, i. 70 sq.; *Reise nach Mā'rib*, p. 59 sq.; Hommel, *Ethnologie*, p. 666). Where the barrage at Raḥāb was is not certain. Perhaps we should assume with Rhodokanakis, *Studien*, ii. 100 sq. that it was built on the rib of rock (e) between d and B. About a generation later than the Raḥāb barrage is the similar con-
walls thus formed, like the three rocks on the south form two channels of exit, both of which however, it is worth noting, flow into one and the same main channel, which runs almost exactly east for about 1,000 yards to a large building for distributing water. This canal ran between two parallel dams of the same style and construction as the dam proper but the bed, which is paved with cemented stones, runs above the plain, especially on the south side some 20—25 feet. The dam proper, barely higher than the two walls of this canal, joins the east side of the most southern wall, 38 paces long. Similar distributing works existed throughout the whole plain of Marib. Glaser saw traces of aqueducts (with double dams) at different places. In the bed of the Dhenne not far below the dam he saw a remarkable erection of stone not unlike a weir. Unfortunately the inscription on it which might have given us definite information had been removed some years before. Canals seem to have led the water from the great distributing centres to the smaller ones (manāšh) from which it was taken direct to the palm gardens and fields. The most of the manāšh are in the form of cubes or shallow prisms and are rarely more than 6 feet high and 12 to 15 feet long. As a rule a canal leads out of them from the centre, usually walled on one side. Nothing is left of the canals which connected the manāšh with the larger distributing centres and on the other side with the fields. Deep furrows torn out of the ground by the periodic deluges of rain and, like the greater part of the plain, becoming gradually filled with desert sand are now the characteristic feature of the once flourishing plain of Saba'.

The Great Barrier of the dam between the two Balak mountains seems however not to have suffered for the strain upon it. A second dam called Mabnā al-Hashra ḫūr was therefore built N.N.E.

Places with especially important inscriptions: 1 Gl. 554, 618; 2 Gl. 551; 3 Gl. 541.

Places with inscriptions:

a. a little lower than b.

The canal, which led the water to the lower manāš, about 1,000 yards away, comes up to a and c.

d. a large intervening wall standing by itself.

S. S. W. of Mabnā al-Hashra ḫūr (see below) lies Ḥuṣn al-Asfāl, a later building erected on the remains of old water-works, which formed the end of the main channel, already mentioned in connection with the northern sluices. It lies at about exactly the same level as the dam and several yards above the surrounding country. It consists of several walls, some of hewn stone and some of ordinary stones and cement, which sent the water out in eight different directions. The aqueduct runs practically westwards up to the northern sluices of the dam. Although perfectly preserved the bed of the canal has been in many places filled up with blown sand.
of the dam and west of Mārib which seems to have been intended to regulate the water of the Wadi 'l-Sā‘īla (cf. Glaser, Reise nach Mārib, p. 49 ff.), which carried the waters of the north Balṣāk hill, the Djabal Hailān and the Khashāb hills into the plain of Mārib and joined the Wadi Ḥassen below the village of Mārib. This barrage consists of three walls of black porous stones, running very irregularly which are held together by mortar and arranged in 3 strata which perhaps point to 3 periods of building. The first of these walls (A) which dammed the river-bed begins just on the right bank of the Sā‘īla and runs 240 paces E. N. E. where it joins a prism-shaped erection (a) 7 paces broad, 12 long and about 15 feet high, which lies N. W. to S. E. 7 feet N. E. stands a second similar building (b) parallel to the first and continued to the S. E. in a narrower wall (c) 36 paces in length. The space between these two buildings must have been an outlet. With a very small space between, the second mortared wall (B) runs N. W. from the second building (b) and with many windings turns N. and N. W. where it joins the rocks. Its length is 265 paces, the space between it and the second building 10 paces (b). 21 paces N. E. of the second building are two others (d, e) which give an outlet to the N. E. The southern of the two is only partly preserved. It points to the S. E. end of the 36 paces long (c); perhaps the two were once connected or there was a sluice between. From the building (d) which forms the northern boundary of the second outlet two walls run: the one (third) wall (C) runs with many windings almost parallel to the second great wall (B) and like it runs up to the northern hills; it is 182 paces long. The other building (f) runs in a curve to the north, 50 paces in length, to a third outlet exactly opposite the second, which however consists of buildings (g, h) 8 paces from each other, with the ground between them covered by a layer of stone masonry. The outlet is to the N. E. On the S. E. is a wall 12 feet long now partly collapsed. Glaser copied 10 Sabaean texts at al-Hashradj which came from other ruins and show that these works belong to a later period, like the late tombstone built into the wall here (Glaser, No. 509).

**Mebnā el-Hashradj**

The various constructions date, as we learn from the inscriptions, from different periods. The southern system of sluices was erected as early as the Mukarrīb period. Sunahu-‘alaya Yānāf, son of Dhimrī-‘alaya, Mukarrīb of Saba', according to the inscription Glaser, No. 513–514, made here an outlet in the barrage at Rahāb, which was extended two generations later by the unknown author of the inscription Glaser, No. 418–419 (cf. N. Rhodokanakis, Alteriatische Texte, i. 7; Studien, ii. 97. 99 sq.; Glaser, Skizze, i. 70 sq.; Reise nach Mārib, p. 59 sq.; Hummel, Ethnologie, p. 666). Where the barrage at Rahāb was is not certain. Perhaps we should assume with Rhodokanakis, Studien, ii. 100 sq. that it was built on the rib of rock (f) between A and B. About a generation later than the Rahāb barrage is the similar con-

**The Encyclopaedia of Islam, III.**
traction at Ḥabāḥūd, which was probably built at the junction (r.) of the Marābih al-Dimm. The Makārī: Yūḥān ibn Ṣamūḥ, son of Sumuḥu-adalafil Ṣimāḥ, built a water-course for it, as his father had done for the Khābi‘ū (according to Glaser, No. 523, 525 = Arnaud, No. 12, 13 = Halévy, No. 678; cf. Khodokanakis, Studien, n. 102 sq.; Glaser, eg., cit.). The northern sluice-works are much later, according to Glaser (Rosse nach Mārib, p. 66–68), they did not get their present form till the time of king Shamar Yūḥān (c. 300 A.D.) and may perhaps even be not older than the fifth century A.D. The oldest parts of the works are put by Glaser (p. 68) to the period 1000–700 B.C. which is probably rather too early.

The great system of dams did not long exist in this form. Thus we know from two great prismatic monoliths, which are inscribed on all four sides and tell us of the later history of the dam. The one with the inscription Glaser, No. 554 is 7 feet long, 50 miles broad, and a foot thick, the second, even larger, bears the inscription Glaser, No. 618. Both lay close beside the junction of the northern wall of the Dīr al-Balāt. According to Glaser, No. 554, king Shāhārūl Yūḥūr in 449 A.D. had a thorough renovation of the works carried out. But these lasted barely a year, for in 450 A.D. the waters broke through the dam so that the works had again to be completely restored. But the collapse of the great system was not to be prevented. From Glaser, No. 618 we learn that under the rule of the Abyssinian viceroy Abrūrāh (542 A.D.) another breach occurred in the dam. Once more restoration work on a large scale was attempted. This threatened the danger, but the final catastrophe must have occurred not long afterwards, which transformed the fertile plain of Saba‘ into a barren desert, alluded to in the Kurān (Surah xxiv. 14 sq.; cf. Glaser, Zweifelthufern über den Dammerbruch von Mārib, p. 13 sqq.; Rosse nach Mārib, p. 10, 64, 144 147). Its cause is seen by Glaser in the action of wind and rain which gradually wore down and weakened the east side. Another main cause of destruction must have been the silt which filled the reservoir in course of decades that the water flowed over the dam. A mention of the bursting of the dam in the Kurān (sūrat al-Hāji‘ān) and the importance of this event for the town of Mārib and the country round has resulted in Muslim tradition devoting attention to this catastrophe and its consequences, so that all sorts of scraps of information about the dams were collected. Nevertheless it is remarkable how little even authorities on South Arabia like al-Hamdānī (Sīra, p. 80 and 1037, viii., in D. H. Muller, Provenzalisch und Sabaesisch, n. 958 sq., 1036, 1038; cf. N. Khodokanakis, Studien, n. 105 sq.; al-Bakri, Masa‘īl, n. 502) really know about the dam. Al-Hamdānī only says that the dam was built against a wall which was built on the side-wall of the reservoirs, of great blocks of stone linked together with iron. The arrangement for distributing the water from the farms were still there as if their builders had only finished yesterday. Al-Hamdānī saw the building which had survived on one of the two sides (i.e. on one bank) namely the one which rose out of the water intact (i.e. the sluices). The breach had only affected the barrage but even of this a portion remained intact which was added by the gardens on the left and was 15 ells in breadth at the base.

How we are to interpret these statements of al-Hamdānī, we learn from the description of the reservoir of Kohaito in Abyssinia (Deutsche Akademie-Expedition, ii, 150 and pl. 23). There a central wall is flanked by two side walls, one of which is at right angles to a third. That the stones were bound together by iron is evident from Glaser's description. When Yākūt (Mu‘jam, iv. 353) paid only little attention to the dam itself, tells us that it lies among three hills, the reference is probably to the massif of the Dīr el-Balāt split into the three hills of the Wādīs al-Adhānā and Masila. He also mentions that the blocks are bound together with lead and says that the water accumulated behind the dam is led as required to the fields by strong sluices and cunningly contrived arrangements. According to al-Ma‘ṣūdī (Murūj al-Dhahab, iii, 368 sq.), the barrage was one parasang in length and breadth and contained 30 round openings, each of 1 cell in diameter through which the water was led to the fields.

The importance of the dam for the prosperity of the country is evident from the descriptions of the Arab historians and geographers, who in this connection usually quote the reference in the Kurān to the two gardens of the Sabaean, while, according to al-Hamdānī, this irrigated area included not only the plain of Saba‘ but stretched to the borders of the desert of Ṣa‘īḥād; Glaser (Rosse nach Mārib, p. 52) held the view that the water accumulated by the dam would suffice to irrigate amply all the land on the borders of the desert as far as Ḥaǧrāmūt, and transform it into a vast garden. It is therefore perhaps not to be regarded as an exaggeration when al-Ma‘ṣūdī (Murūj al-Dhahab, p. 366 sq.) describes the land of Saba‘ with its wealth of gardens and fields, broad meadows and extensive irrigation system as the most fertile part of Yemen, the beauty of which had become proverbial throughout the world. According to him, a man on horseback would take more than a month to cross the rich cultivated country and any one travelling on foot or on horse need not fear the sun from one end of the land to the other, as he could always travel in the shade, so rich was the vegetation (cf. A. v. Kremer, Sager, p. 10, note 1). According to Ibn Rosta, p. 114, who also waxes eloquent over the fertility of the land of Saba‘, a basket on the head of a man walking between the fruit trees would very soon have filled itself with fruit without one pulling or gathering them.

Under such circumstances it was natural that the catastrophe of the bursting of the dam, known as al-lā‘arima throughout the Muslim world, should have the most far-reaching effects. The migration of Himyar tribes to the north is con-
connected with the catastrophe and the Banū Ḥassān took this event as the starting point of an era of their own (Ṣam al-sail; al-Maṣūdī, Kitāb al-Tanbih, p. 202). There is hardly any historical event of pre-Islamic history, that has become embellished with so much that is fanciful and related in so many different versions, as the history of the bursting of the dam. Al-Maṣūdī alone (Muḥammad al-Dāhāh, iii. 370 sq.) dared attribute it to natural causes; he thought that the water had worn away the foundations of the dam and dared it without being noticed. When the masonry of the dam and the barrage had become so weakened that they could no longer resist the force of the water, the waters when unusually big broke through and flooded the plain. But even Al-Maṣūdī sees in the catastrophe a punishment for the arrogance of the Sabaeans and gives a good deal of space in his history to the legendary version of this event (cf. cit., p. 373 sqq.), which in the main agrees with that of Yākūṭ, Muṣfīm, iv. 48). The name of the king according to Sonnerey, Post-und Reisereiten, p. 153 sq.) tells the history of the destruction of the dam in quite a different way from the older historians. According to al-Maṣūdī the story is briefly as follows: the king ‘Amr b. Ṭāriḥ who lived in Marib was warned of the imminent catastrophe by his brother ‘Imrān, who was a soothsayer and by his wife Ṣafīyāt al-‘Aṣfār, also skilled in prophecy. ‘Imrān foresaw that his people would be scattered in different directions and told this to his brother. Žarīf on the other hand dreamed of a great cloud which covered her country and sent forth thunder and lightning. It burst and burned up everything upon which it fell. All this pointed to a terrible inundation and Žarīf was confirmed in her idea by other signs that the catastrophe was imminent. She warned ‘Amr and urged him to see to the dam. If he saw a mouse there tearing out holes with its forepaws and throwing out big stones with his hind feet, the misfortune was inevitable and imminent. ‘Amr went to the dam and actually saw a mouse which turned over with its feet a stone which 50 men could not have moved from the position. ‘Amr himself then dreamed of an inundation by the dam and now decided to realise his possessions and leave the country with his family which he was able to do surreptitiously without arousing suspicions. Soon afterwards the collapse came, which destroyed the whole country, even high lying fields and places a considerable distance off. While there are considerable differences in detail in the different versions of the story—the collapse took place for example, according to Yākūṭ not under ‘Amr but under his brother ‘Imrān—but there is still greater disagreement about the date. Ḥamza al-Isfahānī, for example, puts it 400 years before Islām, i.e. in the third century A.D. Accordingly to Ibn Khalidūn, the catastrophe took place under Ḥassān b. Tibbān Asad, who (with A. v. Kremer, Soge, p. 120 sq. and note 4) is to be identified with Abū Karīb Asad and according to Glaser (Skizze, i. 542) reigned from 385–420. Among European scholars Gosselini goes farthest back in putting the date at 374 B.C. while Reiske thinks it took place 30–40 B.C. and Schultens puts it at 30–40 A.D., Perrin 553 years before Muhammad and Silvestre de Sacy 210 or 170 A.D. Yākūṭ, iv. 383 comes nearest the truth; he says it took place in the period of Abyssinian rule. As the terminus post quem is 542 A.D., according to the inscription Glaser, No. 618, we may put the last disastrous breach in the dam as occurring between 542 and 570 A.D. An exact date unfortunately cannot be obtained as the necessary data are lacking. Besides the name of the bursting of the dam in Maṣūdī, p. 393 sqq. and Ibn Rosta, p. 114 sq. which speak of the land being twice devastated by the waters of the dam, may contain a memory of the actual course of events, and the final collapse of the dam may have taken place after the catastrophe of 542 A.D. when the dam was carried away for the first time.

The various attempts to explain the etymology of Marīb are not satisfactory. When, for example, Yākūṭ, Muṣfīm, iv. 382 sees in Marīb, a place-name from Arāb min ‘uẓbāʿ or from arība or aruba, this clearly shows what difficulties the explanation of this name gave the philologists. His further statement however that Marīb was the kingdom of the Sabaeans Kings is worthy of note (cf. H. Fleischer, Abilīsādā hitst, anticislamica, p. 114), especially as in Naṣawān al-Himyarī, a gloss is preserved according to which Marīb in Himyarīne means ‘lourd’ (cf. Blau in Z. D. M. G., xxv. 591, note 7). Ḫirdī Ṣadvīn, Kīṭāb al-Arab khāb al-ʾIslām, p. 142 explains Marīb as a loan-word from the Aramaic, a compound of māḥ and ṣabb. E. Osiander, Z. D. M. G., xix. 162 takes Marīb to be connected with the root of the Sabaean proper name Min to which Ṣayyīb and Ṣībā correspond in Arabic. J. H. Mordtmann, who deals in Z. D. M. G., xxx. 322 sq. at length with the etymology of Marība, points to the Min and Min of the inscriptions which he connects with the Arabic raʾūbān, ‘dominus crassus, magus gentis’.

D. H. Muller does not accept this derivation (Burgen und Schlosser, ii. 968 sqq.). Al-Bakri, Muṣfīm, ii. 502 says, following al-Ḥamdānī, that Marīb was the name of a tribe of the ʾAd according to which the town is called and in fact al-Ḥamdānī in Ikhlīs, viii. (Muller, Burgen und Schlosser, ii. 960, 1040) says that Marīb and Marīb are the names of two Arab tribes. In the older Sabaean inscriptions the town is called ʾalīd to which the Greeks added a ζ to give it a Greek form. Eratosthenes and Artemidorus (Strabo, xvi. 768, 778) call the town Maṣūba. The later inscriptions mention it under the name Baḥr in which we have, with Rhodokanakis, to see a later contracted form, from which comes the Sabean name of Muslim tradition. The Sabean capital is however known to the classical authors and Arab geographers by another name, viz. ʾalīs (Agatharchides, p. 100 in Geogr. Gr. min., i. 188 and in Steph. Byz. s. ʾalāḥis and Ṣawwā; cf. Tekā in the Art. Sabaʾ, No. 1, K. E., iii, A., col. 1516), and Sāḥba Tekā (col. 1391 sq) sees in contrast to J. H. Mordtmann (Sabische Denkmaler, p. 3, note 1), E. Glaser (Skizze, ii. 15, Sudarabische Streiffragen, p. 10) and A. Sprenger (Die alte Geographie Arabiens, p. 159, 162) in this double name of the Sabean capital not an error but believes that Sāḥba, while not the usual, was not a wrong name for the capital.

Against this Glaser, Skizze, ii. 15, rightly emphasised that the capital of the Sabean kingdom Maryāb or Marīb was never known as Sāḥba. Sāḥba was—so far as the inscriptions are con-
ceined — never anything but the name of the land or kingdom and of the tribe which had the hegemony in this land, to which the name Saba' has remained attached to the present day. This is quite clear from the inscriptions. Thus, in the first place of the old Sabaean inscriptions Glaser, No. 418—419, 1000 A and 1000 B (cf. N. Rhodokanakis, Altsabäische Texte, I. 29 sq.; 79); Al-Majkah (the principal deity of Saba') and saba' is the formula by which the Sabaen, first a theocratic and then monarchical, state is known. That the predominant tribe Saba' is however never described as a tribe in the older period is clear evidence of its hegemony as Rhodokanakis points out (Handbuch der altaraubischen Altertumskunde, I. 121). It was different in the later period; for example, in the inscription Glaser, No. 542, set up by king Shammar Yuharib, king of Saba' and Yhdi Radian, of the tribe of Saba', the reference is always to the "lords of the town of Mārib and its valleys." 

The earliest history of the town is unfortunately wrapped in obscurity. The mention of kings of Mārib in the comparatively late inscription, Glaser, No. 302, 7, shows, it is true, that the town was still independent in the time of the older Sabaean Mukarris — for these "kings of Mārib" are their contemporaries — but gives no clue to the date of its foundation. It probably arose about the same time as the old royal city of Sirwāl. The great inscription Glaser, No. 418—419, shows Mārib already in possession of the Sabaean Mukarris and not long afterwards it became their capital; this at least seems to be from the inscription Glaser, No. 481, where we are told that the founder of the inscription "brought as far as Maryab the peace between Saba' and Katabān." This we can only interpret with Rhodokanakis (Studien, ii. 24) as meaning that the general (he is called Tubā'-kariha, son of Dhamaryeda' of the clan of Madhiram) returned to the capital of Saba' after the conclusion of peace. Not long after the foundation of the great Sabaean kingdom, of which the inscription Glaser, No. 1000 A B relates, it must have replaced Sirwāl, the oldest capital of the Sabaean kingdom; indeed there seems to be evidence that this had already taken place in the reign of the king who set up the two great Sirwāl inscriptions Glaser, No. 1000 A B, Kariba-di Watar, founder of the great Sabaean kingdom. For when we are told in Glaser, No. 1000 B, i. 5 and ii. 6 that he had built the upper part of his palace Sidd (𬭬( which is probably identical with the famous citadel Salhum at Mārib, it may be assumed that this Mukarrab resided here. The great barrage which went back to the older generation of Sabaean Mukarris, must have then transformed Mārib and the country round it into the flourishing oasis which made the town the centre of a great kingdom. The Mukarris Samuhu'ala Ya'naf and his father Wadi-di Dharīt as well as Yithi'amara Baṣan also did much for the development of the town and the country around it.

We do not know exactly when Mārib ceased to be the capital of the Sabaean kingdom. Glaser (Zwei Inschriften über den Dammbruch von Mārib, 3) supposes that the capital was removed to Zafār (near Yarim) at latest towards the end of the third century A.D., but probably as early as the first century A.D., since the Periplus mari Erythraei, § 25 already knows Zafār as the capital. Indeed the evidence of the Periplus which is supplemented by Pliny, Nat. Hist., vi. 104, who knows Saphpar as a royal residence, can hardly be interpreted otherwise than meaning that Zafār was already the residence of the Sabaean kings about 60 A.D. With the transfer of the capital to Zafār, the cause of which Glaser finds in the attacks of the Axumites on the independence of the Sabaean kingdom, while M. Hartmann (Die arabische Frage,
p. 469) supposes this reason to have been the victory of the Huanadids over Himyar (cf. C.J.H., iii. 347 and M. Hartmann, op cit., p. 146 sq.), Märib's glory had passed away: the decline probably did not set in at once but Glaser must be right in assuming that Märib was now neglected and this is how the dam, so important for the cultivation of the land, fell into disrepair. Isolated references in Muslim sources show that the town had however not yet lost all its importance. Al-Bakri, Mu'jam, i. 308 (cf. A. v. Kremer, Sage, p. 138) knows Märib as one of the treasuries of the Himyars, and according to the Himyar-kašda, verse 56 (A. v. Kremer, Sage, p. xii, note 1 and p. 60), Shammar Yūrib (c. 281 a. d.) kept his prisoners in Märib. The two breaches in the dam which took place in 450 a. d. and under Abyssinian rule in 542 a. d., must have done grave injury to the prosperity of the town. In this last period of its brilliant history Märib was for a short time (certainly in 542 a. d.) the capital of the governor of the Ethiopian king Ramsu Zahmiqan, Abraha, and even had a Christian church (cf. Glaser, Zwei Inschriften über den Dambruch von Märib, p. 47). The final catastrophe sealed the fate of the town. Its inhabitants left the sore tried town and migrated to the Hijaz.

Märib was resettled in the Muslim period. The favourable situation of the place and perhaps the rich deposits of salt in the neighbourhood (3 days' journey east of Märib at Säfr, mentioned in the time of the Prophet, who appointed Abī Musa al-Asfār governor of Märib; E. Glaser, Reise nach Märib, p. 26; al-Bakri, Mu'jam, ii. 501; al-Hamdāni, Sīfa, p. 87, 103, 155; al-Sprenger, Post- und Reisereisen, p. 139) also kept the place from being quite forgotten. Ibn Khuradhdhib (B.G.A., vi. 138) and al-Mu'addasi (B.G.A., iii. 89) mention the village of Märib; al-Hamdāni, Sīfa, p. 199 says the sesame of Märib is a specialty of the Yemen. Al-Iṣṭīfa, Geographie, p. 149 calls Märib a burūj; according to Ibn al-Mudjawi (in A. Sprenger, Post- und Reisereisen, p. 140), Märib (c. 630 a. h.) had a market and a mosque and was of some importance as a resting-place for the night and fruit could be obtained there at any time of the year. Since Yākūt, Mu'jam, iv. 436, also says, the district of Märib is rich in palms, it seems to have in part at least regained its old fertility.

to doubt the essential correctness of this story, as there is no particular bias in it and it contains all sorts of details which do not look like inventions, so that it is exaggerated scepticism when Lammens supposes that the "mother of Ibrahim", after whom the maghara was called, was some Jewess. On the other hand, in view of the fact that all the marriages of Muhammad after the Hijra were childless, it would have been surprising if evil-minded people had not cast suspicions on the paternity of Ibrahim, and that this conjecturally happened is evident from some traditions the object of which is to defend Mariya from this suspicion.

On the other hand, it is not so easy to justify the part which Kur'anic exegesis makes Mariya play in the exposition of Sura lxxvi. In this Sura, the Prophet speaks in a very indignant tone against one of his wives, because she has betrayed a secret to another, which he had imparted to her under a promise of the strictest secrecy. At the same time Allah blames him, because in order to please his wives, he has bound himself by oath to refrain from something which is not definitely stated and because he does not use the right granted him by Allah to release himself from his oath. In addition, there is a word of warning to the two women who had disobeyed him and a threat to all his wives that he might divorce them in order to marry more pious ones (cf. xxxiii. 28 sq.). According to the usual explanation, the two wives are Hafsa and A'isha and the revelation is said to have been provoked by the fact that Hafsa, on returning unexpectedly to her house, found Mariya and the Prophet in an intimate tête-à-tête and that on a day which by rotation belonged to her (or A'isha). In his embarrassment he pledged himself by oath to have no more intercourse with the Copt girl. But after Hafsa's breach of faith, Allah tells him to release himself from his oath. This explanation fits very well in some respects and that the promise of continence is connected with marital complications is illuminating. That there are hadiths, which explain his quarrel with his wives quite differently, does not mean very much, for they are doubtless invented to drive out of currency the popular, less edifying version. But, on closer examination, there is one flaw which makes the latter uncertain, for it does not answer the question how Muhammad could call the situation in which Hafsa caught him and Mariya a secret that he trusted to her.

**Al-Markab** (the Margat, Merghatum of the Crusaders), a fortress near Baniyas on the coast of Syria. According to the chronicle of Abu Ghlib Humam b. Al-Fadl Al-Muhadhdhab Al-Mabari (quoted in Yākū, Mushqir, ed. Wüstenfeld, iv. 500) and the Tārikh al-Khulafaʾ wa-l-Hājān u l-Sanāʾa b. Munakb (in Abu l-Fadl’s, ed. Reinard and de lange, p. 255), it was built by the Muslims in 454 (1062). Al-Dimashqī (ed. Menen, p. 208) wrongly attributes its foundation to Harun al-
Raqhid (van Berchem, *Voyage*, p. 304, note 7 where the reference to Raqhid [rather Raqhul] al-Din in Le Strange, *Palestine* is shown to be wrong); his statement seems to be correct, however, that the citadel was built out of material from ancient ruins. The Byzantines occupied al-Markab and other fortresses in the vicinity under the general Kantukzenos in 1104 (Anna Commena, *Alexiad*, ed. Reifferscheid, ii. 138: το το ἀργυρώδιον [= ἑσώθη] τα καλύπτον αἱμαρχία [= al-Markab], τα Τάβαλα [Ταβάλα] καὶ ἅλλα τάκα]. When in 511 (1117-1118) the Crusaders approached the fortress, its lord Ibn Nuhri surrendered it on condition that he and his family were allowed to remain in it; but after a few days the Franks expelled him and allotted al-Maniqa to him in exchange for al-Markab; Franks and Armenians were settled in the latter. The first recorded lord of the fortress was Rainald Mansur, the constable of the prince of Antioch. After the earthquake of 1170, from which the fortress must have suffered damage, Bertrand of al-Markab, perhaps out of fear of Saladin’s threats, handed it over on Feb. 1, 1186 to the Knights of St. John. In July 1186 Saladin passed below the watch tower (now Burj al-Sabib), which from ancient times had commanded the road along the coast (cf. Dussaud, *Topogr.*, p. 127, note 5) below the fortress and was connected with it by a wall which protected a subterranean passage, but did not dare to attack Markab any more than Tarusī (q.v.). Prince Isaac of Cyrus, a descendant of the Comnenos (not the Emperor Isaac Comnenos as van Berchem, op. cit., p. 298 sq., note 298) was taken prisoner by Richard Coeur-de-Lion on May 31, 1191, and imprisoned in Markab till his death (Neophyts, in *Recueil hist. crois., hist. grecs, iv.*, 562 with note, ii. 480: ἐν κατάλληλα καλυμμένω Μαρκαπτία). Sulṭān al-Malik al-Zahir Ghifīr al-Halāf whose lands adjoined those of the Knights of St. John sent in 601 (1204—1205) troops against the fortress, who are said to have just succeeded in destroying the towers of the walls when their leader fell and they again retired without accomplishing their object. In 628 (1231) and 638 (1240—1241) the Knights were again at war with Yusuf, Sulṭān of Halab. From this period (1212) dates the very full description of the fortress by Wilbrand of Oldenburg. Built on a high hill and surrounded by a double wall and many towers, it was regarded in the period when the power of the Crusaders was beginning to decline, as maximum totius terrae illius solacium; the bishop of Valenia (Bānīyās) had moved into the fortress by 1212 out of fear of the Muslims. King Andreas of Hungary in 1217—1218 gave funds for the maintenance of the fortress which had given him an honourable reception (Rohricht, *Regesta Hierosolym.*, p. 245, No. 908). The straits to which the humiliating treaties with Baibars had reduced the Knightsly Orders is lamented by the Grand Master Hugo Revel in 1268 in a letter in which he says that the possession of its last two fortresses, Gratum and Margatun (Ḥṣn al-Akrād and al-Markab), was only granted the Order on payment of oppressive taxes (Rohricht, *Regesta Hierosolym., Additamenta*, p. 541, No. 1355a). After the loss of Ḥṣn al-Akrād, the Templars and the Knights of St. John in 669 (1271) by a treaty which they concluded in ‘Arkā with Saif al-Din Balabān al-Dawāddar (“the secretary”) al-Rūmī, the Sulṭān’s plenipotentiary, had to cede half of the coastal land (jāḥil) of Ḥamarsūs, al-Markab and Bānīyās and bind themselves not to build any new defences (Mufaddal b. Abī ‘l-Fadl al-Osra, *Regesten d. Maumlakensultane*, ed. Blocher, in *Patrol. Orient.*, xii. 536). After a raid by the Franks (Oct. 1279) the Emir Saif al-Din Balabān al-Tābilākhī, the governor of Ḥṣn al-Akrād for Kālātun, in the beginning of 1281 sent troops against al-Markab, but they were driven back with heavy losses (Mufaddal, op. cit., xiv. 484, and the sources quoted in van Berchem, *Voyage*, p. 301, note 5).

In the treaty between Kālātun and the Templars of 681 (1252) al-Markab is mentioned among the districts half of which were to be ceded (Mufaddal, op. cit., xiv. 445; van Berchem, op. cit., p. 302, note 2). The pilgrim Burchardus de Monte Sion in 1283 mentions the *Castrum Margath fratrum hospitalis sancti Johannis*; it was still at this date the see of the bishop of Valencia (Peregrinatores, ed. Laurent, p. 30, 170).

On 10th Šafar 684 (April 17, 1285) Kālātun appeared before al-Markab and began the attack as soon as the siege artillery arrived. On the 19th Rabī‘ I (May 25) the Emir Fakhr al-Din Makri received the surrender of the fortress. On account of its strategic value for defence against possible attacks from the sea, it was not destroyed but included in the “royal province of the fortunate conquests”; the capital of which till 688, when Tarabulus was taken, was the Castle of the Kurds, still governed by Saif al-Din Balabān al-Tābilākhī al-Manṣūrī. Kālātun in 684 ordered him to repair the defences of the citadel as an inscription found in situ shows (van Berchem, *Inscriptiones de Syria*, p. 71 sq.). Among those present at the capture of the fortress were the 12 years old Abu ‘l-Fidā‘ī, who was then on his first campaign with his father, and the historian Ibn ‘Abd al-Raḥim, the continuator of Ibn Wāsīl’s chronicle. The best account of the taking of al-Markab is in Kālātun’s biography entitled Ṭaḥfir al-Ḥiyām wa lq. ʿUṯr bi-Sirat al-Sulṭān al-Malik al-Manṣūrī (Paris, MS. ar., No. 1704, fol. 149 sqq., ed. and transl. in van Berchem, *Voyage*, p. 310—326).

In the viith (sixth) century al-Markab belonged to the province of Tarābulus (*Unari, Tarīf*, transl. by R. Hartmann, *Z. D. M. G.*, lxx. (1916), p. 36; Khalīl al-Zāhirī, *Zebdāt Khālid al-Munāsīk*, ed. Ravaisse, p. 48; Khalīṣāndī, *Suhk al-Fudhī*, ed. Cairo, iv. 145 sqq.); at this time it was used as a state prison (van Berchem, p. 305, note 2). Its harbour is mentioned in documents of 1193 and 1299 (van Berchem, p. 309, note 3); it was presumably at the mouth of the Wādī ʿAin al-Khraibe (in Walpole: al-Mina). As al-Markab lies on the outer spurs of the Ansariye range it has often wrongly been included among the fortresses of the Îmārāt (Kīlī al-Dawīya) (so *Carmi, op. cit.*, in the Berlin and Gotth Ms. but not in the others: Hartmann, *Z. D. M. G.*, lxx., 36, note 7). So far as we can judge from the brief notes by visitors, it was not till about the year 1643 that it began to fall into ruins. About 1885 at the request of the ka’amīmaṣm of the kaḍa of al-Markab the seat of the government was transferred from the ruined Kaṭal al-Markab to Bānīyās (M. Hartmann, *Z. D. P. V.*, xxii. p. 163, No. 27).

MARRAKESH (Vr. MABRUKSH, popular pronunciation Maârûch), a town in Morocco, and one of the residences of the Sultan.

The town Marrakesh, adopted by the administration of the protectorate, is of recent origin in French. Down to about 1890 the town was always known as Marræch (Morocco) in French. The kingdom of Morocco, distinct from the ancient of Fas and the 1860s finally gave its name to all the State. At one time it only consisted of the country south of the wâdi Umm Rakî as far as the range of the Great Atlas.

Marrakesh is situated in 3° 37' 35" N. Lat. and 7° 50' 42" E. Long. (Greenw.). Its mean height above sea-level is almost 1,510 feet. The town is 150 miles south of Casablanca. It is a centre of the desert which lies between the two great Sand-storms. The town has been built on a rocky spur which is called the castle of the town, and its harbour which is the end of the eight century most of the trade between Marrakesh and Europe passed.

Although Marrakesh is only 235 miles from Fas as the crow flies, it is over 330 by Casablanca—Rabat-Meknes which is the only road that has been used for over a century, the direct road by the Tâdã having been rendered impracticable by the traditional in-efficiency of the country.

The temperature which is very mild in winter is very hot in summer. The average maxima of 39°6 in the month of August 1927 have nothing unusual and imply extreme temperatures reaching or passing 50° on certain days. Rainfall is low (284.5 mm.). In 1927, against 706.5 in Rabat and 1,007.5 in Tangier). But water fed by the snows of the Atlas is found at no great depth. It is collected by a system of low subterranean galleries (kaâfara, piut. khoâfîr) which bring it to the surface by taking advantage of the very slight slope of the surface. This method of obtaining water, which is described in the 13th century by Idrisi, has enabled the large gardens which surround the town to be created. The Almohads and the dynasties which succeeded them also built aqueducts and reservoirs to supply the town with water from the springs and streams of the mountains.

Contrary to what was until quite recently believed, Marrakesh is by far the most thickly populated town of the empire. The census of March 7, 1926 gives 149,263 as the total population, 3,652 Europeans, 132,893 Muslims, 12,718 Jews. The probable growth of the population is not sufficient to explain the difference between the present day figures and the old estimates, almost all far below the truth and varying greatly among themselves: from 20,000 (given by Diego de Torres in 1585 and Host in 1768), 25,000 (Saint Olov, 1603), 30,000 (Ali Bey el-Abbassi, 1804), 40 to 50,000 (Gatell, 1864 and Eug. Aubin, 1902), 50,000 (Lambert, 1868), 60,000 (Beaumier, 1868), 80 to 100,000 (Washington, 1830) up to the obviously exaggerated figure of 270,000 given by Jackson in 1811.

About 40 miles N. of the Atlas, the vast silhouette of which, covered by snow for eight months of the year fills the background, Marrakesh is built in a vast plain called the Hass which slopes very gently towards the wâdi Tânisf, which runs 3 miles north of the town. The extreme uniformity of the plain is broken only in the N. W. by two rocky hills called Gillils (1,700 feet) and Kudayl al-Abid. In 1912 at the time of the French occupation, there was built a fort which commands Marrakesh. The modern European town called the Guéliz lies between this hill and the walls of the old town.

The wâdi Isâl, a left bank tributary of the Tânisf, a stream often dried up but transformed into a rather wide river, runs along the walls of the town on the east. To the north of Marrakesh as far as the Tânisf and to the east stretches a great forest of palm-trees, the only one in Morocco north of the Atlas. It covers an area of 13,000 hectares and possesses over 100,000 palm-trees but the dates there only ripen very imperfectly.

The town is very large. The walls which run all round it measure at least 7 miles in length. The town in the strict sense does not occupy the whole of this vast area. The part built upon forms a long strip which starting from the zawiya of Sidi el 'Abbâs in the north runs towards the kasba which stands at the southern end of the town. On the two sides lie great gardens and estates among which we find in the neighbourhood of the chief gates inside the walls, isolated quarters grouped like so many villages around their sük and their mosque.

The town consists mainly of little low houses of reddish clay, often in ruins, among which are scattered huge and magnificent dwellings without particularly imposing exteriors built either by the winners of the old mahzen (e. g. the Bâliya, now
the Résidence Générale, the old palace of the Bā Ḫmād, vizier of Mawli al-Ḥasan) or by the great kāʿids, chiefs of the tribes of the country round. The narrow and overhung streets in the central area broaden towards the outskirts into sunny and dusty squares and crossroads. The colour, the picturesque architecture, the palm-trees, the branches of which appear over the walls of the gardens, the presence of a large negro population, all combine to give the town the appearance of a Saharan āshār of vast dimensions.

The centre of the life of the city is the Dījāma al-Fnā, a vast, irregular, ill defined open space, surrounded until quite recently by wretched buildings and reed huts, overshadowed by the high minaret of the Kutubiya Mosque. Its name comes, according to the author of the Tarīkh al-Sudān, from the ruins of a mosque which Aḥmad al-Mansūr had undertaken to build there: "As he had planned it on a wonderful scale, it had been given the name of mosque of prosperity (al-hanā); but his plans being upset by a series of unfortunate events, the prince was unable to finish the building before his death and it was therefore given the name of mosque of the ruin (dījāma al-fnāmī)." This origin having been forgotten; an attempt was later made to explain the name of the square from the fact that the heads of rebels used to be exposed there (mosque or place of assembly of ruin, of death). It was there also that executions took place. Lying on the western edge of the principal agglomeration of buildings at its most thickly populated part, close to the sūk, connected with the principal gates by direct and comparatively quiet roads, Dījāma al-Fnā is the point of convergence of the roads. At all hours swarming with people, it is occupied in the morning with a market of small traders: barbers, cobblers, vendors of fruit and vegetables, of medicines, of fried grasshoppers, of tea and of soup (harīra); in the evening, it is filled with acrobats and jugglers (Awdāl Sādi Ḥmād Ṭīsā of Taṣerwālī), sorcerers, story-tellers, fire-eaters, snake-charmers and dhīḥah dancers. The audience consists mainly of people from the country who have come into town on business and want to enjoy the distractions of the town for a few hours before going home. These visitors are always very numerous in Marrakesh. Besides the regular inhabitants there is a floating population the number of which has been put at 20,000 to 25,000. For Marrakesh is the great market for supplying not only the Ḥmaw but also the mountain country, the Sīfs and especially the extreme south, Ḍādes, Darā (Dra) and the Anti-Atlas. A portion of this traffic will probably be diverted via Agadir when this port is opened to trade. Marrakesh used to be the starting-point for caravans going through the Sahara to trade with Timbuktu. They brought back chiefly Sudanese slaves for whom Marrakesh was an important market. The conquest of the Sudan by France has put an end to this traffic.

To the north of the Dījāma al-Fnā begin the sīks which are very large. As in Fās and in the other large towns, the traders and artisans are grouped by trades under the authority of the nukāwsh, a kind of provost of the merchants. The most important sīks are those of the cloth merchants (ḥāṣāviya), of the sellers of slippers, of pottery, of basket work, of the embroiderers of harness, of the dyers and of the smiths. An important Thursday sīk (al-ḥamānis) is held outside and inside the walls around the old gate of Fās which has taken the name of the market (Bāb al-Ḥamānis). This sīk was already in existence in the xviiiith century.

There is no industry to speak of in Marrakesh. The most important is the making of leather (tanning). The manufacture of slippers occupies 1,500 workmen who produce over 2,000 pairs each working day. There are the only articles manufactured in the town that are exported. They are sold as far away as Egypt and West Africa. The war interrupted communications and did great damage to this industry. For the rest, Marrakesh is mainly an agricultural market. The whole town is a vast fondaṭ in which are warehoused the products of the country, almonds, caraway seeds, goat-skins, oils, barley, wool, to be exchanged either for imported goods (sugar, tea, cloth) or for other agricultural produce (wheat, oil, which the tribes of the mountains and of the extreme south for example do not have).

The town is divided into 32 quarters: Zāwiyā 'Abbāsiyya, Sādi Ben Slimān, Aswāl, Rīyāḍ al-ʿArūs, Sādi Abī ʿAmr, Bāb Dukkālā (divided into two quarters), Sādi Abī al-ʿAzīz, Raḥbāt Ābdī, Daḥbālī, Kānānīyya, Rīyāḍ al-Zūṭīn al-jīdād, Dījān bīn Ṣogra, Kaʿūr, Mwāsīn, Rīyāḍ al-Zūṭīn al-kādīm, ʿArṣa Māwlā Mīṣā Khīrī, ʿArṣa Māwlā Mīṣā Ṣghīrī, Bāb Ḥallānā, Sādi Mīmīn, Bīn Sādīh, Sādi Ayūb, Bāb Zakār, Kāṭāt bīn Mūṣrāf, Bāb al-Dabābīg, Ḥārat al-Sūrā, Mawūfī, Arḥātīn, the kāštā containing the royal palaces (again subdivided into several sections), Jakāb al-Wālīs, Bīrīmā, Bāb ʿĀḥmār, Muskānī Sādi ʿAmāra and the mellāk or Jewish quarter. We may further mention outside the walls near the Bāb Dukkālā, a quarter called al-Ḥārā where the lepers live. Until recent years the gates of the town were closed during the night. The superintendents of the quarters (mukānādān) have watchmen (ṣūkīn) under their orders. The old custom still survives for hiring a salvo at midnight on the Dījāma al-Fnā as a curfew.

Marrakesh being an imperial town, the suljān who only stays there at long intervals is represented in his absence by a khalīfī, a prince of the imperial family (usually the son or brother of the sovereign). The role of this khalīfī is purely representative. His main duty is to preside at the ceremonies during the ritual celebrations. The governor of the town is a pāṭha, assisted by a delegate (māʾīlı) and several khalīfās. One of the latter supervises the prisons and the administration of justice. Another has the title of pāṭha of the kāṣba. He governs the southern part of the town which includes the imperial palace and the Jewish quarter. Formerly the pāṭha of the kāṣba was dependent of the pāṭha of the town and served to counterbalance the power of the latter. He commanded the gīṣ (a mounted contingent furnished by the warlike tribes (Cīṣāya, As Ḥimmūr etc.) settled in the vicinity of the town by the suljān on the domain lands. At the present day the gīṣ is under the control of the pāṭha of the town and the pāṭha of the kāṣba only retains of his former powers certain rights of precedence and honorary privileges.

Muslim law is administered in Marrakesh by three kādīs: one is established at the mosque of Ibn Yūsuf; the other at the mosque of al-Mwāsīn and the third at the mosque of the kāṣba. The latter's competence does not extend beyond the limits of
MARRAKESH

his quarter. That of the others extends over the whole town and even over the tribes of the area governed from it who have no local kādi.

Marrakesh is not numbered like Rabat and Tétouan among the jaghîfina towns. i.e. it has not, like them, an old established citizen population, not of rural origin, with a bourgeoisie whose tone is given by the descendants of the Moors driven from Spain.

In the xviith century however, Marrakesh did receive a colony of Murerescoe large enough to give one quarter the name of Orgha, a town of Andalusia. The foundation of the population consists of people of the tribes for the most part Berber or Arabs strongly mixed with Berber blood. Shi'ah is much spoken in Marrakesh although the language of the tribes around the town (Raghâma, Ħiliya) is Arabic. The movements of the tribes, the coming and going of caravans, the importation of slaves from the Sudan have resulted in a constant process of mixing in the population and the old Maṣṣā‘idian race which was mixed with Immorants, has been the primitive population of Marrakesh is only preserved in combination with amounts difficult to measure of Arab, Saharan and negro blood. Even to-day this process is going on: the newcomers come less from the valleys of the Atlas than from the Sus, the Dra‘ and the Anti-Atlas, from the extreme south which is poor and overpopulated. The greater number of these immigrants soon become merged in the population of the town, but the Enquiry sur les corporations marchandes, conducted by L. Masson in 1923-1924 (1129-1130 A.H. 1915) yielded some very curious information about the survival in Marrakesh of vigorous groups of provincials, specialising in particular trades: the makers of silver jewellery (at least those who are not Jews) owe their name of al-ṣimṭayn to the fact that they originally came from Tâmmût in Sus; the Mesfaw are charcoal-burners and greengrocers, the Ḥighiyâh, saltiers, the people of the Toghâna, gteeners of dates and Fas, who make wells, who specialise in water-channels (kāšar); those of Tâfīlt, porters and paviors; those of Wârâsét, water-carriers and of Tatta‘ (Anti-Atlas), restaurateurs; of the Dra‘, water-carriers and al-ṣinṭayn, etc. .

This division is not the result of specialisation in their original home nor of privilege granted by the civic authorities but arises from the fact that artisans once settled in Marrakesh have sent for their competitors when they required assistance. This groups grew up, sometimes, quite considerable. The loss of the corporations of Marrakesh gives a total of about 10,000 artisans. These corporations have lost much of their power under the pressure of the MaqĀren. Some of them however still retain a certain social importance: in the first place that of the she-maekers which is the largest (1,500 members): then come the tanners (430), the cloth (237) and silk (100) merchants: the fārid wholesalers: then some groups of skilled artisans, highly esteemed out of leamience, embroiderers of saddles, makers of mosaics, carpenters, sculptors, plaster etc.

Religious and intellectual life. Mosques are numerous in Marrakesh. Some of them will be the subjects of brief archaeological studies. Those which play the most important part in the religious life of the city are the mosque of al-Mawasîn, the mosque of ‘Ali b. ʿĪṣâf, both close to the siq, that of Sîdî bel ‘Abbâs and that of the kaba. Then come the Kutubiya, the mosque of the Bab Dukāla, of the Bab Atlan, of Berrima, and the Djâma‘ Ibn Šâlah. There are also many little mosques in the various faubourgs. But although it can claim illustrious men of learning, Marrakesh is not like Fâs, a centre of learning and of teaching. The Almohads built schools and libraries there, brought the most illustrious scholars, philosophers and physicians from Spain, like Ibn Ṭafâlî, Abû Marwān Ibn Zahr (Avenzoar) and Abu l-Walâd Ibn Rûṣîd (Averroes) who died at Marrakesh in 595 (1199).

These great traditions did not survive the dynasty.

In the beginning of the xviith century, in the time of Leo Africanus, the library of the Almohad palace was used as a poultry house and the madrasa built by the Marinids was in ruins. At the present day in the town of the Kutubiya there is not a single bookseller. A certain number of fâšî still live in the madrasas (Ibn Yusuf, Ibn Šâlah, Sîdî belʿAbbâs, Berrima, Kašâba) but the teaching in Marrakesh has neither the prestige nor the traditions which still give some lustre to the teaching at al-Karaouyin in Fâs, much decayed as it is and which they attempt to keep up and call the fâšî the famous "festival of the sunkûn", etc. every spring) the students are far from holding in Marrakesh the position their comrades enjoy in Fâs.

The devotion of the people of Marrakesh expends itself particularly on the cult of saints, not at all orthodox but dear to the Berbers. Their town has always been famous for the great number of fâšî who are buried in its cemeteries and who justify the saying: "Marrakesh, tomb of the saints".

But in the time of Mawâli Isma‘îl, the Shaikh Abî ‘Ali al-Ḥasan al-Thâbî, by order of the prince, organised, in imitation of the old established cult of the Sab‘atu Rûṣîl (the seven saints of the Râgrâga, around the Djalal al-Hâdîd, among the Shayâma), a pilgrimage to the Sab‘atu Rûṣîl of Marrakesh including visits to seven sanctuaries and various demonstrations of piety. The following are the names of the seven saints in the order in which they are to be visited: 1) Sîdî ʿĪṣâf b. Ṭâlî al-Nahdî, a leper, d. 595 (1196–1197), buried outside the Bab Al-Mûn on the spot where he had lived; 2) the kâfâl ‘Iyad, 476–544 (1083–1154); 480, kâfâl of Ceuta, then of Granada, a learned theologian, author of the Shâb, a celebrated collection of traditions, buried beside the Bab Al-Mûn; 3) Sîdî belʿAbbâs al-Sabî, patron saint of Marrakesh and the most venerated of the saints of the region 524—601 (1130–1204). He came to Marrakesh when the town was being besieged by the Almohads and settled there, at first in a hermitage on the Djalal Gūlīs where a kâfâla dedicated to him can still be seen. But the principal pilgrimage is to his tomb at the northern end of the town over which Abî Fâris b. Ahmad al-Manṣûr built a zâwiya and an important mosque at the beginning of the xviith century; 4) Sîdî Muḥammad b. Sîlām al-Djârî, d. in 870 (1465) at Arûghal among the Shayâma, a celebrated Shâb, founder of the Djâzîlî brotherhood. His body was brought to Marrakesh in 930 (1523) by Ahmad al-Nâḍî the Sabîdân; 5) Sîdî ‘Abî al-ʿAzîz al-Tabâhi, a pupil of the Djalalî, d. in 914 (1508); 6) Sîdî ‘Abî ʿAlîb b. Ghâzîwân, popularly called Mawâl al-Kâfûr, d. in 915 (1508); 7) Sîdî ʿAbî al-Râhîmân al-Suhâli, called the Imâm al-Suhâli, a native of the district of Malaga, d. 581 (1185) and buried outside the Bab al-Rabb.
It is quite an arbitrary choice that these seven individuals have been chosen as the Sab'atu Rīḍāf. Others could equally well have been chosen, as the town of Marrakesh and the countries which stretch before it, contain a very large number of other venerated tombs. The principal are mentioned in the article by H. de Castries, *Les Sept Patrons de Marrakesh* (Heidelberg, 1924). Legend of course plays a great part in the cults of the various saints. We may mention for example the sayings and songs which perpetuate the memory of Lulū' ʿUḍa, mother of the Sulṭān Ahmad al-Manṣūr, a real personage much transformed by the popular imagination. The various trade corporations have chosen patron saints. Thus Sidi Yaʾkub is the patron of the tanners, Sidi ʿAbd Abū Sūdah of the soap-makers and lacemakers, Sidi Maṣʿūd ʿslave of Sidi Muhammad b. Shīmān is the patron of the masons, Sidi ʿAbd al-ʿAzīz al-Tabbāḥ of the dyers, etc. The majority of the artisans are also affiliated to the religious brotherhoods. In Massignon's investigation will be found details of the attraction which some of the latter have for certain trades.

The Jews. At the foundation of Marrakesh, the Jews had no permission to settle in the town. They came there to trade from Aghmāt Ailān where they lived. Al-Idrīsī relates that under ʿAlī b. Yūsuf they had not even the right to spend the night in Marrakesh and that those, who were caught within the walls after sunset, were in great danger of losing their property. They settled there at a later date. At the beginning of the xvith century there was, according to Marmol, in Marrakesh a ghetto of over 3,000 houses. It lay near the sūk on the site now occupied by the mosque of al-Mawṣīn. When this mosque was built by Sulṭān ʿAbd Ailān al-Ghālib, the more scrupulous refused to pray there for some time on the pretext that it occupied the site of a Jewish cemetery. It was ʿAbd Ailān al-Ghālib who, about 1560, settled the Jews on the site they still occupy, along the wall of the kaṣba to the east, where the stables of the palace had been. In the beginning of the xvith century, there was here, according to the French traveller Mocquet, "like rural character spent between the wall and having only one gate guarded by the Moors; here live the Jews who are over 4,000 in number and pay tribute". A century later, there were about 6,000 Jews and many synagogues. The Jewish quarter, called mellāḥ after the example of the Jewish quarter of Fās (the name mellāḥ is attested for Marrakesh as early as the end of the xvith century), has 12,000 inhabitants at the present day. As regards policing, it is under the authority of the pāsha of the kaṣba but otherwise is administered by an elected Jewish committee. Questions of personal law are judged by a rabbinical tribunal of six members nominated and paid by the Maghāzen. The Jews of Marrakesh are beginning to leave the bounds of the mellāḥ. For the most part they wear the ritual costume: gaberdine, skull-cap and black slippers, but the younger generation shows a tendency to emancipate itself from this dress. They have little influence on the corporations of Marrakesh and are not allowed to settle in the sūks. They are limited to certain trades (jewellers, tinsmiths and embroiderers of slippers) and share with the people of Fās the wholesale trade. They trade particularly with the Shīlūh of the mountains.

History. The Roman occupation never extended so far as the region of Marrakesh. It is quite without probability that some writers, following the Spanish historian Marmol, have sought at Aghmāt or at Marrakesh the site of Bīsānten Emerium (Biskra, Bishāṭ, Bishāṭ, Bishāṭ, Bishāṭ, Bishāṭ). The earliest historians agree that the place where Marrakesh was built by the Almohads was a bare marshy plain where only a few bushes grew. The name Marrakesh gives no clue to the origin of the town. The etymologies given by the Arab authors are quite fanciful: according to al-Marrākushi, it was the name of a negro slave who escaped and set up as a brigand there. Another writer explains it by a punning interpretation: "the meaning of the name in the language of the Masmūḍa is "go away quickly"! The place was actually a place of ambush for brigands". It was, it appears, in 449 (1057–1058) that the Almohads advanced from Sūs north of the Atlas and took Aghmāt Waraka. It was there that they settled at first. But after the campaign of 452 (1060) in the course of which they conquered the country of Fāzā, Meknes and of the Lawāṭa near Fās, they wanted to make their position more permanent and independent by creating a kind of camp, which could be used as a base for their further campaigns and would threaten the Maṣmūḍa of the mountains and could be used as a connecting link between the south from which they came and the kingdom of Fās. ʿAbd b. Tadhīf therefore purchased from its owner an estate on the frontier between two Masmūḍa tribes, the Hālāna and the Hāzim, and pitched his camp there. So far was he from thinking of founding a great capital, a thing for which this Saharan nomad felt no need, that at first he lived in a tent here, beside which he built a mosque to pray in and a little kaṣba in which to keep his treasures and his weapons; but he did not build a surrounding wall. The native Masmūḍa built themselves dwellings surrounded by palisades of branches beside the Almoravid camp. The town grew rapidly to a considerable size. If it is true, that in the reign of ʿAlī b. Yūsuf it had at least 100,000 hearths, but it did not lose its rural character. There was there the threat of the Almohad movement revived by him forced ʿAlī b. Yūsuf to defend his town and surround it by a rampart which was built in eight months, probably in 520 (1126). Some historians give the date 526 (1132) but it is certain that the walls were already built in 524 (1130) when the Almohads attacked Marrakesh for the first time. Marrakesh, the creation and capital of the Almoravids, was to be the last of their strongholds to yield. When Ibn Tūmār had established his power over the tribes of the mountains he tried to attack Marrakesh; he then sent an Almohad army under the command of Shālah al-Bāshīr. When, after defeating the Almoravids in the vicinity of Aghmāt, pursued them to the gates of Marrakesh. The Almohads could not enter the town but established themselves before its walls. After 40 days' siege, ʿAlī b. Yūsuf received reinforcements and made a successful sortie which forced the attackers to retreat. This was the battle of al-Buhaira (524 = May 1130) from the name of a large garden, Buhairat al-Raḡīrīḥ, near which it was fought. It lay to the east of the town before the Bāb Dabbagh and the Bāb Ailān. Al-Bāshīr was slain and Marrakesh repulsed by the troops for 17 years. Ibn Tūmār died a few months
later. It is hardly likely that 'Abd al-Mu'min should have made soon after his accession, as the *Kifras* says, a new attempt to take Marrakesh. The memoirs of al-Badhdak which give such full details of all the events of this period make no mention of it. They show on the contrary the Almohad armies, based at first in conquering the country before occupying the capital, taking Tadla, Safe, Taza, Diran, Tlemcen and Fas and only returning to lay siege to Marrakesh after the whole country had been occupied and the capital alone held out as the last stronghold of the doomed dynasty. It was in the summer of 1146 that 'Abd al-Mu'min had siege to Marrakesh. He made his headquarters at Gillaiz and, seeing that the siege would be a long one, at once had houses built in which to install himself and his army. The siege lasted eleven months. An unsuccessful sortie by the Almohad vassals seems to have hastened the fall of the town. Disgusted by lack of success and by famine, a number of chiefs of the besieged went over to the enemy. Abd al-Mu'min had scaling-ladders made and distributed them among the tribes. The assault was made and, according to Ibn al-Adhir, the defence of the Christian soldiers facilitated its success. The Almoravid Sultan, 'Abd al-Mu'tal, a young boy who had sought refuge in the fortress, was slain, along with a large number of the Almohads. This event took place in 541 in the month of Shawwal March 6—April 3, 1147, according to the majority of the historians.

The Almohad dynasty which came from the south naturally took Marrakesh as its capital. It was here that 'Abd al-Mu'min and his successors usually resided when they were not in the country. The town prospered exceedingly under their rule. They gave it many important public buildings: the *kasha*, mosques, schools, a hospital, aqueducts and magnificent gardens. During this period of prosperity, there were very few events of particular interest in the history of Marrakesh. In 547 (1152—1153) according to Ibn Khaldun, in 549 (1154—1156) according to al-Badhdak and the *Kifras*, the Idrisi Amghir, brother of the Malik Ibn Tumart, entered the town and tried to raise the inhabitants against Abd al-Mu'min who was away at Sale. The rising was quickly put down and ended in the massacre of the rebels and their accomplices. But on the decline of the dynasty, i.e. after the battle of Las Navas de Tolosa (1212) and the death of al-Nasir, son of al-Manar, Marrakesh became the scene of the struggle between the royal family decended from Abd al-Mu'min and the Almohad shahids decended from the companions of Ibn Tumart who, quoting traditions of the latter, claimed the right to grant investiture to the sultans and to keep them in tutelage. 'Abd al-Wahhab, brother of al-Manar, was strangled in Sept. 1221—1224. His successor 'Abd al-A'dd was drowned in a bath in the palace (Oct. 624 = 1227) and the Almohad shahids appointed as his successor the younger Yahya b. al-Nasir while Abu l-Ula Idris al-Ma'mun, brother of al-'Adid, was proclaimed in Spain. The whole country was soon in the throes of revolution. Yahya, fearing the defection of the noble Almohads, fled to Tinmal (April—May 626 = 1228). Disorder reigned in Marrakesh, where a governor named al-Ma'mun was finally appointed, but four months later, Yahya returned to Marrakesh with fresh troops, put al-Ma'mun's governor to death and after staying seven days in the town was forced to go to Gillaiz to fight a battle (Feb. 1230). For al-Ma'mun had arrived from Spain to take possession of his kingdom. Ferdinand III, king of Castile, had given in return for various concessions, a body of 12,000 Christian horsemen with whose assistance al-Ma'mun defeated Yahya and his followers, gained, with a few Ma'mun and install a plane of the Almohad regime there, marked not only by a terrible massacre of the shahids and their families but by a new orientation in religious matters quite opposed to that of the preceding reigns. On his arrival in Marrakesh, al-Ma'mun mounted the pulpit of the mosque of the *kasha*, recited the *khutba*, solemnly cursed the memory of Ibn Tumart and announced a whole series of measures, some of which are given by the *Kifras* and Ibn Khaldun and which show he intended to do everything on opposite lines to his predecessors. His innovations revived the discontent so that two years later (1232) while al-Ma'mun and his militia were besieging Ceuta, Yahya again occupied and entered the town. Al-Ma'mun at once turned back to the rescue of his capital but died on the way (Oct. 17, 1232 = 629 A.H.). It is said that Ahmad b. al-Habib, succeeded in getting the hand of al-Rasid, aged 14, proclaimed by the leaders of the army, including the commander of the Christian mercenaries. In return she gave them Marrakesh to plunder if they could reconquer it. But the people of the town, learning of this clause in the bargain, made their own terms before opening their gates to the new sultan. The latter had to grant them the *amiri* and pay the Christian general and his companions the sum they might have expected from the plunder of the capital — according to the *Kifras*, 500,000 dirhams.

In 633 (1235—1236) a rebellion of the Khtit drove al-Rasid out of Marrakesh and he took refuge in Sidjilmassa while Yahya recaptured Marrakesh. Al-Rasid however succeeded in retaking it and Yahya finally was assassinated. It was in the reign of the Almohad al-Salid (1242—1248) that the Marinids who had arrived in the east of the country in 1216, seized the greater part of the kingdom of Fas. His successor 'Umar al-Murtada, proclaimed in 646 (1248), found himself in 658 (1260) reduced to the solitary kingdom of Marrakesh, to the south of the Umm Rabit. In 660 (1261—1262) the Marinid Abul Yusuf Yahya b. Abd al-Hakim came to attack Marrakesh. He encamped on mount Gillaiz whence he threatened the town. Al-Murtada sent his cousin, the saiyyid Abu l-Ula Idris, surnamed Abu Dabbas, to fight him. The emir 'Abd Allah b. Abul Yusuf was slain in the battle and his father lost heart, abandoned his plans on Marrakesh and returned to Fas at the end of Raipur 661 (beg. June 1262).

From this time one feels that the dynasty is lost although peace was made, which moreover showed the humiliation of the Almohads who consented to pay tribute: but they were to destroy themselves. Falling into disfavour with his cousin al-Murtada, Abu Dabbas, this great-grandson of 'Abd al-Mu'min, who in the preceding year had defended Marrakesh against the Marinid sultan, sought refuge with the latter and obtained from him the assistance necessary to overthrow al-Murtada, on condition that he shared the spoils. Victorious and proclaimed sultan in October 1266, Abu Dabbas forgot his promises. Abu Yusuf Yahya came in person to remind him of them. He laid siege to Marrakesh in 1267 but Abu Dabbas had a stroke of good fortune for
the Marinid had to raise the siege to go and defend the kingdom of Fás against an attack by the sulṭān of Tiemcen, Yaghmurṣūna. The campaign being over, Abū Yusuf Ya'qūb returned to Marrakesh. He entered it in Muharram 668 (Sept. 1269). The ʿAlīṣa ra tells us that he gave the amān to the inhabitants and to the surrounding tribes, whom he overwhelmed with benefits and ruled with justice and remained seven months to pacify and organise the country. By accepting Marinid rule, however, Marrakesh lost for two and a half centuries its position as a capital. The new dynasty made Fās its capital.

Its sulṭāns however, did not neglect Marrakesh especially during this period (end of the xiiiith and first half of the xivth century). The chronicles record many sojourns made by them there but its great days were over. The town began to lose its inhabitants. Abu ʿl-Ḥasan ʿAllī was the only Marinid to undertake buildings of any importance at Marrakesh (a mosque and a madrasa). In the absence of the sovereign, the sultan's six-monthly period was entrusted to powerful governors as befitted a large town remote from the central authority. For nearly 20 years, from 668 to 687 (1269–1288), this office was held by Muhammad b. ʿAlī b. Muḥallī, a chief greatly devoted to the Marinids, says Ibn Khaldūn, and allied by marriage to the family of their ruler. But in February 1288, fearing treachery from Muhammad b. ʿAlī, Abū Yaʿqūb Yusuf threw him into prison and gave his office to Muhammad b. ʿAmīn al-Dīn al-Maṭārī, a client and confidant of the royal family, to whom the sulṭān further entrusted his son Abū ʿAmīr. Abū Yaʿqūb had not left Marrakesh the six months when the sulṭān died and proclaimed himself sovereign at the instigation of the governor Ibn ʿAmīr (Nov. 1288). Abū Yaʿqūb hastened to Marrakesh which he took after several days siege. The young Abū ʿAmīr had time to escape and seek refuge in the mountains among the Masmūḍī tribes, after plundering the treasury.

The custom of giving the governorship of Marrakesh to a prince of the ruling family was kept up. Towards the end of May 1307, under the walls of Tiemcen, sulṭān Abū Ḥabīb gave his cousin Yusuf, son of Muḥammad b. Abī ʿIyād b. ʿAbd al-Ḥakīm, the governorship of Marrakesh and the provinces depending on it. By the end of the year, Yusuf rebelled and proclaimed himself independent at Marrakesh after putting to death the governor of the town, al-Hādjiyy Maṭṣūd. Defeated by the imperial troops on the banks of the Umm Rabi, the rebel fled to the mountains, plundering Marrakesh on his way (Jan. 1308). The punishment inflicted on the rebels was severe. Yusuf b. Abī ʿIyād, handed over by a šaykh with whom he had taken refuge, was put to death and the heads of 600 of his followers went to adorn the battlements of the town. Abū Saʿīd al-Qūṣnayn stayed at Marrakesh on several occasions. He did much rebuilding in 720 (1320). Peace and comparative prosperity seem to have reigned there under the rule of Abu ʾl-Ḥasan until this prince, as a result of reverses suffered in his struggle with the Ḥafsids, found his own son, the ambitious Abū ʾInān, rebelling against him. During the troubles which now broke out, Ibn Khaldūn tells us, the town was seriously threatened with being sacked by the Masmūḍī of the mountains led by ʿAbd Allāh al-Saksīwī. Abū ʾInān was able to consolidate his power and avert this danger. The struggle between father and son ended in the region of Marrakesh. Abu ʾl-Ḥasan, defeated at the end of Safar 757 (May 1350) near the town, sought refuge in the mountains with the emirs of the Hintāta and died there just after having become reconciled to his son and designating him his successor (June 1352).

During the course of the xivth century, the emirs of the Hintāta played a very important part in the country. The position of the tribe on an almost inaccessible mountain, from which it commanded Marrakesh, gave its chiefs comparative independence and predominating influence among the other Masmūḍī. Abū ʾInān took no steps against the emir ʿAbd al-ʿAzīz who had given asylum to the fugitive Abu ʾl-Ḥasan. He retained him in the command of his tribe, which he gave a few years later to his brother ʿAmīr. In 1353 the latter, becoming chief of all the Masmūḍī tribes and sufficiently powerful to keep under his thumb the governor of Marrakesh al-Muṭamīdī, son of Abī ʾInān, very discreetly distanced himself completely independent. He received and for a time held as hostages two rebel Marinid princes Abu ʾl-Faḍl, son of the Sulṭān Abū Sālim, and ʿAbd al-Raḥmān, son of Sulṭān Abū ʿAlī. Quarrelling with his protégé Abu ʾl-Faḍl whom he had made governor of Marrakesh, he retired into his mountains and for several years defended the armies of the sulṭān. He was in the end captured and put to death in 1370.

After the death of Sulṭān ʿAbd al-ʿAzīz, the pretender Abu ʾl-ʿAbbās, son of Abū Sālim, had himself proclaimed in Fās with the help of his cousin ʿAbd al-Raḥmān Abī ʾAlī ibn al-ʿUṣūrī, himself a pretender to the throne. The latter, in a letter written for his services was given the independent governorship of Marrakesh and the country round it (June 1374). The empire was thus completely broken up. The two rulers soon began to quarrel but then signed a treaty of peace in 1378. There was a new rupture and a new truce two years later but Marrakesh had been besieged for two months without result. Abu ʾl-ʿAbbās in the end took Marrakesh in Dhu al-Ḥijjah 784 (July–Aug. 1382), and ʿAbd al-Raḥmān was slain. Abu ʾl-ʿAbbās, disposed in 1384 and exiled to Granada, succeeded in reconquering his kingdom in 1387 and sent to Marrakesh as governor his son al-Munṣīr. This event is the last recorded by Ibn Khaldūn. From the time his record ceases and throughout the xvth century we are incredibly poor in information about the history of Marrakesh. The south appears to have continued to form a large governorship in the hands of princes of the royal family. The only information at all definite that we have comes from a Portuguese historian who records that during the three years which followed the capture of Ceuta by the Portuguese (1415–1418), Morocco was a prey to the struggles among the pretenders. While Abī Saʿīd al-Qūṣnayn was ruling in Fās, Mawālay Baʿlī, king of Marrakesh, was fighting against another Marinid prince called Fāris. The "kingdom" or governorship of Marrakesh does not seem to have completely broken the links which bound it to the kingdom of Fās for the governor of Marrakesh supplied contingents to the army which tried to retake Ceuta. But they very soon ceased to take part in the holy war in the north of Morocco and their name is not found among the opponents of the Portuguese.
Marrakesh by 1450 seems to have become de facto if not de jure independent but we do not know within fifty years at what date the Hinta emirs established their power; they were descended from a brother of 'Amur b. Muhammad. They were "kings" of Marrakesh when in 1508 the Portuguese established themselves at Safi, taking advantage of the anarchy prevailing, for the power of the Hinta emirs hardly extended beyond the envoirs of their capital and they could not effectively protect their tribes against the attacks of the Christians. In 1512 the Portuguese governors of Safi had succeeded in extending their power over the tribes near Marrakesh (Awlad Mga) and the town lived in fear of the raid raids which on several occasions brought the Portuguese cavalry and their Arab allies into the district. The king of Marrakesh, overawed, entered into negotiations in 1514 but the terms were nothing less than his paying tribute as vassal and the building of a Portuguese fortress at Marrakesh. Agreement could not be reached.

The occupation of Marrakesh remained the dream of the Portuguese soldiers. An attack on the town led by the governors of Safi and Azemmour failed (April 25, 1515). This was the initial reaction against the anarchy and foreign invasions the Sa'dian sharifs began to come to the front in Srs. Ahmad al-Arajj, who appeared in 1513 to the north of the Atlas, had himself recognized as leader of the holy war and accepted as such by the local chiefs, even by al-Nsri, king of Marrakesh. In the month of April 1514, it is recorded that he was in Marrakesh with the king. At the end of 1521, al-Arajj established himself peacefully in Marrakesh which he found partly depopulated by famine and married the daughter of the king Muhammad b. Nsfr called Bi Shentijj. The latter in 1524 having tried to kick against the treading of his too powerful son-in-law, al-Arajj and his brother Muhammad al-Shaikh, seized the kasha, which seems till then to have been held by Bi Shentijj. They disposed of the latter by having him assassinated in the following year (1525). Marrakesh became the Sa'dian capital. The king of Fas, Ahmad al-Wattani, tried unsuccessfully to take it in June 1527. It remained in the hands of the Al-Arajj till 1534, when it was seized by his brother Muhammad al-Shaikh, up till then king of Fas. After the assassination of Muhammad al-Shaikh in 1537, the Al-Arajj was put to death at Marrakesh with seven of his sons and grandsons, so as to secure the crown for Mawlay 'Abd Allah al-Ghailbi. The whole of the latter part of the century was for Marrakesh a period of great prosperity. 'Abd Allah al-Ghailbi built a series of important public works, rearrangement of the palace and of the provision storeshouses in the kasha; in the town, the madrasa Ibn Yufal and the al-Ma’in mosque etc. Ahmad al-Manjar finished his brother’s work by building in the kasha from 1578 to 1594 the famous al-Badi palace. The sultan, enriched by several years of peace and good government, and by the gold brought from the conquest of the Sudan (1591-1592); lived almost continually in Marrakesh, to which he restored a splendour and a prosperity that it had not enjoyed since the end of the 14th century. But the death of al-Manjar opened a period of trouble and civil war "sufficient to turn white the hair of an infant at the breast" to use the expression of the historian al-Ifani. While Abi Farris, son of al-Manjar, was proclaimed at Marrakesh, another son, Zidan, was chosen sultan at Fas. A third brother, al-Shaikh, came and took Fas, then sent against Marrakesh an army led by his son 'Abd Allah, who seized the town in Dec. 22, 1606. But Zidan, who sought refuge first in Tlemcen, then made his way to Sus, via Tafifilat and coming suddenly to Marrakesh, had himself proclaimed there while 'Abd Allah b. al-Shaikh while escaping with his troops was attacked in the midst of the gardens (garden Rekbat) and completely defeated (Feb. 25, 1607). In October of the same year, 'Abd Allah returned after defeating Zidan's troops on the Wadi Tafifilat (Oct. 2, 1607), fought a second battle with them at Ras al-A'in (a spring in Tafsif), regained possession of the town and revived himself in a series of massacres and punishments so terrible that a portion of the population having sought refuge in the Gilla, proclaimed as sultan, Muhammad, great-grandson of Ahmad al-Arajj. 'Abd Allah was forced to fly (Jan. 25, 1608). Zidan, recalled by a section of the populace, regained possession of his capital in a few days. The struggle between Zidan and his brother al-Shaikh, in a series of campaigns and reprisals, culminated in the possession of Fas. Zidan failed in his plans to retake it and henceforth Fas, given over completely to anarchy, remained separate from the kingdom of Marrakesh. On these happenings, a marabout from Tafifilat, named Abi Mahall, attempted to intervene (1611) to put an end to the fighting among the pretenders, which was inflicting great suffering on the people. His intervention only made matters worse. He took Marrakesh on May 20, 1612. Zidan took refuge in Safi and succeeded in again gaining possession of his capital with the help of an influential marabout in Sus, called Vablya. 'Abd Allah. After a battle near Gilla, Zidan withdrew into Marrakesh on Nov. 30, 1613. But Vablya, succumbing to ambition, rebelled himself at the end of 1618, against the ruler whose cause he had once so well sustained. Zidan had again to take refuge in Safi. He was soon able to return to Marrakesh, taking advantage of the discord that had broken out in the enemy ranks. 'Abd al-Mallik (1627-1631), son and successor of Zidan, has left only the memory of his cruelty and debauchery. He was murdered in May 1631. The renegades, who killed him, also disposed of his brother and successor al-Walid in 1636. A third brother, Muhammad al-Shaikh al-Asghar, succeeded him but had only a semblance of power. He managed however to reign till 1655, but his son Ahmad al-Abbass was completely in the hands of the Shabban, an Arab tribe who assassinated him and gave the throne to 'Abd al-Karim, called Kasr al-Hajj, in 1659. "The latter", says al-Ifani, "united under his sway all the kingdom of Marrakesh and conducted himself in an admirable fashion with regard to his subjects". His son Abi Bakr succeeded him in 1668 but only reigned two months until the coming of the Filali Sultan al-Rashid, already lord of Fas, who took Marrakesh on July 31, 1668. Called to Marrakesh by the rebellion of his nephew Ahmad b. Mufriz, al-Rashid met his death there in the garden of al-Agdal, his head being having been injured by a branch of an orange tree against which his horse threw him when it stumbled.

Mawlay Isma‘il had some difficulty in getting himself proclaimed at Marrakesh, which preferred
his nephew, Ahmad b. Muḥṭir. Ḥismā'īl forced his way in on the 9th Safar 1083 (June 4, 1672). In the following year, Marrakesh again welcomed Ahmad b. Muḥṭir. After a siege of two years (March 1675—June 1677), Ḥismā'īl reoccupied Marrakesh and plundered it. He passed through it again in 1694 (1683) on his way to Siūsī to fight Ahmad b. Muḥṭir who was still in rebellion. Marrakesh was no longer the capital. Mawlāy Ḥismā'īl took an interest in it and destroyed the palaces of the kasba to use the materials for his works in MKnes. In 1114 (Feb. 1703), a son of Mawlāy Ḥismā'īl, Muhammad al-ʿAlīm, rebelled against his father, seized Marrakesh and plundered it. Zīdān, brother of the rebel, was given the task of suppressing the rising, which he did, plundering the town once more.

Anarchy again broke out after the death of Ḥismā'īl. Its centre was MKnes. Mawlāy al-Mustadīl, proclaimed by the Abd in 1375, was disowned by them in 1740 and replaced by his brother 'Abd Allāh. In 1782, 'Abd Allāh sought refuge in Marrakesh. His brother, al-ʿNaṣrī remained his khawīla in Marrakesh till 1745, while al-Mustadīl tried in vain to reconcile his kingdom. Marrakesh finally submitted in 1746 to Mawlāy 'Abd Allāh who sent his son Sīdī Muḥammad there as khawīla. The governorship and then the reign of the latter (1757—1790) formed one of the happiest periods in the history of Marrakesh. Sīdī Muḥammad completely restored the town, made it his usual residence, received many European embassies there, including a French one led by the Comte de Breugnon in 1767, and developed its trade. Peace was not disturbed during his long reign except for a riot raised by a marabout pretender named Qamar, who at the head of a few malcontents tried to attack the palace in order to plunder the public treasury. He was at once seized and put to death (between 1766 and 1772, according to the sources). On the death of Sīdī Muḥammad b. 'Abd Allāh, the situation remained very unsettled for several years. After taking the oath of allegiance to Mawlāy Yazīd (May 3, 1790) the people of Marrakesh took in his brother Mawlāy Ḥishām and proclaimed him. On hearing this, Yazīd abandoned the siege of Ceuta, returned to Marrakesh, plundered it and committed all kinds of atrocities (1792). Ḥishām, supported by the 'Abda and the Dukāla, marched on Marrakesh. Yazīd, wounded in the battle, died a few days later in the palace (Feb. 1792). Marrakesh remained faithful to the party of Mawlāy Ḥishām, but very soon the Ḥāmnā soldiery abandoned him to proclaim Mawlāy Husain, brother of Ḥishām. He established himself in the kasba. (1200 = 1794—1795). While the partisans of the two princes were exhausting themselves in fighting, Mawlāy Slimān, sulṭān of Fās, avoided taking sides in the struggle. The plague rid him at one blow of both his rivals (July 1799) who had in any case to submit some time before. The last years of the reign of Mawlāy Slimān were overcast by troubles in all parts of the empire. Defeated at the very gates of Marrakesh, he was taken prisoner by the rebel Shīrāḍa. He died at Marrakesh on Nov. 28, 1822. Mawlāy 'Abd al-Raḥmān (1824—1859) died much for the aforesaid of Agīlāl and restored the religious buildings. His son Muḥammad continued his work by repairing tanks and aqueducts. These two reigns were a period of tranquillity of Marrakesh. In 1862, however, while Sīdī Muḥammad b. 'Abd al-Raḥmān was fighting the Spaniards at Tetwan the Ḥāmnā soldiery rebelled, plundered the Sūr al-Khamis and closed blocked the town, cutting off communications and supplies, until the Sulṭān, having made peace with Spain, came to relieve the town (June 1862). Mawlāy Al-Ḥasan hardly ever lived in Marrakesh but he stopped there on several occasions, notably in October 1875, to punish the Ḥāmnā and the Bu 'īsā, who had rebelled, and in 1880 and 1885, to prepare his expeditions into Sīa.

During the last years of the reign of Mawlāy 'Abd al-'Azīz (1894—1908), it was at Marrakesh that the opposition to the European tastes and experiments of the Sulṭān made itself most strongly felt. The xenophobia culminated in the murder of a French doctor named Mauchamp (March 19, 1907), and the spirit of separatism in the proclamation as sulṭān of Mawlāy 'Abd al-Hafīz, brother of 'Abd al-'Azīz and governor of the provinces of the south (Aug. 24, 1907). But 'Abd al-Hafīz becoming ruler of the whole empire (Aug. 24, 1910) and having signed the treaty of March 24, 1912 establishing the protectorate of France over Morocco, the anti-foreign movement broke out again in the south. The Mauritanian marabout al-Hība had himself proclaimed and established himself in Marrakesh. He only held out there for a brief period. His troops having been defeated at Sīdī Bū Ṭūmān on Sept. 6, 1912, the French troops occupied Marrakesh the next day.

Relations with Europe. Five minor friars sent by St. Francis were put to death at Marrakesh on Jan. 16, 1220, for having attempted to convert Muslims and having insulted the Prophet Muhammad in their discourses. Their martyrdom attracted the attention of the Holy See to Marrakesh. A mission and a bishopric were established by Honorius III in 1225 to give the consolations of religion to the Christians domiciled in Morocco: merchants, slaves and mercenaries in the sulṭān's army. In the Almoravid period, the sulṭān had Christian mercenaries recruited from prisoners reduced to slavery or from the Mozarab population of Spain whom they had from time to time deported to Morocco by entire villages. In 1227, Abu ʿl-ʿUla Idrīs al-Maʿmūn having won his kingdom with the help of Christian troops sent by the king of Castile found himself bound to take up quite a new attitude to the Christians. He granted them various privileges, including permission to build a church in Marrakesh and worship openly there. This was called Notre Dame and stood in the kasba, probably opposite the mosque of al-Mansūr: it was destroyed during a rising in 1232. But the Christian soldiery continued to enjoy the right to worship, at least privately, and the bishopric of Marrakesh filled by an episcopal court at Seville, existed so long as there was an organised Christian soldiery in Morocco, i.e. to the end of the xvith century. The title of Bishop of Marrakesh was borne till the end of the xvith century by the suffragans of Seville (cf. Father A. Lopez, Los obispos de Marruecos desde el siglo XIII, in Archivo Ibero-American, No. xii., 1920).

A Spanish Franciscan, the prior Juan de Prado, who came to re-establish the mission, was put to death in 1631 at Marrakesh. A few years later (1637), a monastery was re-established beside the prison for slaves in the kasba. It was destroyed in 1659 or 1660 after the death of the last Saʿdīan. Henceforth the Franciscans were obliged to live in the melūṣ.
MARRAKESH

where they had down to the end of the xvith century a little chapel and a monastery. As to the Christian merchants, they had not much reason to go to Marrakesh in the middle ages. Trade with Europe was conducted at Ceuta from which the Muslim merchants carried European goods into the interior of the country. In the xvith century, 'Abd Allâh al-Gâlîbî had a fondôk or ‘bonded warehouse' built in the sûq where the Christian merchants were allowed to live; but the majority of those who came to Marrakesh preferred to settle in the Jewish quarter. It was here also that foreign ambassadors usually lodged, at least when they were not made to encamp in any of the gardens of the palace.

Monuments. The present enceinte of Marrakesh is a wall of clay about 20 feet high, flanked with rectangular bastions at intervals of 250 to 300 feet. Bab Aghnâm, Bab Alif, Bab Dukkâgh which still exist more or less rebuilt, are mentioned in the account of the attack on Marrakesh by the Almohads in 524 (1100). Bab inûnî, Bab al-Makhzen, mentioned at the same time, have disappeared. Bab al-Sâlîbî (no longer in existence: it stood on the site of the mâlikû and Bab Dukkâla (still in existence) figure in the story of the capture of the town by the Almohads (1447). The plan of the wall has therefore never changed. It has been rebuilt in places from time to time, as the clay crumbled away, but it may be assumed that a number of pieces of the wall, especially on the west and south-west, are original, as well as at least three gates all now built up, to which they owe their survival, but have lost their name. According to Mâlikû 'Fida' (xvith century), there were in Marrakesh seventeen gates, twenty-four at the beginning of the xvith century according to Leo Africanus. It would be very difficult to draw up an accurate list, for some have been removed, others opened, since these dates or the names have been altered. Ibn Faûl Allâh al-'Umarî (beginning of the xvith century) adds to the names already mentioned those of Bab Nîsî, Bab Mâlikû, Bab Mésûfâ, Bab al-Kešà all four of which have disappeared, Bab Taghâûtî, Bab Fâs (now Bab al-Khûnîs), Bab al-Kibîb which still exist. The only important changes, which have been made in the walls of Marrakesh since they were built, have been the building of the kasba in the south and in the north the creation of the quarter of Sidi ibn 'Abdû. The kasba, which as late as the xvith century stood outside the walls beyond the Bab Taghâûtî, was taken into the town with all its dependencies.

The Kasba. The little kasba and the palace of Dâr al-Gâlîmîa built by Yûsûf b. Tâshîn, lay north of the present Mosques of the Book-sellers of Kutubiyyâ. Ali b. Yûsûf added in the same quarter other palaces called Sâr al-Ḫadâjîr, or Kasr al-Ḫadâjîr because they were built with stones from the Gilân, while all the other buildings in the town were of brick or clay. It was here that the first Almohads took up their quarters. According to an almost obsolete passage of the Isbâbî, Abû Yaqîb Yûsûf seems to have begun the building of a ‘fort' in the south of the town but it was Yaqîb al-Mânsûr who built the new Kasba (1189–97); that is to say he handed to the south wall of the town a new walled area within which he built palaces, a mosque, and a regular town. Nothing remains of the Almohad palaces, but one can from pieces of wall and other vestiges follow the old wall, at least on the north and the east side. There also the line of the wall has hardly changed. The magnificent gateway of carved stone by which the kasba is now entered, must be one of al-Mânsûr's building. Its modern name of Bab Aghnâm (the Negro's Gate) is not found in any old text. It probably corresponds to Bab al-Kuhl (Gate of the Negroes), often mentioned by the historians.

Ibn Faûl Allâh al-'Umarî, in the xvith century, Leo Africanus and Marmol in the xvith, have left us fairly detailed descriptions of the kasba, in spite of a few obscure passages. In the Almohad period, the kasba was divided into three quite distinct parts. One wall in the northwest, around the mosque of al-Mânsûr which still exists, contained the police offices, the headquarters of the Almohad tribes and the barracks of the Christian soldiery. From this one entered through the Bab al-Tûbâî, a second enclosure in which around a huge open space, the ‘Cereque' of Marmol (al-qârî), were grouped the guardhouses, the offices of the minister of the army, a guest-house, a madrasa with its library and a large building called al-ṣaqqâfî (the porticoes), the ‘Acequife' of Marmol, occupied by the principal members of the Almohad organisation, the ‘Ten', the ‘Fifty' and the sâlimâ, the pages (ahl al-dār). The royal palace, sometimes called the Alhambra of Marrakesh, in imitation of that of Granada, was entered from the Assârî and occupied the whole area east of the kasba. The palaces of al-Mânsûr were still in existence at the beginning of the xvith century when the Sa'dîans took possession. 'Abd Allâh al-Gâlîbî incorporated them in the new palaces which he was building. Aḥmad al-Mânsûr added, in the gardens to the north, the famous al-Bâdi' palace decorated for its size and splendour. Only a few almost shapeless ruins remain of it, but its plan is perfectly clear. Mawlîya Ismâ'îl had it destroyed in order to use its materials. The kasba remained so completely in ruins that Sîdî Mâhâmîd b. 'Abd Allâh when he became governor of Marrakesh in 1746, was obliged to live in a tent until his new buildings were finished. It is to him that we owe an important part of the present palace with its inner garden, 'Arsat al-Nîl. Other works were later undertaken by Mawlîya Slimân and his successors. Some large unfinished buildings date only from Mawlîya 'Abd al-Ḫafîr. A number of gates, in addition to the Bab Aghnâm give admittance to the kasba: those are Bab Barûma and Bab al-Aḥmar in the east, Bab Iglî and Bab Ksa'î in the west. This place has vast gardens belonging to it: Dînân al-'Aţîf, Aghdâl, Dînân Kûhdân, Ma'ânîyâ, Ma'nânâ. The latter, two miles west of the town, contained, in the xvith century, a pleasure house of the sultans. The palace of Dîr al-Haîdâr, situated in the Agdâl, took the place of a Sa'dîan palace. It was built by Sîdî Mâhâmîd b. 'Abd Allâh and has since been restored. As to the gardens of the Agdâl, they seem to have been created in the xith century by 'Abd al-Ma'unî.

Mosques. Nothing remains of the early Almoravid mosques, in the building of one of which Yûsûf b. Tâshîn himself worked along with the masons as a sign of humility. But the cathedral mosque of 'Ali b. Yûsûf, where Ibn Tûmâr had an interview with the sultan, although several times rebuilt, still retains its name. The Almohads, on taking possession of Marrakesh, destroyed all the mosques on the pretext that they were wrongly
oriented. The mosque of ʿAli b. Yusuf was only partly destroyed and was rebuilt. ʿAbd Allāh al-Ghālibī restored it in the middle of the sixteenth century. The present buildings and the minaret date from Mawāliyūs Simān (1792–1822).

Kutubiyya. When the Almohads entered Marrakesh, Abd al-Muʿmin built the first Kutubiyya of which some traces still remain and it has been possible to reconstruct its plan. As it was wrongly oriented he built a new mosque, the present Kutubiyya, in prolongation of the first but with a slightly different orientation. It takes its name from the 100 booksellers' shops which used to be around its entrance. It is a very large building with seventeen naves, which with its decoration in carved plaster, its stalactite cupolas, the moulding of its timberwork, its capitals and magnificent pulpit (минбар) of inlaid work, is the most important and the most perfectly preserved work of Almohad art. The minaret, begun by ʿAbd al-Muʿmin, was only finished in the reign of his grandson al-Mansūr (1195). It is 230 feet high and its powerful silhouette dominates the whole town and the palmergroves. It is the prototype of the Giralda of Seville and of the tower of Ḥassān at Rabat. It is decorated with arcatures the effects of which were formerly heightened by paintings still visible in places, with a band of ceramic work around the top.

The mosque of the ḥāṣba or mosque of al-Mansūr is the work of Yaʿkūb al-Mansūr. It was begun in 1189–95 and built in great splendour. It has been profoundly altered, first by ʿAbd al-Ghālib the Saʿdiyan, then in the middle of the sixteenth century by Muhammad b. ʿAbd Allāh, then more recently by Mawāliyūs Ibn al-Rāmaḥ (1822–1859). The minaret of brick is intact and magnificently ornamented with green ceramics. The lamp-holder supports a ǧīmār of three bowls of gilt copper, which occupy a considerable place in the legends of Marrakesh. They are said to be of pure gold and to be enchanted so that no one could take them away without bringing on himself the most terrible misfortunes. This legend is often wrongly connected with the ǧīmār of the Kutubiyya.

Among the religious monuments of Marrakesh of archaeological interest, may also be mentioned the mosque of Ibn al-Mawāliyūs (dated 731 = 1331) and of the sanctuary of Mawāliyūs Ibn al-Kāsī, built in the Marinid period in the Almohad tradition, and two Saʿdiyan mosques: the mosque of al-Mawāliyūs or mosque of the Sharifs, which owes its origin to ʿAbd Allāh al-Ghālibī, and that of Bāb Dukkāla, built in 965 (1557–1558) by Līlā Masʿūdā, the mother of the Sultān Ḥamād al-Mansūr.

Madrassas. An Almohad madrasa, built to teach the children of the king and others of his family in it, formed part of the buildings of Yaʿkūb al-Mansūr. This royal school was presumably different from what later were the Marinid madrasas. It stood on the great square in front of the palace and was still in existence in the time of Leo Africanus. The Marinid Abu ʿl-Ḥasan in 1347 built another madrasa, also described by Leo. It lay north of the mosque of the ḥāṣba, where traces of it can still be seen. The madrasa of Ibn Yusuf is not, as is usually said, a restoration of the Marinid madrasa. It was a new building by ʿAbd Allāh al-Ghālibī, dated by an inscription of 972 (1564–1565), the only surviving example of a Saʿdiyan madrasa.

Saʿdīan tombs. The two fist founders of the dynasty rest beside the tomb of Sidi Muhammad b. Simān al-Djazīlī in the Rīyāḍ al-ʿArūs quarter. Their successors from 1557 were buried to the south of the mosque of the ḥāṣba. There was a cemetery there, probably as early as the Almohad period, which still has tombs of the sixteenth century. The magnificent kubbās which cover the tombs of the Saʿdīan dynasty must have been built at two different periods. The one on the east under which is the tomb of Muhammad al-Ṣaḥīḥ seems to have been built by ʿAbd Allāh al-Ghālibī. The other, with three chambers, seems to have been erected by Ḥamād al-Mansūr (d. 1603) to hold his tomb.

AL-MARRAKUSHI. [See 'ABD AL-WASĪD]

MARSA (A.), from rasāda, “to wait on the road, to watch, to lie in wait”, originally any place where a watch was kept, for example, a custom-house, then (with or without al-kawāthīb) an observatory. Al-rasāda is also used in the latter sense “To consult the stars for any one” is rasāda al-fa'ilun, to take astronomical measurements with instruments to kāsī (cf. kāsī = ascertaining latitude and longitude and mekās = gnomon).

The Arab observatories had their models and predecessors in the Persian, Indian, Greek and Babylonian observatories. Very little is known about the construction of the oldest observatories. It is obvious however that when the advance was made from the observation and recording of isolated phenomena in the heavens, which were regarded as omens of good or ill fortune, to the exact following of the movements of heavenly bodies, simple instruments to calculate time and measure areas and angles in the heavens would become necessary. Such must have existed in the towers of Babylonian temples which were used as observatories in the form of sundials, sand- and water-clocks measuring rods, and graduated circles. In the time of Ptolemy sundials and water-clocks were certainly in use, a circle divided parallel to the equator of the heavens which was used to calculate the equinoct and length of the year, a meridian circle, the amrylary sphere and the astrolabe or planisphere. The Arab astronomers, however, received their knowledge from the Hindu- and Persian, among whom astrology and practical astronomy had reached a high level. While the first astronomical observations were made under the Abbāsids at Qandah-Sābūr and the first astronomical works were translated out of the Sanskrit and Pahlavi, there is no doubt that the observatories erected in Baghdad were also modelled on Indian and Persian prototypes.

In his astronomical work, al-Battāni describes the construction of the sundial (al-rākhāna), a globe of the heavens (al-baṣfa), a wall-quadrant (al-rub' or al-linā) and a quadratran (al-ṣuṣa'id al-fa'īla or al-dīl al-bat'tain). The instrument most used in the Arab period however was the astrolabe which was portable (cf. above i., p. 501). The number of makers of astrolabes, observers and compilers of astronomical tables from the beginning of the Abbāsīd period is immense and the rivalry of princes to obtain more and more accuracy in the astronomical foundations of astrology also led to the improvement of instruments and the arrangements in observatories generally. It is sufficient to mention out of the many observatories that of Cairo where Ibn Yūnus (d. 400-401 = 1009) completed the Ḥākimī tables, the observatory of Nishāpar where al-Khāzīnī (d. beginning of the 10th-11th century) took observations, that of Maragha which Naṣīr al-Dīn al-Tūsī erected with many new instruments for the Mongol Khan Hūlagū (1259) and the observatory of Salmān, where Ulugh Beg employed the astronomers of his time. Following him in many points but also stimulated by European astronomy Dājīn Singh in India built the great observatories, the remains of which still arouse admiration in Delhi, Dājīpur, Udjain, Benares and Mathura.

(M. RUSKA)

MARTHIYA (A., plur. marathī), translated variously by elegy or dirge, is a poem in Arabic (and other languages following Arabic tradition) in memory of a deceased person. The word elegy is hardly applicable in most cases as such poems differ somewhat from the style of Greek and Latin poems bearing this name; some notable exceptions exist and the finest example of a real elegy is perhaps the poem of a woman named Bara al-Kinānīya preserved in the Kitāb al-līḥtiyyārān, and still unpublished. It was the custom of the ancient Arabs after the usual nasīr or introduction of women [q.v.] that a member of the family, gifted as a poet, should commemorate the noble qualities and deeds of the departed in a poem by enumerating them. These poems as a rule do not contain the tāzāh or amatory introduction like ordinary ḫatūs and in many cases have a peculiarity in their diction, the introduction of a kind of internal rhyme resembling sadī, called tarṣī. This has been fully discussed by Rhodokanakis in his analysis of the poetry of al-Khansā', but is found in many other marthiyas. Many poets, remembering the widespread, naïve universal, belief of the ancient Arabs in fatalism, embellish their poems with descriptions to show that nothing can escape inevitable fate. A typical example is the long poem by Abū Dhu'ain (Dīwān, N. 1; Muḥaddithiyat, N. 125) in which three vivid pictures are drawn of the impossibility of escaping death, both for man and beast. This tradition has been followed by Arabic poets from the times of paganism to the present date and the quantity of poems produced for example upon the death of the Egyptian statesman Zaghlīl Pāšā proves that the taste for them has not abated. The collected poems of al-Zahāwī, the most prominent living poet of
MARTHIVA — MARWÂN B. AL-ḤAKAM 307

the 'Irāk, contain several pages mourning Zaghul. As regards the earlier period, poems have been preserved in considerable numbers and from the Ḥanāsāt of Abū Tammān downstairs nearly every anthology has a special chapter devoted to marāṭī. Several early scholars in addition made special collections of this class of literature and one such collection has come down to us, made by the Kūfī grammarian Ibn al-ʿĀṣīḥī, and published from an incomplete manuscript by W. Wright. The poet par excellence in this class of poetry however was a woman, al-Ḥansāʾ [q. v.].

Bibliography: W. Wright, Opuscula Arabica, Leyden 1859, p. 97—136; Rhodokanakis, al-Ḥansāʾ und ihre Träumerlieder, Vienna 1904; Ibn Ṭaḥṣīḥ, ʿUmda, Cairo, i. 117—126; chapters on marāṭī in the Ḥanāsāt of Abū Tammān, al-Balṭūṭī and Ibn al-Shadījī.

(F. KENKOW)

MARTOLOSEN, Lexicons explain martolos and martolios as "Christian soldiers, volunteers in the Ottoman army". The word apparently is not to be found in Turkish authors, but is often met with in Western books and dogmas.

Leunclavius (Annales, p. 142) says that martolos means "robber"; Ricaut (Italian translation by C. Belli, Istoria dello stato presente dell' Impero ottomano) relates that Buda was garrisoned by 300 martoloi "who are like infantry"; M. Sanudo (Diarii, xxxvi. 271) mentions one Sholovach "a very brave man and great marteloso", who served the Turks and was killed in action near Zara in Dalmatia. According to Lazaro Soranzo (L'Ottomano, 4th ed., Naples 1600, p. 110—111), martelos means spy and thief.

Sathas (Monum. Historiae Hellenicae, iv., lvi., No. 4) derives the word (martoloi, martolios, martelos, martolios, armatolo) from ḥamārōlā and says that they were soldiers of fortune serving the Turks, often opposed the "Stradioti", who fought for the Venetians.

Von Hammer (G. O. K., iv. 211—212) observes that the martelos were bands of brigands, armed by the Turks on the frontiers towards the Venetians and Dalmatians; while, quoting Pouqueville, who favours the etymology ḥamārōlā, he inclines to an etymology from the Hungarian.

Pouqueville's and Sathas' explanations seem to us the most probable. The appellation was not limited to brigands on the western frontiers of the Ottoman empire, but was also given to armed bands of volunteers (xvih—xviiith centuries) in the Danube region (Jorga, Geschichte des osm. Reiches, iii. 419; Hurnuzac, Documente etc., xii., p. 130).

MARUF AL-KARKHI. As-Sā`ūdi, E. F., Marof al-Karkhi, and Fīruz or Fīruz, who died in 200 (818—816), was a celebrated ascetic and mystic of the Baghdād school. The mīda al-Karkhi probably refers to Karkh Bājdāda, a township in eastern Ḥarān (Samānī, Annāb, p. 478b, l. 10; cf. Yāḥyā, Muḥtarik, ed. Wüstenfeld, p. 369, l. 8 sγ.), though some authorities connect him with the Karkh quarter of Baghdād. His parents are generally said to have been Christians; according to Ibn Ṭabghibirdī (ed. Juybībīl and Matthes, i. 575), they were Sā`ūdīs belonging to the district of Wāśīt. Bakr b. Khunais al-Kūfī and Farqād al-Sabākī, also of Kūf, are named as his teachers in Ṣufism (Abū Ṭālib al-Makki, Kūt al-Kūfī, i. 9; Fīruz, p. 183).

Of those whom he taught or influenced the most famous was Sāri al-Sā`afi (q. v.), who in his turn became the master of Dānjād. The story that Ma`rūf was a client of the Shīʿī Imām, ʿAlī b. Mūsā al-Ridā, before whom he made profession of Islam and induced his parents to do the same, deserves no credence. Among the sayings attributed to him are the following: "Love is not to be learned from men; it is a gift of God and comes of His grace"; "The saint is known by three signs: their cares are for God, their business is in God, and their flight is unto God". "Ṣūfism consists in grasping the realities (ḥaṣāʾiḥ) and renouncing that which is in the hands of created beings". Ma`rūf was venerated as a saint, and his tomb at Baghdād on the west bank of the Tigris is still a great resort for pilgrims. Ṣuṣṭārī relates that the people used to go there in order to pray for rain, saying: "The tomb of Ma`rūf is an approved remedy (tirās ṣuṣṭārī)."

(M. LASSER)

MARUF RUSHAFI, one of the best of contemporary Arab poets, born in Baghdād of a Kurd father and a Beduin mother in 1292 (1875). His ḥāfīds have been collected into a Diwān and edited by Muḥy al-Dīn al-Khaṭṭā, Bāirūt 1910, following quite an original classification. 1. Kaʿimāt, 2. Liḥmatā, 3. Taʿrīkh, 4. Wasfiyāt. Raʾīṣ al-Buṭṭā has devoted an excellent study to him (in al-ʿAdab al-ʿArabī fī ʿIrāq al-ʿArabi, Cairo, Salāfiyā 1932, p. 67—96).

(L. MALLERGAN)

MARUT. [See MARUT AND MART.]

MARW, [See MERK.]

MARWAN, [See MARWAN.]

MARWÂN B. AL-ḤAKAM, the father of the Marwānid Caliph, was born at Mecca or at Taif, probably several years before the Hijra. Tradition, by placing his birth 2, 4, or 5 years later than the beginning of this era, aims at depriving him of a right to the title of "Companion" by showing that he could not have effectively accompanied the Prophet, as he must have followed his father who was exiled to Taif. Further, it endeavours in its hostility to give him the epithet of farīd ibn al-ṭarīf, "the banished son of the banished man". After becoming Caliph, his grand-uncle ʿUthmān adopted him as his secretary and under this title he is said to have governed in his name. Seriously wounded on the "day of al-Dār", at the siege of the palace of ʿUthmān, he took part later in the battle of the Camel in which he received fresh wounds. All his life his health suffered from these terrible shocks. Muʿsāwiyā intended to use him alternately with ʿAṣūd b. al-ʿĀṣ [q. v.], his cousin, to govern Medina and the Ḥusayn. He showed in this function a capacity and vigour, far above the ordinary.

Finally dismissed from office, he passed into obscurity during the latter years of Muʿsāwiyā who dreaded his ambition. When Ḥusayn b. ʿAli refused
to recognize the Caliph Yazid, Marwan advised Walid b. 'Utba, his successor at Medina, to employ force against the rebel. The revolt of the people of Medina caused him to be expelled with all his followers from this town. He returned to it in the train of Muslim b. 'Abd Allah [q.v.] whose military operations he was supporting. Put to flight once more after the death of Yazid I, he took up his residence in Syria and attended the court of the Caliph Mu'awiyah II. After the disappearance of this prince, Marwan, desiring of the fortunes of the Omayyads, was disposed to recognize Ibn al-Zubayr, when 'Abd Allah b. Ziyad persuaded him to set up himself as candidate. Acclaimed at the assembly of 'Iqabiya, he defeated the Kaisis under 'Alidj ak b. Khaz [q.v.] at Mardj Rāhī [q.v.]. The submission of the whole of Syria was the first result of this victory.

The reign of Marwan may be epitomized as an uninterrupted series of battles. Immediately after his official installation at Damascus he was forced to take up the gauntlet. He laid it down only to die in its capital. His chief task was the conquest of Egypt. A rapid campaign gave him possession of it, while his lieutenant repelled a raid into Fal-siyya by Ibn al-Zubayr. At 'Iqabiya he was compelled to recognize as his eventual successors Khalid the son of Yazid I and the Omayyad 'Abd al-Ashāf [q.v.]. After laborious negotiations, he was able to end them to the advantage of his own sons 'Abd al-Malik and 'Abd al-'Azīz, the latter being nominated by him governor of Egypt. This was the last success of his adventurous career. Worn out, the septuagenarian caliph died at Damascus on the 27th Ramadān 65 (9th May 685). He is said to have been murdered by the wife of Yazid I, the mother of the Sufyānid Khalid, whom he had married after Mardj Rāhī.

The estimates of the length of his reign vary between 8 and 11 months, according as they count the first recognition of him at 'Iqabiya or the second — the exact date is not known — more ceremonious one at Damascus. We do not know his exact age any more definitely. The two extremes 61 and 71 years reveal the mone-stancy of tradition. The 63 years sometimes given to Marwan are merely a lucky number which has been much abused to give the ages of the older caliphs. It has the advantage that it takes us back to the year 2, often said to be the year of his birth. Our texts describe him as an old man, karbā kahān, when he ascended the throne and contrast him with the Lād, middle-aged man, i.e. Ibn al-Zubayr who, however, was nearly sixty. There must therefore have been an appreciable difference of age between the two competitors. Marwan, therefore, seems to us to have been over seventy. The last five years of his life, filled with rebellions, his two exile, his share in the campaign against Medina, and in those of Syria and Egypt to reconquer these provinces of his empire were, as it were, the constitution of this vigorous old man, who had never been completely cured of the effects of his terrible wounds he received in his youth. This long lean waned old man — these physical characteristics earned him the nick-name 'ākāf ẓafīr — was destined to fall a victim to the great epidemic that swept over the East. In 65 H. the plague reached Syria from the Irāq; it had begun by carrying off Mu'awiyah II, the decrepit predecessor of Marwan, as well as Walid b. 'Utba, a relative of both; it ended by laying low the first of the Omayyad caliphs.

Marwan showed himself a statesman worthy of the highest rank. A contemporary of the great Mu'awiyah, he had under the Sufyānids to accept — without ever resigning himself to it — the part of a brilliant second. He attained the caliphate, ever the object of his wishes, at the moment he had ceased to care about it. He allowed himself to be raised to the throne, rather than mounted it himself. But once at the top he regained that power of lucid decision and spirit of initiative which had earned Mu'awiyah's appreciation, though he feared his ambition. The new ruler remained on the throne just long enough to save the Omayyad fortunes from an imminent collapse and to save the future of the younger branch of this dynasty which bears his name. The work was continued by his favourite son 'Abd al-Malik. He early recognized the merits of this, the elder, more mature, and with a brutality and absence of scruple which was thoroughly Arab, he put him in the place of the young Khalid b. Yazid I, who was less well fitted for the difficulties of the restoration. This is sufficient to characterize his place among the Syrian caliphs. It will explain the hatred of 'Abdūsīd and 'Alid historians, a hatred adopted by Muslim tradition. In energy and knowledge of the art of government, Marwan, recalled his illustrious relative Mu'awiyah. He would have equalled him, if to these eminent qualities he had been able to add that variety of political knowledge, a mixture of cunning and bonhomie, so appreciated by the Arabs, which they call ẓība. He became Caliph in most critical circumstances and had to display firmness above all things, to put down rebellions, and to defend himself against the ambition and resentment of his relatives, frustrated in their attempts on the throne, or spoiled by him of their rights to it. If it had been given to him to live longer, we may well believe that he would have rivalled the first of the Omayyad Caliphs in nobility of soul.

MARWĀN II b. MUḤAMMAD, the last of the Omayyad caliphs in Damascus. He was the grandson of the caliph Marwān b. al-Hākam. As governor of Mesopotamia and Armenia his
father Muhammad for several years directed the campaigns against the Byzantines. His mother was a Kûrish slave-girl. Maslama b. 'Abd al-Malik [q. v.] was one of those who followed Muhammad b. Marwân to war; it is not till 115 (733–734) that we find Marwân coming to the front as governor of Armenia and Adharbâdja. In this position, which he held for 12 years, he fought with success against the peoples of the Caucasus and thus acquired military experience which enabled him to reorganise the Muslim army. In place of divisions consisting of the different tribes he created regular, paid troops under professional commanders; the men levied for military service were divided up into smaller divisions (kârâlis) which possessed much greater mobility and strength than the long Arab battle-lines. After the death in 126 (744) of Yazid III the succession passed to his brother Hishâm b. al-Walîd; the latter however was only recognised in the southern part of Syria. Under the pretext of protecting the interests of the sons of the murdered Walîd II, Marwân crossed the Euphrates into Syria where the Kaisîs at once joined him. At 'Ain al-Djarr between Lebanon and Anti-Lebanon he encountered the Kâlibîs under Sulaîmân, a son of the caliph Hîshâm. In spite of his years of experience in war with the Byzantines the latter was no match for Marwân. He was defeated and fled to Damascus, where he put to death the two sons of Walîd II. He then went with his father, the nominal caliph Ibrâhîm to Palmyra, the capital of the Kâlibîs, whereupon Marwân entered Damascus and received the homage of the people (Safar 26, 127 = Dec. 7, 744). After arranging matters in the capital he made his headquarters in Haraqân, where he could rely upon the support of the Kaisîs who were devoted to him. The result was a rising of the Kâlibîs in Syria. Marwân soon succeeded in restoring order; but when in the following year he was preparing a campaign against the 'Irâk not yet subject to him, he made the mistake of levying Syrian troops also who were to join the rest of the army on the march. On reaching al-Rusûf where Sulaîmân b. Hîshâm lived, the Syrians deserted from Marwân and proclaimed Sulaîmân commander of the faith-ful. When Sulaîmân occupied Qamagram, Marwân had to come back. A battle took place near the town, Sulaîmân was defeated and fled first to Hîmas and then to al-Kûfa. After a siege of several months Hismî was forced to surrender; Marwân razed its walls to the ground and also those of Ba'albek, Damascus, Jerusalem and other large towns of Syria. In the summer of 128 (746) peace was finally restored in Syria.

In the eastern provinces however complete anarchy reigned. The governorship of the 'Irâk had been given by Yazid III to a son of the caliph 'Omar b. 'Abd al-'Azîz, named 'Abd Allah [q. v.]. The latter of course did not recognise the claims of Marwân to the caliphate and the 'Abd Allah b. Mu'awiyâ [q. v.] also rebelled in al-Kûfa. Marwân appointed a new governor of al-Kûfa, Yazîd b. 'Abd al-Harâshî to restore peace and security; the latter however soon fell in battle with 'Abd Allah b. 'Omar and only the approach of a danger that threatened both sides, the Khârîjî movement brought the two opponents to terms. The Khârîjîs a little later seized the town of al-Mawâil: 'Abd Allah, the son of the caliph, was defeated and had to retreat. In the late summer of 28 (746) however the Khârîjî leader al-Dâhîbî b. Kais al-Shâhînî [q. e.] fell in battle with Marwân himself and in the following year the power of these dangerous rebels was finally broken after one of Marwân's generals Yazid b. 'Omar b. Hu-bair had taken the 'Irâk from them.

Soon afterwards however a cloud that boded evil appeared in another direction. 'Abd al-Lâ'îhî, governor of Khorâsân, had long before warned the caliph of the sedidious activities of the 'Abhâsîs and urgently appealed for assistance to render their cunning adversaries harmless. Marwân however had his hands full and could devote no attention to the distant east. In Ramâzân 129 (June 747) the long prepared rebellion broke out in Khorâsân. Apart from a few isolated successes, the government troops were defeated by the rebels and after the fall of al-Kûfa Abu al-'Abbas who with his brother Abu Dîjâfar had taken command of the 'Abhâsî party had himself proclaimed caliph on the 12th Kabi' II, 132 (Nov. 28, 749). In Dhûl-Muhammâd II of the same year (Jan. 750) Marwân was defeated on the upper Zâb. He then fled from one place to another till he was overtaken at Bûr in the district of 'Ushmûnîn in Upper Egypt. There the last Damascus caliph of the Omâyây dynasty fell fighting bravely (end of 132 = Aug. 750).

MARWÂNIDS, a Muhammedan dynasty in Diyar Bakr, founded by the Kurd chief Bâdhî, who had begun his career when he was a shepherd and later took to brigandage. With the help of a body of men similarly inclined, he seized the town of Adîjish in Armenia with other strongholds on the Armenian frontier. After the death of Bûyid 'Adud al-Dawla (372 =983), he invaded the province of Diyar Bakr and captured 'Amîd, the Mâyâfârikûn and Nasûbûn. The armies, which Sâmûn al-Dawla sent against him, were defeated and al-Mawillî also passed into his hands. But when he tried to seize the capital, Bâghdâd (Safar 373 = July–Aug. 983), he suffered a complete defeat and had to abandon al-Mawillî. After vain attempts to retake this town, he took the field again in 380 (990–991) but was defeated by the Hamûnîs, the lords of al-Mawillî, and fell in the battle. 'Abd al-'Alî b. 'Abd Allah, Marwân's sister's son, then married his widow and thus came into possession of the lands conquered by Bâdhî and continued the war against the Hamûnîs whom he twice defeated. After the murder of 'Abd al-'Alî in 387 (997–998) in 'Amîd, his brother 'Umarîhî al-Dawla Abu 'l-Mâshûr succeeded him. The third brother 'Abd al-Dawla Abu Nasr Ahmad at first attempted to dispute his authority but without
success. In 402 (1011-1012) Abu 'l-Mansur was poisoned by one of his generals, whereupon Abu Nasr was recognized as lord of Diyar Bakr. During his rule of fifty years, peace and quiet as a rule prevailed, and poets and learned men found a hospitable welcome at his court. In 433 (1041-1042) the Ghurids (q.v.) who had invaded Mesopo-
tamia in the previous year, raided Djazirat Ibn Omar; but Sulaiman, son of Abu Nasr, succeeded in outwitting and capturing their leader whereupon the others dispersed; they soon returned however and continued their plundering, although Abu Nasr released their chief and gave them a considerable sum to induce them to withdraw. They then occupied al-Mawzil, which was completely sacked while the emir there, Karshah, b. al-Muqaddad (q.v.), saved himself by flight. In 435 (1044) he finally succeeded in driving out the Ghurids whereupon they withdrew to Diyar Bakr and thence to Van. When the Saljuk Sultan Toghru
glu seized in 445 (1054-1055) advantageous terms of cession of Djazirat Ibn Omar, Abu Nasr gained his former position over them and a friendly relationship was established between them Abu Nasr died in 453 (1061-1062) aged 82. He was succeeded by his son Nyam al-
Dawa' Nasr, who had however to go through a hard struggle with his brother Sulaiman. The former was victorious in Maqafirku, while the latter had to be satisfied with Amid. In 463 (1070-
1071) Nasr submitted to the Saljuk Sultan Alp Arslan. After Nasr's death (472 = 1080) his son Mansur was recognized as his successor. Soon afterwards, the Saljuks overthrew the Marwanid dynasty. In 478 (1085-1086) Ibn Dujur, Malik-
Shah's vizier, and his son Za'im al-Rasah Abu l-Kasim conquered the towns of Amid, Maqafirku and Djazirat Ibn Omar and then brought the whole province of Diyar Bakr under the rule of the Saljuk-
s. Mansur, the last Marwanid, died in Muharram 459 (Dec. 1055-Jan. 1056) in Djazirat Ibn Omar.

(M. ZEFFERSTEIN) 

MARYA, a tribe in the Western zone of Eritrea. They are for the most part shepherds and inhabit the middle valley of the An'abs river in the district of Karan. Their tribe is formed by two sections of nobles: Marya Kayi'ih, the "Red Marya" and Marya Salim, the "Black Marya"; and the families of the vassals. The "Red" Marya have been traditionally in a lower position than the "Black" and they were obliged to pay on certain occasions special gifts to the "Black", as for instance, when the chief of the "Black" died. The vassals were practically divided between the Red and the Black as every family of them lived under the patronage of the chief of a noble family. Both the paramount chiefs of the noble sections had some particular rights over all the vassals of the noble families of their sections as they had, for instance, the power to order that every vassal may give them the same gift as to his individual patron or to oblige the patrons to pay as a duty to the highest representative of the tribe, the tenth part of every gift or duty of their vassals.

The Marya claim to be descendants of a warrior, Marya, born of Saho stock, who emigrated with seventeen soldiers to the borders of the 'Ansab and was received there as a guest by the natives. But, afterwards, the sons of Marya had so greatly increased that they were able to occupy the whole territory and to establish the right which strongly defend their vassals. These natives, who are called segi, on account of their origin, were really Abyssinians and Bedja. However, the Marya and their vassals to-day speak only the Tigre language; and the Saho, as the Bedja, has been wholly forgotten.

The Marya were Christians but, about half a century ago, they were converted to Islam. Even their clans (as the 'Ad Te-mik'al, a section of the "Red") and their ancestors till recent generations bore Christian names. In any case, Islamic law has gradually gained great influence, among the Marya; and this has been from many points of view a real profit to the population, as the laws of Islam may moderate in a good way the ancient rough customs which formerly gave the privileges of the nobles and their mastery on the vassals. As a matter of fact, in the hereditary law, the prevalent right of the first born son and the exclusion of the daughters from the succession of their father's estates became gradually disused on account of the Islamic influences. In the same way, the custom of declaring slaves those vassals who could not pay their debts to the nobles and the great differences, in the penal law, as to the punishment of crimes perpetrated by the nobles or by the vassals, had already been diminished after the conversion of the Marya to the Islam, when the occupation of Eritrea by Italy caused the complete abrogation of those rules.

B i b l i o g r a p h y : W. Munzinger, Ostafrikanische Studien, Schaffhausen 1864; E. Litt,

MARYAM, Mary. The Arabic form of the name is identical with מְרִי and מָרִי which are used in the Syriac and in the Greek Bible in the New as well as in the Old Testament. In the latter it corresponds to the Hebrew מִרְי. This name, like other ones with the same suffix, such as Amram, B'ilam, points to the region between Palestine and Northwestern Arabia as its home. According to Muslim interpretation the name means "the pious" (al-'abida; cf. the commentaries on sūra ii. 31). It occurs frequently in the Kur'an in the combination [Tā'] Ibn Maryam ["Jesus"] son of Mary (sūra ii. 81, 254; iii. 31 112; iv. 156, 169; v. 19, 50, 76, 82, 109, 112, 114, 116; ix. 31; xix. 35; xxiii. 52; xxxii. 7; xlii. 57; lii. 27, lxi. 6, 14); no father being mentioned, because, according to Muslim tradition also, 'Isa had no earthly father. In the majority of these passages Ṭā' is clearly regarded as the higher of the two. Yet Maryam's place is important from a dogmatical as well as from a historical point of view.

Maryam is mentioned in the Kur'an, from the oldest parts down to the later Madinan sūras.

To the first Maakkian period belongs sūra xxiii. 52: "And we made the son of Maryam and his
mother a sign; and we made them abide in an elevated place, full of quiet and watered with springs”. Here is possibly the first allusion in the Kurān to the virgin birth. This idea is accenteduated in sūra xix. 37, where Maryam gives the spirit (i.e. the angel) who announces to her the birth of a male child, this reply: “How should I have a male child, no human man having touched me?” In sūra lxvi. 12 the conception is ascribed to this divine spirit (cf. Luke i. 34 sqg.). Then said Mary unto the angel, How shall this be, seeing I know not a man? And the angel answered and said unto her, The Holy Ghost shall come upon thee, and the power of the Highest shall overshadow thee.

The virgin birth is also mentioned in sūra lxvi. 12 (Madinan): “And Maryam bint Imrān who kept her body pure. Then we breathed into it from our spirit. She acknowledged the truth of the words of her Lord and of his book and she belonged to the obedient.”

A third mention of the announcement and the virgin birth is in sūra iii. 37: “When the angels said, O Maryam, verily Allāh has elected and purified thee and elected thee above the women of all created beings. O Maryam, be obedient unto thy Lord and prostrate thyself and bow down with those who bow down” (cf. Luke i. 28). Maryam is indeed reckoned as one of the four best women that ever existed, together with Āsya [q.v.], Khadijā [q.v.] and Fātimah [q.v.], (Ahmad b. Ḥanbal, Musnad, iii. 135), and the chief of the women of Paradise (Ibn Ḥanbal, iii. 64, 80).

According to tradition the announcement took place in the following manner: Jubūl appeared to Mary in the shape of a headless youth with a shining face and curling hair, announcing to her the birth of a male child. She expressed her amazement, but, on the angel’s reassuring answer, she complied with the will of God.

Thereupon the angel blew his breath into the fold of her shirt, which she had put off. When the angel had withdrawn, she put on the shirt and became pregnant. The announcement took place in the cavern of the well of Siwāḥ, whither Maryam had gone, as usual, to fill her pitcher; she was then 10 or 15 years of age; and it was the longest day of the year. In Christian tradition also the voice of the angel was heard by Maryam for the first time when she had gone to fill her pitcher. According to a different tradition ʿĪsā’s spirit entered Maryam through her mouth (Ṭabarī, Taḥfīr, vi. 22).

A second important dogmatical feature is that Maryam belongs to the Trinity according to the Kurān. A glimpse of this conception is given in sūra v. 79: “al-Mashh, the son of Maryam, is an Apostle only, who was preceded by other Apostles, and his mother an upright woman; and both were wont to take food”. This verse is apparently meant as a refutation of the Christians who venerated ʿĪsā and his mother as divine persons, elevated above human needs. With this verse may be compared sūra iv. 169: “O people of the book, beware of exaggeration in your religion and say of Allāh nothing but the truth. ʿĪsā b. Maryam is only the Apostle of Allāh and His word, which He conveyed unto Maryam, and a spirit that came forth from Him. Believe, therefore, on Allāh and His Apostles and say not ‘three’. Beware of this, this will be better for you. Allāh is but one God” etc.

Clearer is sūra v. 116: “And when Allāh said, O ʿĪsā b. Maryam, hast thou said to the people, Take me and my mother as two Gods besides Allāh? He answered: Far be it, that I should say to what I am not entitled. If I should have said it, Thou wouldst know it”. etc.

The commentaries above describe the Trinity as consisting of Allāh, ʿĪsā and Maryam. Al-Bajḍawi, however, admits that in sūra iv. 169 there could be an allusion to the Christian doctrine of one God in three hypostases: Father, Son and Holy Ghost.

The question how Muhammad had come to conceive of Maryam as one of the persons of the Trinity, has often been asked. Maracci has made a reference to Epiphanius, Adv. Haereses, Haeres. lxxviii. § 23, where this author speaks of women in Arabia who venerated Maryam as God, and offered to her cakes, from which the heresy is often called that of the Collyridians. Sale, in his Preliminary Discourse, p. 45, mentions the Maria-salutantes, who worshipped a Trinity consisting of God, Christ and Mary, referring to a passage in the work of al-Makin. It may, however, be that Muhammad’s conception was not influenced by any sect, but by the veneration of which Maryam was the object in the Church itself. Or it may be an inference due to the identification of ʿĪsā with the Holy Ghost (cf. sūra iv. 169 as translated above), which made a vacant place in the Trinity, which Maryam seemed entitled to occupy. A different explanation is attempted by Sayyūs, l.c., p. 61 (see Bibliography).

A comparatively large place is occupied in the Kurān by the story of Maryam and ʿĪsā. Many of the features not agreed partially or wholly, with narratives in the apocryphal Gospels. Sūra xxiii. 32 (see above) mentions the elevated place that was prepared for ʿĪsā and his mother. It is not clear which tradition is here alluded to. According to St. Luke i. 39, Mary went to the mountains to visit Elisabeth. In the Protevangelium Jacobi (chap. xxii; Syriac text, p. 26) it is Elisabeth who flies together with John to a mountain, which opens to protect them against their persecutors. The Muslim commentators mention Jerusalem, Damascus, Ramla, Egypt as being possibly meant by the “elevated place”. Maracci thinks of Paradise.

In two passages of the Kurān there is a fuller narrative of ʿĪsā’s birth and what is connected with it, viz. in sūra xix. (which bears the title of Maryam), vs. 1—35, and in sūra iii. 31—42.

Sūra xix. opens with the story of Zakariyāʾ and Yahyā (vs. 1—15); on this follows the story of Maryam and ʿĪsā (vs. 16—34). Sūra iii. 31—42 contains a. the birth of Maryam; b. the announcement of Yahyā (vs. 33—36); c. the announcement of ʿĪsā (vs. 37—41). The comparison of sūra xix. with sūra iii. makes it probable that Muhammad became acquainted with the story of the birth of Maryam later than with those of Yahyā and ʿĪsā.

a. The birth of Maryam. This story goes back to a Christian tradition contemporaneously with that which is contained in the Protevangelium Jacobi and De nativitate Mariae. Mary’s father is called ʿĪmran in the Kurān, Ioachim in Christian tradition; Ibn Ḥalidūn (Faro, ii. 144) is also acquainted with the name Ioachim. It has been supposed that the name of ʿĪmran, which apparently corresponds with the Biblical "Amram, the father of Moses, as well as the fact that Maryam is called
a sister of Hārūn (Sūra xix. 29), is due to a confusion between the two Biblical Maryam’s. Sale, Gerock and others think such a confusion improbable. At any rate Muslim tradition assures us that there is a distance of 1,800 years between the Biblical Amram and the father of Mary.

Imrān’s wife, ‘Isa’s grandmother, is not mentioned by name in the Kurān. In Christian as well as in Muslim tradition she is called Hanna. It is only in Muslim tradition that her genealogy is worked out. She is a daughter of Fākith and a sister of Ishâr, the Biblical Elisabeth.

According to a different genealogy Ishâh and Maryam were sisters, daughters of ‘Imrān and Hanna (Mas‘ûdi, Murâd, i. 120 sq.; Tabari, Tafsîr, iii. 144).

‘Imrān and Hanna were old and childless. One day the sight of a bird in a tree, which was feeding her young, around Hanna’s desire for a child. She prayed to God to fulfill her desire and vows, if her prayer should be heard, the child to the temple. She had however forgotten that, according to the Jewish law, it would be impossible, to accomplish her vow, if she should give birth to a female child (cf. Prover. Jacobi, chap. iii., iv.; Syriac text, p. 4). Compare with this Sûra, in 31: “How the wife of ‘Imrān said, O my Lord, I have vowed to Thee what is in my womb. Now accept this vow from me. Thou art the hearing, the knowing. And when she had given birth to the child, she said, O my Lord, I have given birth to a female child... and I have called her Maryam.”

The Kurān relates how she invoked on behalf of Maryam and her posterity Allah’s protection from Satan. On this verse is based the well-known hadith: “Every child that is born, is touched by Satan; but Satan touches the child of Maryam and her son” (Bukhârî, Jâfrî, Sîrî 44: Tafsîr, Sûra 3: 2). Muslim, Fadilât, tr. 140, 141; Ahmad b. Hanbal, Mustadr, ii. 233–274; Jâf., 288, 292, 319, 368, 52). This tradition is used in support of the impecuniousness of ‘Isa, Maryam and the Prophet(s), in general of al-Nawawi, ad. Muslim, i. and ad. Bahaijawi ad. Suna in 31.

The Kurān further relates (vs. 32) that the child grew up in a chamber in the temple (mihrâb); cf. the kahîrî in Prover. Jacobi, vi.; Syriac text, p. 5 (7) under the divine grace and under Zakkarâ’s care. According to Muslim tradition, ‘Imrân had died before the birth of Maryam, and Zakkarîa claimed authority over her on account of his being her uncle; the rabbis did not recognize his claim; his right was proved by an ordeal, consisting in the parties throwing their pens or arrows in a river; the only one that floated was that of Zakkarîa. Sûra iii. 59 refers to this.

Christian tradition knows of an ordeal only in the case of Joseph, who, because a dove comes forth from his staff, is recognized as Maryam’s guardian.

As often as Zakkarîa enters Maryam’s mihrâb, he finds her being provided with food in a miraculous way (vs. 32). This feature also belongs to Christian tradition (Proter. Jacobi, chap. viii.; Syr. text, p. 7). The person of Joseph is not mentioned in the Kurān. In Muslim tradition he takes care of Maryam, his cousin, because Zakkarîa is no longer able to do so, on account of old age. Maryam stays however in the temple, which she leaves during her monthly period only. According to Christian tradition, Joseph takes her into his house when she attains to womanhood, lest she should defile the temple.

b. The announcement of Yaḥyâ. See this art. and Zakkarîa.

c. The announcement and birth of ‘Isa. The more detailed narrative is that of Sûra xix. 16 sqq. Maryam retires to a place situated eastward, where she hides herself behind a curtain. The commentators do not know whether a place to the east of Jerusalem is meant, or the eastern part of her house, to which she retires every month. It is said that this is the origin of the kibla of the Christians.

In vss. 17–22 the story of the announcement is given (cf. above), followed by that of ‘Isa’s birth, which, according to some Muslim traditions, followed the conception either immediately or very soon. The pains of childbirth came upon Maryam when she was near the trunk of a palm. “She said, would to God I had died before this, and had become a thing forgotten, and lost in oblivion. And he who was beneath her [i.e. the child, or Dibrîl, or the palm] called to her, saying, Be not grieved; God has provided a rivulet under thee; and shake the trunk of the palm and it shall let fall ripe dates upon thee, ready gathered. And eat and drink and calm thy mind.” This story may, perhaps, be considered a part of the Christian tradition in which it is related that, during the flight to Egypt, the babe Jesus ordered a palm in the desert to bow down in order to refresh Mary by its dates; whereupon the palm obeyed and stayed with her head at Mary’s feet, till the child ordered it to stand upright again and to open a vein between its roots in order to quench the thirst of the holy family (Apocryphal Gospel of Matthew, chap. xx.). The Kurān goes on (vs. 26): “And when thou seest any man, say, I have vowed a fast unto the Merciful; so I may not speak to any man to-day.” The commentators say, this was meant to avoid importunate questions. This feature is not in Christian tradition; yet in the Proterogymnastum Jacobi it is said (chap. xii.; Syr. text, p. 11) that Mary, who was then 16 years of age, hid herself from the Israelites. According to Muslim tradition, she stayed in a cavern during forty days. “Then she brought him”, continues the Kurān (ix. 28), “to her people, carrying him. They said, O Maryam, now thou hast done a strange thing: O sister of Hārûn, thy father was not a bad man, neither was thy mother a harlot. Then she pointed to the child.” Then the child begins to speak, one of the well-known
mysteries ascribed to 'Isa. The "very shameful calumny" which the Israelites brought forth against Maryam, is also mentioned in sûra iv. 155.

As to the words "O sister of Hârûn" (cf. above), it should be added that, according to the commentaries, this Hârûn was not Moses' brother, but one of Maryam's contemporaries, who was either a wicked man, with whom she is compared in this respect, or her pious brother.

A legend about loaves of bread which Maryam gave to the Magi, is mentioned by al-Mas'ûdi, iv. 79 sq.

The flight to Egypt is not mentioned in the Kur'an, unless the "elevated place" (sûra xxiii. 52; cf. above) should be an allusion to it. According to Muslim tradition which is acquainted with it, the abode lasts 12 years. After the death of Herod the holy family returns to Naṣrâ.

After his alleged death 'Isa consoles his mother from heaven. According to others it was Mary Magdalen. The stories of the Transitus Mariae have not obtained a place in Muslim tradition. Instead of these, there is a narrative how Maryam went to Rome in order to preach before Mârut (Nero), accompanied by John (the disciple) and Shim'un, the coppersmith. When Shim'un and Tâdãwus (Thaddaeus) were crucified with their heads downward, Maryam fled with John. When they were persecuted the earth opened and withdrew them from their persecutors. This miracle was the cause of Mârut's conversion.

MARZUBÂN, Arabic form of the title of provincial governors in the Sasanian empire, especially of the "wardens of the marches", the "markgraves". The word is derived from marz which still means in Persian a frontier district (Horn, Grundriss der neupersischen Etymologie, p. 218) and is found in Pehlevi in the form marcûn (in the Kûr-nâmâm; cf. H. S. Nyberg, Hilfsbuch der Pehlevi, i., Upsala 1928, p. 54) which suggests a north Iranian origin (cf. Lents, Z. I. L., iv. 255, 295). As we find alongside of marz also mardî in Persian (Horn, loc. cit.). The title is not found, however, before the Sasanian period and in the great inscription of Paikuli, the warden is called binâkh (Arm. binaâk), also a north Iranian title (Herzfeld, Paikuli, Berlin 1924, p. 155; cf. also Marquart, Erânshahr, p. 165 sqq.). In Syriac we find the forms marzûbân and marzûbân (Payne-Smith) and the Armenian has marzegh and marzgahan (Hubschman, Aramische Grammatik, p. 193). Persian finally has kept the word as marzûh, marzûbân or marzûzân (cf. e.g. the Burkhâni Kâfî).

It is from Arab sources that we are more particularly informed of the duties of the marzûbân. Al-Ya'kûbî (Ta'rikh, ed. Houtsma, i. 201) says that it was the title of the râdî al-balad, while the four great divisions of the empire were governed by pâdegushpân. The historians al-Tâbarî and al-Baladîrî tell us of the different marzûbân encountered by the Arabs in their conquests (cf. the list of provinces ruled by a marzûbân, drawn up by Baladîrî, and given by Nöldeke in Gesch. d. Perser und Araber, Leyden 1879, p. 446). In this period we find these governors dependent of any higher authority and concluding treaties and treaties. They sometimes retained their offices after the Arab conquest. Under the Sasanians the marzûbân were far from having such an independent position. We sometimes find them acting as generals under the command of the shâbul (e.g. Joshua Stylites, ed. Wright, p. 61).

Although the title gradually fell into disuse, Muslim Persia still retained the word, used in its original sense of "warden of the marches". It is frequently found in literature (cf. Sa'dî, Rustâm, ed. Graf, p. 73). On the other hand after the Sasanian period, marzûbân and its variants became a proper name (in Arabic sometimes al-Marzûbân) among Muslims and also among Persians (cf. the names of the caliphs of Palavi manuscripts; cf. especially just, "Iranisches Namentuch, s. v. Marzûpân.

Bibliography: A. Christensen, L'Empire des Sassanides, Copenhagen 1907, p. 43 sq.

MARZUBÂN b. RUSIM, a prince of the Bawand dynasty of Tabâristân [q.v.] regarded as the original author of the Marzûbân-nâmâ, a work in Persian prose containing a series of short stories and fables of a moral and didactic character. This book is known in two versions in elegant Persân of the xiiith century, the author of one of which was Sa'd al-Dîn al-Wârâmî; he dedicated it to Abu 'l-Kâsim Rabih al-Dîn, vizier of 'Uzbek b. Muhammâd b. Ildûs, 'Atâbeg of Adharbâydjân from 1210 to 1225. These dates give us probable limits for the composition of the book. The other version is the work of Muhammâd b. Ghâzi al-Malâyawî, secretary and later vizier of Kukn al-Dîn Sulaimân-shah, Safid-Dîn, who reigned from 1192 to 1204. It is called rawdat al-'alîqûl and differs a good deal in form and contents from the other, which is called the Marzûbân-nâmâ.

In the preface by Sa'd al-Dîn al-Wârâmî we are told that the original work had been written in the language of Tabâristân and the ancient Pûrî, the popular language, but that thanks to him this valuable work had been given a new life after 400 years (p. 6 and 35 of Mirât Muhammad Karwân's edition). In the first chapter Marzûbân b. Sharwân, descendant of Kayûs, brother of the Sasanian king Anushirwân, is mentioned as wâdl'i
MARZUBÂN — MASCARA

The Rawdat al-ʻUkāl on the contrary attributed the original book to a descendant of the Ziyārid ʿAlī b. Wāghnîr and says simply that it is written in a coarse style. Apart from these, there are very few references to the book in Persian literature. The author of the Kalâs-nûma (composed in 1082) says that the grandmother of his mother was the daughter of the prince Marzubân b. Rustam b. Sharwân, author of the Marzubân-nâma. Ibn Isândîyar in his Tarîkh-i Tabaristan (written in 1216) speaks of the Isfahân Marzubân b. Rustam b. Sharwân Parim as the author of the Marzubân-nâma, a work which is in every way better than the book of Kâlibâwân. He adds that this same Marzubân composed a diao in Tahâri verse called the Nikût-nâmâ (cf. An Unbridled Translation of the History of Tabaristan, by E. G. Browne, Leyden 1905, p. 86); finally the Persian bibliographer Rûdî Kûlî Kûmîn in the Fârhanâ-şârî (p. 94), who thinks that Marzubân was the son of Rustam b. Surkhtî, states that the date of Rustam b. Shahrîyar b. Shârvân b. Rustam was in all probability the father of Marzubân, is only known from a coin of the year 355 (966) (H. L. Rabino, Masândârân, Privatdruck, London 1928, G.M.S., N.S. vii, p. 135). Marzubân must have therefore flourished about 1000 A.D., i.e. during the period of the Persian renaissance.

In the first chapter of the Marzubân-nâmâ Marzubân is described as the brother of the reigning king. He had been begotten by the wife of Rustam, who reigned for 8 years (cf. Rabino, loc. cit.) and was supposed to have been begotten to live a life of seclusion and to compose a book containing wise counsels and useful directions for the conduct of life in this world. In this connection he has a dispute with the king and his vizier in the course of which he relates several anecdotes. The other chapters continue in the same style. Several of the fables and anecdotes are found in other books just as we find similar stories in the book of Kalîbâwân and in the Arabic Nights. The collection therefore belongs to an essentially Persian literary type, which has had considerable influence on Arabic literature. Since its contents have not been examined for comparison, it would be too hazardous to express an opinion on its relation to similar collections and popular Persian stories. It is very possible that a number of the stories are of Indian origin. On the other hand, we ought perhaps not to credit the statement that originally it was written in the Tabâri dialect; for then we should have to believe that the two authors of the new recension knew this dialect, about which however, we only have the notes in the Tarîkh-i Tabaristan of Ibn Isândîyar. Perhaps the reference is to a text in archaic Persian like the probable language of the Khudâi-nâmâ which Firdawsi used (cf. Noûdân, Geschichte der Aesthûrî in Pâplûn, Gottingen 1899, p. 27) and the source of a poem like Wis Îrânîn, a text which no longer pleased the taste of the literary connoisseurs of the xith century.

The Marzubân-nâmâ was published by Mirzâ Muḥammad Ḵâzwinî in 1908 (G.M.S., vii.) from a manuscript in the British Museum (Or. 6476) with the help of two other MSS. in the same collection, one in the Bibliothèque Nationale and another sent from Persia. The Paris manuscript had already been used for the publication of extracts from the Marzubân-nâmâ. For the Persian, Cf. Scheffer’s Chrœasthîkî perseâ, Paris 1885, p. 172—199. The Rawdat al-ʻUkâl is represented by a manuscript in Leyden (cf. M. Th. Houtsma, Eine unbekannte Bearbeitung des Marzubân-nâmâ, Z. D. M. G., lii. 359—392) and another in Paris. Mirzâ Muḥammad has given extracts from it in the preface to his edition. There is also an Arabic version of the same work from the pen of Ḵâzwinî, based on a Turkish version of Sa’d al-Wârâwîn’s recension; this Arabic text was lithographed at Cairo in 1278.

Bibliography: The philological data have been collected by Mirzâ Muḥammad Ḵâzwinî in the preface of his edition; Scheffer’s observations (p. 194—211) are to be utilised with caution. Cf. also: H. Ethé, Neupersische Litteratur, in Grundrisse d. iran. Phil., ii. 328 sqq., and E. G. Browne, A Literary History of Persia, ii. 115, 436.

J. H. KRAMERS

MASCARA. [See Sa‘û.]

MASAGAN. [See MAZAGHÎ.]

MASCARA, a town in Algeria (department of Oran), 50 miles S.W. of Mostaganem and 60 S.E. of Oran. Its position is 35° 26’ N. Lat. and 8° E. of Greenwich. It lies on the southern slope of the Bôl Shârīb range, called by the Arabs Shârīb al-Rîh and is built on the edge of a ravine at the bottom of which runs the Wâd Stî Tûjjman on the other side of which to the N.W. lies the native faubourg of Bôb Āli. Mascara commands the plain of Eghrîn, which measures 25 to 30 miles from W. to E. and 10 to 12 miles from N. to S. and is one of the most fertile regions of Algeria. The natives have grown cereals here from the earliest times and the Europeans have introduced tobacco and created vineyards, the produce of which is celebrated. It is the market for a region, becoming more and more prosperous, and by the census of 1926 had 30,669 inhabitants of whom 16,630 were natives.

Mascara is of considerable antiquity. According to Bâkri: (Masûli, transl. de Spaine, rev. by Fagnan, p. 160), it included among its inhabitants people who came from Tiher (Tiaret) some of whom went and settled at Iğan, a day’s journey S.E., when this town was founded by Yâli b. Muḥammad, son of Sâlih the Frânî, in 938 (949—950 A.D.). Ibn Hawkâl (Description de l’Afrique, transl. de Spaine, Journ. Ar., 1842) and Idrîsî (transl. de Goeje, p. 96) mention Mascara as a large well watered village rich in fruits. The Almohads seem to have built a fortress there. The Zîyâkîs of Tiemcen seized a governor and a garrison there. Leo Africanus (bk. iv., ed. Scheffer, vol. iii., p. 34) notes the importance of the market which was held at Mascara “one of the towns of the Beni Râsîl (Bânâ Raqîd) where one could buy, along with cereals in large quantities, cloth and articles of
harness manufactured in the country. The rulers of Tlemcen drew considerable revenues from it: 40,000 pistoles, according to Marmol (Africa, vol. ii., p. 356).
The Turks established themselves at Mascara in the xvith century and placed a garrison there. In 1701 they made it the capital of the beylik of the west, which had hitherto been Mazūna in Dhiba. The beys lived there till Oran was reoccupied by the Algerians in 1792. During this period, Mascara, which had hitherto only been an insignificant place, began to look like a regular town. The beys built two mosques and a madrasa, a wall and a ḩaṣba and brought in a water-supply. The manufacture of burnuses and ḩaṭīs, celebrated throughout the Regency, enriched the inhabitants. This prosperity began to decline after the beys left Mascara and especially after the risings, which broke out in the province of the west in the beginning of the xviith century. The Darkkîn Ben Serf seized the town in 1805 and held it for a time. In 1827 it was attacked by the marabout Muhammad al-Dījānt. Supported by the Hashim he gained possession of the faubourg of Ḑebb 'Ali but was killed by the Turks when preparing to storm the town itself. At the end of Turkish rule, 'Abd al-Kâdir [q.v.] who had been proclaimed Sulṭān by the tribes of the plain of Egiris, established his seat of government at Mascara, but rarely lived there. An expedition, in the month of December 1836 led by Marshal Iauzel, occupied Mascara which the French abandoned next day, after burning down part of it. The emir returned to the town and held it till May 30, 1841, when a column under Buqzad occupied it finally for the French. Mascara, then half in ruins, had only a population of 2,540 inhabitants.

A. Origin of the Mosque.

The word מַדְסִידִיק is found in Aramaic, the earliest occurrence being in the Jewish Elephantine Papyri (ed. Sachau, pl. 32; ed. Ungnad, No. 35; Cowley, Aramaic Papyri of the Fifth Cent. B. C., No. 44); also frequently in Nabataean (Corp. Inscri., ii. 181, 178, 185, 188, 190, 218; cf. Schwally, Z.D.M.G., ii. 1898, p. 134; Lidziarski, Handbuch d. nord. Epig., p. 152, 328; Cooke, North Semitic Inscriptions, p. 238). The word formed from מַדְסִידִיק “to prostrate oneself” seems to mean in Nabataean a stele, a sacred pillar, although the meaning “place of worship” has also been suggested. In the Elephantine Papyri where it is sworn by it is mentioned mīṣīd “temple, church” is perhaps a genuine formation from the verb (which is certainly borrowed from the Aramaic: cf. Noldke, Neue Beiträge z. sem. Sprachw., p. 36). The Arabic māṣīd may have been formed independently from the corresponding verb, which also undoubtedly comes from the Aramaic; probably the above mentioned Aramaic substantive was simply taken over, although no links can be shown between the Nabataean inscriptions and the Kurān.

The word in any case can hardly have been formed by Muhammad himself from its specific connection with divine service (“place where one saqīda or prostrates oneself”).

I. The Meccan period.

The word is used in the Kurān especially of the Meccan sanctuary (al-Māṣīd al-ḥāram, Sūrā ii. 139, 144, 145, 187, 192, 214; v. 3; viii. 34; ix. 7, 19, 28; xvii. 1; xxii. 25; xviii. 25, 27); according to later sources, this was already the usage in the Meccan period (cf. Yaḇṭīṭ, ed. Houtsma, i. 285, 12). According to tradition the term al-Māṣīd al-ḥadīj (Sūrā xvii. 1) means the Jerusalem sanctuary (according to Schrieke, Ish., vi. i qqq.; cf. Horovitz, ibid., ix. 155 qqq., the reference is rather to a place of prayer in heaven); and in the legend of the Seven Sleepers māṣīd means a tomb-sanctuary probably Christian, certainly pre-Muhammadan (Sūrā xvii., 20). The word is also applied to pre-Islamic sanctuaries, which belong to God and where God is invoked, although Muhammad was not always able to recognise the particular cult associated with them. It is undoubtedly with this general meaning that the word is used in this verse of the Kurān: “If God had not taken men under his protection, then monasteries, churches and places of prayer (išāraṭ) and māṣīd would have been destroyed” (Sūrā xxii. 41). The word is also used in a ḏud of an Alyssian church (Bukhārī, Ṣaḥīḥ, bāb 48, 54; Muslim, Māṣīd, Tr. 3) and in another of Jewish and Christian tomb-sanctuaries (Bukhārī, Ṣaḥīḥ, bāb 55; Muslim, Māṣīd, Tr. 3). Even Ibn Kathīr can still use the word in the general meaning of a temple or place of worship of any religion (Maḥdollama, fasc. 4, 6 at the end). There is therefore no question of a word of specifically Muslim creation. This is in entire agreement with Muhammad’s original attitude to earlier religions. Just as Abraham was a Muslim, so David had a masjid (Tabari, i. 2408, 7 qqq.).

To the Prophet the Meccan sanctuary always remained the principal mosque, known as Bait ʿAllah even before the time of the Prophet. It was a grave charge brought against the Kurān in the Meccan period that they drove the believers out of al-Māṣīd al-ḥāram (Sūrā ii. 214; v. 3; viii. 34; xxii. 25; xviii. 25), which was considered all the more unjust as they worshipped the true lord of the sanctuary. To the true God belonged al-māṣīd (Sūrā lxxii. 18, Meccan); it is therefore an absurdity for the godless to prevent the wor-
ship of God in “God’s own mosques” (Sūra ii. 108). The result was that it was revealed in the
year 9: “It is not right for polytheists to frequent the mosques of God” (Sūra ix. 17 sq.) and the
opponents of the new religion were therefore ex
cluued from the sanctuary. The Sūra agrees with the
Kūfī, that the sanctity of al-Masjid al-Haram was
which had been用途from childhood was
always regarded by him as indisputable. Like other
Meccans, he and his followers regularly made the
petition around the Ka'ba and kissed the Black Stone
(e. g. Ibn Hishām, p. 153, 17 sqq.; 239, 8, 251,
13; it is frequently stated that he used to sit in the
masjid like his fellow-citizens, alone or with a
follower or disputing with an opponent (Ibn
Hishām, p. 233, 15 sqq. 252, 24, 259, 260,
269, 15 sqq.). It is related that he used to perform
the prayer between the Yaman corner and the Black
Stone, apparently from the narrator’s context very
frequently (Ibn Hishām, p. 196, 5 sqq.). After his
conversion, 'Umar is said to have arranged that
believers should be admitted to the sanctuary of the
Ka'ba (Ibn Hishām, p. 224, 13 sqq. 17 sqq.).
How strongly Muhammad felt himself attached to
the Arab sanctuary is evident from the fact that
he took part in the traditional rites there before
the Hijra (Sūra evit. 21; in the year 1, one of
his followers, Sa'd b. Mu'ādh, took part in the
pilgrimage ceremonies and in the year 2 he himself
attended on the 10th Dhu '1-Hijja on the
masjid of the Banū Salīma. He therefore, here as
elsewhere, retained ancient customs where his new
teaching did not directly exclude them. But when an
independent religion developed out of his preaching,
a new type of divine service had to be evolved.

In Mecca, the original Muslim community had
no special place of worship. The Prophet used to
perform the prayer in secret in the narrow alleys
of Mecca with his first male follower 'Ali and
with the other earliest Companions also (Ibn Hishām,
p. 159, 166, 17 sqq.). The references are
usually to the solitary prayer of the Prophet, some
times beside the Ka'ba (Ibn Hishām, p. 190, 5 sqq.),
sometimes in his own house (Ibn Hishām, p. 203,
7 sqq.). That the believers often prayed together
may be taken for granted; they would do so in a
Abū 'Umar is said to have conducted the ritual
prayer together with others beside the Ka'ba (Ibn Hishām,
p. 224) because 'Umar was able to defy the
Kurāsh. When the Prophet recited in the mosque
the revelation, later abrogated, recognising al-Lāti,
al-'Alîsha and Ma'nāt, according to the legend,
only the believers but also the polytheists present
took part in the sūjud (Tabari, i. 1192 sqq.). Abū
Bakr is said to have had a private place of prayer
(masjid) in Mecca in his courtyard beside the
gate: the Kurāsh, we are told, objected to this
because women and children could see it and might
be led astray by the emotion aroused (Ibn Hishām,
p. 250; Bukhārī, Sahīh. B. 86; Kāfīzī, B. 14 etc.; Masudi, B. 22).

In the dogma taught by Muhammad a sanctuary
was not a fundamental necessity. Every place
was the same to God and humility in the pre
ience of God, of which the ritual prayer was the
expression, could be shown anywhere; hence the
saying of the Prophet that he had been given
the whole world as a masjid, while earlier pro
phets could only pray in churches and synagogues

(Vāqī'ī, transl. Wellhausen, p. 403; Corpus juris
di Zaid b. 'Ali, ed. Grünert, p. 50 and clxxix; Bukhārī,
Sahīh, B. 56; Tabari, B. 11; Muslim, Masājid, Tr. 1) and also the saying: "Wherever
the hour of prayer overtakes thee, thou shalt per
form the prayer and that is a merit" (Munawwir
Masājid, Tr. 1). That he nevertheless remained
firmly attached to the traditional sanctuary of the
Ka'ba, produced a confusion of thought which is
very marked in Sūra ii. 136 sqq. When in Medina
he was able to do as he pleased, it must have been
natural for him to create a place where he could
be undisturbed with his followers and where
they could perform the ritual prayer together.

2. The Foundation of the Mosque in Medina.

According to one tradition the Prophet came
riding into Medina on his camel with Abū Bakr as ri'di surrounded by the Banū Nadīlār.
The camel stopped on Abū Ayūb's fāna. Here (accordin
g to Abū Da'ūd), the Prophet performed the sūjud,
and immediately afterwards ordered the mosque
to be built and purchased the piece of land from
two orphans, Sa'd and Suhail, who were under the
guardianship of Mu'ādh b. 'Abd, for 10 dinārs,
but declining to accept it as a gift; he lived
after Abū Ayūb until the mosque and his houses
were completed. During this period he performed
the prayer in courtyards or other open spaces (Bukhārī,
Sahīh, B. 48; Muslim, Masājid, Tr. 1; Ahmad b.
Hanbal, Masājid, iii. 212 above; Ibn Hishām, p. 336;
Tabari, i. 1258 sq.; Mas'ūdī, Murūj, iv. 140 sq). According
to this tradition, the building of the mosque was intended by the Prophet from the
first and the choice of the site was left to the
wishes of his mount. According to another tradi
tion the Prophet took up his abode with Abū
Ayūb, but during the first period of his stay in
Medina he conducted the prayer in the house
of Abū Umāma Asād, who had a private masjid,
in which he used to conduct sūjāts with his
neighbours. The Prophet later expressed the desire
to purchase the adjoining piece of ground and
he bought it from the two orphans, who, ac

accordind to this tradition, were wards of Asād
(Bukhārī, Futūḥ al-Buldān, ed. de Goeje, p. 6; cf.
Wustenfeld, Geschichte der Stadt Medina, p. 60).

The site was covered with graves, ruins (ghirāb; also bart, Tabari, i. 1259, 17; 1260, 1; cf.
Ahmad b. Hanbal, Masājid, iii. 212, 7, perhaps due
to an old misreading) and palm-trees and was
used as a place for keeping camels and (smaller
domestic animals, Bukhārī, Waṣṣa, B. 66). The
site was cleared, the palms cut down and the
walls built. The building material was bricks baked
in the sun (lābīn) (Ibn Hishām, p. 337; Bukhārī,
Sahīh, B. 62, 65; according to one tradition they
were baked at the well of FĀtima, Wustenfeld,
Stadt Medina, p. 31); in places it was a cour
tyard surrounded by a brick wall on a stone
foundation with three entrances: the gateposts
were of stone. On the iblīb side (i.e. the north
side) at first left open, the stems of the palm
trees which had been cut down were soon set up
as columns and a roof was put over them of
dissembled leaves and clay. On the east side two
huts of similar materials were built for the Prophet's
wives Sawāda and 'Āisha; their entrances opened
on to the court and were covered with carpets:
they were later increased so that there were nine
little houses for the Prophet's wives. When the 
ṣūffā or ẓūllā the homeless Companions found 
shelter (Bukhārī, Ẓādi, B. 48, 62; Wustenfeld, 
Medina, p. 60 sq., 66; Dīyārābārī, Tarīkh al-
Khāmis, Cairo 1302, i. 387 sqq.; on the ẓūffā, 
p. 387 in the middle; 391 after the middle; cf. 
L. Caetani, Annales dell'Islam, i. 377 sqg.). In 
seven months the work was completed (Wustenfeld, 
Medina, p. 59), according to others in the month 
of Safar of the year 2 (Ibn Hīṣām, p. 339, 48 sqq.).
The mosque was very simple. It was really only 
a courtyard with a wall round it; the ẓūffā 
already mentioned supplied a shelter on the north 
side, while on the south side, later the ẓūlība side, an 
arbour was probably built also, for the Prophet 
used to preach leaning against a palm-trunk and this 
must have been on the ẓūlība side. How large the 
arbours were cannot be ascertained. The mosque 
was the courtyard of the Prophet's houses and 
at the same time the meeting-place for the believers 
and the place for common prayer.

According to the sources, it was the Prophet's 
invention from the very first to build a mosque 
at once in Medina; according to a later tradition 
Gabriel commanded him in the name of God to 
build a house for God (Khāmis, i. 387 infra); 
but this story is coloured by later conditions. It 
has been made quite clear, notably by L. Caetani 
(Annales dell'Islam, i. 432, 437 sqq.) and later by 
H. Lammens (Mō'awwid, p. 8, note 5, 62 etc.; 
do., Zīdd, p. 39 sqq., 93 sqq.) that the earliest 
masjīd had nothing of the character of a sacred 
edifice. Much can be quoted for this view from 
Ḥadīth and Sīra (cf. Annales dell'Islam, i. 440). 
The unconverted Ḥākifis were received by the 
Prophet in the mosque to conduct negotiations 
and he even put up three tents for them in the 
courtyard (Ibn Hīṣām, p. 916; Wāḵīdī-Wellhausen, 
p. 382); envoy from Tāmīl also went freely 
able to the mosque and asked for the Prophet, who 
dealt with them after he had finished praying (Ibn Hīṣām, 
brought to the masjid the head of the Ḥudhaili 
Sūfṣān, threw it down before the Prophet and 
gave his report (Ibn Hīṣām, p. 981 sq.; Wāḵīdī- 
Wellhausen, p. 225). After the battle of ʿUḥd the 
Medina chiefs spent the night in the mosque 
(Wāḵīdī-Wellhausen, p. 149). The Āwssīl 
tended their wounded here (ibid., p. 215 sq.; ʿTabārī, i. 
1491 sqq.); a prisoner of war was tied to one of 
the pillars of the mosque (Bukhārī, Ẓādi, B. 76, 
82; cf. 75). Many poor people used to live in the 
yard (Bukhārī, Ẓādi, B. 58); tents and huts were 
put up in the mosque, one for example by converted 
and liberated prisoners, another by the Banū Ghifār, 
in whose tent Saʿd b. Muṣūf died of his wounds 
(ibid., B. 77; ʿUḍ-ʿal-Ghifār, i. 297). People sat 
as they pleased in the mosque or took their ease 
lying on their backs (Bukhārī, ʿIṣm, bāb 6; Ẓādi, 
bāb 85; Ibn Saʿd, i. 124, 4); even so late as the 
reign of ʿUmar it is recorded that he found 
strangers sleeping in a corner of the mosque 
(Kūmī, p. 118, 13 sqg.); the Prophet received 
gifts and distributed them among the Companions 
(Bukhārī, Ẓādi, bāb 42); disputes took place over 
business (ibid., bāb 71, 85) and in general people 
conducted themselves as they pleased. Indeed, on 
one occasion some Sudanese or Abyssinians with 
the approval of the Prophet gave a display with 
shield and lance on the occasion of a festival 
(ʿIṣm, bāb 69; Ṭalāʿīn, bāb 71, 25; Ẓīḥād, bāb 81) 
and on another a stranger seeking the Prophet, 
rode into the mosque on his camel (do., ʿIṣm, 
bāb 6). So little "sanctified" was this, the oldest 
mosque, that one of the Muḥājīrūn, ejected for 
scatting at the believers, could call to Abī Ayūb 
"Are you throwing me out of the Mirbād Bani 
Thālabu?" (Ibn Hīṣām, p. 362, 10 sqq.).

All this gives one the impression of the head- 
quar ters of an army, rather than of a sacred 
edifice. On the other hand the mosque was used 
from the very first for the general divine service 
and thus became something more than the Prophet's 
private edifice. Whatever the Prophet's intentions 
had been from the first, the masjid with the 
increasing importance of Islam was bound to become 
very soon the political and religious centre of 
the new community. The two points of view 
cannot be distinguished in Islam, especially in 
the earlier period. The mosque was the place 
where believers assembled for prayer around the 
Prophet, with whom he delivered his addresses, 
and not only appeals for obedience to God but 
regulations affecting the social life of the community 
(cf. Bukhārī, Ẓādi, bāb 70, 71); from here he 
controlled the religious and political community 
of Islam. Even at the real old sanctuaries of 
Arabia, there were no restrictions on what one 
could do; what distinguished the mosque from 
the Christian church or the Meccan temple was 
that in it there was no specially dedicated ritual 
object. At the ʿAbā or also people used to gather 
to discuss everyday affairs and also for important 
meetings, if we may believe the Sīra (Ibn Hīṣām, 
p. 183 sqq., 185, 1, 229, 8, 248, 257, v). Here 
also the Prophets used to sit; strangers came to 
visit him; he talked and they disputed with him; 
people even came to blows and fought there (Ibn 
Hīṣām, p. 183 sqq., 185 sqq., 187 sqq., 202, 19, 237, 
259; Chor. d. Stadt Mecca, ed. Wustenfeld, i. 
223, 11). Beside the ʿAbā was the Dār al-Nadwa, 
where important matters were discussed and justice 
administered (ibid., see index). From the Medina 
mosque was developed the general type of the 
Muslim mosque. It depended on circumstances 
whether the aspect of the mosque as a social 
centre or as a place of prayer was more or less 
emphasised.

3. Other Mosques in the Time 
of the Prophet.

The mosque of the Prophet in Medina was not 
the only one founded by Muslims in his lifetime 
and according to tradition not even the first, which 
is said to have been the mosque of ʿAbū. In this 
place, which belonged to the territory of Medina 
(see Wustenfeld, Geschichte der Stadt Medina, 
p. 126), the Prophet on his Hīdjr stopped with 
the family of ʿAmr b. ʿAṣw; the length of his 
stay is variously given: 3, 5, 8, 14 or 22 days. 
According to one tradition, he found a mosque 
there on his arrival, which had been built by the 
first emigrants and the ʿAmr and he performed 
the ṣalāt there with them (see Wustenfeld, p. 
c. 56; Buṣārī, Futūḥ al-Baladīn, i. 1; 
Dīyārābārī, Tarīkh al-Khamis, Cairo 1302, i. 
380 sqq.). According to another tradition, the Prophet 
himself founded the mosque on a site, which 
belonged to his host ʿAbūl-Ḥaṣım and was used as a 
mirbād for drying dates or according to others,
to a woman named Labba, who tethered her ass there (Wustenfeld, Medina, p. 131; Ibn Hisham, p. 335; Tabari, i, 1260; Ibn Sa'd, i, 1, 6; Mas'udi, Murug, iv, 139; Diyarbakri, Khamis, i, 381; al-Sira al-Halabyya, Cairo 1320, ii, 58 sq.). Out of this tradition arose a legend based on the story of the foundation of the principal mosque in Medina. The Prophet moved (first Abū Bakr and 'Umar without success, then) 'Ali mount a camel and at the place to which it goes builds the mosque with stone brought from the Ifarra; he himself laid the first stone, and Abū Bakr, 'Umar and 'Uthmān the next ones (Khamis, i, 381). The Prophet is said to have henceforth visited the mosque of Kūbah every Saturday, either riding or walking and the pillar is still shown beside which he conducted the service (Bukhari, Fālid al-Salāt fi Masjid Makka wa-l-Medina, bāb 2, 4; Muslim, Hadīj, tr. 94; Khamis, i, 382. Ballāghun, p. 5). We are occasionally told that he performed his ṣalāt on the Sabbath in the mosque at Kūbah when he went to the Banū Najir in Kailā of the year 4 (Wustenfeld-Wellhausen, p. 163).

It is obvious that the customs and ideas of the later community have shaped the legend of this mosque. The only question is whether the old tradition that the mosque was founded either by the Prophet himself or even before his arrival by his followers is also a later invention. We thus come to the question whether the Prophet founded or recognised any other mosques at all than that of Medina. L. Caetani, in keeping with his view of the origin of the mosque, is inclined to deny it, pointing to the fact that there was later an obvious tendency to connect mosques everywhere with the Prophet and that Sūra 108 strongly condemn the erection of an “opposition mosque” (M. al-Dirār). The Kurānic passage is as follows: “Those who have built themselves a masjid for opposition (dirār) and unbelief and division among the believers and for a refuge for him who in the past fought against God and his Prophet, and they swear: we intended only good. God is witness that they are liars! Thou shalt not stand up in it, for verily a masjid which is founded on pretence from the first day of its existence has more right that thou shouldst stand in it; in it are men who desire to purify themselves (and loveth those who purify themselves)” (Sūra ix, 108-109). According to tradition this was revealed in the year 6: when the Prophet was on the march to Tabūk, the Banū Sālim said to him that they had built a mosque to make it easier for their feeble and elderly people, and they begged the Prophet to perform his ṣalāt in it and thus give it his approval. The Prophet postponed it till his return, but then this revelation was announced, because the mosque had been founded by Mu'ādh ibn Jarrah at the instigation of Abū 'Amir al-Kalīb, who fought against the Prophet. According to one tradition (so Ibn 'Umar, Zad) they founded the mosque on pretence of that of Molīna from which the people wished to emancipate themselves: according to another (Ibn 'Abbās) the reference was to that of Kūbah; Abū 'Amir and his followers were not comfortable among the Banū 'Amir b. 'Awf and therefore built a new mosque. According to some traditions it was in Dūhā Awn. The Prophet however had it burned down (Tabari, i, 1704 sq.; Ibn Hishām, p. 557 sq.; Ibn Sa'd, i, 1, 6; Wustenfeld-Wellhausen, p. 410 sq.; Tabari, Tafsir, xi, 17 sqq.; Wustenfeld, Medina, p. 131; al-Sira al-Halabyya, ii, 60; Ballāghun, p. 1 sq.; Muslim, Hadīj, tr. 93). If the connection with the Tabūk campaign is correct, the Masjid al-Dirār is to be sought north of Medina; “the mosque founded on piety” would then be the mosque of Medina rather than that of Kūbah which lies to the south of it. There is in itself nothing impossible about the rejection in principle of any mosque other than that of Medina. We should then have to discard the whole tradition, for, according to it, the Prophet is at first not unfavourably disposed to the new mosque and his wrath, according to the tradition, arises from the fact that it had been founded by a refractory party. But as a matter of fact there are indications that a number of mosques already existed in the time of the Prophet; for example, the verse in the Kurān: “In houses, which God hath permitted to be built that His name might be praised in them, men praise Him morning and evening, whom neither business nor travel restrains from praising God and performing the ṣalāt and the giving of alms” etc. (Sūra xxiv, 36 sq.). If this revelation, like the rest of the Sūra, is of the Medina period, it is difficult to refer it to Jews and Christians, and this utterance is quite clear: “Observe a complete fast until the night and touch thou them (i.e. women) not while ye are in the mosques” (Sūra ii, 183). This shows that there were already in the time of the Prophet, several Muslim mosques which had a markedly religious character and were recognised by the Prophet.

That there were really public places of prayer of the separate tribes at a very early date is evident from the tradition that the Prophet in the year 2 offered his sacrifice on the 10th Dhu l-Hijja on the Musalla of the Banū Salīm. In addition there are constant references to private masjīd where a few believers, like Abū Bakr in Mecca, made a place for prayer in their houses and where others sometimes assembled (Bukhari, Sunn, bāb 46, 87; Tāhājjudī, bāb 30; cf. also Ḥāḥīn, bāb 50).

B. Origin of Mosques after the Time of the Prophet.

I. Chief Mosques.

What importance the Medina mosque had attained as the centre of administration and worship of the Muslims is best seen from the fact that the first thought of the Muslim generals after their conquests was to found a mosque as a centre around which to gather.

Conditions differed somewhat according as it was a new foundation or an already existing town. Important examples of the first kind are Bāṣra, Kūfa and al-Fṣima. Bāṣra was founded by 'Utbah b. Nāfi' as winter-quarters for the army in the year 14 (or 16 or 17). The mosque was placed in the centre with the Dār al-Imāra, the dwelling of the commander-in-chief with a prison and Darāwīn in front of it. Prayer was at first offered on the open space which was fenced round; later the whole was built of reeds and when the men went off to war the reeds were pulled up and laid away. Abū Mūsā al-Asghārī, who later became 'Umar's Wālī, built the edifice of clay and bricks baked in the sun (tābīn) and used grass
for the roof (Balādhūrī, p. 346 sqq.; 350; B.G.A., v. 182 sqq.; Yaḵūt, Muḥjam al-Dalīlān, i. 641, 6 sqq.; cf. Ţabarī, i. 2377; 11 sqq.). It was similar in Kūfa which was founded in 17 by Saʿd b. Abī Waḳḳās. In the centre was the mosque and beside it the Dār al-Imāra was laid out. The mosque at first was simply an open quadrangle, zāhn, marked off by a trench round it. The space was large enough for 40,000 persons. It seems that reeds were also used for building the walls here and later Saʿd used ṭabīn. On the south side (and only here) there was an arbour, ṣulūṭ, built (cf. Balādhūrī, p. 348, 1, 3; ṣuffa). The Dār al-Imāra beside the mosque was later by ʿUmar’s orders combined with the mosque (Ṭabarī, i. 2481, 12 sqq., 2485; v. 2487 sqq., 2494, 14; Yaḵūt, Muḥjam, iv. 323, 10 sqq.; I.Balādhūrī, p. 275 sqq.; cf. Annali delli 'Islam, iii. 846 sqq.). The plan was therefore an exact reproduction of that of the mosque in Medina (as is expressly emphasised in Ṭabarī, i. 2489, 4 sqq.); the importance of the mosque was also expressed in its position and the commander lived close beside it. There was no difference in al-Fuṣṭāṭ, which, although there was already an older town here, was laid out as an entirely new camp. In the year 21, after the conquest of Alexandria, the mosque was laid out in a garden where ʿAmr had planted his standard. It was 50 ḥārā long and 30 broad. Eighty men fixed its ḥabla, which however was turned too far to the east, and was therefore altered later by Kūra b. Shārik. The court was quite simple, surrounded by a wall and had trees growing in it; a simple roof is mentioned; it must have been in line with the above mentioned ṣulūṭ or ṣuffa. ʿAmr b. ʿAbī Ṣaḥī lived just beside the mosque and around it the Aḥl al-Raʿya. Like the house of the Prophet, the general’s house lay on the east side with only a road between them. There were two doors in each wall except the southern one (Yaḵūt, Muḥjam, iii. 898 sqq.; Makrīzī, Khuṭṭaṣ, iv., Cairo 1326, p. 4 sqq.; Ibn Ḍuḵmān, ʿA. al-Maṣāṭir, Cairo 1893, p. 59 sqq.; Suyḥī, Ḥusn al-Muḥṣafara, i. 63 sqq.; ii. 135 sqq.; cf. Annali delli 'Islam, iv. 554, 557, 653 sqq.). We find similar arrangements made in al-Mawṣil twenty years earlier (Balādhūrī, p. 331 sqq.).

In other cases the Muslims established themselves in old towns either conquered or surrendered by treaty; by treaty they received a site for their mosque (e. g. Balādhūrī, p. 116, 14, 147, 9). But the distinction between towns which were conquered and those which were surrendered soon disappeared and the position is as a rule not clear. Examples of old towns in which the Muslims established themselves are al-Madāʾin, Damascus and Jerusalem. — In al-Madāʾin Saʿd b. Abī Waḳḳās after the conquest in 16 distributed the houses among the Muslims and Kīsār’s Fāṭimah was made into a mosque, after Saʿd had conducted the Sāḥīb al-Fāṭih in it (Ṭabarī, i. 2443; 15 sqq., 2451, 7 sqq.). In Damascus which was occupied in 14 or 15 by capitulation, according to tradition, the Church of St. John was divided so that the eastern half became Muslim from which Muslim tradition created the legend that the city was taken partly by conquest and partly by agreement (Balādhūrī, p. 125; Yaḵūt, Muḥjam, ii. 591; Ibn Ḍuḥairī, Khuṭṭa, p. 262; J. A., ser. 9, v. 376, 381, 404). As a matter of fact however, the Muslims seem to have laid out their own mosque here just beside the church

[cf. DAMASCUS]; and close beside it again was the Khaṭṭār, the commander-in-chief’s palace, from which a direct entrance to the maṣjid was later made (B.G.A., ii. 159, 9). Conditions here were therefore once more the same as in Medina. But the possibility of an arrangement such as is recorded by tradition cannot be rejected, for there is good evidence of it elsewhere; in Hīmṣ for example, the Muslims and Christians shared a building in common as a mosque and church, and it is evident from al-ʾIṣṭakhrī and Ibn Ḥawkal that this was still the case in the time of their common authority, al-Balūkā (339 = 921) (B.G.A., i. 61, 7 sqq.; ii. 117, 5; iii. 156, 13), and a similar arrangement is recorded for Dābil in Armenia (B.G.A., i. 158, 3 sqq.; ii. 244, 21; cf. iii. 577, 3 sqq.). There were special conditions in Jerusalem. The Muslims recognised the sanctuary there, as is evident from the earlier Kibla and from Sūra xxvii. 1 (in the traditional interpretation). It must therefore have been natural for the conquerors, when the town capitulated, to seek out the recognised holy place. Indeed we are told that ʿUmar in the year 17 built a mosque in Jerusalem on the site of the temple of Solomon (F. Baethgen, Fragmenta syr. n. arab. Hist., p. 17, 110, following Ḫūd al-dnā, metropolitan of Basra after 700 A.D.; cf. for the viith century Theophanes quoted by Le Strange, Palestine under the Moslems, 1890, p. 91 note). That the Kubbāt al-Šakhr (q. v.) which the Mosque of ʿUmar replaced, stands on the old site of the Temple is undoubted. How he found the site is variously recorded (cf. al-Kūns). The building was, like other mosques of the time of ʿUmar, very simple. Arculf who visited Jerusalem about 670 says “The Saracens attend a quadrangular house of prayer (domus orationis, i.e. masjid) which they have built with little art with boards and large beams on the remains of some ruins, on the famous site where the Temple was once built in all its splendour” (Itinerae Hierosolymitana, ed. P. Geyer, 1898, p. 226 sqq.; transl. by P. Mickley, in Das Land der Bibel, ii/2, 1917, p. 19 sqq.). It is of interest to note that this simple mosque, like the others, was in the form of a rectangle; in spite of its simple character it could hold 3,000 people, according to Arculf.

As late as the reign of Muʿawiyah we find a new town, Kārāwān, being laid out on the old plan as a military camp with a mosque and Dār al-Imāra in the centre (Yaḵūt, Muḥjam, iv. 213, 10 sqq.). As Balādhūrī, for example, shows, the Muslim conquerors even at a later date always built a mosque in the centre of a newly conquered town, at first a simple one in each town, and it was a direct reproduction of the simple mosque of the Prophet in Medina. It was the exception to adapt already existing buildings in towns. But soon many additional mosques were added.

2. Tribal mosques and Sectarian mosques.

There were mosques not only in the towns. When the tribes pledged themselves to the Prophet to adopt Islam, they had also to perform the ṣalāt. It is not clear how far they took part in Muslim worship, but if they concerned themselves with Islam at all, they must have had a Muslim place of meeting. Probably even before Islam they had, like the Meccans, their muḍjīf or nāḍī or dīr skāṭ, where they discussed matters of general importance (cf. Lammens, Muṭawwī, p. 205; Ẓiʿād.
As the mosque was only distinguished from such places by the fact that it was also used for the common salāt, it was natural for tribal mosques to come into existence. Thus we are told that as early as the year 5 the tribe of 'Amir b. 'Abd al-Kasid had built a mosque and introduced the asghām (Wākidh-Wellhausen, p. 351). How far one can rely on such stories in a particular case is however uncertain. A late writer like al-Diyārābāki says of the Banū 'Amšūṭ that they aslamū wa-banū masджīd (Tuṣkī Khimiz, i. 132, 201; cf. Annales dell' islam, ii. 221): in the early sources this is not found. Nor is the story, told by Ibn Sa'd at all probable, that envoys from the Banū Ḥasanah received orders to destroy their churches, sprinkle the ground with water and build a mosque (Ibn Sa'd, i. 56, 11 sgg., while Ibn Ḥishām, p. 945 sq.; Tahtābi, i. 1737 sqg., and Baladhuri, p. 36, sqg. say nothing about it). But that there were tribal mosques at a very early date is nevertheless quite certain. The mosque at Kubā' was the mosque of the tribe of 'Amr b. Ṭawfīq (Ibn Sa'd, i. 6, 6, and cf. above) and according to one tradition, the Banū Ḥanna b. Ṭawfīq were jealous of it and built an opposition mosque (Baladhuri, p. 3; Tahtābi, Tāṣīrī, i. 21 infra). A Companion, who had taken part in the battle of Badr, 'Īsā b. Mālik, complained to the Prophet that he could not reach the masджīd of his tribe in the rainy season and wanted to build a mosque for himself (Bukhārī, Sūrat, bāb 46; Muslim, Masджīd, bāb 47). The Prophet himself is said to have visited the masджīd of the Banū Zuraq (Bukhārī, Dālī, bāb 56—58) and in the masджīd of the Banū Salama during the prayer, there was revealed to him Sūrat i. 139, which ordered the new jihād, wherefore it was called Masджīd al-Khambatī (Wustenfeld, Mecen., p. 62).

The tribal mosque was a sign that the independence of the tribe was still retained under Islam. Indeed we hear everywhere of tribal mosques, for example around Medina that of the Banū Kurayra, of the Banū Ḫanūfa, of the Banū Zafar, of the Banū Wa'il, of the Banū Harām, of the Banū Zuraq, said to have been the first in which the Kurān was publicly read, that of the Banū Salama etc. (see Wustenfeld, Geogr. d. Stadt Medina, p. 29, 37 sqq., 44, 50, 57, 139 sqg.; the "mosque of the two Khubas" belonged to the Banū Sawad b. Ḥamm b. Ka'b b. Ḥamm (Wustenfeld, Medina, p. 41). This then was the position in Medina the tribes had usually their own mosques and one mosque was the chief mosque. This was probably the position within the Prophet's lifetime; for in the earliest campaigns of conquest, mosques were built on this principle. 'Umar is said to have written to Abū Mūsā in Bāṣara telling him to build a mosque it is ījīf'amā and mosques for the tribe, and on Fridays the people were to come to the chief mosque. Similarly he wrote to Salīh b. Abī Waḳḫaṣ in Kūfa and to 'Amr b. al- Ḥaḍīd in Mīr. (On the other hand in Syria where they had settled in new towns, they were not to build tribal mosques (Mākurī, Khidrī, iv. Cairo 1326, p. 4 infra). It is actually recorded that the tribes in each ījīf'amā had their own mosques around the mosque of 'Amr in al-Fuqī (cf. Ibn Duḥaym, p. 62 infra sqg.) and even much later a tribal mosque like that of the Rāṣīda was still in existence (Mākurī, Khidrī, iv. 64, 4 sqg.). Even in the chief mosque, the tribes had their own places (ibid., p. 9, 12 sqg.). We have similar evidence from the Banū 'Adī in Bāṣara for example there was a Masджīd Banū 'Adī (Baladhuri, p. 356, sq.; one of the Banū Kūfah (R. G. A., vii. 201, 16), one of the Banū 'Adī (ibid., v. 101, 4) and one of the Anṣār (cf. Goldziher, Muhammedanische Studien, i. 77, note 5); in Kūfa we find quite a number such as that of the Anṣār (Tahtābi, i. 284, 13 sqg.), of the Banū Dhu al-Kāsir (ibid., i. 657, sqg.), of the Banū Duḥām (ibid., p. 670, 4), of the Banū Makhūm (ibid., p. 734, 15), of the Banū Ḥillal (ibid., p. 1687, 9), of the Banū 'Adī (ibid., p. 1705, 4), of the Banū Dhu al- Ḥijār (ibid., p. 532, 8 sqg.), of the Dhuḥayla (ibid., p. 533, 6), of the Banū Ḥāram (ibid., ii. 2509, 10) and the 'Abīs had even several masджīd (Baladhuri, p. 278, 12 sqg., s. also p. 265 and Goldziher, loc. cit.).

During the wars these tribal mosques were the natural rallying points for the various tribes; the mosque was a madīlah, where councils were held (Tahtābi, i. 532, 6 sqg.) and the people were taught from its minbar (ibid., p. 284); battles often centred for this reason round these mosques (e.g. Tahtābi, i. 130, 148, 6, 960). "The people of your mosque", al-masджīd al-fikhrī (ibid., p. 532, 10) became identical with "your party". Gradually, as new sects arose, they naturally had mosques of their own, just as Muslīmīs before them is said to have had his own mosque (Baladhuri, p. 90, 4 from below; Ibn Ḥanbal, Maqārīd, i. 404 infra). Thus we read later of the mosques of the Hanāfīs, the Shafi'īs, the Māturīdīs, in which there was continual riot and confusion (Hīfī al-Ṣūbī, Kitāb al-Wasāfī, ed. Amenedo, p. 335). It sometimes happened that different parties in a town shared the chief mosque (B. G. A., ii. 102, 5 sqg.) but as a rule it was otherwise. In particular the Sunnīs and Shi'īs as a rule had separate mosques (cf. M. Z., Die Renaissance des Islam, p. 63). It sometimes even happened that Hanāfīs and Shi'īs had separate mosques (Yākūt, Muḥallām, v. 509, 5; cf. B. G. A., iii. 323, 11). These special mosques were a great source of disruption in Islām and we can understand that a time came when the learned discouraged whether such mosques should be permitted at all. But the question whether one might talk of the Masджīd Banū Fuṣāl was answered by saying that in the time of the Prophet, the Masджīd Banū Zuraq was recognised (Bukhārī, Sūrat, bāb 41; ibid., bāb 56—58 and Tahtābi, Tāṣīrī, xi. 20 after the middle of the page).

3. Adaptation to Islām of Older Sanctuaries; Memorial Mosques.

According to the early historians, the towns, which made treaties with the Muslims, received permission to retain their churches (Baladhuri, p. 121, in the middle; Tahtābi, i. 2405, 2407) while in the conquered towns the churches fell to the Muslims without any preamble (cf. Baladhuri, p. 120 infra). Sometimes also it is recorded that a certain number of churches were received from the Christians, e.g. fifteen in Damascus according to one tradition (ibid., p. 124, 8; otherwise p. 121; cf. F. A., 9 Ser., viii. 403). It is rather doubtful whether the process was such a regular one; in any case the Muslims in course of time appropriated
many churches to themselves. With the mass-
conversions to Islam, this was a natural result.
The churches taken over by the Muslims were
occasionally used as dwellings (cf. Tabari, i. 2405,
2407); at a later date it also happened that they
were used as government offices, as in Egypt in
146 (Maqrizi, iv. 35; cf. for Káf, Baladhuri.
p. 286). The obvious thing, however, was to
transform the churches taken over into mosques.
It is related of 'Amr b. al-'Asi that he performed
the Salāt in a church (Maqrizi, iv. 6) and Zaid b.
'Ali says regarding churches and synagogues, "Perform
thy Salāt in them; it will not harm thee" (Corpus
not clear whether the reference to conquered
synagogues is evident, in any case, that the saying is intended to remove any
misgivings about the use of captured churches
and synagogues as mosques. The most important
example of this kind was in Damascus where al-Walid
b. 'Abd al-Malik in 86 (705) took the church of
St. John from the Christians and had it rebuilt;
he is said to have offered the Christians another
church in its stead (see the references above, B.1,
and also J. A., 9 Ser., vii. 369 sqq.; Quatremère,
Hist. Sali. Maml., i./i. 262 sqq. and the article
Damascus). He is said to have transformed into
mosques ten churches in all, which must have been particularly in the villages, with
the gradual conversion of the people to Islam, that
the churches were turned into mosques. In the
Egyptian village there were no mosques in the
earlier generations of Islam (Maqrizi, iv. 28 sq,
30). But when al-Ma'mūn was fighting the Copts,
many churches were turned into mosques (ibid.,
p. 30). It is also recorded of mosques in Cairo
that they were converted churches. According to
one tradition, the Rāshīda mosque was an unfinished
Jacobite church, which was surrounded by Jewish
and Christian graves (Maqrizi, iv. 63, 64) and in
the immediate vicinity al-Hākim turned a Jacobite
and a Nestorian Church into mosques (ibid., p. 65).
Was there a palace church in the Salāt of the Muslins
that was taken in and transformed into a mosque
(ibid., p. 269); similar changes took place at later
dates (ibid., p. 240) and synagogues also were
transformed in this way (Masdjīd Ibn al-Illāna,
ibid., p. 265). The chief mosque in Palermo was
previously a church (Yākūt, Muq. Alm., i. 719).
After the Crusades several churches were turned
into mosques in Palestine (Sauvain, Hist. de
Jérusalem et d'Hébron, 1876, p. 77; Quatremère,

Other sanctuaries than those of the "people of
the scripture" were turned into mosques. For example
a Masjīd al-Shams between Hilla and Kerkela
was the success of an old temple (Goldziher,
Mish. Stud., ii. 331 sq.) Not far from Iṣṭakhūr was
a Masjīd Sulaimān which was an old "fire-temple," the pictures on the walls of which could still be seen in the time of Masjīd and al-Makdisī (ivth century) (Maqrizi, Mor. jv.,
77; B. G. A., iii. 444). In Iṣṭakhūr itself there was
a dījāmi, which was a converted fire-temple (ibid.,
p. 436). In Maṣštā, the ancient Mopsuestia, al-Mansūr
in 140 built a mosque on the site of an ancient
temple (Baladhuri, p. 165 sq.) and the chief mosque
in Dīhil was originally a temple (Ibn Batūta, iii.
151); as to Tā'i if Abū Dāwūd, Salāt, bab 10.
Thus in Islam also the old rule holds that sacred
places survive changes of religion. It was especially
easy in cases where Christian sanctuaries were
associated with Biblical personalities who were also
recognised by Islam: e.g., the Church of St. John
in Damascus and many holy places in Palestine.
One example is the mosque of Job in Shekh Sa'id,
associated with Sīra xxi. 83, xxxviii. 40, here
in Silvia's time (fourth century) there was a church
of Job (Masjīd, i. 91; Baecker, Palast. u. Syrien,
1910, p. 147).

But Islam itself had created historical associations
which were bound soon to lead to the building
of new mosques. Even in the lifetime of the
Prophet, the Banū Sālim are said to have asked
him to perform the Salāt in their masjīd to give
his authority (see cases above, p. 3). At the request
of 'Ibn b. Malik the Prophet performed the
Salāt along with Abū Bakr in his house and thereby
acquired it as a masjīd, because he could
not get to the tribal mosque in the rainy season
(Bukhārī, Salāt, bab 47; Tāhāshīyūd, bab 36;
Mishn, Masjīd, tr. 46; a similar story in
Bukhārī, Anfām, bab 47, Tāhāshīyūd, bab 33
is perhaps identical in origin). After the death of
the Prophet, his memory became so precious that
the places where he had prayed obtained a special
importance and his followers, who liked to imitate
him in everything, preferred to perform their Salāt
in such places. But this tendency was only an
intensification of what had existed in his lifetime:
and so it is not easy to decide how far the above
stories reflect later conditions. Mosques very quickly
arose on the road between Mecca and Medina at
places where, according to the testimony of his
Companions, the Prophet had prayed (Bukhārī,
Salāt, bab 89; Wāqıdī-Wellhausen, p. 421 sqq.);
the same was the case with the road which the
Prophet had taken to Tabūk in the year 9 (Ibn
Hishām, p. 907; Wāqıdī-Wellhausen, p. 394;
there were 19 in all, which are listed in Annali
dell' Islam, ii. 246 sq.). Indeed wherever he had
taken the field, mosques were built; for example
on the road to Badr, where according to tradition
Abū Bakr had built a mosque at Tabari (Wakidi,
1910, p. 39, also Wustenfeld, Med. p. 135). The
mosque of al-Fādīkh was built on the spot where
the Prophet had prayed in a leather tent during
the war with the Banū Naṣr in the year 4
(Wāqıdī-Wellhausen, p. 165; Wustenfeld,
Med., p. 132). He is said to have himself built a little
mosque in Khilah during the campaign of the
year 7 (Diyarbakri, Tariḥ al-Khamis, n. 49 sq.:
Annali dell' Islam, ii. 19). Outside Taʾif a
mosque was built on a hillock, because the Prophet
had performed the Salāt there during the rainy
season in the year 8, between the tents of his two
wives, Umm Salama and Zainab (Ibn Hishām, p. 872;
Wāqıdī-Wellhausen, p. 396); in Liyya the
Prophet is said to have himself built a mosque
while on the campaign against Taʾif (Ibn Hishām,
p. 872; Wāqıdī-Wellhausen, p. 368 sq.). Mosques
arose in and around Medina, "because Muhammad
prayed here" (Wustenfeld, Gesch. d. Staat Meden,
p. 31, 38, 132 sqq.). It is obvious that in most
of these cases later conditions are put back to
the time of the Prophet; in connection with the
"war of the 1stitch" we are told that: "he prayed
everywhere where mosques now stand" (Wāqıdī-
Wellhausen, p. 208). Since, for example, the
Masjīd al-Fādīkh is also called Masjīd al-Shams
(Wustenfeld, Med., p. 132) we have perhaps
here actually an ancient sanctuary.

THE ENCYCLOPAEDIA OF ISLAM, III.
Mosques became associated with the Prophet in many ways. In Medina, for example, there was the Masjid al-Baghdādī where footprints of the Prophet's mule were shown in a stone, the Masjid al-ʿAbīya where the Prophet's appeal was answered, the Masjid al-Tabīth which recalls the victory over the Quraysh etc. (see Wustenfeld, Medina, p. 126 sqq.). In Mecca there was naturally a large number of places sacred through associations with the Prophet and therefore used as places of prayer. The most honored site, next to the chief mosque, is said to have been the house of Khaḍidja, also called Mawlid al-Sayyida Fāṭima, because the daughter of the Prophet was born there. This house, in which the Prophet lived till the Hijrah, was taken over by ʿAbī ʿAli, his brother, and bought by him through Muwāvia and turned into a mosque (Ch. von Meck., ii. 112. 440). She also purchased the Prophet's birthplace, Məsājid al-Nabi, and made it into a mosque (ibid., i. 422; in. 439). If Muwāvia really bought the Prophet's house from his cousin, it was probably the right one, but the demand for places associated with the Prophet became stronger and stronger and we therefore find more and more places referred not only to the Prophet, but also to his Companions, such as the birthplaces of Ṭāhā al-ʿUmar and ʿAbī ʿAli (Ch. von Meck., in. 445), the house of Māriya, the mother of the Prophet's son, Ṣaʿd ibn Māriya (ibid., i. 447. 450) who also had a mosque at Medina (Wustenfeld, Medina, p. 133). There were also a Masjid Khaḍidja (ibid., i. 324) and a Masjid ʿAbīya (ibid., in. 455). A Masjid of the “granted appeal” in a narrow valley near Mecca, where the Prophet performed the ṣalāt (ibid., in. 455), a Masjid al-ʿAbīya, the Prophet's house, which the Quraish overheard his preaching (ibid., i. 424; in. 453), a Masjid al-Raṣāḍ, where he planted his standard at the conquest (ibid., ii. 68 infra and 71 supra; in. 3. 453); a Masjid al-Raṣāḍ where the first homage of the Medinees was received (ibid., i. 428; in. 441). In the Masjid al-Khaṭif in Minaš is shown the mark of the Prophet's head in a stone into which visitors also put their heads (ibid. i. 438). Persons in the Bible are also connected with mosques, Adam, Abraham and Iša with the Ka‘bah, beside which the Muṣāna ir-Raḥmah is shown and in ʿArafah there is still a Masjid ir-Raḥmah (ibid., i. 415. 428), and another in al-Zahiri near Mecca (Ibn Ḏubair, Ḏibār, 1907, p. 112). To these memorial mosques others were later added, e.g. the Masjid Alū Bākīr, Masjid Bīlāh, the Mosque of the Splitting of the Moon (by the Prophet) etc. (Ibn Ḏubair, Ḏibār, p. 114 sqq.; B.G.A., in. 102 sqq. Snouck Hurgronje, Meck., ii. 27; al-Batānunī, al-Raṣāḍ al-Ḥajjatīya, Cairo 1329, p. 52 sqq.).

In al-Ḥijaz the Muslims thus acquired a series of mosques which became important from their association with the Prophet, his family and his Companions, and made Muslim history live. On the other hand, inlands formerly Christian, they took over sanctuaries which were associated with the Biblical history which they had assimilated (see Le Strange, Palestine, passim). Other mosques soon became associated with Biblical and Muslim story. The mosque founded by ʿUmar on the site of the Temple in Jerusalem was, as already pointed out, identified as al-Masjid al-ʿAlī mentioned in Sūra xvii. 1 and therefore connected with the Prophet's night journey to Paradise. The rock is said to have greeted the Prophet on this occasion and marks in a stone covering a hole are explained as Muḥammad's footprints (sometimes also as those of Idrīs; cf. Le Strange, Palestine, p. 136; al-Batānunī, Ḳīthā, p. 165; Badcker, Palestine, 1910, p. 52 sqq.; cf. Yaʿqūbī, ed. Houtsma, ii. 311). The name al-Masjid al-ʿAlī was used throughout the early period for the whole Ḥaram area in Jerusalem, later partly for it, and partly for the building in its southern part (B.G.A., v. 160; Sauvare, Hist. Jérus., Libron, p. 95, 121; cf. Le Strange, Palestine under the Moslems, p. 96 sqq.). Then there were mosques which had specifically Muslim associations, like the Masjid of ʿUmar on the Mount of Olives where he encamped at the conquest (B. G. A., ii. 172).

In Egypt not only was an old Christian sanctuary called Maḥbūd Mīṣa (Maḳrizī, iv. 269), but we are also told, for example, that the Mosque of Ibn Ṭūlūn was built where Mīṣa talked with his Lord (Maḳrizī, iv. 36); according to al-Ḳudāt there were in Egypt four Masjadi of Mīṣa (Ibn Ḏuqmāk, ed. Vollers, p. 92); there was a Masjid Yaʿqūb wa-Yūnuf (B.G.A., ii. 200) and a Joseph's prison, certainly dating from the Christian period (Maḳrizī, iv. 315). There was also a Mosque of Abraham in Maryam al-Maḳṣūr (Ibn Ḏubair, p. 58). The chief mosque of San’a was built by Shem, son of Noah (B. G. A., vii. 110). The old temple near ʿIshāq mentioned above was connected with Sulaimān (Maḳūfī, al-Muṣāfī, iv. 77; Yaḳūt, i. 299). In the mosque of Kīfa not only ʿIrāhm but one thousand other prophets and one thousand saints, described as waṣī are said to have offered their prayers; here was the tree Yaḳūn (Sūra xxxvii. 146); here died Yaḥyā and Yaʿqūb, etc. (Yaḳūt, iii. 325; also Ibn Ḏubair, p. 211 sqq.) and in this mosque there was a chapel of Abraham, Noah and Idrīs (Ibn Ḏubair, p. 212) and a large number of mosques were associated with Companions of the Prophet. What emphasis was laid on such an association is seen, for example, from the story according to which ʿUmar declined to perform the ṣalāt in the Church of the Resurrection in Jerusalem, lest the church should afterwards be claimed as a mosque.

4. Tomb Mosques.

A special class of memorial mosques consisted of those which were associated with a tomb. The graves of ancestors and of saints had been sanctuaries from ancient times and they were gradually adopted into Islam. In addition there were the saints of Islam itself. The general tendency to distinguish places associated with the founders of Islam naturally concentrated itself round the graves in which they rested. In the Kur’ān, a tomb-masjid is mentioned in connection with the Seven Sleepers (Sūra xviii. 20) but it is not clear if it was recognised. As early as the year 6, the companions of Abū Iṣaṣ are said to have built a mosque at the place where he died and was buried (Wādīs-Wellhausen, p. 262). The Prophet is also said to have visited regularly at al-ʿAbīya in Medina the tombs of the martyrs who fell at Ṣuḥy and paid reverence to them (ibid., p. 143).
Whatever the exact amount of truth in the story, there is no doubt that the story of the tomb-mosque of Abū Basīr is ante-dated. The accounts of the death of the Prophet and of the period immediately following reveal no special interest in his tomb. But very soon the general trend of development stimulated an interest in graves which led to the erection of sanctuaries at them. The progress of this tendency is more marked in al-Wākidī, who died in 207 (823), than in Ibn Isḥāq who died in 151 (768).

The collections of Ḥadīth made in the third century contain discussions on this fact which show that the problem was whether the tombs could be used as places of worship and in this connection whether mosques could be built over the tombs. The Ḥadīth answer both questions in the negative, which certainly was in the spirit of the Prophet. It is said that “Salāt at the graves (ṣa’lah al-magāhir) is makrūḥ” (Bukhārī, Salāt, bāb 52); “sit not upon graves and perform not salāt towards them” (Muslim, Qunāt, tr. 33); “hold the salāt in your houses, but do not use them as tombs” (Muslim, Salāt, al-Masājid, tr. 28). On the other hand it is acknowledged that Anas performed the salāt at the cemetery (Bukhārī, Salāt, bāb 48). We are also told that tombs cannot be used as masājid (Bukhārī, Salāt, bāb 48; Qunāt, bāb 62). On his deathbed the Prophet is said to have cursed the Jews and the Christians because they used the tombs of their prophets as masājid. Ḥadīth explains this by saying that the tomb of the Prophet was not at first accessible (Bukhārī, Salāt, bāb 48, 55; Qunāt, bāb 62; Abūd, bāb 50; Muslim, Masājid, tr. 3); as a matter of fact its precise location was not exactly known (Qunāt, bāb 96).

The attacks in Ḥadīth insist that tomb-mosques are a reprehensible Jewish practice: “When a pious man dies, they build a masjid on his tomb” etc. (Bukhārī, Salāt, bāb 48, 54; Muslim, Qunāt, tr. 71). Although this view of tomb-mosques is still held in certain limited circles (cf. Ibn Taimiyyah, the Wahhābīs), the old pre-Islamic custom soon became a Muslim one. The expositors of Ḥadīth like al-Nawawī (on Muslim, Masājid, tr. 3, lih. Dīlī 1319, i. 201) and al-‘Askarī (Cairo 1239, i. 354) explain the above passages to mean that only an exaggerated ta’zīn of the dead is forbidden so that tombs should not be used as a kibla; otherwise it is quite commendable to spend time in a mosque in proximity to a devout man.

The name given to a tomb-mosque is often khunā, a word which is used of a tent (Bukhārī, Dīrāsāt, bāb 62; Ḥadīth, bāb 150); khunā, bāb 19; al-Lajina, bāb 15; Tarafa, Dīrāsāt, vii. 1), but later came to mean the dome which usually covers tombs and thus became the general name for the sanctuary of a saint (cf. Ibn Djbair, Rīḥā, p. 114, 115; cf. Dozy, Supplement, s. v.). Maṣjīd also means a little chapel and a saint’s tomb (v. Berchem, Corpus Inscrip. Arab., i., N. 32, 63, 417, 544; Maṣḥūrī, iv., p. 265, 309 sqq.) but also to tombs of other recognised saints, e.g. Mashhad Djurjis in Mawṣīl (Ibn Djbair, Rīḥā, p. 236) etc.

The transformation of the tombs of the Prophet and his near relatives into sanctuaries seems to have been a gradual process. Muḥammad, Abū Bakr and Umar are said to have been buried in the house of Ā{lī}ṣha; Fāṭima and Ā{lī} lived beside it. Ā{lī}ṣha had a wall built between her room and the tombs to prevent visitors carrying off earth from the tomb of the Prophet. The houses of the Prophet’s wives remained as they were until al-Walīd rebuilt them. He thought it scandalous that Ḥasan b. Ḥasan b. Ā{lī} should live in Fāṭima’s house and Umar’s family close beside Ā{lī}ṣha’s home in the house of Ḥaṣa. He acquired the houses, had all the houses of the Prophet’s wives torn down and erected new buildings. The tombs were enclosed by a pentagonal wall; the whole area was called al-Rawja “the garden”; it was not till later that a dome was built over it (Wustenfeld, Medina, p. 66 sqq., 72 sqq., 78 sqq., 89). In the cemetery of Medina, al-‘Askāf, a whole series of Masājīd came to be built where tombs of the family and of the Companions of the Prophet were located (ibid., p. 140 sqq.; Ibn Djbair, Rīḥā, p. 195 sqq.). It is often disputed whether a tomb belonged to one or the other (e.g. Ṭabarī, iii. 2436, 3 sqq.) Such tomb-mosques were sacred (masājīd; Ibn Djbair, Rīḥā, p. 114, 13, 15); they were visited li’-baraka. The name al-Rawja of the Prophet’s tomb became later applied to other sanctuaries (Ibn Djbair, Rīḥā, p. 46, 56; 52, 11). Separate limbs were revered in some mosques, like the head of al-Ḥusain in Cairo, which was brought there in 491 from Ā{lī}ṣha (‘Alī Fāṭih bi-Mabruṣ, al-Khitat al-Dawād, iv. 91 sqq.; cf. Sauval, Hist. Jérus. Hôbr., p. 16); his head was also revered for some time in the Masjid al-Rūq al-Dawād (according to Ibn Shahīr, J. A., 9th ed., vi. 285).

Gradually a vast number of Muslim tombs of saints came into existence; and to these were added all the pre-Islamic sanctuaries which were adopted by Islam. No distinction can therefore be drawn between tomb-mosques and other memorial mosques. It was often impossible to prove that the tomb in question ever really existed. In the Masjīd al-Ā{lī} for example, the Ā{lī}’s tomb is honoured but Ibn Djbair leaves it in doubt whether he is really buried there (Rīḥā, p. 212) and many located his grave in the mosque at Kafrā and elsewhere (Masājīd, Murādb, iv. 289; v. 68; B. G. A., al-Masājid, p. 341). ‘Ākīkī there was also a Mashhad al-Ā{lī} (Yākūt, iii. 759) and also in the Mosque of the Umaysids (Ibn Djbair, p. 267); on this question cf. B. G. A., iii. 46. Names frequently become confused and transferred. In Mecca between Sāfi and Marwa there was a Kubba, which was associated with Umar b. al-Khaṭab but Ibn Djbair says that it should be connected with Umar b. ‘Abd al-‘Azīz (Rīḥā, p. 115, 114 sqq.). In Ḍījżā there was a Mashḥad al-‘Ar∪ra, where the memory of this Companion of the Prophet was honoured; it is said to have been originally the grave of another Al-‘Ar∪ra (Muṣannaf, i. 355, 4). Wherever this rule is not, there arose numerous tomb-mosques of the Alī b. Ḥaṣa. In Egypt Ibn Djbair gives a list of 14 men and five women of the Prophet’s
family, who were honoured there (Qibla, p. 46 sq.). Islam was always creating new tombs of saints who had been distinguished for learning or asceticism or miracle-working, e.g. the tomb of Al-Shafi‘i in Cairo and Aḥmad al-Bada‘wī in Tanūţ. There were mosques, chiefly old established sanctuaries, of Biblical and semi-Biblical personages like Rūbūl (Reuben) and Aṣiya the wife of Pharaoh (Ibíd., p. 46). In and around Damascus were a number of mosques, which were built on the tombs of prophets and unmentioned saints (Ibn Dhuḥair, Qibla, p. 273 sqq.). In Palestine could be seen a vast number of tombs of Biblical personages (cf. Le Strange, Palestine under the Muslims, Index and Guide in Palestine Explor. Fund, quarterly statement, 1871, p. 89 sqq.), usually mosques, with a kubbah.

After the sanctuaries of persons mentioned in the Bible came those of people mentioned in the Qur‘an. For example, outside the Džam‘ in ‘Akka was shown the tomb-mosque of the prophet Šāliḥ (Najrī Khuwarā, Sefīr-Namak, ed. Schefer, p. 15, s. v. 49), and in Syria that of his son (Ibn Dhuḥair, p. 49); that of Hūd also was also shown near ‘Akka (Sefīr-Namak, p. 16, s. v. 52), farther east that of Shu‘ab and of his daughter (Ibíd., p. 16, o. v. 53; the tomb of Hūd also was pointed out in Damascus and in Hasrā màta (Yākūt, ii, 596, 16); then we have particularly Mu‘āmmal saints like Du‘‘ Ḥikīth, the son of Job (Ibíd., p. 16, s. v. 52). Then there are the sanctuaries of saints who are only superstitiously Mu‘āmmal but really have their origins in old popular superstitions, like al-Kha‘lij who had a mosque in Damascus (Yākūt, ii, 596 sqq.), or a saint like ‘A‘kā, founder of the town of ‘Akka, who on a tour Najrī Khuwarā visited outside the town (Sefīr-Namak, p. 15, s. v. 53). Such tombs were much visited by pious travellers, and are therefore frequently mentioned in literature on Ma‘āshid of the kinds mentioned here in the Irāq, see B.G.A., ii. 130: for Mawjūd etc., ibid., p. 146). In this way ancient sanctuaries were turned into mosques and it is often quite a matter of chance under what names they are adopted by Islam (cf. Goldziher, Musl. Sūṣa, in. 325 sqq.).

Herefore sometimes happens that the same saint is honoured in several mosques. Abū Hurayra, who is buried on Medina, is honoured not only in the above-mentioned tomb-mosque in Džuraj but also at various places in Palestine, in al-Ramī‘a and in Yūbān south of Tabāniya, Khalīl ad-Dāhirī, Zoubliat Kakhfī al-Manhī‘īk, ed. V. Ravasi, p. 42, from below; Sefīr-Namak of Najrī Khuwarā, ed. by Ch. Schefer, p. 17, 3 from below: 59, Yākūt, ii, 512, 20; iv, 1007; cf. Simkhe Soudineau, Itin. Sufīkhī, ii (1928), 31). The tomb of the Prophet Joseph is revered not only in the ancient Ninveh but also in Palestine.

Just as the kubbah under which the saint lay and the mosque adjoining it were sanctified by him, so vice-versa a kubbah and a mosque could cause a deceased person to become considered a saint. It was therefore the custom for the mighty not only to give this distinction to their fathers but also to prepare such buildings for themselves even in their own lifetime. This was particularly the custom of the Mamlūk sultāns, perhaps stimulated by the fact that they did not found dynasties in which power passed from father to son. Such buildings are called kubbah (van Berchem, C. I. A., i, Ê. 82 sqq., 95, 96, 126, 138 etc.), exceptionally sāwīya (ibid., Ê. 98), frequently turba (ibid., Ê. 98, 68, 106, 107, 116 etc.); the formula is also found: “this kubbah is a turba” (Ê. 67); the latter word acquired the same meaning as masdjid, partly saint’s grave and partly sacred site (cf. Ibn Dhu‘hair, Qibla, p. 114, 196); but this word does not seem to be used of ordinary tomb-mosques, although the distinction between these and mosques in honour of saints often disappeared. In these kubbahs the regular recitation of the Kur‘ān was often arranged and the tomb was provided with a kīwā. The mausoleum might be built in connection with a great mosque and be separated from it by a grille (Yākūt, iv, 509, 6 sqq.).

5. Mosques deliberately founded.

In the early period the building of mosques was a social obligation of the ruler as representative of the community and the tribes. Very soon a number of mosques came into existence, provided by individuals. In addition to tribal mosques, as already mentioned, there were also sectarian mosques and prominent leaders built mosques which were the centres of their activity, for example the Masjīd ‘Aḍī b. Ḥa‘īm (Tabāri, ii, 130), the Masjīd Simāk in Kūfa (ibid., i, 265); the Masjīd al-Asbā‘ī ṣ. As other sanctuaries entered Islam, the mosque received more of the character of a sanctuary and the building of a mosque became a pious work; there arose a hadith, according to which the Prophet said: “for him who builds a mosque, God will build a home in Paradise!” some add “if he desires to see the face of God” (Corpus juris puri zaid b. ‘Alī, ed. Grimini, N°. 276; Ḍabārī, Sā‘ī, bāb 65; Muslim, Masdjid, tr. 4: Zād, tr. 3; Ma‘ṣūřī, iv, 36). Like other sanctuaries, mosques were sometimes built as a result of a revelation in a dream. A story of this kind of the year 557 is given by al-Sahnabā‘ī for Medina (Wustenfeld, Medina, p. 91 sqq.); and a similar case of a mosque in Damascus (J. A., Ser. 9, vii 354); a mosque was also built out of gratitude for seeing the Prophet (al-Madraṣa al-Sharī‘īya, Ma‘ṣūrī, iv, 209). It was of course particularly an obligation on the mighty to build mosques. Even in the earliest period, the governors took care that new mosques were built to keep pace with the spread of Islam (cf. Balāghūrī, p. 178 sqq.). About the year 1000 the governor of Media, Bād b. Ḥasanawwā‘ī, is said to have built 3,000 mosques and hostels (Mer, Die Renaissance des Islam, 1922, p. 24). The collections of inscriptions, as well as the geographical and topographical works, reveal how the number of mosques increased in this way.

In Egypt, al-Ḥākim in the year 403 had a census taken of the mosques of Cairo and there were eight hundred (Ma‘ṣūrī, iv, 264); al-Ku‘dā‘ī (d. 544 = 1006) also counted the mosques and his figure is put at 30,000 or 36,000 (Yākūt, iii, 901; Ibn Dhu‘hair, ed. Voller, p. 92; Ma‘ṣūrī, iv, 264) which seems quite a fantastic figure (there is probably a very lacking before i.e. 1036). Ibn al-Mutawwā‘ī (d. 750) according to al-Ma‘ṣūrī counted 480, and Ibn Dīmās (about 1050) gives in addition to the incomplete list of djāmī‘ a list of 472 mosques, not including madīras, khānahās etc.; the figure given by Ma‘ṣūrī is smaller. The fantastic figure of 30,000 for Baghdad is found as early as Yākūt (B.G.A., vii, 250). It is also an exaggeration when Ibn Dhu‘hair was told in
Alexandria that there were 12,000 or 8,000 mosques there (p. 43). In Baṣra where Ziyād built 7 mosques (B.G.A., v. 191), the number also increased rapidly, but here again an exaggerated figure (7,000) is given (B. G. A., vii. 361). In Damascus, Ibn Ṭāsikīr (d. 571 =1176) counted 241 within and 148 outside the city (7. A., Ser. 2, vii. 835). In Palermo Ibn Hawkal counted over 300 and in a village above it 200 mosques. In some streets there were as many as 20 mosques within a bowshot of one another; this multiplicity is condemned: everyone wanted to build a mosque for himself (Yāḵūṭ, i. 719; iii. 409, 410). As a matter of fact, one can almost say that things tended this way; Yāḵūṭ mentions in Baghārd a mosque for the Anbarī officials of the tax-office (B. G. A., vii. 245) and several distinguished scholars practically had their own mosques. It occasionally happened that devout private individuals founded mosques. In 672 Taḏj al-Dīn built a mosque and a separate chamber in which he performed the salāt alone and meditated (Maḵrīzī, iv. 90). The mosques thus founded were very often called after their founders, and memorial and tomb-mosques after the person to be commemorated. Sometimes a mosque is called after some devout man who lived in it (Maḵrīzī, iv. 97, 265 sqq.) and a madrasa might be called after its head or a teacher (ibid., iv. 235; Yāḵūṭ, ʿUdāqī, vii. 82). Lastly a mosque might take its name from its situation or from some feature of the building.

6. Al-Muṣāllā.

In addition to the mosques proper, al-Maḵrīzī mentions for Cairo 8 places for prayer (muṣāllā) mainly at the cemetery (iv. 334 sq). The word muṣāllā may mean any place of prayer, therefore also mosque (cf. Sūra, lii. 119; cf. Maḵrīzī, ʿĀdīṣaṭ, iv. 25, 16; do., Iftīṣāq, ed. Bunz, p. 91, 17; Yāḵūṭ, Muṣḥṣām, iv. 326, 2 sq.) or a particular place of prayer within a mosque (Ṭabarī, i. 2408, 16; Bukhārī, Gh布st, bāb 17; Ṣalāt, bāb 91). In Palestine, there were many open places of prayer, provided only with a mihrab and marked off, but quite in the open (cf. for Tiberias, Sīfer-Nāmah, transl. Schefer, p. 36). It is recorded of the Prophet that he used to go out at the two festivals (al-Fitr and al-Aḍḥā) to the place of prayer (al-muṣāllā) of the Banū Salāma. A lance which the Negus had presented to al-Zubair was carried in front of him and planted before the Prophet as swara. Standing in front of it, he conducted the salāt, and then preached a khutba without a minbar to the rows in front of him (Ṭabarī, i. 1281, 14 sqq.; Bukhārī, Ṣalāt, bāb 6; Ṣalāt, bāb 90; Ḥaḏīṯ, bāb 6). He also went out to the muṣāllā for the salāt al-ʿaṣr (1 ималь, ʿIṣṭiṣāq, tr. 1). This Muṣāllā was an open space and Muḥammadan is even said to have forbidden a building on it (Wustenfeld, Medina, p. 127 sqq.). This custom of performing the salāt on a muṣāllā outside the town on the two festivals became swara. There is evidence of the custom for several towns. In Medina however, a mosque was later built on the muṣāllā (ibid., p. 128 sqq.) which also happened in other places. An early innovation was the introduction of a minbar by Marwān (ibid., p. 128; Bukhārī, Ḥaḏīṯ, bāb 6). When ʿAbd b. ʿAbd Wāḳṣās built a mosque in Ḳisrāʾ al-Wān in al-Maḏāʾin, in the festival in the year 16 it was expressly stated that it was ʿanūna to go out to it; ʿAṣd, however, thought it was a matter of indifference (Ṭabarī, i. 2451). Shortly after 300 a muṣāllā outside of Hamadān is mentioned (Mašūḵī, Marāḏī, ix. 23). There was al-Muṣāllā al-ʿAṭīq in Baghdad; here a daḵka was erected for the execution of the Kūfa prisoners (Ṭabarī, iii. 2444 sq.; cf. 1659, 18); in Kūfa, several are mentioned (ibid., ii. 628, 16; 1704, 8; iii. 367, 8 sqq.), two in Merw (ibid., i. 1931, 8; 1964, 19; cf. Sīfer-Nāmah, transl. Schefer, p. 274), one in Farghāna (B.G.A., ii. 393, 1). In Tirmidhī, the muṣāllā was within the walls (B. G. A., ii. 349, 8) which also happened elsewhere (ibid., 378, 6 sqq.). In Cairo the two festivals were celebrated on the Muṣāllā al-Ḥamāla (a Yemen tribe) with the ʿAṭāb al-Mosque of ʿAmr as leader: according to al-Kuḍāʾi the festivals were to be celebrated on a muṣāllā opposite the hill Yalānīn, then on al-Muṣāllā al-Kadīm where ʿAḥmad b. Ṭūlūn erected a building in 256. The site was several times changed (Maḵrīzī, iv. 334 sq.; B. G. A., ii. 200, 14 sq). In 302, 306 and 308 the salāt al-ʿaṣr was performed for the first time in the Mosque of ʿAmr (Maḵrīzī, iv. 20, 8 sqq.; Ḥaḏīṯ al-Muḥarrāra, i. 137 infra; Ibn Tabghīrī, ii. 194, 9 sqq.), Ibn Batṭūṭa notes the custom in Spain (a. 20) and Tunisia (i. 22) and also in India (iii. 154). Ibn al-Haḍīdī (d. 737) says that in his time the ceremonies still took place on the muṣāllā but condemns the ḥaḍīṯ associated with them (K. al-Maḏīḵ, ii. Cairo 1320, p. 82 sqq.). It is also laid down in Muslim law, although not always definitely (see Juyrboll, Handbuch d. islam. Gcs, 1910, p. 127; I. Guidi, Il Mehtayer, i., 1919, p. 136). The custom seems in time to have become generally abandoned. In the ninth century the Masjd Aḵsonkor was expressly built for the ḥāṭa at the Friday services and at festivals (Maḵrīzī, iv. 107, 17).

C. The Mosque as the Centre for Divine Service.

1. Sanctity of the Mosque.

The history of the mosque in the early centuries of Islam shows an increase in its sanctity which was intensified by the adoption of the traditions of the church and especially by the permutation of the cult of saints. The sanctity already associated with tombs taken over by Islam was naturally very soon transferred to the larger and more imposing mosques. The expression bāṯt Allāḥ "house of God", which at first was only used of the Kaʿba came now be applied to any mosque (s. Corpus irais ai Zaid b. Ṭālī, No. 48, cf. 156, 983; Chron. Meka, ed. Wustenfeld, iv. 164, 17; Bukhārī, Mekka, Corpus Insr. Araba, i. No. 10, i. 1. Ibn b. Ḥadīḏi, K. al-Maḏīḵ, i. 20, 23; ii. 64, 68; cf. Bast Rūbbī, Ḥaḏīṯ, i. 23, 73; ii. 56). The alteration in the original conception is illustrated by the fact that the Manūḥik al-Malk al-Zahr Bāḥbars declined to build a mosque on a place for tithing camels because it was unseemly, while the mosque of the Prophet had actually been built on such a place (Maḵrīzī, v. 91; Abū Dāwūd, Sāḥīḥ, bāb 22).

In the house of God the Miḥrāb and the Minbar (see below) enjoyed particular sanctity, as did the tomb, especially in Medina (Bukhārī, Pāḏ al-Salāt fi Masjidī Makka wa l-Madīna, bāb 5).

The visitors sought baraka, partly by touching the tomb or the railing round it, partly by praying
in its vicinity: at such places “prayer is heard” (Qur. Mecca, ii. 441, 442). In the Masjid al-
Khaṭīb in Mīnā the visitor laid his head on the
print of the Prophet’s head and thus obtained ṭaṣāka (tirdūn, iii. 458). A mosque could be built on a site, the sanctity of which had been shown
in the finding of hidden treasure (Maḥṣūs, iv. 75).
There were often places of particular sanctity in
mosques. In the mosque at Kūḥā and Medina, the
spots where the Prophet used to stand at prayer
were held to be particularly blessed (Bādaḏār, p. 5: Būkhrā, Ṣalāt, bāb 91: Wustenfeld, Medīnā, p. 65, cf. 82, 109). In other mosques, places where a saint had sat or where a divine phenomenon had
taken place e.g. in the Mosque of Ṭāmir and in
the Ashr Mosque (Maḥṣūs, in. 19, 52) or the Mosque in Jerusalem (Masḍūj, B. G. A., in. 170)
were specially visited. Pilgrims visitors made proof
[41] between such places in the mosque (Ma-
ṣūs, p. 26). Just as in other religions we find
patrons-dedicating their children to the service of a
sanctuary, so we find a Muslim woman pouring
her child or child yet unborn to the mosque (Būkhrā, Ṣalāt, bāb 74: Maḥṣūs, iv. 20). The
fact that mosques, like other sanctuaries, were
sometimes founded after a revelation received in a
dream has already been mentioned (B. 5). This
increase in sanctity had as a natural result that
no longer a mosque at random as had been the case in the time of the Prophet. In the early Umayyad period, Christians
were still allowed to enter the mosque without
interdiction (cf. Lammens, Medīnā, p. 13 sq.;
told either in I. Z. K., vi. 100 sq.). Muḥāʾyīn
used to sit with his Christian physician, Ibn Uḥūl, in
the mosque of Damascus (Ibn Abī ʿUṣayn, in. 117). According to Ahmad b. Ḥanbal, the Aḥl al-Kītīb (or Aḥl al-Aḥbāb) and their servants,
but not polytheists, were allowed to enter the mosque of Medina (Maḥṣūs, in. 339, 392). At a later date
they were forbidden to Christians and this
regulation is related to Ṭāmir (Lammens, ep. cit.,
p. 13, note 6). A strict teacher of morality like Ibn al-Ḥaḏīḥī thought it un-chaste that the monks
who wove the mats for the mosques should
be allowed to lay them in the mosque (Maḥṣūs,
57). Conditions were not always the same. In
Hebron Jews and Christians were admitted on
payment to the sanctuary of Abraham until in
194 (1203) Barmak forbade it (Quattromare, Hist.
Sah., M. 9, in. 18, p. 27).

According to some traditions, a person in a state of
vitiated impurity could not enter the mosque (Abū Dāwūd, Ṣalāt, bāb 92: Ibn Māḏa, Taḥārā, bāb 123) and in any case only the pure could
receive merit by visiting the mosque (Maḥṣūs,
Maṭāfīl, tr. 49: Corpus litterarī ad Ṣalāt κ Εί', Ni;
40), and in a later period it is specially mentioned that the ṣalāt cannot be undertaken in
the mosque itself (Maṭāfīl, in. 47 infra) nor could
having ṣalāt. p. 55.2)
It is always necessary to be careful not to spit
in a mosque, although some traditions which are
obviously close to the old state of affairs say,
“not in the direction of the kibla, only to the
left” (Būkhrā, Ṣalāt, bāb 53 sq.). The custom
of taking off one’s sandals in the mosque is
found as early as the time of Abū ʿUḥayda (second
century). (Ṭāmir, ʿUṭārā, v. 272, 4 sq.) and according
to al-Maṭāfīl (see below) is also mentioned by
Abū Dāwūd. Al-Ṭabari puts the custom back to
the time of ʿUmar (i. 2408). That is based on an
old custom observed in sanctuaries is obvious
(cf. on the history of the custom, F. Ceum, Ouvrages de Douar-Europes, 1926, p. 60 sq.). The
custom however seems not to have been always
observed. In the viii. century in the Mosque of
the Umayyads the shoes were taken off only in
the kibla, because the sanctuary was entered with
shoes; but in 827 an Egyptian superintendent
ordered that the mosque should only be entered
with bare feet (J. A., ser. 9, vii. 211, 217).
The visitor on entering should place his right foot first
and utter certain prayers with blessings on the Prophet
and his family (which Muḥammad is said to have
done!) and when he is inside perform two rak’a’s
(Būkhrā, Ṣalāt, bāb 47: Taḥadījūm, bāb 25; Muslim,
Ṣalāt al-Muṣṭafīrûn, tr. 12 sq.; Tabār, iii. 2464, 2532). Certain regulations for decent
conduct came into being, the object of which was
to preserve the dignity of the house of divine
service. Public and other animals about stray animals
were not to be made, as the Beduins did in their
houses of assembly, and one should not call out
aloud and thereby disturb the meditations of the
worshippers (Būkhrā, Ṣalāt, bāb 83; Muslim,
Masḍūj, tr. 18: more fully in Māḥṣūs, i. 19
sgg.). One should put on fine clothes for the
Friday service, rub oneself with oil and perfume
oneself (Būkhrā, ʿUṭārā, bāb 3, 6, 7, 19) as
was also done with ṣab for the Ḥadījī (Būkhrā,
Ḥadījī, bāb 143).

A question which interested the teachers of
morality was that of the admission to not enter
the mosques. That many did not desire the presence
is evident from the hadith that one cannot
prevent them as there is no ṣawwā connected with
it, but they must not be perfumed (Muslim, Ṣalāt,
bāb 29; Būkhrā, ʿUṭārā, bāb 13; cf. Chron.
Mecca, i. 168). Other Ḥadījī say they should
leave the mosques before the men (al-Naṣṣāb, Ṣahēr,
bāb 77; cf. Abī Dāwūd, Ṣalāt, bāb 14, 48). Some-
times a special part of the mosque was rolled off
for them; for example, the governor of Mecca in
156 had ropes tied between the columns to make
a separate place for women (Chron. Mecca, ii. 197
infra). According to some women were allowed
during their menstruation (Abī Dāwūd,
Ṭahārā, bāb 92, 103; Ibn Māḏa, Ṭahārā, bāb 117,
123). In Medina at the present day, a wooden
grille shuts off a place for women (al-Batanūnī,
al-Rīḥīl al-Ḥadījīyī, p. 240). At one time the
women stood at the back of the mosque here
(Ṭāmir, ʿUṭārā, vi. 400). In Jerusalem there were
special maṣjīd for them (B. G. A., v. 100). Ibn
al-Ḥadījī would prefer to exclude them altogether
and gives Ṣawwā as his authority for this.

Although the mosque became sacred it could
not quite cast off its old character as a place of
public assembly and in consequence the mosque
was visited for many other purposes than that of
divine service. Not only in the time of the Umayyads
was considerable business done in the mosques
(Tabār, iii. 1118: cf. Lammens, Zāīd, p. 68) which
is quite in keeping with the Ḥadījī (Būkhrā,
Ṣalāt, bāb 70 sg.) which, actually found it necessary
to forbid the sale of wine in the mosque (Ibn,
bāb 73), but a writer in the viii. century, Ibn
al-Ḥadījī, records with disapproval that business
was done in the mosques: women sit in the
mosques and sell threads, in Mecca hawkers even
call their wares in the mosque. The list given by
This holds especially the Friday salāt (ṣalāt al-jumā'ā), which can only be performed in the mosque and is obligatory upon every free male Muslim who has reached years of discretion (cf. Ḥuyyiboll, Handbuch, p. 86; Ghulim, "Seminar für die Geschichte des Islam". i. 125 sq.). According to Ibn Ḥāshim (p. 290) this salāt, which is distinguished by the khatbā, was observed in Medina even before the Hijra. It is hardly probable and besides is not in agreement with other sources (see Bukhārī, Q̄umā'a, bāb 11) but the origin of this divine service, referred to in Sūra lixx, 9, is obscure. The assemblies of the Jews and Christians on a particular day must have formed the model (cf. Bukhārī, Q̄umā'a, bāb 1). Its importance in the earlier period lay in the fact that all elements of the Muslim camp, who usually went to the tribal and particular mosques, assembled for it in the chief mosque under the leadership of the caliph. The chief mosque, which for this reason was particularly large, was given a significant name. They talk of al-Masdjī al-ṣanā'ī (Tabārī, i. 2494; B.G.A., vii. 245) or Masdjī al-Q̄umā (Yaḥṣūb, iii. 896, al-Fusṭāṭ; also Tabārī, i. 1119: Ibn Kūtaiba, Ma'ārif, ed. Wustenfeld, p. 106; Masdjī li-l-Q̄umā (Ma'κrizī, iv. 4); Masdjī Q̄umā' (Bādhūth, p. 51, Māzīrān; Yaḥṣūb, i. 643, 647, Buṣrā); then Masdjī al-Q̄umā (Yaḥṣūb, iii. 899; B.G.A., ii. 295, 315, 387; vii. 110 etc.). As an abbreviation we find also al-Q̄umā' (Yaḥṣūb, i. 400; Ibn Bāṣīr, iv. 343; cf. Masdjī al-Q̄umā', Bādhiyār, p. 348) and especially Q̄umā. As the khatbā was the distinguishing feature, we also find Masdjī al-Khutbā (Ma'κrizī, iv. 44, 64, 87) Q̄umā' al-Khutbā (ibid., iv. 55) or Masdjī al-Lebān (B.G.A., iii. 316 for Q̄umā', i. 8).

Linguistic usage varied somewhat in course of time with conditions. In the time of 'Umar there was properly in every town only one Masdjī Q̄umā' for the Friday service. But when the community became no longer a military camp and Islam replaced the previous religion of the people, a need for a number of mosques for the Friday service was bound to arise. This demanded mosques for the Friday service in the country, in the villages on the one hand and several Friday mosques in the towns on the other. This meant in both cases an innovation, compared with old conditions, and thus there arose some degree of uncertainty. The Friday service had to be conducted by the ruler of the community, but there was only one governor in each province: on the other hand, the demands of the time could hardly be resisted and, besides, the Christian converts to Islam had been used to a solemn weekly service.

As to the villages (al-kāna'), 'Amr b. al-'Āṣ in Egypt forbade their inhabitants to celebrate the Friday service for the reason just mentioned (Ma'κrizī, iv. 7). At a later period then the khutbā was delivered exceptionally, without minbar and only with máwūṣ, until Marwān, in 222, replaced the minbar into the Egyptian kūra also (ibid., p. 8). Of a mosque in which a minbar had been placed, we are told Q̄umā' masdjī al-kūra (Tabārī, i. 2451) and a village with a minbar is called kūra Q̄umā' (Bukhārī, Q̄umā', bāb 15; cf. Masdjī Q̄umā', B.G.A., ii. 321), an idea which was regarded by Bukhārī (d. 256--870).
as quite obvious. In introducing minbars into the
Egyptian villages, Marwaan was apparently fol-
lowing the example of other regions. In the
fourth century, Ibn Hawkal mentions a number of
masjids in the district of Ispah (R. G. A. II. 152
f.) and a few in the vicinity of Marw (ibid., p.
316) and in Transoxania (ibid., p. 378; cf.
p. 384) and al-Malaki mentions the same for other
districts of Persia (B. G. A., iii. 309, 317) and he
definitely says that the kuttus of Palestine are /iiit
arrab (ibid., p. 176; cf. i. 58); Baladhuri (p.
331) also uses the name minbar for a village
mosque built in 230; in general, when speaking of
the kuttus, one talks of minbar and not of /iitmi
(cf. R. G. A. I. 63). Later however the term Masjid
(jami‘) is used for a Friday mosque (Ibn Dju repairs,
p. 217). The conditions of primitive Islam are re-
lected in the teaching of the Hanafis, who only
permit the Friday service in large towns (cf. al-

As to the towns, the Shafis on the other
hand have retained the original conditions, since
they permit the Friday service in only one mosque
each (cf. QAFFA and cf. cit., p. 178 sq.), but with
the reservation that the mosque is able to hold
the community. The distinction between the two
sites was of importance in Egypt. When in 669
al-Hajjaj became supreme in Egypt, he ap-
nointed a Shafi‘i chief rajah and the Friday service
was therefore held only in the Hakim mosque,
the largest; but in 665 (1266) al-Malik al-
Zahur b. al-Hajjaj gave the Hanafis preference and
many mosques were therefore used as Friday
mosques (Makrizi, iv. 52 sq.; al-Suyuti, Han
I. 39 sqg]). During the Uniae period and to a
some extent in the ‘Abbasid period, the number of
jami‘ in the towns were still very small. The
graphers of the sixth and fourth centuries in
descriptions of towns as a rule mention only
the ‘jami‘. Ibn al-Fakhr, c. 290 (903), sometimes
says masjih jami‘ or jami‘, R. G. A. I. 304-306,
also minbar simply, p. 305. In keeping with the
oldest scheme of town planning, it was very
much in the middle of the town surrounded by
the business quarters (R. G. A. II. 298, 325; iii.
274 sq., 279; 280, 314, 316, 375, 376, 415, 426, 427
etc.; M. B. Khusraw, ed. Schefer, p. 55, 41, 56) and
the jami‘ was still frequently in the
immediate vicinity of the chief mosque
(B. G. A., ii.
208, 314; iii. 426).

Istakhri mentions as an innovation in Islam that
al-Hajjaj built a jami‘ in al-Wasit on the
west bank, although there was already one on the
east bank (R. G. A. I. 82 sq.; cf. iii. 118; viii. 372).
Ibn Dju bar (R. G. A. I. 211 sq.) mentions only one
jami‘ in Kufa, called Masjidul al-Kufa by Ibn
al-Fakhr, although he also mentions other mosques
(R. G. A. I. 173; cf. 174, 183 and iii. 116). In
Kufa where Yaqubi (278 = 891) already mentions
seven mosques (R. G. A. I. 361), al-Malaki
In Samarra‘, among many mosques, there was
the jami‘ (R. G. A. I. 258, 259), which was
later replaced by another (ibid., p. 260 sq.); al-
Mutawakkil also built one outside the original
town ‘al ‘ (ibid., p. 255; see also P. Schwarz, Die
A dzim in Renaissance, Samarat-an, 1000, p. 32). In Bagh-
dad, Ya‘qubi (278 = 891) mentions on jami‘
for the eastern town and one for the
western R. G. A. vii. 240, 245, 251, 253. The
most ancient Ibn Rosta just mentions the
old western town and its jami‘ (ibid., p. 109).
Although he gives the fantastic figures of 15,000
mosques in the east town (ibid., p. 254) and
30,000 in the west (or in the whole town, ibid.,
256). After 820 there was added the jami‘ of the
eastern palace of the caliph (Mez, Renaissance,
Baghdad; a private jami‘ of Harih al-Rashid in
the Bustan Litun Mids is mentioned by Ibn al-Khali‘,
These 3 jami‘ are mentioned about 340 (951)
by Istakhri (R. G. A. I. 84), who also mentions
one in the suburb of Kalkhadi. Ibn Hawkal in
367 (977) mentions the latter and also the jami‘
of al-Barathia (R. G. A. I. 164 sq., of 329; Mez, loc.
cit.), a fifth was added in 379, a sixth in 383
(MeZ. p. 389); thus al-Khali‘ al-Baghdadi in 460
(1058) gives 4 for West Baghdad, 2 for the east
town (cf. Le Strange, Bagdad, p. 324). Ibn
Dju bar in 581 (1185) gives in the east town 3,
and 1 jami‘ (Rikha, p. 225 sq.) for the whole of
Baghdad. For Cairo, Ithkari gives two jami‘:
the ‘Amr and Tulin mosques (R. G. A. I. 49)
besides that in al-Karafa which was regarded as
a separate town (cf. Ibn Rosta: c. 290 = 993),
R. G. A. I. 116 sq.). Al-Malaki, who writes (575
= 985) shortly after the Fatimid conquest, mentions
the ‘Amr and Tulin mosques, the new mosque in
al-Khara‘ (al-Azhar), also one in al-Djazira, in Dijza
and in al-Karafa (R. G. A. I. 156-209, 209; the
ejami‘ in al-Djazira, also jami‘ Mikyas (cf. Makrizi,
iv. 75), was mentioned in an inscription of the
year 485; see van Berchem, Corpus, i., no. 39). As
these places were all originally separate towns, the
principle that it was not abandoned that town had
only one jami‘. The Fatimids however extended the
use of Friday mosques and, in addition to those
already mentioned, used the jami‘ al-Hakim,
al-Ma‘ and Rishida (Makrizi, iv. 2 sq.). Nasiri
Khusraw in 439 (1047) mentions in one passage
the ‘jami‘ of Cairo, in another seven for Misr
and fifteen in all (ed. Schefer, p. 134 sq., 147).
This was altered in 569 by Salih al-Din (see above)
but the quarters, being still regarded as separate
towns, retained their Friday mosques (cf. for the
year 607 in al-Karafa: Makrizi, iv. 86). After
the Friday service in Egypt and Syria was freed from
restriction, the number of jami‘ increased very
much. Ibn Dukanik (about 800) gives a list of only eight ‘jami‘ in Cairo (ed.
Voliers, p. 59-78), but this list is apparently
only a fragment (in all he mentions something
over twenty in the part of his book that has
survived); al-Makrizi (d. 845 = 1442) gives 13
‘jami‘ (iv. 2 sq.). In Damascus, where Ibn
Dju bar still spoke of ‘the jami‘, al-Nu‘aimi’s
d. 927 = 1521) gives twenty ‘jami‘ (7, sq.,
231 sq.), and according to Ibn Battuta, there
were in all the villages in the region of Damascus
‘jami‘ (i. 236). The word jami‘ in
Makrizi always means a mosque in which the
Friday service was held (vi. 76, 115 sqq.) but
by his time this meant any mosque of some size.
He himself criticises the fact that since 799 the
’salat al-jam‘a‘ was performed in al-Aqmar, al-
though another jami‘ stood close beside it (iv.
76; cf. also 86).
The great spread of Friday mosques was reflected in
the language. While inscriptions of the viith
century still call quite large mosques masjid, in
the ninth most of them are called *djami* (cf. on the whole question, van Berchem, *Corpus*, i. 173 sq.); and while now the madrasa begins to predominate and is occasionally also called *djami* (see below, F. 4), the use of the word *masjid* becomes limited. While, generally speaking, it can mean any mosque (e.g. Ma'krizí, iv. 137, of the Mu'ayyad mosque), it is more especially used of the smaller unimportant mosques. While Ibn Bu'nán gives 472 *masjadi* in addition to the *djawai*, madrasas, etc., al-Ma'krízí only gives nineteen, not counting al-Karâfa, which probably only means that they were of little interest to him. *Djami* is now on the way to become the regular name for a mosque of any size as is now the usage, in Egypt at least. In Ibn al-Hajdjid (d. 737) *al-djawai* is occasionally used in this general meaning in place of *al-masjadi* (Madkhal, ii. 50). Among the many Friday mosques one was usually distinguished as the chief mosque; we therefore find the expression *al-djami* a-le-g'am (Ibn Battútá, ii. 54, 94; cf. the older *al-masjid* a-le-g'am, *ibid.*, p. 53). The principal *djami* decided in such questions as the beginning and ending of the Fast of Ramadan (Madkhal, ii. 68).

3. Other religious activities in the Mosque.

"The mentioning of the name of God" in the mosques, was not confined only to the official ritual ceremonies. Even in the time of the Prophet, we are told that he lodged Thāqífí delegates in the mosque so that they could see therows of worshippers and hear the nightly recitation (Wâjiíl-Wellhausen, p. 582). Although this story (which is not given in Ibn Hisáma, p. 916) may simply be a reflection of later conditions, the recitation of the Qur'án must have come to be considered an edifying and pious work at quite an early date. In the time of al-Ma'âdíd the *kurār* of Ni'sâbûr used to assemble on Fridays in the *djami* in the early morning and recite till the *duhâ* (B.G.A., iii. 328), and the same author tells us that in the Mosque of 'Amr in Egypt the *d'immat al-kurâr* sat in circles every evening and recited (*ibid.*, p. 205). In the time of Ibn Djugair, there were recitations of the Qur'án in the Umayyad mosque after the *salât al-Salâh* and every afternoon after the *salât al-A'zh (Rihla, p. 274 sq.). Besides the recitation of the Qur'án there were praises of God etc., all that is classed as *dhikr*, and which was particularly cultivated by Sufism. This form of worship also took place in the mosque. The Abú al-Tauhidí named Ma'ráfí formed *masjâd al-dhikr*, who assembled in the mosques (al-Makki, *Kitâb al-Kulûb*, i. 152). In the Mosque of the Umayyads and other mosques of Damascus, *dhikr* was held during the morning on Friday (*ibid.*, iv. 49). In the *Masjâd al-Abâj* the Hânâfí held *dhikr*, and recited at the same time from a book (B.G.A., i. 182). In Egypt, Ahmad b. Tullân and Khümârumawîth allowed twelve men quarters in a chamber near the minaret, and during the night four of them took turns to praise God with recitations of the Qur'ân and with pious *kusâd*. From the time of Salîh al-Dîn an orthodox *kJâd* was recited by the mu'addâdîn in the night (*ibid.*, iv. 48). Ibn al-Hâdjîdî demands that the recitation of the Qur'ân aloud should take place in a mosque for the special purpose (*masjâd maqûdâm*) as otherwise pious visitors are disturbed (Madkhal, ii. 53, 67). Mosques and particularly mausoleums had as a rule regularly appointed reciters of the Qur'ân. In addition there was, e.g. in Hebron and in a mosque in Damascus, a *shâikh* who had to read *Bukhârî* (or also *Muslim*) for three months. (Sauvâre, *Hist. Juris., Hebr.*, p. 17; *J.A.,* ser. 9, iii. 261). In Tunis, al-Bukhârî was read daily in a hospital (Zarkaši, transl. Fagnan, *Rec. Soc. Arch. Constantine*, 1894, p. 188).

Sermons were not only delivered at the *salât al-djum'â*. In the *I'rij, even in al-Ma'âdíd's time, one was preached every morning, according to the *sunna* of Ibn 'Abbás (B.G.A., iii. 130), it was said. Ibn Djugair, in the Niğâmîyâ in Baghdad, heard the *shâ'ita* *râ'îs* preach on Friday after the *'asr* on the minbar. His sermon was accompanied by the skilled recitation of the *kurâr* who sat on chairs; they were over twenty in number (Ibn Djugair, p. 219 sq. 222). In the same way, the calls of the *mu'âdhdin* to prayer to the Friday *khuţâba* were delivered to a musical accompaniment (see below, H. 4). The unofficial sermons, which moreover were not delivered in mosques alone, were usually delivered by a special class, the *kusâd* (plur. of *kusâd*; see ibid., p. 220 sq.). The *kusâd*, who delivered edifying addresses and told popular stories, were early admitted to the mosques.

Tânim al-Dârî is said to have been the first of these; in Medina in the caliphate of 'Umar before the latter's decease, he used to deliver his orations at the Friday solemn and was allowed to talk twice a week in the mosque; in the reign of 'Ali and of Mu'âwiya the *kusâd* were employed to curse the other side (*Makzûzi*, iv. 16 sq.). In the Mosque of 'Amr in Cairo by the year 38 or 39, a *kusâd* was appointed, named Sulâim b. 'Irî al-Tauĥidî, who was also *kaşî* (*ibid.*, iv. 17 wrongly: Sulâmân; Kindi, *Governers and Judges*, ed. Guest, p. 505 sq.). There are other occurrences of the combination of the two offices (Ibn Hudjâra [d. 83], *Kindi*, p. 317; Khâlîr b. Nu'â'âm in the year 120, *ibid.*, p. 348; cf. Ham al-Mahâdur, i. 131, *Dîr*.; according to Thâwba b. Nimr, *Ibn*, i. 130 infra; Ibrâhîm b. Ishâk al-Kâri [d. 204], Kindi, p. 467; see also Makzûzi, *ibid.* iv. 18) which shows that the office of *kusâd* was quite an official one. There is also evidence of the employment of *kusâd* in the mosque of the *I'rij* in the 'Abbasid period (Yâkît, *Râ'îs*, iv. 268; v. 446). The *kusâd* read from the Qur'ân and delivered an explanatory and edifying discourse, the object of which was to instil the fear of God into the people (*Makzûzi*, iv. 18). Under the Fâtimids also, *kusâd* were appointed for the mosques; for example, in 403 the umam undertook the office in the Mosque of 'Amr (Makzûzí, iv. 18 infra) and the rulers had also a *kusâd* in the palace. The *kusâd* were called *ahâshâr*, because they delivered their discourses, either in the *kurâr* (al-Makki, *Kitâb al-Kulûb*, i. 152; Ibn al-Hâdjîdî, *Madkhal*, i. 159; cf. Makzûzí, *ibid.*, 121). Their discourse was called *dhikr* or *wâz* or *mu'âsirâ*, whereas the *kusâd* was also called *mu'âshâkîr* (B.G.A., iii. 205) or *wâz* (*ibid.*). Specimens of their discourses are given by Ibn 'Abd Rabbihi (al-İhâ li-Al-faštîd, *Cairo*, 1321, p. 204 sqq.). It was not only the appointed officials who delivered such discourses in the mosque. Ascetics made
public appearances in various mosques and collected interested hearers around them (cf. e.g. Makrizi, iv. 155). In the Di'ami al-Kashfa, a whole society, the Banu IJahwari, delivered wa'az discourses on a kurd for three months on end; their servant collected money in a begging-bowl during the discourse and the shaikh distributed some of it among the poor (ibid., iv. 121).

The wa'az was completely taken over by popular Sufism and later writers would hardly reckon, as al-Makki does, the "story-tellers" among the mutakallimin (K'Ut al-Kutub, ii. 152). The whole system degenerated to trickery and charlatanry of all kinds, as may be seen in the Makama literature (cf. thereon Ya'qub, Udbi), vi. 167 sq. and see also Metz and Goldsmid, op. cit.). Al-Makki therefore distinguishes between al-wa'az al-dhijja, the regular and seemingly edifying discourse in the mosque, and al-wa'az al-tamma, which consisted in the people gathering round all kinds of speakers, which is wa'az (Makrizi, iv. 17). Others also have recorded their objections to the wa'az. Ibn al-Hudaq utter a warning against them and wants to forbid their activities in the mosque completely, because they deliver "weak" narratives (Madkhal, i. 158 sq.; ii. 13 sq., 50). He says Ibn 'Umar, Malik and Abu Dawla rejected them and 'Ali elected them from the madjil of Basra. It is of little significance that al-Mu'tadi cited in as forbade them to sit in the mosques and forbade people to gather around them, for he issued a similar interdict against the jahida and the reasons were evidently different (Tabari, ii. 2165); it was for political reasons also, but with a very different motive, that Abu al-Dawla forbade their activities appearing in Baghdad shortly before 400, because they increased the tension between Sunnis and Shi'a (Metz, op. cit., p. 310). As late as 580 the wa'az still flourished in the mosques of Baghdad, as is evident from the Kitab of Ibn Dujair (p. 219 sq., 224), and in the ninth century there was in the Ahrar mosque a madhja al-wa'az as well as a halal al-dhijja (Makrizi, iv. 54).

When Ibn al-Hudaq denounced speaking aloud in the mosque, it is in the interest of the pious vocation of those engaged in religious works and meditation. Litt. (q. v.), retirement to a mosque for a period, was adopted into Islam from the older religions.

The word wa'az means in the Kur'an the ceremonial worship of the object of the cult (Sura vii. 134: vv. 93, 97; xxi. 53; xxvi. 71; cf. H. H. Jarjawi, ed. Horovitz, p. 86, 19) and also the ritual stay in the sanctuary, which was done for example in the Meccan temple (Sura ii. 119: xii. 55). In this connection it is laid down in the Kor'an that in the month of Ramadan believers must not touch their wives "while ye pass the time in the mosques" (akhfan bi 'umma al-juma, Sura ii. 185), an expression which shows, firstly that there were already a number of mosques in the lifetime of the Prophet and secondly that these had already to some extent taken over the character of the temple. The connection with the early period is evident from a hadith, according to which the Prophet decides that 'Umar must carry out a vow of wa'az for one night in the Madison al-Haram made in the Di'ahiliya (Bukhari, Fikrak, bab 5, 15 sq.; Fird al-Khams, bab 19; Munawir, bab 54; Amman wa' al-Dir], bab 29). It is completely in keeping with this that the Prophet, according to the hadith, used to spend ten days of the month of Ramadan in Fikrak in the mosque of Medina (Bukhari, 'I'tikaf, bab 1; Fird al-Lailat al-Kadar, bab 3), and in the year in which he died as many as twenty days (ibid., 'I'tikaf, bab 17). During this period the mosque was full of booths of palm branches and leaves in which the 'akifun lived (ibid., bab 13; cf. 6, 7). The Prophet only went to his house for some very special reason (ibid., bab 3). This custom was associated with the asceticism of the monks. The faithful were vexed, when on one occasion he received Safiya in his booth and chatted for an hour with her (Bukhari, Fird al-Khams, bab 4; Fikrak, bab 8, 11, 12). According to another tradition, his Fikrak was broken on another occasion by his wives putting up their tents beside him and he postponed his Fikrak till Shawwal (Bukhari, 'I'tikaf, bab 6, 7, 14, 18). According to Zaid b. 'Ali, the Fikrak can only be observed in a chief mosque (dim) (Corpus iuris di Zaid b. 'Ali, No. 447). During the early period, it was one of the initiatory rites for new converts. In the year 14, 'Umar ordered the retreat (al-siyar) in the mosques during the month of Ramadan for the people of Medina and the provinces (Tabari, i. 2377). The custom persisted and has always been an important one among ascetics. "The man who retires for a time to the mosque devotes himself in turn to salat, recitation of the Kor'an, meditation, dhikr etc." says Ibn al-Hudaq (Madkhal, ii. 50). There were pious people, who spent their whole time in a mosque (a shima fikr; Makrizi, iv. 87, 97); of one we were told that he spent his time in the month of Ramadan in the Mosque of 'Amr (fikrak, ibid., p. 44). Al-Samhadi says that during the month of Ramadan, he spent day and night in the mosque (Wustenfeld, Medina, p. 95). Sa'd al-Din (d. 644) spent the month of Ramadan in the Mosque of the Umayyads without speaking (Ibn Abi Usabib, ii. 192). Nocturnal vigils in the mosque very early became an established practice in Islam. According to the Hadith, the Prophet frequently held nocturnal salats in the mosque with the believers (Bukhari, Di'ama, bab 29) and by his orders 'Abd Allah b. Uais al-Ansari came from the desert for twenty-three successive nights to pass the night in his mosque in rites of worship (Ibn Kutaiba, Ma'arif, ed. Wustenfeld, p. 142 sq.).

Out of this developed the takahfiz (q. v.) salat, particularly recommended in the law and notably the tarawih salats (q. v.). In Bihl on these occasions women singers actually took part (Ibn Battuta, iii. 155).

During the nights of the month of Ramadan there were festivals in the mosques and on other occasions also, such as the New Year, sometimes at the new moon, and in the middle of the month. The mosque on these occasions was illuminated; there was eating and drinking; incense was burned and dhikr and kir'a performed.

The Friday Salat was particularly solemn in Ramadan, and in the Fajr period, the caliph himself delivered the khutba (see Makrizi, ii. 345 sqq.; Ibn Taghrir, ii/iii., ed. Juynboll, p. 482 sqq. and 1/iv., ed. Popper, p. 351 sqq.—333). The mosques associated with a saint had still have their special festivals on his memory (cf. Lane, Minutes and Customs, ch. xxiv. sqq.). The saint's festivals are usually local and there
are generally differences in the local customs. In the Madghrib for example in certain places the month of Ramaḍan is opened with a blast of trumpets from the manābīr (Madkhal, ii. 69).

The mosque thus on the whole took over the role of the temple. The rulers from `Umar on wards dedicated gifts to the Ka'ba (B. G. A., v. 20 sq. and Gl., s. v. Sāma), and as in other sanctuaries we find women vowing children to the service of the mosque (Bukhārī, Salāt, bāb 74; Makrīzī, iv. 20). Tawfīq was performed, as at the Ka'ba, in mosques with saints' tombs as is still done, e. g. in Hebron; Muḍjir al-Din sees a pre-Islamic custom in this (Sauvare, Hist. Íuras. et Hebron, p. 5). Especially important business was done here. In times of trouble the people go to the mosque to pray, for help, for example during drought, for which there is a special salāt (which however usually takes place on the müqalla), in misfortunes of all kinds (e. g. Wustenfeld, Medina, p. 19-20; Makrīzī, iv. 57); in time of plague and pestilence, processions, weeping and praying with Kur'ān uplifted, were held in the mosques or on the müqalla, in which even Jews and Christians sometimes took part (Ibn Taghrībidī, ii/ii, ed. Popper, p. 67; Ibn Baṭṭāja, i. 243 sq.; cf. Quatrėmère, Hist. Sult. Maml., ii/i, 35, 40; ii/ii, 199) or for a period a sacred book like Bukhārī's Sāḥīḥ was recited (Quatrėmère, op. cit.; ii/i, 35; al-Dhahabi, Merveilles Biographiques, French transl., vi. 133). In the courtyards of the mosques in Jerusalem and Damascus in the time of Ibn Baṭṭāja solemn penance was done on the day of Ḍirār (i. 243 sq.), an ancient custom which had already been introduced into Egypt in the year 27 by ʿAbd al-ʿAzīz b. Marwān (quīd after al-Ḥīṣr; cf. Kindi, Wustī, p. 50). Certain mosques were visited by barren women (Wustenfeld, Medina, p. 133). An oath is particularly binding if it is taken in a mosque (cf. Joh. Pedersen, Der Eid bei den Semiten, p. 144); this is particularly true of the Ka'ba, where written covenants were also drawn up to make them more binding (ibid., p. 143 sq.; Chron. Mecca, i. 160 sq.). It is in keeping with this idea of an oath that Jews who had adopted Islam in Cairo had to take oaths in a synagogue which had become a mosque (Makrīzī, iv. 285). The contract of matrimony (ṣaḥād al-niḥāb) also is often concluded in a mosque (San-tillana, II Muḥāṣṣir, i. 548; Madkhal, ii. 72 infra; Snouck Hurgronje, Mecca, ii. 163 sq.), and the particular form of divorce which is completed by the Ṭāʿān [q.v.] takes place in the mosque (Bukhārī, Salāt, bāb 44; cf. Joh. Pedersen, Der Eid etc.), p. 114.

It is disputed whether a corpse may be brought into the mosque and the salāt al-ʿijānāzā performed there. According to one hadith, the bier of Saʿīd b. Abi Waḳāḥas was taken into the mosque at the request of the Prophet's widow and the salāt held there. Many disapproved of this, but ʿAṣīrī pointed out that the Prophet had done this with the body of Saḥāil b. Baṭṭāj (Muslim, Dhimmīs, tr. 34; cf. also Ibn Saʿīd, i/v, 14 sq.). The discussion on this point is not unconnected with the discussions regarding the worship of tombs. In theory this is permitted by al-Shāhī, while the others forbid it (see Juyboll, Handbuch, p. 170; I. Gudzi, II Muḥāṣṣir, i. 151). The matter does not seem to be quite clear, for Kuṭ b. Al-Din says that only Abū Ḥanīfah forbids it, but he himself thought that it might be allowable on the authority of a statement by Abū ʿUṣūf (Chron. Mecca, iii. 208-210).

In any case, it was a very general practice to allow it, as Kuṭ b. Al-Din also points out. ʿUmar conducted the funeral salāt for Abū Bakr in the Mosque of the Prophet and ʿUmar's own dead body was brought there; later it became a general custom to perform the ceremony in Medina close to the Prophet's tomb and in Mecca at the door of the Ka'ba; some even made a sevenfold ṭawfīq with the corpse around the Ka'ba. This was for a time forbidden by Marwān b. ʿAbd al-Ḥakam and later by ʿUmar b. ʿAbd al-ʿAzīz (Kuṭ b. Al-Din, loc. cit.; Wustenfeld, Medina, p. 77). The custom was very early introduced into the Mosque of `Amr (Makrīzī, iv. 7, 1 sqq.). That later scholars are quite wrong about the prohibition is not at all remarkable; for it is not at all in keeping with the ever increasing tendency to found mosques at tombs. Even Ibn al-Ḥadīdī, who was anxious to maintain the prohibition, is not quite sure and really only forbids the loud calling of the ṭawārīkh, ḥākīmīn, muškūlīn and masīhīn on such occasions (Madkhal, ii. 50 sq., 64, 81). When a son of Sulṭān al-Muʿayyad died and was buried in the eastern ʿūbah of the Muʿayyad mosque, the ḥāṭib delivered a ḥuṭba and conducted the salāt thereafter and the ṭawārīkh recited for a week at the grave, while the amirs paid their visits to the grave (Makrīzī, iv. 240, 2 sqq.). In Persia, it was the custom for the family of the deceased to sit in the mosque for three days after the death and receive visits of condolence (B. G. A., iii. 440 infra).

4. Mosques as Objects of Pilgrimage.

As soon as the mosque became a regular sanctuary it became the object of pious visits. This holds especially of the memorial mosques associated with the Prophet and other saints. Among them three soon became special objects of pilgrimage. In a ḥadīth the Prophet says "One should only mount into the saddle to visit three mosques: al-Masjid al-Ḥarām, the Mosque of the Prophet and al-Masjid al-ʿArḍ (Bukhārī, Fadl al-Salāt fi Masjid Maqka wa-l-Madīna, bāb 16; Ṣaḥīḥ al-ʿArḍ, bāb 26; ʿAṣīrī, bāb 67; Muslim, Ḥadīṯ, tr. 92; Chron. Mecca, i. 303). This hadith reflects a practice which only became established at the end of the Muʿayyad period. The pilgrimage to Mecca had been made a duty by the prescription of the Ḥadīth in the Kurʾān. The pilgrimage to Jerusalem was a Christian custom which could very easily be continued, on account of the significance of al-Masjid al-ʿArḍ in the Kurʾān. This custom became particularly important when Abū al-Malik made it a substitute for the pilgrimage to Mecca (Yaʿqūbī, ed. Houtsma, ii. 317). Although this competition did not last long, the significance of Jerusalem was thereby greatly increased. Pilgrimage to Medina developed out of the increasing veneration for the Prophet. In the year 140, Abū Ḥafṣa Mawṣūr on his Ḥadīṯ visited the tombs of the saints (Tabari, i. 120) and this became a very usual custom. Mecca and Medina however still held the preference. Although those of Mecca and Jerusalem were recognised as the two oldest (the one is said to be 40 years older than the other; Muslim, Masājīd, tr. 1: Chron. Mecca, i. 301), the Prophet however is reputed to have said "A salāt in this
Mosque is more meritorious than 1,000 salāt in others, even the al-Masjīd al-Ḥaram (Bukhārī, Bāqīʾ al-Saḥābī fī Masjīd Makkah wa l-Madīna, Bāb 1: Muslim, Ḥadīṣī, tr. 89; Chron. Mekka, i. 303) The hadīth is aimed directly against Jerusalem and therefore probably dates from the Omayyad period. According to some, it was pronounced because someone had commenced performing the salāt in Jerusalem, which the Prophet was against (Muslim, loc. cit.; Wakīlī-Wellhausen, p. 349). The three mosques however retained their pride of place (Ibn Khalūd, Makhdūmat, fāṣ 4; Ibn al-Ḥadījī, Madhkurīh, p. 55) and as late as 662 (1264) we find Bālsārīs founding azāfūr for pilgrims who wiled to go on foot to Jerusalem (Quatremère, Hist. Sult. Maml., i, 1, 248).

Although these three mosques officially hold a special position, others also are highly recommended, e.g. the mosque in Kūfah [see AL-MADINA]. A salāt in this mosque is said to be as valuable as an ʿumāra or two visits to the mosque in Jerusalem (Iḅābarkī, Aḥāna, i. 381 sq.). Attempts were also made to raise the mosque of Kūfah to the level of the three. Aḥī is said to have told some one who wanted to make a pilgrimage from Kūfah to Jerusalem that he should stick by the mosque of his native town, it was “one of the four mosques” and two rakāʾ in it were equal to ten in others (B. G. A., iv. 175 sq.; Yaḥyū, Muṭḥam, iv. 345; in another tradition, salāt in the provincial mosques are said to be generally worth as much as the pilgrimage (Makrīzī, iv. 4), and traditions arose about the special blessings associated at definite times with different holy places of Islām (B. G. A., iii 183) and especially about their superior merits (B. G. A., iv. 174). The Meccan sanctuary, however, always retained first place, which was marked by the ʿIṣābāt. It was imitated by al-Mutawakkil in ʿṢamarrāʾ; he built a Kūfah as well as a Mina and an ʿArafah there and made his amirs perform their ḥajj there (B. G. A., iii. 122).

D. Equipment of the Mosque.

1. The Development of the Edifice.

Except in the case of Mecca the earliest mosques as described above (B. 1) were at first simply open spaces marked off by a ʿārās. The space was sometimes, as in al-ʿUṣāṣ, planted with trees and usually covered with palkās; e.g. in Medina (Muslim, Ḥadīṣī, tr. 95; Bālādhūrī, p. 63) and al-ḥājīṣ (Makrīzī, iv. 8; Ibn ʿUstādākī, iv. 62; Ibn Taḥṭāṣīrī, i. 77) which was introduced in Bāṣra and Kūfah the courtyards of which were otherwise dusty (Bālādhūrī, p. 277, 348). These conditions could only last so long as the Arabs retained their ancient customs as a closed corporation in their simple camps. The utilisation of churches was the first sign of a change and was rapidly followed by a mingling with the rest of the population and the resulting assimilation with older cultures.

Umar made alterations in the mosques in Medina and in Mecca also. He extended the Mosque of the Prophet by taking in the house of ʿAbbas; but like the Prophet, he still built of ṭakīn, palm-trunks and leaves and extended the booths (Bukhārī, Ṣaḥābī, Bāb 62; Bālādhūrī, p. 6). In Mecca also his work was confined to extending the area occupied by the mosque. He brought the surrounding houses and took them down and then surrounded the area with a wall to the height of a man; the Kaʿbah was thus given its ṣināʾ like the mosque in Medina (Bālādhūrī, p. 46; Chron. Mekka, i. 306 sq.; Wustenfeld, Medina, p. 68 sq.) . Othūmān also extended these two mosques but introduced an important innovation in using hewn stone and plaster (ṣawṣaw) for the walls and pillars. For the roof he used teal (ṣuṣuṣ). The book, which had been extended by ʿOmar, were replaced by him by pillared halls (arwaṭa, sing. ṣiṣīk) and the walls were covered with plaster (Bukhārī, Ṣaḥāt, Bāb 62; Bālādhūrī, p. 46; Wustenfeld, Medina, p. 70 sq.). Saʿd's. Abī Waqīfī is said to have already taken similar steps to relieve the old simplicity of the barely equipped mosque in Kūfah. The ʿtrakh consisted of pillars of marble adorned in the style of Byzantine churches (Ṭabarī, i. 2489; Ṭabūtī, iv. 324).

This was little in keeping with the simple architecture of the original town, for Bāṣra and Kūfah had originally been built of reeds only and after several great fires were they built of ṭakīn (see above Bāb 1; cf. Ibn Kultabā, Ṣurīfīṣrī, ed. Wustenfeld, p. 279). As to Kūfah, Saʿd by ʿOmar's orders extended the mosque so that it became joined up with the Dār al-Imāra. A Persian named ʿUzābāh b. Burzūjmihr was the architect for this. He used bricks (ṣūrūr) for the building, which he brought from Persian buildings and in the mosque he used pillars which had been taken from churches in the region of Ifraj belonging to the Persian kings; these columns were not erected at the sides but only against the Kibla wall. The original plan of the mosque was therefore still retained although the pillared hall, which is identical with the ʿtrakh already mentioned (200 ʿārās broad), replaced the simple booth and the materials were better in every way (Ṭabarī, i. 2491 sq., 2494). Almost after the early Caliphs we can therefore note the beginnings of the adoption of a more advanced architecture.

These tendencies were very much developed under the Omayyads. Even as early as the reign of Muʿawiyah, the mosque of Kūfah was rebuilt by his governor Ziyādī. He commissioned a pagan architect, who had worked for Kīrāt, to do the work. The latter had pillars brought from al-Ahwāz, bound them together with lead and iron clamps to a height of 30 ʿārās and put a roof on them. Similar halls, built of columns (here like the old booth in Medina called ṣūrāf; Ṭabarī, i. 2492, 16; but also ʿtrakh, plur. ʿtrak, Ṭabarī, ii. 259 sq.) were also built by him on the north, east and western wall. Each pillar cost him 6,000 dirhams. The mosque could now hold 60,000 instead of 40,000 (Ṭabarī, i. 2492, 6 sqq. cf. 2494; Ṭabūtī, Muṭḥam, iv. 347, i. 977; Bālādhūrī, p. 276). Al-Ḥadījīḏāḏi also added to the mosque (Ṭabūtī, iv. 325 sq.). Ziyādī did similar work in Bāṣra. Here also he extended the mosque and built it of stone (or brick) and plaster and with pillars from al-Ahwāz, which were roofed with teak. We are told that he made al-ṣūrāf al-muṭḥadīna, i.e. the ʿtrak, hall, with 5 columns. This seems to show that the other sides also—as in Kūfah—had pillared halls. He erected the Dār al-Imāra close to the kibla side. This was taken down by al-Ḥadījīḏāḏi, rebuilt by others, and finally taken into the mosque by Harūn al-Kāshīdī (Bālādhūrī, p. 347, 348 supra, 349; Ṭabūtī, i. 642, 643). In Mecca also in the same period
similar buildings were erected. Ibn al-Zubair and al-Hādjīdālī both extended the mosque, and Ibn al-Zubair was the first to put a roof on the walls; the columns were gilt by 'Abd al-Malik and he made a roof of tiles. Chron. Meckba, i. 307, 309.

The Mosque of 'Amr was extended in 53 with Mu‘āwiya’s permission by his governor Maslama b. Mukhallad to the east and north; the walls were covered with plaster (mūrās) and the roofs decorated; it is evident from this that here also the original booth of the south side was altered to a covered hall during the early Umayyad period. A further extension was made in 79 in the reign of 'Abd al-Malik (Makrizi, iv. 7, 8; Ibn Dūkmaḳ, iv. 62). Thus we find that during the early Umayyad period and in part even earlier the original simple and primitive mosques were some extended, some altered. The alteration consisted in the old simple booth of the Mosque of the Prophet being gradually enlarged and transformed into a pillared hall with the assistance of the arts of countries possessing a higher degree of civilization. In this way what had originally been an open place of assembly developed imperceptibly into a court, surrounded by pillared halls. Very soon a fountain was put in the centre of the house and we now have the usual type of mosque. The same plan is found in the peristyle of the houses and in the atrium of a basilica like that of Tyre (Hertzog-Hauch, Realencyclopaedie, i. 780)."

The great builders of the Omayyads, 'Abd al-Malik and his son al-Walid I, made even more radical progress. The former entirely removed the original mosque in Jerusalem and his Byzantine architects erected the Dome of the Rock as a Byzantine building (cf. Sauvage, Jérus. et Hébron, p. 48 sqq.). Al-Walid likewise paid equal little attention to the oldest form of mosque, when, in Damascus, he had the church of St. John transformed by Byzantine architects into the Mosque of the Omayyads. As al-Maḳdisī distinctly states, they wanted to rival the splendours of the Christian churches (B. G. A., iii. 159). The new mosques, which were founded in this period, were therefore not only no longer simple, but they were built with the help of Christians and other trained craftsmen with the use of material already existing in older buildings. Al-Hādjīdālī, for example, used materials from the surrounding towns when building his foundation of Wāṣil (Tabatī, iii. 321; Baladhuri, p. 290). Columns from churches were now used quite regularly (e. g. in Damascus: Masūdī, Muḥadżīdī, i. 408; Ramla: B. G. A., iii. 165; cf. Baladhuri, p. 143 sqq.; for Egypt see Makrizi, iv. 36, 124 sqq.). Sometimes remains of the older style remained alongside of the new. In Irâksh, al-Maḳdisī found in the chief mosque wooden columns of the time of Abū Muslim along with round columns of brick of the time of 'Amr b. al-Laith (B. G. A., iii. 316). The building activities of al-Walid extended to al-Fuṣṭāṭ, Mecca and Medina (cf. B. G. A., v. 106 sqq.) where no fundamental alterations were made, but complete renovations were carried out. With these rulers, the building of mosques reached the level of the older architecture and gains a place in the history of art. There is also literary evidence for the transfer of a style from one region to another. In Iṣṭakhr, for example, there was a djamā' in the style of the Syrian mosques with round columns, on which was a sabara (B. G. A., iii. 436 sqq.; cf. for Shiraz, p. 430). Al-Walid also rebuilt the Mosque of the Prophet, in part in the Damascus style (B. G. A., iii. 80; Kaẓwīni, ed. Wustenfeld, ii. 71). This revolution naturally did not take place without opposition any more than the other innovations, which Islam adopted in the countries with a higher culture which it conquered. After the Mosque of the Prophet had been beautified by Christian architects with marble, mosaics, shells, gold etc. and al-Walid in 93 was inspecting the work, an old man said: “We used to build in the style of Mosques; you build in the style of Churches” (Wustenfeld, Medina, p. 74). The discussions on this point are reflected in Ḥadīth. When 'Omar enlarged the Mosque of the Prophet, he is reported to have said: “Give the people shelter from the rain, but take care to make them red or yellow lest you lead the people astray”, while Ibn 'Abbās said: “You shall adorn them with gold as the Jews and Christians do” (Bukhārī, Salīḥ, bāḥb 62). Ibn 'Abbās here takes up the Omayyad attitude and 'Omar that of old-fashioned people, according to whom any extension or improvement of the sūlla was only permissible for strictly practical reasons. The conservative point of view is predominant in Ḥadīth. It is said that extravagant adornment of the mosques is a sign of the end of the world; the works of al-Walid were only tolerated from fear of the jītna (Ibn Ḥanbal, Muw}m}a, iii. 134, 145, 152, 230, 283; al-Nasā'ī, Mawṣ}l}dī, bāḥb 2; Ibn Māja, Maṣ}mūlīdī, bāḥb 2). The lack of confidence of pious conservatives in the great mosques finds expression in a Ḥadīth, according to which the Prophet (according to Ibn Anas) said: “A trick will come over my umma when they will vie with one another in the beauty of their mosques; then they will visit them but little” (al-`Askālānī, Fath al-Bārī, i. 362). In the Fīhī, we even find divergence from the oldest quadrangular form of the mosque condemned (Guidi, al-Muḥ}t}aṣār, i. 71). Among the types which arose later was the “suspected” (muwallakah) i.e. a mosque situated in an upper storey (e. g. in Damascus, Ǧ, A., ser. ix., vol. v. 409, 415, 422, 424, 427, 430).

2. Details of the Equipment of the Mosque.

a. The Minaret (see also Manār). The earliest primitive mosques had no minaret. When the adhān call was introduced, Bilāl is said to have summoned the faithful in Medina to the early salat from the roof of the highest house in the vicinity of the mosque (Ibn Iṣ-hāb, p. 348; Wustenfeld, p. 75); on the day of the conquest of Mecca, the Prophet instructed Bilāl to utter the call to prayer from the Ka'ba, according to al-Azraḳī, from the roof (Chron. Meckba, i. 192: cf. Ibn Hisḥām, p. 822). During the early days of Islam, the muʾadhdhīn did not however utter his summons from an elevated position (cf. below G 4 d). It is doubtful in the first place when the minaret was introduced, and in the second whether it was adopted into Islam, expressly for the call to prayer.

The Omayyad caliph al-Walid (86–96) undoubtedly had considerable importance for the history of the minaret, although even earlier in 84 (703) Siddī Ḥākīma in Kairawān had been built by Ḥassān b. Nūmān with a minaret (so according to Bakrī: H. Salādīn, La Mosquée de Sidi Okba, 1899, p. 7, 19). There was also a minaret in the
Omayyad mosque in Damascus. At the present day, the mosque has 3 minarets as was the case in the time of Ibn Djibair, who mentions 2 on the west and one in the north (Rihla, p. 266), while Ibn Hajar also says there were three and added that one was in the west, another in the east and another in the north (f. 205), which agrees with present day conditions. One of the earliest authorities, Ibn al-Falikh (d. 289 = 902), however mentions only one minaret (miq'a;hana) and says that in the days of the Greeks it had been a watch-tower (mawârîn), which belonged to the church of St. John and was left standing by al-Walid (B. G. A., i. 106, 5). Al-Majdisi (d. 375 = 955) mentions only one minaret, which was above the Bab al-Paradis: when he calls it "miq'a;hana majâhita (B. G. A., iii. 159) he may perhaps mean a renovated minaret (cf. Le Strange, Palestine under the Moslems, p. 239) and besides his description does not exclude the existence of other minarets. The tradition that the minaret of the Omayyad mosque was taken over from the predecessors of the Muslims long survived: or Yâkit, who mentions the east and west minarets, says that the western belonged to a fire-temple and a temple used to be visible on it (Muhîyîn, n. 596) and according to Ibn Batûtah, the east- and west minarets had been built by the Byzantines while only the north one was built by the Muslims (t. 205 sqv; a story al-o given by al-Bosîrî [d. 1003 = 1594] quoting Ibn Asâkir [d. 1176], see Y. A. ii. 9; v. 423; Quatremère, Hist. Sult. Musul., ii. p. 273). Ibn Mecca also, al-Walid built turrets (khirbat al-Masjida, ibn Mecca, ii. 310), sometimes minarets (as is evident from ibid, p. 310, 311). They were later increased so that Kutb al-Din mentions 7 minarets (ibid, iii. 424-426). According to al-Samhîdî, he also built in Medina 4 towers but Sulaimân b. 'Abd al-Malik, in the year 97 had the southwestern tower taken down, because the shadow of the miq'a;hahana from it fell upon him, when he was in the house of Marwan b. al-Hâkim. While al-Samhîdî says that there were no minarets in Medina before al-Walid, he asserts on the other hand that 'Omar had already built towers on four corners of the mosque (Wustenfeld, Medîna, p. 73; cf. Ibn Batûtah, f. 272). In the time of Ibn Djibair (in 580) there were still only 3 minarets there (Rihla, f. 195). It was not until 707 that Muhammad b. Ka'b al-As'în rebuilt the fourth minaret (Wustenfeld, op. cit., p. 76).

After the time of al-Walid, minarets became more and more numerous, in Ra'mān b. brother al-Hîshâb built a beautiful minaret (R. G. A., i. 165, f. v. For the mosque in Jerus. ibn 'Abd al-Kâhidî about 400 mentions 4 minarets (Jâlî, Cairo 1351, iv. 274-275) which Muqarr bark al-Din claims to go back to the time of al-Mahc (Sa'dî, Hist. Jâlî, Cairo, p. 125). Ibn Hâwâl (367 = 977) expresses notes of the Umayyans in Fârayah in Kharîsân that it did not have a minaret (B. G. A., ii. 321) and he seems to consider it 'î'ta to build two minarets (f. 165, v. 13, sqv.). Apart from the isolated reference by al-Samhîdî to 'Omar's building activities, to which very little importance can be attached, it is probable from this evidence that al-Walid was the first to introduce the minaret into Syria and the Hijaz. That he introduced it into Islam itself, is however not certain. According to al-Baladhuri (d. 279 = 892), Ziyâd in Basra, where he was governor in 45, built the minaret of stone, when he built the mosque of brick (p. 348). This seems to suggest that there was already a minaret there. According to the Egyptian historians, Muslama b. Mu'âshad in al-Fustât by Mu'âshad's orders in 53 built a tower at each corner of the mosque (Amr (Ismâ'îl), which had not been done before (Ma'akrizi, iv. 7 sqv, 44; Ibn Taghribîrdî, i. 77). The staircase leading up to the minaret was originally outside the mosque, but was later put inside it. Muslama is said to have introduced the minaret into other mosques in al-Fustât (i.e. in all except those of Tûdîb and Kha'îl; cf. Ma'akrizi, iv. 44; Ibn Taghribîrdî, loc. cit.). How old this story is, cannot be ascertained, but the view often put forward that al-Walid was the first to introduce the minaret (cf. Schwally, in Z. D. M. G., ii., 1898, p. 143-146), is in any case not certain.

There are three names in common use for the minaret. 'Mîq'a;hahana or miq'a;hahana, "place of the al-tâbîn call", which is in general use in Egypt and Syria at the present day, is frequently found in literature and inscriptions (B. G. A., ii. 225, ii. v. 108, s; Ma'akrizi, iv. 13, 10, 20, 4, 6, and pass.; Ibn A. Usâîbî, i. 204, 3, from below; v. Berchem, Corpus, i, N°. 25, 63, 88, 89, 90 and others from the 9th century onwards), Safwâna, specially used in North Africa (Maria, Les Monuments arabes de Tlemcen, 1903, p. 45), is frequently found (Ibn Djibair, Rihla, p. 91, 100, 145, 195, 266; Ibn Batûtah, i. 203, 272; ii. 2, 12, 13; Ma'akrizi, iv. 7 sqv; Ibn Taghribîrdî, i. 77). This word means also cloister or cell and in the older literature is used as the equivalent of dair (Sûra xxii. 41; Ibn Hâšîm, p. 115; Bukhârî, al-A'mâl fi-l-Sâlîh, n. 7; Majlîs, n. 35; Anbâ'î, n. 48; B. G. A., i. 115, 154; Ma'akrizi, iv. 384; Dâ'î, n. 561). Manârâ is the most usual word in literature (Ibn al-Makrizi, iv. 7; mânâr; cf. v. Berchem, Corpus, i, N° 63; K. al-Mas'âdî, ii. 63, 67). This word has the same meaning as Syr. mânârâ but is probably a analogously, independent formation. The word means light, position in which a light is put (Ibn 'Abbâs, Dîwân, 147, 37; Abî Dhu'aib, Dîwân, ed. Bell, i. 60; B. G. A., vii. 132); also light-house (B. G. A., i. 177; Kindi, Wulâr, p. 64; Ibn Dju'air, Rihla, p. 41). Manâr (or) also means a boundary stone or a signpost (Salûm, Lîsân, p. 99, from below; Kaîl al-Rukâyî, p. 37-77; Ibn Sa'd, ii. 135; Fratam, Hist. Arab., i. 12 and Gl.) or a watch-tower (Tabari, i. 864, 878) the boundary stones of the horasan area, for example, are called Manâr al-harâm (B. G. A., i. 25) and Abraha was called Dhu 'l-Manâr, because he put up signposts (Lîsân, vii. 105, 11; Djâhâna, Saûbî, i. 410); obelisks are also called manârâ (B. G. A., vii. 117, 118, s). The derivation of the last named mânâr from millârion (Franckel, Fremdeufer, p. 285) is likely and still less probable is a derivation from a Persian building for fire-worship (v. Berchem in E. Dier, Die sassanische Baukunst, i. (1908), 113 sqq. distinguishing rather ingeniously between manâr = "light" from nûr and mânâr = "fire-tower" from nûr). Probably there is only a single word in question and the signposts received their name from the watch-tower (note that ašlan also is used of the minaret: Ibn 'Arabshah, Vita Timuri, ed. Manger, 1767, vii. 704). There are a number of references to the existence on the coasts of a series of manârâ and each manârâ gave warning by light-signals of the movements of the enemy (B. G. A., ii. 177). According to al-Baladhuri
This was the already the custom in Omar's time and was in all probability an inheritance from the Byzantines. Similar watch-towers (έγκοιτέριον) were used inland in the Byzantine period e.g. in the eastern Hauran, and the Persians had similar towers on their frontiers (μανάρα: Tabari, i. 864, 878); a similar manâra in the Iraq is described by Ibn Djuhair (p. 210; cf. B. G. A., v. 176); in the Maghribi also, fort-like towers are called manâra, e.g. in Tunis and Gabes (al-Tidjâni in 706–707; J. A., ser. 4, xx. [1852], 99, 144). That these towers used fire-signals is very probable and Musil gives evidence of this custom for the Edom territory (Arabia Petraea, ii. 2, 233). In the sixth (sixth) century again al-"Umari (Zewaj, il'i: al-Mustalhak al-\'ilam, Cairo 1342, p. 199 sq.) refers to the use of a series of heights and towers for light-signals, including the Ma’dumat al-Farazdak, one of the minarets of the Omayyad mosque of Damascus (on the whole question see R. Hartmann, in Z. D. M. G., lxx., 1916, p. 486, 505; Memnon, iii. 221; Ist. i. 388 sq.). It is obvious that the tower of the mosque was given the name manâra from its resemblance to similar watch-towers and it is possible that its use for fire-signals was more general in earlier times. In Fâs the hours of prayer were indicated by lamps from the minarets (J. A., ser. 11, xii. 1918, p. 341).

This does not however answer the question why the minaret was introduced into Islam. From what has been said above it is probable that the minaret was introduced specially for the azžâd call. According to Ibn al-Fakhrî and others, it was incorporated in the Mosque of the Omayyads, simply because it was already there as a part of the church (cf. above); this agrees with de Vogüé's observation that the use of towers in churches and the larger public buildings in Syria in the ivth and vth century was common (La Syrie centrale, i. 57). The tower in the mosque of Baṣra is thought to be an original church-tower (cf. Diez, Die Kunst der islamischen Völker, p. 19 sq.). This indicates that the minaret in Syria became part of the mosque in a purely architectural way. But after its introduction, it was soon used as a place in which the ma’dâdhîn could stand, which has also been an obvious thing to do. This did not happen at once however. From Tabari and others we can see that the call to prayer at a much later date could still be uttered in the street, and al-Farazdak (d. about 110 = 728) who refers to the existence of manâr al-masâjid (Kimiš, p. 481; Aghâni, 2nd ed. Cairo, xiv. 18) also speaks of ma’dâdhîns on the city wall (Tabari, ii. 1302; Naṣîrid, p. 365; see J. Horovitz, in Ist., xvi., 1927, p. 253, 255) with which we may compare the tradition that the Prophet considered whether he ought to permit the call to prayer to be uttered on the fortifications of Madina ("ala az-Zam al-Madina; cf. Ibn Sa’d, i. 7).

It is however by no means impossible that the minaret may have arisen elsewhere in a different way. If we can trust the account by al-Mâkridî and others (see above), the minaret was introduced into Egypt by Mu'awiyâ's orders as a corner tower. Here it was at once used in a way which recalls the dwelling-towers of ascetics. It was used for the adhân, but not only for the five calls to prayer but also for vigil, in which the ma’dâdhîns repeated litanies (Mâkridî, iv. 44 middle) and its architect, Maslama b. Muhkâlîd, used it for the i'tikâf (ibid., p. 44). An ascetic who died in 469 lived in the manâra of the Mosque of 'Amr (YâkJît, Vdây3, iv. 274). This suggests the meaning of minaret expressed by the word guwâmâ (cf. also Mâkridî, iv. 7, 8) as a saint's cell. According to one source, rather late however, al-Walîd is said to have found a monk in the guwâm of the church of St. John who lived in the guwâm there (cf. J. A., ser. 9, vii., p. 189; Quatremère, Hist. Sult. Mant., i/1, 264). This use of the minaret was kept up during the golden age of Islam. Thus Ibn Djuhair records that he saw in the west minaret of the mosque of the Omayyads cells for devout Maghribi and in the topmost chamber, where al-Chârîdî had lived in i'tikâf, there was now a zâhid (Ribîl, p. 266, 18 sqq.); Ibn Tumtûn also lived there (YâkJît, Muqâyim, ii. 596, 19 sq.) and 'Abd al-Lâjî also found another devotee living there (Ibn Abî Usâbhî, ii. 204, 2 from below).

According to al-Mâkridî, the Egyptian minaret was not introduced in a purely architectural way, but even from his account it appears most likely to be Syrian in origin.

If the minaret did not have a single origin, it is improbable that a single type of tower served as the model for it. Ziyâd is said to have built the minaret in Baṣra of stone. The quadrangular Syrian Omayyad type (B. G. A., iii. 182), which was taken over from the church-tower, was also of stone. In Egypt, on the other hand, according to al-Mâkridî, minarets for many centuries were only built of brick and the earliest stone minarets in this country were not built till shortly before 700 in al-Mansûriya and al-\'Albâghâwîya (Mâkridî, iv. 224). In North Africa where the Omayyad, Syrian type was introduced, a round minaret of brick in 7 stories with pillars was built in 'Abbâsiya south of Kairawân in 184 (YâkJît, Muqâyim, iv. 119). Ibn al-Hâjîâdî condemns minarets of his time as being built too high. It is interesting to note as throwing a light on what was considered bid'a that he regards the round form as the old and genuine one (Mashâhid, ii. 61 below). — For literature see Frankel, Schwally, v. Berchem, R. Hartmann, Horovitz quoted above; Durât, in K. Afr., iv., 1900, p. 539 sqq.; J. H. Gotthelf, in Am. Ar. O. S., xxx, 1913, 132–154; N. A. C. Creswell, in Burlington Magazine, xlviii., 1926, p. 134–140, 252–258, 290–296.

b. The Chambers.

The old mosque consisted of the courtyard and the open halls running along the walls: these were called al-muçhaftâs (B. G. A., iii. 82, 158, 165, 182) because they were roofed over. When we are told that in Palestine, except in Jericho, towers were placed between the mucaba and the courtyard (ibid., p. 182), this seems to suggest that the halls were closed, which would be quite in keeping with the winter climate of this region.

The halls were particularly extensive on the kibla side, because assemblies were held here. The space between two rows of pillars was called risâlah or arwi'ka or riwâ'ik (B. G. A., iii. 158, 159: Mâkridî, iv. 10, 11, 12, 49). Extension often took the form of increasing the number of the arwi'ka. In some districts a sail-cloth was spread over the open space as a protection from the sun at the time of the service (B. G. A., iii. 205, 430).

The courtyard was called wâlî. The open space around the Ka'bah is called Fitâr al-Kâba
The name also given to the open space around the mosque (Makrizi, iv. 6). Trees were often planted in the courtyard: e.g. in the mosque of Amir (see B 1); when we read in Makrizi, iv. 6 that it had no ḥabā, this probably means that this space, planted with trees, between the covered halls was very narrow. In Medina, at the present day, there are still trees in the Kura (Batanum, Rīḥa, p. 249); in Ibn Dhu’fa’s time there were 15 palms there (Rīḥa, p. 194). Other mosques in Cairo had trees growing in them (Makrizi, iv. 54, 94, 65, 120; in al-Mawdūdī al-Ḳurān, there were as many as 516 trees: Rīḥa, p. 200) as is still the case today. In other cases the court was covered with pebbles (see above D 1); but this was alleviated with a more refined style of architecture.

Although the maṣṣūrā was only found in Tiberias, out of all the mosques in Palestine (B. G. I., in 182). Frequently, as in Ramla, the halls were covered with marble and the courtyard with flat stone (ibid., p. 165). In the halls also the ground was originally bare or covered with little stones: for example in the mosques of ‘Amr until Maslama b. Muḥammad covered it with mats (see below). The floor of the Mosque of ‘Amr was entirely covered with marble in the Mamluk period (Makrizi, iv. 15 sq.; cf. in Ṣanṣār, Ibn Ṣanṣār, ii. 53). But in the mosque of Mecca, the ḥabā is still covered with little stone. (Batanum, Rīḥa, p. 99 below) 400 dinars were used to be spent annually on this (Crown, Mecki, ii. 109 sq.). In Medina also little pebbles were used (Ibn Dhu’fa, Rīḥa, p. 190, Ibn Ṣanṣār, i. 263)

They were not at first enclosed chambers in the halls. A change in this respect came with the introduction of the maṣṣūrā (p. v.) (on this word cf. Quatremerie, Hist. Sult. Maml. i, p. 164, note 46). This was a box or compartment for the ruler built near the mihrāb. Al-Samhūdī gives the history of the maṣṣūrā in Medina (Wustenfeld, Medina, p. 71 sq., 89 sq.). The traditions all agree that the maṣṣūrā was introduced to protect the ruler from the falling of the little attacks according to some men. Qūḥānī built a maṣṣūrā of ṣiḥr with windows, so that the people could see the Imam of the community (ibid. and Makrizi, iv. 7). According to another tradition, Marwān b. ‘Abd al-Jaκām, governor of Medina, after an attempt had been made on him by a Yāmān in the year 44, was the first to build a maṣṣūrā of dressed stone with a window (Balādūn, p. 6 below; Tabari, n. 70). Maṣṣūrā is then said to have followed his example. Others again say that Maṣṣūrā was the first to introduce this innovation. He is said to have introduced the maṣṣūrā with the accompanying guard as early as the year 40 or not till 44 after the Khaṭirji attempt (Tabari, i. 3495; B. G. I., v. 109; Makrizi, iv. 12, 11 sq.); according to one story because he had seen a dog on the maṣṣūrā (Hābīš, ed. Schwyzer, p. 393 below; cf. on the whole question: H. Lammens, Maṣṣūrā, p. 202 sq.). This much seems to be certain, that the maṣṣūrā was at any rate introduced at the beginning of the ⁹th century and it was an arrangement so much in keeping with the increasing dignity of the ruler that, as Ibn Khuldūn says, it spread throughout all the lands of Islam (Maṣṣūrā, Cairo 1322, p. 212 sq.; fur/i. 37). The governor built themselves compartments in the principal mosques of the provinces, e.g. Ziyād in Kūfah and Baṣrah (Balādūn, p. 277, 348) and probably Kurra b. Shīrīk in al-Fustāti (Makrizi, iv. 12). In Medina, we are told that ‘Omar b. ‘Abd al-‘Azīz as governor (86—93) raised the maṣṣūrā and built it of tunk, but al-Maḥdī had it taken down in 160 and a new one built on the level of the ground (ibid., p. 7; Wustenfeld, op. cit.: Balādūn, p. 7 cent.). We are further told that in 161, al-Maḥdī prohibited the maṣṣūrā of the provinces and al-Ma’mūn even wanted to clear all the boxes out of the masjadi al-Ǧamāʿa, because their use was a sunna introduced by Muʿāwiya (Makrizi, iv. 12; Yaḥūḥ, ed. Houtsma, ii. 571). But this attempt did not succeed. On the contrary, their numbers rapidly increased. In Cairo, for example, the Ḥājī al-‘Aṣkar built in 169 a maṣṣūrā (Makrizi, iv. 33 sq.) and the mosque of Ibn Tālūn had a maṣṣūrā beside the mihrāb which was accessible from the Dār al-Imāra (ibid., p. 36, 37, 42; Ibn Ṭāhribiṭī, ii. 8, 14). The maṣṣūrā was found in the larger mosques. In the Ḥājī al-Ḳurra and Muhammad b. Kālaṭūn in 718 built a maṣṣūrā of iron for the Sultan’s prayer (Makrizi, iv. 132). According to Ibn Ḥālūdūn, the maṣṣūrā was an innovation of Islam’s own. The question must however be left open, whether in its introduction and development there may not be some connection with the boxes of the Byzantine court, at least, for example, when the Turks in the Veṣḥi al-Ḥājī in Brussa put the Sultan’s box over the door (R. Hartmann, Im neuen Anteliten, p. 27).

Although the maṣṣūrā was introduced with the object of segregating the ruler and was therefore condemned by the strict aṣḥāb al-ṭarīq, it is the custom of Islam (e.g. Maṣṣūrā, ii. 4 sq.), maṣṣūrā were probably introduced for other purposes. Ibn Dhu’fa mentions three in the Mosque of the Omayyads: the old one built by Muʿāwiya in the eastern part of the mosque, one in the centre, which contained the minbar, and one in the west where the Ḥanafīs taught and performed the prayer. There were also other small rooms shut off by wooden lattices, which could be sometimes called maṣṣūrā and sometimes zawiya. As a rule, there were quite a number of zawiya connected with the mosque which were used by students (Rīḥa, p. 265 sq.). We find the same state of affairs in other mosques.

While the groups of the kūrīdū, the students, the lawyers etc. had originally to sit together in a common room, gradually the attempt was made to introduce separate rooms for them. Small compartments were either cut off in the main chamber or new rooms were built in subsidiary buildings. In the former case we get the already mentioned maṣṣūrā or zawiya. Ibn al-Ḥittājī says that a madrasa was often made by the simple process of cutting off a part of a mosque by a balustrade (darbasīn) (Maṣṣūrā, i. 44). Thus in the halls of the Mosque of ‘Amr there were several compartments for teaching, which are called maṣṣūrā and zawiya, in which studies were prosecuted (Makrizi, iv. 20, 15, 25). In the Aṣḥāb Mosque, a maṣṣūrā (Qāmūs) was made in the time of the Fatimids, which she had appeared, and the emirs in the following period made a large number of such maṣṣūrā (ibid., p. 52, 53). In the Aṣḥāb Mosque about 300 A.H., there were three more for women (B. G. I., v. 100). These divisions might be a nuisance at the great assemblies and this is why al-Maḥdī wanted to remove them in 161 from the masjadi al-jamāʿat (Tabari, iii. 486),
and Ibn al-Hajjāj condemned them as works of the mulk and numbers them like other embellishments with the ḥazrāt al-ṣā'i (Muḥarrar, ii. 43 sq.).

The mu'addhinūn not only lived in the minarets, where, at any rate in the Tūlūnī period, they held vigils (Makrizī, iv. 48). They had rooms (zawāfī, sg. ẓawāfī) on the roof and these rooms in time came to be numerous (ibīd., p. 13, 14). All kinds of rooms were put in subsidiary buildings, for the khaṭīb (ibīd., p. 13), for judges, for studies, etc. In addition there were dwelling-houses, not only for the staff but also for others. As already mentioned, devout men used to take up their residence in the mosque for a considerable period for ṣāhīḥ and any one at any time could take up his quarters in the mosque; he could sleep there and make himself at home. It therefore came quite natural to the devout to reside permanently in the mosque. Asceities often lived in the minaret (see above), a ṣāhīḥ lived there and resided there (Sauvage, Hist. férus. et Hébron, p. 11 sq.) and also beside the Masjid Yāni in the ancient Nīyeh (B. G. A., iii. 146). Kitchens were therefore erected with the necessary mills and ovens and cooked food (ḏaḵīzāh) and 14–15,000 loaves (raḏāfī) were daily distributed to those who stayed there and to visitors (Sauvage, p. 20 sq.; cf. Quatremère, Hist. Sult. Maml., i/ii., 231). Bread was also baked in the mosque of Ibn Tūlūn (Quatre- mère, op. cit., vii, 233) and kitchens were often found in the mosques (for al-Azhar, see Djalartti, Merveillet, ii. 238 sq.; Sulaimān Ṭalādūn, Kanz al-Dīwān fī Taʾrikh al-Azhar, p. 71 sqq., 107 sqq.). Those who lived in and beside the mosque were called muḥāfīzin (cf. B. G. A., iii. 146; for Jerusalem, Nāṣīr-i Kborsaw, p. 82, 91; for Mecca, Ibn Dījbarīr, p. 149; for Medina, Ibn Baṭṭūtā, i. 279, where we learn that they were organised under a ḍāmidd, like the North Africans under an amūn in Damascus; Ibn Dījbarīr, p. 277 sq.). They were pious ascetics, students, and sometimes travellers. The students generally found accommodation in the madaris but large mosques like that of the Omayyads or al-Azhar had always many students who lived in them. The name of the halls rīwāk, plur. arwāhka, was later used for these students' lodgings (cf. v. Berchem, Corpus, i. 43, note 1; perhaps Makrīzī, iv. 54, 25). Strangers always found accommodation in the mosques (cf. C 1). In smaller towns it was the natural thing for the traveller to spend the night in the mosque and to get food there (Ŷikhtūn, iii. 353; al-Kīfī, Taʾrikh al-Ḫubānā, ed. Lippert, p. 252). Travellers like Nāṣīr-i Kborsaw, Ibn Dījbarīr, Ibn Baṭṭūtā, al-Abdārī (J. A., ser. 5, iv, 1854, p. 174) were able to travel throughout the whole Muslim world from one mosque to the other (or madrasa or rīwāk). The traveller could even leave his money for safe keeping in a mosque (Sīfat-nāma, p. 51). Large endowments were bequeathed for those who lived in the mosques (Ibn Lūjair, op. cit.; Ibn Taghrībirdī, ii/ii., 105 sq.).

In later times the rulers often built a lodge or pavilion (muṣāra) in or near the mosque (Makrīzī, ii. 345; iv. 13; cf. on the word: Quatremère, Hist. Sult. Maml., i/ii., 15).

There was often a special room with a clock in the mosques; this also is probably an inheritance from the church, for Ibn Rosta (290 = 903) talks of similar arrangements in Con-tantinople (B. G. A., vii. 126 supra). Ibn Dījbarīr (p. 270) describes very fully the clock in the mosque of the Omayyads (cf. J. A., ser. 9, vii. 205 sq.). It was made in the reign of Nār al-Dīn by Fāhr al-Dīn b. al-Salātī (Ibn Abī ʿUṣābiʿa, ii. 183 sq.); an expert was kept to look after it (Ṭuḡrī, 191). There was a clock in the Mustaʿnīya in Baghdaḍ (Saʿre and Herrfeld, Arch. Rasse, i. 170) and the Muṣūd of ʿAmr also had a ghurjat al-Salātī (Makrīzī, iv. 13, 13). In the Mosque of Ibn Tūlūn is still kept a sundial of the year 696 (1296–1297; cf. v. Berchem, Corpus, i, N°. 514) but the clocks were usually mechanical (see also Duvey, Supplément, s.v. mināgāna and on the clock generally E. Wiedemann, in Nova Acta der K. Leop. Carol. Akad., vol. C, Halle 1915). In the Maghrib also we find mosque-clocks, e.g. in the Bilānāiya (J. A., ser. ii, xii. 357 sqq.).

The very varied uses to which the mosques were put resulted in their becoming storehouses for all sorts of things. In 668, the Mosque of the Omayyads was cleared of all such things; in the courtyard there were for example stores for machines of war and the rāwāi of Zain al-ʿAbīdu was a regular khān (J. A., ser. 9, vol. vii. 225 sq.).

 strawberries

Whether the Prophet considered it necessary to erect an indicator of the direction of prayer in Medina may be considered doubtful. According to Tradition, when the revelation of the ʿībā came to him, he turned round in the middle of the prayer without further investigation (Wustenfeld, Medina, p. 41, 62; Ṭabarī, Taķāfī, xi. 23 centre; Muslim, Ῥassādīdīdī, tr. 2). On the muṣīlālā however and on journeys he used a spear, which was stuck in the ground right in front of him, but this zābā (q.v.) was not intended so much to give the direction a- to be a substitute for the wall, to mark off the area of the worshippers: it could therefore also be an animal or some living thing (Bukhari, Ῥassāt, B. 18, 80–90; Muslim, Ῥassāt, tr. 45; Zaikhāni on Munarrijā, i. 283; Abū Dīwālī, i. 69; Ḥāmid h. Ḥanbāl, Muṭwās, ii. 106). At the present day the mīḥrāb is often called ʿiḥā (and as early as Ibn Taghrībirdī, i. 351; Yūkūt, i. 642).

In al-Fustāṭ ʿAmr is said to have ascertained the ʿībā very carefully with the help of a number of other (Makrīzī, iv. 6 supra: B. G. A., vii. 359; Ibn Taghrībirdī, i. 75 sq.). But we are not told how it was indicated, probably by a pole or something of the kind. The ʿībā was however too far to the east, so that during the prayer the worshippers turned more to the south. At first they were probably content with the direction, roughly correct, in keeping with a ḥadith of Abū Ḥaṭairā, according to which the ʿībā in general lies between east and west (Tirmidhī, Mawākiṭ al-Salātī, p. 139; Makrīzī, iv. 24). The first mosque in Fīhān was built where Abū Mūḥā had performed the ḫātāt, and a brick placed in position
by him was taken as the kibla (B. G. A., vi. 200). But later the problem was tackled seriously. Makrizi mentions the different solutions of it in Egypt (xxi. 21—33). Al-Azhari had the kibla accurate; the mihrāb al-qālāba, i.e. that of the Mosque of 'Amr and those of the mosques in Dīzā, Bilbāis, Alexandria, Kus and Assuan were too far to the east, that of the Mosque of Ibn Tulun was found by a committee to be 14 dārdāb too far west, those of the villages too far west. The direction was ascertained from the stars. Many however followed the kibla of Syria. In the transformation of churches into mosques, frequent under al-Mansūr, their orientation from east to west was decisive. The door on the east side as a rule was made the mihrāb (Makrizi, iv. 30).

The word mihrāb and after the beginning of Islam meant in the first place a palace or a part of one (Immu'ul'ka', p. 52, 339 South Ar.; Mujaddidiyya, p. 21, 139, Persian; Bahuri, Humā'īn, p. 494; Iṣāf al-Rukayyāt, p. 2, 49, 3), also women's apartment ('Omar b. Râbi', p. 136, 9, 42, 7; Makrizi, iv. 378, 13), secondly a niche where a bust stood; e.g., before Islam (Ibn Khūtaiba, 'Uṣūl al-Abārār, p. 356) and for the Muslim period (Huljīn, 90, 14; Bahuri, Humā'īn, p. 492), especially of a niche with an image of a Christian saint ('Omar b. Râbi', p. 323, 7). Perhaps the part of the palace, called mihrāb in the above examples, is simply a niche with a throne in it (cf. esp. Mujaddidiyya, p. 21, 13). The same use of the word is found in the Kur'ān. In Sūra xxxvii. 20, it means the part of the palace where the king is. Sūra xiv. 12, most probably a place where images are put, and iii. 32 sq.; xix. 12, a temple or rather a cell in a temple where one prays. At a still later date we find expression-like mihrāb al-mā'morāb, apparently a name for the apse in the church behind the altar (J. A., ser. 9, vii. 189). Mihrāb has been derived from kisra 'spear' and from South Arabic mekrāb, 'church, mosque, temple.' But the etymology is not certain (see on the whole question: Fraenkel, Fremde Begriffe, p. 274; Khodakami, in W. Z. K. A., xiv. 1905, p. 296—298; Patorius, in Z. Ph. M. G., xi. 1907, p. 621 sq.; Nohlke, Neuer Bestand, z. em. Sprachw., p. 54; note 2; Lammens, in J. A., ser. xi., vi. 247; Becker, Islamstudien, i. 492 sq.; J. Horovitz, in J., xvi., 1927, p. 260 sq.).

If the word mihrāb means the niche placed in the mosque in the direction of prayer, this connects quite well with the usual usage of the word. All are agreed that the mihrāb did not originally belong to the mosque and that it was taken over from the church. The church finds confirmation in Muslim literature (see Lammens, Zīd, p. 33, note 7; note 1) and it is evident that the innovation found its way into the mosque by a purely archetypical way. The mihrāb became the place where the mā'mūm stood during the salāt. It may therefore be assumed that it was one of the principal niches in the church, which was taken over into the mosque: it may have contained the bishop's throne or the image or picture of an important saint.

There is no unanimity as to the date when the mihrāb was introduced into the mosque. Mu'awiyah is occasionally mentioned (B. G. A., v. 109, 11) as a rule, however, and probably with greater right, al-Walid. His governor 'Omar b. 'Abd al-'Azīz is said to have introduced it into Medina (Wüstenfeld, Medina, p. 74; B. G. A., iii. 80, 17 however takes it for granted that 'Omar b. 'Abd al-'Azīz only revived it); similarly his governor Kurra b. Shākit (90—96) is recorded to have introduced the prayer niche (mīhrāb mudajjawwuf) into Egypt (Makrizi, iv. 6, 149, 9; Ibn Dukāmāt, iv. 62, 12 sq.; Ibn Taghbirī, i. 76; Süyūṭī, Ḥan al-Muḫwadāra, ii. 135 sq.). Only occasionally is Mu'awiyah's governor Maslama b. Makkahullad (47—62) or 'Abd al-'Azīz b. Marwān (65—84) mentioned as having introduced this innovation (Makrizi, iv. 6). It therefore seems not to be wrong when one speaks of the mā'mūm in the mosque of the Omayyads is described as the oldest in Islam. But it is an anachronism to call it mihrāb al-qālāba and attribute it to Mu'awiyah (Ibn Dujair, p. 265; Ibn Bāṭṭūta, i. 203). The mihrāb is however said not yet to have come into general use in the second century (see Lammens, Zīd, p. 94, note 1; on the other hand, Tābārī supposes a mīhrāb in the Muslim sense as early as David (Tābārī, i. 2408, 71, 12; B. G. A., ii. 312, 10 sq.; other prophets also had their mihrābs in Jerusalem, ibid.).

In the larger mosques there were usually several mihrābs, used by the different madhāhib; in the mosque of 'Amr, for example (according to Ibn Taghbirī, i. 79), in Hebron (Sauvaire, Hist. de l'Islam, et al-Hobr, p. 17), in the mosque of the Omayyads (J. A., ser. 9, vii. 213 sq.; Ibn Dujair and Ibn Bāṭṭūta as above). They might be of wood, but as a rule they were built of masonry or put on pillars. They were often highly ornamented. In the mihrāb of al-Walid, a looking-glass that had belonged to 'Alī is said to have been placed (Kārwhī, ii. 71). A Fātimid adorned a mihrāb in the mosque of 'Amr and one in the Azhar mosque with a silver girdle which weighed 5000 dirhams (Makrizi, iv. 52).

The general objections to adorning mosques were also applied to the mihrāb. A hādīth is said to have forbidden this as an inheritance from the churches; it is compared with the altars (see Lammens, Zīd, p. 33, note 7), but even a puritan like Ibn Ḥudjī does not reject the mihrāb in principle; he only condemns its adornment (Maṣbah, ii. 48). In fact the mihrāb was held in special respect as the most important part of the mosque which found expression in the erection of a kūba over it (e.g. Makrizi, iv. 91; cf. v. Berchem, C. F., i., No. 79). The special importance of the mihrāb is shown from the fact that its position was occasionally revealed in dreams, e.g. in Kairawān (Yākūt, iv. 213) and in the Mosque of Ibn Tulun; here the Prophet appeared to Ahmad b. Tulun and showed him the mihrāb and the spot was surrounded by ants (Makrizi, iv. 39). In the principal mosque of Sanā' there was a prophet's tomb under the mihrāb (B. G. A., vii. 470), which recalls Christian altars. As the most sacred part of the mosque, the mihrāb is compared not only with Christian altars, but the word is used of the sanctuary of prayer in any sanctuary, e.g. in the pre-Christian temple, which stood on the site of the later mosque of the Omayyads (J. A., ser. 9, vii. 371). In Palestine, in keeping with this idea, very many mihrābs are said to have been the mihrābs of Biblical personalities (see Sauvaire, Hist. jér. et Libr, p. 42, 76, 96 sq., 102; Le Strange, Palestine, Index).
d. Minbar [q.v.].

In contrast to the mihrāb, the minbar was introduced in the time of the Prophet himself. The word, often pronounced minbar (cf. Brockeflamm, Grundris, i. 161), comes from the root m-br 'high'; it could be derived from the Arabic quite easily with the meaning "elevation, stand", but is more probably a loanword from the Ethiopic (Sa'd, Z. D. M. G., ii., 1898, p. 146—148; Noldeke, Neue Beiträge z. Sem. Sprachw., 1910, i. p. 49). Its case is therefore somewhat similar to that of masjid. It means "seat, chair" (e.g. Chron. Melkto, ii. 8; Aghāni?; Cairo, xiv. 75) and is used, for example, for saddle (Tabari, Gloss.) and of a litter (Aghāni, xiii. 155; cf. Schwallly). It is therefore identical with madī' (Bukhārī, Dāmu'a, B. 25), with sarī (Kimīl, p. 20; Aghāni, iii. 3), takht or kuri (Usd, i. 214; cf. also Becker, Kamil, p. 8). The use of the word for the pulpit is in keeping with its history.

When the khatib [q.v.] spoke among the Arabs, he usually did so standing (cf. Mafṣūlahiyyāt, ed. Lyall, xci. 33; Dājjājīqay, Bayān, Cairo, 1332, i. 129; ii. 143) frequently beating the ground with bow and lance (ibid., i. 198; Lohi, d. 15, 9, 45); or he sat on his mount as did e.g. Kuśa b. Sawda (Bayān, i. 25, 31; ii. 141). The Prophet did both of these things. In Ḡeṣa he sat on his camel during his khutba and on other occasions, when addressing the community during the early period, even as late as the day of the capture of Mecca, he stood (cf. Sūra xxii. 11). The people set on the ground around him (Bukhārī, Dāmu'a, B. 28; Tabari, B. 6). In the mosque in Mecca he had a particular place, as is mentioned in the stories of the introduction of the minbar. Sometimes, we are told, he stood beside a tree or a palm-tree (Bukhārī, Manāfiqī, B. 25; ed. Kreth, ii. 400); as a rule however, beside a palm-trunk (gūlū), so Ibn Sa'd, i. 9, 10, 11, 12) and on a few occasions beside one of the pillars (Bukhārī, Manāfiqī, B. 25, ed. Kreth, ii. 401; Dīyārbakrī, Khumīs, ii. 75). This is undoubtedly the original tradition: the Prophet stood beside one of the palm-tree trunks used as pillars in the mosque. For "beside" (usually kāna lī; Bukhārī, B. 32: Ibn Sa'd: B. 254: Kāmil: sūnīna: al-'uḍ) already in Bukhārī, Dāmu'a, B. 26) is sometimes found later and for the column or trunk, we find a stomp which he sat.

Various passages record how the minbar was introduced, notably the following: Ibn Sa'd, i. 9—13; Bukhārī, Sālit, B. 18, 64, 91; Dāmu'a, B. 26; Būyār, B. 32; Hība, B. 3; Manāfiqī, B. 25; Muslim, Mafṣūlahiyyāt, iii. 10; n. also Wensinck, Handbuch, iv., P. 3; Usd al-Ghābīha, i. 43 infra, 214; Wustenfeld, Medina, p. 62 sq. Ibn Bayṭāt, B. 275 sq.; the whole material is in Dīyārbakrī, Khumīs, i. 129; ii. 75 sq. and Strat al-Hallabāh, ii. 146 sqq. The details are variously given. We know, we are told, was built of ṭarāf wood or tamarisk from the woods near Medina; the builder was a Byzantine or a Coptic and was called Buṭum or Būlīḥ, but the names Ibrāhīm (Usd, i. 43), Maimūn, Ṣabīḥ, Kūlāb, Minā [see Khumīs] are also given. He was a carpenter, but a slave of the wife of one of the Ansār or (Bukhārī, Hība, B. 3) of the Muḥādhirūn. Others say he belonged to al-ʿAbbās. The suggestion is sometimes credited to the Prophet and sometimes to others. The palm-trunk is said to have whined like a camel

or a child when the Prophet mounted his new seat but was calmed by stroking and kind words from the Prophet. Most stories take it for granted that the minbar was primarily intended for the khutba; in some it is added that the object was to enable the large assembly to hear him (Ibn Sa'd, i. 10, 11). We are told also that the Prophet performed the salāt on it, and, during the snūfīl, he came down from it. He also took care that the people could see his salāt and follow him (Bukhārī, Sālit, B. 18; Dāmu'a, B. 26). This last tradition however presumes the last custom customary upon the minbar (note that the same idea of the palm-stump occurs in Dāmu'a, B. 26).

In this connection it is interesting to note a tradition in Ibn al-ʿĀthīr, according to which the Companions asked the Prophet to take up a raised position as an early mufaddaliyyāt in Dāmu'a, (Al-Ghābīha, i. 43). Another tradition is in keeping with this, according to which the Prophet, when he was visited by a man named Ṭānīm, stood on a kuri and addressed him from it (ibid., i. 214; cf. Lammens, Mokwat, p. 204, note 5). Here we have a seat of honour on which the ruler sits. This is undoubtedly in keeping with the character of the minbar; while the raised seat was in general use among the northern Semites the Arabs usually sat on the ground, often leaning against a saddle. The raised seat was the special mark of the ruler or, what is the same thing, of the judge. We are told that Rāba b. Mughāshīn was the first to sit on a minbar or sarī when acting as judge (Aghāni, 2nd Cairo ed., iii. 3; Maškīr, iv. 6 sq.). Al-Ḥadīdī, for example, when he addressed the people (hardly in the mosque) sat on a chair which belonged to him (kuri ṭawīl: Tabari, i. 959) and when he tried and condemned his enemies, a sarī was erected for him (ibid., p. 1119); in the same way a kuri was placed for Yaḥyā when he issued his orders for a battle (ibid., p. 1107; see also Becker, Kamil, p. 8). If tradition usually suggests that the minbar was introduced exclusively for the khutba, this seems to be somewhat one-sided view. The minbar was, primarily, as Becker was the first to point out, the throne of the mighty Prophet in his capacity as a ruler. In keeping with this is the tradition that it was introduced in the year 7, 8 or 9 (Tabari, i. 1591; Khumīs, ii. 75; Usd al-Ghābīha, i. 23). The Prophet used it for the publication of important announcements, for example, the prohibition of wine. That he should also make his public speeches to the community from the new seat was only natural. His khutba, however, were not confined to the Friday service and could well deliver a khutba without a minbar, e.g. at the festival on the ṭuqālāh, when Mar-Wān was the first to put up a minbar (Bukhārī, ʿUṣūl, B. 6) and beside the Kalb after the capture of Mecca (Ibn Hisābām, p. 823).

The Prophet's minbar is often called a ṣawād from its material (Bukhārī, Sālit, B. 64; Dāmu'a, B. 26). It consisted of two steps and a seat (madī's: Khumīs, ii. 75; Bukhārī, Dāmu'a, B. 23; makāṭ: Tabari, i. 1591). After the time of the Prophet, it was used in the same way by Abū Bakr, ʿOmar and ʿUthmān (see below). Its significance as a throne is seen from the fact that in the year 50 Muḥāwiyya wanted to take it to Syria with him: he was not allowed to do so but he raised it 6 steps. At a later date, ʿAbd al-

MASDJD

339
Malik and al-Walid are said to have wanted to take the Prophet's minbar to Damascus (Tabari, n. 92 sq.; Khudari, ii. 75; Yakuti, ed. Houtsm, ii. 283; B. G. A., v. 23 sq.; Wustenfeld, Medina, p. 63). In the time of the Prophet, it stood against the wall so that a sheep could just get past (Bukhari, Salats, p. 91). In the time of al-Mahdi, in the centre of the Muhajjara there was pointed out the position of the old minbar, above which Mu'awiya was said to have built his new one (B. G. A., ii. 82; cf. ii. 26 and Kazimi, ed. Wustenfeld, ii. 71). According to some hadiths, it was over the hand of the Prophet (Bukhari, Salats fi Makka, B. 5; FabiI-al-Medina, B. 5, 12 and pass.). At a later date, new minbars were erected in the mosque (see Wustenfeld, Medina, p. 64, 96).

That the Omayyads should have a minbar of their own was natural; they sat on it, just as their predecessors had done (cf. Goldhauer, Muhammet, ii. 42) or perhaps in the journey to Mecca (Chron. Meckia, i. 333; he also had it taken to the festivals on the musalla (Yakuti, ed. Houtsm, ii. 265), just as Marwan used to do in Medina (see above); it was therefore still portable and indispensable for the sovereign, when he wished to make a public appearance as such. In Ibn Lubbah's time, the minbar al-khutba in Damascus was in the central maksura (Ribat, p. 265). According to Ibn Khaldun, Mu'awiya was the first in Islam to use the throne (sawir, minbar, tarzat, kursi) but he is clearly not referring to the minbar of the mosque (Muqaddima, Canto 1322, p. 205 sq.; firdos, 3, iii. 37).

The minbar taken to Mecca by Mu'awiya remained there till the time of al-Rasheed; when the latter visited Mecca on his hajj in the year 170 or 174 a minbar maksura with 9 steps was presented to him by the emir of Egypt and the old one was put up in Arafat. At a later date, al-Wathiq made minbars for Mecca, 'Arifa and Minah (Chron. Meckia, i. 333; ii. 114). The Meccan minbar was a portable one. It usually stood beside the maksur but was put beside the Ka'ba during the khutba (Ibn 'Abbas, p. 95, 97; cf. Chron. Meckia, ii. 429). According to al-Tabani, this custom was kept up until Sultan Sulaiman Kanuni (926-974) built a marble minbar, north of the maksur (al-Tabari, al-Makdisi, p. 100).

It seems at first to have been doubtful whether minbars should be put up in the provinces or not. According to al-Kufi, 'Amr had a minbar made in al-Fustat but 'Omar ordered him to take it away: he was not to raise himself above the Muslims so that they would have to sit below his heels (Maqrizi, iv. 6 sq.; Ibn Taghribirdi, i. 76; Suyuti, Huma al-Muhammad, i. 63; ii. 135). The idea obviously was that the throne belonged to the caliph alone. After 'Omar's death however, 'Amr is said to have used a minbar (Maqrizi, iv. 8: 27). It stood there till Kurra b. Shabir rebuilt the mosque. During the rebuilding it was put in the Kasr, which was used as a mosque; only when the mosque was completed in the year 92 did Kurra put up a new minbar. This tradition however is uncertain. The minbar removed by Kurra perhaps dated from Abd al-Aziz b. Marwan, who had taken it from a church or had been presented with it by the 'Abbasid King (Maqrizi, iv. 8; Ibn Taghribirdi, i. 78). Kurra's minbar remained till 737 when the Fatimid vizier Yakuti b. Killis replaced it by a gilded one. A large new minbar was placed in the mosque of 'Amr in 405 by al-Hajim (Maqrizi, iv. 8; Ibn Taghribirdi, i. 78 sq.). We hear of no objections in other places to the manbar in the ansar. In al-Madawa' in as early as the year 16 Sa'd erected a minbar in the mosque improvised in the Iwan of Kisra (Tabari, i. 2451, q). In Basra, Abu Masu put up a minbar in the middle of the mosque. This was however found inconvenient because the Inam had to cross from the minbar to the kibla "over the necks" of the (seated) believers. Ziyad then placed the minbar against the south wall (Yakuti, i. 642). On the other hand, we are told that 'Abd Allah b. 'Abbâs (governor of Baṣra 36-40) was the first to mount the minbar in Basra (Dhajal, Bayan, i. 179). When Ziyad had to fly from Basra he saved the minbar which he put up in his Masjid al-Haddan (Tabari, i. 3414 sq.). The minbar was the symbol of the ruler and the governor sat upon it, as representative of the ruler. It therefore formed a feature of the Masjid al-Djamâ', where the community was officially addressed. In the year 64 therefore, there were minbars in all the provinces.

In this year homage was paid to Marwan b. al-Hakam not only in the capital but in other manabirs in the Hijaz, Misr, 'Arâb, Ifriqi, Khorasan, and other amâqis (B. G. A., vii. 307). Special mention is made of the fact that 'Abdunya had no minbar.

In the first century and beginning of the second, we find the wall in the smaller towns, delivering the khutba standing, with the staff only. But in 132 the governor 'Abd al-Malik b. Marwan had manbar put up in the kura of Egypt (Maqrizi, iv. 8, 37 sq.; Ibn Taghribirdi, i. 350 sq.). When the khatba became purely an official service and the ruler was no longer the khatib (q.v.), the minbar became the pulpit of the spiritual preacher and every mosque in which the Friday service was celebrated was given a minbar. At the same time, i.e. after al-Rasheed, the change was gradually completed and the preacher spoke, standing on the pulpit. Hadiths therefore came into existence, according to which the Prophet used to deliver two khutbas on Friday, standing "just as is done to-day" (Bukhari, Zawwa'a, p. 27; 30 and 'Omar, ibid., p. 2).

The minbar was thus now quite analogous to the Christian pulpit. It is very probable that this latter also influenced its form. We have already noted above, of a minbar in the mosque of 'Amr, that it was said to be of Christian origin. The same thing came to be said of the Prophet's minbar (Wustenfeld, Medina, p. 63). Mu'awiya made the Medina minbar larger, while the one bought by him to Mecca had only 3 steps and was of course portable. We again hear of portable minbars later, which did not exclude their being large (cf. above on the minbar of Mecca). Thus the manbar in al-Maghrib is said to have been portable. Ibn al-Hajjaj regards this (the oldest) custom as bid'a and therefore ascribes it to al-Hajjaj (Maghrib, ii. 47, 13 sqq.). The oldest minbars were all of wood. There is however one hadith which says that the Prophet had a kurji of wood with iron fittings made for the reception of Tamim ('Cd, i. 214 sq. from now; cf. Lammens, Maw'ita, p. 273; note 3); it is however uncertain what relation this had to the minbar. A minbar of iron was made as early as the Omayyad period (Ibn Taghribirdi, i. 78; 8: al-minbar al-hadil probably correct in
spite of Becker, Kanzel, p. 10, note; cf. 79, 49 (see below); and also of stone (Goldziher, Muh. Stud., ii. 42, note 5 with a reference to Ibn Hadžar); later they were also built of bricks (Wustenfeld, Med. i., 64, 96). As a rule the minbar stood against the kibla wall beside the mihrab. Al-Mahdī tried to reduce the manāhib to their original small size (Tabari, iii. 486, r; Mašhīrī, iv. 12, 13 sqq.), but he could not arrest the development. In the larger mosques several manāhib were even built. Ibn al-Fakhrī about 300 A. H. already mentions 5 minbars in the mosque in Jerusalem (B. G. A., i., 100, 8 sq.). In the Sultan Hassan mosque in Cairo 4 were planned and 3 erected when a minaret fell down in 762 and diverted attention to other work (Mašhīrī, ii. 117, 18 sq.).

The importance, which the minbar already had in the time of the Prophet, caused special reverence to be paid to it and the sanctity of the mosque was concentrated round this and around the mihrab. The governor of Kufa Khaššīb b. ʿAbd Allāh al-Kasrī (105—120) received a letter of censure from the caliph because he had prayed for water on the minbar (Kasrī, p. 26, 13 sqq.). A false oath was taken on or beside the minbar of al-ʿAdī. He was led to hell absolutely (Ibn Saʿād, i/1, 10, 3 sqq., 12, 19 sq.; Ibn Ḥanbal, Musnad, ii. 329; cf. John Pedersen, Der Eid, p. 144, 147). Legends grew up which represented the Prophet seeing into the future from the minbar (Bukhārī, Qumra, bāb 29) and being able to follow the battle of Muʿta from it (cf. Wāqīdī—Wellhausen, p. 311; Ibn Ḥīṯām, p. 760) and also telling how his prayers on the minbar were specially efficacious.

Just as the Kaba was covered (kusūr) so was the same thing done to the minbar. ʿOṯmān is said to have been the first to cover the minbar of the Prophet with a kitṭa (Louma, ii. 75 sq.) from below. Muʿawiyah did the same thing when he had to give up his attempt to abolish it (ibid., p. 76 sq.; Tabari, ii. 92 sq.). It was not quite the same thing when al-Ḥākim rediscovered the already mentioned iron minbar and covered it with gilt leather because it was covered with dirt (read: kadhār) i.e. rust (Ibn Taḥṭibīrī, i. 79, 5 sq.). Under the ʿAbbāsid new κίσα was sent every year for the minbar of the Prophet from Baghdad; the Sultan Liṭr was not renewed so frequently (Wustenfeld, Med., p. 64). We find other references to the covering of the minbar on special occasions (Ibn Djabair, p. 149, 6). Ibn al-Hadīdī (Madkal, ii. 74) demands that the imām should put a stop to the custom of putting carpets on the minbar. —

On the question of the minbar see: C. H. Becker, Die Kanzel im Kultus des alten Islam, Novellae Festschrift, i. 331—351 = Islamstudien, i. 450—471; Caetani, Avvalli dell' Islam, i. 553, 739; ii. 68 sqq., 87, 213 sqq.; H. Lammens, Moesia, p. 63, 204—208, 273; J. Horovitz, in IsL, xvi., 1927, p. 257—260.

c. Dakka.

In the larger mosques there is usually found near the minbar a platform to which a staircase leads up. This platform (dakka, popularly often dikka) is used as a seat for the muʿādhīhūn when pronouncing the call to prayer in the mosque at the Friday service. This part of the equipment of a mosque is connected with the development of the service (cf. below under H. 4 and C. H. Becker, Zur Geschichte des islamischen Kultus, iii., 1912, p. 374—399 = Islamstudien, i. 472—500; E. Mittwoch, Zur Entstehungsgeschichte des islamischen Gebets und Kultus, Abb. Fr. Ak. W., 1913, Phil.-Hist. Cl., No. 2). The first adḥān-calling is pronounced from the minaret, the second (when the khaṭīb mounts the minbar) and the third (before the ʿalā, ʾišāma) in the mosque itself. These calls were at first pronounced by the muʿādhīhūn standing in the mosque. At a later date raised seats were made for them.

Al-Ḥadīdī records that Maslama, Muʿawiyah's governor in Egypt, was the first to build platforms (here called manāhib) for the calls to prayer in the mosques (Su a Ḥalabiya, ii. 111 below). This story however, given without any reference to older authorities, is not at all reliable. It seems that a uniform practice did not come into existence at once. In Mecca the muʿādhīhūn for a time uttered the second call (when the preacher mounted the minbar) from the roof. As the sun in summer was too strong for them, the emir of Mecca, in the reign of Hāṭān al-Rashīd, made a little hut (zanne) for them on the roof. This was enlarged and more strongly built by al-Muwattākik in 240, his contemporary al-ʿAzrāki relates (Chron. Melb., i. 352 sqq.). The attention in the mosque of Amr in Cairo was similar. Here also the adḥān was uttered in a chamber (dīghafū) on the roof and in 336 there is a reference to its enlargement (Mašhīrī, iv. 11) As late as the time of Barbās, when the many chambers were removed from the roof of the Mosque of ʿAmr, the old zanne of the muʿādhīhūn was left intact (ibid., p. 14; cf. al-Kindi, Wulțar, ed. Guest, p. 469, note 2). In the Mosque of Ibn Ṭūlūn the adḥān was pronounced from the cupola in the centre of the ʿalā (Mašhīrī, iv. 40). Al-Maḏkīrī records in the fourth century as a notable thing about Khaṣrān that the muʿādhīhūn there pronounced the adḥān on a sarīr placed in front of the minbar (B. G. A., iii. 327).

The dīghafū "platform" in front of the minbar in the mosques of Shahrāṣīn must have had the same purpose (ibid., p. 357).

In the viiith century, Ibn al-Hadīdī mentions the dīghafū as a bidāʿ in general use, which should be condemned as it unnecessarily prevents freedom of movement within the mosque (Madkal, i. 45 above). In the year 827 a dīghafū in the mosque of al-Ḥākim was mentioned (Mašhīrī, iv. 61): the dīghafū mentioned in inscriptions from Cairo all date from the period before and after 900 A. H. Ibn al-Hadīdī mentions that in addition to the large dīghafū used for the Friday service there was sometimes a lower one for ordinary sermons (Madkal, ii. 46 sq.) and says that in the larger mosques there were several dīghafūs on which muʿādhīhūn pronounced the adḥān in succession so that the whole community could hear it (tablīgh; ibid., p. 45 sq.). Lane also mentions several musībalīgīn in the Azhar Mosque (Manners and Customs, Everyman's Library, p. 87, note 2).

c. Kursi, Kurraṣ and Relices.

In the mosques there is usually a kursi, that is a wooden stand with a seat and a desk. The desk is for the Kurraṣ, the seat for the kāṣīr or reader, kāṣīr. Ibn Djabair attended a divine service in Baghdad at which a celebrated preacher spoke from the minbar, but only from the kāris, the kāris had recited portions of the Kurraṣ (Rīkā, p. 219, 222). The kāṣīr's chair was sometimes identical with the kāṣīr sitting on a kursi made of teak (Ibn Djabair, p. 200; Yākūb, Udbãh, ii. 319; Mašhīrī, iv. 121);
sometimes he spoke from the minbar to which the wā'īt often had access (cf. Ibn Djubair: see M., Renaissance des Isams, p. 320). The kūṣṣāṣ are called by al-Makki uṣbā' al-kārāṣi which is in keeping with this (Kut al-Kulai, i. 152, quoting K. al-Madkhal, i. 159). Several kārāṣi are often mentioned in one mosque (cf. for the mosque of al-Makki, iv. 19). Whether the kārāṣi mentioned for the same period always had a desk cannot be definitely ascertained. The kārāṣi with dated inscriptions given by van Beecum in his Corpus all belong to the ith (xiiith) century (N°, 264, 302, 338, 359, 401). According to Lane, at the Friday service while the people are assembling, a kārāṣ recites the 18th Sūra up to the aṭṭāf (Manners and Customs, p. 86). The same custom is recorded by Ibn al-Hajdji and condemned because it has a disturbing effect (K. al-Madkhal, ii. 44, middle).

The Kūrsan very soon received its definite place in the mosque like the Bible in the church (cf. Baghṭa, Salīl, bāb 91: they prayed at a pillar besidē al-nūṣhāf). According to one tradition, 'Awāmīhāh had several copies of his Kūrsan sent to the provinces (e.g. Noledeko-Schwall, Gesch. d. Ṣūra, ii. 112 sqq.); al-Hādhāja, a little later, is said to have done the same thing (Makrizi, iv. 17). The mosques had many other copies besides the one kept on the kūrsan Al-Hakim put 814 aṭṭāf in the Mosque of IbnṬūlūn, where the founder had already put boxes of Kūrsan (Makrizi, iv. 36, 40, cf. Ḥasan al-Mūsāḥara, ii. 138) and in 403 he presented 1,289 copies to the Mosque of 'Amr, some of which were written in letters of gold (Makrizi, iv. 12; Ḥasan al-Mūsāḥara, ii. 136). Even earlier than this there were so many that the kāṣī al-Rāḥīḥ b Makīn (237—245) appointed a special aṭṭāf to look after them (al-Kindī, Wisti, p. 469); there are still a very large number in the Mosque of the Prophet (see Batanuni, Rīhla, p. 241 above). Of particular value was the Muḥājīr Āmūz, belonging to the Mosque of 'Amr, prepared by 'Abī al-ʿAzīz b. Muʿāwīya, later bought by his son and afterwards by his daughter ʿAmmār; he left it in 128 to the mosque and it was used for public reading (see its whole history in Makrizi, iv. 17 sqq.) Besides it, another copy was for some time also used for reading, which was said to have lain beside ʿOthmān, when he was killed and to have been stained with his blood, but this one was removed by the Fatimids (Usk., p. 19) in the time of Ibn Būṭṭa, a Kūrsan for which the same claim was made was kept in Ḥasra (ii. 10). On New Year's Day when the Fatimids used to go in procession through the town, the Caliph at the entrance to the Mosque of 'Amr took up in his hands a muḥājīf said to have been written by 'Ali and kissed it (Ibn Taghribirdi, ii. 4, p. 472 middle); it was perhaps the Muḥājīr Āmūz, in Syria, Egypt, and the Ḥud obst, in the fourth century, there were Kūrsan which were traced back to ʿOthmān (F. G. A., ii. 143; cf ii. 117) one of the Kūrsan made for ʿOthmān was shown in the Mosque of the Omaiyads in Damascus in the time of Ibn Djubair. It was produced after the daily Salahs and the people touched and kissed it (Rīhla, p. 268). It was bought there in the year 507 from Tiberias (Dhahab, Taqī al-Dīn Rāshīd, 1327, ii. 25). Other Kūrsan of ʿOthmān were shown in Baghdād and Cordova (see M., Renaissance des Isams, p. 327) and Ibn Djubair saw another in the Mosque of the Prophet; it lay in a desk on a large stand, here called milnā (Rīhla, p. 193; cf thereon Dozy, Supplement, s. v.). The Fāḍilīya Madrasa also had a Muḥājīr ʿUthmān, bought by the Khā ṣ al-Fāḍil for 30,000 dinārs (Makrizi, iv. 197) and there is one in Fāsid (Archives Muscovites, xviii, 1922, p. 361). Valuable Kūrsan like these had the character of relics and belonged to the kīṣānā they were. They were often kept in a chest (sandīk) (Ibn Djubair, cf. cit.); for amīṣ al-muḥājīf, Bukhārī, Sahīr, bāb 95; Makīn has al-sanāf (see al-ʿAskalānī, Fath al-Bātir, i. 385); also called ṭā ṣīb (Ibn Djubair, p. 104). In the Kūrsa Ibn Djubair saw two chests with Kūrsan (p. 84). Ibn al-Fakhrī mentions 16 chests with Kūrsan in the Jerusalem mosque (B. G. A., v. 100). In the mosques there were also sandīk for other things, such as lamps (Makrizi, iv. 53; Wüstenfeld, Meṣna, p. 82 = Ibn Djubair, p. 194), a ṭā ṣīb for alms (K. al-Madkhal, ii, 44, infra), for the kāṣī al-muḥājīn or the property of the mosque (see below). There were also chests for rose-wreaths (Makrīzī, v. 50) which were in charge of a special officer. In the Mosque of ʿAmr there was a whole series of ʿawādī (Makrizi, iv. 9).

The Kūrsan were not the only relics to be kept in the mosques. Bodies or parts of the bodies of saints (cf. B. 4, C 1) and other ʿāthār were kept and revered in mosques: the rod of Moses, (in Kūssā, Yāʿrī, iv. 325 being of Mecca, see Goldziher, Muh. Stud., ii. 192), the Prophet's sandals (in Ηebron, B. G. A., v. 101, also in Damascus, where the Ashrafīya Madrasa had his left and the Dammāghiya his right sandal; F. J. s. 9, i. 271 sqq., 402), his cloak (in Adbur, B. G. A., i. 178), hair from his beard (in Jerusalem among other places, Batani, Rīhla, p. 165) and many other things (see Goldziher, Muh. Stud., ii. 355 sqq.; M., Renaissance des Isams, p. 325 sqq.). These relics were often kept in valuable reliquaries. The head of Husain was buried in a ṭā ṣīb in his mosque in Cairo (Ibn Djubair, p. 45). There was a black stone like that in the Kūrsa in the Mosque of Khāṭrān (B. G. A., iii. 433). On the other hand, pictures and images were excluded from the mosques, in deliberate contrast to the crucifixes and images of saints in churches, as is evident from Ḥadith (Bukhārī, Sahīr, bāb 48, 54); Ḩaṣnāt, bāb 71; Muslim, Maṣāḥid, tr. 3; or on the question Becker, Christliche Polemik und islamische Dogmenbildung, Z. A., xxvi = Islamstudien, i. 445 sqq.). It is of interest to note that in the earliest period, Saʿd b. Abī Waḳkās had no scruples about leaving the wall-paintings in the Iwan of Kūrsa at Mā ḥaṣ standing, when it was turned into a mosque (Tahari, i. 2443, 2451). The case was somewhat different, when, before the chief mosque in Delhi which had been a Hindu temple, two old copper idols formed a kind of threshold (Ibn Battuta, iii. 151) although even this is remarkable (cf. Snouck, Islamische Kunst, Verspreide Geschichten, i. 451 sqq. = Z. D. W. G., i., 1907, p. 186 sqq.). In some circles the opposition to pictures extended to other relics also. Ibn Taimiya condemned the reverence paid to the Prophet's footprint, which was shown, as in Jerusalem, in a Damascus mosque also (Quatremère, Hist. Salt. Mani., ii. 248). g. Carpets.

Carpets were used to improve the appearance of the mosques. The custom of performing the
salât upon a carpet is ascribed by Ḥadīth to the Prophet himself. Anas b. Mālik performed the salât with him in his grandmother's house and the Prophet used a cloth or mat (ḥabūr), which had become block through wear; as a rule, he used a mat woven of palm leaves, ḫamūra (Baghdādi, Salāt, bb. 19, 20, 21; Ḥadd, bb. 30; Muslim, Masdjid, tr. 47; Aḥmad b. Hanbal, Muṣnad, ii. 145). In any case, it is clear from Balādhurī that the salât was at first performed in the mosque simply in the dust and then on pebbles (Balādhurī, p. 277, 348; cf. al-Zarqānī, Shahr ʿalaʾ l-Mawṣūfī, i. 283 sq.). Later, when the halls were extended, the ground, or the paving, was covered with matting.

The first to cover the ground in the Mosque of Ṣamr with ḥabūr instead of ḥabūr was Muḥāwīya’s governor Maslama b. Mukhliḍ (Maṭrī, iv. 8; Ḥusn al-Maṭḥūta, ii. 136; Ibn Ṭabarī, Rihla, p. 469). Ibn Ṭūlūn covered his mosque floor with ʿAbbaḍanī and Sāmānīan mats (Maṭrī, iv. 36, 38). For the mosque of al-Ḥākim in the year 403, al-Ḥākim bought 1,036 ḥārān of carpeting for 5,000 dinār (Maṭrī, iv. 56; cf. for al-ʿAzhar, ibid., p. 50). In the year 439 in the Mosque of Ṣamr, there were ten layers of coloured carpets one above the other (Nāṣīr Khusraw, ed. Schefer, p. 31 [text], p. 149 [transl.]). In the Mosque at Jerusalem 800,000 ḥārān of carpets were used every year (R. G. A., v. 100). In the Mosque in Mecca they were renewed every Ramadan (R. G. A., v. 100). On ceremonial occasions the minbar was also draped with a carpet (ṣadqāṣa, q.v.); in Medina, the minbar and the sacred tomb was always covered like the Kaʿba in Mecca (Wustenfeld, Medina, p. 83; cf. Quatremère, Hist Suit. Islam., ii. 91) and some, especially the teachers, had their skins (jarwa), in some cases also a cushion to lean upon. The doors were also covered with some material (Maṭrī, iv. 56). On feast-days, the mosques were adorned with carpets in a particularly luxurious fashion (see Ibn Ṭabarī, Ṭabarī, i. 483). The Puritans rejected all this as bidʿa and preferred the bare ground (Maṭrī, ii. 46, 49, 73, 74, 76) as the Wahhābīs still do.

h. Lighting.

When evening meetings and vigils were of regular occurrence, artificial lighting became necessary. Al-ʿAzrākī gives the history of the lighting of the Meccan Mosque. The first to illuminate the Kaʿba was ʿIbā b. al-ʿAzrākī, whose house was next to the Mosque, just on the Maṭrī; here he placed a large lamp (muḥābāt). ʿOmar, however, is said previously to have placed lamps upon the wall, which was the height of a man, with which he surrounded the mosque (Balādhurī, p. 46). The first to use oil and lamps (ṣanāʿāt) in the mosque was Muḥāwīya (cf. R. G. A., v. 20). In the time of ʿAbd al-Malik, Khālid b. ʿAbd Allāh al-Ḵasrī placed a lamp on a pillar of the Zendem beside the Black Stone, and the lamp of the ʿAzrākī family disappeared. In the reign of al-Maʿmūn in 216 a new lamp-post was put up on the other side of the Kaʿba and a little later two new lanterns were put up around the Kaʿba Hārīm al-Rashīd (268–271) placed ten large lamps around the Kaʿba and hung two lanterns on each of the walls of the mosque (ḥurayṣa; cf. Ibn Ḥujayl, Ḥikāya, p. 149, 150, 155, 271; v. Berchem, Corp. Inscrip. Arab., i, N. 506). Khālid al-Kasrī had the maṣ’ā also illuminated during the pilgrimage and in 219 the torches called nafsāt were placed here and ʿOmar b. ʿAbd Allāh al-Maṭrī ordered the people, who lived in the streets of Mecca, to put up lamps on the 1st Muḥarram for the convenience of those visiting the Kaʿba (Chron. Mīkāb, i. 200–202, cf. 458 sq.). In 253 Muḥammad b. Aḥmad al-Maṭrī ordered a wooden pole in the centre of the ṣamūʿ and ḥanūfī on ropes were hung from it. This was however very soon removed (ibid., ii. 196 sq.). About 100 years later, al-Maḍīṣi saw around the Taʿwīf wooden poles on which hung lanterns (ṣanāʿāt) in which were placed candles for the kings of Egypt, Yemen, etc. (B. G. A., ii. 74). Ibn Ḥujayl describes the glass ḥanūfī, which hung from hooks in the Meccan Īḍāma (Rīḥlā, p. 193) and lamps (masaṣāt) which were lit in iron vessels (ibid., p. 103, cf. i. 143). Similar silver and gold ḥanūfī were seen by him in Medina (ibid., p. 192 at the top; see also Wustenfeld, Medina, p. 83 sqq.). According to al-Ṭabīḥī (before 300), 1,000 lamps lit every evening in Jerusalem (ii. G. A., v. 100) and in the next century al-Maḍīṣi says that the people of Palaistine always burn ḥanūfī in their mosque, which were hung from chains as in Mecca (B. G. A., ii. 182). The illumination was thus greatly increased. In the year 60, when Ibn Ṣayyād was searching for his enemies in the mosque of Kaʿba, the lamps were not sufficient, and large torches had to be used in searching the pillared hall (Tabari, ii. 250 sq.). This shows that already been said about Mecca, shows us out of what modest beginnings this part of the mosque’s equipment developed.

In the time of the ʿAbbāsid, lamps and lanterns were part of the regular furniture of the mosque. Al-Maʿmūn is said to have taken a special interest in this. He ordered lamps to be put in all the mosques, partly to assist those who wanted to read and partly to prevent crime (Bañah, ed. Schwally, p. 473). For this purpose, the ḥanūfī, already mentioned, hung on chains were used, as at the building of the mosque of Ibn Ṭūlūn (Maṭrī, iv. 36, 38), in the Āzhār Mosque and elsewhere; they were often of silver (ibid., v. 100). Lanterns (ṣanāʿāt) were also used and were of course condemned by Ibn al-Ḥādī (Akhīdī, ii 54) as ostentations. At the same time, candles (ṣwām or ẓwām) were used in large numbers, the candlesticks (ṭāwūs, sing. ṭawṣ) often being of silver (Ibn Ḥujayl, Ḥikāya, p. 45, 151, 194; cf. Wustenfeld, Medina, p. 95, 100). About 400, large candleabra were made in Egypt, which from their shapes were called tanūrūs, stoves. Al-Ḥākīm presented the Mosque of ʿAmr with a tanūrūs made out of 100,000 dirhams of silver; the mosque doors had to be widened to admit it. He also gave it two other lamps (ṣwām) (Ṭalib, Ḥikāya, p. 45, 185, 186 [transl.]; Nāṣīr Khusraw, ed. Schefer, p. 51 [text]; p. 148 [transl.]; Ibn Ṭabarī, Rīḥlā, ed. Popper, ii. ii., p. 105). In the Mosque of al-Ḥākim, in addition to lamps and candle-lanterns, he also put 4 silver tanūrūs and he made similar gifts to the Āzhār and other mosques: the lamps were of gold or silver (Maṭrī, iv. 51, 56, 63; cf. Ibn Ṭabarī, Ṭabarī, ii. ii. 105). The tanūrūs and other lanterns could also be made of copper (see v. Berchem,
Corpus, i, No. 502, 503, 506, 507, 511), as, for example, the elebrated candelabrum of the Mosque of Mākiyad (Makrizi, iv. 137) which was made for the Mosque of Ḥasan but sold by it (ibid., p. 118).

This great interest in the lighting of the mosque was not entirely based on practical considerations. Islam made and the monastirs a divine service and Išlm here, as elsewhere, was taking over something from the Church. When, in 227, the caliph was on his deathbed, he asked that the sallt should be performed over him with candles and incense (bi 'isham wa 'ibābkūr) exactly after the fashion of the Christians (Ibn Abī Ṣaḥīfa, i, 165; cf. ii. 89). The dependence of Išlm on Christianity is also seen in the story that Othmān, when he was going to the evening sallt in Medina, had a candle carried in front of him, which his enemies condemned as ḫud' (Yāqūbi, ed. Houtsma, ii. 187). The ḥuṭa ḫis does not affect the significance of this story. A light was used particularly in the miḥrāb, because it represented the holy cell, to which light belonged (cf. Sūra xxiv. 35). Then, in Mecca, lamps were placed before the imāms in the miḥrāb and there were considerable endowments for such miḥrāb lamps (Ibn Djbair, Ḫība, p. 103. 144). Light, as everywhere the custom in ancient times, was necessary in mausoleums and the documents of endowment show that a large number of oil-lamps were used in this way (cf e.g the document for al-Malik al-Ashraf's mausoleum, v. Berchem, Corpus, i, No. 252). But in the mosque generally the use of lights had a devotional significance and lamps might be endowed for particular individuals (cf. R. G. A., iii. 74, quoted above). The lamps so given by al-Hārikī were therefore placed in the mosques with great ceremony, with blasts of trumpets and beating of drums (Ibn Djbairi, ii/ii. 105).

On ceremonial occasions a great illumination was therefore absolutely necessary. In the month of Rāmaḍān, says Ibn Djbair, the carpets were renewed and the candles and lamps increased in number, so that the whole mosque was a blaze of light (Ḫība, p. 143); on certain evenings trees of light were made with vast numbers of lamps and candles and the minarets, and the minbar, were illuminated (Ḫība, p. 149–151, 154, 155). In the Mosque of the Prophet in the time of Samhūdī, forty wax candles burned around the sacred tomb, and three to four hundred lights in the whole mosque (Wustenfeld, Medina, p. 108). On the masjid al-nābī, says Kūt al-Din, a procession went from the Ka'ba in Mecca to the birthplace of the Prophet with candles, lanterns (fawāsin) and lamps (masā'il; see Chron Mecca, ii/ii. 450). In the haram of Jerusalem, according to Mahfūz al-Din, 750 lamps were lit by night and over 20,000 at festivals (Sauvage, Hist Jérusalem, Haver, p. 158). In the dome of the Sakhra in 452 a chandelier and 500 lamps fell down (Ḫība, p. 69); at the taking of the town in 492 (1099) the Franks carried off 42 silver lamps, each of 3,600 dirhams, 23 lamps of gold and a tawārīr of 40 rifl of silver (Ibn Aṣālī, p. 71). It was similar and still is in Cairo and elsewhere in the Muslim world. For the lahit al-aṣr in the Mosque of 'Amr, 18,000 candles were made for the Mosque of 'Amr and every night eleven and a half kinār of good oil were used (Makrizi, iv. 21 and more fully ii. 345 sqq.). The four "nights of illumination" fell in the months of Rādāb and Ṣaḥāb, especially Ma'rūf and Ṣaḥbān (Quatremère, Hist. Stat. Maml., i/ii. 131; cf. also Snouck-Hurgronje, Mecca, ii. 77). Quite recently (1908) electric light has been introduced into the Mosque of the Prophet (al-Batanūnī, Ṭikība, p. 245 sqq.).

[On the question in general see Clermont-Ganneau, La lampe et l'oilier dans le Coran, in Recueil d'Archéologie Orientale, viii., 1924, p. 183–228; on the copper candelabra see A. Wingham, Report on the Analysis of various examples of Oriental Metal-Work etc. in the South Kensington Museum etc., London 1892; F. R. Martin, Altere Kupferarbeiten aus dem Orient, Stockholm 1902; on glass lamps see G. Schmoranz, Altorientalische Glass-Gefasse, Vienna 1898; v. Berchem, C. L. A., i. 678 sqq.; Max Herz Bey, La Mosquée du Sultan Hasan (Comité de Conservation des Monuments de l'Art Arabe), 1899, p. 8 sqq.; see also the Bibliography in Ist., xviii., 1928, p. 217 sqq.]

i. Incense.

According to some traditions, even the Prophet had incense burned in the mosque (Tirmidhi, i. 116; see Lammens, Moesenia, p. 367, note 8) and in the time of ʿOmar, his client ʿAbd Allāh is said to have perfumed the mosque by burning incense while he sat on the minbar. The same client is said to have carried the censer (mudjarār; cf. Lammens, loc. cit.) brought by ʿOmar from Syria before ʿOmar when he went to the sallat in the month of Rāmaḍān (A. Fischer, Biographie von Gewahrmännern etc., p. 55, note). According to this tradition, the use of incense was adopted into Išlm very early as a palatable imitation of the custom of the Church. In keeping with this is the tradition that in al-Fusṭāṭ as early as the governorship of ʿAmr, the masjid-al-Hakam incense was burned in the mosque (ʿAbd al-Hakam, p. 132; cf. Annali dell' Islam, iv. 565). The Sahāra Mosque had incense burned in it during the consecration ceremony (Sauvage, Hist. Jérusalem et Hébron, p. 53).

Under the Umayyads, incense was one of the regular requirements of the mosque (ṭib at-masjid; Tabari, ii. 1234, 10). Muʾawiyah is named as the first to perfume the Ka'ba with perfume (ḥašāt) and censer (tisajja; B.G.A., v. 20, 12). It became the custom to anoint the sacred tombs with musk and ṭīb (Chron. Mecca, i. 150, 10; Ibn Djbair, Ḫība, p. 194, 9). Baibars washed the Ka'ba with rose-water (Mašrīzī, iv. 96, 14). Incense, as well as candles, was used at burials (cf. de Goeje, Z.P.M.G., 1905, p. 403 sqq.; Lammens, Moesenia, p. 436, note 9). Al-Muʿtāsim's desire to be buried with candles and incense (mukkūr) exactly like the Christians (Ibn Usbīla, i. 165; 12 sqq., cf. above) shows that they were aware that the custom bore much the same relation to the Christian usage, as the mosque building did to the church. The consumption of incense in the mosques gradually became very large, especially at festivals (see for the Fātimids: Ibn Taghribirdi, ii/ii., 484, 12; ii/ii., ed. Popper, p. 106, 35; Mašrīzī, iv. 51; on vessels for holding incense see the Bibliography in Ist., xviii., 1928, p. 217 sqq.).

j. Water-Supply.

Nothing is said of a water-supply in connection with the oldest mosques. The Mosque of Mecca occupied a special position on account of the Zamzam well. In the early days of Išlm, two basins (hatut) are said to have been supplied by it, one behind the well, i.e. just at the side of the mosque for ṭawīm and one between the well...
and the rūbk for drinking purposes; the latter was moved nearer the well by Ibn al-Zabair. In the time of Sulaimān b. ‘Abd al-Malik, a grandson of ‘Abd Allāh b. ‘Abbās for the first time, built a kūḥb in connection with the Zemzem (Chron. Mekka, i. 299). At the same time, the governor Khalīl al-Kāsri laid down lead-piping to bring water from the well of al-Thabīr to the mosque, to a marble basin (fāṣīka) with a running fountain (fāṣūrā) between the Zemzem and the rūbk, probably on the site of the earlier lāzīm. It was intended to supply drinking-water in place of the saltish water of Zemzem, but a branch was led on to a birka at the Bāb al-Ṣaffā, which was used for ritual ablutions. The people, however, would not give up the Zemzem water and immediately after the coming to power of the ʿAbbāsīs, the provision for drinking-water was cut off, only the pipe leading to the birka being retained (ibid., t. 339 sq.). In Ibn Djuḥair’s time, there was, in addition to the Zemzem, a supply of water in vessels and a bench for performing the wudu’ (Rīḥā, p. 89). Khalīl’s plan, arrangements for ablutions at the entrance and a running fountain in the sahn, seems to have been a typically Omaiyad one and to have been introduced from the north. Such fountains were usual in the north, not only in private houses, but also for example in the aṣḥāḥ sanā (stadium) surrounded by pillars, which, from Ennueis’s description, formed part of the church of Tyre (see Hauch in Herzog-Hauch, Realencyclo. f. prot. Theol. u. Kirche 3, x. 782).

The usual name for the basin, fāṣīka (in Egypt now fāṣāka) is pīṣina, which in the Mīḥāna and in Syria takes the form pīṣīn (see Levy, Nehrūhr. u. chald. Worterbuch, iv. §55; Fraenkel, Fronworter, p. 124; fāṣīna, found in al-Iṣraj, Chron. Mekka, i. 340 is probably due to a slip). At the same time, however, birka or sīḥa or sīḥīd which probably comes from the Persian (cf. Fraenkel, op. cit., p. 287) or the old Arabic hawd are also used. The arrangements for ablutions in the Zemzem were called maṣṭāhir or maṣūlān, sing. maṣdā (now usually miḏā), “place for wudu’”. The accommodation in Mecca just mentioned was later extended. Ibn Djuḥair mentions a building at al-Zahīr, 1 mile north of Mecca which contained maṣṭāhir and sīḥa for those performing the minor ṣuḥrā (Rīḥā, p. 111).

In Medina, Ibn Djuḥair mentions rooms for ṭuḍūf at the western entrance to the mosque (Rīḥā, p. 197, 13 sq.; cf. the plan in al-Ṭabarīnī, Rīḥā, facing p. 244). At the same time Ibn Ṣāhīla mentions seventeen receptacles for water in the sahn in the year 199, probably for drinking-water; later (tenth century) a large basin surrounded by a railing is mentioned in the court. It was intended for drinking purposes, but became used for bathing and was therefore removed. Baths and latrines were built anew by al-Nāṣir’s mother (Wustenfeld, Medina, p. 99 sqg.).

In Damascus, where every house, as is still the case, was amply supplied with water, Yākūt (d. 626 = 1229) found no mosque, madrasa or kha-naḵākh which did not have water flowing into a birka in the ṣaḥn (Yākūt, ii. 590). Ibn Djuḥair describes the arrangements in the Mosque of the Omayyads. In the sahn, as is still the case, there were three kuḥbas. The centre one rested on four marble columns, and below it was a basin with a spring of drinking-water surrounded by an iron grille. This was called ṣaḥāf al-maṣīʿ “water-cage”.

North of the ṣaḥn was a Masджid al-Kallāṣa in the sahn of which there was again a ṣiḥīd of marble with a spring (Ibn Djuḥair, Rīḥā, p. 267). There was also running water in an adjoining masḥad (p. 269), in the kha-naḵākh and madrasa (p. 271), and in a hall beside the living apartments there was again a kuḥba with a basin (ḥawd) and spring water (p. 269). There were also ṣiḥāyāt against the four outer walls of the mosque, whole houses fitted up with lavatories and closets (p. 275); a century earlier, we are told that at each entrance to the mosque there was a miḏā (R.C.A., iii. 159). The whole arrangements correspond exactly to those made by Khalīl al-Kāsri in Mecca in the Omayyad period and must therefore date from the Omayyad.

It was the same in other Syriān and Mesopotamian towns. In Sīmarā, al-Mutawakkil built in his new ḍāmi’a a fāṣūrā with a constant running water (B.C. A., vii. 265). In Nāṣib, the river was led through the ṣaḥn of the mosque into a sīḥīd; there was also a sīḥād at the eastern entrance with two sīḥāyāt in front of the mosque (Ibn Djuḥair, Rīḥā, p. 259). In Māsīlī in the mosque, which dated from the Omayyad period, there was a spring with a marble cupola over it (ibid., p. 255). In Ḫira, there was in the sahn three marble kuḥbas with ḍūf and drinking-water (ibid., p. 246), in Ḫaleb two (ibid., p. 255).

In Khīl there were three ḍūf with Euphrates water in front of the Dāmī’ (ibid., p. 212) but in the mosque a zāwīya a domed building with running water (Yākūt, iv. 325, 326, here called ṣamār; cf. F. G. A., v. 173; Ibn Djuḥair, p. 89, 267). It was the same in Amīd (Nāṣir-i-Khosraw, ed. Schefer, p. 28) and in Zarānd in ʿĪmā lat (B.C. A., ii. 298 sqq.). The principal mosques of the ʿīfīk had maṣūlān at the entrances, for which, according to a remarkable note by Maḥṣūsī, rents were paid (B. G. A., iii. 129, read kūrdī; cf. muṣṭāhir: Ibn Djuḥair, p. 89). In Palestine also, in al-Maṣṣūrī’s time, there were cubic boxes for ablutions, at the entrances to the ḍawāmī (muṣṭāhir: B. G. A., iii. 182; Maṣīrat: ibid., i. 58) and in ʿṢānā’ in the fourth century, beside each mosque, there was water for drinking and for ṭuḍūf (B. G. A., vii. 111). In Persia also, it was the custom to have a ḍūfī in front of the mosque (B. G. A., iii. 318) and there was drinking-water in the mosque itself on a bench (kūrdī) in iron jars into which ice was put on Fridays (ibid., p. 327). Not only at the Zemzem well but also in the mosques of the ʿīfīk, men were appointed whose duty it was to distribute drinking-water (Ṭabarī, ii. 2655). — The regular custom, therefore, was to have at the entrance to the entrance in the court of the mosque a fountain as the traditional ornament in the court of the mosque itself a fountain as the traditional ornament and for drinking water. It was the exception for the ṭuḍūf to take place in the mosque itself.

In Egypt at first the Mosque of Ibn Tulūn was arranged similarly to the Syrian mosques. In the centre of the sahn there was a gilt dome, supported by sixteen marble columns and surrounded by a railing. This upper storey was supported by nineteen marble columns and below was a marble basin (kaṭa) with a running fountain (fāṣūrā): the ṣaḥīn was called from the dome (Maḥṣūsī, iv. 37; the description is not quite clear). People complained that there were no arrangements for washing (miḏā). There, Ibn Tulūn replied that
he had not made them because he had concluded the mosque would be polluted thereby. He therefore made a miḥā'a with an apothecary's shop behind the mosque (ibid., p. 38, 39; Ḥusn al-
Maḥṣūla-i, ii. 139; Ibn Taghrībī, i. 11, 10). This suggests that previously in Egypt the washing arrangements had been directly connected with the mosque. After the fire of the year 376, the fadakība was renovated by al-Azīz (Maḥrizi, iv. 404), in 696 again by al-fājdūn, whose inscription still exists (C.F.A.I., i. NP. 10). A new miḥā'a was built in 792 beside the old one on the north, outside the mosque (Maḥrizi, iv. 42).

The Mosque of 'Amr first got a fadaka in the time of al-Azīz. In 378—379 his vīzir ʻAlā' Ḥās. Kīliš installed one in the cupola, already in existence for the batūt al-māl. Marble jars were put there for the water (probably drinking-water) (Maḥrizi, iv. 9, 11; cf. Ḥusn al-Maḥṣūla-i, ii. 139; ʻAlā′ Ḥās. Kīliš, i. 899). A new water basin was installed by ʻAlā' Ḥās. Kīliš beside his maṣrā on the mosque. The water was led to the faḍākība al-fiṣṭa from the Nile. This was prohibited in the reign of Ḥabūs al-ḥallūdakārī (658—676) by the chief khāja, because the building was being affected by it (Maḥrizi, iv. 14; Ḥusn al-Maḥṣūla-i, iv. 37). The emir, who restored it, brought the water for the faḍākība from a well in the street (Maḥrizi, iv. 15).

Like Ibn ʻṬabīb, the ifshāms do not seem to have considered the miḥā'a indispensable. For the Azhar Mosque had originally no miḥā'a; as late as al-Jikāmi's work for provision of miḥā'a, money is given only with the provision that something of the kind should be made (Maḥrizi, iv. 51, 54). At a later date we hear of two miḥā'a's, one at the adjoining Aḥbūgha'Ahwa (ibid., p. 54). On the other hand, there was already a baṣīya in the centre of the court, but whether it had existed from the first is not known. It had disappeared, when traces of it were found in 827 in laying out a new faḍākība (ibid., p. 54). The faḍākība of the Mosque of al-Ḥakim was not erected by the founder. Just like that of the Mosque of 'Amr, it was removed in 660 by the khāja ʻAbū Ḥās. Kīliš but after the earthquake of 702. It was again rebuilt and provided with drinking-water from the Nile (ibid., p. 56, 57) and again renovated after 780 (ibid., p. 61). A small miḥā'a later placed by another, was in the vicinity of the entrance (ibid., p. 61). Other ʻAlājmi'ī mosques had basins in the sahn, which were supplied from the Nile and from the Khālid (ibid., p. 76, 81, 120).

The traditional plan was retained in the period following also. For example, we know that the emir Ṭūḥān in 815 placed a ḍar in the centre of the Ḥāja'maj' Aḥṣanīr which was covered by a roof supported by marble pillars and supplied by the same pipe as the already existing miḥā'a as (Maḥrizi, iv. 107, cf. 124, 158, 159, 160 etc.). At the ceremonial dedication of mosques, it was the custom for the patron to fill the ḍar in the sahn with sugar, lemonade or other sweet things (e.g. al-Muayyadhi, 822; Maḥrizi, iv. 139; Mudarras Ḥāja'mal in 811: Ibn Ḥanbal, p. 253; another in 757: ibid., p. 256).

The importance of the birka of the mosque as a drinking-place, diminished as pious founders erected drinking fountains everywhere (cf. for Mecca, Certain ii. 116—118; also F.G.I., iv. 211. v. ḍar; p. 258, v. ʻabd) and especially when it became the custom to build a sabil with a boy's school in part of the mosque (see below, E 4 end). A ḍar for washing animals was also sometimes built in the vicinity of the mosque (Maḥrizi, iv. 76). Sometimes also the birka of the sahn was used for washing. In the year 799 the emir Yelbuga made arrangements for this in the Aṣkāmar mosque so that one could get water for ʻawdī from taps from a birka put up in the sahn (Maḥrizi, iv. 76). Maḥrizi condemns this addition, but only because there was already a miḥā'a at the entrance and the sahn was too small for the new one (ibid.) and not on grounds of principle; and it was only because the wall was damaged that the emir's gift was removed in 815 (ibid., p. 77). The custom of using the water supply of the sahn for a ḍar survived in many places in Egypt. The arrangements were therefore usually called miḥā'a or rather miḥā'a (which is not found in the inscriptions). If they had taps, they were called ṣanaflāya; according to Lane's suggestion because the Ḥanafis only permitted ablutions with running water or from a cistern on 10ells broad and deep (Lexicon, s. v.; cf. Manuscripts and Customs. Everyman's Library, p. 69; cf. on the question: Max Herz, Observations critiques sur les bassins dans les Sahn des Mosquées, H. I. E., iii 7, 1896, p. 47—51; do., La Mosquée du Sultan Husan, p. 2; Herz wrongly dates the modern usage from the Turkish conquest in 1517).

In quite recent times the miḥā'a's have often been moved outside to special buildings. Ibn al-Hadżjīden makes the same object for ablutions and ablutions in the mosque are forbidden by "our learned men" (Maḥbūl, ii. 47 sq. 49); like shaving, ablutions should be performed outside the mosque in keeping with the Prophet's saying: aṣṣā'īn muṣarratun ʻalā abwāb masjid-jābīn (ibid., i. 58). It was in keeping with this principle that in earlier times the miḥā'a was usually put at the entrance and the barbers took up their places before the entrance (cf. the name Ṣah Ṣalma-yinīn, "The Barbers' Gate" for the main entrance to the Azhar mosque). Miḥā'a's were also to be found in hospitals; thus the "lower hospital" was given two in 346, one of which was for washing corpses (Ibn ʻUkāb, p. 99 infra).

E. The Mosque as a State Institution.

1. The Mosque as a Political Centre.

Its Relation to the Ruler.

It was inherent in the character of Islam that religion and politics could not be separated. The same individual was ruler and chief administrator in the two fields, and the same building, the mosque, was the centre of gravity for both politics and religion. This relationship found expression in the fact that the mosque was placed in the centre of the camp, while the ruler's abode was built immediately adjacent to it, as in Medina (and in al-Fustāf, Damascus, Basra, Kīfī). We can trace how this ḍar al-imāra or ḍar (so for Kīfī: Ṭahā, ii. 230 sq.; ḍar al-imāra: ibid., p. 234) with the growth of the mosque gradually became incorporated in it in al-Fustāf and Damascus and was replaced by a new building. The tradition remained so strong that in Cairo, when the chief mosque Ḥāja'm al-Asqar was being planned in 169, a ḍar al-imāra ʻaubā must be built beside it with direct access to the mosque (Maḥrizi, iv. 33
...and when Ibn Tülin built his mosque, a building called the Dür al-Imāra was erected on its north side, where the ruler, who now lived in another new palace, had rooms for changing his dress, etc., from which he could go straight into the maqṣūra (ibid., p. 42).

The ʿAbbāsid s at the foundation of Baghdād introduced a characteristic innovation, when they made the palace the centre of the city; the case was similar with Fāṭimid Cairo; but Sulaimān b. ʿAbd al-Malik in Ramla had already built a palace in front of the mosque (Baladhurī, p. 143). Later rulers who no longer lived just beside the mosque, had special balconies or something similar built for themselves in or beside the mosque. Ṣālāḥ al-Dīn built for himself a minbar under the great minaret of the mosque of ʿAmr (Makrizī, iv. 13; Ibn al-Muḥāḍara, ii. 137) and just to the south of the Azhar mosque the Fāṭimids had a minbar from which they could overlook the mosque (Makrizī, ii. 345).

The caliph was the appointed leader of the ʿulāmā and the ʿālim of the Muslim community. The significance of the mosque for the state is therefore embodied in the minbar. The installation of the caliph consisted in his seating himself upon this, the seat of the Prophet in his sovereign capacity. When homage was first paid to Abū Bakr by those who had decided the choice of the Prophet's successor, he sat on the minbar. ʿOmar delivered an address, the people paid homage to him and he delivered a khutba, by which he assumed the leadership (Ibn Ḥājīm, p. 1017; Ṣaharīa, ii. 182; v. 119; cf. Yākūbī, ii. 142); it was the same with ʿOmar and ʿOthmān (ibid., p. 157, 187).

The khutba, after the glorification of God and the Prophet, contained a reference to the caliph's predecessor and a kind of formal introduction of himself by the new caliph. It was the same in the period of the Omayyads and ʿAbbāsids (see for al-Walīd: Ṣahīrīa, ii. 1177 sqq.; al-Aʿīma: ibid., iii. 764; al-Mahdī: ibid. iii. 457; cf. supra on this question also Bukhari, ʿAbd al-Rahmān, bāb 43). The minbar and the khutba associated with it was still more important than the imāmāt at the ʿulāmā, it was minbar al-mulk (Hamāyūn, ed. Fraytag, p. 156, v. 4). According to a hadīth, the Prophet carried the little ʿHasan up to the minbar and said, "This my son is a chief-you" etc. (Bukhari, ʿAbd al-Mahdī, bāb 25). This reflects the last custom by which the ruler saw that homage was paid to his successor-designate; this also was done from the minbar (cf. khutba yurum al-duʿāʾ fī ʿl-maṣājid bi-ʿl-iʿlāmāmāt li-ʿl-ʿulāmā, Ṣahīrīa, iii. 2131). The Fāṭimid caliph showed honour to a distinguished officer by allowing him to sit beside him on the minbar (Husn al-Muḥāḍara, i. 91): in the same way Muḥammad ibn ʿAbd al-Qādir was allowed to sit beside him al-ʿāli ṣarīrī (Ibn Abī Yūsuf, ii. 119) but whether the reference is to the minbar is perhaps doubtful. The minbar could also be received by another of his brothers but it must be accepted on the minbar. Thus the governor of Mecca in 196 accepted on the minbar homage to ʿAbd Allāh b. Muʿāwiyah and the deposition of Muḥammad b. Ḥārūn (Ṭabarī, iii. 561 sq.; cf. for al-Mahdī: ibid., p. 389). There are other cases in which the solemn deposition of a ruler took place on or beside the minbar (Aḥmadī, 2nd ed. Cairo, i. 12; Wüstenfeld, Ṣaḥīrīa, p. 15). Even at a much later date, when spontaneous acclamation by the populace was no longer of any importance, the ceremonial installation on the minbar was still of importance (Makrizī, iv. 94). It had become only a formality but still an important one. Homage was paid to the ʿAbbāsid caliphs in Egypt in the great ʿīdān of the palace or in a tent in which a minbar had been put up, and similarly to the ʿulāmā whose investiture was read out from the minbar (cf. Quatemère, Hist. Sult. Maml., i. 117, 149 sqq., 183 sqq.). If one dreamt that he was sitting on the minbar, it meant that he would become sultan (ibid., ii/ii. 103). — The ʿAbbāsid caliph had however long had his own throne after the old Persian fashion in his palace (ʿAbd Allāh fi ʿAbbāsid al-Maṣūm, ed. Ahmad Zaki, Cairo 1914, p. 7 sqq.) and so had the Fāṭimids (Ibn Ṭahānīa, ii. 457) and the Mamluks (Quatemère, ed., ii. 87; cf. 147). When later we find mention of the kūta ʿīkhāliya (v. Berchem, Corpus, i., N° 33), sarīr al-mulk (Chron. Mekk., ii. 113), sarīr al-ṣalātīna (Makrizī, ii. 157; cf. al-ṣarīr, royal throne; B. G. A., ii. 282, 285; kūta similarly cf.: Ibn ʿĀrābshāh, Viṣṇu Viṃśṭrī, ed. Manger, i. 486) or marḥabat al-mulk (Quatemère, cf. i., ii. 61), the reference is no longer to the minbar. This does not mean that the ruler could no longer make public appearances in the mosques: thus in 648 Muʿizz al-Mulk regularly gave audiences in ablāḏūrīn al-ṣūlāḥīya (Quatemère, Hist. Sult. Maml., i. 17) and memorial services for Baḥrūs were held a year after his death in several mosques, madāris and khanqāhs (677 = 1278; ibid., ii. 164 sqq.).

The caliph spoke chiefly from the minbar of the capital, but when he made the pilgrimage he also spoke from the minbar in Mecca and Medina (cf. e.g. Ṣahādī, ii. 1234; Yākūbī, ii. 541, 501; Chron. Mekk., i. 160). Otherwise in the provinces, the governor stood in the same relation to the mosques as the caliph in the capital. He was appointed "over ʿulāmā and sword" or he administered "justice among the people" and the ʿulāmā (Ṭabarī, ii. 860), he had "province and minbar" under him (ibid., ii. 611), hāṬalīya wa l-ḥatba (B. G. A., ii. 337). Speaking from the minbar was a right which the caliph had delegated to him and it was done in the name of the caliph. ʿAmr b. ʿĀs therefore refused to allow people in the country to hold ḍūmūt except under the direction of the commander (Makrizī, iv. 7). This point of view was never quite abandoned. The khutba was delivered "in the name of" the caliph (ibid., p. 94) or "for" him (ibid., p. 66, 74, 198; Ibn Ṭahānīa, i. 85 infra; B. G. A., ii. 485 supra) and in the same way an emīt delivered a khutba "for" a sultan (Makrizī, ii. 213, 214). The sultan did not have the "secular" and the caliph the "spiritual" power, but the sultan exercised as a Muslim ruler the actual power which the caliph possessed as the legitimate sovereign and had formally entrusted to him. During the struggles between the different pretenders, there was thus a confession of one's politics if one performed the ʿīdān with the one or the other governor (Ṭabarī, ii. 228, 234, 258; Chron. Mekk., ii. 168). The pretenders disputed as to whether the one or the other could put his standard beside the minbar (Ṭabarī, iii. 2009).

I like the caliph, the governor also made his formal entry into office by ascending the minbar
and delivering a khutba; this was the symbol of his authority (e.g. Tabari, ii. 91, 228, 242; Chron. M. M., ii. 173; cf. Hawamid, p. 660, v. 2-3; Ibn Jarir, iii. 135). After glorifying God and the Prophet, he announced his appointment or read the kätar from the caliph and the remainder of his address, if there was a war going on, was exclusively political and often consisted of crude threats. The khutba was not inseparably connected with the Friday service. The commander-in-chief could at any time issue a summons to the salah and deliver his khutba with admonitions and orders (see Tabari, ii. 260, 257 sq., 208, 300, 89, 179) and it was the same when he left the pulpit (ibid., p. 245): a governor, who could not preclude his authority with the khutba, was dismissed (bid., p. 592).

Since war was inseparably associated with early Islam and the mosque was the public meeting-place of ruler and people, it often became the scene of warlike incidents. While the governor in his khutba was issuing orders and admonitions relating to the fighting, cheers and counter-cheers could be uttered (ibid., p. 238) and councils of war were held in the mosque (Tabari, i. 3415). Soon after his election, Abu al-Malik asked from the minbar who would take the field against Ibn al-Zuhair and al-Hadj Japhet shouted that he was ready to go (Chron. Mekb., ii. 20). After the battle of the Camel, Ali sent the body to the mosque of Basra and Aisha led from another mosque (Tabari, l. 3178, 3223). Rowdy scenes occasionally took place in mosques (Kindi, Wulat, p. 18); Zayd was stoned on the minbar (Tabari, ii. 88); one could ride right into the mosque and shout to the governor sitting on the pulpit (ibid., p. 682); fighting often took place in and beside the mosque (ibid., p. 960. 1701 sqq.; Wustenfeld, Medzir., p. 13 sq.) Sometimes for this reason, the governor was surrounded by his bodyguard during the salah or on the minbar or even clothed in full armour (al-Walid, Tabari, i. 1234. Yâkub, ii 341: al-Hadî Japhet Tabari, i. 254; salah and wood were thus closely associated in reality.

It thus came to be the custom for the enemies of the rulers and his party to be buried in the mosques. This custom continued the old Arab custom of regular campaigns of obsequiation between two tribes but can also be paralleled by the Byzantine ecclesiastical anathematization of heretics by Becker, „Handbuch u. d. iran. Kultur“.

The first to introduce the official cursing of the Abds from the minbar of the Ka'ba is said to have been Khalid al-Kasrî (Chron. Mekb., ii. 36). The cursing of cursing ofOmaysids and Abds became general (cf. Tabari, ii. 12, 2: al-Attab, ed. edition coro. x 102. Ibn Taghibirdi, i. 248: see also Minnemos. Maviçin, iii. 186 sq. cf. the blessing upon the ruler, it was uttered by the bytab. (Makrizi, iv. 165), it was even recorded in inscriptions on the minbar of Ibn Taghibirdi, ii. 112. ed. Popper, i. 13, 15; cf. also M. R. Mashal, ed. press. 61: 

Ibn as-284, al-Ma'djadi wanted to restore the anathematization of Muslims from the minbar that had been abandoned (Tabari, in 2164). Anathematizations were also pronounced on other occasions, for example, Sulayman had al-Hadî Japhet (Chron. Mekb., ii. 37) and al-Mami al-Tbaïian solemnly cursed from the minbar (Tabari, in 2048 sqq., and other rulers had M'azhdh heretics cursed from the pulpit (see Mz. op. cit. p. 198; cf. against Ibn Taimiya: Quatremère, Hist. Sult. Maml., ii. 256)). Ibn Battûta describes the tumultuous scene with thousands of armed men uttering threats in a mosque in Baghdad when a Shi'i khutba was on the minbar (ii. 58).

It was very natural to mention with a blessing upon him the ruler in whose name the Friday khutba was delivered. Ibn 'Abbas, when governor of Basra, is said to have been the first to pronounce such a dâ'â over 'Ali (ibn Khaldun, Muhabl. of thing, 37, end); it is not improbable that the custom arose out of the reciprocal objurgations of 'Abd and Omaysids: the hajjâr, who had to curse the Abds in the mosques, used to pray for the Omaysids (Makrizi, iv. 17). Under the 'Abbâsids, the custom became the usual form of expressing loyalty to the ruler (Ibn Taghibirdi, i. 115). After the caliph, the name of the local ruler or governor was mentioned (bid., p. 156, 161); even in Baghdad in 369 by order of the caliph al-Tâ'ifî, the actual ruler 'Adud al-Dawla was mentioned in the dâ'â (Ibn Miskawwah, vi. 499: Cairo 1915, p. 396) and the Buyids, according to al-Makdisî, were generally mentioned in the khutba even in the remotest parts of the kingdom (this is evident from the above-mentioned expression khutba unh, for which we also find adelâd: see F. A. A., ii. 29; iii. 337, 338, 400, 472, 485; cf. Glossary, s. v.). There is also evidence that prayers used to be uttered for the heir-apparent (Makrizi, iv. 37; Khûb al-Huwâzâ, ed. Amelroz, p. 420). Under the Mamikâ also, the sultan's heir was mentioned (Quatremère, Hist. Sult. Maml., ii. 101; iv. 3). Under the Fâtimids, it was even the custom to call adlân upon the ruler from the minaret after the adâh dâ'â (Makrizi, iv. 45); this also took place under the Mamikâ (e.g. in 696 = 1297, when ifâm was elected: Quatremère, Hist. Sult. Maml., ii. 45). The prayer for the sovereign in the khutba did not find unanimous approval among the learned (see Snouck Hurgronje, Vergezicht geschieden, 214 sq.).

In general, the mosque, and particularly the minbar, was the place where official proclamations were made, of course as early as the time of the Prophet (ibkhâr, Said, bâb 70, 71), 'Othmân's bloodstained shirt was hung upon the minbar (Tabari, i. 3255); messages from the caliph were read from it (ibid., in. 2084). al-Walid announced from the minbar the deaths of two distinguished governors (Ibn Taghibirdi, i. 242); the results of battles were announced in khutbas (Yâkît, i. 647: ad alik al-fard, ii. Cairo 1321, p. 149 sq.). In the Fâtimid and 'Abbâsî periods also proclamations, orders, edicts about taxation etc. by the ruler were announced in the principal mosque (Tabari, ii. 40; iii. 2165: Ibn Taghibirdi, ii. 68: Makrizi, tilatâ, ed. Bunz, p. 87 supers. Quatremère, Hist. Sult. Maml., ii. 89; iii. 44. 1511): documents appointing the more important officers were also read upon the minbar (Kindi, Mau. p. 580, 599, 603, 604. etc. pas. Makrizi, ii. 246; iv. 43. 88; frequently the people trooped into the mosque to hear an official announcement (Kindi, Wulat, p. 14: cf. Dozy, Gesch. d. Mârûn in Speten, ii. 179).

After the position of the caliph had changed, tradition was so far retained that he still delivered the khutba in the principal mosque on special occasions,
particularly at festivals. Thus the Fatimid al-Aziz
preached in the mosque of al-Hākim on its com-
pletion (Maqrizi, iv. 55) and in the month of
Ramadan he preached in the three chief mosques
of Cairo, one after the other (ibid., p. 53: cf.
61 sq.; Ibn Taghribirdi, ii. 482 sqq.; exceptionally
also in al-Maqrizī: Maqrizi, iv. 63). The "Abdābād
caliph also used to preach at festivals (e.g. al-Khādīj,
Yaṣṣāf, Cāhāb, ii. 349 sqq.); it was the exception
when a zeal on al-Muḥātaddī (255) followed the
old custom and preached every Friday (Masūdī,
Muṣṭaṣ, v. i. 2). Even the caliph Ṣaʿīdī in Egypt
preached occasionally (Maqrizi, iv. 94; Quatremère,
Hist. Sutt. Musul., i. 138 sqq.). Although the
mosque lost its old political importance in its
later history, it has never quite lost its character
as the place of assembly on occasions of public
importance. This is evident from al-Harrazī's
history and even quite recently large meetings
have been held in the mosques of Egypt on questions
of nationalist politics.

2. The Mosque and public
administration.

The actual work of government was very early
transferred from the mosque into a special dāwān
or muqaffa (see Tabārī, Gr. v.) and negotiations
were carried on and business frequently done in
the kāya al-bātī (cf. Tabārī, n. 259 sqq.). But
when financial business had to be transacted at
public meetings, the mosque was used, of this
there is particular evidence from Egypt. Here the
director of finance used to sit in the Mosque of
Amr and auction the farming out of the domains,
with a crier and several financial officers to assist
him. Later the Dīwān was transferred to the
Lāmi' Aḥmad b. Ṣūlīn but even after 300 A.H.
we find Abū Bāki al-Muḥājīrī sitting on such
occasions in the Mosque of Amr. Under the Fātimids
the vizier Yaṣṣāf b. Killās used first the dār al-
amāra of the Mosque of Ilūn Ṣūlīn (see above),
later his own palace and afterwards the caliph's
kāya was used (Maqrizi, i. 131 sqq.). In the same
way, in the reign of Muḥāyīn, the Coptic churches
were used and the taxation commission took up
their offices in them (Egyptus Erzherzog Rainer,
Führer durch die Ausstellung, N° 577); and Ibn
Rosta (c. 290 = 903) says that the officials
charged in the measurement of the Nile, when they
noticed the rising of the river, went at once to
the chief mosque and announced it at one kūbat
after another, at the same time scattering flowers

The connection with administration was al-
so seen in the fact that the treasure-chest, the bātāt
al-māl (identical with the rābīt; Kindi, Wulāt,
p. 70, 117) was kept in the mosque in al-Muḥājīrī
Usāma b. Zaid, the director of finance, in 97 and
99 built in the Mosque of Amr a kūbat on pillar-
in front of the minbar for the bātāt al-māl
of Egypt. A drawbridge was placed between it and
the roof. In the time of Ibn Rosta (c. 300) it was
still possible to mount freely below the kūbat
but in 378-379 al-Azīz put up a running fountain
below it (R. G. A., vii. 116; Maqrizi, iv. 9, 11,
13; Ḥasan al-Muḥājīrī, ii. 136; Yaṣṣāf, iii. 899).
Ab-Kindi records an attempt to steal the chest in
145 (Wulāt, p. 112 sqq.). In the disturbed years
about 300, the wali al-Νasāhīrī closed the mosque
between the times of ṣalāt for the safety of the
chest, which was also done in Ibn Rosta's time
(Kindi, Wulāt, p. 266; R. G. A., vii. 116) New
approaches to the Bait al-Māl were made in 422 from
the khīzāna of the mosque and from the Dīwān
(Maqrizi, iv 13).

In Kāfā, the būyāt al-amādī, at least during the
early period, were in the Ḥār al-Imāra (Tabārī,
12459, 2491 sqq.); in the year 58 during the
fighting, it was saved from Ḫāṣra and taken with
the mūtabar to the Mosque of al-Hudūn (iv. 2,
p. 3414 sqq.). In Palestine, in the chief mosque
of each town, there was a similar arrangement to
that in the Mosque of Amr (R. G. A., ii. 182). In
Al-Maṣrāb the bātāt al-māl was in the most
western of the three kūbās in the court of the
Mosque of the Omanīyāds; it was of lead and tested
on 8 columns (R. G. A., ii. 157; Ibn Ḫūdhaib,
p. 264, 267; Ibn Ḫattāba, i. 200 sqq.); it is still
called khubāt al-dīwān (treasure-chest), earlier
khubāt al-dīwān (cf. Baadeker, Palatina und
Süden). In the time of the two travellers
mentioned, the khūba only contained property of the
mosque. Ibn Ḫūdhaib saw a similar khūba in the
chief mosque of Ḥārān and says that it came from
the Byzantines (246). In Aḥabar da'līn also by the
time of Ḫāṣra, the Byzantine custom had been everywhere established (Tabārī, i. 184); in İnān da'līn in the centre of the court, there
was a building with marble columns and doors
(R. G. A., i. 316) which perhaps points to a
similar statement of affairs and in Armenia it is
recorded that the bātāt al-māl was kept in the Lāmi'
in the time of the Omanīyāds as in Ḫāṣra and elsewhere
(R. G. A., ii. 241). The khūba was usually of lead
and had an iron door. Ibn al-Hudhaib considers it
highly illegal to shut off a dīwān in a mosque,
which is the same as forbidding entrance to it. This
shows that the custom still survived in his time.

Ibn Ḫūdhaib's remark about Ḥārān suggests
that here again we have an inheritance from
Lyakinum. It was probably the building belonging
to the ṭūrma (cf. above) that the Neōshur put
practical use in this way. For the Byzantines
they had the treasury (tēkērī) in the palace and it was
doubtful if the treasurer-chambers of the church
(kinŏ̱y̱y̱ō̱kān) were built in this way (cf. F. der
Bolker, in Byzantinische Arch., Heft 9, 1927,
p. 26, 34).

3. The Mosque as a court of justice.

That the Prophet used to settle legal disputes
in his mosque was natural (see Bukhārī, Ṣāḥīb,
bāb 19, 29 etc. of Ṣaḥīḥ; Bukhārī, bāb 41); but he could also deliver judgments in other places (ibid., pass.); in Ḫāṣra it is recorded
that some kāfās of the earlier 397 (Bukhārī, al-
Ṣaḥīḥ, bāb 41; cf. ibid., bāb 41), but he could also deliver judgments in other places (ibid., pass.); in Ḫāṣra it is recorded
that some kāfās of the earlier 397, and in the mosque
of Khurāsān, Ilūn Ṣūlīn, was a court of judgement
beside the minbar. Other (e.g. Ḫāṣra, Zārā b.
Awwāfī) on the open square beside the mosque
(Bukhārī, II. 184, bāb 18). The courts had all the
better chance of survival, as churches were
ruined in the same way (Josua Stylites ed. Wright,
20; cf. Mgr. Renan, p. 223). Sitting in
judgement was primarily the business of the ruler
but he had to have assistants, and Abū Bakr's
kāfā is mentioned as assisting Omar (Tabārī, i.
2135) and a number of judges appointed by
Omar are mentioned (R. G. A., ii. 227). In the
reign of Umayyad, Abd Allāh b. Masūd is said
to have been judge and financial administrator
On the other hand, we are told that 'Abd Allāh
MASDJD

b. Nasif, appointed by Marwan in 42. was the first kadi in Damascus (Tabari, ii. 2477): it is recalled that in the year 132 the kadi of Medina administered justice in the mosque (ibid., p. 2505). In Bagdad, we are told that al-Aswad b. Sari al-Tamim immediately after the building of the mosque (i.e., in 131) worked in it as kadi (Baladhurî, p. 349). In the early period, 'Amr wanted to choose a kadi, who had been already acting as a judge before Islam (Kindî, Wâlî, p. 301 sq.; Idrîs al-Muhadara, ii. 86). Even the Christian poet al-Akhfâl was allowed to act as arbiter in the mosque of Kufa (see Lammens, Mu'dra, p. 435 sq.).

In al-Fâsid, as early as 23 or 24 A.H. in command of Omar, 'Amr b. a-Shammâ appointed a kadi named Khuwâs (Ibn al-Mukhtârah, ii. 86; Kindî, Wâlî, p. 300 sq.). The kadi held his sessions in the Mosque of 'Amr but not exclusively there. The kadi Khuwâs b. Nu'aim (120-127) held his sessions sometimes before his house, sometimes in the mosque and for Christians on the steps leading up to the mosque (Kindî, Wâlî, p. 351 sq.). A successor of his (177-184) invited Christians who had lawsuits into the mosque to be heard (ibid., p. 391); of another judge (205-211) it is recorded that he was not allowed to sit in the mosque (ibid., p. 428). It seems that the kadi could himself choose where he would sit. A judge, officiating in the year 217, sat in winter in the great pillared hall turning his back towards the kibla-wall and in summer in the courtyard near the western wall (ibid., p. 443 sq.). During the Fâtimid period, the undivided building on the north-east of the Mosque of 'Amr was reserved for the judges. This judge, called from the year 376 onwards khalil 'al-żamâr (cf. Idrîs al-Muhadara, ii. 91; Kindî, Wâlî, p. 590), sat on Tuesday and Saturday in the mosque and laid down the law (Maârifî, ii. 245; iv. 16, 22; cf. Kindî, Wâlî, p. 587, 589; cf. Sâlihiyya, transl. Schefer, p. 149).

In Yâsîn's time in Baghdad, the judge of the caliph was used to sit in his chief mosque (B.G.A., vu. 245). In Damascus the vice-kadi in the fourth century had a special iwan in the Mosque of the Omayyads (F.G.A., iii. 158) and the notaries (architects) also sat in the Mosque of the Omayyads at the Bab al-Asfâr (ibid., p. 17). In Nishapur, every Monday and Thursday, the mulkân al-žawwâd was held in a special mosque (ibid., p. 328). In course of time the judge was given a mulkân al-žawwâd of his own (cf. Idrîs, ii. 90) and in 279 al-Mu'tadâd wanted to forbid the kâdis to hold sessions in the mosques (Ibn Fâhri, i. 87 infra); perhaps however we should read see Goldziher, Mu'tadâd, stud. ii. 163, note 4). Justice was also administered in the dar al-žawwâd (Qurâyshî, Hist. Sult. Mâlik, ii ii. 79). But the administration of justice did not at once lose all connection with the mosque. Under the Fâtimids, the custom had been introduced that the kâdis should hold their sessions in his house. But Ibn al-'Arâm, appointed just after 400 A.H., held them either in the Idrîsî at the Bab al-Malî in a room (Kindî, Wâlî, p. 612; cf. Ibn Taghrûbarî, ed. Popper, ii. p. 69; 'Abûκhâsî, ed. ibid., p. 497: for 439 = 1046, see Na'irî Khwâsî, ed. ibid., p. 514, transl. 1). In Mecca, the dar al-žawwâd was in direct connection with the mosque (Ibn Ujairî, p. 104). In the 9th century Ibn Bâsh'ân attended a court presided over by an eminent jurist in a mosque (madrasa) in 'Uarb (n. 55: 63; cf. also Mâk-}

A mufti, especially in the large mosques, was also frequently appointed; he sat at definite times in a khatla l'Cin addâdâ, e.g. in Cairo (al-Kazwînî, Hâsn al-Mu'âmâlar, i. 182; Djâlîl al-Dîn, ibid., p. 157), in Tunis (Zarkashi, Chronicles, transl. Fag-}

P. The Mosque as an Educational Centre.

I. Islamic studies in the Mosque to the end of the Fâtimid period.

The new studies stimulated by Islam were from their nature associated with the mosque. The learning by heart and the understanding of the Qur'an formed the starting-point and next came the study of Hadîth, by which the proper conduct for a Muslim had to be ascertained. The Prophet was often questioned on matters of belief and conduct, in or outside the mosque (Bukhârî, 'Îm, bâb 6, 52; 23, 24, 26, 46). After the death of the Prophet, his Companions were consulted in the same way and scientific study began with the collection and arrangements of hadîths, as has been shown, notably by Goldziher. This process is reflected in the hadîths themselves. According to them, even the Prophet in his lifetime was asked about hadîths (ibid., bâb 4, 14, 33; tr. 9, 51, 53); the Prophet sits in a mosque surrounded by a hâlqa and instructs his hearers; the latter repeat the hadîths three times until they understand them (ibid., bâb 8, 39, 35, 42). The necessity of 'Îm is strongly emphasised and the ta'âl al-}

MASDJD

in or hikma (ibid., bāb 15). Such knowledge was imparted to the tribes by the Prophet (ibid., bāb 25) or by teachers sent to them. In the year 17, Omar sent teachers of the Kurān in all directions and ordered the people to appear every Friday in the mosque. The complicated nature of the subjects of study resulted at the principal centres of Islam in the formation not only of a guild of teachers but of a regular system of instruction. The typical scholar, in addition to the kāfir, was the muqaddith (ibid., bāb 29) although new branches of study were soon added as a result of contact with lands of older cultures, notably linguistic studies and in this connection the study of the old poetry, philosophical and speculative studies, logic, etc. The learned man of the old period was also called faṣkhi (Hum al-Muḥājara, i. 131; Taḥārī, ii. 1183, 1266; Aṣghīni, viii. 89; Ibn Saldī, v. 167 etc.). Even after the new branches of learning were added to the older studies, the mos- que remained the chief centre of instruction. This may have been facilitated by the fact that in the old Christian countries it had been the custom for such studies to be prosecuted in connection with monasteries and churches (on the university connected with the Church of the Apostles in Constantinople cf. A. Heiseberg, Gotteskerc he und Apostelkirche, ii., 1908, p. 179). We hear of a madras for educational purposes in the Medina mosque in the first century A.H. (Aṣghīni, i. 48; iv. 162 sg.). Yazīd b. Abī Ḥabīb sent by ʿOmār b. ʿAbd al-ʿAzīz as mufti to Egypt (d. 128), is said to have been the first to teach in Egypt (Hum al-Muḥājara, i. 131); he is mentioned along with another as teacher of al-Lāḥi (Kindī, Wafāʾ, p. 89) and the latter, upon whose pronouncements fatwas were issued had his hakīma in the mosque (Hum, i. 134). Omar II had before this sent al-Nāfiʿ, the Makāli of Ibn ʿOmār, to Egypt to bring them the sunan (ibid., p. 150). He also sent an able reciter of the Kurān to the Maghrib as ḡādi to teach the people (Hum, i. 52, p. 131). Education was arranged for by the government, allowing suitable people to give instruction in addition to their regular office. From the very first, education in Egypt was closely connected with admonition to right living. The first teachers in the mosques were the ḡādīs, as a rule ḡādīs, whose discourses dealt with the interpretation of the Kurān and the proper conduct of divine service (cf. C 3). Their masjīfa was the direct continuation of the moral instruction given by the old Companions (cf. Bukhārī, ʿIṣnā, bāb 12). The instruction started in the mosque of Amr was continued for centuries. In the third century A.H. al-Shafiʿī taught various subjects here the morning till his death (240) (Hum al-Muḥājara, i. 153, l. 183, vi. 38). It was after his time that the study of fiqh came markedly to the front and the great teachers used at the same time to give fatwas (cf. Hum, i. 182: ‘Abd Allāh al-Kaẓwīnī, d. 315: i. 183: ‘Abd al-Rahmān al-Rāzī, d. 339). In the year 326 (938), the Shafiʿis and Mālikis had each 15, the Ḥanafis 3 groups in the mosque of Amr (Ibn Sālid, ed. Tallquist, p. 24). The Mālikī Muhammad al-Nāʿalī (d. 380) had so many hearers that the chest occupied the area which 17 pillars included (Hum, i. 207). In the fourth century, al-Maḍāqīl mentions the groups (ḥalaf) of fiqhāt, kirtā and al-ṣalat an i-hikma, who sat in the mosque (B. G. A., iii. 205; cf. for the fifth

centures—Nāṣīrī Ḵosrow, ed. Schefer, p. 50 [text], p. 148 [transl.]). He also mentions that the followers of Abū Ḥanīfah held meetings in the Masjd al- Ṭṣa with ẓihār, which here must mean something like lectures, where they read out of a volume and the fukāṭ used to sit in the mosques of Palestine generally, to teach between the salāt (B. G. A., iii. 182). In the third century, Ibn al-Ṭāfīḥ tells how the fukāṭ sit in the mosque of Sidjāt, Balkh and Herāt, while the people crowd around them (ibid., iii. 217). The maṭāḥīḥ which later lost their importance had also their study-places in the mosques. For example al-Maḥtūt says that the Dāwāṭiya had study-groups in Ābāz (ibid., p. 439) and the Awānṣa had even a madras in the mosque of the Omayyads (ibid., p. 179).

Arabic philological studies were ardently prosecuted in the mosques. The interest of the early Arabs in rhetoric survived under Islām; the fāṣālī b. al-Musayyab (d. 95) (cf. Tabārī, b. 1269) discussed Arabic poetry in his madras in the mosque in Medina, but it was still thought remarkable that poems should be dealt with in a mosque (Aṣghīni, i. 48; iv. 162 sg.). In the year 256, al-Talhārī by request dictated the poems of al-Tirīsu in the Baṣr al-Mal in the Mosque of ʿAmr (Yāḥū, Quraysh, viii. 452 infra). In the chief mosque of Ṭabaṣṭa the Aṣghī- the Arantzja: the mosque, which bears his name and the pupils used to take their places in front of him after the morning salāt (Yāḥū, Quraysh, i. 243 sg.). About 200 A.H. we hear of lectures on tafsīr in the principal mosque of the same town (ibid., vii. 105). At the mosque of Ḥadīth still retained its importance (Wustenfeld, Šaṭṭ, iii. 362). The Mosque of al-Manṭir remained the most distinguished school, the goal of all the learned (Yāḥū, Quraysh, i. 246 sg.). When a traveller came to a new town, he could go to the dāmar in the confidence that he could attend lectures on Ḥadīth there (B. G. A., iii. 415; in Sūs). In Mecca, for example, al-Ṣafrī lectured (Yāḥū, Quraysh, vii. 391), in Medina Ibn Ḥabīb, who died in 234 (ibid., p. 400, 401). In Damascus we hear of some one who lectured on kirtā (Hum, i. 182) and of another, Abī Ṭaḥīr al-ʿIs̱kandarānī (d. 359) who lectured on Ḥadīth in the same place (ibid., i. 185). Teachers went from one town to another. Makī b. ʿAbī Ṭalīb came from Kairawan to Miṣr, Mecca and Kurṭubā; in the last named place he put up in two rijāls of the chief mosque, where he lectured on ḥadīth, afterwards in another mosque, and he was much sought after on account of his ḥadīth (Yāḥū, Quraysh, vii. 174). At quite an early date we read of special apartments (which were certainly also lecture-rooms) for authorities on the Kurān, for, according to al-Walāʾi, Abī Ḥanīfah b. Umm Makṭūm lived in Medina in the Dār al-Ḥabīrā (Hum al-Muḥājara, i. 142).

As is evident from the examples quoted, studies were not only prosecuted in the chief mosques but also in other mosques. In Egypt, not only
the Mosque of Amr but also the chief mosques of later date were important centres of study. As soon as the Mosque of Ibn Tulun was founded, a pupil of al-Shāhī's began to lecture in it. In 921 (Fihrist, ed. Flugel, p. 423; cf. Ibn al-Kīfī, Tārīkh al-Hadā'īn, p. 98). During the Fatimid period this was continued. In the year 361 (1972) the Azhar Mosque was finished. Soon afterwards, the new Shi'i Kādi, 'Ali b. al-Nu'mān, lectured in it on Fikh according to his school; in 378 Al-Qādir and his vicer Yā'kūb b. Killis founded 35 lectureships in a large house built beside the mosque (Maqrizī, iv. 49; Sulāḥīn Ṭāhā al-Ḥāfi, Kurz al-Dā'irah fi Tārīkh al-Ashar, p. 32 sqq.). Immediately after the foundation of the Mosque of al-Hākim, the fājūkhī gave lectures (mulḥākāt: Maqrizī, iv. 55) in it. In the Fatimid Mosque of al-Akmar, also founded in 378, teaching was carried on from the very first (Ibid., p. 77).

We can therefore say definitely that mosques were from the beginning throughout the centuries educational institutions, that learned men occasionally used to live in mosques and that under the Fatimids and probably much earlier, there were special houses for the learned teachers. The mosque therefore corresponded to church, town hall and school, and sometimes hostel. It was, then, a public place of assembly for the town. Nāṣīr Khosraw in 439 (1047) gives a vivid picture of the activity in the Mosque of Amr which was visited by 5,000 people daily, teachers, kūrān-teachers, students, strangers, scholars, who drew up bills of exchanges and contracts etc. (ed. Schefel, text, p. 50 and transl., p. 148). It was therefore an exception when the Sāhīra Mosque was open only on Mondays and Fridays (Sana'ī, Hārār, et urb., p. 54) which happened with very few other sanctuaries, and also unusual for the mosque only to be opened for prayer, as sometimes happened out of consideration for the safety of the barāt al-māl. The people demanded unrestricted access to the mosque at all times (cf. Maqrizī, iv. 54).

2 Special Educational Institutions.

In the descriptions of the larger mosques the libraries are often mentioned. These collections were gradually brought together from gifts and bequests, and it was a common thing for a scholar to give his books for the use of the Masjid or Al-ʿālam (e.g. al-Khaṭīb al-Baghdādī: Yākūt, Uṣūl, i. 252; cf. cv. 287). Many other libraries were semi-public. These often supplemented the libraries of the mosques, because they contained books in which the mosques were not much interested, notably on logic, falsafa, geometry, astronomy, music, medicine and alchemy: the latter were called al-ʿālam al-kutub (Ibn Abī Usāibīa, i. 113, use this already for the pre-Islamic period) or al-ʿālam al-nilvān (on them see Golzheiser, in 'Ab Fr. dh. II. 1915. Phil.-Hist. Kl., Nr. 8. Berlin 1916). The academy, Baitul-Hikma, founded by al-Maḥmūd (138–202) in Baghdad, deserves first mention. It recalls the older academy founded in Córdoba by, to which Maḥsūr had invited Gorgias and, after his death of the hospital; he also translated works from the Greek (Ibn Abī Usāibīa, i. 123 sqq.). In the new academy there was a large library, and it was extended by the translations which were made by men qualified in the above-mentioned fields; there was also an astronomical observatory attached to the institution in which there were also apartments for the scholars attached to it (Fihrist, ed. Flugel, p. 423; cf. Ibn al-Kīfī, Tārīkh al-Hadā'īn, p. 98). When the caliph al-Mu'ātifid (279–289) built himself a new palace, he had apartments and lecture-rooms in an adjoining building for men learned in every science, who received salaries too to teach others (Maqrizī, iv. 192, 202; Fihrist, ed. Flugel, p. 239). Al-Mu'ātifid also presented a whole library to Fāth b. 'Aḥmad ibn al-Majdīsī, which he visited, and by giving books to the libraries with which students worked daily at all branches of knowledge which were even supplied with free paper. The founder lectured on poetry in it (Ibid., p. 240). In the fourth century al-Majdīsī visited in Shirāz a large library founded by 'AbdAllāh ibn al-Dawla (367–372) on which people of standing had access. The books were arranged in cases and listed in catalogues, and the library (kāfīn al-kutub) was administered by a director (waḳīl), an assistant (beṣīr) and an inspector (muṭāhir) (B. G. A., iii. 449; cf. a little later: Yākūt, Uṣūl, ii. 406, 419 sqq.). In the fourth century, a certain Ibn Sawrār founded both in Baṣra and in Rām-Hurmuz a large dar al-kutub with stipends for the scholars who worked in it; in Baṣra a shaykh used to hold classes (muḍarris) in Muṣṭarāli kalām (B. G. A., ii. 413, 418). In al-Ra'y, there was at the same time, a beṣīr al-kutub with over four hundred camel-loads of books, which were catalogued in a ten volume fihrist and included many šī'ī works (Yākūt, Uṣūl, ii. 315 a sqq.). In the year 583, the vizier Sābūr b. Arslānī founded a dar al-fīhrist in Karkh with a large library for scholars (Ibn Taghibīrī, ed. Popper, v. 51, 56 sq.; Ibn al-Adhīr, ix. Cairo edition, p. 35, 7).

Many of the libraries had a strongly, but by no means exclusively, Shi'a character. As to the ‘ilm al-ʿuraq, the ‘Abbāsidīs, as already mentioned, were interested in them and the Omayyad Khalīd b. Yazīd b. Muʿāwīyā studied alchemy and medicine along with Hadīth (Ibn Taghibīrī, i. 245, 3; Yākūt, Uṣūl, iv. 165). But the connection between the Shi'a systems and Hellenistic science of which we have evidence, for example in the Khāšā al-Saffa, perhaps caused a greater interest to be taken in this branch of knowledge among the Shi'is than among the Sunni. In Cairo, the Fatimids founded similar institutions in the interests of the Shi'is. In their palace, they had a library which was said to be the largest in Islam. It had about 40 rooms full of books and all branches of knowledge were represented; they had for example 1,200 copies of al-Ṭabarī's History and 18,000 books on the "old learning" (Maqrizī, ii. 254–255). The vizier Yākūb b. Killis founded an academy with stipends for scholars and spent 1,000 dinars a month on it (Yahya b. Sādī, ed. Tahlin-i, fol. 108'; Ibn Khallīkān, Wafayāt, Cairo 1310, n. 334; cf. Maqrizī, iv. 192, 193). It was
and one built by Abū Sa‘d ʿIsā强有力 al-ʿAshtarabādī and another built for the teacher Abū ʿIsā强有力 al-ṣafiʿarabī. A Nisāmīya was also built here by Nisām al-Mulk for the Imam al-Ḥaraman al-Sinquati (Maqrizi, iv. 192; Hāsa al-Mufaddas a, i. 141 sq.). It was an event of great importance when Nisām al-Mulk (456–485, vizier of the Seljuq sultans Alp Arslan and Malik Shāh) founded the celebrated Nisāmīya Madrasa in Baghdad; the building was begun in 457 and on the 10th Dhu ʿl-Ka‘da 459 (Sept. 1067) it was consecrated. It was founded for the Shāhī teacher Abū ʿIsā强有力 al-ṣafiʿarabī; but he at first refused to accept the call, because the ground on which it was built was said to have been acquired illegally, and Abū Naṣr Ibn al-Sabībāgh therefore held the office for the first twenty years (ibid.; and Wustenfeld, Schāhī, iii. 297; Ibn Khallikān, Wajlayt, Curo, i. 143 sq.).

The Muslim historians are in some doubt about the foundation of the madrasa. Nisām al-Mulk is given the credit of having founded it, but al-Maqrizi and al-Suyūtī point out that madrasīs were already in existence before him and mention the four above-named, but, as we have seen, even they were not innovations. Al-Suhki thinks (says al-Suyūtī) the new feature was that Nisām al-Mulk endowed scholarships for the students. But this again was nothing new as we have already seen. But the enthusiasm and energy of Nisām al-Mulk meant the beginning of a new period of brilliance for the Madrasa. The sultān and men of high rank were now interested in it and the type evolved by Nisām al-Mulk, a school in which the students were boarded, became the prevailing one after his time. We may presume that the older schools also had a place for prayer in them, i.e., they resembled mosques. The type of school known to us is built as a complete mosque. Since even the older mosques containing living-rooms which were frequently used by students, there is no difference in principle between the school and the ordinary mosque; only the school was especially arranged for study and the maintenance of students. This character is expressed by the name madrasa, plural madrasīs; it is a genuine Arabic formation from the word darasa, “to read,” “to study,” taken from Hebrew or Aramaic (Sura lviii. 37 and elsewhere; Hāsa al-Mufaddas a, ed. Horovitz, p. 53; ibid., xiv., 2nd Cairo ed., p. 78; cf. darasa “to teach”: Bukhārī, Babu ‘l-Waḥrār, bab 5 and elsewhere “to study”: Kūmālī, ed. Wright, p. 178; where Bāt Mūrās is used in a Jewish school (Bukhārī, Dīqān, bab 6; Ibn Ḥishām, p. 383; 388); it is therefore an analogous formation to Masjīd (cf. also Heiecher, Klein. Schriften, ii. 122 sq.; Noldke, Neue Beiträge z. sem. Sprachw., p. 38).

In the time of Nisām al-Mulk and immediately afterwards, the madrasa spread in the Trāb, Kūhārān, al-Baṣra etc. He was not content with the two he founded in Nisābūr and Baghdad. There was also a Madrasa Nisāmīyā in Balkh (Wustenfeld, Schāhī, iv. 240); in Māwṣīr (ibid., p. 219); in Hīrāt to which al-Shāhī (d. 485 = 1092) called from Ghazna and in Merw (Yakut, iv. 509).

Ibn al-Sabībāgh, who had to give up his position in favour of al-ṣafiʿarabī, received a promise from Nisām al-Mulk that he would build a madrasa for him in Baghdad, but the death of this scholar prevented this being done (in 477; ibid., p. 304). The great vizier’s rival Tādīj al-Mulk (d. 486 = 1093) in Baghdad founded a Madrasa Tādījya (ibid., p. 311). In Nisābūr, other madrasas were founded at the same time, for example one by al-Manṣūr who died in 463 (ibid., p. 277) and a Shāhīyya (ibid., p. 327). In Mār w, al-Samānī who died in 484 taught in a Shāhīyya madrasa (ibid., p. 321; cf. above). In Marw, al-Rudh, Abū al-Manṣūr (d. 512) built a madrasa (ibid., p. 326).

The prosperity of the madaris stimulated by Nisām al-Mulk in the fifth century survived for a long time in the east. In the sixth century Ibn Ḫubair (580 = 1184) mentions some thirty madaris, all in the eastern part of the town, the most notable being the Nisāmīya, renovated in 504 (Kībhā, p. 229). In 631 (1234), the caliph al-Mustānṣir founded the magnificent Mustānṣiriyā as a school for the four rites, each with a teacher and seventy-five students and a teacher for Kurān and one for Ḥadīth, as well as a physician. Attached to it were a library, baths, hospital and kitchens; there was a clock at the entrance; beside it was a garden where the caliph had a pavilion (mawsira) from which he could survey the building (cf. Le Strange, Baghdad, p. 366 sq.; Wustenfeld, Académies des Arabes, p. iv. and 29).

The Nisāmīya and the Mustānṣiriyā survived the destruction of Baghdad by Hūlāgū and both are mentioned at the beginning of the viiith century by Ibn Bāṭṭūta (ii. 108 sq.) and the building of the latter still exists. Ten others are known of the viiith–ixth century including the Madrasat Abū al-Kādir al-Dījānī (688 = 1286), Madrasat Abū Ḥanīfah (of about the same date) and al-Mīrānīyya (758 = 1357), all still in existence, which were founded for Shāhīs, Ḥanafis and for the study of Kurāna and Ḥadīth. Besides these there still exist seven madrasas founded in Baghdad in the xvith and xviith centuries (L. Masségnson, Les Madrasses de Bagdad, B.F.A.O., vi., 1909, p. 77–86; the inscriptions, do, in M.F.A.O., xxxii., 1912). Although the Tatars in 699 (1300) destroyed many madāris (Quatremère, Histo. des Sult. Maml., ii/ii. 163 sq.), Ibn Bāṭṭūta shows that in the eighth century there were still flourishing schools in the east. In Wāṣiţ there was a madrasa which specialised in taḏījīyya al-Kūrān; it had three hundred rooms for foreign students (ii. 3). In Tustar, the sultān expended one-third of the revenues on madrasas and monasteries (ii. 31) and in Ḡirāz and other Persian towns he also found madrasas (ii. 62 and pass.). For Nisābūr, he mentions four madāris beside the chief mosque (ii. 80); according to Ḥanīf ʿAbrū (c. 820 = 1417), this town still had eight madāris under the ʿAbūl-wādās and he mentions seventeen in which Shāhī fīḥ was taught (Sefer Namek, ed. Schepfer, p. 281). For Marw, Yākūt about 600 mentions, in addition to the Nisāmīya, the school founded by Abū Sa‘d al-Muḥī, b. Mansūr al-Mustāwī (d. 494), also the ʿAmidiyya and the Kūṭānīyya (iv. 509). Large madāris were still being built in Persia in the xviith century and they are still to be found there in modern times (E. G. Browne, A Year amongst the Persians, ii., 1916, p. 104, 217 sq.). Although the institution had for long a Sunni tendency, it could of course be taken over by the Shīʿī without any difficulty. In 728 (1328) in Mashhad, Ali Ibn Bāṭṭūta found a large Shīʿī madrasa (i. 415). The Mongols also built madāris, e.g. Karakā Khan (Quatremère, Histo. Sult. Maml., vii. 56). Hūlāgū’s mother built two madrasas in Bukhārā.
where 1,000 students studied daily in each (J.A., ser. 4, xx. 389). The period of greatest prosperity of the madrasa in Central Asia was under the Timurids, notably in Samarkand, where Timur built a dār al-hadith "in the Indian style," and his madrasa, the (ibid., p. 631). Al-Mulk al-Din rebuilt the Shafii Kallasa, which had been burned down (J.A., ser. 9, iii. 430) and himself founded the Maliki al-Salihya and a Maliki zawiya in the Mosque of the Omayyads (ibid., iv. 460 sq.). There were also built in his reign a dār al-hadith by the Kadi al-Fadil (ibid., iii. 277), a madrasa for Shafii's and Hanafis, the 'Ahdawiya, by his daughter or brother's daughter in 530 (ibid., p. 425), six Shafi'i madaris (ibid., p. 391, 399 sq., 403, 435, 442), some five Hanafi including one founded by his (previously Nur al-Din's) wife (ibid., iv. 256, 266, 277, 284 sq.). This building activity was continued into the seventh to ninth centuries so that al-Nu'aimi can give the following totals: seven dār al-Kur'an, sixteen dār al-hadith (one, the Kusya, is not given in Fleischer), three for both Kur'an and Hadith, sixty Shafii (two of them also for Hanafis); in Fleischer, Nrs. 16 and 30 are not given), fifty-two Hanafi (two of them for Shafii's; in Fleischer, one of them, the Dammaghaya, is not given: it appears among the Shafi'i as Dabghaya), four Maliki and ten Hanbali madaris (in Fleischer, one of the two Uyiyiya is not given; on the other hand he has the Musa-miraya), also three madaris al-tibi, all of which belong to the seventh century. The founders were mainly rulers and emirs, but also included merchants and quite a number of men of learning, and a few women also. As in the east, especially in earlier times, a madrasa was often founded for a particular scholar (ibid., iii. 400, 488) and one sometimes finds a learned man handing over his house to be a madrasa (al-Dawla'iya, ibid., p. 403, cf. 439, iv. 470). According to Mikhail Mejshaka, in his time (1848) these madaris had practically all disappeared or were used as dwelling-houses, because their endowments had disappeared and there were only five left in his time (Fleischer, op. cit., p. 397—311).

Salih al-Din introduced the madrasa into Jerusalem. In 585 (1189) he endowed the Khannah al-Salihya, in 587 the Zawiya Khataniya south of al-Aksa for a particular scholar and in 588 he turned the Church of St. Anna into the Salihya Madrasa; in 589, 583 and 598 emirs built similar institutions and in the seventh—ninth centuries a whole series of them came into existence. According to Mujir al-Din (d. 927 = 1521), there were thirty-one madaris and monasteries (which were in part used in the same way as madaris) in direct connection with the Haram area or near it, and sixteen at some distance. Of these some were also called madrasa, one a dār al-Kuran and one a dār al-hadith (Sauvare, Hist. Juris. et Heb., 1876, p. 139 sqq.; v. Berechim, Corpus, ii. 1; cf. for Salih al-Din: Ibn Khallikan, Wafa'vat, ii., Cairo 1310, p. 402 sq.). In Hebron there was also a madrasa, that of al-Malik al-Nasir (Sauvare, op. cit., p. 23).

Next to Ni'am al-Mulk, Salih al-Din has the greatest reputation as a builder of madrasas. He owes this mainly to the fact that his great activity as a builder lay in countries, which became of great importance in the Muslim world, Syria with Palestine, and Egypt. Even before the fall of the Fatimids he had founded in the year 566 in the vicinity of the Mosque of 'Amr, the Nasiriya
overshadowed by the "House of Knowledge" (dār al-kitāb) founded by al-Hākim in 395 (1005). It was at the northern end of the west palace and contained a library and reading-room as well as rooms for meetings and for classes. Librarians, assistants, with their servants administered it and scholars were given allowances to study there; all branches of learning were represented — astronomy, medicine etc. in addition to the specifically Islamic subjects. Al-Hākim built similar institutions in al-Fustāt (Makrizi, ii. 334 seq.; according to Ibn Dukhamī, ed. Volters, p. 582 c infra; there still existed in his time about 20 a building called the Dār al-kitāb in al-Fustāt). In the year 435, al-Sanbadi saw in Cairo a library with 6,500 books on astronomy, handasa and falsafa (Ibn al-Kīfī, p. 440, 13 sqg.). We do not learn very much of the subjects taught there but occasionally hear of someone who lectured on Arabic philology in it (Kindī, Wusat, p. 616, 13). But the whole institution was closely associated with Shi'a propaganda, which is obvious from the fact that it was administered by the Dīfī l-Dīdar who held conferences with the learned men there every Monday and Thursday (Makrizi, iv. 226; Kālqashandi, Suhb al-fā'lid, iii. 487); occasionally he was a kādī (Kindī, Wusat, p. 606, 11). A similar missionary institute (dār al-hikma) was built in Ḥalab in 207 by the emir Fakhr al-Mulk (Ibn Taghribirdi, ed. Popper, p. 360, 17). We may assume that these buildings were also arranged for the performance of the salāt.

With the dār al-hikma, Islam was undoubtedly continuing Hellenistic traditions. Al-Makrizi mentions a dār al-hikma of the pre-Islamic period, where the learned men of Egypt used to work (iv. 377, 4); Ibn Abī Uṣaiḥa, also mentions pre-Islamic seminaries in Egypt where Hellenistic learning was cultivated (dār al-kitāb, i. 104, 16, 24; Athens is also called dār al-kitāb al-Fustātīyīn; B. G. A., i. 135, 14) and the similarity with the Alexandria Museum, which was imitated in Pergamon and Antioch, for example, is apparent (John W. H. Walden, The Universities of Ancient Greece, New York, 1928, p. 60). We do not know just when this institution was closed by the vizier al-Afdar on account of political and religious disputes, but shortly afterwards (517 = 1123) reopened by the vizier al-Ma'mūn in another building, south of the east palace (Makrizi, ii. 313, 337, 17 sqg.). But it was now considerably smaller. During the famine in the reign of al-Musta'ṣir, the library was plundered. In 461 (1068) an eye-witness saw twenty-five camels carrying books from the palace library (Makrizi, ii. 254; cf. Wustenfeld, Fāṭimidenchalifen, p. 261). The institute was finally closed with the end of the Fāṭimid dynasty (567 = 1171). Ṣalāḥ al-Dīn had all the treasures of the palace, including the books, sold over a period of ten years. Many were burned, thrown into the Nile, or thrown into a great heap which was covered with sand so that a regular "hill of books" was formed and the soldiers used to sole their shoes with the fine bindings. The number of books said to have disposed of varies from 120,000 to 2,000,000 but many were saved for new libraries. The Kādī al-Fā'lid is said to have procured 120,000 volumes (Makrizi, ii. 253—255; Abū Shāma, Kitāb ar-Ruwaḥtābin, Cairo 1827, i. 200, 268). Ṣalāḥ al-Dīn also allowed anyone interested to take what he liked from the khisānat al-kitāb in Ḥalab for example (Yākūt, Udabā', vii. 20). These attacks on libraries did not mean they were tired of books as Yākūt (Udabā', v. 389) suggests, but was only one expression of the reaction against the Shi'is.

3. Origin and spread of the Madrasa.

While the institutions called the Dār al-kitāb developed in Fāṭimid countries into centres of Shi'a propaganda, the madrasa grew up in the east out of similar Sunni institutions. It is interesting to note that in 400, al-Hākim built a Sunni Dār al-kitāb in Cairo. In it lived two Maliki scholars, who gave instruction and ground round them men learned in Ḥadīth and fikr (Ibn Taghribirdi, ed. Popper, ii. 64, 105, 106; al-Dhahabi, Dowlat al-Islām, Hādarādārād, 1337, i. 186). As the instruction (see the first reference) was given in the Dāmārī, the institute must have been connected with a mosque, probably that of Amr. It owed its existence however only to a passing fancy and after three years, the institution was abolished and the two learned teachers executed. With the growing strength of the Sunni, especially in the Ṣa'īfī and Ḥanafi form, many educational institutions arose in the east which had a pronounced Sunni character; the Sunni in the fourth century wanted to have influence with the other schools (P. G. A., iii. 375, 365, 415). Many teachers built houses of their own, where they dictated hadiths and held lectures on fiqh, e.g. a teacher who died in Merw in 420 (Wustenfeld, Islām Schā'ī, ii. 232). Abū Ḫātimī al-Butṣī born in 277 (890) founded in his native town a school with a library with apartment and allowances for the maintenance of foreign students (ibid., p. 163). In Amul, al-Rāyānī (d. 502) built a school; he himself taught in the mosque, also in al-Rāy (iii. 245). In Tābarān a school was built for al-Ḥātimī (d. 393 = 1003) (ibid., ii. 202). In Baghdad, al-Isma'īlī (d. 395 = 1006) founded two lectureships in fiqh studies, one of which was filled by al-Isfārā'īnī, who otherwise lectured in the Mosque of Ibn al-Muḥarrak, and the other by al-Bāfī (ibid., p. 204, cf. p. 217). The philologist al-Mukhtārī, poet al-Zawzānī who died in 465 lived in other learned men in a madrasa al-Suyūtī (Yākūt, Udabā', vi. 409).

In Nisābūr especially, where studies were vigorously prosecuted in the mosque (e.g. Wustenfeld, Schā'ī, iii. 236) many such institutions arose. Thus a special school was built for the Shāfī fiqh-scholar al-Ṣā'īdī al-Nisābūrī (349 = 960; ibid., ii. 156; cf. 160). Abū 'Ali al-Ḥusainī (d. 393) himself founded a school in which to teach Ḥadīth and it was attended by 1,000 scholars (ibid., p. 203). Ibn Fūrāk (d. 406; ibid., p. 216) did the same and in the year 437 Abū ʿl-Kāsim al-Kušairī (ibid., ii. 284) and for Rukn al-Dīn al-Isfārā'īnī (d. 418 = 1027) a school was built which survived the end of the Fāṭimid dynasty. Thus, as early as the fourth century, we thus find al-Maḳdisī praising the very fine madāris of Is̱mā'īl Firrān (P. G. A., ii. 315). In the first half of the fifth century, there were four especially famous madāris in Nisābūr: al-Madrasa al-Bahākhaya, founded by al-Baihaqī (d. 384), when he became a teacher in Nisābūr in 441 (Wustenfeld, Schā'ī, iii. 270; al-Suyūtī is therefore wrong in ascribing its foundation to the birth of Nīżām al-Mulk [in 408]; see Hāsan, ii. 141), al-Sa'dīyya founded by the emir Naṣr b. Subuktakīn (governor of Nisābūr in 389).
for Shafi'i and the Kamhiyya for Malikis; for Shafi'is also the Sharifiyya (called after its head also Madrasa Zain al-Taqdijir) and notably the great Salajiyah or Najarriya (for the identity of the two see Makrizi, iv. 233, with Ibn Idris al-Maliki, ii. 142 sq.) beside al-Shafi'i's mausoleum; he also built a madrasa beside the Mashhad al-Husain and in 572 a Hanafi madrasa, the Suyufiya, and he turned the house of an emir named Sa'd al-Su'adā into a khanaqāh (Husain al-Muhaqara, ii. 141 sq.; Makrizi, iv. 193 sqq.; Ibn Khaliljain, ii. 402 sqq.). Those around him emulated this activity. His vizier the Khāt 'Filīdir in 580 built the Fīlīdir for Shafi'is, Malikis and for Isrā (Makrizi, iv. 197), a brother the Sufya (ibid., p. 199), another, an al-Malik al-'Ahdhi, the Madrasat al-'Ahdhi (ibid., p. 195), his nephew Taqi al-Din built in Cairo the Mausul al-I'zz or Taqawiya for Shafi'i (ibid., p. 51; Ibn Dukmkā, p. 93) and two others in the Faiyum (Makrizi, iv. 195). Other emirs and their relatives followed his example (ibid., p. 196, 199 sqq.) and even a merchant, al-Ārshādi, founded a madrasa in 570 (ibid., p. 194). Ibn Lūnābīr, who travelled through Egypt in the time of Salāḥ al-Dīn, speaks of several madrasas in Alexandria (Khdta, p. 42) and particularly of one beside al-Shafi'i's tomb, which looked like a whole town (ibid., p. 48).

During the period of the Ayyūbids and Mamūls the number of madrasās increased even further an extraordinary degree. In the street called Bāl al-Khayr, there were two long rows of madrasās on the site of the old Fajmā idpalace in Cairo (cf. P. Ravasse, in M. M. A. F., i, 1889, p. 409 sqq., pl. 3). As a rule, the madrasās were in the street in line with the houses. Ibn Dukmkā mentions that in Cairo only two existed (ibid., p. 98). Al-Nāṣirīyin and Ibn Dukmkā describe several madrasās (and madāsijdīt) as maṣālaqāt i.e. above the ground-floor. Ibn Ṣafāqī, who travelled at the beginning of the eighth century, found madrasās even in quite small towns, e.g. in D̄imāqā, Manyat al-Khänjū, Kina, Kāṣ, Aṣwa (i. 65, 96, 106, 108). Ibn Dukmkā (p. 92-99) gives about 800 a list of twenty-four madrasās; this is obviously very incomplete; on the other hand, it contains nine names, not given by al-Makrizi. This author (d. 845 = 1442) mentions 74 madrasās, fourteen for Shafi'is, four for Malikis, ten for Ḥanafis, three for Shafi'is and Malikis, six for Shafi'is and Ḥanafis, one for Malikis and Ḥanafis, four for all four rites, two exclusively used as dār al-hadīth, while the rite of twenty-five is not mentioned and four remained unfinished. Of these madrasās, according to him, about thirteen were founded before 600, twenty-seven in the seventh century, twenty-nine in the eighth century and two after 800. To the two schools of Ḥadīth (al-Kāsimīyā of the year 622 and al-Kharābūya of about 758, see iv. 201, 211 sqq.) it is to be added the Matfīghiyya mentioned by Ibn Dukmkā (p. 99). A notable feature is the decline of the Ḥanbalis and in contrast to Damascus the large number of schools which included all four rites. The first Egyptian madrasa to include all four rites was the Ṣāhīfyya, founded in 640-641 by al-Malik al-Salīhi (Makrizi, iv. 209 sqq.) probably on the model of the Mustansiriyah.

In Salāḥ al-Dīn's time, the madrasa was also introduced into 'Aпад in Mecca a madrasa for the Ḥanafis and in the following year a Shafi'i madrasa was also founded there (Chron. Mecca, i. 104). Up to the beginning of the ninth century, eleven madrasās are mentioned (ibid., p. 104—107) but others were added (ibid., iii. 117 sqq., 211 sqq., 225 sqq., 351 sqq., 417). In the xiiith century they could be used for their original purpose (see Snouck Hurgronje, Mecca, ii. 229 sqq.). Madrasās were also built in Medina (Wis-}

As for Asia Minor, madrasas spread under the Saljūqids; the oldest known date from the seventh century. In Konya for example there were the Sīrājī Madrasa of the year 640 (1242—1243), Karatāj Madrasa 649 (1251—1252) and İ̄bdin in the xiiith century, may even be used for their original purpose (see Snouck Hurgronje, Mecca, ii. 229 sqq.). Madrasas were also built in Medina (Wisstenfeld, Medina, p. 58, 88, 112).

In Asia Minor, madrasas spread under the Saljūqids; the oldest known date from the seventh century. In Konya for example there were the Sīrājī Madrasa of the year 640 (1242—1243), Karatāj Madrasa 649 (1251—1252) and İ̄bdin in the xiiith century, may even be used for their original purpose (see Snouck Hurgronje, Mecca, ii. 229 sqq.). Madrasas were also built in Medina (Wisstenfeld, Medina, p. 58, 88, 112).
al-Shridij in 723 (1324), the al-Mutta'ari in 725 (1325) later called M. al-Wadi and in 747 (1346–1347) M. Mišdž after the teacher; the next Marinid Abu 'Inan (749–759) built in 756 (1358) the Bu’ananya (Tomberg, Annales Reg. Maur., i. 280 infra; Ibn Marājuk, in Heftier, v. 34 and 63; Ed. Pauly, ibid., 1905, p. 548 sqq. Bel. Inscriptions de Fès, in J. A., ser. 1, x., 1917; xii., 1918; Maçais, Manuel d’Art Musulman, ii. 1927, p. 465 sqq.). These Marinid madāris are all still in existence. No longer in existence is the M. al-Lebbādin (Bel, J. A., ser. 1, i., x. 148); the M. al-Shridij consisted of a larger and a smaller madrasa; the latter is now the M. al-Shari‘a (ibid., p. 215 sqq.). Others were built under the Sharifs, notably the M. al-Sharrāt in the xiiith (xvith) century, now the largest in Fas (ibid., p. 114; Bel writes Shaghāḥatn). In other towns also Abu l-Hasan built madāris: in Tāzā Minkāsah, Salī (742 = 1340), the muqaddasa, Sabta, Afsa, Xumāmūr, Alu-prāj, Marrākash, al-Kabīr (747 = 1346–1347), Tilmisān and al-Djażāzir (Ibn Marājuk, Heftier, v. 35 and p. 69). That of Minkāsah was completed by the son of Abu l-Hasan, Abu Inan who was a great builder of schools (Ibn Battūtā, i. 84). In Tilmisān, the Ziyānīn Abd Hamīn Miṣli I had already built a mosque in 710 (1310) and before 737 Abu Tahṣīfīn founded the similar institution, whose name he bore (Maçais, Monumentes arabes de Tlemcen; do., Manuel d’Art Musulman, 1927, ii. 483, 515).

In Spain according to Ibn Sa’d (viith = xith century), there were no madrasas; instruction was given in the mosques (al-Maṣkari, ed. Dozy, i. 136); but in the following year, however, a large madrasa was founded in Granada by the Nasīrid Yūsf Abu l-Haddājā in 750 (1349) (Almagro Cardenas, in Bolletin de la Real Acad. de la Hist., xxvii. 490; Maçais, op. cit., p. 517).

According to Ibn Sa’d, men of learning were held in high esteem in al-Andalus; the Marinids in the Maghrib also built madrasas in their enthusiasm to further learning. The traveller al-Abbārī (688 = 1289), however, found no interest in learning in Tilmisān, al-Djażāzir or Constantine (with one exception); it was only in Tunis that he found any enthusiasm (J. A., ser. 5, iv., 1854, p. 154, 157, 158, 161, 169). This is certainly connected with the fact that the madrasa had just then been introduced into Tunis. But not even the madrasas brought about any deepening of interest in study in the west. Ibn Khaldūn (508 = 1406) testifies to the spread of madrasas in Tunis and the Maghrib but laments the decline in education. In al-Andalus, Muslim culture was dying out and after the decline of Kūrtuba and Kairawa, education in the Maghrib was on a low level; while the old schools in the ‘Irāk were no longer of importance, Cairo was a centre of learning to which all made their way and studies also flourished in Persia (Muḥaddidin, Cairo 1323, p. 342–344, flyl 6, No. 2). This decline in interest in learning soon became general. The learning of the time lacked vitality and international scholarship was affected by political conditions. In 1517 A. D. Leo Africanus says that the lecture-rooms in Cairo were largely empty but the numbers who attended them were small. Some still studied fiqh, but very few the arts (Deor. de l’Afr., iii. 372, in Rev. de Voy. et de Doc., ed. Scherer, Paris 1896–1898). In Egypt, interest in the specialised madrasa decreased considerably and the great builder of the xiiiith (xvith) century, the emir Kāthiūdī, still built madrasas, but his real interest was in the mosque (see below). Lāne only mentions the Azhar Mosque as an important centre of study in Cairo. The development in Mecca was similar, where in modern times studies are only prosecuted in the mosque (Snouck Huisronge, Mekka, i. 17, and cf. above). On education and the madrasa in general cf. also F. Wustenfeld, Die Akademien der Araber und ihre Lehrer, Gottingen 1837; Kremer, Kulturgeschichte, 1877, ii. 479 sqq.; Hanenberg, Abhandlung über das Schul- und Lehrwesen der Muhammedaner im Mittelalter, 1850; v. Berchem, Corpus Inscrip. Arab., i. 252–269; G. Gabrieli, Manuale di Bibliografia Mulsmana, i., 1916, p. 109 sqq.

4. Development of the Madrasa and similar Institutions.

a. Madrasa, Masjid and Djimma.

There was, as already mentioned, no difference in principle between the madrasa and other mosques. Even after the introduction of the madrasa, the regular mosques remained schools as before. Ibn Battūtā, who travelled in the eighth century, in the period when madrasas flourished most, attended lectures on Ḥadīth not only in the Džimma of Shārāz but also in the Džimma of Maṣūr in Baghdad (ii. 83. 110). In Damascus in 580, Ibn Dhu‘ayr refers to rooms in the Mosque of the Omayyads, which were used for Shafī‘ī and Malikī students, who received considerable stipends (ṣīrāj, mūlam) and among them were many Maghāribīs; the mosque had large endowments (maḍārā) for strangers and abī al-falān (kibta, p. 266 supra, 272 supra). Ibn Battūtā also speaks of the halāfāt al-ta’dīrī of this mosque in the different sciences (i. 212). In Egypt in the time of al-Maṣrī (ninth century), there were 8 rooms for fiqh studies in the Mosque of ‘Amr and before 749 there were over 40 halāfāt in it (Maṣrözī, iv. 20, 21). In the Mosque of Ibn Tullūn after its renovation in the reign of Lāḏīn (696–708) courses of fiqh, according to the four madhāhib, and other studies were arranged (ibid., p. 41; cf. Quatremer, Hist. Sult. Muls., ii/i. 47 sqq.) and in 767 an emir appointed 7 teachers in Ḥanāfī fiqh there (Maṣrīzī, iv. 42). In al-Ashtar in the seventh century and later after the earthquake of 702 many lecture-rooms with paid teachers were built (ibid., p. 52), likewise in the Mosques of Ḥākim, where, after the earthquake, lecture-rooms in fiqh for each madhhāb and for Ḥadīth were founded with salaries for the teachers and scholarships for the students (ibid., p. 57). In Fātimid mosques, like the Džimma of al-Zafrī and the Džimma of Makṣ built by al-Ḥākim, Mamlūk emirs founded new lecture-rooms (ibid., p. 66, 81) and not only in the Masjid al-Ḥusain but also in the Masjid al-Nafisi were studies carried on in the eighth century (Ham al-Muḥāfar, i. 195; Muḥi‘ l-Dīn).

When a particular room was set apart for teaching purposes in a mosque, this was often called a madrasa; for example 6 of the Damascen madāris were in the Mosque of the Omayyads: the Shāhīnīya, Ghazzāliya, Kūṣīya, Iṣīyūya, Safiyyīya. Munādjīyya, of which the first and third were also known simply as Ḥalīkha (J. A., ser. 9, iii. 410, 432, 437; iv. 262, 270, 481; others: vii. 239); al-Ḥākim’s Ma‘līki madrasa was
in the Mosque of ‘Amr (see above) and Ibn Dukānī (p. 160 sq.) mentions 8 zawāyā in this
mosque, which were remodelled for tabītī. The madrasas were often also built close beside
the large mosques so that they practically belonged to them. This was the case in Mecca (Chron.
Mobk, ii. 104 sqg.; cf. Ibn Batuṭa, i. 324), in Damascus where there was a Shāfi‘i madrasa beside
the western gate, Bāb al-Barid (Ibn Djabair, p. 271), in Nīšābur (Ibn Batuṭa, ii. 80) and in Cairo where
al-Madrasa al-Taibarsiya in 790 and al-‘Akhdarīyya about 770 were built so close to the Azhar Mosque
that they had common walls and windows in them, which was specially permitted by a fewa; they
were afterwards completely incorporated in the Mosque (Makrizi, iv. 223 sq.). In Fās, the chief
madrasas are arranged round the great mosque al-Karaṣly and the same arrangement is found in

If the madrasa, as a building, had little independ-ence, its character as a home for students
and place of instruction was very marked. But even where it was quite an independent institution,
the distinction between madrasa and ordinary mosque was very slight, all the less as sermons were
also preached in the madrasa. In the fifth century the minbar had already been introduced into
a large number of mosques. In the Nīšāmiya in Nīšābur, services were held as soon as it was
finished (by ‘Abd al-‘Raḥīm: Wustenfeld, Schäffl, ii. 285) and the Nīšāmiya in Baghdaq had a
minbar (Ibn Djabair, p. 219). A problem was however raised by the fact that these madīras were
Shāfi‘i and this school held that only one mosque in a town could celebrate the Friday service,
unless the town was of very considerable size and we are definitely told that al-Djuiwaini conducted
the Friday service in the madrasa in Nīšābur although he was also kātib at the Manṣī mosque
(Wustenfeld, Schäffl, ii. 251). In Egypt from 659 to 665 there was only one Friday khatba, but
after this time there was usually a minbar in the larger madrasas. The caliph actually preached in
the madrasa built by Ka‘īlān (657-659; Makrizi, iv. 221). The minbar for the djumā in many mosques is
expressly mentioned, e.g. the Ḥijāzīyya 761 (ibid., p. 222 sq.), the Bakrīyya 776 (ibid., p. 230), the Za-
mānīyya 797 (ibid., p. 241), the Džamī‘ (ibid., p. 249).
The Šaffā‘īya, which had not a minbar at first, was
given one in 758 and was henceforth used for the Friday service (ibid., p. 205). In Fās the
mixed type of djumā and madrasa was found in the Bū‘ānānīya (Bel, J. A., ser. 11, xii. 339).

It was only natural that the madrasa should also be called masjid (cf. Ibn Djabair, p. 48, 11
with line 19), 20). Ibn al-Hādjīj in the viiiith
century still wants to distinguish between masjid and madrasa and to give more importance to the
former (Maknzi, ii. 48). The distinction remained however, however for quite an artificial one and this is
also true of the distinction between madrasa and djumā. The name madrasa was decided by the
main object of the institution and the special style of the building. The name djumā was only given
if the Friday service was held in it. Thus, as late as 772, we find the emir Bāb al-Qabbār building a
madrasa and opposite it a djumā; but in the year 815, the madrasa was given a minbar and used as a djumā (Makrizi, iv. 235 sq.). If these two uses of the building are equal, either name may be used
(cf. the double name in an inscription of the emir Muḥbīl: van Berchem, Corpus, i, No. 201). In
some cases a Friday mosque can be said to be in the madrasa (Ibn Batuṭa, ii. 39). The great
Djami‘ hasan begun in 757 was also one of the
largest madrasas in Cairo (Makrizi, iv. 117 sq.) and on the other hand, the Djami‘ Khaṭṭār in Bālāk,
built in 737 and the Djami‘ Aṣlam founded in
746 were educational institutions (ibid., p. 106, 111; Hüsnu al-Maḥāsura, i. 192). In the ninth century the Djami‘ al-Mu‘ayyad was the most im-
portant new madrasa in Cairo (Makrizi, iv. 139).

The same variation in nomenclature is often found in this century (cf. v. Berchem, Corpus, i, No. 235,
245, 253, 262). On the other hand Makrizi, in the ninth century, only uses masdjīd as a name for
